

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE MINES HANDBOOK

AN ENLARGEMENT OF

THE COPPER HANDBOOK

A MANUAL OF

THE MINING INDUSTRY OF NORTH AMERICA

Founded by Horace J. Stevens, 1900

BY

WALTER HARVEY WEED, E. M.

Former Geologist in the U. S. Geological Survey, 1883-1905. Member
Institution of Mining and Metallurgy of America; Fellow
Geological Society of America; Member American
Institute of Mining Engineers, etc., etc.

VOL. XII

Supplementing Volumes I to XI

Price \$10.00

PUBLISHED BY

THE STEVENS COPPER HANDBOOK CO. 
29 Broadway, New York City

1916

COPYRIGHT, 1916
BY
WALTER HARVEY WEED

PREFACE

For many years the Copper Handbook, founded by Horace J. Stevens, has been the accepted authority on the Copper Mining industry. Its pages have given a frank and absolutely unbiased account of all known copper mining companies and neither fear nor favor have ever influenced its descriptions or opinions. In this new volume, the work is enlarged to cover all metal mines save Iron, but the same policy is continued; neither money nor influence have affected or can affect the opinion, or alter the description given; it is however realized that errors may occur and honest criticism or correction is welcomed and invited.

The enlargement of the book is in response to repeated requests for information about the broader field of Gold—Silver—Lead—Zinc mines. Only the active companies are described, but it is intended to include all those whose stocks are listed and dealt in on any Exchange, and most of the properties actually under development. To cover all prospects and inactive companies would take several volumes, as our files contain records of fully 100,000 companies and properties.

The amount of time and labor expended in getting up the book has been considerable and exceedingly tiring, but it has resulted in bringing together in a small compass, all the essential facts concerning the mining companies of North America. Much of this material is entirely new; part of it has come from widely scattered sources. Doubtless there are many companies omitted and some listed as dead are alive; if there are errors I shall be glad to hear of them.

To make the book more useful to mining engineers, brief geological notes are given and references inserted to important publications in which the geology, mill equipment or processes used, are described.

Intending investors and others interested in mining ventures will do well to look up the reports made by the engineers, mentioned as having examined the property.

The present volume includes several new features: a chapter on the common minerals and a glossary of mining terms have been added for the convenience of non-technical readers; all copper-bearing minerals are described in a separate chapter, a feature not to be found in any other book published in any language; an alphabetical list of company and of mine officials has been added and statistical chapters enlarged to cover the common metals. The book also gives financial statements of many companies in a form used by the standard publications.

The opinions expressed are based on information obtained from many sources; this information is believed to be accurate and reliable, but is not guaranteed.

It has been found necessary, both for space and because of the Great War, to limit the Handbook to North America, save in the case of the important American owned companies, such as Chile Copper, etc.

It is hoped that many readers will offer suggestions for the improvement of future volumes.

The Geographical Index in the back of this book gives the mines or companies grouped by States and towns. Thus to find a list of companies operating in Arizona, look for Arizona, and the names of all active companies will be found arranged alphabetically. The description of each company is given in the body of the book, in alphabetical order.

Thanks are due to the U. S. Geological Survey and to Mr. W. R. Ingalls, Editor of the Engineering & Mining Journal, for part of the statistical material used in Chapters VII and VIII.

Thanks are also due to Mr. George H. Morgan, E. M., who has been my able and untiring helper in the preparation of the book.

WALTER HARVEY WEED.

Our Equipment for

Mills and Smelters

stands in the front rank. We have always studied the requirements of the foremost engineers to carry out the treatment of ores in the most satisfactory manner, and have met their most exacting demands for machinery which will effectually perform its intended functions while withstanding the severe conditions of continuous hard service.

Quick to correct all shortcomings and to embody genuine improvements, though carefully avoiding everything of a freakish nature, we have brought our productions to a point where we confidently recommend them for the real work of the metallurgist who requires the best.

Our constant endeavor is that our customers be not merely satisfied but gratified.

Colorado Iron Works Co.

MILLING PROBLEM SOLVED BY ELECTROSTATIC SEPARATORS

*The Standard Dry Method for
the Separation of*

ZINC-IRON table middlings WITHOUT ROASTING
COPPER ORES - IRON - SILVER
TUNGSTEN - GRAPHITE
FLOTATION CONCENTRATES and many other
ORE DRESSING PROBLEMS

United States Smelting Co. Electrostatic Plant, Midvale, Utah

The process has been developed mechanically and electrically to a high point of efficiency.

Improvements during the past few years have reduced the operating cost and increased the efficiency 75%

REPEAT ORDERS for SEPARATORS to be SHIPPED EXPRESS and twenty plants now in operation testify to the success of the process commercially.

WE MAINTAIN A WELL EQUIPPED LABORATORY for the investigation of ore DRESSING PROBLEMS; also design, remodel and build mills, and install methods that are suitable to the ore to be treated.

PRESCOTT MINE PUMPS

The wet mine presents a greater variety of pumping problems than any other industry. On surface and underground, low and high service, light and heavy pressures, condensing, circulating, forking, shambling, sinking and station work. The water is cold, hot, sometimes acidulated, dirty, gritty and aerated.

Where such conditions of service must be met and overcome, it is essential to select a pump built by a maker intimately acquainted with underground practice and the difficulties attending that kind of work.

Prescott Mine Pump designs result from years of experience in solving the knottiest mine pumping problems. It therefore stands to reason that the Prescott Pump is essentially, a mine pump—the pump for your mine.

Duplex double acting—steam or electric drive: accessible, efficient, economical.

We will send a copy of Mine Pump Bulletin
P-105 on receipt of your name and address.

THE MINERALS SEPARATION FLOTATION PROCESSES

Invented, Perfected and Owned by

MINERALS SEPARATION, Ltd.

**of 62 London Wall, London, England
and its affiliated Companies**

The Processes are protected in the United States of America by over forty patents and applications for patents, which include practically everything essential or of value in the use of the Process and Art of Air Froth Flotation of mineral values, irrespective of whatever mechanical apparatus may be employed.

The Processes are now in almost universal operation, yielding phenomenal recoveries and record breaking profits wherever properly installed as at Anaconda, Braden, Britannia, Inspiration, Timber Butte, and numbers of other important Copper, Zinc, Lead, Silver and Gold Mining Plants throughout the World.

The Plant is simple, inexpensive and "Fool Proof," and occupies very small space for its large tonnage capacity.

The Patent Rights for the United States of America, Canada and Mexico are controlled

CODE: McNeill's, 1008

ROCK DRILLS

The kind that can be "*cleaned up with a sledge hammer*" and "*wiped off with a scoop shovel*" and yet "*stay with you!*"

They have been used on some of the biggest jobs in the world. All steel in combination with Vanadium-Tungsten Cylinder and Chest, makes them the Drill of "*long wear with few repairs.*" Ask us something!

Wood Drill Works Paterson, N. J.

ROTATING HAMMER DRILLS

are indispensable in any mining work. In first cost, operation and maintenance they are cheaper yet more efficient than any other type of rock drilling tool.

GNS FLOTATION GNS

"An Oil for Every Ore"

This brand covers over thirty distinct Oils; including special grades of Pine Oils, Pine Tar Oils, Wood Creosotes, Coal Tar and Creosote, and Petroleum Products. Each has individual characteristics and has been developed to meet the special requirements of some ore.

FLOTATION OPERATORS

This mark means "service"—an adequate supply of the oil giving highest concentration, shipped promptly, and *always the same*.

Let us know exactly the ore you are milling. We will send generous samples of the Oils best suited to your ore. Prices covering your monthly or yearly requirements will be quoted.

FOSTER SUPERHEATERS FOR STEAM AND AIR

are essential to economical operation of steam plants and air hoists. They make steam do 12% to 33% more work, or the same amount of work can be done with 10% to 25% less steam in turbines, engines and pumps.

Water eliminated from steam lines; erosion of turbine blades avoided; sizes of steam pipes and valves reduced.

GAS for Your Laboratory, Industrial Work and Buildings

The metal mines where city gas is available are extremely few, yet gas is the most practical fuel for the laboratory, for heating assay furnaces, hot plates for solutions, blast lamps, Bunsen burners, etc.

GAS IS THE MOST PRACTICAL FUEL

For every need it is the cheapest, most satisfactory and convenient method known.

The TIRRILL "Equalizing" Gas Machine

supplies a standard, uniform, non-poisonous gas. Absolutely safe. It is the ONLY machine in the world which mixes the air and gas outside the building. Never affected by weather conditions. No heat or fire is required to generate the gas. The machine is a finished factory product and positively the most dependable cold process gas machine manufactured. Is fully guaranteed.

TIRRILL High Efficiency Burners

Insure a gas saving of 25 to 50 per cent.

If it is a problem in gas installation, gas burning or gas appliances, write us.

BLUE LIST OF MINING ENGINEERS, GEOLOGISTS AND ASSAYERS

The engineers whose names appear in this list are men of established reputation in their profession, or are personally known to the editor of this Handbook and recommended by him.

ALDRIDGE, Walter H.,
Mining and Metallurgical Engineer,
c/o Wm. B. Thompson, 14 Wall St., New York.

BALL, Sydney H.,
Mining Geologist,
71 Broadway, New York City.
Cable: Sydball.

BARDWELL, Alonzo F.,
(Successor to Bettles & Bardwell.)
Custom Assayer and Chemist.
158 Sw. Temple St. Salt Lake City, Utah.

BARKER-WILSON CO.,
Mining Engineers,
Deputy-United States Mineral Surveyors.
Butte, Mont.

BEATTY, A. Chester,
Consulting Mining Engineer,
25 Broad Street, New York, N. Y. No. 1, London Wall Buildings, London, E. C.
Cable: Granitic. No professional work entertained.

BRADLEY, Philip Road,
General Supt. Alaska, Juneau Co.,
Cons. Eng. Alaska Treadwell Co.
Treadwell, Alaska.

BRETHERTON, S. E.,
Con. Mining and Met. Engineer.
Specialty: Smelting of copper and lead ores and treatment of complex zinc ores.
Mills Bldg., San Francisco.

BROADBRIDGE, Walter,
Chief Engineer,
Minerals Separation, Ltd., 62 London Wall, London, E. C.
Cable: Rillstope, London. Usual Codes.

BURGER, C. C.,
Mining Engineer,
71 Broadway, New York City.

BURGESS, John A.,
General Superintendent,
United Eastern Mining Co.
Oatman, Arizona.

CHANCE & CO., H. M.,
Mining Engineers,
Drexel Building, Philadelphia.

CHANNING, J. Parke,
Mining Engineer,
61 Broadway, New York.
Code: Bedford McNeill.

CHASE, Charles A.,
Mining Engineer,
812-824 Cooper Bldg., Denver.
Liberty Bell G. M. Co., Telluride, Co'o.

CHURCH, John A.,
Mining Engineer,
15 William Street, New York.
Cable: "Scottist."

CLARK, C. Dawes,
Consulting Mining Engineer,
Examinations, Reports, Operation of Mining Properties.
120 Broadway, New York City.

COBB, Collier,
Professor of Geology,
University of North Carolina.
Chapel Hill, N. C.

COLLINS, George E.,
Mining Engineer,
Mine Examinations and Management,
Boston Building, Denver. Cable: Colcamac. Code: Bedford McNeill.

DORR COMPANY, The,
John V. N. Dorr, Pres.
Metallurgical Engineers,
Denver, New York, London, E. C.

DWIGHT, Arthur S.,
Mining Engineer and Metallurgist
29 Broadway, New York. Cable Address: Sinterer, New York.
Codes: Bedford-McNeill, 1908 Edn. and Miners' & Smelters.

FARISH, George E.,
Mining Engineer,
25 Broad St., New York. Nevada Nat. Bank Bldg., San Francisco, Cal.
Cable: Georgefar. Code: Bedford-McNeill.

FINLAY, J. R.,
Mining Engineer,
Room 802, 52 William Street, New York.

FULLER, John T.,
 Consulting Engineer,
 Department of Mines, State Banking Department.
 P. O. Box 393. Little Rock, Arkansas.

GEMMELL, Robert C.,
 Mining Engineer,
 General Manager Utah Copper Co.
 McCormick Bldg. Salt Lake City, Utah.

GREENE, Fred T.,
 Consulting Mining Engineer and Geologist,
 Butte, Montana.

HAQUE, William,
 North Star Mines Co.,
 Grass Valley, California.

HAMMOND, John Hays,
 Consulting Engineer,
 71 Broadway, New York.
 Code: Bedford-McNeill.

HUNT & CO., Robt. W.,
 Engineers,
 2200 Insurance Exchange Bldg., Chicago.
 90 West St., New York. Monongahela Bank Bldg., Pittsburgh, Pa.

KEFFER & JOHNS,
 Mining Engineers,
 Examinations, Reports and Management of Mining Properties.
 610 Hutton Bldg., Spokane, Wash. Codes: Bedford-McNeill, Moreing & Neal.

KEITH, Frank A.,
 Consulting Mining Engineer,
 1202 Hollingsworth Bldg., Los Angeles, Cal.

MARK B. KERR, Mining Engineer **JOHN B. KERR, Petroleum Engineer**
KERR and SON, Mark B.,
 Examination and Reports on Mining and Oil Properties
 626 Mills Building, San Francisco

KIRCHEN, John G.,
 General Manager,
 Tonopah Extension Mining Co.,
 Tonopah, Nevada.

LAKENAN, C. B.,
 Mining Engineer,
 Ely, Nevada.

LEGGETT, Thos. H.,
 Consulting Mining Engineer, New York.
 149 Broadway,
 Cables: Tomleg.

LIDDELL, Donald M.,
 Metallurgical Engineer,
 Care Merrill, Lynch & Co., New York City.
 7 Wall St.,

LINCOLN, Francis Church,
 Consulting Mining Engineer and Geologist,
 Director Mackay School of Mines,
 Reno, Nevada.

LINDSLEY, Halstead,
 Mining Engineer,
 60 Broadway, New York.

McMEEKIN, Chas. W.,
 Mining Engineer,
 1270 Pine Street, San Francisco, Cal.

MEIN, William Wallace,
 Mining Engineer,
 43 Exchange Place, New York.
 Cable: Mein, New York.

MERRILL METALLURGICAL CO.,
 Specialists in Hydrometallurgical Precipitation and Precipitants,
 121 Second Street, San Francisco, California.
 Cable: Lurco. Code: Bedford-McNeill.

MORGAN, G. H.,
 Mining Engineer,
 Room 302, No. 29 Broadway, New York City.

MUDD, Seeley W.,
 Mining Engineer,
 1208 Hollingsworth Bldg., Los Angeles, Cal.

NEILL, James Wilson,
 Mining Engineer and Metallurgist,
 Pasadena, Cal. and Salt Lake City, Utah.
 President Yosemite Dredging & Mining Co., Snelling, Cal.

NEVIUS, J. Nelson,
 Mining Engineer and Geologist
 809 South Los Robles Ave., Pasadena, Cal.

NEWSOM, John F.,
 Consulting Geologist and Mining Engineer,
 Hobart Building, San Francisco.

PACKARD, George A.,
 Mining Engineer and Metallurgist,
 Mine Examinations and Reports. Supervision of Mining Operations.
 50 Congress Street, Boston, Mass.

PAYNE, Henry Mace,
 Consulting Mining Engineer,
 Woolworth Building, New York.
 Cable: c/o Macepayne. Usual Codes.

PETROLOGICAL LABORATORY
 of W. Harold Tomlinson,
 All Petrographic Work.
 Swarthmore, Penna.

PRATT, Joseph Hyde,
 Consulting Mining Engineer,
 Chapel Hill, N. C.

PURINGTON, Chester W.,
 Examination of Russian Properties.
 63 London Wall, London, E. C.
 Cable: Olenek. Usual Codes.

RAYMOND, Robert M.,
 Mining Engineer,
 The Exploration Co., Ltd.
 61 Broadway, New York City.

RICKETTS, L. D.,
 Consulting Engineer,
 42 Broadway, New York.

RIORDAN, D. M.,
 Consulting Engineer.
 Mining Investigations Carefully Made for Responsible Investors.
 525 Market St., San Francisco, Cal.

ROBBINS, Percy A.,
 Managing Director,
 Hollinger Consolidated Gold Mines, Ltd.,
 Timmins, Ont.

ROGERS, Allen Hastings,
 Consulting Mining Engineer,
 201 Devonshire St., Boston, Mass.
 Cable: Alhasters. 71 Broadway, New York, N. Y.

ROGERS, Edwin M.,
 Consulting Mining Engineer,
 32 Broadway, New York, N. Y.
 Cable: Emrog. Code: McNeill.

ROHN, Oscar,
 Mining Engineer and Geologist,
 care East Butte Copper Mining Co.
 Butte, Mont.

SEARS, Stanley C.,
 Consulting Mining Engineer,
 Reports and Management
 702 Walker Bank Building, Salt Lake City. Usual Codes.

SHARPLESS, Fred'k F.,
 Mining Engineer,
 52 Broadway, New York.
 Cable: Fresharp. Code: McNeill.

SHAW, S. F.,
 Mining Engineer,
 Care of American Smelting & Refining Co.,
 1112 Mills Bldg., El Paso, Texas.

SIZER, Frank L.,
 Consulting Mining Engineer,
 701 First Nat'l Bk. Bldg., San Francisco, Cal.
 Cable: Sizer. Usual Codes.

FRANKLIN W. SMITH

SMITH & ZIESEMER,
 Mining Engineers,
 Bisbee, Arizona.

RALPH A. ZIESEMER

SPURR, J. Edward,
 Mining Geologist,
 Tonopah Mining Company of Nevada.
 Bullitt Building, Philadelphia, Pa.

STAUNTON, W. F.,
 Mining Engineer,
 636 I. W. Hellman Bldg., Los Angeles, Cal.

SYMMES, Whitman,
 Mining Engineer,
 Manager Union Con. Mexican, Ophir, etc.
 Virginia City, Nevada.

TOUT & McCARTHY,
 Assayers and Chemists,
 Assays, Analysis and Tests, Independent Control Work.
 Butte, Montana.

TURNER, J. K.,
Mining Engineer,
Goldfield, Nevada.

TYRRELL, J. B.,
Mining Engineer and Geologist.
534 Confederation Life Bldg., Toronto, Canada.
Cable: Tyrrell. Usual Codes.

VOLNEY, Lewis J.,
Mining Geologist,
Professor at Rutgers College,
New Brunswick, N. J.

WEED, Walter, Harvey,
Mining Geologist and Engineer,
Examinations.
29 Broadway, New York. Cable: "Minexam."

WEEKES, Frederic R.,
Mining Engineer,
71 Broadway, New York.

WESTERVELT, William Young,
Consulting Mining Engineer,
17 Madison Ave. (Madison Square East), New York.
Cable: Casewest. Code: McNeill.

WILSON, W. A.,
Mining Engineer,
Reports and Management of Properties.
406 Dooly Block, Salt Lake City, Utah.

WINCHELL, Horace V.,
Mining Geologist,
826 First National-Soo Line Bldg.,
Cable: Racewin. Minneapolis, Minn.

WISEMAN, Philip,
Mining Engineer,
1210 Hollingsworth Bldg., Los Angeles, Cal.
Cable: Filwiseman. Usual Codes.

WRIGHT, Charles Will,
Mining Engineer,
Ingurtoau, Sardinia, Italy.
Cable: Wright Arbus. Code: Bedford-McNeill.

YEATMAN, Pope,
Mining Engineer,
Room 8533, 120 Broadway, New York.
Cable: Ikona. Code: Bedford-McNeill.

Information Bureau

THE annual publication of The Mines Handbook necessitates the constant gathering and systematic filing of accurate information regarding the technics and statistics of all non-ferrous metals and the metal trade generally, also the securing and filing of data covering the finances, organization, equipment, development, ores, management and prospects of several thousand mines and mining companies in all parts of the world.

This information is available to any inquirer for a small fee, \$5.00 being the price charged for answering an ordinary inquiry. Where the inquiries involve extended investigation or personal inspection of mines, the price for furnishing full reports will be made according to the time and outlay required.

Special investigations conducted with regard to any branch of the metal industry in the United States and abroad.

Partial or full reports, with personal investigation, made upon any mine or prospect in the United States, Canada or Mexico.

THE MINES HANDBOOK

29 Broadway

New York, N. Y.

THE MINES HANDBOOK

CHAPTER I.

GLOSSARY OF MINING TERMS.

The following glossary of mining, milling and trade terms which first appeared in Vol. II of the Copper Handbook, has been amplified and is now fairly complete.

Acicular. Needle-shaped.

Acid. An acid or silicious rock is one in which bases are combined with silica. The antithesis of basic.

Adit. A level mine opening driven into a hill or mountain.

Adobe. Sun-dried brick used in all Latin-American countries.

Air-blast. A violent explosion caused by the escape of air compressed by the settling down of the rocks of the upper workings of a mine that is over 3,000' deep.

Air Compressor. A machine for condensing air to a pressure sufficient to actuate machinery. The compressed air is forced through pipes to various parts of the mine, or surface plant, and used in the same way as steam for driving drills, pumps, hoists, etc.

Air-doors. Doors built in mine passage ways to stop air currents.

Air-drill. A drill driven by the elastic pressure of compressed air.

Air-shaft. A shaft used to provide ventilation for deep workings. Two shafts, one opening on slightly higher ground than the other, will provide natural ventilation underground, when connected by a drift, the longer shaft becoming a chimney, and the shorter an inverted syphon, down which the air is sucked with great force.

Alkali. Potash and soda are the common alkalis. An alkali is a lye—the opposite of an acid.

Alloy. Two or more metals united mechanically, but not chemically by fusion.

Alluvium. Soil or broken rock deposited by the action of water.

Altered. An altered rock is one that has undergone changes in its chemical and mineralogical structure since its original deposition.

Aluminous. Containing aluminum.

Amalgam. An alloy of mercury with another metal such as gold, silver or copper. Mercury will not amalgamate with iron.

Amalgamation. The process of extracting gold and silver from crushed ores by amalgamation with mercury. The quicksilver is expelled later, by heat, and recovered for further use.

Amorphous. Without form.

Amygdaloid. A trap rock, containing vesicles or small rounded cavities filled by mineral matter such as calcite, agate, etc. Rock is spotted and in outcrop often pitted as amygdules weather out, leaving cavity. In the Lake Superior district copper-bearing amygdaloids frequently show native copper in the cavities left by the leaching out of the soft minerals originally therein.

- Analysis.** A determination of the constituents of a chemical substance.
- Anhydrous.** Devoid of water.
- Anode Copper.** Copper from a converter, cast in molds into plates with ears, and used in cells of electrolytic refineries.
- Anticline.** An arch or fold of rock-strata bulging upwards, in U shape. Is the reverse of syncline.
- Antigua.** In Mexico, is a mine worked by Spaniards or Mexicans at a time so remote—from 50 to 300 years—that particulars have been forgotten. Sometimes valuable.
- Antimonide.** An ore of any metal chemically united with antimony.
- Apartado.** Apartado de correos is Spanish for postoffice box. Usually abbreviated to Ap.
- Apex.** The top or uppermost part of a vein. In the United States the ownership of the outcrop or apex carries the right to follow the vein downward beneath another's ground, if within one's end lines extended.
- Arastra.** A circular rock lined pit in which broken ore is pulverized by stones attached to horizontal poles fastened in a central pillar and dragged around by mules.
- Arenaceous.** Sandy; carrying silica as sand.
- Argentiferous.** Silver-bearing.
- Argillaceous.** Clayey.
- Aroba.** A Spanish weight of 25.36 lbs. avoirdupois; Portuguese, 32.38 lbs.
- Arroya.** A gulch.
- Arsenide.** A mineral composed of arsenic combined with another metal.
- Arsenopyrite.** A mineral composed of arsenic sulphur and iron; often carries gold or silver also.
- Assay.** A test of ore or metal to determine the exact amount of any metal or metals contained in it. Usually fire assay; smelting on a small scale.
- Assessment Work.** The work required annually by the U. S. government, on an unpatented mining claim to keep title.
- Attle.** Cornish term for waste rock.
- Auriferous.** Containing gold.
- Back.** The rock above mine opening like the ceiling of a room. The part or section of a vein between two levels or between a level and the surface.
- Bad air.** Air vitiated by powder fumes, noxious gases or insufficient ventilation.
- Ball Head or Stamp.** A steam stamp, named after its inventor.
- Barilla (De Cobre).** Spanish term for particles of native copper, cleaned (concentrates). Equivalent to the "mineral" of Lake Superior mines. Used mainly in Bolivia.
- Barranca.** A deep gulch or canyon, with precipitous sides.
- Barrel Work.** Masses of crude native copper, picked out by hand before ore passes beneath stamp. Was formerly shipped in barrels to the smelter.
- Barrow.** A wheelbarrow.
- Basalt.** A dark colored heavy igneous rock, carrying much iron; a trap rock.
- Base.** Impure. An alkaline element.
- Base Bullion.** Copper or lead carrying much gold or silver.
- Base Metal.** Any of the non-precious metals.
- Basic.** Low in silica. Containing more than enough iron and lime to form a good slag.
- Basin.** A syncline; a trough in the earth's surface.
- Battery.** A set of stamps usually five in a stamp mill.
- Bearing.** The course of direction, as that of a mineral outcrop in degrees, east or west of, north (meridian).

Bed. A seam or layer of stratified rock. Used in some mineral districts for flat veins or lodes.

Bed Rock. The solid rock underlying stream gravel or rock.

Bedded Vein. One parallel with the bedding of the country rock.

Bells. Signals for lowering and hoisting the bucket, skip or cage in a shaft usually are given by bells, the number of strokes indicating the nature of the load, the place for stopping, etc.

Bit. The cutting end of a boring tool. A steel drill; a short hollow cylinder of soft steel, used in diamond drilling. The diamonds are set around the inner and outer edges of the bottom of the bit, and cut into the most refractory rocks when the bit is rotated.

Black Copper. Impure copper, smelted, but containing impurities requiring refining.

Black Jack. Sphalerite, zinc blende of dark color.

Blanched Copper. Copper containing a large amount of arsenic, practically forming an alloy.

Blast. (N.) Air forced through tuyeres into a blast furnace or Bessemer converter. (V.) to explode gunpowder or dynamite.

Blast Furnace. A cupola furnace in which ore is smelted, with the aid of air pumped in under pressure.

Blasted. A blasted miner is one who has been injured by the explosion of dynamite or gunpowder.

Blasting. The breaking of rock by means of high explosives, inserted in holes bored in the rock for the purpose.

Blende. Zinc-blende or sphalerite. Sulphide of zinc.

Blind Drift. A drift connected with other workings of the mine at one end only. A cul de sac.

Blind Lode. A lode not outcropping at surface.

Blister Copper. Copper of 96 to 99% purity. Applied to product of Bessemer converter.

Blocking Out. Exposing the ore in a mine so that it can be extracted by stoping. Properly speaking, ore is not blocked out for stoping until opened on three sides.

Blossom. The oxidized, softened outcrop of an orebody altered by weathering.

Blout. A mass of quartz, often mineralized, that is often isolated and not connected with a vein. An abbreviation of blow-out.

Blower. A fan used to force air into a mine; a blowing engine.

Blowing Engine. An engine for forcing air into blast furnaces under pressure often about one pound avoirdupois per square inch.

Blowing In. A smelting furnace is blown in, when charge is ignited, fusion begins and the process of reduction by fire is begun.

Blowing Out. A smelting furnace is blown out when the metal and slag are tapped out, and the fires are allowed to die out.

Blowout. An outcrop larger than the orebody beneath; see blout.

Bluestone. Copper sulphate.

Bonanza. Spanish for pay-ore. Usually applied in United States to a body of exceptionally rich ore, especially in silver mines.

Bonnet. The cover or roof of a cage; also a steel casting connecting the piston-rod with the upper end of a stamp-shaft.

Bostonite. A light colored igneous rock composed mainly of potash feldspar.

Bore Hole. A drill hole bored for test purposes.

Bort (Bortz). A form of crystallized carbon between the diamond and the black diamond.

Botryoidal. Resembling a bunch of grapes.

Bottom. A mass of impure copper formed below the matte, in matting copper ores.

Boulders. Loose, rounded masses of rock, larger than cobbles.

Box Canyon. A canyon closed at one end.

- Branch.** A vein branching off from the main orebody.
- Brattice.** A screen for the regulation of air currents in a mine.
- Breast.** The face or innermost end of a mine working.
- Breccia.** A rock formed of angular fragments cemented together.
- Brecciated.** Broken into angular fragments partially or wholly cemented together.
- Broken.** A vein is broken when dislocated by faults.
- Broken Ground.** Rock strata where the walls are poorly defined and the general formation shattered.
- Bucket.** An iron or steel bucket used for hoisting men or ore in a mine. In a vertical shaft a bucket swings free, but in an incline shaft the bucket runs on a skidway of plank timbers.
- Buddle.** A conical table on which ore is dressed. (Obsolete.)
- Bulkhead.** A wooden or masonry partition walling off part of a mine or protecting it against soft or creeping ground.
- Bullion.** Refined gold or silver.
- Bullion Bars.** Unrefined gold and silver melted and cast into bars.
- Bunch.** A small mass or pocket of exceptionally rich ore.
- Bunchy.** An orebody containing small scattered masses or bunches of ore.
- Cable.** The steel wire rope used in shafts for hoisting buckets, skips or cages.
- Cage.** The elevator used in vertical shafts for hoisting mineral and for lowering men, timber, etc.
- Calcareous.** Limey.
- Calcine.** To drive off sulphur, carbonic acid gas, or other volatile constituents of an ore by heating.
- Calcining Furnace.** A furnace for roasting ore to drive off sulphur, previous to smelting.
- Calcite.** Crystallized calcium carbonate.
- Cam.** A curved tooth, fixed on a shaft, for lifting the pistons of gravity stamps.
- Camp.** A mining town.
- Canyon.** A deep gorge with precipitous walls.
- Cap.** The top piece of a framed set of mine timbers; copper caps containing fulminate of mercury, used to explode dynamite in blasting rock.
- Capping (or Cap-Rock).** The rock or other ground above a mineral deposit.
- Captain.** In most mining fields where Cornishmen are employed, the foreman in charge of mining work is termed a captain.
- Carbonaceous.** Any mineral in which carbon and oxygen are chemically united.
- Carbonates.** A term commonly applied in the western part of the United States, to oxidized lead ores, usually argentiferous.
- Carboniferous.** Rocks of the coal age of geological eras.
- Carga.** A Mexican weight of 300 lbs. avoirdupois.
- Cartridge.** Dynamite put up in cylindrical cases of oiled paper to fit the holes bored by drills.
- Casing.** The wooden lining of a shaft; an iron pipe put down outside of a diamond drill hole when passing through soft or broken ground, to prevent the hole becoming clogged by matter intruding from outside.
- Casting Copper.** Impure copper better suited for casting into various forms than for drawing into wires or rolling into sheets.
- Cave.** A natural opening or "vug" in a rock formation; the partial or complete falling in of a mine.
- Caving System.** A plan of mining, by which the worked out upper levels and surface are allowed to subside gradually, as the mine workings are deepened.
- Cement Copper.** Regulus. The loose and usually impure copper deposited on iron by copper-bearing waters.

- Cerro.** Spanish for a mountain or hill showing rock outcrops.
- Chalybeate.** Iron-bearing waters.
- Chamber.** A large stope.
- Change House.** Building where miners change their clothing before entering a mine.
- Change Day.** The day when a gang of miners are transferred from day shift to night shift, or the reverse.
- Chapeau de Fer.** French term for an oxidized iron outcrop; gossan or iron hat.
- Charge.** The amount of ore, flux and fuel fed to a smelting furnace.
- Chert.** A coarse impure chalcedony or flint.
- Chile Bars.** Bars of Chilean blister copper, weighing about 200 lbs. each.
- Chilean Mill.** A grinding apparatus with three heavy wheels running around in a circular pan.
- Chimney.** An orebody of pipe shape in an approximately vertical position.
- Chloride.** A mineral (or ore) of any metal united chemically with chlorine. Usually applied to hornsilver ore.
- Chloride.** (V.) To work the oxidized part of an ore deposit on a lease or tribute. A term used in the western part of the United States.
- Churn Drill.** A drill having a churning motion, used for boring oil wells, test-holes, etc.
- Chute.** A hole, usually lined with planks, used for dropping ore or waste to a lower level of a mine.
- Claim.** The area of 600'x1,500' or 20 acres of U. S. public land staked off and claimed by a prospector or miner. Size of claims varies in different countries.
- Classifier.** A machine which separates particles, according to their weight.
- Chloride.** (V.) To work the oxidized part of an ore deposit on a lease or tribute. A term used in the western part of the United States.
- Clay Gouge.** A thin seam of clay separating ore, or ore and rock.
- Clay Slate.** An argillaceous slate.
- Clean-Up.** The collection or gathering together of accumulated ore or metal in a mill or smelter.
- Cleavage Planes.** The more or less regular lines along which slates and other metamorphic rocks break into slabs or leaves.
- Coarse Jigs.** The jigs used to handle the larger sizes and heavier grades of ore or metal.
- Coarse Metal.** Matte resulting from the first smelting in old-style smelting of oxidized copper ores.
- Cobbing.** Breaking masses of ore into lumps by hand hammers and sorting ore out.
- Collar.** The top of a shaft; surface timbering of a shaft.
- Colloids.** Non-crystalline materials.
- Compartment.** Mining shafts usually are divided into two or more compartments or sections, separated by framed timbers and planking.
- Concentrate.** The ore or metal, after partial or complete elimination of gangue rock.
- Concentration.** The process of separating the metallic part of an ore from the waste rock or mineral in which it has been enclosed. It involves crushing to free the metallic particles. The separation may be by gravity, either dry or in water; by oil or froth flotation, or magnetic separation.
- Concentration Table.** A table on which a stream of finely crushed ore and water flows downward and the heavier metallic minerals lag behind and flow off in a separate compartment.
- Concentrator.** A plant where ores are concentrated; a jig or machine for separating ore or metal from gangue-rock, the process usually employ-

ing a rocking or oscillating motion, aided by jets of water, whereby the worthless gangue is carried off and the heavier mineral remains.

Conchoidal. Breaking with a curved or shell-like face, or fracture.

Concretion. A rounded mass or nodule formed of mineral matter gathered about a center.

Conductivity. Electrical conductivity is measured by the resistance offered to the passage of an electrical current.

Conglomerate. A rock formed of pebbles and rounded boulders cemented together. Sedimentary conglomerates are ancient shore deposits whose pebbles and sands are hardened into rock. Volcanic conglomerates are formed of rounded masses ejected from volcanic vents cemented together by volcanic sand or ash (tuff) rock.

Construction Account. Many of the Lake Superior copper mines summarize their finances so that the cost of operation is divided into two classes, one being for general working expenses and the other for construction, sometimes classed as capital account. It includes new buildings and machinery on surface and frequently new mine openings.

Contact. The junction of two dissimilar bodies of rock, as limestone and porphyry.

Contact Deposit. A mineral deposit found between two unlike rocks, usually applied to an orebody at the contact between a sedimentary rock, limestone shale or sandstone and an igneous rock.

Contract. In mining applies to an agreement between operator and workman to pay latter so much per foot for excavating drift or stope. These men are known as contract miners and are usually skilled workmen.

Copper Ore. Rock carrying copper mineral or minerals. See detailed descriptions of copper-bearing minerals in Chapter III.

Core. A drill core.

Cornish Pump. A form of mine pump actuated by long rods reaching from surface down the shafts.

Costeining. Proving an ore deposit or vein by trenching across its outcrop at approximately right angles.

Counterbalance. Hoisting plants usually are worked in counterbalance for deep shafts. The weight of the descending cage or skip is used to partially offset the weight of the ascending cage or skip.

Counter Vein. A cross vein running at approximately right angles to the main orebody.

Country Rock. The predominant rock about an ore deposit.

Course. The direction or strike of a vein; a stretch of mineralized matter in a vein.

Crab. A hand winch.

Creeping. The slow movement of the rock in mine workings caused by the pressure of super-incumbent and adjacent rock masses.

Cretaceous. A geological age characterized by chalky beds in England. The limestones of Arizona and Mexico are largely of Cretaceous age and so are the coal-bearing beds of the Rocky Mountain region.

Cribbing. Close-set round timbers supporting an underground roof, or lining a shaft.

Croppings. Outcrops.

Cross Course. An intersecting vein.

Crosscut. A mine opening, similar to a tunnel, that is driven across the rocks at approximately right angles to the orebody; a drift follows the lode or vein.

Cross Vein. An intersecting vein.

Crucible. A vessel of refractory material in which ores and fluxes are melted.

Crystals. Geometrical forms, with plane faces, of infinite variety, assumed by the majority of minerals.

Cupola. An upright furnace used in smelting.

Cupriferous. Copper-bearing.

Cut. To intersect an orebody; the portion of a working face of mineral removed at one operation.

Cwt. A hundredweight, or 112 lbs. avoirdupois.

Cyanide (V.) To treat crushed rock with a weak solution of cyanide of potash or of soda, extracting the gold and silver, which is recovered by precipitating it with zinc.

Datum Level. The level (usually sea-level or mean level of nearest considerable body of water) from which altitudes are measured in surveys.

Dead Roasting. Sulphide ores are dead roasted when all the sulphur possible to drive off by roasting has been eliminated.

Dead Work. Underground work which is not in ore. The opening of new shafts, drifts and winzes preliminary to the stoping of the mineral bodies.

Debris. Broken down rock material. The fragmental material broken off by frost, etc., from rock exposures; talus.

Decomposed. Rock or ore altered and leached by air and water.

Decrepitate. To break into fragments with violence, under the blow-pipe or great heat.

Dendrite. A moss or fern-like mineral stain or film usually of manganese or iron oxides.

Denouncement. In Mexico, the formal filing of a claim to mineral land.

Denudation. The uncovering of rock or an ore deposit by the weathering of wind and water, or glaciation.

Dessication. Drying out. Loss of water from any given substance.

Detritus. Debris. Broken down rock, usually applied to gravel, etc., moved and deposited by streams or glaciers.

Development Work. Mining work performed to develop or expose an ore deposit and to open up new and further amounts of ore.

Diabase. A dark trap rock composed largely of a felt of lath shape crystals of plagioclase feldspar, plus ferro magnesian minerals, etc.

Diamond Drill. A machine used for boring holes in rocks, with a hollow cylinder for a bit, whose end is set with black diamonds or bort.

Die. The iron block in the mortar, onto which the ore is fed for crushing under the stamp.

Dike. A vein of igneous rock. Locally a reef or wall of rock projecting above the ground. Also applied to the hardened waste material filling fissures.

Diorite. A crystalline granitic rock with predominant plagioclase feldspar.

Dip. The inclination or angle at which a lode or vein pitches downward into the earth.

Dip Compass. A compass having the needle fixed to swing in a vertical plane, so it can be readily deflected by magnetic rocks.

Dirt. Frequently used to designate ore broken underground.

Disintegration. The breaking down of rock through weathering.

Disseminated Ore. Ore carrying fine particles of metallic minerals, usually sulphides, scattered through rock or gangue matter.

Disturbed. An orebody is disturbed when lacking defined walls and settled character.

Dolomite. Magnesian limestone; carbonate of calcium and magnesium.

Donkey. A small auxiliary hoisting engine, usually operated underground and actuated by compressed air, or used for preliminary work at new shafts or exploring pits.

Downcast. A shaft having a downward air current.

Draffage. An arbitrary allowance claimed by some British smelters to cover loss of weight in transport.

Dress. To separate ore from gangue rock by hand or machinery.

Dressing Floor. A floor of dirt surface where ore is sorted by cobbing and picking.

- Drift.** A horizontal passage in a mine following the lode or vein.
- Drift Copper.** Native copper found in gravel and clay, far from original orebody, from which it has been carried by glaciers.
- Drifting.** Opening drifts. Driving.
- Drill.** A steel bar with chisel shaped end used for boring in rock. Is struck on the other end by a hammer, or is forcibly driven against rock by air piston.
- Drill-Core.** Solid, cylindrical cores of rock cut out by a diamond drill. These form a record of the strata through which the drill has passed.
- Driving.** Extending a drift horizontally.
- Drum.** The cylinder of a hoisting engine, around which the rope is wound.
- Druse.** The crystallized crust lining a cavity in rock or ore.
- Dry Ore.** Argentiferous ores containing insufficient lead for fluxing in a smelter.
- Ductile.** That which is capable of being extended in length by tension, as into wire.
- Ductility.** The capacity of a metal to elongate, when under pull from the ends, without cracking or breaking.
- Dump.** A place for depositing rock taken from a mine. A pile of ore or rock; usually refers to the worthless rock hoisted from underground.
- Dyke.** See dike.
- Dynamite.** Nitro-glycerine held in wood pulp, infusorial earth, or some similar article, to render it safer in use. Strength varies according to percentage of nitro-glycerine contained.
- Eisener Hut.** German for iron hat, or gossan.
- Electrolyte.** The solution in which electrolytic separation of metals is carried on.
- Electrolysis.** The separation and redeposition of metals by electrolytic action.
- Electrolytic.** Applied to copper means copper made from impure metal by electrical decomposition and redeposition; the bar of impure copper is gradually dissolved and the pure metal redeposited at the opposite pole of the battery, while other metals fall as black slime to the bottom of the tank in which the solution (electrolyte) is held.
- Elvan.** Cornish name for dikes of greenstone, porphyrite and granite.
- Erosion.** The wearing away of surface masses of rock and soil by the elements, or by glacial action.
- Eruptive.** Igneous rocks, brought to the earth's surface or outer crust by volcanic activity.
- Escarpment.** A rock wall, nearly or quite vertical.
- Exfoliation.** The separation of thin leaf-like layers from a rock mass.
- Exploders.** A fulminating cap for setting off high explosives.
- Exploitation.** The productive working of a mine or ore deposit.
- Exploration.** Prospecting work; looking for ore.
- Face.** The inner or working end of any mine opening. A face of ore is the ore shown at the extreme end of a drift, stope or tunnel.
- Fahlband.** A zone or band of crystalline rock, carrying finely disseminated metallic sulphides.
- Fall of Ground.** Rock falling from the roof into a mine opening.
- False Set.** A temporary set of timber.
- Fan.** A machine for forcing air into a mine.
- Fathom.** Six feet. In stoping, a fathom is a cube of six feet.
- Fault.** Dislocation of a vein or of a rock stratum.
- Feeder.** A branch or small vein joining a larger one.
- Ferruginous.** Containing iron.
- Filling.** The waste material used to fill up old stopes or chambers; allowing a mine to fill with water.
- Filter.** A machine for removing the solution or moisture from crushed

ore, usually by forcing it under pressure through canvas or cloth, leaving the muddy ore mass behind.

Fines. The finer particles of ore or metals saved in concentrating processes.

Finisher Jigs. The jigs used to save the smaller particles of ore in a concentrator or stampmill.

Fire. The miner's warning cry when a blast is to be set off is "fire."

Fissile. Splitting easily into plates.

Fissure Vein. A fissure in the earth's crust filled with mineral matter.

Flake Copper. Very thin scales of native copper.

Float. Loose ore or rock, away from its parent mass.

Float Copper. Drift copper.

Float Ore. Loose ore, often water worn ore, found at a distance from its outcrop.

Flocculent. Resembling tufts; cloudy masses of slightly coherent material floating in a liquid.

Floor. The floor of a drift or other horizontal mine opening; the rock bed beneath an orebody.

Flour Copper. Very fine scaly native copper that floats on water and is very difficult to save in milling.

Flotation. A process of concentrating or separating out the valuable metallic sulphide minerals of an ore, by mixing the pulverized ore with acid and oil and agitating it by air or paddles to make a scum or froth that takes up the metallic minerals and floats them off, leaving the waste behind.

Flume. A launder or conduit for carrying water.

Flux. Salt or other substance used in furnaces to form a fusible compound with the waste matter and make slag.

Fluxing Ore. An ore containing appreciable metallic values, but smelted mainly because containing fluxing agents required in the reduction of richer ores.

Foliated. Having a laminated structure.

Foot. The foot-wall.

Foot-Wall. The rock wall under a vein or underlying inclined mineral deposit.

Fork. The branching of a vein.

Formation. A term used by miners for any particular body of rock, as a granite formation, a sandstone formation. Geologists limit term to groups or rock beds of similar age.

Founders Shares. The few shares issued to the individuals organizing a stock company. In companies owned outright by other companies, founders shares are issued to as many individuals as are required to incorporate and hold the offices required for corporate management, as the laws do not permit a corporation, which is an artificial person, to form another corporation, or to serve as a director of another corporation.

Free. A metal is free when virgin or native, and not combined chemically with any other element.

Free Milling. An ore that readily yields metallic contents by simple means, such as amalgamation or cyanidation.

Freeze. A furnace freezes when the molten charge solidifies.

Friable. That which may be pulverized or broken up easily.

Froth. Foam; a mass of bubbles.

Furnace. A structure or oven for the smelting of ore.

Fuse. A cotton cord with a gunpowder core, so made as to carry fire to an explosive.

Fusible. That which may be melted.

Fusion. Melting. Alloying metals while liquid, through heat.

Gabbro. A rock composed mainly of plagioclase feldspar and iron magnesia minerals.

Gad. A small steel wedge or chisel.

- Galena.** Lead sulphide; see Mineralogy.
- Gallery.** A drift or level.
- Gallows Frame.** The timber or steel framework over the mouth of a shaft, carrying a sheave-wheel, over which the hoisting rope passes to the engine.
- Gangue.** The waste rock or mineral in which ore or metallic particles are held.
- Gash Vein.** A gash shaped fissure vein, rapidly pinching downward.
- Geode.** A hollow crystal lined cavity, or the rounded mass containing such a cavity.
- Geological Horizon.** Rocks of one geological age.
- Geology.** The science of the formation of the earth and the rocks of which it is made.
- Giant Powder.** Dynamite.
- Girt (or Girth).** A horizontal brace in direction of a drift in mine timbering.
- Glaciation.** The erosive effect produced by glaciers.
- Glance.** A metallic sulphide showing a bright, shining surface. Copper glance is chalcocite. Silver glance is argentite.
- Glory Hole.** A large open pit from which ore is or has been extracted.
- G. M. B.** "Good Merchantable Brands"—an English grade of refined copper. Term replaced by Standard.
- Gneiss (pronounced nice).** A banded coarse-grained rock often formed of the same minerals as granite, often in patchy and irregular arrangement. May be a diorite gneiss, granite gneiss, etc.
- Gob.** Waste used to fill worked-out openings.
- Gophering.** Prospecting work confined to digging shallow pits or starting adits. Term used from similarity of this work to the crooked little holes dug in the soil by gophers.
- Gossan.** Iron hat. Is the leached capping, usually quartzite, showing yellow to reddish brown iron stains found overlying veins.
- Grade.** The percentage, or value, of ore and partly refined metals; the percentage of rise in roads or mine openings driven on an approximately horizontal plane.
- Gram.** A metric weight of 15.4 grains or 1-500 of a pound avoirdupois.
- Granite.** A dense, granular rock of igneous origin, composed of varying proportions of quartz, feldspar and mica.
- Granulated.** In the form of grains.
- Gravity Stamp.** A stamp, usually set in batteries of five, in which the piston is raised by a cam, the stamp crushing the charge in the mortar by its weight, when allowed to fall.
- Greenstone.** An altered basic porphyry; usually andesite or diorite.
- Grizzly.** A screen or grating of heavy iron rails or steel bars, through which the smaller pieces of rock or ore fall through.
- Groundsill.** The bed-piece of a set of mine timbers.
- Guides.** Perpendicular square wooden strips or stringers for guiding cages in vertical shafts. Cables are used instead in some mines.
- Gut.** To rob, or extract, only the rich ore of a mine.
- Hade (American).** Inclination or dip of a vein, measured from the vertical, while dip is measured from the horizontal. Becoming obsolete. Should not be confounded with rake of an ore-shot.
- Hanging.** The hanging wall; the rock on the upper side of a mineral vein or deposit.
- Hardinge Mill.** A cone-shaped tube mill, resting horizontally and half filled with pebbles, which fall and crush ore when mill is revolved.
- Haulage Plant.** A mechanical installation for the underground tramming of rock, operated by ropes, compressed air or electricity.
- Head or Heading.** An underground level or airway in a mine. Also water pressure.

Headframe or Gallowsframe. A building or framework, fitted with sheaves, over the mouth of a shaft.

Heap-Roasting. Burning the sulphur out of ores piled in heaps, with a small amount of wood or other fuel.

Heave. A horizontal dislocation of a vein or bed caused by a fault. Also applied to the rolling out of line of a lode in making depth.

Hectare. An area 100 meters on each side. Called *pertenencias* in Mexico. Equals 2.471 acres.

Hoist. An engine for raising ore from a mine and for lowering men and material.

Holing Through. A drift or other mine opening is holed through when a connection is made between two separate sections working toward each other.

Horizon. The sky-line, commonly used in the sense of absolutely flat, as shown by a spirit level. Geologically, all rock strata of the same geological period.

Horse. A mass of country rock enclosed in a mineral vein or deposit.

Horsepower. A measure of power of an engine. One horsepower is rated as equivalent to raising 33,000 lbs. *avoirdupois* to a height of one foot in one minute.

Horse-Whim. A windlass operated by horse power.

Hot Blast. Heated air supplied to a blast furnace.

Hungry. Nearly or quite barren.

Hunt & Douglas Process. A leaching process, using chloride of iron and salt, to dissolve oxide ores of copper.

Huntington Mill. An improved Chilean mill.

Hutch. See jig.

Hydrated, Hydrous. Containing water combined chemically.

Hydro-Metallurgy. The reduction of ores by wet processes.

Igneous. Rocks consolidated from a molten state; includes not only volcanic rocks but those deep-seated rocks, hardened under cover, which have been exposed to view by erosion, or artificial openings.

Impregnated. Containing metallic minerals, scattered or diffused through the mass. Properly used in referring to country rock carrying mineral similar to that in the vein.

Incrustation. A solidified coating, usually crystallized.

Infiltration. The deposition of mineral matter from percolating waters.

Ingot. A mass of metal cast in a peculiarly formed mold; applied only to gold, silver or copper. Iron and lead are cast in pigs.

In Place, In Situ. Rock or ore that is in the position where deposited by nature.

Intrusive. Igneous rock masses pushed up through other and older rock formations.

Iridescent. Showing the colors of the rainbow.

Iron Hat. Gossan. Outcrop of iron-stained material over an ore deposit or vein.

Jack. A miner's name for sphalerite. Is called black jack, ruby jack or rosin jack, according to color.

Jig. A machine for concentrating ore; i. e., separating the metallic mineral from the waste, by means of oscillatory or vibratory motion, aided by jets of water. The heavier ore minerals sink and the lighter rock or gangue is carried off by the current.

Jump. To locate and take possession of mineral lands held or claimed by another party.

Kaolin. China clay.

Keweenaw. Pertaining to or of the Keweenaw formation or rocks in which the Lake Superior copper veins occur.

Kibble. A bucket used for hoisting material in a shaft.

Kilo or Kilogram. A metric weight of 2.2046 lbs.

- Kilometer.** 0.621376 miles. For rough computations may be figured as 3-5 of a mile.
- Kin.** A Japanese weight of 1.31 lbs. avoirdupois.
- Kindly.** The appearance of rock carrying or promising to carry good mineral values.
- Ladderway.** The series of ladders giving ingress and egress to a mine; the compartment in which the ladders are located.
- Lagging.** Timber, usually of small diameter, placed over the cap-timbers of incline shafts and drifts, to prevent damage from falling rock.
- Lamina.** A thin plate. Plural is laminae.
- Lamellar.** In thin sheets of laminae.
- Lander.** The top man at the mouth of the shaft, who receives signals from below, and attends to the unloading of rock sent up in buckets, skips or cages.
- Launder.** A wooden flume or sluice, used to convey water, or tailings held in suspension in water.
- Lava.** Rock from volcanoes.
- Leach.** To dissolve metals out of ore by water, or acid or both.
- Leaching.** The process of extracting a metal from its ores or salts by treatment with a solvent, such as weak acid.
- Lead** (pronounced Leed). A mineral body.
- Leader.** A small vein running into a larger one.
- Ledge.** The solid vein or lode.
- Leg.** An upright timber supporting the cap of a set of timber.
- Lense.** An orebody of lenticular form.
- Lenticular.** Having the shape of a double convex lense.
- Level.** A horizontal opening in a mine, usually connected with a shaft. Levels are commonly opened at stated intervals as depth is gained—usually at 100 feet in modern mining practice. The word "level" frequently is used interchangeably with the word drift, but is more comprehensive. Both drifts and crosscuts may be opened on a level, though a crosscut is not a level.
- Limestone.** A rock composed of lime carbonate.
- Lixiviation.** The process of leaching out the metallic contents of ores.
- Locate.** To locate a mining claim is to file a notice claiming ownership, at the point where mineral is discovered and to put up stakes or monuments at the corners of the rectangular area claimed.
- Location Work.** Labor required by law to be done on mining claims within 60 days of location, in order to establish ownership.
- Lode.** A metalliferous vein. In Lake Superior region refers to the mineralized beds. Is used generally as synonymous with vein. Used by geologists as meaning an aggregation or congerie of mineralized veins.
- Long Ton.** An English ton of 2,240 lbs. avoirdupois.
- Low Grade.** Ore whose recoverable value yields but slight profit per ton. Carrying mineral values but sparingly.
- Magma.** An originally molten mass of rock coming to the earth's crust from depth.
- Magmatic Segregation.** The process by which the different constituents of molten rock masses crystallize at varying temperatures with a tendency to separate themselves, so far as circumstances allow, from the other compounds.
- Malacate.** Mex. A horse whim with vertical drum used for hoisting in Mexico. Sometimes is called a Zacatecas malacate.
- Mass.** Copper. A solid chunk of native metal.
- Massive.** Rock without defined lines, of cleavage; ore occurring without appreciable gangue, as contradistinguished from ore disseminated throughout a gangue.
- Matrix.** The rock between imbedded objects, such as a particle or mass of ore or native metal. More rarely a metallic mineral is the matrix cementing together rock particles.

Matte. A furnace product composed of copper and iron sulphides, produced by shaft or reverberatory fusion. Usually contains 30-40% copper, but varies from 20-60%. Is "blown" to blister copper 98-99% fine in bessemer converters.

Matting. The process of smelting sulphide ores into matte.

Mesa. Spanish for tableland or plateau.

Mesh. The size of openings in a screen.

Metalliferous. Carrying metal.

Metallurgy. The science and practice of reducing metals from ores and minerals.

Metamorphic. Rock that has been changed from its original condition by pressure, chemical action, heat or other causes.

Metamorphosis. The process by which changes in structure are effected in a rock form by heat or percolating waters.

Metasomatic. Replacement, particle by particle, so that original structure is often preserved.

Meter or Metre. 39.37 inches.

Metric Ton. A weight of 2,204.6 lbs. avoirdupois.

Mica. A scaly transparent mineral. Biotite is brown or black mica; muscovite or isinglass is the clear mica used in stoves, lanterns, etc.

Mill. Works for treating ores without smelting.

Milling. Dressing ore in a mill; also dumping ore in a winze to be drawn off into cars or wheelbarrows on a lower level.

Mill Run. The treatment of a definite quantity of ore in a mill. Also the result or yield thereof.

Mill Test. The determination of the metallic contents and recoverable values in any given ore by the milling of a sufficient quantity to afford average milling conditions.

Miner. In strict construction, the man that does the drilling and blasting in a mine. In a broader sense, all men working underground.

Mineral. Ore or rock containing metal. In the Lake Superior district the term mineral has a special use, being employed to designate the concentrate of native copper, with its small amount of admixed amygdaloid or conglomerate, as it comes from the mill, before going to the smelter.

Mineral Belt. The strip or zone of mineralized territory in a given formation or district.

Mineral Right. The ownership of mining rights under the surface of land owned by another holder. Mineral rights sometimes are reserved in selling land in some districts.

Mineralized. Carrying metalliferous values.

Miners Inch. The amount of water that will flow through an opening one inch square under a six-inch head, which is 2,274 cubic feet in 24 hours, or 94¾ cubic feet per hour, equal to 655 wine gallons or 593 imperial gallons hourly.

Mining Engineer. Graduates of technical mining schools are given the degree of engineer of mines and sign the letters E. M. after their names. The letters M. E. stand for mechanical engineer, when given by a school, but are often used by men engaged in mining, who lack scholastic degrees, as an abbreviation for mining engineer, or mining expert.

Misad Hole. A drill hole, charged with explosives which fails to be set off by the fulminating cap.

Moil. A steel bar, like a drill, except that it is sharpened to a point instead of having a cutting face.

Molybdenite. A graphite like, flaky, lead colored mineral found in some ores. Composed of molybdenum and sulphur.

Momme. A Japanese weight equal to 3.75 grams or 2.4113 pennyweights.

Monocline. Upturned beds of rock that have a practically uniform dip.

Monzonite. A granitic rock intermediate between diorite and granite.

Morgen. A South African land measure—2.1165 acres, or 1.44 claims.

Mortar. An assayer's mortar in which rock or ore is crushed with a

pestle. A mortar is the box, about the stamp of a mill, in which the ore is stamped and crushed.

Mother Lode. The main lode of the district. In America applies to the mineralized belt of the California gold region.

Mouth. The surface entrance or opening of an adit, tunnel or shaft.

Mucker. Ore shoveller, who loads the mine cars and in most mines is also a trammer, pushing the cars to the shaft or tunnel mouth.

Mullock. Australian for waste-rock broken underground.

Mundic. Pyrrhotite, magnetic pyrite; iron sulphide.

Mynpacht (South Africa). A part (10%) of a farm, which the owner has the first right to locate or peg out, when the farm is proclaimed a public goldfield.

Nickeliferous. Carrying nickel.

Nodule. A small concretionary, rounded mass of mineral matter.

Non-Conformable. Rock strata not associated originally in the position now occupied.

Nugget. A lump of native metal; usually applied to gold.

Open Cast, Open Cut. A mine worked as a quarry, or pit open to the sky.

Ore. Metallic minerals; mineralized material or rock, holding metallic minerals. Called pay ore when it can be profitably worked; low-grade ore when it yields but slight profit.

Ore Car. A mine car for carrying ore or waste rock.

Ore Chute. An opening in ore or rock through which ore is dropped downward. Also used for ore bins and pockets.

Ore Dump. A heap or pile of ore at the tunnel mouth or top of shaft.

Ore-Shoot. An orebody or portion of a vein carrying high-grade, or payable ore. Usually has a vertical or diagonal dip on the plane of the dip of the vein.

Orthoclase. A white, or pale colored feldspar composed of silicate of potassium and aluminum. Occurs as white crystals or spots in porphyry.

Outcrop. The apex, or part of a vein or mineral deposit that is exposed at the surface of the earth.

Outlier. An isolated mass of rock or group of rocks lying at a distance from the main body, and separated therefrom, on the surface by a different rock formation.

Output. Production.

Overburden. Waste material, usually drift or alluvium above the solid rock, or orebody.

Overhand Stopping. Removing ore in ascending steps.

Oxide. An ore of any metal or metals chemically united with oxygen.

Oxidize. To unite with oxygen. Many minerals and most metals oxidize with greater or less rapidity when exposed to air or water.

Panning. To wash gravel, etc., in a pan, so that the sand and gravel is loosened and thrown out and the gold or heavy metallic minerals left in the pan.

Patent. A deed given by the government, to mineral lands.

Patio. A walled yard with paved floor in houses and mine plants, in Mexico and other Spanish countries.

Paystreak. The rich band, part, or zone in a vein or ore deposit which carries the profitable, or pay ore.

Pegmatite. Very coarsely grained granite; a giant granite.

Penthouse or Pentice. A shed-roof erected in the bottom of a shaft, when sinking, to protect miners from accidental fall of rock, timber or tools from above.

Peroxide. The oxide of any metal containing the greatest proportion of oxygen.

Pertenencia. The unit of a mineral claim in Mexico; 100 meters square, or one hectare, 2.471 acres.

Peter Out. To pinch out, or feather out and end.

Petrology. The study of rocks.

Phosphate. An ore of any metal or metals with which phosphorous and oxygen are chemically united.

Picul. A Chinese weight of $133\frac{1}{2}$ lbs.

Pillar. A section, or block of ore left in place to support shafts or roofs.

Pinching. The narrowing of a vein.

Pinching Out. The narrowing of a vein to extinction.

Pipe Vein. An orebody of chimney form.

Pitch. The angle and direction of dip or take of an ore-shoot in a vein. If a vein dips east, an ore-shoot may pitch at a flatter angle than the vein, to the N. E. or S. E.

Plain. A flat or nearly level country.

Placer. A deposit of metal-bearing gravel or alluvium.

Plant. The machinery equipment of a mine or reduction works. In general use the term includes buildings housing machinery.

Plat. To draw to scale. In Lake Superior usage it is the station or enlargement of a level, to give extra space for loading and unloading the cage, skip or bucket.

Plumbiferous. Carrying lead.

Plutonic. Rocks of deep seated, igneous origin.

Pocket. An orebody of small extent. A natural underground reservoir of water. A cavity cut in the rock underground to hold ore. A bin at shaft house or mill, in which ore, flux or fuel is stored.

Pockety. Carrying only occasional bunches of good ore.

Poling. The process of deoxidizing molten copper in a reverberatory furnace by stirring with long poles of green timber.

Poll-Pick. A tool having a pick on one end, and a poll, or hammer head, on the other.

Pood. A Russian weight of 36.112 lbs. avoirdupois.

Poppet-Head. Framework or gallowsframe over a shaft, for sheave-wheel and hoist rope.

Porphyritic. Carrying isolated crystals in a groundmass, like plums in a pudding.

Porphyry. Properly, is any igneous rock showing phenocrysts, i. e., distinctly isolated crystals in a dense or crystalline matrix. Porphyry may be granite, quartz, or one of several other rocks.

Pound. The troy pound alone is used for gold, silver and platinum only. It is 0.82286 of an avoirdupois pound. A pound of gold weighs 12 troy ozs. or 5,760 grains and the avoirdupois lb. 7,000 grains.

Primary. The first; primary ores are those first or originally formed in an ore deposit, before alteration began. Also applies to the oldest rock formations.

Prop. A heavy timber placed with its foot against the floor of a mine opening, and its top against the roof, to support the rock above.

Prospect. To seek for mineral; a new mining property that has not yet been developed enough to be called a mine.

Prospector. A searcher for mineral deposits.

Protoxide. The oxide of any metal containing the least proportion of oxygen.

Puddingstone. A coarse conglomerate showing rounded pebbles.

Pulp. Pulverized ore or concentrate.

Pulverize. To crush to powder.

Pulverulent. That which may easily be reduced to powder.

Pyrrhotite. Iron sulphide, often called mundic or magnetic pyrite.

Pyrite. Iron disulphide. Fools gold.

Pyrites. A local term for pyrite and for sulphide ores; more properly iron disulphide.

Pyrolusite. A black, manganese ore containing 63% manganese.

Quarry. An open pit, of varying size, sometimes several acres, from which stone or ore is mined.

Quarter-Section. In the United States a quarter of a square mile; 160

acres, laid out in a parallelogram, each side of which is one-half mile in length.

Quartz. Crystalline silica. Any hard silicious ore, in miners' usage.

Quartz Claim. In the United States mining claims are of two classes, placer claims, carrying mineral, usually gold, in alluvium, and quartz lode claims, any prospect carrying metalliferous bodies in place.

Quartzite. An altered (metamorphosed) crystalline sandstone.

Quartzose. Rock having much quartz in its composition.

Quicksand. Fine sand, which flows easily when wet.

Ragging. Cornish for rough cobbing; broken lumps of ore of medium size.

Raise or Rise. A shaft or winze that is being opened from below. Sometimes called upraise or uprise.

Rake. The pitch of an ore-shoot on the plane of the vein. Also applied to cross veins, which are sometimes called rake, or counter veins.

Range. A mineral belt; also in many American states a surveyor's term for describing and locating lands. The state is surveyed in sections, towns and ranges. A township comprises 36 sections and is a square of six miles. Each township receives a double number, one for the town and one for the range. The towns are numbered consecutively from south to north, and the ranges are similarly numbered from east to west. Thus T. 2 N., R. 5 W. means Township 2 north or 12 miles north and Range 5, or 30 miles west of the State meridian.

Reamer. A tool like a bit, used to enlarge a hole previously drilled.

Reduction. The separation of metals from their ores.

Reef. A quartz vein or lode. A projecting ledge or inclined wall like an outcrop.

Refining. The elimination of impurities from crude metals, or separation of metallic alloys obtained in the reduction of ores.

Refractory. A refractory ore is one that cannot be smelted or otherwise treated by ordinary metallurgical processes. A refractory stamp-rock is one that is pulverized with unusual difficulty.

Regulus. The metallic material that separates and settles in the bottom of a pot of molten matte, or slag.

Reniform. Kidney-shaped.

Reserves. The amount of payable ore, developed and ready for extraction, or blocked out ahead of immediate requirements.

Reverberatory Furnace. A smelting furnace in which the flame from the grate below is reflected back by the roof, on the charge of ore.

Rise. A raise or opening driven upward.

Roasting. Driving off sulphur and other volatile elements from ore, by heat. When done in a furnace, under great heat, the process is called calcining.

Rob. To remove pillars and other supports from a mine for their mineral values, regardless of the future of the property.

Rock. Lake Superior; applied to ore mined and ready for the stamp mill. In English practice ore is called STONE. More properly applied to the stony matter surrounding ore, or constituting the earth's crust. Is a synonym for stone.

Rock Crusher. A machine for reducing rock or ore to smaller sizes. Crushers are of two types, the jaw-crusher and the centrifugal. The jaw crusher works as a man cracks nuts with his teeth, the centrifugal operates on the plan of a coffee-grinder.

Rock Drill. A power drill.

Rock Filling. Waste rock, used to fill up worked-out stones to support the roof.

Rock House. Lake Superior; the building (usually the one over the shaft) where copper-bearing rock from the mine is dumped from the ore skip (or bucket), is screened, crushed and stored in a bin, ready for shipment to the mill.

Rolls. Heavy steel rolls, worked in pairs, like a clothes wringer, for crushing rock and ore.

Roof. The rock overhead in a mine opening.

Room. Similar to a stope; term usually applied to mines working mineral bodies lying nearly horizontally.

Royalty. A percentage of the ore, or value thereof paid to the land owner by the lessee of the mine. Often a fixed sum for each ton of ore extracted.

Run. See mill run. A bar or course of ground better or worse than the average value of the mine.

Running Ground. Superincumbent material that breaks off readily and falls into the mine openings.

Saddle. Depression or U shaped fold. The reverse of an arch or anticline.

Safety Cage. A cage furnished with automatic appliances to stop its descent in case the cable breaks.

Salting. Placing rich, foreign ore, minerals or substances in a mine to deceive intending purchasers or other interested parties.

Sample. A specimen of ore from a mineral deposit. A selected sample is misleading because containing far above average values, and splendid samples frequently come from the poorest mines. An average sample is what its name purports—if it be an average sample.

Sampling. Cutting a representative part of an ore deposit, which should truly represent its average value. Most usually a trench-like cut 4 inches wide and 2 inches deep, cut into the clean face of ore and across its course. Honest sampling requires good judgment and practical experience.

Sand Pump. A pump, usually centrifugal, designed to lift water carrying large quantities of coarse tailings or sand in suspension.

Sands. Tailings from the stampmills of Lake Superior copper mines.

Sand (or Tailings) Wheel. A large wheel, having buckets on its inner perimeter, for elevating water carrying stamp-sand.

Scale Copper. Copper in very thin flakes.

Schist. A crystalline, usually micaceous rock of foliated structure, made up of superimposed flattened particles.

Scoria. Slags from copper smelters; volcanic ash.

Scoriaceous. Of the nature of scoria.

Scram. To search for ore in a mine that is apparently worked out and to extract it.

Screen. A grating of perforated metal or woven wire.

Seam. A thin layer of rock or ore.

Secondary Enrichment. An enrichment of a vein or an orebody by material of later origin, often derived from the oxidation of decomposed overlying ore masses. Nature's process of making high-grade out of low-grade ores. First discovered by Weed and announced by publication in Geol. Soc. of America program, Dec. 8, 1899. Confirmed by Emmons and by Van Hise, Feb., 1900.

Sectile. Easily cut.

Section. A field or district; also, in the U. S. a square mile of land.

Sedimentary. Rocks formed by deposition from water, as contradistinguished from rocks formed by igneous action.

Selvage. A clay seam along which parting occurs. Also called fluccan.

Set. A framed form of timber, used for supporting ground in a mine.

Shaft. A pit or deep mine opening.

Shaft-House. A building at the mouth of a shaft, where ore or rock is received from the mine.

Shale. A hardened clay with fissile structure.

Shear Zone. A belt in which the rocks are crushed by many parallel fissures.

Sheave. A grooved wheel, notched to carry rope; an open pulley.

Shift. A miner's work period of 8 to 10 hours' time; a force of men employed on one turn.

Shift Boss. A mine boss, or under-captain, in charge of a gang or shift of miners.

Shoot. See ore-shoot. To fire or explode dynamite in holes drilled for that purpose. An erroneous spelling for chute.

Short Ton. A weight of 2,000 lbs. avoirdupois.

Shot. A blast of some explosive.

Shot Copper. Small rounded particles of native copper, somewhat resembling small shot in size and shape.

Shrinkage Stopping. Taking out ore by blasting it down on a heap of broken ore. Working space for drilling is kept open by drawing out part of the ore from an opening beneath. Is a method of overhead stopping.

Silica. Quartz, a compound of oxygen and silicon. Ordinary sand is composed largely, if not wholly, of silica.

Silicate. A mineral composed of any metal or element chemically united with silica.

Silicious. Containing much silica or quartz.

Sill. The floor-piece of a set of mine timbers.

Sinking. The process of deepening a shaft or winze.

Sinking-Pump. A movable pump, usually vertical, hung in a shaft, and lowered, as the shaft is deepened.

Skip. An iron box, open at the top, running on guides, on four wheels, and hauled by a cable; used for hoisting ore and rock, and for lowering timber.

Skip-Road (or Way). A track of T-rails, spiked to wooden sleepers, on which a skip runs.

Slag. The melted rock or waste separated from the metal in a smelting furnace.

Slice. To remove ore in mine in pillars, or by successive slices.

Slickenside. A polished rock surface, showing striations produced by the opposing walls of a fracture rubbing and grinding against each other in the movement produced by earth stresses.

Slide. A bedding fault or slipping caused by the subsidence of the overlying rock formation. Also applied to masses of loose rock, or ore on a mountain slope.

Slime. Exceedingly small particles of rock and mineral held in suspension in water. This mud is called slum.

Slime Table. A circular revolving table, on which slimes flow and minute particles of mineral are saved.

Slip. A fault.

Sludge. The mixture of rock and water, or slime, formed by a diamond drill.

Sluice. A wooden trough, box, flume or launder.

Smelter. Works where ores or crude metals are reduced by fusion.

Soapstone. Steatite. A soft unctuous rock.

Soft Ground. Heavy ground. Rock about underground openings that does not stand well and requires heavy timbering.

Sollar. A platform or ladder landing in a shaft.

Spathic. Containing carbon dioxide; a carbonate.

Specimen. A sample of mineral selected because typical, unusual or exceptionally rich.

Speiss. Impure metallic arsenides produced in copper smelting; ore particles finely disseminated through a rock, usually occurring as impregnations.

Spelter. The common term for metallic zinc.

Sphalerite. Zinblende; zinc sulphide, the most common zinc ore mineral; is very often found associated with galena and chalcopyrite.

Spile. Lagging driven ahead of the regular timbering in treacherous ground.

Spitzkasten. Pyramidal boxes wherein ores are concentrated and sized by a jet of water fed from below.

Spoon. A long-handled spoon, used to scrape out drill holes.

- Sprag.** A prop or cross-timber set to secure the hanging wall in a stope. A short piece of wood used to block the wheels of a mine car.
- Spar.** A short, small branch from a vein.
- Square Sets.** A frame of mine timbers with mortised and tenoned sill, top piece and uprights of equal length, joined at right angles.
- Squib.** A fuse.
- Squeeze.** The slow settling down of the roof in mine workings without fracture.
- Stack.** The chimney of a furnace; usually employed to designate a number of furnaces, when used in the plural.
- Stamp-Mill.** A mill for crushing and concentrating minerals by stamps and jigs, etc.
- Stamp-Rock.** Rock containing fine copper that must be crushed and jiggged to recover the metal.
- Stamps.** Machines to crush rock or ore by heavy blows.
- Stamp-Shoe.** The heavy chilled iron casting attached to the lower end of a stamp piston, that does the actual crushing of rock in a stamp-mill. It hits against a round steel block called a die.
- Stanniferous.** Tin-bearing.
- Station.** A chamber in a shaft, cut out for pumps, landing place, etc.
- Station-Pump.** A mine pump permanently placed, as distinguished from a movable sinking-pump.
- Steatite.** Soapstone. A greasy mineral, having a talc base.
- Step Fault.** A series of faults, rising like steps.
- Stockwork.** A mass of rock penetrated by numerous small stringers of ore, the entire mass averaging sufficiently rich in metallic material to warrant its mining and treatment.
- Stone.** See Rock.
- Stope.** (V.) To mine or extract ore. (N.) The workings between levels or drifts, in which ore is broken down in a series of chambers and taken away for treatment.
- Stopping.** Breaking down the mass of pay-rock or ore above a drift. When stopping in an orebody of average width, miners can break rock much more quickly and cheaply than when driving the drifts.
- Stopping Ground.** Part of an orebody opened by drifts and raises and ready for breaking down.
- Strata.** The successive beds or layers of sedimentary rocks.
- Stratified.** Having regular layers of varying rock varieties.
- Stratum.** A layer or bed of rock.
- Streak.** The color given by a mineral when scratched or when rubbed on porcelain.
- Strike.** The horizontal direction of a vein, measured by the points of the compass; a discovery of ore.
- Stringer.** A thin seam of ore.
- Strip.** To remove the overburden of waste, drift or alluvial soil overlying an orebody.
- Stripping.** The waste or overburden above an orebody.
- Structure.** The form of a mineral, whether granular, crystalline or amorphous.
- Stull.** The top-piece of a set of mine timber. A timber prop supporting the roof of a mine opening.
- Sulphate.** A chemical compound (or a mineral) of a metal combined with sulphuric acid. An ore of any metal or metals with which sulphur and oxygen are united chemically.
- Sulphide.** A mineral or ore of any metal or metals with which sulphur is combined chemically.
- Sulphoantimonite.** A mineral in which sulphur and antimony are united chemically with a metal.
- Sulphoarsenite.** An ore mineral of any metal or metals with which sulphur and arsenic are united chemically.
- Sulphuret.** A sulphide. Term becoming obsolete.

- Sump.** The pit at the bottom of a shaft, where water collects.
- Surface Rights.** The ownership of the surface of land only, where mineral rights are reserved.
- Swabstick.** A stick used to clean out drill-holes.
- Syncline.** Canoe or U shaped fold of rock layers. The reverse of an anticline.
- Table.** A concentrating machine for separating finely crushed particles of ore from gangue.
- Table Land.** A plateau.
- Tailings.** The sandy and gravelly residue or refuse matter from a concentrating mill.
- Tamp.** To closely pack clay or other sticky earth into a drill-hole above the cartridges, to give greater force to the blast.
- Tap.** To draw off molten metal or slag from the vent of a furnace.
- Taper Off.** Cornish for stopping work temporarily.
- Tenor.** The percentage or average metallic content of an ore, matte or impure metal.
- Terrero.** Spanish for heaps of partly leached ore.
- Tertiary.** The third great geological period preceding the present Quaternary period.
- Test-Pit.** A shallow pit sunk to look for mineral.
- Texture.** A rock structure; is fine or coarse grained, porphyritic, etc.
- Throw.** The displacement of a vein caused by faulting.
- Timber.** The wooden logs and sticks used for underground supports.
- Timberman.** One who works at timbering a mine.
- Ton.** Long, 2,240 lbs.; metric, 2,206 lbs.; short, 2,000 lbs.
- Tonelada.** Spanish for long ton.
- Township.** Abbreviated T. or Twp. See Range.
- Trachyte.** A light colored volcanic rock made of alkaline feldspar with black mica and hornblende.
- Tram.** To load rock or ore in cars and push same to the shaft; a tramway.
- Trammers.** Men who load and tram the broken rock underground.
- Trap.** A dense gray, blue or greenish rock of volcanic origin; usually an old and altered basaltic rock.
- Trend.** The general direction of a mineral body.
- Trestle.** A frame-work of timbers, carrying tram-tracks.
- Tribute.** The money per ton or percentage of ore extracted which is paid by lessees to owners for the privilege of working a mine.
- Tripod.** The three-legged iron frame on which the working parts of a power-drill rest; a three-legged wooden frame over the mouth of a pit or shaft.
- Trommel.** A revolving cylindrical sieve for sizing ore.
- Troubled.** A vein is sometimes called troubled when disturbed or faulted.
- True Fissure Vein.** All mineralized fissures are true fissure veins. Term commonly used as meaning a fissure vein with promise of holding to great depth, in contradistinction to a gash vein.
- Tsubo.** A Japanese measure of 6 feet square, equalling 36 square feet.
- Tube Mill.** A steel cylinder half filled with flint pebbles, which crush ore when the "tube" is revolved.
- Tufa.** A limestone formed by spring waters. Name frequently used in place of tuff.
- Tuff.** Volcanic ash, cinder and lapilli, ejected from volcanic vents and deposited in layers from air in water and solidified by time and superincumbent pressure. Name also used for coarser volcanic debris, including breccia and conglomerate.
- Tunnel.** A practically horizontal opening entirely through a hill or mountain. Term is commonly used instead of adit, which is a horizontal gallery having only one opening to surface.

Turbine. The most efficient form of water-wheel; also a new form of steam-engine in which the entire movement of the power producing parts is rotary instead of reciprocating.

Tuyeres. The pipes in a furnace wall by which air is supplied under pressure, to either blast furnaces or bessemer converters.

Unconformable. With a break between. Rock beds lying at different angles or with erosion surface between.

Underhand Stoping. Cutting out ore from the floor of an opening. Removing ore in descending steps.

Underlay, Underlie. The downward extension of a vein or bed beneath the ground. Is technically the horizontal departure of a vein from the vertical measured in feet, per fathom (or 100'). Mineral bodies lying under a given tract, though not outcropping on surface.

Unpatented. Mining claims to which a deed from the U. S. Govt. has not been received. They are subject to annual assessment work, in order to maintain ownership.

Unstratified. Rock that is not bedded in layers.

Unwater. To free from water; to pump out or drain a mine.

Upcast. A shaft having an upward air current.

Upraise. A raise, an upward opening in a mine.

Van. To wash ore on a shovel, like panning.

Vanner. A concentrating table or machine for dressing ore by means of vibratory motion, aided by jets or water to carry away waste rock.

Vara. A Spanish-American measure of length, of 33 inches.

Vein. A rock fissure filled with mineral matter. A mineral body having defined walls. See contract vein and fissure vein.

Veinstuff. Vein filling. Also used for gangue.

Vertical Shaft. One sunk at an angle of 90° with the horizon, or directly downwards toward the center of the earth.

Virgin. Native metal occurring elementally, as distinguished from ore minerals, which are chemical compounds.

Vitreous. Of a glassy nature.

Volatile. That which can be driven off as vapor, by heat.

Vug. A cavity in the rock; usually lined with a crystalline encrustation.

W. The chemical symbol for tungsten.

Wall. The side of a mine opening or drift. The waste or country rock on each side of a vein.

Wall Plates. Are the two side pieces of a set or "frame" of shaft timbers, as distinguished from the end pieces.

Water-Jacket. An outer casing for a blast-furnace, in which water circulates, to keep the metallic furnace-walls from melting because of the intense heat of the charge.

Water Level. The level above which water does not rise, when a mine is allowed to fill. The water level is often the point below which altered and enriched ores are succeeded by base unaltered sulphides.

Weathered. Changed by long exposure to air and water.

Wet Process. Leaching or lixiviation.

Wheal. Cornish for mine.

Whim. A windlass with a vertical drum revolved by horse-power and used for hoisting.

Whip. A fixed pulley with hoisting rope passed through it and pulled by a horse or mule.

Wilfley. A Wilfley concentrating table.

Winch. A windlass.

Winding. Hoisting with rope and drum.

Windlass. A device for hoisting from a pit or shaft, by means of coiling a rope or cable around a drum, with crank handles.

Winze. A shaft, usually short, extending downward from the floor of a mine opening.

Wire Bars. Refined copper cast into bars for wire drawing.

Workings. The underground openings of a mine.

Wulfenite. See molybdenum in **Minerals**.

Zinblend. Sphalerite. Sulphide of zinc.

Zinckiferous. Carrying zinc.

Zinc Sulphide. A compound of zinc and sulphur. See **Minerals**.

Zn. The chemical symbol for zinc.

CHAPTER II.

MINERALOGY.

Ore Minerals:

Ores as mined are very seldom composed entirely of ore minerals, usually consisting of a mixture of quartz, or other non-metallic mineral, or of altered rock and metal bearing minerals. The mixture constitutes ore when it contains enough value, in one or more metals, to pay for the cost of mining, concentrating, transportation, smelting and marketing. As this cost varies with each mine and locality, and the price of every metal save gold, also fluctuates, there is a wide range of value to "ore." The Alaska gold quartz mines operating on a gigantic scale can mine, mill and reduce their product for less than \$1 per ton, whereas many smaller mines cannot make a profit on \$3 ore of similar character. Copper ores show a much greater margin, between the costs at the Utah Copper Co. and those of small vein mines.

In the following pages I have given a list of the more important ore minerals of each metal. It is intended only for general reference, the minerals being arranged under the name of the metal. The list of copper minerals is complete, giving every mineral containing copper. For sight tests and recognition of ore minerals, see Practical Field Mineralogy, Farrell-Moses, 1912.

Aluminum.

BAUXITE. 74% alumina. Hydrated alumina. Regarded as a hot spring deposit. Occurs in pockets in clay in Arkansas.

CORUNDUM. 53% aluminum. A bluish-gray, brown or white mineral which is harder than and will scratch any other mineral except diamond; will scratch steel. The clear red is the gem ruby and the blue, sapphire, found in many basic igneous dikes in Montana, especially in the sapphire mines at Yogo.

CRYOLITE. 12.8% aluminum, sodium alumina fluoride. A Greenland ore, essential to aluminum reduction.

GIBBSITE. 65.4% alumina. Hydrated alumina, derived in Arkansas deposits from decomposition of a granitic rock (Elaeolite syenite).

Antimony.

STIBNITE. Antimony glance 71.4% antimony. Is the common ore; a sulphide of the metal. Is in process of deposition at Steamboat Springs, Nevada. Antimony occurs in many silver ores. Is common in tetrahedrite or silver-bearing copper minerals. Antimony ores are mined at Pine Creek, near Wardner, Idaho.

Arsenic.

This metal is largely derived from arsenopyritic deposits, from nickel or cobalt arsenides, common at Cobalt, from enargite, copper arsenide at Butte or from the common mineral ARSENOPYRITE a sulpharsenide of iron, with 46% arsenic, which looks like iron pyrite, but emits a garlic odor when struck. Occurs in fissure veins, with gold ores. Ruby silver and other minerals rich in silver also contain arsenic.

Bismuth.

BISMUTHINITE. Bi_2S_3 81.2% bismuth, a sulphide of bismuth. The metal is a subordinate constituent of many gold, tin and silver ores, especially those of Leadville, Colo. It is obtained mainly as a by-product from gold-silver and lead ores and not from ores mined for this metal itself.

Cadmium.

GREENOCKITE. Is the only important ore mineral, the yellow sulphide, which occurs with zinc (sphalerite) ores in the Mississippi states.

Chromium.

CHROMITE, FeO , Cr_2O_3 or chrome iron ore, with 68% chromium is the sole ore of commerce. It resembles magnetite, the black iron oxide ore.

Cobalt.

COBALTITE, or cobalt sulpho-arsenide, with 35.4% cobalt.

ERYTHRITE. A cobalt bloom, 37.4% cobalt, a creamy raspberry red mineral, formed by oxidation; a hydrated arsenious oxide.

SMALTITE. Cobalt arsenide with 28.2% arsenious oxide.

Copper.

See special list of all copper minerals given in Chapter III.

Gold.

CALAVERITE. A pale bronze yellow telluride of gold with 40% gold, 1-2% silver and balance tellurium. Breaks with uneven fracture and scratches easily. If burned in a forge gives beads of gold. Common at Cripple Creek.

NATIVE. As clean metallic, gold; as rusty and mustard colored gold and as pale colored electrum, an alloy with silver.

PETZITE. Tellurides of gold and silver, a steel or iron gray metallic lustered mineral easily scratched with knife, slightly scaly, 20% to 25% gold; 18% to 25% silver.

PYRITE is the commonest gold bearing mineral.

SYLVANITE. A silvery telluride of gold and silver, with brilliant metallic lustre, very soft, and carries 26% gold, 12.5% silver. Common in Cripple Creek, Colorado, ores.

Iron.

Iron ores as such are not considered here, but magnetite, hematite, both earthy and specular and pyrite or sulphide of iron are common in all metallic ores, especially silver, gold, lead and zinc.

Lead.

GALENA. The common ore of lead; lead sulphide, 86.6% lead, a steely, silvery mineral that crystallizes in cubes, occurs massive, resembling pig iron, or with sheeted structure. Breaks with perfect cleavage. Is often silver-bearing.

CERUSSITE. White lead ore, lead carbonate, 77.5% lead, a white or gray brittle mineral with waxy lustre. Is the most common oxidized ore of lead and effervesces with acid.

ANGLESITE. Lead sulphate, 73.6% lead; a brittle, colorless, or white mineral, often coating a kernel of galena and mixed with cerussite; very common.

PYROMORPHITE. Lead phosphate, 76.30% lead, a green, gray or brown mineral fusing easily to crystalline globules. Occurs in six-sided crystals and mossy fibres.

JAMESONITE. Feather ore, lead sulpho-antimonide, 50.8% lead, 29.5% antimony, 19.7% sulphur, steel gray, metallic hairs and needles, also compact.

BOURNONITE. Lead copper sulphide. See Copper.

VANADINITE. A lead chloro-vanadinite, containing 18.7% lead oxide, 19.4% vanadium oxide, 2.5% chlorine, a bright yellow, orange or brown mineral, occurring in small, sharp hexagonal crystals; fuses easily.

WULFENITE. See molbydenum.

Manganese.

Ores to be valuable must contain at least 40% of the metal. Only the oxide ores are valuable.

BRAUNITE. 69.6% manganese. Occurs as brown and black bands in clay in Arkansas.

FRANKLINITE. See under zinc.

PSILOMELANE. 77% manganese; earthy manganese.

PYROLUSITE. 63.2% manganese, black manganese ore resembling limonite. Is the common form of the Virginia deposit.

WAD. A soft earthy brown or black ore of variable composition.

Mercury.

CINNABAR. 86.2% mercury. Sulphide of mercury, a red mineral, which is easily decomposed by heat.

Molybdenum.

MOLYBDENITE. The sulphide carries 60% molybdenum. Is a soft, lead colored, scaly metallic mineral resembling graphite, but malleable and giving a greenish streak on unglazed porcelain. Easily scratched by finger nail.

MOLYBDITE. Oxide with 66.7% molybdenum. Is an earthy yellow powder, formed by oxidation, but has never been found in commercial quantity.

WULFENITE. Lead molybdate, contains 39.3% molybdic oxide. It usually occurs in flat, resinous, lustered, yellow, orange or red crystals, in the oxidized parts of lead deposits.

Nickel.

NICCOLITE. Arsenical nickel, copper nickel, 43.6% nickel, 56.4% arsenic; somewhat resembles native copper. Has brownish, black scratch; metallic lustre and melts on heating.

MILLERITE. Sulphide of nickel, 64.4% nickel, a brass yellow, easily tarnished mineral, easily scratched by a knife.

PYRRHOTITE (magnetic iron pyrite). Contains 2-6% nickel at Sudbury, Ont.

Platinum.

METALLIC. In America is found in the black sand of gold placers, also at the Boss mine in Nevada and as minute crystals of sperryite in Sudbury, Canada, nickel ores.

Kadium.

CARNOTITE. See Uranium.

PITCHBLEND. See Uranite (uranium).

Silver.

ARGENTITE. Silver glance; 85% silver; a silver sulphide of leaden-gray, metallic appearance; scratches with thumb nail.

EMBOHITE. Silver bromide, 67% silver; resembles horn-silver.

FRIESLEBENITE. Gray silver; 22% silver, 30% lead, 28% antimony, 18% sulphur. Resembles gray copper ore (tetrahedrite), but contains silver.

GALENA. Lead sulphide. Is usually silver-bearing in our Western ore deposits.

HORNSILVER. Cerargyrite; 75.3% silver, 24.7% chlorine. When pure resembles wax and cuts like it. A fragment put on zinc and wetted, turns black and is reduced to silver.

POLYBASITE. 50.6% silver. A brittle, metallic mineral formed of silver and copper, combined with arsenic and antimony.

PROUSTITE. Light red or ruby silver, with 65% silver; also called arsenical silver; a brilliant red or ruby colored mineral that is subtranslucent, and is bright red, when powdered.

PYRRARGYRITE. Dark ruby; 60% silver; antimonial silver; a dark red to black metallic lustered mineral with brilliant red streak, or purplish powder.

STEPHANITE. Brittle silver, 68.5% silver; an antimonial sulphide of silver, with iron black color and streak.

TETRAHEDRITE. Gray copper ore, often rich in silver, with up to 17% silver. Usual composition, copper 30-40%; antimony 15-25%; sulphur 20-25%. Brittle iron gray to black metallic mineral; an important silver ore.

Tin.

CASSITERITE. Oxide of tin 78.67% tin. Is the common ore of tin; when weathered, looks like wood, but is very heavy.

STANNITE. Tin sulphide, rare.

Tungsten.

WOLFRAMITE. Iron manganese tungstate, 76.4% tungstic acid (WO_3). Has a hardness of 5; gravity 5, and a dark brown streak. The name covers all transitions and variations of iron-manganese tungstate from iron tungstate, ferberite to manganese tungstate, hübnerite.

Occurs in long, dark brown crystals, or short, stoutish columnar masses, varying to black, brilliant, lamellar masses in quartz and pegmatite. The brown varieties are softer and more brittle than the blacker form whose thin flakes are deep red in transmitted light. Is the most common ore of tungsten.

FERBERITE. Iron tungstate, 76.3% tungstic acid. A dull, coal black mineral, sometimes in an aggregate of cubic crystals, more often massive in black, sooty looking material in veins in pegmatite. Is thus far only found commercially in Nederland district, Boulder Co., Colo., and is a very desirable ore.

HÜBNERITE. Manganese tungstate, 76.6% tungstic acid. A light brown mineral often in needle-like crystals of hair brown color, in quartz.

SCHEELITE. Tungstate of lime, 80.6% tungstic acid. Hardness $4\frac{1}{2}$, gravity 6. Streak white, gray or pale brown, very heavy mineral with peculiar glitter to fractured surfaces. Occurs massive, and as crystals imbedded in quartz, and also in garnet (Hawthorne, Nev., and Bishop, Calif.) Also in gold ores.

The field test for tungsten is to crush the specimen and "pan" it, to get the heavy residue; powder a part of the residue and put it in a glass or porcelain dish; add a half ounce (tablespoonful) of muriatic acid and heat to near boiling for fifteen minutes. Then add a few drops of nitric acid and boil one minute. Set aside a moment to settle and pour off liquid into a large tumbler of cold water. Also add cold water to residue and stir. Set aside both dishes a few minutes to settle, then pour off liquid. Canary yellow sediment in dish shows tungstic acid.

The more common test is to wrap tin foil about the specimen and boil hard in hydrochloric (muriatic) acid for 15 minutes, remove foil; a blue color indicates tungsten, but the test does not always show the color.

Uranium.

CARNOTITE. 52%-57% oxide of uranium. A vanadate of uranium and potassium; a canary yellow powdery mineral occurring in large bedded deposits of impregnated sandstone in southern Utah and S. W. Colorado. Is the chief ore of uranium.

URANINITE. Pitchblende. 65%-80% uranium. A black to dark brown, olive green, very heavy mineral, found in Connecticut, Texas, Colorado and South Dakota. (See Bull. 70; U. S. Bureau of Mines, for description of mines.)

Vanadium.

CARNOTITE. (See above.) 18% vanadium.

ROSCOELITE. 21%-29% vanadium; a scaly green to brown micaceous mineral mined at Vanadium, Colo., by the Primos Co. and also found in California quartz mines.

VANADINITE. 19.4% vanadium oxide. See under lead minerals.

Zinc.

CALAMINE. Hydrated zinc carbonate, 67.5% zinc oxide.

Is also the trade name for oxidized zinc. Often occurs in clay. Is yellow to brown, rarely pale blue or green.

FRANKLINITE. An iron manganese zinc mineral with 5.54% zinc, 51.8% iron and 7.5% manganese; found at Franklin, N. J.

SMITHSONITE. Zinc carbonate, 64.8% zinc oxide. Dry bone, the white carbonate of zinc, differs from calamine by effervescing in acid.

SPHALERITE. Blende, black jack, zincblende, 67% zinc. Is the chief source of the metal; varies from brown to black, rarely clear resinous.

WILLEMITE. Zinc silicate, with 72.9% zinc oxide. Is a greenish yellow to apple green mineral with resinous lustre. Is only important as an ore mineral at Franklin, N. J.

ZINCITE. Red zinc ores, 80.3% zinc. Occurs at Franklin, N. J.

CHAPTER III.

A DESCRIPTION OF ALL COPPER BEARING MINERALS

This chapter has been carefully revised and amplified and is the only complete list of copper bearing minerals published.

ACICULITE. Aikinite.

ADAMITE. A hydrous basic zinc arsenate, in which copper sometimes replaces zinc to the extent of about 18%.

AGUILARITE. An unnamed alteration product of aguilareite has the formula $5(\text{Ag,Cu})_2\text{S}(\text{Sb,As})_2\text{S}_2$. The mineral, which is an arsenosulphoantimonite is isometric.

AIKINITE. $3(\text{Pb,Cu})_2\text{S.Bi}_2\text{S}_3$. A lead and copper sulphobismuthite, carrying 11% copper. Common names, needle ore, acicular bismuth. Crystallization, orthorhombic. Fracture, uneven. Hardness, 2 to 2.5. Gravity, 6.1 to 6.8. Lustre, metallic. Color, blackish lead-gray, tarnishing to pale copper-red. Fuses on charcoal and is soluble in nitric acid. Occurrence, in acicular crystals in quartz, Ural Mountains of Russia and Gold Hill, North Carolina.

ALASKITE. An argentiferous and cupriferous variety of galenobismuthite, which is a lead sulphobismuthite, carrying 3.5 to 5.1% copper.

ALGODONITE. Cu_2As . A copper arsenide carrying 85.5% copper. Structure, massive and granular. Fracture, subconchoidal. Hardness, 4. Gravity, 7.62. Lustre, metallic on fresh fractures, dulling on exposures. Color, steel-gray to silver-white on freshly polished surface, tarnishing to bronze. Is less fusible than domeykite. Occurs in Chile and Lake Superior, in the latter district being found in cross-courses traversing the cupriferous beds of the South Range mines, causing the copper product to be highly arsenical.

ALISONITE. $3\text{Cu}_2\text{S.PbS}$. A copper and lead sulphide, carrying 53.5% copper, and 28.5% lead. Is related to cuproplumbite. Structure, massive. Color, deep indigo-blue, quickly tarnishing. Occurs at Coquimbo, Chile.

AMMIOLITE. Formula undetermined. A mercury and copper antimonite, carrying about 12.5% copper. Occurs, as an earthy powder, in Chile.

ANDREWSITE. Formula undetermined. A hydrous iron and copper phosphate related to chalcosiderite, containing circa 8.6% copper.

ANNIVITE. A variety of tennantite with antimony and bismuth, from Switzerland.

ANTIMONIAL COPPER. Common name for chalcostibite.

ANTLERITE. Formula probably $10\text{CuO}.3\text{SO}_3.7\text{H}_2\text{O}$. A basic copper sulphate, containing about 54.7% copper. Structure, massive. Gravity, 3.93. Color, light green. From Yucca, Mohave county, Arizona.

APHANESITE. See Clinoclasite.

APHTONITE. An argentiferous and zinciferous variety of tetrahydrite.

ARNIMITE. $5\text{CuO}.2\text{SO}_3.6\text{H}_2\text{O}$. A hydrous basic copper sulphate, containing 47.6% copper. Color, bright green. Occurs in acicular crystals.

ARZUNITE. $(\text{Pb}_2\text{O})\text{SO}_3(\text{CuClH}_2\text{O})\text{CuOH}$. Crystallization orthorhombic, in small bluish green prisms.

ARSENICAL COPPER. Domeykite.

ASPEROLITE. $\text{CuSiO}_3 \cdot 3\text{H}_2\text{O}$. A hydrous copper silicate. Apparently a hydrated chrysocola, from Tagilsk, Perm, Russia.

ATACAMITE. $\text{CuCl}_3\text{Cu}(\text{OH})_2$. A hydrous copper oxychloride, containing 60.5% copper. Crystallization, orthorhombic. Fracture, conchoidal. Tenacity, brittle. Hardness, 3 to 3.5. Gravity, 3.75. Lustre, adamantine to vitreous. Color, emerald green to blackish green. Streak, apple-green. Is transparent to translucent. Occurs, as sandy granules, in numerous mines in the province of Atacama, Chile, and elsewhere. Usually occurs disseminated, and low in copper tenor, but is extensively mined in Chile.

ATELITE. $2\text{CuO} \cdot \text{CuCl}_2 \cdot 3\text{H}_2\text{O}$. A hydrated copper oxychloride. An altered tenorite. Color, green. An alteration product from Mt. Vesuvius, closely related to atacamite chemically and mineralogically, but occurring as a pseudomorph after tenorite.

ATLASITE. A copper carbonate containing chlorine, from Chañarcillo, Chile. Apparently is merely an intimate mixture of azurite and atacamite.

AURICHALCITE. $2(\text{Zn}, \text{Cu})\text{CO}_3 \cdot 3(\text{Zn}, \text{Cu})(\text{OH})_2$. A basic zinc and copper carbonate, containing 16.6% copper. Crystallization, probably monoclinic. Occurs in acicular crystals, forming drusy incrustations, also columnar, laminated and granular. Hardness, 2. Gravity, 3.5 to 3.6. Lustre, pearly. Color, pale turquoise green to sky-blue. Streak, light green to light blue. Is translucent. Is soluble in acids. Occurs in small quantities in many zinc and copper fields.

Azurite. $2\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$. A basic, copper carbonate, containing 55.3% copper. Common names, blue carbonate of copper, blue malachite, azure copper ore. Crystallization, monoclinic. Fracture, conchoidal. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.77 to 3.83. Lustre, vitreous. Color, azure blue. Streak, lighter blue. Is subtranslucent to transparent. Occurs frequently in the oxidized zone of copper ore bodies, almost invariably with malachite, but is much less common than malachite. Is a valuable commercial ore of copper.

BARNHARDTITE. Formula uncertain. A copper and iron sulphide, probably an alteration product from chalcopyrite that has lost part of its iron and copper, containing 46.7 to 50.4% copper. Apparently is nearer to bornite than to chalcopyrite. Structure, massive, compact. Fracture, conchoidal. Hardness, 3.5. Gravity, 4.5. Lustre, metallic. Color, bronze-yellow, tarnishing to pinchbeck-brown. Streak, grayish black, slightly shining. Occurrences, North Carolina and Arizona.

BARRACANITE. Cupropyrrite.

BAYLDONITE. $4(\text{Pb}, \text{Cu})\text{O} \cdot \text{As}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic lead and copper arsenate containing 26.1% copper. Occurs in minute mamillary concretions with drusy surface. Fracture, subconchoidal. Hardness, 4.5. Gravity, 5.35. Lustre, resinous. Color, grass-green to blackish green. Streak, apple-green. Is subtranslucent. Soluble, with difficulty, in nitric acid. Occurs in Cornwall, England.

BEAUMONTITE. A very doubtful hydrous copper silicate, from Chessy, France.

BELL-METAL ORE. Common name for stannite.

BERZELIANITE. Cu_2Se . A copper selenide containing 61.6% copper. Occurs disseminated in incrustations. Is very soft. Gravity, 6.71. Lustre, metallic. Color, silver-white, soon tarnishing. Streak, shining. Usually is argentiferous. Occurs in Småland, Sweden.

BEUDANTITE. Apparently this name is applied to two minerals, one an arsenate and the other a sulphate of iron, lead and copper, carrying from a trace to 9.8% copper.

BINNITE. Formula probably $3\text{Cu}_2\text{S} \cdot 2\text{As}_2\text{S}_3$. A copper sulphoarsenite, containing 37.7% copper. A variety of tennantite. Crystallization, isometric. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 4.47.

Lustre, metallic. Color, dark steel-gray to iron-black. Streak, reddish brown. Occurrence, Binnenthal, Switzerland.

BLACK COPPER. Common name for melaconite or disseminated chalcocite. In all likelihood much of what has been taken for melaconite in the past was disseminated chalcocite.

BLUE COPPER. Common name for azurite.

BLUE MALACHITE. Common name for azurite.

BLUESTONE. Common name for chalcantite; also for blue vitriol, the manufactured product corresponding in chemical formula with chalcantite.

BLUE VITRIOL. Common name for chalcantite or bluestone.

BOGOSLOVSKITE. Chrysocolla carrying carbon dioxide as an impurity, from the Bogoslovsk mine, Perm, Russia.

BOLÉITE. $\text{Pb}(\text{OH})\text{Cl}\cdot\text{Cu}(\text{OH})\text{Cl}+\frac{1}{2}\text{AgCl}$. A hydrated lead, copper and silver oxychloride, containing about 12% copper. Crystallization, isometric. Texture loose. Hardness, 3 to 3.25. Gravity, 5.08. Color, indigo-blue. Occurrence, at the Boleo mines, Baja California, Mexico.

BOOTHITE. $\text{CuO}\cdot\text{SO}_4\cdot 7\text{H}_2\text{O}$. A hydrous sulphate of copper. Crystallization monoclinic. Color, blue. A variety Morenoside.

Bornite. Cu_3FeS_4 . A copper and iron sulphide, containing 55.5% copper, 16.4% iron, 28.1% sulphur. Common name, peacock copper ore. Crystallization, rare isometric, with many hexagonal penetration twins. Structure, granular or compact. Fracture, small conchoidal to uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.9 to 5.4. Lustre, metallic. Color, copper red to bluish brown, quickly tarnishing to iridescence, often most brilliant. Streak, pale grayish-black. Is soluble in nitric acid, with separation of sulphur. Is a primary mineral, at Butte and in contact metamorphic ores, but also occurs as the first alteration product from chalcopyrite among the secondary copper sulphides, and often carries nodules and occasionally larger masses of chalcocite. Is one of the most important ores of copper.

BOTALLACKITE. Atacamite.

BOURNONITE. $3(\text{Pb},\text{Cu}_2)\text{S}\cdot\text{Sb}_2\text{S}_3$. A lead and copper sulphantimonite, containing 13% copper, and 42.5% lead. Crystallization, orthorhombic. Structure, massive, granular and compact. Cleavage, imperfect. Fracture, subconchoidal to uneven. Tenacity, rather brittle. Hardness, 2.5 to 3. Gravity, 5.7 to 5.9. Lustre, brilliant metallic. Color and streak, steel-gray, inclining to blackish gray or iron-black. Fuses easily on charcoal and is soluble in acids. Occurrence, in many copper fields.

BRASS ORE. Common name for aurichalcite.

BROCHANTITE. $4\text{CuO}\cdot\text{SO}_4\cdot 3\text{H}_2\text{O}$. A basic copper sulphate containing 56.2% copper. Crystallization, orthorhombic. Fracture, uneven. Hardness, 3.5 to 4. Gravity, 3.9. Lustre, vitreous. Color, emerald-green to blackish green. Streak, paler green. Is translucent to transparent. Is found in many copper fields, and is an important commercial ore in the Clifton district, Graham county, Arizona, and Chuquicamata, Chile.

BURATITE. An aurichalcite containing calcium monoxide, probably as a mechanical admixture.

CACHEUTAITE. A lead, copper and silver selenide carrying 7 to 36% copper. Is closely related to zorgite.

CALCIOVOLBORTHITE. $4(\text{Cu},\text{Ca})\text{O}\cdot\text{V}_2\text{O}_5\cdot\text{H}_2\text{O}$. A hydrous basic copper and calcium vanadate, containing 31.7% copper. Hardness, 3.5. Gravity, 3.5 to 3.86. Color, gray to green. Streak, brownish yellow to greenish yellow. Occurrence, Thuringia, Germany.

CALEDONITE. $2(\text{Pb},\text{Cu})\text{O}\cdot\text{SO}_4\cdot\text{H}_2\text{O}$. A basic lead and copper sulphate, containing 9.4% copper. Crystallization, orthorhombic. Fracture, uneven. Tenacity, rather brittle. Hardness, 2.5 to 3. Gravity, 6.4. Lustre, resinous. Color, verdigris-green to bluish green. Streak, greenish white. Is translucent. Occurrence, Scotland, Hungary, California, etc.

CANTONITE. A dimorphous variety of covellite, apparently a pseudomorph after galena, crystallized in cubes with cubical cleavage.

CAPILLARY RED OXIDE OF COPPER. Common name for chalcotrichite, a form of cuprite.

CARMENTITE. A variety of digenite.

CARROLLITE. $\text{CuS} \cdot \text{Co}_2\text{S}_3$. A cobalt and copper sulphide containing 20.5% copper and 38% cobalt. Crystallization, isometric. Fracture, sub-conchoidal to uneven. Hardness, 5.5. Gravity, 4.85. Lustre, metallic. Color, light steel-gray, with faint reddish hue. Occurrence, Carroll county, Maryland.

CASTILLITE. $(\text{Cu}, \text{Ag})_2\text{S} \cdot 2(\text{Cu}, \text{Pb}, \text{Zn}, \text{Fe})\text{S}$. A copper, silver, lead, zinc and iron sulphide carrying about 41% copper. Apparently an impure bornite. Structure, massive. Hardness, 3. Gravity, 5.19 to 5.24. Resembles bornite in color, streak and tarnish. Occurrence, Guanaceví, Mexico.

CERALEITE. (Coeruleite) $\text{CuO} \cdot 2\text{Al}_2\text{O}_3 \cdot \text{As}_2\text{O}_5$. A massive clay-like, turquoise blue, arsenate of copper and aluminum.

Chalcanthite. $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$. A hydrous copper sulphate containing 25.4% copper. Common names, blue vitriol, bluestone, copper sulphate. Crystallization, triclinic. Structure, massive, stalactitic and reniform, sometimes fibrous. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5. Gravity, 2.12 to 2.30. Lustre, vitreous. Color, sky-blue. Streak, uncolored. Is translucent to subtransparent. Is soluble in water. Occurs as deposits from mine water in most sulphide copper mines, and is found in impure state, in beds, in Chile.

Chalcocite. Cu_2S . A copper sulphide carrying 79.8% copper. Common names, copper glance, cuprous sulphide. Crystallization, orthorhombic; also occurs massive, with structure granular to compact and impalpable. Cleavage, indistinct. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 5.5 to 5.8. Lustre, metallic. Color and streak, blackish lead-gray, tarnishing to dull green or blue. Is soluble in nitric acid. Occurs in all copper districts, frequently in large quantities. Is the richest commercial ore of copper and yields more than one-half of world's copper supply.

CHALCOLITE. Torbernite.

CHALCOMENITE. $\text{CuO} \cdot \text{SeO}_2 \cdot 2\text{H}_2\text{O}$. A hydrous copper selenite containing 28% copper. Crystallization, monoclinic. Gravity, 3.76. Lustre, vitreous. Color, bright blue. Is transparent. Is soluble in acids. Found at Cacheuta, Mendoza, Argentina.

CHALCOMICHLITE. Bornite.

CHALCOPHACITE. Liroconite.

CHALCOPYLLITE. $7\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 14\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 42.3% copper. Crystallization, rhombohedral. Hardness, 2. Gravity, 2.43 to 2.66. Lustre, vitreous. Color, grass-green to verdigris-green. Streak, grass-green. Occurs in Hungary, Siberia and Utah.

Chalcopyrite. Cu_5FeS_4 . A copper and iron sulphide containing 34.5% copper and 30.5% iron. Is the primary ore of copper. Crystallization, tetragonal, sphenoidal, often twinning, also frequently massive and compact. Fracture, uneven. Hardness, 3.5 to 4. Gravity, 4.1 to 4.3. Lustre, metallic. Color, brass-yellow, often tarnishing to iridescence. Streak, greenish black. Is soluble, except sulphur, in nitric acid, and, on being heated, yields a portion of its sulphur. On exposure to moisture and heat becomes hydrated, and copper and iron change readily to sulphates. Alters to azurite, malachite, melaconite, chalcocite, covellite, bornite, brochantite, chrysocolla, tetrahedrite and tennantite. Is found in practically every copper field in the world, and is second only to chalcocite in importance among the commercial ores of copper.

CHALCOPYRRHOTITE. $\text{CuS} \cdot \text{FeS}_2$. An iron and copper sulphide containing 13% copper and 48.2% iron. Structure, massive. Hardness, 3.5 to 4. Gravity, 4.28. Color, brassy, with brownish tinge. Occurrence, Nya Kopparberg, Sweden.

CHALCOSIDERITE. $\text{CuO} \cdot 3\text{Fe}_2\text{O}_3 \cdot 2\text{P}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$. A hydrous iron and copper phosphate containing 6.4% copper. Hardness, 4.5. Gravity, 3.1. Crystallization, triclinic in minute distinct crystals in sheaf-like group. Lustre, vitreous. Color, dark green. Streak, pale green. Occurs in Cornwall, England, and Westphalia, Germany.

CHALCOSINE. Chalcocite.

CHALCOSTIBITE. $\text{Cu}_2\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper sulphantimonite containing 25.6% copper and 48.5% antimony. Crystallization, orthorhombic, in thin prisms. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3 to 4. Gravity, 4.75 to 5. Lustre, metallic. Color, between lead gray and iron-gray. Occurrences, in the Hartz Mountains of Germany and in Guadix, Spain.

CHALCOTRICHITE. A form of cuprite with capillary or acicular crystallization. Common name, plush copper ore.

CHALMERSITE. $\text{Cu}_3\text{S} \cdot \text{Fe}_2\text{S}_3$. Occurs in orthorhombic prisms. Color, bronze yellow.

CHELEUTITE. A ferruginous, nickeliferous and slightly cupriferous smaltite.

CHENEVIXITE. $2\text{CuO} \cdot \text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous copper and iron arsenate containing 21% copper. Structure, massive. Fracture, subconchoidal. Hardness, 3.5 to 4.5. Gravity, 3.93. Lustre, vitreous. Color, dark olive-green to greenish yellow. Streak, yellowish green. Is soluble in acids. Occurrence, Cornwall, England and Eureka, Juab county, Utah.

CHESSYLITE. Azurite.

CHILEITE. Formula uncertain. A hydrous lead and copper vanadate containing 11.7 to 13.6% copper. Is related to psittacinite. Structure, earthy. Occurrence, Chile.

CHILENITE. $(\text{Ag}, \text{Cu}) \cdot \text{Bi}$. A silver and copper bismuthide containing 8.5% copper and 75% silver. Structure, amorphous, granular. Is soft. Color, silver-white. Occurrence, Copiapó, Chile.

CHIVIATITE. A lead sulphobismuthite carrying about 2.5% copper.

CHLOANTHITE. Empirically nickel diarsenide, but analyses invariably show cobalt and iron, and commonly small quantities also of copper, lead, silver, bismuth and antimony.

CHLOROTHIONITE. $\text{CuCl}_2 \cdot \text{K}_2\text{SO}_4$. A copper and potassium chlorosulphate. Occurs in bright blue crystalline crusts on lava. Is an alteration product from Mt. Vesuvius.

CHLOROTILE. Formula probably $3\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$. A hydrous copper arsenate containing about 33% copper. Is related to trichalcite. Crystallization, orthorhombic; also occurs fibrous and massive. Is soft. Color, pale emerald-green. Is transparent.

Chrysocolla. $\text{CuSiO}_3 \cdot 2\text{H}_2\text{O}$. A hydrous copper silicate carrying 36% copper. Common names, mountain green and mountain blue. Structure, cryptocrystalline, enamel-like, sometimes botryoidal. Fracture, conchoidal. Is brittle and somewhat sectile. Hardness, 2 to 4. Gravity, 2 to 2.24. Lustre, vitreous to earthy. Color, mountain green, bluish green and sky blue to turquoise-blue, with impure varieties brown to dull black. Streak, white, from pure green and blue varieties. Is opaque to translucent. Is decomposed by acids, without gelatinization. Commonly occurs with carbonate ores in the oxidized zones of copper ore bodies, and is a commercial ore of value in many districts.

CLARITE. $3\text{Cu}_2\text{S} \cdot \text{As}_2\text{S}_5$. Crystallization monoclinic. Color, dark lead-gray. Belongs to enargite family. A dimorphous form of enargite, from Schapbach, Baden, Germany.

CLAYITE. A lead sulphantimonite, carrying copper as a replacement of lead to extent of circa 8%.

CLINOCLASITE. $6\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate carrying 48% copper. Crystallization, monoclinic. Is brittle. Hardness, 2.5 to 3. Gravity, 4.19 to 4.36. Lustre, vitreous to resinous. Color, blackish blue-green externally, dark verdigris-green internally. Streak, bluish

green. Is subtransparent to translucent. Is soluble in nitric acid. Occurrence, Cornwall and Utah.

CONDURRITE. Apparently a copper arsenide, related to domeykite. Is supposed to be an alteration product of tennantite. Is soft and blask. Occurs in the Condurrow mine, and at Carn Brea, Cornwall, England.

CONICALCITE. $4(\text{Cu,Ca})\text{O} \cdot \text{As}_2\text{O}_5 \cdot 1\frac{1}{2}\text{H}_2\text{O}$. A hydrous basic copper and calcium arsenate, carrying 24% copper. Structure, reniform and massive. Fracture, splintery. Tenacity, brittle. Hardness, 4.5. Gravity, 4.12. Color and streak, pistachio to emerald green. Is subtranslucent. Occurs in Andalusia, Spain and at Eureka, Juab county, Utah.

CONNELLITE. Formula probably $\text{Cu}_{15}(\text{Cl}_2\text{O}_2\text{H})_2\text{SO}_{16} \cdot 15\text{HO}$. A hydrous basic copper chlorosulphate, containing about 57.6% copper. Crystallization, hexagonal. Hardness, 3. Gravity, 3.36. Lustre, vitreous. Color, fine blue. Is translucent. Is soluble in nitric acid. Occurrence, Cornwall, England.

Copper. Cu. Native copper. The chemical symbol Cu is an abbreviation of cuprum, the Latin word for copper. The metal, native or refined, has the following names in modern languages: kupfer in German; koppar in Swedish; kobber in Norwegian; cobre in Spanish and Portuguese; cuivre in French; rame in Italian.

Atomic weight, 63.2. Belongs in the first group and is the leader of the fifth series of Mendeleef's Periodic System. The group is as follows: 1, hydrogen; 2, lithium; 3, sodium; 4, potassium; 5, copper; 6, rubidium; 7, silver; 8, caesium; 9, unknown (possibly terbium, atomic weight 160); 10, gold; 11, unknown. The fifth series, of which copper is the basic leader, is as follows: 1, copper; 2, zinc; 3, gallium; 4, germanium; 5, arsenic; 6, selenium; 7, bromine. The three metallic elements falling between series four and five in Mendeleef's table, are iron, cobalt and nickel. The frequency with which these three elements are found associated with copper, and the ease with which all four metals replace one another, are notable. The general resemblance between copper, silver and gold, which form ascending steps in the same group, is readily apparent.

System of crystallization, isometric. Tetrahexahedronal forms are the most common, with much twinning. Crystals often show cavernous faces and occasionally elevations, are often distorted and pass gradually through distortions into filiform and arborescent forms. Native copper also occurs massive, in granular form, and in laminae. In the Lake Superior mines the metal occurs in all observed forms and sizes, including lamellae from microscopic flakes up to sheets of immense size and weight, crystals of greatly varying form and size, grains from microscopic size to considerable nodules, and druses, often of considerable size, show various filiform and arborescent shapes. The finest particles are grains and exceedingly minute flakes, occurring in an upper sandstone of the Keweenawan series, while the largest masses, weighing upwards of 500 tons, have been found in contact and fissure veins.

Cleavage, none. Fracture, hackly. Tenacity, second only to that of iron. Is perfectly sectile and highly ductile and malleable, ranking in these particulars with the precious metals. Electrical conductivity, 931, as compared with 1,000 for silver, which possesses the most perfect electrical conductivity of any known metal or alloy. Conductivity for heat, 898, as compared with 1,000 for gold, the most perfect conductor of heat.

Hardness, 2.5 to 3. Specific gravity, in vacuo, at 0 degrees Centigrade (equal to 32°, or freezing point, Fahrenheit), when chemically pure and devoid of porosity, is 8.945. Specific gravity of the ordinary copper of commerce, none of which is free from impurities, varies from about 8.75 when cast, to about 8.95 when rolled, hammered or drawn, the exact gravity depending upon how handled, as well as upon the extent and nature of the impurities contained.

Lustre, metallic. Color, copper-red. Streak, copper-red, metallic, shining. Tarnishes upon exposure to air to brownish red, and is liable to form

a coating of verdigris or oxide upon long exposure to air. Atmosphere laden with moisture and carbonic acid is especially favorable to the formation of verdigris.

Fusibility: Copper is fusible at approximately 2,000° Fahrenheit, or a trifle less than 1,100° Centigrade. Color, when fused, sea-green. Copper becomes volatile under the high temperature of the electric arc.

Solubility: Copper is soluble in nitric acid, aqua regia, and strong boiling sulphuric acid, also, slowly, in dilute hydrochloric and sulphuric acids, with admission of air. When in solution in nitric or sulphuric acids will deposit metallic copper on iron immersed therein.

Affinities: Copper has a greater affinity for sulphur than for any other element, possessing also marked affinities for oxygen, carbon dioxide, arsenic, antimony and bismuth, and unites with many other elements.

Alterations: Native copper alters on exposure, especially in damp air, to the simpler oxide and carbonate ores, such as cuprite, malachite and azurite, and occasionally, in time, to the more complex ore forms.

Occurrence: Native copper occurs, usually in small quantities, in most of the principal copper districts of the world. The native metal is mined upon a considerable scale only in Lake Superior, U. S. A., and Bolivia. The Lake Superior native copper carries considerable silver, mechanically admixed, though not alloyed, but carries no gold. In districts outside of Lake Superior and Bolivia the metal occurs most frequently in connection with the oxide and carbonate ores, and occasionally with the secondary sulphide ores.

Impurities: Native copper frequently contains silver, arsenic, bismuth, antimony, zinc and occasionally mercury. Commercial copper, refined from ores, may contain any of the elements already named, and also gold, tin, lead, selenium and tellurium, the latter two elements in very minute quantities.

COPPER GLANCE. Common name for chalcocite.

COPPER MICA. A miner's name for chalcopyrite.

COPPER NICKEL. A term sometimes used for niccolite.

COPPER PHOSPHATE. Libethenite.

COPPER PYRITES. Common name for chalcopyrite.

COPPER VITRIOL. Trade name for copper sulphate which is called chalcantith in nature; bluestone when manufactured.

COPPER URANITE. Trade name for torbernite.

COPPITE. A ferruginous variety of tennantite.

CORNWALLITE. $5\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 46.5% copper. Structure, massive. Fracture, conchoidal. Hardness, 4.5. Gravity, 4.16. Color, verdigris-green to emerald green. Occurrence, Cornwall, England.

COSALITE. Empirically lead sulphobismuthite, but usually cupriferous to the extent of from a trace to 8.75% copper.

Covellite. Covelline. CuS . A beautiful bright blue copper sulphide containing 66.4% copper. Chemical name, cupric sulphide. Crystallization, hexagonal; also occurs massive. Is flexible in thin layers, with basal cleavage. Hardness, 1.5 to 2. Gravity, 4.6. Lustre, submetallic on crystals, dull when massive. Color, indigo-blue. Streak, lead-gray to black, shining. Occurs in most sulphide copper districts, as a secondary ore and is a valuable commercial ore of copper, when found in sufficient quantities, as in Butte, Mont., Utah, Wyoming and elsewhere.

CREDNERITE. $3\text{CuO} \cdot 2\text{Mn}_2\text{O}_3$. A copper manganate containing 34.4% copper. Crystallization, monoclinic. Cleavage, basal, perfect, less distinct in other directions. Hardness, 4.5. Gravity, 4.9 to 5.1. Lustre, metallic. Color, iron-black to steel-gray. Streak, brownish black. Is soluble in hydrochloric acid.

CROOKESITE. $(\text{Cu}, \text{Tl}, \text{Ag})_2\text{Se}$. A copper, thallium and silver selenide, containing 44 to 46% copper, 17 to 18.5% thallium and 1.5 to 5% silver. Structure is massive, without crystallization. Is brittle. Hardness,

2.5 to 3. Gravity, 6.9. Lustre, metallic. Color, lead-gray, finely disseminated. Occurrence, Småland, Sweden.

CUBANITE. $\text{CuS.Fe}_2\text{S}_3$. An iron and copper sulphide containing 23.3% copper and 41.3% iron. Crystallization, isometric; also occurs massive. Cleavage, cubic. Hardness, 4. Gravity, 4.026 to 4.169. Color, bronze to brass-yellow. Streak, dark reddish bronze to black. Occurrence, Cuba, California and Sweden.

CUMENGITE. Pb(OH)Cl.Cu(OH)Cl . A hydrous lead and copper oxychloride, related to boléite. Crystallization, tetragonal. Color, indigo-blue. Loose texture.

CUPRIC OXIDE. Tenorite, when found in nature; copper monoxide in chemistry.

Cuprite. Cu_2O . A copper oxide, containing 8.88% copper, being the richest copper ore. Chemical names, cuprous oxide, copper protoxide. Common names, ruby copper, red glassy copper ore, octahedral copper ore. Crystallization, isometric, commonly in octohedrons; also occurs massive, granular and sometimes earthy. Fracture, conchoidal. Is brittle. Hardness, 3.5 to 4. Gravity, 5.85 to 6.15. Lustre, adamantine to earthy. Color, light to dark red; when fresh, usually ruby-red, but fades to duller red. Streak, brownish red, shining. Is subtransparent to subtranslucent. Occurs in most copper districts in the upper oxidized zone, frequently shading into crystals of native copper.

CUPROBISMUTITE. $3\text{Cu}_2\text{S.4Bi}_2\text{S}_3$. A copper sulphobismuthite containing 15% copper and 65.1% bismuth. Occurs in slender prismatic crystals. Gravity, 6.31 to 6.68. Lustre, metallic. Color, dark bluish black. Streak, black. The copper frequently is replaced partially by silver.

CUPROCALCITE. Formula perhaps $(\text{Cu}_2\text{O})_x \cdot \text{CO}_2 + 2\text{CaO} \cdot \text{CO}_2 + \text{H}_2\text{O}$. Apparently merely an intimate mixture of cuprite and calcium carbonate. Hardness, 3. Gravity, 3.9. Color, vermilion-red. Is soluble in hydrochloric acid.

CUPROCASSITERITE. Formula possibly $4\text{SnO}_2 + \text{Cu}_2\text{Sn(OH)}_2$. Occurrence, Black Hills of South Dakota.

CUPRODESCLOIZITE. A cupriferous variety of descloizite, which is a basic lead and zinc vanadate.

CUPROFERRITE. Pisanite.

CUPROGOSLARITE. A copper-bearing variety of goslarite, or zinc sulphate.

CUPROIODARGYRITE. CuI.AgI . A copper and silver iodide. Apparently a decomposition product of stromeyerite. Occurs, as incrustations, at Huantajaya, Chile.

CUPROMAGNESITE. $(\text{Cu,Mg}) \text{SO}_4 + 7\text{H}_2\text{O}$. A copper and magnesium sulphate; crystallization monoclinic. Occurs in crust on lava. Color, bluish green. Is alteration product, occurring as incrustations, from Mt. Vesuvius.

CUPROPLUMBITE. $\text{Cu}_2\text{S.2PbS}$. A copper and lead sulphide, carrying 61.3% copper and 19% lead. Structure, massive. Lustre, feeble or lacking. Color, lead-gray to indigo-blue. Occurrence, Catemou, Aconcagua, Chile, Butte, Montana, and Semipalatinsk, Siberia.

CUPROPYRITE. CuFe_2S_4 . An iron and copper sulphide, carrying 24% copper. Is closely related to cubanite.

CUPROSCHEELITE. $(\text{Ca,Cu})\text{WO}_4$. A calcium and copper tungstate carrying 3 to 5% copper. Is a variety of cuprotungstite in which copper is mainly replaced by calcium.

CUPROTUNGSTITE. CuWO_4 . A copper tungstate carrying 24% copper. Structure, granular and incrustive. Hardness, 4.5 to 5. Color, pistachio-green to leek-green. Streak, greenish gray to greenish yellow. Is soluble in hydrochloric acid. Occurrence, Llamuco, Santiago de Chile.

CUPROURANITE. Torbernite.

CUPROUS OXIDE. Cuprite in nature. Chemical term for two atoms of copper united with one atom of oxygen.

CUPROVANADITE. Chileite.

CYANOCHALCITE. A phosphoriferous variety of chrysocolla, from Nijnj Tagilsk, Perm, Russia.

CYANOCHROITE. $\text{CuSO}_4 \cdot \text{K}_2\text{SO}_4 \cdot 6\text{H}_2\text{O}$. A hydrous copper and potassium sulphate, carrying 14.3% copper. Crystallization, monoclinic. Color, clear blue. Is an alteration product from Mt. Vesuvius.

CYANOTRICHITE. $4\text{CuO} \cdot \text{Al}_2\text{O}_3 \cdot \text{SO}_3 \cdot 8\text{H}_2\text{O}$. A hydrous basic copper and aluminum sulphate, carrying 39.4% copper. Crystallization, orthorhombic. Lustre, pearly. Color, smalt-blue to sky-blue. Occurrence, Hungary, France, Arizona and Utah.

DARWINITE. Whitneyite.

DELAFOSSITE. An iron, copper and aluminum oxide containing 37.9% copper, 47.99% iron sesquioxide and 3.52% aluminum sesquioxide. Occurrence, Ekaterinburg, Perm, Russia.

DEMIDOVITE. A phosphoriferous variety of chrysocolla from Tagilsk, Perm, Russia.

DIGENITE. Apparently a partly altered chalcocite containing a considerable percentage of covellite.

DIHYDRITE. $5\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 55.2% copper. Crystallization, monoclinic; also occurs massive and fibrous. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 4.5 to 5. Gravity, 4 to 4.4. Lustre, adamantine. Color, dark emerald-green. Streak, pale emerald-green. Is translucent. Is soluble in nitric acid. Occurrence, Germany and the Ural Mountains of Russia.

DILLENBURGITE. An impure chrysocolla containing copper carbonate.

DIOPHASE. $\text{CuO} \cdot \text{SiO}_2 \cdot \text{H}_2\text{O}$. A hydrous copper silicate carrying 40.3% copper. Common names, emerald copper, emerald malachite. Crystallization, rhombohedral; also occurs massive. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 5. Gravity, 3.28 to 3.35. Lustre, vitreous. Color, brilliant emerald-green. Streak, green. Is subtranslucent to transparent. Gelatinizes with hydrochloric acid. Is fusible with charcoal and soda. Occurrence, Chile, Hungary, Siberia, French Congo, at Superior, Arizona, etc.

DOGNACSKAITE. Formula perhaps $3\text{Cu}_2 \cdot 5\text{Bi}_2\text{S}_3$. A variety of cuprobismutite carrying slightly less copper and sulphur and slightly more bismuth than the normal mineral. Color, gray.

DOLEROPHANITE. $2\text{CuO} \cdot \text{SO}_3$. A basic copper sulphate carrying 53.1% copper. Crystallization, monoclinic. Color, brown. Is soluble in nitric acid. Is a sublimation product from Mt. Vesuvius.

DOMEYKITE. Cu_3As . A copper arsenide carrying 71.7% copper. Common name, arsenical copper. Structure, reniform and botryoidal, also massive and disseminated. Fracture, uneven. Hardness, 3 to 3.5. Gravity, 7.2 to 7.75. Lustre, metallic, dulling on exposure. Color, tin-white to steel gray, tarnishing to iridescent bronze, sometimes argentiferous and granular. Is fusible in open tube, yielding a white sublimate of arsenic trioxide. Is soluble in nitric acid. Occurrence, Chile, Bolivia, Saxony, Mexico and Lake Superior.

DUCKTOWNITE. Apparently merely a mechanical mixture of chalcocite and pyrite.

DÜRFELDTITE. $3(\text{Pb}, \text{Ag}, \text{Cu}, \text{Mn}, \text{Fe})\text{S} \cdot \text{Sb}_2\text{S}_3$. A lead, silver, copper, manganese and iron sulphobismuthite. Occurs in acicular crystals. Hardness, 2.5. Gravity, 5.4. Lustre, metallic. Color, light gray. Is related to stylopyrite. Found in Perú.

EHLITE. $5\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 52 to 55% copper. Is closely related to dihydrite and pseudomalachite. Gravity, 4.2 to 4.4. Occurrence, Cornwall, England, and Nijnj Tagilsk, Perm, Russia.

EMERALD COPPER. Common name for diophtase.

EMERALD MALACHITE. Common name for diophtase.

EMPLECTITE. $\text{Cu}_2\text{S}\cdot\text{Bi}_2\text{S}_3$. A copper sulphobismuthite containing 18.9% copper and 62% bismuth. Crystallization, orthorhombic, in thin prisms. Tenacity, brittle. Hardness, 2. Gravity, 6.3 to 6.5. Lustre, metallic. Color, grayish to tin-white. Occurrence, Chile, Saxony and Norway.

Enargite. $3\text{Cu}_2\cdot\text{As}_2\text{S}_5$. Enargite grades into famatinite. A copper sulpharsenite containing 48.3% copper. Crystallization, orthorhombic; also occurs massive and granular. Fracture, uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.45. Lustre, metallic. Color and streak, grayish black to iron-black. Is soluble in aqua regia and fusible on charcoal. Occurs in many copper fields, notably at Butte, Montana, where it is a common and valuable ore.

EPIGENITE. Formula probably $4\text{Cu}_2\cdot\text{S}\cdot 3\text{FeS}\cdot\text{As}_2\text{S}_5$. A copper and iron sulpharsenite, carrying about 41% copper. Crystallization, orthorhombic, in short prisms. Fracture, uneven. Hardness, 3.5. Lustre, metallic. Color, steel-gray. Streak, black. Is soluble in nitric acid. Occurrence, Wittichen, Baden, Germany.

ERINITE. $5\text{CuO}\cdot\text{As}_2\text{O}_5\cdot 2\text{H}_2\text{O}$. A hydrous basic copper arsenate, containing 47.8% copper. Occurs in mamillated concentric crystalline groups, also fibrous and rough. Tenacity, brittle. Hardness, 4.5 to 5. Gravity, 4.04. Lustre, slightly resinous. Color, emerald green. Streak, grass-green. Is opaque to subtranslucent. Is soluble in nitric acid. Occurrence, Cornwall and Utah.

ERYTHROCALCITE. $\text{CuCl}_2\cdot n\text{H}_2\text{O}$. A hydrated copper chloride. Is an alteration product from Mt. Vesuvius.

EUCAIRITE. $\text{Cu}_2\text{Se}\cdot\text{Ag}_2\text{Se}$. A silver and copper selenide carrying 25.3% copper and 43.1% silver. Crystallization, isometric; also occurs massive and granular. Hardness, 2.5. Gravity, 7.5. Lustre, metallic. Color, silver-white, to lead-gray. Streak, shining. Occurrence, Småland, Sweden, and Copiapó, Chile.

EUCHLORINE. A compound of copper potash and soda sulphates and cuprous chloride, from Mt. Vesuvius.

EÜCHROITE. $4\text{CuO}\cdot\text{As}_2\text{O}_5\cdot 7\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 39.7% copper. Crystallization, orthorhombic. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.39. Lustre, vitreous. Color, emerald-green to leek-green. Is translucent to transparent. Occurrence, Libethen, Hungary.

FAHLORE. Common name for tetrahedrite or tennantite.

FALKENHAYNITE. $3\text{Cu}_2\text{S}\cdot\text{Sb}_2\text{S}_3$. A copper sulphantimonite carrying 39.5% copper. Apparently is related to stylopyrite. Structure, massive. Gravity, 4.83. Color, gray-black. Occurrence, Joachimsthal, Bohemia, Austria.

FAMATINITE. $3\text{Cu}_2\text{S}\cdot\text{Sb}_2\text{S}_3$. A copper sulphantimonite carrying 43.3% copper. Crystallization, orthorhombic; is isomorphous with enargite; also occurs massive. Fracture, uneven. Tenacity, brittle. Hardness, 3.5. Gravity, 4.57. Color, gray with copper-red tinge. Streak, black. Is fusible on charcoal. Decrepitates in closed tube. Occurrence, Sierra de Famatina, Rioja, Argentina and Cerro de Pasco, Junín, Perú.

FIELDITE. A zinciferous variety of tetrahedrite.

FOOTEITE. $8\text{Cu}(\text{OH})_2\cdot\text{CuCl}_2\cdot 4\text{H}_2\text{O}$. A hydrous basic copper oxychloride containing 55.3% copper. Is closely related to tallingite. Crystallization, monoclinic. Color, deep blue. Occurrence, Bisbee, Arizona.

FOURNETITE. Apparently merely a mechanical mixture of tetrahedrite and galena.

FREDRICITE. An argentiferous, plumbiferous and stanniferous variety of tennantite, from Sweden.

FREIBERGITE. An argentiferous tetrahedrite carrying variable percentages of silver as a replacement of the copper found in the normal tetrahedrite.

FRIGIDITE. A ferruginous and nickleiferous variety of tennantite.

GERHARDITE. $4\text{CuO} \cdot \text{N}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A basic copper nitrate containing 52.9% copper. Crystallization, orthorhombic. Cleavage, yields flexible laminae. Tenacity, fragile and sectile. Hardness, 2. Gravity, 3.426. Lustre, vitreous, brilliant. Color, deep emerald-green. Streak, light green. Is transparent. Is soluble in dilute acids. Occurrence, Jerome, Arizona.

GERSDORFFITE. Empirically nickel sulphoarsenite, but occasionally slightly cupriferous.

Glance. Common name for sulphide ores with dark metallic lustre. Copper glance is chalcocite.

GLASBACHITE. Zorgite.

GLAUCOPYRITE. An iron and cobalt diarsenide, occasionally slightly cupriferous.

GRAY COPPER. Common name for tetrahedrite; name also is applied to tennantite, which shades into tetrahedrite.

GREEN COPPER. Common name for malachite.

GRUNAUITE. An impure nickel sulphide (polydimit) carrying copper, lead, cobalt, iron and bismuth, copper ranging 1.68 to 11.56% in tenor in published assays.

GUEJARITE. $\text{Cu}_2\text{S} \cdot 2\text{Sb}_2\text{S}_3$. A copper sulphoantimonite containing 15.2% copper. Crystallization, orthorhombic. Tenacity, brittle. Hardness, 3.5. Gravity, 5.03. Lustre, metallic. Color, steel-gray, with bluish tinge. Streak, black. Occurrence, Andalusia, Spain.

HARRISITE. A pseudomorph of chalcocite after galena.

HENWOODITE. Chemical formula uncertain. A hydrous aluminum and copper phosphate carrying about 5.6% copper. Occurs in botryoidal globular masses. Fracture, conchoidal. Hardness, 4.4 to 4.5. Gravity, 2.67. Color, turquoise-blue. Streak, bluish to greenish white. Occurs in Cornwall, England.

HERMESITE. An imperfectly established variety of schwartzite.

HERRENGRUNDITE. $\text{CaO} \cdot 4\text{CuO} \cdot 2\text{SO}_3 \cdot 6\text{H}_2\text{O}$. A hydrous basic copper and calcium sulphate carrying 39.5% copper. It is related to brochantite. Crystallization, monoclinic. Tenacity, rather brittle. Hardness, 2.5. Gravity, 3.13. Lustre, vitreous. Color, emerald-green to bluish-green. Streak, light green. Is transparent. Occurrence, Herrengrund, Hungary.

HISTRIXITE. $7\text{Bi}_2\text{S}_3 \cdot 2\text{Sb}_2\text{S}_3 \cdot 5\text{CuFeS}_2$ (a variety of Emeplectite). Orthorhombic prismatic steel gray.

HOMICHLINITE. Chemical formula uncertain. A copper and iron sulphide carrying about 43.8% copper. Apparently is chalcopyrite partly altered to bornite, and close to barnhardtite. Crystallization, tetragonal; also occurs massive. Hardness, 4 to 5. Gravity, 4.48. Color, brassy bronze. Streak, black. Occurrence, Chile, Germany, Japan, etc.

HORSEFLESH ORE. Common name for bornite.

HORSFORDITE. Cu_3Sb . A copper antimonide carrying 76% copper. Structure, massive. Is brittle. Hardness, 4 to 5. Gravity, 8.8. Lustre, metallic. Color, silver-white, tarnishing easily. Is said to occur in large deposits on the Island of Mitylene, Asia Minor.

HUTCHINSONITE. $(\text{Tl}, \text{Ag}, \text{Cu})_2\text{S} \cdot \text{A}_2\text{S}_3 + \text{PbS} \cdot \text{As}_2\text{S}_3(?)$ Crystallization orthorhombic in flattened prisms; lustre adamantine; red colored.

HYDROCIANITE. $\text{CuO} \cdot \text{SO}_3$. A copper sulphate carrying 39.6% copper. Crystallization, orthorhombic. Color, green. Is soluble in water. Is an alteration product, from Mt. Vesuvius.

HYDROCUPRITE. Apparently a hydrated cuprite. Is amorphous, occurring in very thin coatings on magnetite. Color, orange-red to orange-yellow. Found at Schapbach, Baden, Germany, and at Cornwall, Pennsylvania.

INDIGO COPPER. Common name for covellite.

ISOPYRE. Apparently an impure opal, carrying about 1.6% copper, found at St. Just, Cornwall, England.

JALPAITE. $3\text{Ag}_2\text{S} \cdot \text{Cu}_2\text{S}$. A silver and copper sulphide, carrying 13.1% copper and 71.5% silver. Apparently is a cupriferous argentite.

Crystallization, isometric. Tenacity, malleable. Gravity, 6.89. Color, blackish lead-gray. Occurrence, Jalpa, Mexico.

JAMESONITE. A lead sulphantimonite, sometimes cupriferous to the extent of about 3.5%.

JOHANNITE. Chemical formula uncertain. A hydrous uranium and copper sulphate, containing circa 4.8% copper. Crystallization, monoclinic. Hardness, 2 to 2.5. Gravity, 3.19. Lustre, vitreous. Color, emerald-green to apple-green. Streak, paler green. Is translucent to transparent. Taste, bitter. From Joachimsthal, Bohemia.

JULIANITE. A slightly argentiferous and ferruginous variety of tennantite, from Silesia, Germany.

KAMAREZITE. $(\text{CuOH})_2\text{SO}_4 \cdot \text{Cu}(\text{OH})_2 + 6\text{H}_2\text{O}$. A hydrated copper sulphate. Crystallization, probably orthorhombic. Color, grass green. Occurrence, Laurium, Greece.

KARAMSINITE. Chemical formula uncertain. As determined is a weird silicate of aluminum, iron, manganese, copper, calcium, magnesium and potassium, containing circa 1.85% copper. Occurrence, Finland.

KEWEENAWITE. $(\text{Cu,Ni,Co})_2\text{As}$. A copper and nickel arsenide, related to mohawkite, carrying 39 to 54% copper and 9.7% to 20% nickel, with cobalt replacing nickel to extent of about 0.9%. Structure, massive. Cleavage, subconchoidal. Fracture, uneven. Tenacity, slight. Hardness, 4. Gravity, 7.7. Lustre, metallic. Color, pale pinkish brown red, tarnishing to darker red. Is soluble in nitric acid. Occurrence, Mohawk mine, Keweenaw county, Michigan.

KLARPOTHOLITE. $3\text{Cu}_2\text{S} \cdot 2\text{Bi}_2\text{S}_3$. A copper sulphobismuthite containing 25.3% copper and 55.4% bismuth. Crystallization, orthorhombic, in furrowed prisms. Fracture, uneven. Tenacity, brittle. Hardness, 2.5. Gravity, 4.6. Lustre, metallic. Color, steel-gray, tarnishing to iridescent brass-yellow. Occurrence, Baden, Germany.

KOBELLITE. A lead sulphoantimonite, usually cupriferous to the extent of about 1%.

KROHNKITE. $\text{CuSO}_4 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$. A hydrous copper and sodium sulphate carrying 18.8% copper. Crystallization, monoclinic. Fracture, conchoidal. Hardness, 2.5. Gravity, 1.98. Lustre, vitreous. Color, azure-blue to bluish green. Occurrence, Cobija, Atacama, Chile.

LAMPADITE. A cupriferous wad, an earthy form of manganese oxide with 3 to 15% copper.

LANGITE. $4\text{CuO} \cdot \text{SO}_3 \cdot 4\text{H}_2\text{O}$. A hydrous basic copper sulphate containing 53% copper. Is closely related to brochantite. Crystallization, orthorhombic. Hardness, 2.5 to 3. Gravity, 3.5. Lustre, vitreous on crystals, silky on crusts. Color, greenish blue. Is translucent. Occurrence, Cornwall, England.

LAUTITE. CuAsS . An imperfectly determined copper sulphoarsenite, of the enargite family, from Marienberg, Saxony.

LAVENDULAN. Chemical formula probably $3(\text{Cu,Co,Ni})\text{O} \cdot \text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$. A hydrous copper, cobalt and nickel arsenate, containing about 32% copper, 2.5% cobalt monoxide and 1.35% nickel monoxide. Is related to trichalcite. Structure, amorphous. Fracture, conchoidal. Hardness, 2.5 to 3. Gravity, 3.01. Lustre, greasy to vitreous. Color, lavender blue. Streak, pale lavender blue. Diaphaneity, translucent. Is soluble in warm hydrochloric acid. Occurrence, Chile and Saxony.

LAXMANNITE. Vauquelinite.

LEDOUXITE. Cu_3As_2 . Massive, silver white.

LENGENBACHITE. $6\text{PbS}(\text{Ag,Cu})_2\text{S} \cdot \text{As}_2\text{S}_3$. Crystallization triclinic, bladed, steel gray.

LEPIDOPHAEITE. A varietal form of cupriferous wad or lampadite.

LETTOMITE. Cyanotrichite.

LEUCOCHALCITE. $4\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate, carrying about 39.8% copper. Structure, acicular. Lustre, silky. Color, light greenish white.

LIBETHENITE. $4\text{CuOP}_2\text{O}_8\cdot\text{H}_2\text{O}$. A hydrous copper phosphate carrying 51.1% copper. Common name, copper phosphate. Crystallization, orthorhombic. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 4. Gravity, 3.6 to 3.8. Lustre, resinous. Color and streak, olive-green. Diaphaneity, subtranslucent. Is soluble in nitric acid. Occurrence, Chile, Bolivia, England, Germany and Hungary.

LILIANITE. A lead sulphobismuthite, sometimes cupriferous to the extent of about 1.5%.

LIME-MALACHITE. Apparently merely a malachite carrying gypsum or calcite, or both, as impurities.

LINARITE. $\text{PbO}\cdot\text{CuO}\cdot\text{SO}_4\cdot\text{H}_2\text{O}$. A basic lead and copper sulphate carrying 15.8% copper and 55.7% lead oxide. Crystallization, monoclinic. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5. Gravity, 5.3 to 5.45. Lustre, vitreous to adamantine. Color, deep azure-blue. Streak, pale blue. Diaphaneity, translucent. Occurs in many lead and copper districts.

LINDACKERITE. Chemical formula probably $3\text{NiO}\cdot 6\text{CuO}\cdot \text{SO}_3\cdot 2\text{As}_2\text{O}_5\cdot 7\text{H}_2\text{O}$. A hydrous copper and nickel sulphoarsenate containing 27.8% copper. Crystallization, orthorhombic. Hardness, 2 to 2.5. Gravity, 2 to 2.5. Lustre, vitreous. Color, verdigris-green to apple-green. Streak, pale green to white.

LINNAEITE. A cobalt sulphide in which cobalt frequently is replaced partially by nickel, iron or copper, latter to the extent of 1 to 8%.

LIROCONITE. $18\text{CuO}\cdot 4\text{Al}_2\text{O}_3\cdot 5\text{As}_2\text{O}_5\cdot 55\text{H}_2\text{O}$. A hydrous basic copper and aluminum arsenate carrying 28.7% copper. Crystallization, monoclinic; also occurs rarely, granular. Cleavage, subconchoidal. Is imperfectly sectile. Hardness, 2 to 2.5. Gravity, 2.88 to 2.98. Lustre, vitreous. Color and streak, sky-blue to verdigris-green. Is soluble in nitric acid. Occurrence, Hungary and Cornwall, England.

LITHIDIONITE. A copper, iron, potassium and sodium silicate carrying circa 5.2% copper. Is an alteration product from Mt. Vesuvius.

LUNNITE. A name proposed for dihydrite, pseudomalachite and their varietal forms.

LUZONITE. A dimorphous form of enargite, found in the Mancayan-Suyoc district, Lepanto, Luzon, Philippines.

LYELLITE. Langite.

— **Malachite.** $2\text{CuO}\cdot \text{CO}_2\cdot \text{H}_2\text{O}$. A basic copper carbonate carrying 57.5% copper. Common names, green copper carbonate, basic cupric carbonate. Crystallization, monoclinic. Commonly massive, but frequently in crustive and sometimes granular or earthy, and disseminated as stains. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.9 to 4.03. Lustre, of crystals, adamantine, frequently with concretionary bands of varying shades from pistachio-green to bluish green. Streak, green. Is opaque to translucent. Is soluble in nitric acid. Occurs in most copper districts, in the upper portions of the oxidized zones of ore bodies, and frequently is an important commercial ore. When massive and beautifully marked is a semi-precious stone, used for table tops, etc.

MALINOWSKITE. A plumbiferous and usually argentiferous variety of tennantite.

MARCYLITE. An imperfectly determined alteration product from copper sulphides, consisting of hydrated copper oxides and sulphides. Occurrence, Peru and Arkansas, U. S. A.

MARSHITE. Cu_2I_2 . A copper iodide containing 33.4% copper. Crystallization, tetragonal. Fracture, subconchoidal. Tenacity, brittle. Lustre, adamantine. Color, oil-brown. Streak, orange-yellow. Is translucent. Occurrence, Broken Hill mines, New South Wales, Australia.

Melaconite. Massive, compact, shining or earthy dull, black copper oxide of same composition as tenorite. Tenorite.

MELANOCHALCITE. Chiefly CuO with some $\text{SiO}_2\cdot\text{CO}_2\cdot\text{H}_2\text{O}$. A massive black mineral. $\text{Cu}_2(\text{Si,C})\text{O}_4\cdot\text{Cu}(\text{OH})_2$. A copper silicate containing 61.4% copper. Structure, amorphous or cryptocrystalline, habit of crystals being

undetermined. Hardness, 4. Gravity, 4.14. Lustre, vitreous. Color, jet black, powder is coffee-brown.

MELANOTHALLITE. Chemical formula probably $\text{CuCl}_2 \cdot \text{CuO} \cdot 2\text{H}_2\text{O}$. A copper oxychloride. Is an alteration product at Mt. Vesuvius.

MIARGYRITE. A silver sulphoantimonite, frequently cupriferous to the extent of one-half to one per cent.

MIXITE. Chemical formula probably $20\text{CuO} \cdot \text{Bi}_2\text{O}_3 \cdot 5\text{As}_2\text{O}_5 \cdot 22\text{H}_2\text{O}$. A hydrated basic copper arsenobismuthite, carrying 35.2% copper. Occurs in tufts of minute acicular crystals. Hardness, 3 to 4. Gravity, 3.79. Color, whitish green to emerald-green or bluish-green. Streak, lighter green. Is translucent, and, in fine particles, transparent. Occurrence, Baden, Germany, and Utah.

MOHAWKITE. $(\text{Cu}, \text{Ni}, \text{Co})_2\text{As}$. A copper, nickel and cobalt arsenide, carrying 63 to 69% copper, 3 to 7% nickel and 0.5 to 2% cobalt, usually somewhat argentiferous. Crystallization, hexagonal, by synthesis, no crystals being found in nature. Cleavage, indistinct. Fracture, uneven. Tenacity, slight. Hardness, 4. Gravity, 8.05. Color, light gray on fresh fractures, tarnishing to purple or brassy yellow. Streak, gray. Is soluble in nitric acid. Occurrence, Mohawk mine, Keweenaw county, Michigan.

MOHAWK-WHITNEYITE. Cu_3As . A copper arsenide, carrying 83 to 87% copper. Is a mere name of convenience for an intimate blending of mohawkite and whitneyite, or keweenawite and whitneyite, indistinguishable to the eye, but determined chemically. Cleavage, none. Fracture, hackly. Tenacity, is malleable to only a slightly less extent than copper. Hardness, about 5. Gravity, 8.6. Color, gray, with a yellowish tinge, tarnishing to coffee-brown. Streak, gray. Is soluble in nitric acid, with a small residue of gray powder. Occurrence, at Mohawk mine, Keweenaw county, Michigan.

MOTTRAMITE. Chemical formula undetermined. A hydrous basic lead and copper vanadate containing about 16.3% copper. Form resinous, velvety black crystalline incrustation. Is very closely related to psittacinite.

MOUNTAIN BLUE. Common name for azurite.

MOUNTAIN GREEN. Common name for malachite. Name sometimes is applied to chrysocolla also.

MYSORIN. An impure malachite from Mysore, India.

NAMAQUALITE. Chemical formula probably $2\text{Cu}(\text{OH}) \cdot \text{Al}(\text{OH})_3 \cdot 2\text{H}_2\text{O}$. A hydrated copper and aluminum oxide, carrying 35.8% copper. Occurrence, Little Namaqualand, Cape Colony.

NANTOKITE. Cu_2Cl_2 . A copper chloride, carrying 84.1% copper. Crystallization, isometric; also occurs massive and granular. Cleavage, cubic. Fracture, conchoidal. Hardness, 2 to 2.5. Gravity, 3.9. Lustre, adamantine. Color, grayish white to colorless. Is translucent to transparent. Is soluble in nitric or hydrochloric acids, and in ammonia. Yields chlorine when sharply struck. Oxidizes readily on exposure to atmosphere. Occurrence, Carmen Bajo mine, Chile, and Broken Hill mines, New South Wales.

NATROCHALCITE. $\text{Na}_2\text{SO}_4 \cdot \text{Cu}_2(\text{OH})_2(\text{SO}_4) \cdot 2\text{H}_2\text{O}$. A sodium copper sulphate of the copperas group. Crystallization monoclinic. Lustre, brilliant. Translucent. Color, emerald-green.

NEOCIANOITE. Anhydrous copper silicate. Crystallization monoclinic, in microscopic tables as a blue sublimate on lava.

OCTAHEDRAL COPPER ORE. Common name for cuprite.

OLIVE GREEN COPPER ORE. Common name for olivenite.

OLIVENITE. $4\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot \text{H}_2\text{O}$. A hydrous basic copper arsenate, carrying 44.8% copper. Common name, olive green copper ore. Crystallization, orthorhombic, with prismatic and acicular crystals; also occurs globular and granular. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.1 to 4.4. Lustre, adamantine to vitreous. Color, olive-green to blackish green, also earthy, felt-like whitish mass. Is opaque to subtransparent. Is soluble in nitric acid. Occurrence, Nijni Tagilsk, Perm, Russia, Cornwall and Devon, England, Chile, Utah, etc.

ORILEYITE. $(\text{Cu}_2\text{Fe})_2(\text{As},\text{Sb})_2$. A copper and iron arsenoantimonite, carrying 12.13% copper. Is related to stibiodomeykite. Structure, massive. Hardness, 5.5. Gravity, 7.4. Lustre, metallic. Color, steel-gray, with purplish tinge on fresh fracture. Streak, dark gray. Occurrence, Burmah.

PARAMELACONITE. $\text{CuO} + \text{Fe}_2\text{O}_3$. A copper oxide carrying 79.3% copper. Is a dimorphous form of melaconite. Crystallization, tetragonal. Hardness, 5. Gravity, 5.83. Lustre, brilliant. Color, purplish black on faces, pitch-black on fractures. Occurrence, with footeite, at Bisbee, Arizona.

PARATACAMITE. $\text{CuCl}_2 \cdot 3\text{Cu}(\text{OH})_2$. Crystallization rhombohedral. Color, bright green.

PARTZITE. $\text{Cu}_2\text{Sb}_2\text{H}_2\text{O}$. Chemical formula uncertain. A hydrous copper antimonite, carrying about 28.7% copper. Fracture, conchoidal. Hardness, 3 to 4. Gravity, 3.8. Color, yellowish green to blackish green. Occurrence, Mono county, California.

PEACOCK ORE. Common name for bornite. Sometimes is applied also to chalcopyrite when showing an iridescent tarnish.

PEARCEITE. Chemical formula probably $9(\text{Ag},\text{Cu})_2\text{S}_2\text{As}_2\text{S}_2$. A silver and copper sulphoantimonite. Crystallization, rhombohedral; also occurs massive. Cleavage, none. Fracture, conchoidal. Tenacity, brittle. Hardness, 3. Gravity, 6.125. Lustre, metallic. Color and streak, black. Occurrence, Aspen, Colorado.

PELOCONITE. A varietal form of lampadite, a copper-bearing earthy form of manganese oxide.

PENTLANDITE. An iron and nickel sulphide carrying up to 1.75% copper.

PERCYLITE. Chemical formula probably $\text{PbCuO} \cdot \text{Cl}_2 \cdot \text{H}_2\text{O}$. A hydrous lead and copper oxychloride carrying about 17% copper. Crystallization, isometric. Hardness, 2.5. Color and streak, sky-blue. Occurrence, Chile, Bolivia, South Africa and Mexico.

PHILLIPITE. $\text{CuSO}_4 \cdot \text{Fe}_2(\text{SO}_4)_3 + n\text{H}_2\text{O}$. A hydrous copper and iron sulphate, carrying 11.5% copper. Structure, granular and fibrous. Lustre, vitreous. Color, azure-blue. Diaphaneity, translucent. Taste, astringent. Is soluble in water. A variety of Kröhnkite. Occurrence, Los Condes, Santiago de Chile.

PHOSPHOROCHALCITE. $6\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate, closely related to dihydrite and pseudomalachite.

PHOSPHOCHROMITE. Vauquelinite.

PILARITE. An aluminous variety of chrysocolla, from Chile.

PISANITE. $(\text{Fe},\text{Cu})\text{SO}_4 \cdot 7\text{H}_2\text{O}$. A hydrous iron and copper sulphate, carrying variable percentages of copper. Practically is a cupriferos melanterite, or copperas. Crystallization, monoclinic. Lustre, vitreous. Color, bright blue. Occurrence, Old Jordan mine, Bingham, Utah.

PLANCHEITE. $15\text{Cu}_2\text{O} \cdot 12\text{SiO}_2 \cdot 5\text{H}_2\text{O}$. A fibrous blue hydrated silicate of silver.

PLANERITE. A hydrous aluminum, copper and iron phosphate, carrying circa 2.8%. Occurrence, Gumishevsk, Perm, Russia.

PLUMBUCUPRITE. Cuproplumbite.

PLUSH COPPER ORE. Common name for capillary cuprite.

POLYBASITE. $9(\text{Ag},\text{Cu})\text{S}_2\text{Sb}_2\text{S}_2$. A silver and copper sulphoantimonite carrying 3 to 10% copper and 62 to 72% silver. Crystallization, orthorhombic. Fracture, uneven. Hardness, 2 to 3. Gravity, 6 to 6.2. Lustre, metallic. Color, iron-black, in thin splinters, cherry-red. Streak, black. Is nearly opaque. Occurrence, Neihart, Mont., Mollie Gibson mine, Aspen, Colo.

PRASINE. A varietal form of dihydrite, containing alumina, silica and arsenic in small amounts, apparently merely as impurities.

PSEUDOBOLÉITE. Cumengite.

PSEUDOLIBETHENITE. Libethenite.

PSEUDOMALACHITE. $6\text{CuO}\cdot\text{P}_2\text{O}_5\cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 53.5% copper. Is closely related to dihydrite, but has one extra unit each of cupric oxide and water. Structure, massive, reniform and botryoidal. Hardness 4.5 to 5. Gravity, 3.4 to 4.4. Lustre, vitreous. Color, emerald-green to blackish green. Streak, paler green.

PSITTACINTE. Chemical formula probably $4(\text{Pb}, \text{Cu})\cdot\text{V}_2\text{O}_5\cdot 2\text{H}_2\text{O}$. A hydrous basic lead and copper vanadate, containing about 15.4% copper. Cryptocrystalline coating. Structure, pulverulent. Color, olive-green. Occurrence, Argentina and Montana.

PURPLE COPPER ORE. Common name for bornite.

PYRITES OF COPPER. Common name for chalcopyrite.

RABDIONITE. Chemical formula uncertain. A hydrated iron, manganese and copper oxide, containing 11.2% copper. Is very soft. Gravity, 2.8. Lustre, dull. Color, black. Streak, dark brown. Occurrence, Nijni Tagilsk, Perm, Russia.

RAHTITE. An impure cupriferous sphalerite.

RAMIRITE. Cuprodescloizite.

RED COPPER ORE. Common name for cuprite.

RED GLASSY COPPER ORE. Common name for cuprite.

REDRUTHITE. Chalcocite; prismatic in pseudo-hexagonal twin crystals.

REGNOLITE. $5\text{CuS}\cdot\text{FeS}\cdot\text{ZnS}\cdot\text{As}_2\text{S}_3$. A copper, iron and zinc sulphoarsenite containing 32.6% copper. Is closely related to epigenite, sandbergerite. Crystallization, tetragonal. Occurrence, Cajamarca, Perú.

RESANITE. Chemical formula uncertain. A hydrous copper and iron silicate, containing about 18.5% copper. Structure, massive. Color, olive-green. Is soluble in hydrochloric acid. Occurrence, Liquillo, Porto Rico, associated with chrysocolla and malachite.

REZBANYITE. A lead sulphobismuthite, usually cupriferous to the extent of 1.75 to 3.75%.

RICHMONDITE. A cupriferous variety of beegerite, which is, normally, a lead sulphobismuthite.

RICKARDITE. Cu_2Te_2 . A copper telluride containing 40.5% copper. Structure, massive. Fracture, irregular. Hardness, 3.5. Gravity, 7.54. Color, brilliant, purple, rivaling bornite tarnish, even on a fresh fracture, and showing deep color when pulverized. Is fusible on charcoal and soluble in nitric acid. Occurrence, Good Hope mine, Vulcan, Colorado.

RIONITE. A bismuthiferous variety of tennantite. 13% bismuth.

RIVOTITE. Chemical formula uncertain. A copper and antimony carbonate and oxide carrying about 31.6% copper. Structure, amorphous, compact. Fracture, uneven. Tenacity, fragile. Hardness, 3.5 to 4. Gravity, 3.55 to 3.62. Color, yellowish green to grayish green. Streak, grayish green. Occurrence, Lerida, Spain.

ROSASITE. (Variety of Aurichalcite.) $2\text{CuO}\cdot 3\text{CuCO}_3\cdot 5\text{ZnCO}_3$. A fibrous greenish blue mineral.

RUBY COPPER. Common name for cuprite.

SAFFLORITE. A cobalt diarsenide, usually cupriferous to the extent of 0.25 to 4.25%.

SALVADORITE. $\text{FeSO}_4\cdot 7\text{H}_2\text{O}\cdot 2(\text{CuSO}_4)\cdot 7\text{H}_2\text{O}$. A hydrous copper and iron sulphate carrying about 14.5% copper. Is near pisanite. Crystallization, monoclinic. Lustre, vitreous. Color, bluish green. Occurrence, Calama, Antofagasta, Chile.

SANDBERGERITE. A zinciferous variety of tennantite, from Peru. Contains about 8% zinc.

SCHULZENITE. Chemical formula probably $\text{CuO}\cdot 2\text{CoO}\cdot \text{Co}_2\text{O}_3\cdot 4\text{H}_2\text{O}$. A hydrous copper and cobalt oxide. Structure, amorphous. Fracture, conchoidal. Hardness, 3.5. Gravity, 3.39. Color and streak, black. Occurrence, Chile.

SCHWATZITE. A mercurial tetrahedrite, in which mercury replaces copper variably, usually to the extent of about 15% of the total. Gravity, 5.10. Lustre, dull. Color, dark gray to iron-black.

SELIGMANNITE. $\text{Cu}_2\text{S} \cdot 2\text{PbS} \cdot \text{As}_2\text{S}_3$. Orthorhombic, in small crystals. Color, lead gray. Is a variety of bournonite.

SERPIERITE. $3(\text{Cu}, \text{Zn}, \text{Ca})\text{SO} + 3\text{H}_2\text{O}$. A hydrous basic copper, zinc and calcium sulphate, containing 28.8% copper. Crystallization, orthorhombic. Hardness 2.5. Color, bluish green. Is transparent. Occurrence, Laurium, Greece.

SIEGENITE. A nickeliferous variety of linnæite, frequently carrying small percentages of copper.

SMALTITE. Empirically cobalt disulphide, but frequently carrying copper in quantities from a mere trace to 3.25%.

SOMERVILLITE. $\text{CuSiO}_3 \cdot 4\text{H}_2\text{O}$. A hydrous copper silicate, corresponding in formula with chrysocolla and asperolite, except as to excess of water. From Somerville, Somerset County, New Jersey.

SPANGOLITE. Chemical formula probably $(\text{AlCl})\text{SO}_4 \cdot 6\text{Cu}(\text{OH})_2 + 3\text{H}_2\text{O}$. A basic copper and aluminum chlorosulphate, carrying about 47.7% copper. Crystallization, rhombohedral. Fracture, conchoidal. Hardness, 2 to 3. Gravity, 3.14. Lustre, vitreous. Color, dark green. Occurrence, Cochise County, Arizona.

SPANIOLITE. An imperfectly established variety of schwartzite.

STANNITE. Chemical formula probably $\text{Cu}_2\text{S} \cdot \text{FeS} \cdot \text{SnS}_2$. A copper, iron and tin sulphide, containing 29.5% copper, 13.1% iron and 27.5% tin. Structure, massive, granular and disseminated. Crystallization scalenohedral, tetragonal symmetry. Cleavage, cubic, indistinct. Fracture, uneven. Tenacity, brittle. Hardness, 4. Gravity, 4.3 to 4.5. Lustre, brilliant metallic. Color, olive steel-gray when pure, ranging to iron-black when impure, latter with bluish to yellowish tarnish. Streak, blackish. Occurrence, County Wicklow, Ireland, and Cornwall, England.

STELZNERITE. $\text{CuSO}_4 \cdot 2\text{Cu}(\text{OH})_2$. Chemical formula uncertain. A basic copper sulphate, closely related to brochantite. Crystallization, orthorhombic. Hardness, 3.5 to 4. Gravity, 3.9. Lustre, vitreous. Color, dark emerald-green to blackish green. Streak, lighter green. Is translucent to transparent. Occurrence, Chile, associated with brochantite and atacamite, and frequently mistaken for both.

STETEFELDTITE. Chiefly $\text{Sb}_2\text{O}_3 \cdot \text{AgCu}$ and H_2O . A hydrous copper antimonite, carrying about 12.8% copper. Structure, massive. Hardness, 3.5 to 4.5. Gravity, 4.12 to 4.24. Color, brown to blackish. Streak, shining. Occurrence, Nevada.

STIBIODOMEYKITE. $\text{Cu}_2(\text{As}, \text{Sb})$. A copper arsenoantimonite containing about 65% copper. Apparently is an antimonial domeykite. Crystallization, hexagonal in synthetic crystals, none being found in nature. Cleavage, none. Fracture, uneven. Tenacity, very slight. Hardness, 4. Gravity, 8.1. Lustre, metallic. Color, gray, with yellowish tinge, like domeykite. Streak gray. Is soluble in nitric acid, with small residue of gray powder. Occurrence, Mohawk mine, Keweenaw County, Michigan.

STROMEYERITE. $(\text{Cu}, \text{Ag})_2\text{S}$. A silver and copper sulphide, carrying 31.1% copper and 53.1% silver. Crystallization, orthorhombic. Fracture, subconchoidal. Generally compact, massive. Hardness, 2.5 to 3. Gravity, 6.15 to 6.3. Lustre, metallic. Color and streak, dark steel-gray. Occurrence, Chile, Perú, Siberia, Colorado, California and Silver King mine, Arizona.

STUBELITE. Chemical formula undetermined. A hydrous manganese, copper, iron and aluminum silicate, carrying about 12% copper. Structure, massive, reniform and botryoidal. Fracture, conchoidal. Tenacity, brittle. Hardness, 4 to 5. Gravity, 2.22 to 2.26. Lustre, vitreous, brilliant. Color, velvet-black to pitch-black. Streak, dark brown.

STUDERITE. A varietal form of tennantite containing, as partial replacement of normal copper content, silver, lead, zinc and iron.

STYLOTYPITE. $3(\text{Cu}_2\text{Ag}, \text{Fe})\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper, silver and iron sulphobismuthite carrying 28.3% copper and 8.1% silver. Apparently is an argentiferous and ferruginous bournonite. Crystallization, orthorhombic, columnar prisms. Fracture, imperfectly conchoidal. Tenacity, brittle.

Hardness, 3. Gravity, 4.8. Lustre, metallic. Color, iron-black. Streak, black. Occurrence, Copiapó, Chile.

SUB-OXIDE OF COPPER. Cuprite in mineralogy; cuprous oxide in chemistry.

SULVANITE. $3\text{Cu}_2\text{S}_2\text{V}_2\text{S}_8$. Massive, bronze yellow, tarnishing on exposure. Is a variety of famatinite.

SYCHNODYMITE. $(\text{Co}, \text{Cu})_2\text{S}_8$. A cobalt and copper sulphide, containing about 14.5% copper. Crystallization, isometric. Gravity, 4.75. Lustre, metallic. Color, steel-gray. Is soluble in nitric acid. Occurrence, Eiserfeld, Siegen, Germany.

TAGILITE. $4\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 49.4% copper. Crystallization, monoclinic; also occurs in spheroidal concretions with structure fibrous to earthy. Fracture, uneven. Tenacity, brittle. Hardness, 3 to 4. Gravity, 4.08. Lustre, vitreous. Color, verdigris-green to emerald-green. Diaphaneity, subtranslucent. Is soluble in nitric acid. Occurrence, Coquimbo, Chile and Nijni Tagilsk, Perm, Russia.

TALLINGITE. Chemical formula probably $\text{Cu}_2(\text{OH})_2\text{Cl}_2 + 4\text{H}_2\text{O}$. A hydrated copper oxychloride containing about 64% copper. Structure, subcrystalline. Hardness, 3. Gravity, about 3.5. Color, greenish blue. Streak, white. Is subtranslucent. Thin crusts of minute greenish blue globules. Occurrence, Botallack, mine, Cornwall, England.

TARGIONITE. Apparently merely an impure galena carrying circa 1% each of copper, silver and zinc, from Tuscany, Italy.

TENNANTITE. $4\text{Cu}_2\text{S}_2\text{As}_2\text{S}_8$. A copper sulpharsenite containing 57.5% copper when pure, but shading into a great number of varietal forms. Common name, gray copper ore, in common with tetrahedrite, to which tennantite is closely related and joined by a chain of rather obscure minerals shading gradually from tennantite into tetrahedrite. The many varietal forms of this mineral are brought about by partial replacement of copper by silver, lead, zinc, iron, mercury, cobalt, nickel, tin and platinum, with a marked tendency toward mutual substitution of the antimony of tetrahedrite for the arsenic of tennantite, and vice versa, rendering the tetrahedrite-tennantite group unusually prolific. Crystallization, isometric; also occurs massive and granular, compact. Cleavage, none. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3.5 to 4.5. Gravity, 4.4 to 5.1. Lustre, metallic. Color and streak, flint-gray to iron-black. Diaphaneity, opaque to subtranslucent in small splinters. Is soluble in nitric acid and fusible on charcoal. Occurrence, at numerous points, being found in greater or less profusion in most copper districts. Is not regarded usually as a commercial ore, except where argentiferous, which is quite commonly the case.

Tenorite. Earthy form is known as melaconite. CuO . A copper oxide, containing 79.8% copper. Common names, BLACK COPPER, BLACK OXIDE OF COPPER. Chemical names, copper monoxide, copper peroxide, cupric oxide. Crystallization, monoclinic; also occurs massive, pulverulent and earthy. Fracture, conchoidal to uneven. Hardness, 3 to 4. Gravity, 5.8 to 6.25. Lustre, metallic. Color, dull grayish-black when massive, steel-gray in flakes. Is soluble in nitric and hydrochloric acids. Is found in most copper districts, and is a valuable ore of copper when occurring in quantities, but much of what has been considered tenorite in the past really was chalcocite, for which it is easily mistaken when disseminated. Found in very thin, long, flexible, minute scales of glistening gray color in Vesuvian lavas.

Tetrahedrite. $4\text{Cu}_2\text{S}_2\text{Sb}_2\text{S}_8$. A copper sulphoantimonite containing 52.1% copper. Shades into tennantite, which see, for reference to protean forms of these two closely related and frequently indistinguishable minerals. Common name, gray copper ore. Crystallization, isometric; also occurs massive and granular, coarse to fine, compact. Cleavage, none. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 3.5 to 4.5. Gravity, 4.4 to 5.1. Lustre, metallic, brilliant. Color, flint-gray to iron-

black. Streak, grayish-brown to cherry red. Opaque in quantity, but occasionally subtranslucent in very thin splinters, giving cherry red transmitted light. Is soluble in nitric acid and fusible on charcoal. Occurrence, in most copper districts, but commonly is not regarded as a commercial ore, except when argentiferous, which frequently is the case.

THROMBOLITE. An imperfectly determined hydrous copper antimonate, carrying about 31.5% copper. Structure, amorphous. Color, emerald-green. Occurrence, Rezbánya, Hungary.

TIEMANNITE. An imperfectly determined silver, mercury and copper selenide, carrying about 8.8% copper. Occurrence, with eucairite and umangite, in the Sierra de Umango, Rioja, Argentina.

TORBERNITE. $\text{CuO} \cdot 2\text{UO}_2 \cdot \text{P}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$. A hydrous uranium and copper phosphate, carrying 69% copper. Common name, uranium mica. Crystallization, tetragonal. Cleavage, micaceous, with brittle laminae. Hardness, 2 to 2.5. Gravity, 3.4 to 3.6. Lustre, pearly on cleavage planes and subadamantine on other faces. Color, emerald-green to grass-green. Streak, apple-green. Diaphaneity, translucent to transparent. Is soluble in nitric acid. Occurrence, Cornwall, Saxony, etc.

TRICHALCITE. $3\text{CuO} \cdot \text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$. A hydrous copper arsenate containing 34% copper. Structure, in radiated groups, columnar, also dendritic. Hardness, 2.5. Lustre, silky. Color, verdigris-green. Is soluble in hydro-choloric acid. Occurrence, Russia.

TRIPPKEITE. ($n\text{CuO} \cdot \text{As}_2\text{O}_5$) A copper arsenite. Crystallization, tetragonal. Color, bluish-green. Is soluble in acids. Occurrence, Copiapó, Chile, in druses.

TRITOCHORITE. Cuprodescloizite.

TURQUOISE. $[\text{Al}(\text{OH})_2 \cdot \text{Fe}(\text{OH})_2 \cdot \text{Cu}(\text{OH}) \cdot \text{H}] \text{P}_2\text{O}_7$. A gemstone, essentially a hydrous aluminum phosphate, colored by 2 to 6% of copper, which probably is included as a hydrous basic copper phosphate.

TYROLITE. $5\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 9\text{H}_2\text{O}$. A hydrous basic copper arsenate carrying 40.1% copper. Crystallization, orthorhombic. Cleavage, micaceous. Tenacity, highly sectile and flexible in thin laminae. Hardness, 1 to 1.5. Gravity, 3.02 to 3.1. Lustre, pearly to vitreous. Color, verdigris-green to apple-green. Diaphaneity, subtranslucent to translucent. Occurrence, Libethen, Hungary, Utah, etc.

UMANGITE. Cu_2Se . A copper selenide containing 54.6% copper. Structure, massive. Cleavage, none. Fracture, subconchoidal to uneven. Hardness, 3. Gravity, 5.62. Lustre, metallic. Color, dark cherry-red, with violet tinge on fresh fracture, soon tarnishing to violet-blue. Streak, black. Occurrence, with tiemannite and eucairite, in the Sierra de Umango, Rioja, Argentina.

URANIUM MICA. Common name for torbernite.

URANOCHALCITE. Chemical formula undetermined. A hydrous basic uranium and copper sulphate carrying about 5% copper. Occurs in acicular crystals. Hardness, 2 to 2.5. Color, grass-green. Occurrence, Joachimstahl, Bohemia.

VALLERIITE. A sulphate of copper, iron, aluminum and magnesium. Apparently is a mixture of covellite, pyrrhotite and several aluminous and magnesium minerals. Occurrence, Nya Kopparberg, Sweden.

VARIEGATED COPPER ORE. Common name for bornite.

VAUQUELINITE. Chemical formula probably $2(\text{Pb} \cdot \text{Cu}) \text{CrO}_4 \cdot (\text{Pb} \cdot \text{Cu}) \text{P}_2\text{O}_7$. A lead and copper phosphochromate carrying 3.9 to 10% copper. Crystallization, monoclinic; also occurs amorphous. Fracture, uneven. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 5.8 to 6.1. Lustre, adamantine to resinous. Color, apple-green to liver-brown. Streak, greenish to brownish. Diaphaneity, opaque to faintly translucent. Occurrence, Berezov, Russia.

VELVET COPPER ORE. Common name for chalcotrichite.

VENERITE. A hydrous copper, aluminum, iron and magnesium silicate containing about 14% copper. Occurrence, Springfield, Berks county, Pennsylvania.

VERDIGRIS. Copper carbonate. Is formed from metallic copper by the action of carbon dioxide and moisture in the atmosphere. The verdigris of the pharmacist is a copper acetate and care should be taken not to confuse these widely varying compounds bearing the same name.

VESZELYITE. Chemical formula probably $(\text{CuZn})_2(\text{OH})_2(\text{AsP})_2\text{O}_8 + 5\text{H}_2\text{O}$. A hydrous copper arsenophosphate carrying about 30% copper. Crystallization, monoclinic. Hardness, 3.5 to 4. Gravity, 3.53. Color and streak, greenish blue. Occurrence, Moravitz, Hungary.

VOGLITE. Chemical formula uncertain. A hydrous uranium, lime and copper carbonate carrying about 6.9% copper. Occurs in aggregations of crystalline scales. Lustre, pearly. Color, emerald-green to bright grass-green.

VOLBORTHITE. Chemical formula probably $(\text{Cu,Ca,Ba})_2(\text{OH})_2\text{VO}_4 + 6\text{H}_2\text{O}$. A hydrous basic copper, calcium and barium vanadate carrying about 30.9% copper. Hardness, 3 to 3.5 Gravity, 3.55. Lustre, pearly to vitreous. Color, olive-green to citron-yellow. Streak, greenish yellow. Is translucent in thin splinters. Occurrence, Perm, Russia.

WARRINGTONITE. A varietal form of brochantite.

WHITNEYITE. Cu_3As . A copper arsenide containing 88.4% copper. Structure, massive, crystalline, very finely granular. Tenacity, malleable. Hardness, 3.5. Gravity, 8.4 to 8.6. Lustre, dull and submetallic on fresh fracture, strongly metallic when scratched, soon tarnishing. Color, pale reddish to grayish white, pale reddish white on a rubbed surface, tarnishing to yellowish bronze, brown and brownish black, sometimes with iridescence. Is soluble in nitric acid. Occurrence, Osceola Mine, Calumet, Michigan, Sonora, Mexico, and Chile.

WINKLERITE. Chemical formula uncertain. A hydrous cobalt, nickel and copper arsenate carrying about 11 to 12% copper. Structure, amorphous, massive. Fracture, conchoidal. Hardness, 3. Gravity, 3.43. Lustre, dull. Color, bluish black to violet black. Streak, dark brown. Occurrence, Almería, Spain.

WITTICHENITE. $3\text{Cu}_2\text{S.Bi}_2\text{S}_3$. A copper sulphobismuthite carrying 38.4% copper. Crystallization, orthorhombic. Fracture, conchoidal. Hardness, 3.5. Gravity, 4.3 to 5. Color, steel-gray to tin-white, tarnishing to pale lead-gray. Streak, black. Is soluble in nitric or hydrochloric acids. Decomposes easily on charcoal. Occurrence, Wittichen, Baden, Germany.

WOLCHITE. A varietal form of bournonite.

WOLFSBERGITE. Chalcostibite.

WOOD COPPER. Common name for olivenite.

WOODWARDITE. Chemical formula uncertain. An aluminum and copper sulphate containing about 38.4% copper. Is closely related to langite.

YELLOW COPPER ORE. Common name for chalcopyrite.

YPOLÉIME. Chemical formula perhaps $5\text{CuO}.2\text{P}_2\text{O}_5.5\text{H}_2\text{O}$. A doubtful hydrous basic copper phosphate of the dihydrite-pseudomalachite group.

ZEUNERITE. $\text{CuO}.2\text{UO}_2.\text{As}_2\text{O}_5.8\text{H}_2\text{O}$. A hydrous uranium and copper arsenate containing 6.1% copper. Crystallization, tetragonal. Fracture, uneven. Tenacity, brittle. Hardness, 2 to 2.5. Color, grass-green to emerald-green. Occurrence, Saxony and Cornwall, England.

ZINKAZURITE. Apparently merely a hydrous mixture of copper carbonate and zinc sulphate in small blue crystals, from the Sierra Almagrera, Spain.

ZINKENITE. A lead sulphoantimonite, usually slightly cupriferous.

ZIPPEITE. Chemical formula undetermined. A hydrous basic uranium, copper and calcium sulphate. Occurs in acicular crystals and crusts. Hardness, 3. Color, lemon-yellow to orange-yellow. Occurrence, Joachimsthal, Bohemia.

ZORGITE. Chemical formula uncertain. A lead and copper selenide, carrying 4 to 15.5% copper and 41 to 64% lead, with traces of silver, mercury and iron. Structure, massive and granular. Tenacity, brittle. Hardness, 2.5. Gravity, 7 to 7.5. Lustre, metallic. Color, lead-gray, tarnishing. Streak, darker lead-gray. Occurrence, Cacheuta, Mendoza, Argentina.

CHAPTER IV

THE MINING COMPANIES AND MINES OF NORTH AMERICA

Including United States, Canada and Mexico; also American owned mines of Central and South America, Philippine Islands, Cuba and elsewhere.

ABANGAREZ GOLD FIELDS OF COSTA RICA.

17 Battery Place, New York City. Mine office, Abangarez, Costa Rica. **Officers:** Minor C. Keith, pres.; A. W. Preston, v. p.; H. M. Keith, treas.; J. F. Tilden and E. W. Ong, sec.; E. S. Hyde, asst. treas.; directors, M. C. Keith, Maxwell Norman, E. W. Ong, B. W. Palmer, A. W. Preston, Jas. Virdin. Inc. Sept. 8, 1899, in Del. Cap. \$4,000,000 Com. and \$1,000,000 6% cumulative Pfd.; outstanding, \$3,880,000 Com. and \$1,000,000 Pfd.; par \$25. Transfer agt.: Old Colony Trust Co., Boston; registrar: American Trust Co., Boston. No dividends on Pfd. since May, 1911, when semi-annual dividend of 3% was paid. Annual meeting 3d Monday in Dec. Listed on Boston Stock Exchange.

Funded debt: \$374,000 1-year 6% gold notes; dated May 1, 1915; due May 1, 1916; int. payable May and Nov. 1st, at company's office. Coupon \$50, \$100, \$500, and \$1,000. Issued in exchange for \$353,300 1-year 6% notes due May 1, 1915, callable at par and interest on any interest date on 4 weeks' notice: \$476,000 2-year convertible 6% notes; dated May 1, 1914, due May 1, 1916, int. payable May and Nov. 1st, at company's office. Coupon \$100, \$500, and \$1,000. Convertible at maturity at option of holder into Com. stock. Issued to retire \$461,200 3-year 6% notes which matured May 1, 1915.

Balance sheet for year ending Dec. 31, 1915, shows assets \$6,529,377 which includes cost of property \$3,553,362; mine equipment, \$1,585,383; supplies \$156,782; cash, \$55,337; bullion, \$33,240; accts. and notes receivable, \$138,752; profit and loss, \$1,006,369. Liabilities include notes payable \$1,327,751, current liabilities \$240,570, compared with \$25,903 in 1914. Income account for 1915 shows: deficit from operations of \$9,243, compared with \$99,090 in 1914; interest charges \$78,545; deficit for the year \$87,789, as compared with \$174,589 the previous year. Total deficit Dec. 31, 1915, \$1,006,369 as compared with \$809,063 the previous year.

Property: Company acquired the properties of the Guanacaste Syn. and the Guacimal Expl. Co. After obtaining possession of $\frac{3}{5}$ of the capital stock of the Costa Rica Esperanza Mng. Co. in exchange for land, the Abangarez Co., Dec. 31, 1909, acquired the balance of the stock by giving one share of Abangarez and \$1.87 in cash for each share of Costa Rica

Esperanza. Owns mining properties in full operation covering 118 sq. miles in the province of Guanacaste, Costa Rica, C. A. The ore developed at Majica Creek on the Tres Hermanos Lode is transported by aerial tramway to the Abangarez mill. Also owns a power plant in the Guacimal River, 12 miles from the mill.

Recent production has been as follows:

Year	Tons	Cost Per Ton			Total (a)	Prod. (b)	Earn (b)	Int.
	Milled	Mng.	Mlg.	C'yg.				Chgs. (b)
1915	25,262	\$4.33	\$0.84	\$1.60	\$8.18	\$7.82	d\$0.36	\$3.11
1914	37,742	4.47	0.58	1.39	7.89	5.27	d2.62	2.00
1913	69,346	4.92	0.64	1.70	8.68	8.36	d0.32	1.00
1912	50,011	9.11	1.07	2.28	14.71	12.14	d2.57	0.94
1911	42,514	10.06	1.61	2.38	16.98	21.84	4.86	0.42

(a) includes cost of production, administration and marketing.

(b) per ton. (d) deficit.

In view of the company's financial conditions and conditions in general, an arrangement has been made with J. N. Popham, who has been successful in the management of a neighboring mining property, to undertake the operation of the company's property. He is to furnish all necessary capital for carrying on operations. As compensation he will receive 10% of the net profits over and above operating and development expenses. Company reserves the right to withdraw from agreement upon due notice. Since Mr. Popham assumed charge there has been a gradual but fairly constant improvement in the output of the mine. Net earnings for last quarter of 1915 averaged \$8,800 per month.

ABBEY MINING CO.

NEW MEXICO

Idle. Apparently dead. Described in Volume XI, Copper Handbook.

A. B. C. METALS CO.

BRITISH COLUMBIA

See Alaska British Columbia Metals Co.

ABUNDANCIA; MINA LA

PORTO RICO

Idle. Mine near Rio Blanca, Porto Rico, opened in 1869. Produced a small quantity of rich oxidized ore from a paystreak of 8 to 15', carrying bornite and chalcopyrite averaging 10 to 12% copper, in a vein of cupriforous pyrrhotite of 6 to 10' width.

ABUNDANCIA MINING CO., S. A.

MEXICO

Address: Puerticitos, via Cananea, Sonora. Inc. May, 1912, in Mexico, by O. L. Neer of Douglas, Ariz., Apollo Fuller of Boston and W. C. Webster, Los Angeles. Property, lease and bond on the Abundancia claim, 30 hectares, 5 miles west of Cananea on west slope of mountain. Formerly held by West Cananea Mining Co. and later bonded by Copper Queen Consolidated Mining Co., relinquished 1909. Was shipping from 150 to 200 tons monthly of 9% ore from open cuts and tunnels at last accounts.

ACACIA GOLD MINING CO.

COLORADO

Mining Exchange Bldg., Colorado Springs, Colo. Mine office: Cripple Creek, Colo. K. Mackenzie, pres.; C. S. Gambrill, v. p., K. Macdermid, sec.-treas. **Cap.** \$1,500,000, shares \$1.00 par, outstanding Jan. 1, 1916, 61,011 shares. Gross production to Jan., 1916, \$1,287,513. Net production last 12 months 1915, \$20,139. No liabilities. Annual meeting in Jan.

Dividends to Jan., 1916, \$136,703. Payment of last dividend, Dec. 15, 1912, \$14,389.

Property: The Burns and Morning Star claims, patented, 20 acres, on Bull Hill, Cripple Creek. Developed by a 425' shaft with over 2,000' of underground work, on the Morning Star, and 3 shafts on the Burns claim, one being double compartment with depth of 1,250' and a mile of

underground workings. A second shaft, 350' deep, has 3,390' of drifting and a third 825' deep, has 3,600' of drifting. Cost of development work is about \$694,000. The Burns' claim is being worked at present, shipments being made from the 1,200' level. Ten men employed.

ACCORD MINING & MILLING CO. COLORADO

Address: Georgetown, Colo. Capital stock, \$250,000. **Property:** 40 claims on Saxon Mt., 3 miles from Georgetown. Development by means of the 900' Cully Tunnel which company intends to advance an additional 2,100' with expectation of cutting the American Sisters and Jo Reynolds system of veins on the east and the Capital Prize system on the west.

Property not unpromising, but company was not in good financial condition in March, 1915. Closely related to the Alco Mining & Milling Co.

ACME CONS. GOLD & COPPER MINING CO. WYOMING

Inactive. See Copper Handbook, Vol. XI.

ACME GOLD MINES, LTD. ONTARIO

See Hollinger Cons. Mines, Ltd.

ACME MINING & REDUCTION CO. ARIZONA

Idle. Mail returned from former address in Tucson, Ariz. See Vol. XI, Copper Handbook.

ADANAC SILVER MINES, LTD. ONTARIO

Standard Bank Bldg., Toronto and Cobalt, Ont., Can. **Officers:** B. E. Cartwright, pres.; J. B. Bickell, treas.; D. McArthur, sec. with P. M. Bushnell, J. J. Calvin, directors. Chas. Spearman, supt.

Inc. March, 1915, in Ont. **Cap.** \$2,500,000, shares \$1 par.

Property: In Coleman Twp., Cobalt district, Ont., adjoins the Temiskaming. Developed by shaft which is being sunk to 400' and a winze being sunk to 200' level on a vein showing smaltite, niccolite and a little silver. Property is in the prospect class.

ADELAIDE STAR MINES, LTD. NEVADA

Office: Joseph Ralph, Attorney, 416 Walker Bank Bldg., Salt Lake City, Utah. Dec., 1915, company was being liquidated. Fully described in Vol. XI, Copper Handbook.

ADMIRAL GOLD AND COPPER MINING CO. NEW MEXICO

Idle. **Office:** Tusas, Rio Arriba Co., N. Mex. G. F. Hall, mgr. Inc. 1900 in New Mexico. **Cap.** \$500,000; shares \$1 par. **Lands,** 8 claims, 160 acres, in the Bromide district, show 3 fissure veins carrying silver, copper and gold ores, opened by 3 shafts, deepest 150'. Inactive owing to lack of funds.

ADMIRAL MINING CO. WASHINGTON

Mine in Colville district, near Valley, Stevens Co., Wash. Inc. 1913. **Officers:** T. H. Greenway, pres.; T. R. Tate, v. p.; Mrs. T. R. Tate, treas., Chas. Warsth, sec. **Cap.** \$1,500,000; shares \$1 par.

Property: Developed by 3 tunnels. Reported to have opened up a silver-copper vein in 1915, 18"-8' wide, assaying from \$30-\$100 per ton. In April, 1916, the property was optioned to J. R. Brown and W. Everett of Spokane for \$30,000 and development work scheduled to start.

ADVANCE MINING CO. ARIZONA

Letters "unclaimed" at Fort Grant, Graham Co., Ariz. See Copper Handbook, Vol. XI.

ADVANCE MINING CO. IDAHO

Office: 824 Vine St., Missoula, Mont. Mine office: Mullan, Shoshone Co., Ida. **Officers:** F. D. Fox, pres.; Herbert Crego, v. p.; Henry Hubert, sec.-treas.; preceding officers and F. H. Murphy, directors. Joe. Peila, mgr.

Inc. 1903. **Cap.** \$1,000,000, shares \$1 par, assessable. **Lands:** 5 unpatented claims, 4 miles from Mullan, on Snowstorm Hill, lying between

the Snowstorm on the east and the Butte & Coeur d'Alene on the west and 107 acres of timber land.

Development: by 1,550' tunnel with 2 crosscuts showing streaks of chalcopryrite ore. Management plans active development work, installation of a Pelton water wheel and other necessary machinery in 1916.

ADVENTURE CONSOLIDATED COPPER CO. MICHIGAN

Idle. Office: 32 Broadway, New York. Mine office: Greenland, Ontonagon Co., Mich. Jas. L. Bishop, pres.; Charles G. Lund, v. p.; W. R. Todd, sec.-treas.; preceding officers, Chas. J. Devereaux, James S. Dunstan, Chas. G. Lund and Chas. D. Hanchette, directors; W. A. O. Paul, asst. sec.-treas.; Chas. L. Lawton, gen. supt.

Inc. Oct. 17, 1898, in Michigan. **Cap.** \$2,500,000, shares \$25 par; paid in, \$23. American Loan & Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agt. Annual meeting, first Thursday after first Wednesday in June. Stock listed in Boston; price varied from \$1 to \$4 $\frac{7}{8}$ in 1915.

Operations, 1912, were conducted at a loss of \$38,741, and company ended year with cash assets, \$42,307, and liabilities, \$33,634. An assessment of \$1 per share was levied July 20, 1911. On January 1, 1915, balance on hand was \$2,054 as compared with \$9,263 on Jan. 1, 1914. Receipts for 1915 totaled \$15,805 and expenditures \$13,750, of which \$7,614 represented State taxes for 1913 and 1914. Receipts were derived from rents, sale of previously stored mass copper, mining supplies and land near Ontonagon.

Property: Consists of 3 old mines, the Adventure, Knowlton and Hilton, opened in 1850, 1853 and 1863 respectively, 1,696 acres on the mineral belt, also a mill site on Lake Superior. The mineral lands are located in Secs. 35 and 36, T. 51 N., R. 38 W., and in Secs. 1 and 2, T. 50 N., R. 39 W. The Toltec and part of the Belt lie on the north, South Lake east, Toltec and Mass on the South, and the Mass on the west of the main tract. The Knowlton tract has the Mass to the north and east, Flint Steel to the south and Michigan to the west, the Ridge mine of the Mass lying between the two Adventure tracts. The village of Greenland lies on the northwestern corner of the Adventure's principal tract, and the village of Maple Grove, controlled by the company, is near the mine.

The old Adventure mine was opened 1850, along a line of ancient pits showing prehistoric mining. The largest annual production was \$233,941 lbs. fine copper, 1857. After being closed by owners, the old openings were worked for years by tributors, proving notably rich in silver.

The Hilton, or Ohio mine, opened 1863, on the Mass lode, never was worked vigorously. The Knowlton was opened in 1853. These three old mines made 1,949,173 lbs. fine copper, previous to their merging as the Adventure Consolidated which started work Nov. 1, 1898.

Diamond drill work and crosscutting has disclosed four copper bearing lodes.

The Adventure property has a series of 7 parallel copper-bearing beds in a cross-section of about 1,200' and these, coupled with the existence of Adventure bluff, a 300' hill, caused the opening of the mine by adits, as well as by shafts. The Evergreen belt, of Ontonagon county, comprises a belt of bedded traps, amygdaloids and conglomerates, 7 of these amygdaloidal beds carrying copper on the Adventure tract. These beds were fully described, Vols. I to VII, inclusive.

The cupriferosus beds of the Evergreen belt are notoriously bunched, being rich in spots and worthless at other points. The strike of the parallel lodes of the Adventure is N. 73° E. on the main tract, where operations were conducted, shafts being sunk at an angle of 45°. The old mine has

4 tunnels and 4 shafts, latter, except No. 1, which is in the Merchant lode, being sunk on the Knowlton bed, at 45°, and numbered from west to east.

Production from the old mines ceased, Jan., 1908, since which time only exploratory and development work has been done.

There are 5 shafts, of which No. 5 is the deepest.

No. 5 shaft, started May 6, 1909, is 6x16' inside measurement, with two 6x6' hoisting compartments and a 4x6' compartment for ladders and pipes. Shaft is vertical and was 1,520' deep, June, 1913. It is located about 1,500' south of No. 3 shaft, is lined with concrete for a depth of 50' from the collar, and is solidly timbered from surface. The shaft cuts No. 1 Adventure lode at depth of 894', and is expected to cut No. 2 lode at about 2,200' depth, and No. 3 at about 2,600' depth. The No. 1 lode, opened by an 80' crosscut on the 1,021' level has been drifted upon for a distance of about 200' and discloses very little copper. A 1,150' exploratory crosscut south and west on the 1,500' level intercepts 3 beds, designated as Nos. 2, 3 and 4, cutting the first at a distance of 634', the second at 880' and the third at 1,015' from the shaft. These lodes, opened by drifts out from the crosscut, are altogether without promise so far as opened, the No. 2 lode, 29' wide, and opened for a distance of 145', carrying much copper in the first 7' with the remainder practically barren; No. 3, 32' wide, and opened 547', showing varying amounts and generally poor, and No. 4, 65' wide, carrying practically no copper in the 34' drift run along the footwall of the lode. A fifth lode, No. 1½, first encountered in shaft sinking, is opened for a distance of about 130' at a depth of 1,190' in the shaft, and makes a fair showing. All work was suspended June, 1913. Current rumors report probable calling of assessment and resumption of exploratory development work in 1916.

The new Mass lode, so-called, lying about 120' S. E. of the Evergreen bed, was opened by test pitting, May, 1909, and some crosscutting was done from the Evergreen bed, down to the 6th level of No. 2 shaft, but only a few feet of drifting was done. This bed shows a width of 8 to 12', but carrier flaky copper, with considerable epidote. No work is in progress on this bed.

The mine equipment includes a 38x59' steel boiler house with three 500-h. p. Burt boilers; a 59x59' steel engine house having an Allis-Chalmers duplex double-cone drum direct-acting hoist with 42x60" cylinders, capable of raising a 12-ton load from a depth of 5,000' on an incline of 45° at a speed of 2,000' per minute, and a 38x65' steel compressor house having a 60-drill Rand-Corliss air compressor. There is a complete electric light and power plant and protection from fire is furnished by water mains. The principal mine buildings are sheathed with steel and painted, and the property is served by a spur of the Copper Range railroad.

The stamp mill at Edgemere, on Lake Superior, went into commission Sept. 22, 1902. Equipment includes 3 Allis-Chalmers heads, fitted with Parnall-Krause mortars having 11 to 16" openings in discharge screens, with 2 horizontal revolving screens having 5 to 16" openings for each head. The stamp pistons are automatically rotated, equalizing wear on the shoes. From the revolving screens of the heads, crushed rock goes to the separator jigs, 24 for each head, or 72 for the mill, thence to 36 finisher jigs. There are round slime tables, 3 Overstrom and 3 Wilfley concentrators, and Huntington mills for raggings. Rock bins have a storage capacity of 4,500 tons. Coal is delivered from trestles to boiler rooms by gravity, through chutes. The pump is a 16,000,000-gal. Reidler, drawing its supply from Lake Superior through a tunnel extending 1,200' under the lake. Miscellaneous improvements at the mill site include an office, smithy, machine shop, dwellings, etc.

Production has been as follows: 23,572 lbs. in 1900; 29,361 lbs. in 1901; 606,211 lbs. in 1902; 2,182,608 lbs. in 1903; 1,380,480 lbs. in 1904; 1,606,208 lbs. in 1905; 1,552,628 lbs. in 1906; 1,244,874 lbs. in 1907, with no later production.

AEOLIAN COPPER CONSOLIDATED MINING CO., LTD., IDAHO

Idle. Described in Copper Handbook, Vol. XI.

AETNA MINING CO.

WYOMING

Idle. Office: Merrill, Wis. Mine near Riverside, Carbon Co., Wyo. See Copper Handbook, Vol. XI.

AFTERTHOUGHT COPPER CO.

CALIFORNIA

Office: 400 Meridian Life Bldg., Indianapolis, Ind. Mine and works office: Ingot, Shasta Co., Cal. James E. Watson, v. p.; O. E. Adams, sec.; W. H. Watson, treas.; preceding officers and Geo. L. Porter, directors; S. E. Bretherton, gen. mgr.; John Bull, smelter supt.

Inc. Jan., 1909, in Arizona. Cap. \$8,000,000, shares \$1 par, nonassessable, in \$200,000 of 7% cumulative preferred stock and \$7,800,000 common stock; issued about \$4,200,000. Was organized as successor of Great Western Gold Co. A 20-year first mortgage 6% gold coupon bond issue—authorized to raise funds for payment of debts and further development work; \$229,000 issued to end of 1915.

Property: 19 claims, 18 patented, area 380 acres, with mill and smelter sites and timber lands giving total holdings of 1,704 acres. Lands include the Afterthought, Liberty, Last Chance, Section 15 and Bull groups, mines more or less developed being Afterthought, Copper Hill and Copper Grand. Lands are on the east side belt which extends from Ingot to DeLamar, and is entirely distinct from the copper belt on the west side of the Sacramento river. Lands show porphyry, slates and shales, carrying contact deposits with sulphide ores, there being 5 known orebodies, of which 2 are under development, 1 being reported by company to be 160x500x35' in size.

The Afterthought mine, in the Furnaceville district, 20 miles east of Redding, had about 2,000' of workings, when taken over by predecessor of present company, and now has shafts at 216 and 327', with 7 tunnels, main tunnel being about 2,500' long, with a total of 8,500' of workings, reported by management to show 400,000 tons of ore, estimated to carry 2.7 to 3.4% copper, 10 to 25% zinc, a trace of lead, 6.4 oz. silver and 52 cts. gold per ton. Ore is almost exclusively chalcopyrite and sphalerite, a little oxidized ore having been shipped under former ownership. In 1905 ore smelted assayed 2.81% copper, 14.3% zinc, 11.6% iron, 18.7% sulphur, 5.3% alumina, 7.4% barium sulphate, 5.4% calcium carbonate and 18% silica. The main working tunnel cuts a 25' ore body in the Copper Hill mine.

Equipment includes blast furnaces, electric power, a 115-h. p. steam plant at the mine, with 20-h. p. and 30-h. p. hoists and a 5-drill air compressor. Company owns a total of 55 buildings, including mine and smelter buildings, shops, dwellings, etc.

Survey was made, 1907, and work begun May, 1913, on a 14-mile standard-gauge railway, known as the California, Shasta & Eastern railway, connecting the mine and works at Ingot with the Southern Pacific railway at Bella Vista.

The smelter, 1 mile north of Cow creek, and 1½ miles north of the mine, connected therewith by a 30' tramline, includes a small sampling mill. The smelter, blown in March 24, 1905, has water-jacket blast furnaces of 42x96", rated at 75 tons, and 42x150", rated at 250 tons daily capacity. Fuel is coal, costing \$4.50 per ton. Smelter has 2 brick dust chambers. Much trouble was had at first with the smelter, but under the management of Mr. Bretherton, who took charge later, the furnaces were run with a low

charge and an exceptionally hot top, on account of the excess of barium sulphate, this plan giving good results.

Production by the Great Western Gold Co., 1905-1907, is reported to have upwards of \$900,000 worth of copper, silver and gold, and the last ore smelted, amounting to 18,951 tons, to have averaged 3.1% copper, 15.3% zinc, 8.6 oz. silver and 60 cts. gold per ton.

Company in Dec., 1915, under the leadership of Geo. L. Porter, is planning a reorganization of the board, refinancing, and the building of a 100-ton reduction plant for the recovery of zinc, copper, silver and gold, leaching the zinc and recovering the copper from the residue; operations to be resumed in 1916.

AGUILA AMALGAMATED MINING CO.

MEXICO

Last address: 185 Summer St., Boston, Mass. Probably dead. See Vol. XI, Copper Handbook.

AHMEEK MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Mine office: Kearsarge, Keweenaw Co., Mich. Officers: Rudolph L. Agassiz, pres.; Geo. A. Flagg, sec.-treas.; Clarence H. Bissell, asst. sec.-treas.; Rodolphe L. Agassiz, Wm. A. Hodgson, Benj. Joy, Thomas L. Chadbourne, Jr., James McNaughton, Thomas M. Perkins and Francis L. Higginson, directors; Jas. MacNaughton, gen. mgr.; S. Russell Smith, supt.; Thos. Rapson, mg. cap.; J. T. Reeder, purch. agt.; John G. Bennetts, chief clerk. Inc. March 22, 1880, in Michigan and charter extended, 1910, for 30 years. Cap. \$1,250,000, shares \$25 par, fully issued; \$17 paid in; increased, June 8, 1915, to 200,000 shares, par \$25, 4 new shares being given for each one of the original shares. Last assessment was \$5, Feb. 5, 1904. Paid dividends of \$5 in 1911, \$22 in 1912, \$17 in 1913, \$4 in 1914, \$13 on old capitalization and \$2.50 on new in 1915, \$5.50 for first two quarters of 1916. Annual meeting, second Tuesday in April. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Balance of assets was \$968,772 at end of 1914, and \$1,583,654 at end of 1915. Is controlled by the Calumet & Hecla Mining Co., through ownership of 98,048 shares, of a total issue of 200,000 shares.

Net income for 1915 was \$2,180,000 compared with \$463,000 in 1914, \$207,420 in 1913, and \$1,465,397 in 1912.

Property: 931 acres, lying between the Mohawk and Allouez mines, set off, 1880, by the Seneca Mining Co., to work the Kearsarge or Houghton conglomerate. Under the management of Capt. John Daniell, 2 shafts were sunk on this bed, which averages about 70' width, with 3 paystreaks of 2 to 3', aggregating 7' width, each carrying copper in good quantities, but bed not payable as a whole, owing to great width of partially or wholly barren rock. Boundary lines were rectified, by exchange of 11.18 acres with Allouez, July, 1903, and by a similar exchange of 20 acres, with Mohawk, 1909, giving straight boundary lines on the dip of the bed, permitting easier development by all mines concerned. Work on the present mine was started Dec. 2, 1902, as work at the Mohawk mine had disclosed the position and trend of the Kearsarge lode.

The Kearsarge bed, on which the present mine is opened, ranged 14 to 18' in width, with but little poor ground encountered in the entire mine. Openings are considerably ahead of stoping requirements, and blocking out is almost entirely by drift stopes, which are carried about 9' wide and 14' high, to the boundary limits, where extraction is begun and brought backward to the shafts, thus reducing timber requirements to a minimum. The mine keeps 3,000,000 to 3,500,000 tons of stamp rock blocked out for stoping. All levels below the first are 125' apart. A Richmond electric bell

signal system connects all underground workings with the engine rooms, and underground stations are connected with surface by telephone. Concrete is substituted for timber in the construction of the shafts, and in other places where practicable, rendering the shafts as nearly fireproof as possible. Mules are used in trampling rock underground.

A cross fissure vein of domeykite, copper arsenide, 71.7% copper, and mohawhite, a copper-nickel-cobalt arsenide, mainly the former, that is 4 to 12" wide, was opened 300' south of No. 1 shaft, on the 5th level, and a second vein of 2 to 12" width is found about a quarter-mile south, both crossing the bedded formation at practically right angles.

The mine has 4 shafts, numbered from south to north, planned to develop the entire tract. Nos. 1 and 2 shafts, 1,445' apart, sunk at 42°, are each 8x17' 4" in size, with 2 hoisting compartments and a ladderway. These shafts were 2,533' and 2,775' deep respectively at end of 1915. Each shaft has, between the 9th and 10th levels, a 400-ton rock bin, equipped with a measuring hopper holding exactly one 7-ton skip load, loaded in 20 seconds by one man, this system saving much time, and confining hoisting of all rock mined down to the 10th level to 1 point in the shaft. No. 1 shaft can be sunk to about 3,000' depth before cut off by the Allouez line, and No. 2 can be sunk much deeper.

The northern end of the mine is developed by shafts 3 and 4, begun August, 1908. These will command the 12 forties lying in the western half of Sec. 28 and eastern half of Sec. 29. Shafts 3 and 4, three-fourths mile N. E. of No. 2, have a common collar, being only 6' apart at surface, but diverging north and south, from the surface, at an angle of 42°. These shafts are sunk through 70' of overburden, and are concreted into the solid rock ledge for depth of 95' from surface. Owing to the outcrop of the Kearsarge lode being owned by the Mohawk, Ahmeek having only the underlay at its northern end, shafts 3 and 4 are sunk in the hanging, at an angle of 80° on a plane corresponding longitudinally to the strike of the bedded formation, and bend at depth of 980', in a curve with a radius of about 400', bringing the shafts to 34°, to correspond with the rather flat dip at the Kearsarge bed, both shafts entering the bed, early 1911, at depth of about 1,275'. Concrete sets and stringers have been used in these shafts wherever ground would permit. Each shaft has 3 compartments, with two 8x8' skipways and a 4x8' ladderway. It is proposed to work out the upper portion of the bed by crosscuts, beginning at depth of 1,020' in No. 4 shaft, which will be the 1st level in these shafts, which have 3 stations above the point where the bed intersects, from which crosscuts will be run to the Kearsarge bed, to the Mohawk line. No. 3 shaft was 2,210' and No. 4 was 2,158' deep at end of 1915. In 1915 new workings totaled 8,769' compared with 4,587' in 1914.

Shaft house No. 1 is 26x26' on the ground, and 80' high, with a 28x100' ironclad wing over the collar of the shaft. A new shaft rockhouse is being built at No. 2 and when completed the rock from this mine will be crushed here instead of sending it to the central crushing plant.

The main power house, between shafts 1 and 2, is in 2 parts, of brick and steel, with composition roof. Equipment of No. 1 power house includes 60-drill and 50-drill Nordberg cross-compound 2-stage air compressors, and a 32x72" cylinder Nordberg hoist. The electrical plant consists of a 13x26" Nordberg tandem-compound engine, direct-connected to a 200-kw. 250-volt Northern Electric generator. Condenser pumps and reheaters are located in the basement. No. 2 engine house is a duplicate of No. 1, containing a similar hoist with double conical drums with maximum diameter of 18'-6", capable of hoisting 10-ton skips in counterbalance from 1 mile

depth. Nos. 1 and 2 engine houses are connected by a steel-frame boiler house, having six 200-h. p. boilers, with room for 8 equipped with feed pumps, ash sluices, coal trestles, etc. The boiler house has a self-supporting steel smokestack, 150' high and 7' 6" in diameter, on a sandstone-faced concrete base.

Shafts 3 and 4 are equipped with two 32x72" cylinder Nordberg hoists, a triple-expansion Nordberg compressor and electric-light engine, housed in a brick structure 65' wide by 146' long, with corrugated-iron roof; a steel boiler house 57' wide and 84' long with corrugated-iron roof, housing eight 200-h. p. boilers, and a steel self-supporting brick-lined smokestack, 7' diameter and 140' high. There is also a change house of brick construction, 39x139". One shaft rock house serves both shafts.

The central crushing plant, of brick, is 800' north of No. 1 shaft, and 624' south of No. 2, with which the plant is connected by a temporary frame trestle 37' high and 14' wide, carrying a double track for 7-ton tram cars, which are dumped by means of cradles, and rock directed by grizzlies and chutes to the crusher, below which is a hopper, feeding directly into a shaker driven by a 7½-h. p. electric motor, crushed rock, thence being fed automatically into a link-belt conveyor driven by a 35-h. p. motor, going to the rock bin. The crusher building, of steel, contains 3 Farrell crushers, driven by a 12x24" Nordberg engine, and tram cars are actuated by two 35-h. p. motors, located in the 2nd story of the building. Crushed rock goes to a 1,600-ton cylindrical steel rock bin, 32' in diameter and 48' high, set on concrete piers, with tunnel and railway track beneath, permitting the filling of cars by gravity, 1 man loading a 40-ton car in 10 seconds.

Mine buildings include office building, machine shop, warehouse, connecting with railway tracks; an office for mining captains and timekeepers, smithy, cold-storage shed, and about 70 dwellings. The location is protected by a water system having 6,000' of 6" mains with 16 Ludlow hydrants. Water is taken from an 8' dam across the outlet of Seneca lake. This water supply probably will be adequate for several years, but is located on another company's land. A large water supply could be developed from Ahmeek lands near the Allouez boundary, and an inexhaustible supply is available from Lake Superior, 4 miles distant, but about 600' lower.

The mine has rail connections with both the Mineral Range and Keeweenaw Central lines, and is connected with the mill by the Mineral Range, which enters the structure over a steel trestle 100' high.

The stamp mill, at Hubbell, on Torch lake, went into commission June, 1910. There were 4 heads, each stamp breaking about 560 tons of rock daily. The mill site has a frontage, on Torch lake, of about 2,000' with a maximum water depth of 90', providing for wasting sands for many years. Ground was broken May, 1913, for an addition to the mill, with room for 4 heads, 2 of which have been installed, together with extensive regrinding machinery, and the other two will be operating by the middle of July, 1916, making 8 heads in all, with an estimated daily capacity of 5,600 tons.

Several new ideas are embodied in the erection and equipment of this mill. The material of construction is steel and concrete throughout. Stamps rest on concrete piers, each standing on a concrete slab 4' 6" thick that rests directly upon a hard pan of closely-cemented gravel. Each slab holds about a mile of wire cable, interlaced upward on its surface and reaching into the pier above, which is 40x40' at the base, pyramidal in form and 38' high, giving the stamps an elevation of about 50' above lake level. There are four 1,000-ton rock bins. A new feature in local mill

construction is double-deck floors, the jigs being located on the upper or roughing floor, and sands overflowing to Evans round tables and Wilfley concentrators on the ground floor. Wash equipment includes 88 jigs, 12 Evans round tables, 45 Wilfley tables and 4 sets of Woodbury jigs. Tests made to end of 1910, indicate a saving of about one-half pound fine copper per ton from the Woodbury system of milling, over the old system. The jigs and tables are actuated exclusively by electricity.

The mill power house has six 200-h.p. boilers, and a low pressure steam turbine. The plant has a 300-k.w. generator, and a pump of 40,000,000-gal. daily capacity, capable of supplying water for 8 heads, connected with Torch lake by a 600' pipe intake.

Production

Year	Tons R'k Treated	Lbs.		Lbs. Cu.		Lbs.		Tot. Cost per Lb.	Rec'd per Lb.
		Mineral Produced	R'k	per Ton Stpd.	Cost per Ton	Copper Produced	per Lb.		
1915	948,874	32,292,325	23.0	\$1.26	21,800,492	7.96c	18.28c		
1914	590,519	20,333,000	23.1	1.55	13,634,605	9.71	13.08		
1913	383,749	13,742,140	24.0	1.77	9,220,874	13.30	15.42		
1912	652,260	23,945,315	25.2	1.39	16,455,769	7.85	16.61		
1911	598,549	21,917,925	25.4	1.42	15,196,127	7.17	12.85		
1910	530,365	16,758,521	22.3	1.42	11,844,954	11.05	12.94		
1909	406,045	22.7	(a)	9,198,110	15.48(b)	13.39		
1908	298,178	21.1	6,280,241	12.66	13.36		

(a) Includes mining, transportation, stamping and taxes. (b) Due to unusually heavy construction costs.

Copper production is marketed through the United Metals Selling Co. Reserves not officially given are maintained at about 5,000,000 tons, and the life of the mine is estimated at 18 years, with present output.

The strike called by the Western Federation of Miners on July 23, 1913, and declared off on April 12, 1914, curtailed production during that time. Later in 1914 when the European war broke out, the copper market was demoralized and the mines were operated on a three-quarter time basis from Sept. 1, 1914, to Feb. 1, 1915.

With 6 stamps operating, Ahmeek is now producing at the rate of over 25,000,000 lbs. copper per year and with the two additional stamps its output will be at the rate of 32,000,000 lbs. of copper per year, figured on the basis of 24 lbs. rock, with a cost per lb. copper of between 7 and 8c. With copper at 14c earnings per share would approximate \$4.40; at 18c \$8.80 and at 20c, \$11.00.

AJAX GOLD MINING CO.

COLORADO

Address: 416 E. 10th Ave., Denver, Colo. Mine address: Victor, Colo.
Officers: E. A. Colburn, pres.; Wm. Lennox, v.-p.; B. L. Gorich, sec.-treas.; E. A. Colburn, E. A. Colburn, Jr., Wm. Lennox and C. H. Dudley, directors. E. A. Colburn, Jr., supt. Reorganized in 1914. **Cap.**, \$1,250,000, shares \$1.00 par. Outstanding \$1,000,000.

Property: 11 claims, patented, 33 acres, on southeast slope of Battle Mt., Cripple Creek mining district, show quartz fissure veins in granite, phonolite and basalt. Veins dip 72° S. W. with strike of N. 32° W. Pay ore occurs as telluride. Company reported 1914 to have leased the property of the Aloha Gold Mining Co. adjoining on the south. Lessees found good grade gold ore on the different levels of the Ajax from the 400' to 1200' levels, in veins from 2' to 4' wide, probably the extension of ore shoots previously worked. Average grade of ore shipped in 1915 was \$16 per ton.

Development: is by means of the Ajax shaft of 1,350' depth, with over 12 miles underground workings. There is a 300-ton cyanide-concentration mill on the property treating custom ores in addition to company ore. Equipment includes a steam hoist and 40 drill air compressor. Output to date said to total \$4,500,000. In Nov., 1915, the output, 2,081 tons, had a gross value of \$22,403. Management intends sinking shaft an additional 500'.

AJO CONSOLIDATED COPPER CO.

ARIZONA

Office: 77 Franklin St., Boston, Mass. **Officers:** Jas. Phillips, Jr., pres.; Walter M. Briggs, v. p.-treas.; H. I. Gaskill, sec., with Jeremiah Horvin, H. C. Slack, Guy Murchie and A. D. Parker, directors. James P. Gaskill, mine supt., Ajo, Pima Co., Ariz.

Inc. Dec. 5, 1912, in Me. Cap., \$6,000,000, shares \$10 par; non-assessable; 4,980,000 shares outstanding. Annual meeting June 14th.

Property: 54 claims, 7 patented, about 1,000 acres in Pima Co., Ariz. Ore occurs as a disseminated deposit of copper sulphides, capped by a heavy burden of oxidized material. Extensive diamond drill prospecting underway 1915-16. Developed by 200' shaft and equipped with gasoline power. Employs 25 men.

AJUICHITLAN MINING & MILLING CO.

MEXICO

Address: Monterey, Mexico. Mines located in district of Toliman, State of Queretero, Mexico, about 25 miles northeast of Bernal station on the National railway, are reached by coach over good roads from Tequisquiapan. Ore is gold-silver, occurring in veins in shale. Vein has well defined walls, an average width of 9 metres, and dips east 50°. Average assay of ore from upper level is \$8 per ton, with \$4 to \$6 ore on the level 50 metres below. Ore is blocked out for 50 metres above upper level, company claiming to have 250,000 tons of \$7 to \$12 ore blocked out in the workings. There is a 65-ton mill on the property, water being obtained from a shaft in the arroyo. Output not reported.

ALADDIN COBALT, LTD.

ONTARIO

Address: F. F. Fuller, sec., 638 Salisbury House, London, E. C., Eng. Mine address. Cobalt, Ont. C. R. E. Jorgensen, pres.; directors, D. H. Herbert, chairman, A. Ferland, C. R. E. Jorgensen, S. B. Peech, J. A. McVichie, mgr. Registered in England, April 23, 1913. Acquired a controlling interest in Aladdin Cobalt Co., Ltd., registered in Canada and having a capitalization of \$500,000, shares \$5 par. Canadian shareholders were offered 5 fully-paid shares for every two \$5 shares held. In addition the Canadian company was allotted 58,000 fully-paid shares in order to enable it to acquire 1,160,000 shares, \$1 each, in the Chambers-Ferland Mng. Co., Ltd. Shares are held in reserve for the acquisition of remaining outstanding shares of the Chambers-Ferland Co. at the rate of one fully-paid £1 share for every 20 Chambers-Ferland shares. For services rendered in organization of the company, 134,351 shares were allotted to H. B. Sedgwick and C. R. E. Jorgensen. The Aladdin Cobalt Co., Ltd., owns the old Silver Queen mine at Cobalt, which was originally worked by the Cobalt Silver Queen, Ltd. It has an authorized capital of £500,000, shares £1 par, issued 439,519 shares. The mine was closed down in Aug., 1914.

Company leases the works of the Nipissing Reduction Co. Employs about 16 men. Recent production is as follows:

	Ore Milled Tons	C'ncts Tons	C'ncts Shipped Tons	Silver Oz.
1914.....	1161	60,000
1913.....	1898	57.2	31.5	19,511

ALADDIN MINING CO.**ARIZONA**

W. A. Kent, mgr., Prescott, Ariz., writes as follows: "I do not feel at liberty to fill out blank you send. All those entitled to receive the information asked for receive it direct." Company has 5-year lease on Paymaster mine and 8 other claims, the property of the Oriental Mining Co., in Big Bug district, near Poland. Lottie mine of same group has 4,400' tunnel and 20-stamp mill.

ALADDIN MINING CO.**WASHINGTON**

Mine near Northport, Stevens Co., Wash. Frank Earnest, pres.; P. P. Swanson and C. A. Magney, directors. Mine is developed by 2 tunnels, lower 400' below upper, and management plans a third crosscut tunnel. Workings show mainly silver-lead ore, decidedly zinciferous in the upper levels. Has about 1,500' of openings in ore. Equipment includes a 50-ton concentrator and sawmill. Presumably idle.

ALAMEDA MINING CO.**IDAHO**

Wallace, Ida. **Officers:** F. J. Finucane, pres., 323 8th St., Spokane, Wash.; Frederick Burbridge, v. p.; Chas. McKinnis, mgr.; J. A. Wayne, sec.-treas.; above with Chas. Hussey, directors. Originally inc. 1900 as the Alameda M. & M. Co., Ltd. Reorganized 1910 as Alameda Mng. Co. **Cap.**, \$1,500,000, shares \$1 par; assessable; 14 assessments levied since 1900. Control of 800,000 shares purchased April, 1916, at 15 cents a share, by syndicate consisting of above named officers. Stock listed on Spokane and Butte Exchanges.

Property: 6 claims adjoining Success Mng. Co. ground; on the E., in Nine-mile section, Coeur d'Alene district, Shoshone Co., Ida. Little work has been done on the property during the last 4 years, but operations of the Success Co. have shown that ore bodies opened on the 400, 450 and 700' levels of the Success mine extend into Alameda ground and judgment has been rendered the Alameda Co. for illegal extraction of ore estimated at 11,000 tons and valued at over \$200,000. The faces on the 400' and 450' levels are said to average 31.7 oz. silver per ton, 31.5% lead, 21.1% zinc and on the 700' level, 7.5% lead, 7 oz. silver and 25.7% zinc.

Operations through the Success No. 2 tunnel or by a new crosscut to tap the 700' level are proposed for 1916.

Development: up to 1916 consists of about 1,400' of tunnel work on the 300' level, disclosing no ore. Property considered promising and new management able. Further litigation with the Success Company pending.

ALASKA BRITISH COLUMBIA METALS CO., BRITISH COLUMBIA

50 Broad St., New York City. **Officers:** J. C. Eden, pres.; Geo. C. Treat, v. p.; Geo. Allen, treas.; S. I. Silverman, sec., with J. D. Trenholme, Henry J. Mayer and Frank W. Coler, directors.

Inc. Dec., 1915, in Wash. **Cap.**, 1,000,000 shares, \$1 par; outstanding 200,000 shares; 500,000 shares held for issue. Transfer agent, 50 Broad St. Registrar, Metropolitan Trust Co., New York City. Listed on New York Curb.

Company's report for 1915 shows assets of \$1,700,000 which include 400,000 shares Stikine Mining Co., \$400,000; option on 200,000 shares Stikine Mng. Co., \$175,000; 200,000 shares Glenora Mining Co., \$200,000; option on 50,000 shares Glenora Mining Co., \$37,500; Stikine claims \$750,000; machinery, supplies, etc., to make up the balance.

Property: 3 groups of claims in B. C.; the Stikine group, 3 claims of the Stikine Mining Co., located 115 miles from Wrangel, Alaska, up the Stikine River, thence 2 miles by trail to claims; elevation, 1,500' to 2,500'. Claims said to have a mineral zone 3,000' wide, running through entire length of claims, with "irregular deposits occurring here and there

throughout the entire zone, which lies in a granitic formation." Little work has been done on the claims. Average sample taken from the first 150 tons ore mined said to yield \$35 gold and silver; 12% lead; 16½% zinc per ton.

The Glenora group: 3 claims, located 5 miles from Glenora, 150 miles up the Stikine River from Wrangel, Alaska, said to cover 4,500' along strike of vein. Ore: chalcopryrite, containing gold and silver. No work has been done except a little open-cutting.

The Jumbo group, 4 claims, located on Copper Creek, at the end of Tofino Inlet, Clayoquot mining division, Vancouver Island, B. C., said to show 1' to 4' of chalcopryrite in a limestone formation, with diabase hanging-wall. Development: 65' shaft with 80' drift and several short tunnels.

Properties are prospects.

ALASKA CONSOLIDATED MINING & SMELTING CO. ALASKA

Mines at Copper Mount, Sulzer P. O., Prince of Wales Island, Alaska. Officers: Geo. H. Crosby, pres.-gen. mgr., Lonsdale Bldg., Duluth, Minn.; A. M. Sellwood, v. p., with A. L. Warner and Henry W. Armstrong, directors. R. L. Kirkpatrick, supt. Inc. Oct., 1912, in Ariz. Cap., \$2,500,000, shares \$5 par; \$1,500,045 outstanding.

Company purchased property of the Alaska Copper Co. at sheriff's sale and offered 100,000 shares to stockholders of the old company at \$1.25 per share. Property consists of 23 claims, 18 patented and 5 being patented, with 40 acres mill site, known as the Copper Mountain group, situated on Copper Harbor, Prince of Wales Island, Alaska.

Property covers a contact metamorphic zone between granite and limestone with a porphyry intrusion along the contact. Orebodies are from 3 to 50' wide with mineralized zone 900' wide and quite attractive surface showings. Development by 4,600' of tunnels and several shallow shafts. Engineer on ground for past year has kept a few men at work waiting for company to be financed.

Equipment includes smelter, sawmill, tramway and many buildings, put up before sufficient ore had been found to keep smelter in operation. Reports made by W. H. Weed and other engineers on file in company office. No ore shipped since 1907.

ALASKA COPPER & COAL CO.

ALASKA

Dissolved in 1915. The Kennecott group, formerly owned by this company, has been sold to the Kennecott Mines Co., and property is described under that title. See volume XI, Copper Handbook.

ALASKA COPPER CORPORATION

ALASKA

Offices: 60 Wall St., New York City, and 437 Chestnut St., Philadelphia, Pa. Mine office: Strelna, Alaska. Officers: Samuel D. Wariner, pres.; D. Geo. Dery, v. p.; John W. D. Bausman, sec.-treas., with I. M. Thomas, W. F. B. Stewart, G. R. Bedford, M. J. Martin, F. P. Lauer, H. W. Davis, directors. Howard W. DuBois, cons. engr.; C. N. Anderson, Strelna, mgr. Angus McLeod, supt.

Inc. Dec., 1914, in Delaware. Cap., \$10,000,000, shares \$5 par, fully paid and nonassessable; 1,700,000 issued. Guaranty Trust Co., New York, transfer agent. Columbia Trust Co., New York, registrar. Annual meeting 3rd Tuesday in February. Stock listed on New York Curb. Company is a successor to the Alaska Consolidated Copper Co.

Property: 35 claims, 700 acres; nine claims patented and balance in process of patent. Holdings comprise Nugget group, situated about 18 miles from railroad station of Strelna, on the Copper River and North Western R. R., at an elevation of about 3,500'.

The property is crossed by a series of parallel fault fissure veins, in amygdaloidal greenstone, containing mostly bornite and some chalcopyrite, in a siliceous limestone gangue. The several parallel veins dip 83° N. W. and strike N. 40° E. One vein system has been followed on the surface along its strike for 3,500', by means of test pits sunk at frequent intervals. The main vein system is prominently exposed at the surface, the orebody said to have a width of 16' across its strike, and to average better than 5% copper. From the high-grade orebody train carload shipments have been made from which smelter returns are reported to have averaged 49% copper and 13 oz. silver per ton. The property is being developed for mining the disseminated ore, which will average 5% copper and which will be milled by a special flotation process.

Development: Underground workings of 2,320' were driven by hand drilling previous to the new management installing power equipment for carrying on all future development work. The power equipment includes two 30-h.p. of the N-S-O type of fuel oil engines, manufactured by the Chicago Pneumatic Tool Co. The air compressors are direct connected, furnishing 366 cu. ft. air per minute, at 100 lbs. pressure. The general equipment includes a No. 5 Leyner drill sharpener, one oil furnace for heating drill steel, two tigger hoists and one air-driven pump. Both Ingersoll-Rand and Sullivan hammer and stoper drills are used. The above equipment was installed during the spring of 1916 and plans have been made for carrying out a development campaign during 1916-17. Property considered meritorious, but needs large amount of money for development and equipment.

ALASKA-EBNER GOLD MINES CO. ALASKA

Dead Property, sold under bondholders' foreclosure for \$225,000, to A. W. Middleton, former treasurer, acting for a bondholders' protective and reorganization committee. Company's best asset was 100,000 shares Ebner Gold Mines Co. stock.

Shareholders were invited to pay 50c a share and receive stock in the newly organized Cons. California-Nevada Co., which see.

A Federal Court decision rendered Jan. 27, 1916, held that the 100,000 shares of the Ebner Gold Mines Co., and 1,000 shares of the Humboldt Mining Co., are the property of the bondholders' committee, but subject to a lien of \$170,072, of the U. S. Smelting, Refining & Mining Exploration Co. The Court held that the deposit agreements with the latter company are void, and restrained the Exploration Co. from disposing or pledging the stock, until further order of the court.

ALASKA FREE GOLD MINING CO. ALASKA

Originally organized as a stock company, now operated under an 8-year lease that began in 1912. Wm. Martin is lessee. **Property:** 13 claims, surveyed for patent, in Fishhook Creek Valley, Willow Creek district, south-central Alaska. It was on this property the first gold quartz of the district was discovered in 1906. Two orebodies have been opened on two different veins, that are sharp, clean fissures in quartz diorite, traceable for several hundred feet on surface. Ore treated in the mill has averaged about \$20 per ton. Development is by means of several tunnels, maximum length 100', with some stoping.

Equipment: includes an aerial tramway, mill and cyanide plant. Sixty men were employed in 1915 and production is said to have been \$90,000. Operating costs are high, due to short season of 100 to 150 days each year, and the isolated position in which property is located. District will be made easily accessible by the Gov't railroad from Seward to Fairbanks, construction of which is under way. See U. S. G. S. Bull. 607, page 60.

ALASKA GASTINEAU MINING CO.**ALASKA**

Office: 25 Broad St., New York. Mine near Juneau, Alaska. **Officers:** Chas. Hayden, pres.; D. C. Jackling, v. p.; C. W. Peters, treas.; K. R. Babbitt, sec.; preceding officers, J. T. Gilbert, N. B. MacKelvie, D. B. King, directors. Operating officials in Alaska: B. L. Thane, mgr.; G. T. Jackson, supt. of mines; F. G. Janney, cons. met. engr.; Geo. O. Bradley, cons. mech. engr.; H. L. Wollenberg, chief engr.; C. E. Bruff, cons. mill engr.; E. S. Daveler, supt. met. dept.

Inc. Jan. 14, 1911, in New York. **Cap.**, authorized and outstanding, \$12,000,000; shares \$5 par. Is controlled by the Alaska Gold Mines Co., which owns \$11,438,670 of the outstanding stock.

Bonded debt: consists of \$3,500,000 (Entire Issue) First Gold 6%; dated Feb. 1, 1911, due Feb. 1, 1931. The Alaska Gold Mines Co. owns \$3,268,000 of the issue. Balance sheet of Dec. 31, 1915, shows total assets of \$23,228,510, which includes mining grounds, titles and rights, \$14,328,321; mine development, construction and equipment, \$7,630,153; materials and supplies, \$373,945; merchandise at stores, \$31,123; product on hand and in transit, \$131,718; accounts receivable, \$133,520; cash, \$25,035; deferred charges to operations, \$574,690. Liabilities: capital stock, \$12,000,000; bonded debt, \$3,500,000; notes payable, Alaska G. M. Co., \$6,858,264; accounts payable, \$94,798; payroll, \$75,701; bond interest accrued, \$612,500; reserve for replacement of equipment, \$6,360; profit from operations, \$80,886. Mining profit for 1915 was \$251,848; miscellaneous income, \$26,923; total operating profit, \$278,771.

Properties: of the Alaska Gastineau Mining Co., situated in the vicinity of Juneau, Alaska, in what is known as the Juneau Gold Belt, comprise (Dec. 31, 1915) a net area of 2,166 acres, consisting of 1,672 acres of lodes, 219 acres of placers and 275 acres of millsites and homesteads. The mining claims of the company consist principally of 4 groups, formerly owned and operated independently of each other, locally known as the "Alaska Perseverance," "Ground Hog," "Silver Bow Basin" and "Sheep Creek" groups. They cover the so-called Gold Creek lode system of ore deposits, across a low spur of mountains from Gold Creek to Sheep Creek and extending into the basin of each stream, total length of lode system so covered being in excess of 2 miles. The company owns a 310-acre mill site near the mouth of Sheep Creek, on the Gastineau Channel. In addition to the above the company owns and controls lands, reservoir sites, power plant sites and rights-of-way on Salmon Creek, emptying into Gastineau Channel, in connection with its principal water power development; and also on Annex Creek and Carlson Creek, streams emptying in to the Taku Inlet about 10 miles east of the mill, and on Granite Creek, Gold Creek and Lurvey Creek. The property of the Alaska Juneau Gold Mng. Co. adjoins the Alaska Gastineau on the west. The mineralized zone dips about 70° E. and in the main has a slate or a schist hanging wall and greenstone foot-wall. It is cut in a number of places by metagabbro dikes, intrusive into the vein. Gold-bearing quartz is irregularly distributed through the zone in the form of veinlets, stringers and masses. The height of vein measured on the dip above Sheep Creek tunnel and for the length of zone developed on No. 10 level is almost 2,000' with a length of 5,000'. Thickness of the main vein, as used for estimates of tonnage, is 70'. A solid block of ore this size would contain more than 50,000,000 tons. This vein is known as the Perseverance Block. It served as a basis for the purchase of the property. Another orebody, known as vein No. 2, has been opened up for several hundred feet, with an average width of over 100'. It is about midway of the length of the Alexander crosscut. On Jan. 1, 1915,

the estimated tonnage of this block was 21,000,000 tons of fully-developed ore, with average assay value slightly less than \$2 per ton. A third orebody, the Ground Hog or Footwall orebody, has been developed in a few places, principally on the Sheep Creek tunnel level, where it was opened up for 1,500' in driving the tunnel. At this point its width and value are as large as those of the Perseverance vein, lying immediately north. The ore zone, known as No. 1, and lying between the Footwall vein and No. 2 vein, contains two, and possibly three, distinct veins, ranging in width up to 200' or more.

At beginning of 1915 the minimum estimate of fully developed, partially developed, and probable ore, was from 75,000,000 to 100,000,000 tons having a recoverable value of \$1.50 per ton. Undoubtedly the ultimate tonnage will be very much greater than these figures, as no consideration has been made of orebodies extending below sea level. Underground work done in 1915 did not materially change the estimate of ore reserves.

The several orebodies opened thus far in the Perseverance Block, are composed of schist, slate, and metagabbro and slate, with the highest grade ore found to date, occurring in the schist; it has averaged in excess of \$2 per ton; No. 2 East stope on the 5th level averages \$2.70 per ton. This orebody has a strong rake to the east appearing further away from the central shaft and workings on successively deeper levels, until on No. 10 level it is first found east of No. 2 shaft. The slate orebody is the lowest grade so far developed; west of No. 1 shaft the vein widens out to twice and three times the width of the original development of 70'; this widening of the ore zone has resulted in a decrease in assay values. East of No. 1 shaft and below No. 5 level the slate orebody is narrower and higher grade, \$1.50 to \$2.50 per ton. West of No. 1 shaft and below No. 9 level the orebody is made up of meta-gabbro and slate, the meta-gabbro dike replacing the foot-wall and making up a large percentage of the orebody. This section so far as sampled and opened, is higher grade than the slate orebody west of the shaft, but lower grade than the schist orebody; it will furnish ore of an average grade.

It had originally been determined that if a mixture of ore could be made, approximating 25% from the schist orebody and 25% from the slate orebody, both east of the shaft, and 50% from the slate orebody west of the shaft, ore of an average grade would be sent to the mill so long as these percentages were maintained; actual results have proven this to be true, but due to unforeseen conditions underground this schedule could not be adhered to and the percentage of high grade ore as originally depended upon dropped in proportion to tonnage increase from 25%, as calculated, to 5% in Nov., and the profit per ton dropped accordingly. Without doubt new development work with the opening of new stopes, will overcome the difficulty and it will be possible to follow the original plan.

Principal development is by means of the Perseverance, or No. 1 shaft, 1,544' deep; No. 2 shaft extending from the 5th to the 10th level, with an oreway from the 10th to 13th level at this point; the Sheep Creek tunnel, or No. 13 level; and the Alexander or No. 10 level. The 8' by 10' Sheep Creek tunnel with length of 9,178' from the bottom of the Perseverance shaft to the portal near Sheep Creek was started Nov., 1912, and finished April 1, 1914. For the last 6 months of 1913 the average distance driven monthly was 583', during 3 of these months advancement was over 600', and in Nov. 661' were driven. The tunnel was driven both for the purpose of developing the property longitudinally and at depth, and to provide a transportation outlet for delivery of ores to the new mill. It

is driven parallel to and in the foot-wall of the principal or Perseverance vein. At certain points, irregularities of the orebody threw portions of the vein into the direct course of the tunnel; at such places the ore was found to be of good value. The Alexander Crosscut, 10th level, 700' above the Sheep Creek tunnel and 1,300' from the surface on the dip of the vein, runs from the Perseverance mine camp to No. 1 shaft, which is vertical and connects No. 13 level with the top or No. 5 level. It is used only for men and supplies, has a reinforced concrete shafthouse and is equipped on the 13th level, with an air driven hoist, which operates two cages. Between the 10th and 5th levels the mine is opened by levels spaced 200' apart. The ore is dropped from the different levels through oreways to the 13th, or main haulage level, Sheep Creek tunnel. No. 1 oreway extends from No. 5 level to No. 13 level, parallels the vein and is almost wholly in the foot-wall. On No. 9 level there is a timber bulkhead which is used to break the fall of ore. It is hinged and can be pulled out of the way when not required. Oreway No. 2 extends from the 9th to the 13th level. It is expected to put these oreways in at 2,000' intervals.

Two methods of mining are used, shrinkage stoping in the gabbro where the back is so hard it must be drilled and blasted, and a caving system in the slate. Full sized stopes are 400' long with 40' pillars between. A 2-compartment raise is carried through the middle of each pillar, half of it being used as a manway, the other half as a skipway through which supplies are delivered from the level below by means of an air hoist. Stopes are started from the tops of chutes run along the foot-wall, a slice being taken across the lode at right angles to the dip. In order to start movement in the lode a cut is driven along the length of the stope and in the foot-wall. No attempt is made at sorting, the mining being done on a large scale and everything extracted put through the mill. During 1915 development work amounted to 17,346', exclusive of 5,943' of diamond drilling, compared with 28,523' of underground workings and 6,203' of diamond drilling in 1914. Total amount of work done since beginning of company's operations in July, 1912, to Jan. 1, 1916, was 71,049', exclusive of 13,499' of diamond drilling; this added to previous work brings total development work to over 17 miles.

Haulage on the different levels is done in 4-ton cars of the Granby type, by means of 6-ton Baldwin storage-battery locomotives, thus eliminating the trolley-wire. The locomotives are operated for 16 hours, then charged for 8 hours. On the main haulage level four 10-ton cars can be loaded at the same time. Haulage to the mill is done over a narrow gauge railroad by electric locomotives of the trolley type. The railroad to the mill runs through Sheep Creek tunnel for 10,000', then along the north side of Sheep Creek for 6,000' to the coarse crushing plant. When the mine and mill are running at full capacity this railroad will handle from 10,000 to 12,000 tons of ore daily.

The milling plant was designed to handle a daily tonnage of 1,500 tons of ore in each of its 4 sections. Since starting operations Feb. 15, 1915, it has been demonstrated that the mill will handle from 10,000 to 12,000 tons of ore per day, necessitating a larger mine output. The mill is essentially a concentrator, accompanied by a separate small plant for retreatment of concentrates produced. It differs greatly from the conventional type of amalgamating gold mill, in that the main milling plant produces nothing but concentrates, at a ratio of about 60 into 1. A decided novelty has been introduced by crushing with rolls instead of stamps. In the retreatment plant the coarser gold containing some silver is separated from the concentrates and reduced to gold and silver bullion; this separation

produces a small tonnage of lead concentrates containing gold and silver that is shipped to Pacific coast smelters. The residual portions of original concentrates, consisting chiefly of iron and zinc sulphides, are finely ground and amalgamated for gold and silver, resultant iron-zinc tailing being discarded.

The mill is built upon a very steep slope, the bottom floor is 192' above Gastineau Channel, the crushing plant 685' above the water. Supplies to the mill are handled over an inclined tramway, while supplies for the crushing plant or the mine are handled over a longer tramway to a loading station on the ore railroad. The course of the ore through the coarse crushing plant is as follows: From the mine cars to the rotary dump, capable of handling four 10-ton cars at once, to grizzly; oversize to two 36" by 42" rolls set to 5"; over caterpillar feeders to stationary inclined screens with 1½" square openings; oversize to two No. 8 gyratories set to 2"; to ore pocket beneath the crushing plant. This pocket is cut in solid rock, is 30' by 50' in cross-section and 225' in height, 110' of which is the ore-pocket proper. Remaining 115' is a raise connecting the ore-pocket with the crushing plant. The bin has a capacity of 10,000 tons of ore. At the bottom of the bin 8 feeders supply ore to a 42" belt-conveyor, 608' long, that runs through a tunnel to the coarse ore-bins in the mill. From the bins the ore goes to stationary inclined screens, 1½" square openings; oversize to 72" x 24" rolls set to ⅞"; undersize to 54" x 24" rolls set to ⅜". Rolls are run on choke-feed and crush dry, and are of heavy design, having the large pulley in the form of an 8,000-lb. flywheel. Bearings are water-cooled. Roll shells are 6" thick and are shrunk onto the roll-cores. Five-ton skips, working in balance, raise the roll product 115' to a series of 10-mesh impact screens; undersize goes to concentrator; oversize is returned to the 54" rolls. Each of the 4 sections contains 15 impact screens, and there are two 54" rolls for every 12 screens. The two 72" rolls serve the entire 4 sections of the mill. Seven sets of skips are used; one set for each 72" roll, and one set for each of the 5 pairs of 54" rolls. Exhaust fans carry away the excessive dust caused by dry crushing.

The concentrating department has a primary set of 10 double-deck Garfield tables and 10 Wilfley tables per section. Products are tailings and a concentrate that assays nearly 50% lead, which is shipped. Tailing goes to a 4-spigot Janney classifier; product of first 3 spigots to tube-mills. Tube-mill product goes to a secondary set of 10 double-deck Garfield tables, followed by 10 Wilfley tables using as wash water the 4th spigot product of the classifier. Each primary Garfield table can handle 300 tons per day. A 15-h.p. motor drives 10 tables. Concentrate from the secondary Wilfley tables will receive a more thorough treatment when the new concentrate retreatment plant is running.

Hydro-electric power is used. The chief sources of supply at present are the Salmon Creek plants, 2 miles northwest of Juneau, and the Annex-Carlson Creek plant furnishing 4,000-h.p.; these furnish a minimum of 6,000-h.p. Ultimate capacity of the Annex Creek project will be 12,000-h.p. The Salmon Creek project necessitated the building of a concrete dam 165' high and 700' long on its crest. Base of dam is 1,000' above sea level. In order to get maximum benefit from the water available 2 power plants were built. No. 2 is a mile below the dam and operates under a head of 600'. Power Plant No. 1 is on the shore of Gastineau Channel, near the mouth of Salmon Creek. Water discharged from upper plant is conveyed by a 10,000' flume to No. 1 plant and there used under a head of 500'. Power plants No. 1 and No. 2 are each equipped with two 1,500-k.w. generating units with total capacity of 6,000-k.w. or 8,000-h.p. Office build-

ings, machine shops, sawmill, six 50-men bunk houses, messhouse and dock have been built on the beach below the reduction plant.

The first ore was run through the mill Feb. 15, 1915. Towards the end of the year a daily capacity of 6,000 tons was reached, but the grade of ore falling for a time, this tonnage was reduced to 4,000 tons daily. When the mine output is increased to a point commensurate with mill capacity there will be a daily tonnage handled of 10,000 to 12,000 tons. The original figure was a daily tonnage of ore handled of 6,000 tons, with a recoverable value of \$1.50 per ton and net profit of 75c per ton. Operating costs have been proven to have been estimated 10% to 20% too high as 60c costs were obtained in Nov., 1915.

Production: by quarters for 1915:

	1st Qr.	2nd Qr.	3rd Qr.	4th Qr.	Total for Year

Extraction and costs in 1915:

Tons Milled	Value	Tails	Ext.	Mng.	Tram.	Trans.	Gen.	Total	Mill	Total
Tons % ————— Cost Per Ton, Cents										
1,115,294	\$1.157	21.91c	81.06	22.47(a)	4.98	3.64	0.33	31.44	30.50	69.04

(a) Includes 5.25c per ton charged against mining to create a reserve to cover cost of preparing new stopes as old ones are exhausted; this cost, 22.47c applies to 2,089,620 tons of ore broken.

ALASKA GOLD BELT MINING CO.

ALASKA

Address: 170 Broadway, New York. Mine office: Juneau, Alaska.

Officers: Sanford Makeever, pres.; A. B. Dodd, v. p.; M. M. Makeever, sec.; J. Makeever, treas.; preceding officers and D. C. Bard, directors; A. B. Dodd, supt. Inc. 1915, in Alaska. Cap., \$1,000,000, shares \$1 par, none outstanding Feb. 3, 1916.

Lands consisting of 93 lode claims, 13 tunnel claims, and 18 wharfage claims, total area 2,500 acres, are located 4 miles south of Juneau and adjoining property of the Alaska Gastineau on the southeast. They cover the extension of the Juneau gold belt and the ore is supposed to be of the same general character as that of the Alaska Gastineau.

Development work was started in the summer of 1915 on the Lott-Nelson group of 30 claims, located in the upper Sheep Creek basin. Roads were built, buildings constructed, and an air compressor put in, preparatory to driving a 3,000' exploratory and development tunnel in Sheep Creek mountain to cut upper part of orebody. In Jan., 1916, this tunnel had been driven 2,880' and \$100,000 is said to have been spent thus far on the development work. Is diamond drilling in an attempt to cut the Gould & Curry vein, supposed to be the main orebody of the property. At last accounts, April, 1916, this drill hole had reached a depth of 1,575' in a horizontal hole without results. Company plans to drive a 9,000' tunnel at sea-level that will cut the orebody at depth, and to build a mill on the beach south of that of the Alaska-Gastineau Co. Trying to make good with the aid of the reflected glory of its neighbors.

ALASKA GOLD & COPPER MINING CO.

ALASKA

ALASKA GOLD EXPLORATION & DEV. CO.

ALASKA

Officers: Chas. J. Hutchinson, pres.; Nelson W. Parker, sec.; both of

Seattle, Wash., and S. I. Silverman, v. p. and mgr., Seward, Alaska. **Property:** Barnes group, including Stella & Ruth claims, in Crow Creek Canyon, in Knik Mng. district, Alaska. **Ore:** gold, in three veins, said to average about \$40 per ton. **Development:** by opencuts and 1,000' of underground workings.

ALASKA GOLD MINES CO.

ALASKA

Office: 25 Broad St., New York. Mine near Juneau, Alaska. **Officers:** Chas. Hayden, pres.; D. C. Jackling, v. p. and managing director; C. W. Peters, treas.; K. R. Babbitt, sec.; directors, Chas. Hayden, D. C. Jackling, K. R. Babbitt, C. M. MacNeil, Sherwood Aldrich, F. H. Goff, E. A. Clark, Wm. H. Coolidge, Jos. T. Gilbert.

Inc. Aug., 1912, in Maine. It is the holding company, owning \$11,438,670 of the \$12,000,000 capital stock, and \$3,268,000 of the \$3,500,000 bonds of the Alaska Gastineau Mining Co. Property is described under title of Alaska Gastineau Mining Co.

Cap., \$7,500,000, increased Jan., 1915, to \$10,000,000, shares \$10 par, outstanding \$7,500,000. Of the unissued stock, \$500,000 is reserved for conversion of 10-year, 6% debentures. Transfer agents: Guaranty Trust Co., New York, and National Shawmut Bank, Boston. Registrars: Bankers Trust Co., New York, and First National Bank, Boston. Listed on the New York and Boston Stock Exchanges.

Bonded debt: Consists of \$1,500,000 10-year, 6% convertible gold debentures, series "A"; dated March 1, 1915; due March 1, 1925; int. M. & S. 1, at Guaranty Trust Co., New York, Trustee, and \$1,500,000 10-year 6% convertible gold debentures, Series "B"; dated March 1, 1916, due March 1, 1926. Coupon, \$100, \$500, and \$1,000; principal may be registered. Authorized, \$1,500,000. These bonds were sold for purpose of providing funds for increasing the mining and milling operations of the Alaska Gastineau Mng. Co. Convertible at any time into stock of the company at \$30 per share. Subject to call as a whole, or in part, at 110 and interest at any time on, or after 3 years from their date. Company agrees that it will not, while any of these debentures are outstanding, mortgage or otherwise encumber any of its assets. Company is not, however, prohibited from issuing other debentures similar to series "A," and series "B," at any time and to any amount, provided that said debentures shall not be given priority over Series "A," and Series "B," debentures. Normal income tax deducted from interest. Listed on New York Stock Exchange.

ALASKA IMPROVEMENT CO.

Office: Room 302, No. 65 Second St., San Francisco, Calif. Bonded Rip Van Winkle mine, at Lone Mountain, Elko Co., Nev., to Lone Mountain Mining Co., in March, 1916. Property produced \$13,813 net to the Alaska Investment Co., making a total of \$42,000 to date. Mine said to be sold to Stewart Mining Co., July, 1916.

ALASKA INDUSTRIAL CO.**ALASKA**

Office: 115 Broadway, New York. Mine office: Sulzer, Prince of Wales Island, Alaska. A. E. Spriggs, pres.; S. I. Frankenstein, v. p.; L. A. Sarecky, sec.; C. B. Thomas, treas.; Charles A. Sulzer, gen. mgr. Inc. Oct. 30, 1899, in New Jersey. Cap., \$1,000,000, shares \$1 par. Annual meeting, second Saturday in January.

Property: The Sulzer group of 35 claims, patented, area 700 acres, also 60 acres in mill sites, 80 acres in homestead, and miscellaneous properties. Eight outlying claims were leased, 1909, for 5 years, to Tye Copper Co., Ltd. Main holdings are near the head of Hetta inlet, 2 miles from the beach and 1,500 to 2,000' above tidewater.

Mine, known as the Jumbo, has a mineralized contact metamorphic zone-up to 1,000' in width, with granite foot and limestone hanging, ore fading into the lime. Property shows 7 lenses and irregular masses, ore being mainly chalcopyrite, with some bornite and a little tetrahedrite in a gangue of magnetite, garnet, epidote and other contact minerals, together with occasional molybdenite. Ore averages 4 to 5% copper, with \$3 gold and silver per ton. Average recovery said to be 100 lbs. copper per ton of rock, at cost of seven cents per lb. copper produced.

Development is mainly by tunnel, with 4 shallow shafts and numerous open cuts. The tunnels are in series, lowest 500' vertically below the highest, all connected by winzes, and the mine has over 3 miles of workings; greatest depth of workings is 1,000'. The ore stands well, requiring little timbering, even in stopes up to 50' in width.

The property carries an available water power, rated at 5,000-h.p., and this has been partially developed by a 36" Pelton wheel, taking water from Beaver creek and actuating a 6-k.w. generator, and a 16" Pelton wheel taking water under a 330' head from Jumbo creek, through a 10" pipe line of 3,000' length, this actuating a 55-k.w. 3-phase 2,300-volt 60-cycle generator, current being stepped down to 220 volts for lighting and power. Mine is equipped with electric fans, blowers and Temple-Ingersoll electric drills.

A 9,000' Riblet aerial tram has 14 wooden towers with 22 half-ton buckets, operated by gravity with a 600' auxiliary tram. Capacity of tram line is 12 tons per hour. The main tram has small bins at the mine and 4,000-ton storage bins at tidewater, where there is a 200' wharf. Company has a 47' gasoline launch.

Equipment includes a 200-h.p. electric hoist and an Allis-Chalmers duplex air compressor, electrically driven. Buildings include a 35x40' warehouse, 30x35' power house, smithies, store, office, dwellings, bunkhouses and various smaller buildings.

Production was begun 1907, and now aggregates 127,000 tons, over \$1,000,000. Earnings have gone back into the property for development and permanent improvements. Company now shipping about 2,500 tons monthly to the Tacoma smelter.

Property considered valuable and management good.

ALASKA JUNEAU GOLD MNG. CO.

ALASKA

Office: Crocker Bldg., San Francisco, Cal. Mine office: Juneau, Alaska. Officers: F. W. Bradley, pres.; Wellington Gregg, Jr., v. p.; A. B. Davis, v. p.; G. D. Abbott, sec.-treas.; J. S. Wallace, ass't sec.; directors, F. W. Bradley, Wellington Gregg, Jr., J. H. MacKenzie, A. B. Davis, and M. L. Requa; P. R. Bradley, gen. supt. Inc. Feb. 17, 1897, in West Va. Cap., \$150,000, consisting of 1,500,000 shares, increased April, 1915, to \$15,000,000, shares \$10 par, outstanding 1,400,000 shares. Increase of capitalization to represent more correctly the value of the property and provide funds for its development. Registrar, Metropolitan Trust Co., New York; transfer agent, Central Trust Co., New York. Listed on the New York Stock Exchange. Annual meeting first Tuesday after third Monday in March.

(a) After deducting \$71,341, property carrying charges.					

Property: The mineral area of the company covers a tract of land adjoining the property of the Alaska-Gastineau Mng. Co. on the west and that of the Ebner Gold Mng. Co. on the east, located one mile inland from Gastineau Channel. In addition the company owns a large tract of land stretching along the east side of the Channel south from the city of Juneau. This area, used as the mill site, is connected with the large mineral area by two narrow strips of land, one along Gold Creek and the other farther south through which a long transportation tunnel connects the mine and mill.

The mining claims include the first quartz claims located on the wide vein called "The Juneau Gold Belt" and are supposed to be in the center of the mineralization of the belt. The property owned by the Alaska-Juneau covers the outcrop of the vein or mineralized zone, for over a mile in length. The lode has a width between walls of 900' and dips 70° east. The orebody is composed of slate with gold bearing quartz, irregularly distributed through it in the form of veinlets, stringers and masses. Metagabbro dikes, intrusive into the vein, carry gold bearing quartz similarly distributed. The quartz distribution is not regular, but it is probable that, where the gold content of the vein is too low for commercial extraction, sorting can be

resorted to and a mill feed obtained that will be higher than the average mass. Associated with the gold in the quartz is pyrite, pyrrhotite, galena and a little sphalerite. The foot-wall is greenstone, the hanging wall schist.

The vein had been operated in a superficial way for a great many years. Deep development was first planned in 1899, started in 1909, but not actively pushed until 1910, when a main working crosscut, 8'x10', called the Gold Creek tunnel, was commenced at an elevation of 425' above sea level, starting from a point immediately behind the town of Juneau. At 6,540' from the portal, where the surface could be reached in the shortest possible distance, an 800' inclined raise in the hanging-wall was put through to surface. In driving the tunnel that portion of the vein lying west of the Silver Bow fault was crosscut diagonally for 650', disclosing orebodies of average assay values slightly less than \$2 per ton. The true width of the vein where cut is 500' with average assay value close to \$2 per ton. Although this is better than shown by any surface developments, it is believed this width and assay value will persist for considerable distances longitudinally and vertically. This belief is based on the result obtained from a 30-stamp mill working 5 months each year, from 1896 to 1914, on ore mined by open-pit work along the outcrop of the vein. During this time 295,807 tons were milled, yielding \$2.26 free gold per ton, obtained by milling 63% of ore mined. The rejected vein matter was gold bearing, but of lower grade. No attempt was made to save the values in the sulphides, which would have added about 20c per ton.

Ore extracted from the Gold Creek tunnel and the intermediate level opened from the incline raise at an elevation of 495' above the tunnel was milled in the new 40-stamp mill on Gastineau Channel. A total of 50,000 tons milled up to Dec. 1, 1914, averaged \$1.36 per ton, the low value undoubtedly being due to the dilution of ore with waste attendant upon the opening up of the two levels preparatory to stoping. In Dec., 1914, there was milled 9,657 tons of average assay value of \$1.74 per ton; in Jan., 1915, there was milled 12,000 tons of average grade of \$2.09 per ton.

Confidence in the persistence of the vein and its value is also derived from milling records of the 100-stamp Perseverance mill, now part of the Alaska Gold Mines Co., adjoining on the East, and the milling results obtained by a small mill operating on the Ebner property on the west.

The mine development work as outlined, and now under way, will give a daily tonnage of not less than 8,000 tons, making available for caving and extracting 7,500,000 tons of ore in one section of the vein. Management expects to complete this work by Oct., 1916. All tunnels are being double tracked and so equipped that 16,000 tons of ore daily can be transported from the mine to the mill. The mining method to be employed will be a combination of those used on Douglas Island with the caving system used by the Alaska Gold Mines Co.

The approximate total tonnage of the vein above the Gold Creek tunnel level and between the eastern and western ends of the property amounts to 500,000,000 tons of slate, metagabbro and quartz. From this by means of selective mining there should be taken 80,000,000 to 100,000,000 tons of vein matter suitable for milling that should yield, according to estimates made by the management, a net profit of from \$0.70 to \$1 per ton. That part of the vein below the Gold Creek tunnel would seem to promise an additional tonnage of the same value, but twice as great as that which lies above the tunnel level, inasmuch as a parallel vein 2 miles distant on Douglas Island is being mined at a depth of 2,000' below sea level.

New work in 1915 totaled 16,775' compared with 5,671' in 1914.

Forty stamps of the first unit of the new mill started operating early

in Jan., 1914. Ten of these stamps were used as a pilot plant, with total duty per stamp per day of 20 tons. The pilot stamps are followed by 2 Wilfley roughers, 1 Chilean mill, amalgamating plates and 2 Wilfley concentrators. A mill with daily capacity of 8,000 tons has been designed and construction work will be started this Spring. Present plans call for 4 No. 9 gyratory-crushers, 2 jaw-crushers, 12-6' by 8' ball-mills, 12 7' by 10' tube-mills, 48 roughing tables, and 120 finishing tables. The plant will be in 4 units of 2,000 tons each, the first of which is expected to be in operation early in 1917. Battery water for the mill will be obtained from Gold Creek and also from the ocean when fresh water is scarce. The power plant will be built on the beach and will contain two 5,000-k. w. turbo-generators. Hydro-electric power will eventually be transmitted from Nugget Creek, about 15 miles distant, and, in case this is not enough, Speel river, 45 miles distant, will furnish additional requirements. Wharf facilities allow large ocean-going steamers to approach within a few feet of the mill!

	Tons Milled	Value p. Ton	Cost per Ton		Rec. p. Ton	Total Recovery
			Oper.	Total(a)		
1915....	179,892	\$1.4797	\$2.853	\$ 3.819	\$1.118	\$201,036
1914....	60,026	1.4326	3.573	10.813	1.156	69,390

(a) Total of all expenditures.

In 1913 F. W. Bradley made comparison between the average costs per ton in the 4 operating Douglas Island mines, and the estimated costs per ton at the Alaska-Juneau as follows: Douglas Island total mining costs \$0.95, total milling costs \$0.25, concentrate treatment, plant construction, etc., \$0.20, total \$1.40. Alaska-Juneau total mining costs \$0.40, total milling costs \$0.20, concentrate treatment, plant construction, etc., \$0.20, total \$0.80.

The Juneau gold lode is not a new discovery, for mining operations have been carried on there for 25 years. All such work was on a small scale, however, and directed toward mining only the quartz veins and zones of enrichment. To make a profit on ore that carries only \$1.50 gold per ton it is absolutely necessary to mine and mill a large tonnage. When present plans of the Alaska Juneau materialize a daily tonnage of 8,000 tons will be treated, from which the management expects to pay dividends of at least \$1,400,000 per annum, or 10% on stock now outstanding. The property adjoining on the east is that of the Alaska Gastineau, Alaska Gold Mines Co. Its ore is similar to that of the Alaska-Juneau and about the same average grade. Both companies are managed by the most successful mining engineers of the day, but entirely different methods will be pursued in working the properties. According to present plans, Alaska Gastineau will begin Mch., 1917, to treat 10,000,000 tons per year, extracting everything from the vein and doing no sorting. In the mill crushing will be effected by means of rolls, a decided novelty in gold milling. Alaska-Juneau will treat 2,500,000 tons per year and will use selective mining—that is, extracting only the richer portions of the lode. In the mill the company will adhere to the conventional stamps. The net results obtained by these two entirely different methods will be awaited with much interest.

ALASKA METALS CO.

Idle. Mine office: Bruce, Prince of Wales Island, Alaska. Harry Corbin, supt., at last accounts. Property, on the west coast of Prince of Wales Island, formerly known as the Corbin mine, and the Copper Mountain Mine. No recent returns secured. Slightly developed.

ALASKA MEXICAN GOLD MINING CO.

Address: Mills Bldg., San Francisco, Calif. Mine office: Douglas Island, Alaska. Under same management as the Alaska Treadwell.

Inc. April, 1892, in Minnesota. Cap., \$1,000,000 in 200,000 shares, \$5 par;

120,000 of which went to pay for the Alaska Mexican Gold Mine, and 60,000 were issued to the public by the Exploration Co., Ltd., of London. Annual meeting in May. Registration & Security Co., of San Francisco, registrars.

Comparative General Balance Sheet:

(d) Deficit.

Dividends paid from 1894-1915 inc. aggregate \$14.48 per share.

Property: Located on the east side of Douglas Island, between the 700' claim of the Alaska United on the west and the Ready Bullion mine of that company on the east. For a general description see Alaska Treadwell Gold Mining Co.

Development: includes the 1,570' Mexican shaft, devoted to general use, while all ore is hoisted through the 2,354' Central shaft on the 700' claim of the Alaska United, adjoining on the west. The orebody has been opened by levels from the 110' level to the 1,570' level; distance between levels is 110'. During 1915 development work done by the A. M. Co. amounted to 2,153' on its own property, 354' on the adjoining 700' claim of the A. U. Co., and 3,054' done jointly with the A. T. and the A. U. Cos.

Ore reserves: Estimated Dec. 31, 1914, 688,738 tons ore in sight, average grade \$2.68 per ton; revised Dec. 31, 1915, 1,188,866 tons averaging \$1.87 p. t.

The company has a 120-stamp mill that, in 1915, operated 42% of the time with steam power and 58% of the time with waterpower. Duty per stamp per day was 5.24 tons, 1 lb. of Chrome shoe crushed 2.48 tons ore, and 1 lb. of Treadwell die crushed 5.34 tons ore. Mill sands are used for filling stopes.

A cyanide plant is owned and operated jointly by the Alaska Mexican, Alaska Treadwell and Alaska United G. M. Cos., the A. M. Co. owning 13.64% of the plant. Power plants are in conjunction with those of the Alaska Treadwell, which see.

Average number men employed daily in 1915 was 121, with average wage paid each \$3.36. Miners received \$3.50 per day.

Production and profits since 1909 are as follows:

	Concentrates		Total		Oper. Costs	Oper. Profits	Div. Paid	
	Tons Crushed	Yield Free Gold	Tons Treated	Yield p. Ton				
1915....	216,428	\$190,980	4,769	\$188,816	\$1.75	\$1.29	\$0.46	10%
1914....	233,457	238,756	4,340	270,267	2.18	1.45	0.73	16%
1913....	227,112	225,369	4,795	264,327	2.15	1.39	0.76	20%
1912....	233,299	307,951	4,956	371,169	2.91	1.58	1.33	25%
1911....	227,081	323,965	5,150	353,442	2.98	1.84	1.14	14%
1910....	218,960	390,198	4,166	375,523	3.50	1.76	1.74	38%

Costs per ton for 1915 were: Mining, \$0.85; milling, \$0.31; cyaniding same as Alaska Treadwell. Mining costs include charges for 3,047' of development at \$14.74 per ft., and stoping 70,446 tons at \$1.11 per ton. Milling costs include crushing, 4.0c; tramming, 1.6c; stamping, 19c; concentrating, 6c.

ALASKA TREADWELL GOLD MNG. CO. ALASKA

Address: Mills Bldg., San Francisco, Cal. Mine office: Douglas Island, Alaska. **Officers:** F. W. Bradley, pres.; A. B. Davis, v. p.; F. A. Hammersmith, sec.-treas.. **Preceding officers:** E. W. Hopkins, H. S. King, directors; P. R. Bradley, gen. supt.; R. G. Wayland, asst. gen. supt.; R. A. Kinzie, supt. **Inc.** June 1, 1890, to take over the property of the Paris mine on Douglas Island, where operations had been conducted since 1882. Purchase price was \$5,000,000 in fully paid shares. **Cap.**, \$5,000,000; shares \$25 par. Metropolitan Trust Co., New York, registrar and transfer agent.

(d) Deficit.

Dividends to Jan., 1916, aggregate \$77.68 per share.

Property: The Treadwell group of mines, consisting of the Alaska Treadwell, the Alaska Mexican and the Alaska United, which operates the 700' mine and the Ready Bullion, are under one management and are located on the east side of Douglas Island near the shore of Gastineau Channel. The A. T. property is farthest west. Geological conditions are the same in the mines of the 3 companies. Hanging wall of Treadwell is 1,000' distant from present shore line, while that of the Ready Bullion lies for the most part under tidal water. Though several orebodies have been found, the mines are all situated on the same lode and ore is practically of identical origin throughout. In the Alaska Treadwell, 700', and Alaska Mexican mines, the lode has been developed continuously for 3,500'. Between the Mexican and Ready Bullion mines is an undeveloped interval of 2,500'. Width of orebodies is from 300' to 400'.

Geology: the orebodies consist mainly of mineralized albite-diorite occurring in the form of intrusive dikes in black slate, whose structure they closely follow. They strike N. W.-S. E. and dip 50 degrees toward the N. E. The slates are metamorphosed shale. The ore-bearing dikes belong to a series of intrusives that appear interruptedly along the strike for a distance of about 3 miles in a zone 3,000' wide. Next to the shore of Gastineau Channel the border is defined by a heavy bed of greenstone that forms the hanging wall of both the orebodies and the intrusion zone. Many of the

dikes of albite-diorite at a distance from the hanging wall have been greatly altered and impregnated with pyrite and no workable orebodies have yet been found in them. The ore consists mainly of rock impregnated with sulphides, principally pyrite, and in part shattered and filled by veins of calcite and quartz, which also contain sulphides. The ore-bearing dikes are considerably mineralized throughout, and often the whole mass can be mined. The characteristics of the deposit are believed to indicate that it was formed by ascending waters, with little, or no, subsequent secondary concentration. If this is correct there is little doubt that the ore will continue to a much greater depth than has been reached, and the limit of mining will probably depend finally upon increased costs, attendant upon operating at great depth.

Development: is by an 1,850' shaft with levels from the 110' to the 1,750' level. Upper four levels are at intervals of 110', below this at an interval of either 150' or 200', thus saving a large development expense. The 700' claim of the Alaska United adjoins on the east. During 1915 development work done by the A. T. Co. amounted to 7,284' on its own property, 14' for its own use on the adjoining 700' claim and 3,054' done jointly with the A. T. and the A. U. Cos. There was also 1,047' of diamond drilling done. **Ore reserves:** estimated to Jan. 1, 1916, were 7,012,755 tons, average grade of \$2.28 per ton as compared with 7,159,253 tons, average grade \$2.48, for the preceding year.

In 1882 a 5-stamp mill was built, followed in 1887 by a mill of 120 stamps, and in 1888 by an additional 120 stamps. Between 1893 and 1896 the Mexican, 700', and Ready Bullion mines were equipped with mills, and in 1899 a new 300-stamp mill started operating at the Treadwell. In 1915 the 240-stamp mill operated 27% of the time with steam power and 50% with water, 23% with electric power. Duty per stamp was 4.31 tons per day. In the 300-stamp mill electric power was used 41% of the time and water power 59%. Duty per stamp per day was 5.31 tons. In the 240-stamp mill 1 lb. of chrome steel in shoes crushed 2.70 tons of ore, in the 300-stamp mill 2.44 tons. In the 240-stamp mill 1-lb. of iron in the dies crushed 5.83 tons ore, in the 300-stamp mill 4.09 tons ore.

The Alaska Treadwell owns 61.36% of the cyanide plant operated by the 3 companies.

Steam power was formerly used, but this has been gradually changed to hydro-electric or steam electric power. Recent equipment at the Central power plant includes three 500-h. p. Stirling boilers, one 500-h. p. Heine boiler, one 2,000-k. w. turbo-generator, one 750-k. w. turbo-generator, and all accessories. Total capacity of completed plant is 4,750-k. w. Total cost to 1916 was \$266,173, of which the A. T. Co.'s share was \$159,704. The company's hydro-electric power is obtained from its plants on the mainland on Nugget Creek and Sheep Creek. The Treadwell Co. will furnish power to the Alaska-Juneau Gold Mng. Co.

The average number of men employed per day in 1915 was 718, with average wage of \$3.61. The company has ample facilities, dwellings, store, etc., for taking care of its employees. It also has its own fire department.

	Recent production:		Concentrates		Total Oper. Oper.

(a) May 15, 1910, to Dec. 31, 1911.

Costs per ton for 1915 were: Mining, \$0.78; milling, \$0.33 in 240-stamp mill and \$0.30 in 300-stamp mill; cyaniding, \$3.25. Mining costs include charges for 9,663' of development at \$18.42 per ft., and stoping 595,099 tons at \$0.52 per ton. Milling costs for the 240-stamp mill include crushing 3.8c, tramming 1.4c, stamping 21.0c, concentrating 6.6c. Costs for the 300-stamp mill include crushing 3.8c, tramming 1.6c, stamping 18.9c, concentrating 6c. Cyaniding costs include grinding 74c, dissolving \$1.02, filtering 40c, precipitation 56c, refining 53c, proportioned to labor \$1.02, supplies \$1.10, misc. \$1.12.

ALASKA UNITED COPPER EXPLORATION CO. ALASKA

Office: 551 Coleman Block, Seattle, Wash. Mine office: Dan creek, Copper River district, Alaska. L. C. Dillman, pres. and gen. mgr.; Jas. A. Munday, v. p.; E. V. Dillman, sec.; W. A. Mears, treas.; preceding officers, A. Ingraham, W. Hughes, Frank L. Huston, Jas. J. O'Keane and Thos. M. Dunn, trustees; C. C. Jones, cons. engr. Inc. Nov. 14, 1906, in Washington. Cap., \$12,500,000, shares \$1 par. Debentures, \$150,000, 6% bonds. Annual meeting, first Monday in January.

Property: 23 claims, area 460 acres, comprising the Finch, Dillman and Porcupine groups, all five miles from the Copper River railroad, on branches of the Chitina and Nizina rivers, in the Copper River district, Alaska.

Exploratory work has been done on the various groups, property having a number of small tunnels and numerous trenches and opencuts, showing copper ore said to average 35%.

The company is primarily a holding company, prospecting and developing properties in its possession for sale to other parties.

Management expects to start shipment from the Finch group in 1916. Company controls the Alaska Westover Copper Co., which see.

ALASKA UNITED GOLD MNG. CO. ALASKA

Address: Mills Bldg., San Francisco, Calif. Mine office: Douglas Island, Alaska. Under same management as the Alaska Treadwell. Inc. Aug. 6, 1895. Cap., \$1,000,000, shares \$5 par, issued \$901,000.

Comparative General Balance Sheet:

Assets—

Dividends to Jan., 1916, aggregate \$11.05 per share.

Property: Located on the east side of Douglas Island, includes the 700' mine, lying between the Alaska Treadwell and the Alaska Mexican properties, and the Ready Bullion mine east of the property adjoining the Mexican. For a general description see Alaska Treadwell G. M. Co. Apparently the ore shoot of the adjacent properties is rapidly diminishing in length, with depth, and at 2,150' level, the bulk of the ore will come from the 700'

mine. The Ready Bullion property is opened by incline shaft No. 1 to the 2,200' level. As this shaft crosses the orebody, and large pillars of ore are left, incline shaft No. 2 was started, 1914, in the footwall, with dip of 70° and depth to the 2,200' level of 1,885'. Levels from the 300' to the 1,800' are 150', and below the 1,800' level are 200' apart, this distance between levels eliminating much development expense. In 1915 exploration and development work amounted to 4,777', with 1,639' of enlarging No. 2 shaft.

The 700' Claim is developed by the 2,354' Central shaft with levels from the 98' to the 2,300' level. Workings of the Alaska Treadwell on the west and the Alaska Mexican on the east are connected with Central shaft levels, and the hoisting through this shaft is done for the 3 companies. Of 1,353,430 tons of ore hoisted in 1915, 23,097 tons was waste. In 1915 exploration and development work totaled 5,197' for the United Co., and 3,054' was done jointly by the United, Mexican and Treadwell Cos. Ore reserves of the Ready Bullion mine at the end of 1915 were estimated as 2,583,105 tons, average grade \$2.86 per ton, of the 700' claim mine, 4,893,907 tons average grade \$1.75.

The company owns two stamp mills. In 1915 the Ready Bullion 120-stamp mill crushed 252,154 tons ore, operating 15% of the time with steam power and 49% with water power, and 36% with electric power. Duty per stamp per day was 5.64 tons; one lb. chrome steel shoes crushed 2.59 tons of ore and one lb. of dies crushed 6.12 tons of ore. Thirty stamps were added to the mill in 1914 and 30 more in 1915. The 700' claim mill of 120 stamps crushed 278,058 tons ore, operating 37% of time with steam power, 43% with water, and 20% with electric power. Duty per stamp per day was 5.25 tons, one lb. chrome steel shoes crushed 2.88 tons ore, and one lb. dies crushed 6.07 tons ore.

The company owns 25% of the cyanide mill, operated jointly by the 3 Treadwell companies. Of the 35,502 tons of concentrates treated in 1915, 11,556 tons were from A. U. mines. Power plants are in conjunction with those of the Alaska Treadwell, which see. During 1915 the average daily number of men employed was 276, with average wage of \$3.46.

Recent production: (1) Ready Bullion mine, (2) 700-ft. claim mine.

(a) Total for both mines. (b) Dec. 16, 1910-Dec. 31, 1911.

Costs per ton for Ready Bullion mine in 1915 were: Mining, \$0.89; milling, \$0.29; cyaniding same as Alaska Treadwell. Mining costs include charges for 1,865' of development work at \$15.17 per ft., and stoping 174,860 tons at \$0.73 per ton. Milling costs include crushing 2.2c, tramway 1.9c, stamping 18.2c, concentrating 7.0c. Costs per ton for 700-ft. claim mine in 1915 were: mining, \$0.90; milling, \$0.27; cyaniding same as Alaska Tread-

well. Mining costs include charges for 6,135' of development work at \$13.31 per ft., stoping 169,913 tons at \$0.63 per ton. Milling costs include crushing 37c, trammung 1.5c, stamping 16.9c, concentrating 5.2c.

ALASKA WESTOVER COPPER CO.**ALASKA**

Office: 551 Coleman Block, Seattle, Wash. Mine, 18 miles from Copper River railroad in the Chitina district. **Officers:** L. C. Dillman, pres.; W. A. Mears, sec.-treas.; preceding officers, F. B. Whiting, F. J. Perine, F. B. Chandler, trustees.

Property: The Westover group, title to which was transferred from the Alaska United Copper Explor'n Co. Owns 23 claims, about 460 acres, covering a contact between limestone and greenstone. The contact lies horizontally and the ore outcrop is from 6 to 14' thick and 43' long in a perpendicular bluff at 4,990' elevation.

Development consists of 1,000' of tunnels. One tunnel started at the south end is reported to have shown 4 to 20' of ore for 45' in a S. E. direction, and a crosscut on the orebody shows 2' of glance claimed to assay 50% copper. It widens to 14' for about 36'; is then cut off by a fault, but continues about 12' to the north.

Management plans installing machinery and starting production in 1916.

ALBANY COPPER CO.**NEVADA**

Idle. Mine: Morningstar, Lyon Co., Nev. John E. Lutz, pres., treas. and gen. mgr.; E. R. Tutt, v. p.; Wm. G. Williamson, sec.; Ulrich Keck, supt., at last accounts. Inc. June 29, 1907, in Nevada. Cap., \$200,000, shares 10 cts. par, non-assessable. Annual meeting, last Tuesday in November.

Property: 700 acres, with 400 acres miscellaneous lands, giving total holdings of 1,100 acres, 3 miles from a railroad, in the Buckskin district, showing 3 orebodies, carrying mainly nickeliferous malachite and melaconite, estimated by management to average 3.5% copper, 2% nickel, 0.2 oz. silver and \$2 gold per ton. Development includes 5 shafts, of 30', 37', 54' and 253', and 8 tunnels of 30 to 188' length, with total underground workings of 1,400'. Equipment includes a 15-h. p. gasoline hoist, good for 800' depth. No recent returns secured.

ALBERT BEACON GOLD MINING CO.**COLORADO**

See Prince Albert Mine.

ALBERT COPPER CO.**QUEBEC**

Office: 25 Broad St., New York. Mine office: Capelton, Sherbrooke Co., Que. Was organized to take over the mining interests of the Nichols Copper Co. in Quebec and is controlled by that company.

The Albert mine, area 640 acres, at Capelton, carries lenses of chalcopyrite and pyrite, assaying up to 5% copper and 38% sulphur. Development is by 6 shafts, 4 under 500' depth each, with one of 800' and one of 2,000', the mine having upwards of 5 miles of workings.

The works at the Albert mine include a 150-ton concentrator, a smelter and an acid plant. The chemical works, completed, 1907, at a cost of about \$1,000,000, with capacity of 150 tons of commercial sulphuric acid daily, are among the most complete in existence, manufacturing sulphuric, nitric and hydrochloric acids and glauber salts. The cinder remaining from the burning of cupriferous pyrite for sulphuric acid is smelted in a small blast furnace, producing 1 to 2 tons daily of matte assaying up to 40% copper, with small silver contents, shipped to the Laurel Hill works for refining, and copper production is estimated at 350,000 lbs. yearly.

ALBION MINING CO.**UTAH**

Office: 703 McIntyre Bldg., Salt Lake City, Utah. Mine office: Alta, Utah. **Officers:** Wm. Hatfield, pres.; C. E. Loose, v. p.; H. T. Hatfield,

sec-treas.; with P. G. Peterson and W. M. Bradley, directors; Col. Geo. H. Watson, gen. mgr.; Sol Snyder, supt. Inc. 1903 in Utah. Cap., 1,000,000 shares, 10 cents par; 735,000 shares outstanding. Stock listed on Salt Lake Exchange and New York Curb.

Property: 11 patented claims, 250 acres, in the Alta Cottonwood district adjoining the South Hecla ground on the south, includes the Wellington mine of the Albion Group, formerly owned by the Wellington Mining Co. and credited with a \$1,000,000 production from shallow workings. Company advertised March 29, 1910, as delinquent in payment of Utah corporation tax, but refinanced in May, 1915, and operations resumed in June, after an enforced shutdown since the panic of 1907.

Present development is expected to cut the Greeley fissure through the 3,800' Quincy tunnel of the South Hecla at a depth of 1,300'; a raise driven up 110' to explore the Hays fissure discovered the Connor vein, carrying bunches of copper-silver-gold ore, said to assay 37 ozs. silver per ton.

Equipment includes machine drills, water power and a 30-ton mill, with jigs, putting about 4 into 1, giving concentrates with small and variable assays in copper, 35 to 40% lead, 40 to 45 oz. silver and 0.15 oz. gold per ton. Employs eight men. Royalties received from lessees on the Wellington cover operating expenses, and company is expected to realize a profit next year.

The Albion Group, being developed under lease by R. S. Witcher, covers about 2,000' of the Cardiff lode, intersected by the Greeley, Kate Hayes, Garfield fissures; on the first two a high grade shoot of black sulphides 4' wide has been opened up on a porphyry and limestone contact; this ore is said to assay 1.7% copper, 22% lead, \$1 gold and 26 ozs. silver per ton. Shipments begun in October, 1915, reported to average \$50 per ton and netting about \$30 to the leasers.

ALCO MINING & MILLING CO.

COLORADO

Idle. Address: Georgetown, Colo. Inc. 1910, with same officials as Accord Mng. Co.

Property: Group of lode claims on Saxon Mt., near Idaho Springs, Clear Crook Co., Colo., reported to show ore assaying \$30 to \$125 per ton.

Equipment: Includes hoisting plant.

Company said to be out of debt and plans resumption of development work in 1916.

ALDER GROUP MINING & SMELTING CO.

WASHINGTON

Idle. Mine near Twisp, Okanogan Co., Wash. Lands, about 3 miles from Twisp, have 3 tunnels, of 3,000' aggregate length, longest said to show a 60' vein, claimed, in the press, to be solid ore, without any waste. Mine is said to have blocked out a considerable amount of silicious ore, mainly auriferous chalcopyrite. Company awaiting construction of railroad up the Columbia river from Pateros to Twisp.

ALEXO MINES, LTD.

ONTARIO

Address: Porquois Junction, Ontario. E. F. Pullen, mgr. Operates a mine in Dundonald twp. The ore, nickeliferous pyrrhotite, is shipped to the Mond Nickel Co.'s smelter at Coniston. Production was begun in 1913. In Nov., 1915, shipments amounted to 1,305 tons; in Dec., 875 tons.

ALGOMA CUSTOM SMELTING & REFINING CO., LTD. ONTARIO

Idle several years. Works office: Thessalon, Algoma, Ont. See Vol. XI, Copper Handbook.

ALGOMAH MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich. Officers: R. M. Edwards, pres. and gen. mgr.; S. L. Powers, v. p.; Albert L. Wyman, sec.; Henry Tolman, treas.; R. M. Ed-

wards, J. H. Rice, Henry Tolman, S. L. Powers and Arthur C. Paine, directors; Thos. Bennetts, supt.; Wm. Wearne, mg. capt.

Inc. June, 1910, in Michigan. Cap., \$2,500,000, shares \$25 par; issued 70,000 shares; paid in \$13. Last assessment, May 18, 1916, \$1. Of the capitalization, 60,000 shares were given land owners in full payment for property and 10,000 shares were sold to public at \$10 per share. Annual meeting, third Tuesday in April. American Trust Co., Boston, transfer agent; Federal Trust Co., Boston, registrar. Stock is listed on the Boston Stock Exchange.

The treasurer's statement, Dec. 31, 1915, showed excess of liabilities \$18,133, as compared with \$14,597 surplus assets at close of 1914 and \$27,707 in 1913.

Property: 480 acres, adjoining the Lake mine in Ontonagon Co., Michigan, being the N. $\frac{1}{2}$ and S. W. $\frac{1}{4}$ of Sec. 3, T. 50 N., R. 30 W. Property was owned formerly by a company of the same name, which began work 1852, and did a little prospecting, with negative results, expending about \$65,000.

An 8x12' exploratory shaft, started in an amygdaloidal bed, without definite data as to pitch, was over 560' deep, May, 1916. For the first 95' the shaft continued in vein material, passing into the hanging wall at about 95' from surface. The first level, opened at 104', has about 2,350' of drifts, and a 90' crosscut to the eastern sandstone. The second level, 212' from surface, has a crosscut northwest across the formation which, for more than 1,000', exposes almost solid trap, a small amygdaloid, 560' from the shaft, showing some native copper in about 680' of drifts. The Algomah bed, in which the shaft is sunk, apparently has a dip of about 80° and a width ranging from about 40' at the first level to about 60' at a depth of 470', indicated by diamond-drill borings.

The Algomah bed is peculiar in both strike and contents, strike apparently being nearly north and south, in line with the strike at the Lake mine, next north, and the bed carrying copper oxide instead of native copper, as is the case with all of the other copper mines of the Lake Superior district opened on the bedded formation of the Keweenawan series. Ore is mainly black oxide, or melaconite, carrying traces of native copper, and chrysocolla of 16 to 19% assay tenor was found in a test pit near the shaft. Assays made of a small quantity of selected ore, removed in the course of shaft sinking, gave a copper value of 24.1%, this selected ore representing one-eighth of the entire body of material taken from the shaft.

Considerable diamond drilling has been done in the area west of the orebody, and to great depth, but results are conflicting and nothing definite is known concerning either the dip, strike or value of the several copper-bearing formations there encountered. No mining work was done on the property during 1914, but one shipment of selected ore was made, which yielded 5,005 lbs. copper and sold for \$1,695. A few shipments of ore, taken from above the 40' level, were made in 1915, the first assaying 14% copper. Shaft sinking, resumed in the summer of 1915, to be continued to 500' depth, and development work will be done on this level. It is expected that in depth the shaft will encounter some of the lodes worked in the Lake and South Lake mines, as they flatten downward and dip toward the Algomah ground. Property is a likely prospect only.

Equipment includes a steam hoist, with capacity to lift a 3-ton load from a depth of about 500', and an air compressor. Buildings include a power plant, office and boarding houses. Property considered promising and management good.

ALGONIAN DEVELOPMENT CO.

Haileyburg, Ont., Canada. Holding company of the Jualin-Alaska Mines Co., which see. Also has done development work on a molybdenite property in Brome Twp., Renfrew Co., Ont. Hector Drolet, mgr.

ONTARIO**ALICE G. MILLS CORPORATION.****COLORADO**

Mine office: Idaho Springs, Clear Creek Co., Colo. Inc. 1910, as successor of Alice Development Co. Mine is opened by a tunnel, said to show a vein upwards of 75' in width, carrying ore averaging about \$4 per ton in combined copper, gold and silver values. Equipment includes a 12-stamp mill. Mine and mill reported sold at sheriff sale, April, 1914.

ALICE GOLD & SILVER MINING CO.**MONTANA**

Office: Salt Lake City, Utah. Former mine office was Butte, Silver Bow Co., Mont. Officers: John D. Ryan, pres.; Wm. D. Thornton, v. p.; J. W. Allen, sec.-treas.; preceding officers, Arthur C. Carson and E. S. Ferry, directors. Inc. May 16, 1880, in Utah. Cap., \$10,000,000, shares \$25 par. Total dividends paid, from March 15, 1881, date of first, to March 15, 1888, date of last, were \$1,500,000. Control was purchased, 1906, by Butte Coalition Mining Co. Stockholders voted, May, 1910, by a large majority, to sell the property to the Anaconda Copper Mining Co. at the ratio of 15 shares of Alice for 1 of Anaconda, and deed to property was given May 31, 1910, the company receiving in return 30,000 shares of Anaconda stock.

A suit by minority stockholders to set aside the sale, resulted in a decree annulling the sale and ordering a public resale, Nov. 10, 1915, no bid to be less than \$1,904,391. No bid being made, the sale was declared off, which under the decree confirms the previous sale. In January, 1916, an appeal was taken by the litigants to the U. S. Supreme Court.

Property: The Alice, Magna Charta, Curry, Valdemere, Rooney and many other claims on the Rainbow lode and its neighbors.

The mine had a 1,500' shaft, and was operated actively, 1880-1893, and intermittently thereafter. Production, 1906, was 3,170 tons of ore, giving gross returns of \$7.70 per ton, and costing \$9.30 per ton to mine, mill and smelt.

ALICE MINING CO.**ALASKA**

Address: Valdez, Alaska. Property consists of the Alice mine, situated at sea level on west side of Shoup Bay, 1½ miles northwest of the Cliff mine. The vein, located in March, 1910, is a well-defined fissure, strike N. 60° W., dip 70° S., width from a few inches to 2½'. Ore minerals include gold, pyrite, chalcocopyrite, arsenopyrite, and sphalerite. The country rock is composed of graywackes, slates and green schists.

Development: At beginning of 1915 consisted of a 247' tunnel, a two-compartment shaft, 170' deep, and 100' of drifting at the bottom of the shaft. **Equipment:** Includes 100-h. p. boiler, 3-drill air compressor, 50-light dynamo, 5-h. p. steam engine, steam hoist, pumps, blacksmith shop, mess house and bunk house. Small shipments were made to Valdez in 1913; no returns available. At last reports, Aug., 1914, work was at a standstill, pending a settlement of financial difficulties. See U. S. G. S., Bull. 622, pp. 175.

ALICE MINING CO.**IDAHO**

Address: Wallace, Shoshone Co., Idaho. F. M. Russell, supt. **Property:** The Alice mine, located between Wallace and Mullan, output of which is lead, silver ore. Developed by 640' shaft. **Equipment:** Includes a compressor and 125-ton concentrator. Electric power is used.

ALKALI MINES CO.**NEVADA**

Office: 1417 First National Bank Bldg., Chicago, Ill. Mine address: Eureka, Eureka Co., Nev. W. E. Sanders, supt. **Property:** The Windfall mine, developed by a 500' shaft. **Ore:** Contains gold, silver and lead.

Equipment: Includes a crushing plant and 150-ton cyanide plant. About 25 men are employed. Returns not available.

ALL RIGHT MINING CO.

COLORADO

Address: Cheyenne, Wyo. Inc. Jan., 1915, in Wyoming. **Cap.,** \$500,000, shares \$1 par. N. D. Jones, F. B. Woodson and G. W. Logan, incorporators. Property at Cripple Creek, Teller Co., Colo.

ALLGROVE M. & M. CO.

COLORADO

Office: Cardinal, Colo. **Officers:** K. W. Hunt, pres.-gen. mgr.; Hudson T. Morton, v. p.; G. W. Nicholas, sec.-treas. Operates a lease on the properties of the Pine Grove M. & M. Co. and the Alton group, about 200 acres, 1 mile above Nederland, Boulder Co., Colo.

Development: 300' shaft with 2,000' of levels, and the 2,400' Alton tunnel, which has reached the bottom of the shaft, thus enabling economical development at depth. The Alton mill, remodeled in 1916, includes 15 stamps, a Monel slimer, Wilfley and Card tables, 1 Sampson crusher and a 50-ton oil flotation unit. Mine, heretofore solely a gold-silver producer, is now outputting 25% tungsten product.

ALLIANCE COPPER CO.

MONTANA

Idle several years. Mine office: 3 Lewisohn Bldg., Butte, Silver Bow Co., Mont. Donald Campbell, pres. Inc. May 19, 1906, in Montana. **Cap.,** \$400,000, fully issued, shares \$2 par. Statement of Dec. 31, 1914, gave debts of \$129.19. Property is very small acreage in the northeastern portion of the Butte district, with surface rights to sundry town lots. Development is by shaft, sunk jointly by the Alliance and Farrell companies, and a little ore of good grade was shipped, 1907, from the 200' level. Stock listed on Butte Exchange.

ALLIANCE MINING CO.

WASHINGTON

Address: 622 Old National Bank Bldg., Spokane. **Officers:** C. M. Hansen, pres.; F. H. Hunter, v. p.; W. W. Gifford, sec.-treas.; preceding officers, M. C. Hunter, B. T. Manchester, directors. Inc. Sept. 9, 1913, in Wash. **Cap.,** \$1,500,000, shares \$1 par, outstanding \$1,302,000; assessable, not exceeding 5 assessments of 5 mills each year. Bonds authorized \$100,000, outstanding \$32,400. In 1914 the company took over for \$171,000 the property of the Anaconda Gold Mng. & Reduction Co., paying \$120,000 in Alliance stock, and assuming an indebtedness of \$51,000 for the remainder.

Property: 9 claims, 90 acres, patented, in the Eureka mining district, Republic, Wash., adjoining the property of the Republic mine, cover 3,500' along the strike of the Republic vein, 12' to 30' wide, and the Princess vein, 2' to 10' wide.

Early development of the properties was done when only high grade ore was shipped, and the Alliance Co. acquired the holdings of 4 different companies for the purpose of mining and milling the low grade ore. The veins are developed to a depth of 600' by means of a 385' tunnel and a 400' winze, with total workings of 5,000'. Company claims to have ore reserves of 100,000 tons, assaying \$5 to \$8 in gold per ton. No development work has been done since organization, the company endeavoring to put in a cyanide plant, which it hopes to have complete in 1916. Equipment includes gasoline hoist and a 3-drill compressor.

ALLIE ISLAND COPPER MINE.

ONTARIO

Office: 225 Water St., Kenora, Ont., Can. Owned by F. W. Moore et al. **Property:** 4 claims, the S 777, K 312, K 314 and K 315, 156.64 acres in all, at the east end of Allie Island, about 15 miles from Kenora. Claims cover an outcrop of serpentine, or chlorite-schist carrying small pellets or crystals of native copper. Country rock is dolomite, altered traps and greenstones. Ore body claimed to be ½ mile long with a maximum width of 700'.

Development is surficial only, 40' and 20' pit holes, showing ore in bottom. Ore said to average $1\frac{1}{2}\%$ copper. Owners plan development work in summer of 1916.

ALLIE MINING CO., LTD.

IDAHO

Edgar C. Ross, of the Ross Syndicate, Salt Lake City, pres.-gen. mgr. Company inc. 1905. Property, 18 claims, including the Allie mine in the Texas district, near Gilmore, Lemhi Co., Idaho. Lead-silver ores occur in fissure veins in flat Devonian limestone underlain by Cambrian quartzite.

A development tunnel 4,500' long has been driven into Gilmore mountain jointly by this, the Gilmore and the Pittsburg-Idaho companies. This crosses a dozen silver-lead and one gold vein. Development 1915 was on the Latest Out lead vein at 800' below the outcrop. For geological features see Umpleby, Bull. 528, U. S. Geol. Survey, 1913, p. 107.

The Allie vein, closely parallel to the lead veins, has a gangue of iron oxide with no lead, only a trace of silver and almost exclusively gold values, averaging 1 ounce gold with 50% iron.

In 1914 ore reserves were claimed to be 15,000 tons, with average assay of \$12 per ton gold. Extensive prospecting had not up to 1913 shown any commercial silver-lead deposits, but had opened up good gold ore.

Production: First shipment in Feb., 1914, of about 26 tons gold ore showed smelter returns of \$11,060. Total production was 50 tons, averaging better than \$300 per ton. Later returns, if any, are not available.

ALLOUEZ MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Allouez, Keweenaw Co., Mich. Rodolphe L. Agassiz, v. p.; Geo. A. Flagg, sec.-treas.; Jas. MacNaughton, gen. mgr.; preceding officers, Harry F. Fay, W. L. Frost, D. S. Dean, F. L. Higginson and Walter Hunnewell, directors; Geo. G. Endicott, asst. sec.-treas.; F. W. Ridley, supt.; A. Warne, mg. capt. Inc. Sept., 1859, in Michigan. Cap., \$500,000, shares \$25 par; reorganized and reincorporated, 1889, with capitalization \$2,500,000, shares \$25 par; paid in, \$22.25. Last assessment, \$3 per share, was levied 1904. Annual meeting, second Wednesday in April. Old Colony Trust Co., Boston, registrar. American Trust Co., Boston, transfer agent. Owns a half interest in the Lake Milling, Smelting & Refining Co. Is controlled through ownership of 41,000 shares, by Calumet & Hecla Mining Co.

Initial dividend, \$1 per share, was paid July 31, 1915; a second dividend, \$1 per share, paid Jan. 12, 1916, and a third of \$1.50 paid April 5.

Balance sheet of Dec. 31, 1915, shows quick assets and cash of \$1,214,160, and accounts payable of but \$250,349. Construction expenses for 1915 were \$19,037; mine expenses, \$729,899; smelting, etc., \$184,695, with a gain from mining operations of \$924,680.

Lands: 3,400 acres, including mineral ground 640 acres, adjoining the Ahmeek Mining Co., which contains the Kearsarge amygdaloid at great depth.

The old mine, opened 1859, is on the Allouez conglomerate, a bed underlying the greenstone. The conglomerate, 30' wide in many places, with strike of N. 39° E., and dip of 39°, averages 0.7 to 1% copper, and is very refractory under the stamps. There are 3 shafts, deepest about 3,700'. Mining was begun actively in 1869, and stopped in 1877, with an exhausted treasury. The mine was then leased to Watson & Walls, who made money from it, after paying a royalty of one-eighth on gross production. In 1880 the company resumed control, to quit once more, financially exhausted, in 1885. Watson & Walls took the mine again, and once more did well; the company resumed work on its own account for the third time, and again lost money, stopping all work in 1892. The old mine has been idle for

some years, except for exploratory and development work in 1898 to 1900, when a shaft was sunk 1,200' on the Osceola lode, and nearly 4,000' of openings secured thereon, with indifferent results. The shafthouse at the Osceola shaft has been demolished. The old stamp mill, on Hills creek, has 3 old-fashioned heads, and is too antiquated for use. The old Allouez made 26,051,528 lbs. fine copper, 1869 to 1892.

Development: at the Allouez mine is on the Kearsarge amygdaloidal bed, which does not outcrop on Allouez lands, though underlying the entire 640-acre tract, hence was opened on the underlay. The mine had but one producing shaft, until late 1909. Shafts Nos. 1 and 2 are connected by crosscuts and drifts, on several levels. The Kearsarge bed, above the 14th level, is opened by crosscuts, uppermost being at the 6th level, below which plats have been cut in the shafts at the 8th, 10th and 12th levels, for crosscuts to be run to the bed. The Kearsarge bed averages about 16' width in the Allouez mine.

New underground openings totaled 8,517' in 1912; 4,400' in 1913; 3,526' in 1914 and 4,858' in 1915.

No. 1 shaft, at the extreme southeastern corner of the tract, with 3 compartments, started May, 1903, and 3,544' deep, leaves surface at an angle of 75°, but at slight depth takes an angle of 80°, continuing thereon to about 1,435' depth, when a curve of 60' brings the shaft to an angle of 38° 30', which is the dip of the bed. At the change of angle, on reaching the bed, a single idler with a very wide flange cares for the cables passing at either end. Owing to the steep pitch of the shaft, back rails of 6x10" timber are set so close to the wheels of the skips that their flanges cannot leave the steel rails, the wooden timbers serving as guides. The first level is opened at depth of 1,264'. In order to save pumping charges on surface water, a gutter, cut entirely around the shaft, leads to an incline 36' long, used as a sump. This shaft showed very fine ground in its upper levels, but deeper openings are not so good. Equipment at No. 1 shaft includes a 42x62' steel shaft rock house having two 18x34" crushers.

No. 2 shaft, 1,500' northeast of No. 1, is similar to No. 1 in general design, but changes pitch when entering the bed at 2,307' from surface, from 80 to 42°. The bed above the point of intersection will be reached, to the boundary, by crosscuts. This shaft is sunk further in the hanging than No. 1, owing to the proximity of a lake. A new record in shaft sinking was established, 1908, at No. 2, when, with 2 drills, the shaft was sunk a total of 1,275', in addition to which 4 plats were cut, and 105' of crosscutting was done. The collar of No. 2 shaft is of concrete. Washington fir and 16x24" steel I beams, with 14x14" square timber wall plats and 4" plank sheathing. The interior, from collar to solid rock ledge, is lined with 22" of concrete, dividers having their ends bedded in concrete, this giving an impregnable shaft, sunk through 52' of treacherous quicksand overburden. Both shafts can be sunk to about 9,400' before reaching the western boundary line. No. 2 shaft is 3,408' deep.

Machinery equipment includes a Nordberg hoist with 32x72" duplex cylinders and 18' double-conical drum for No. 1 shaft, and No. 2 has a 20x30" engine good for depth of 5,000'. No. 1 engine house, of mine rock, with redstone trimmings, has 12-drill and 18-drill air compressors, and No. 2 engine house has a 60-drill Laidlaw-Dunn-Gordon air compressor. The stone boiler house has five 125-h.p. boilers and a 120' self-supporting steel smokestack. Buildings include a redstone machine shop and smithy, and a large warehouse. There is a very considerable mine location, with numerous dwellings, some remaining from 40 years ago, and some new. The mine is reached by a spur of the Mineral Range railroad.

Recent production has been as follows:

	Tons R'k Treated	Lbs. Min. Prod.	Lbs. Cu. Mine Cost		Lbs. Cu. Prod.	Total Cost Rec'd	
			Per Ton R'k Stpd.	Per Ton (a)		Per Lb. Cts.	Per Lb. Cts.
1915	534,705	10,043,459	18.78	\$1.365	10,043,459	9.31	18.166
1914	354,457	9,408,470	17.09	1.583	6,056,548	11.18	12.853
1913	236,663	6,640,000	17.29	1.687	4,091,129	12.09	15.672
1912	333,618	8,787,120	16.56	1.613	5,525,455	13.52	16.668
1911	288,610	7,532,490	16.56	1.668	4,780,494	13.30
1910	247,119	7,406,970	18.84	1.769	4,655,702	11.57

(a) Includes mining, transportation, stamping and taxes.

The strike, called July 23, 1913, by the Western Federation of Miners and declared off April 12, 1914, interfered with production during that time. After the European war broke out in 1914 the property was operated on a three-quarter time basis from Sept. 1, 1914, to Feb. 1, 1915. At the present time, Jan., 1916, the output is gradually being increased and the management hopes to be able to reach 60,000 tons per month in the near future.

The Allouez, a considerable disappointment in earlier years, earned a net profit of \$171,264 in 1912, turning a deficit of \$77,700 of former years into balance of assets of \$93,564 over all liabilities, and in 1914 net profits were \$114,530. Earnings in 1915 were \$924,680, so that with a working capital of \$963,810, the company is now on a sure dividend paying basis. Is regarded as a good investment.

ALMADEN MINES CO.

COLORADO

Property of the company, located in the Lower Fall mining district, near Idaho Springs, Clear Creek Co., Colo.; was sold in Nov., 1915, to satisfy a judgment of \$27,596. Purchased by Geo. Neill, of Topeka, Kan., and J. A. Greenfield, of Bellaire, Ohio, principal bondholders and stockholders, who plan to resume operations. The property is said to have been a good producer of silver-ore in its day.

ALMEDA CONSOLIDATED MINES CO.

OREGON

Office: 207 Board of Trade, Portland, Ore. O. M. Crouch, pres.; L. B. Simons, v. p.; R. C. Kinney, sec.-treas.; John F. Wickham, gen. mgr. Inc. July 18, 1905, in Oregon. Cap., \$15,000,000, shares \$5 par, as successor of Almeda Mining Co. Annual meeting, second Tuesday in December.

Property: 17 claims, area, 340 acres, also 500 acres of placer ground, in Josephine county, about 22 miles northwest of Grant's Pass, 17 miles from Merlin, nearest railway station, on the Southern Pacific, with daily stage line to Galice. Lands include a 200-acre platted town site, connected with the mine workings by bridge. Lands are well timbered, and have a considerable water power available from the Rogue river. Quartz claims are in 4 groups, known as the Almeda or North Side, Rocky Gulch, which is a continuation of the Almeda, and sometimes known as the Big Yank, both on the north side of the Rogue river, and the Bull Pine and Rand groups on the southern side of the river. Property was worked to slight depth, 1850-1870, for gold.

The Almeda group, including the Rocky Gulch, has 3 claims and 30 acres of placer ground, with 300' of tunnels, showing a strong orebody, of 40 to 60' width, with diorite foot and slate hanging, carrying 10 to 20' of ore on the hanging, ore being strongly auriferous and slightly argenteriferous chalcopyrite. While ore values are not high, they seem fairly constant and dependable, and the orebody is large. Paralleling the main vein is a body of low-grade ore of 20 to 30' width, highly silicious, mainly chalcopyrite, with occasional bornite, giving promise of greater values at increased depth. Development is by tunnels, the longest being the Riverside tunnel

having a back of about 250', and No. 1 tunnel a back of about 500', and by the Alameda 300' vertical shaft, planned to be sunk to 500'. Mine has about 1 mile of workings, with considerable ore blocked out for production.

The Bull Pine group, of 2 quartz claims, 4 miles southwest of the Rocky Gulch group, has a 100' crosscut tunnel, intersecting a 3' vein. The Rand group of 7 claims, with 500 acres of placer ground, has a 900' tunnel, the outcrop giving small assay values in copper, silver and gold.

Equipment includes a 24-drill air compressor, and company has made plans for a steel and concrete dam, the Rogue river being estimated as capable of developing up to 8,000-h.p., under a 20' head.

Buildings include a boarding house, bunk house, office, laboratory, smithy, and a number of dwellings. There also is a 15,000' sawmill.

The 16-mile mountain road, from Merlin to Galice, is not in the best of condition during the wet season, and company plans a motor line, with improved roads, until completion of which the mine cannot ship profitably.

A smelter, completed 1910, was in operation July, 1912, after a winter's shutdown, and overhauling, while roads were bad. The plant has a 100-ton 36x72" blast furnace, for matting. The 80x110' smelter building covers the power plant and ore crusher also, and is planned for an additional 100-ton furnace. The coke bins are at Merlin. Company has made a contract with the government, by which it is to pay for damage to trees and vegetation, the smelter being within the limits of a national forest reserve.

Company was thrown into hands of receiver, June, 1912, on the representation of minority stockholders that company had been mismanaged and that misrepresentations had been made in the sale of the stock. Robert S. Tucker, Portland, Ore., receiver.

ALMOLOYA Y ANEXAS; CIA DE.

MEXICO

Pedro Suinaga, pres.; P. A. Babb, cons. engr.; M. M. Barney, mgr. Organized under laws of Mexico, 1909; capitalization 200,000 pesos. Property the Almoloya copper mine at Ameca, Jalisco, containing veins in diorite said to average 2.5% copper, 2 oz. silver and a few grams in gold. Company began operations 1910, erected a concentrating plant with Merrill stamps and 3 Wilfley tables handling 30 tons per day and saving 75% of the copper and 25% of the silver values. Was a steady shipper of concentrates throughout 1910 and 1911 and paid dividends of 8,000 pesos in 1910.

The Cerritos copper mine was held under option for 50,000 pesos until 1912 and was developed by a shaft 300' deep equipped with hoist, pumps and steam power.

Mill enlarged to double capacity 1912 and ran steadily. Probably idle owing to revolutionary disturbances.

ALMOLOYA MINING CO.

MEXICO

Office: 46 Cedar St., New York. Mine office: Baca, Chihuahua, Mex. Officers: Nils O. Bagge, pres.; W. H. Schlofield, v. p.; C. I. Morey, sec-treas.; preceding officers and W. M. Jermyn, directors; Victor C. Joslyn, mine mgr. Inc. 1903, in Arizona. Cap., \$2,000,000, shares \$1 par, in \$800,000 participating noncumulative 10% preferred stock, and \$1,200,000 common stock, all outstanding. New York Trust Co., registrar. Holds title to lands through Minas de Almoloya, S. A., a Mexican corporation.

Property: 177 hectares, including the San Enrique group adjoining the Cigarrero mine, and 4 other groups, about 4 miles from Baca, in the Allende district, with rail transportation over a standard-gauge line to the Cigarrero mine.

The Sierra de Almoloya is an isolated mountain range, about 9 miles long and 2 wide, carrying limestone beds of the Comanche series of the Lower Cretaceous, extensively fractured by several systems of faulting, with

shear zones of 50 to 90 metres width, principal zones being the northeast system, of Eocene age, of which the most prominent is the San Pedro fault zone, and the N. 40° W. system of Miocene age, which are the sources of large and rich ore chambers, the most important orebodies occurring at the intersection of these faults. Lands adjoin the Cigarrero mine on the northeast, and carry the extension of the San Pedro fault, proven by diamond drilling to occur between the 800' and 900' levels.

Development: several shafts, deepest 700', and 4 tunnels, longest 1,600'. Present development is confined to the San Enrique and Exploradora groups, having 1,186' of shafts and winzes, with 2 main and several shorter tunnels, and a total of 4,400' of workings.

Equipment, includes gasoline and air power, with one 15-h.p. and two 60-h. p. hoists. Property will use commercial electric current as soon as available.

Ore so far found has been in pockets, in leached shear zones, carrying low copper values, which are expected to increase at depth, with about 30% lead, 700 grams silver and 8 to 80 grams gold.

Development work has been almost entirely along the San Pedro fault which shows ore in depth. Revolutionists practically stopped all work in 1913, holding the superintendent for ransom in April and stopping mail and telegraphic service. Work will be resumed when conditions are again stable.

ALOHA GOLD MINING CO.

COLORADO

Property: the Coriolanus mine on Battle Mountain, Cripple Creek, Colo.; under lease in 1914 to Ajax Gold M. & M. Co., whose property adjoins on the north.

Ore: gold occurs in footwall of intrusive dike, phonolitic in character. See Ajax G. M. & M. Co.

ALPENA COPPER MINING CO.

MONTANA

Office: Wallace, Idaho. **Mine office:** Saltese, Missoula Co., Mont. C. W. Beale, pres.; A. H. Featherstone, sec.-treas.; preceding officers, Alex. Muir and A. P. Cochrane, directors. Mine in the St. Joe district, near the Monitor, and 2 miles from the Adair on the Milwaukee railroad, is developed by 2 long tunnels and shaft, showing a 2' vein of quartz with chalcopyrite. At last account face was 400' from ore shoot exposed on surface, which is goal of present work. Equipment includes several buildings. No recent returns secured.

ALPHA MINE

NEVADA

Owned by Horace Palmer, of Chicago. Chas. Nelson, mgr. **Property:** at Jarbridge, Elko Co., Nev., contains veins of gold-silver ore in Tertiary volcanic rocks. **Development:** crosscut tunnel, several hundred feet long. **Equipment:** 5-stamp mill. Employs 20 men. **Production:** \$10,000 bullion per month by amalgamation. Plan installing cyanide plant to treat tailings. See Bull. 497, U. S. Geol. Survey, 1912, by F. C. Schrader, for geology, etc.

ALPINE GALENA MINING CO.

UTAH

Owned and operated by Alpine and Provo men. **Property:** in Alpine Canyon, near Bingham, Salt Lake Co., Utah, contains ferruginous lead ore, in bunches in black limestone. **Development:** by 312' tunnel and incline shaft. Plans to drive tunnel to reach blowout 350' below surface. Assessment called in 1914 in order to provide funds for further development.

ALTA CONSOLIDATED MINING CO.

UTAH

Office: 201 Judge Bldg., Salt Lake City, Utah. **Mine office:** Alta, Salt Lake Co., Utah. A. O. Jacobson, pres.; R. S. Lewis, v. p.; Val. S. Snow, sec.-treas.; W. H. Weyher, director; M. J. Dailey, mgr.; A. O. Jacobson,

supt. Foregoing are all directors; V. S. Snow, sec.-treas. Inc. Aug., 1911. **Cap.**, \$300,000, shares \$1 par, the promoters taking 100,000 shares, and 200,000 shares being placed in the treasury of which amount 100,000 shares were sold at 20c per share; capitalization was increased Oct. 10, 1913, to \$500,000, to provide stock for treasury purposes, practically all issued, Jan., 1916.

Property: 17 claims in the heart of Alta's mineralized zone between the Emma and the Michigan Utah properties, include several old mines. Ores are lead and copper sulphides, highly argentiferous. Ores occur as bedded tabular replacement deposits adjacent to crosscutting fissures and are parallel to the bedding and fissure intersections. The Braine fissure, the most important ore-bearing channel of the camp, known for 2 miles and explored on Alta Consolidated ground for 800'. The existence of cross-cut fissures and a porphyry dike are favorable geologic features.

Development: 5,000' of tunnels exposing a deposit of copper ore 20' wide, carrying 2% copper, 80c in gold and silver and excess iron and worth about \$6.00 at the Garfield smelter, 24 miles away. With cheaper freight (present teaming and freight is \$3.65) it could be worked. Ore occurs at contact between flat dipping quartzite and limestone. The main working, or Silver King tunnel is 300' below the Brooklyn tunnel and an equal distance above the new Alfred tunnel. All recent development is from the main tunnel which follows in a general way the Braine fissure. Drifts east and west from this tunnel have raises to reach the ore. Shipments were made during 1915 from Hoboken lease and from small orebodies encountered in the company workings.

Past representations of mine management have been misleading and unduly optimistic. While the property has merit the company has no stock in reserve, cannot pay expenses under present conditions and a reconstruction seems inevitable.

ALTA COPPER MINING CO.

IDAHO

Idle. Office: 6 West Second South St., Salt Lake City, Utah. Mine office: Mackay, Custer Co., Idaho. Frank M. Foote, pres.; Ernest R. Woolley, v. p. and mgr.; Fred R. Woolley, sec.-treas.; H. C. Parker, cons. engr.; L. S. Rampton, supt., at last accounts. Inc. 1908 in Utah. **Cap.**, \$1,000,000, shares \$1 par; issued, \$600,000. Is a close corporation.

Property: 7 claims, well timbered and watered, 22 miles from a railroad, including several good water rights on Lost river. **Development:** by 2 tunnels, the 250' upper tunnel showing a vein up to 14' in width, carrying a 2' paystreak of high-grade argentiferous copper and lead ore, and lower tunnel is said to show a 7' vein carrying auriferous and argentiferous lead and copper ore, mainly of smelting grade. Has secured ore assaying up to 174 oz. silver and 1.02 oz. gold per ton. No recent returns secured.

ALTA COTTONWOOD MINING CO.

UTAH

Address: Salt Lake City, Utah. A. O. Jacobson, pres.; Franklin Webb, v. p.; Val. S. Snow, sec.-treas.; preceding officers, J. C. Wood and R. S. Lewis, directors. Inc. 1915. **Cap.**, \$250,000, shares 25c par.

Property: 28 claims, 18 patented, known as the Argenta group, located in the Big Cottonwood district, 7 miles southwest of Park City. Claims adjoin the Maxfield mine on the south and the Cardiff on the north. In 1915 the company was planning to start work on a long drainage and exploration tunnel that had already been driven 1,300': No later information.

ALTA DIVIDE GOLD MINING CO.

UTAH

Officers: A. F. Ellgren, pres.; L. H. Hardy, treas.; A. Y. Hardy, sec.; with C. W. Knudsen, and E. M. Tyson, directors. Inc. April 22, 1916, in Utah. **Cap.**, \$100,000, shares 10c par; 600,000 shares in treasury.

Property: 34 unpatented claims, in Big and Little Cottonwood districts, near Alta, Salt Lake Co., Utah, shows gold values in a vein up to 30' wide in a shale quartzite contact. **Development:** commenced in Spring of 1916.

ALTA MINE

Located on Josephine Creek, 4 miles west of Kirby, Josephine Co., about 15 miles north of the Oregon-Calif. state line. There are 3 claims, originally worked as a placer, which show a porphyry dike 25' to 40' in width between vertical serpentine walls. It strikes N. 40° E. and has been traced 1½ miles. The ore which is chiefly pyrite occurring in scattered grains in the rock and in small quartz veins, is said to assay about \$5 gold per ton. **Equipment:** includes a Chilean mill run by a 25-h. p. steam engine. The ore, after coming from the mill, is run over plates to concentrators. No recent returns. See U. S. G. S. Bull. 546, p. 70.

ALTA MINING & DEVELOPMENT CO.

An old corporation controlled by J. R. and C. A. Walker, of the banking house of Walker Bros., and J. M. Moore, all of Salt Lake City. **Cap.**, \$600,000; shares \$1 par; 300,000 shares are held in the treasury. In May, 1915, it was reported that 150,000 shares of treasury stock had been underwritten to net the company 60c per share.

Property: about 160 acres, is in the Alta Cottonwood district and located at the head of Little Cottonwood canyon. Lands include the townsite of Alta. Adjoining on the west are the Wasatch mines, and on the north, east and south the South Hecla. In 1915 the management planned to continue a 330' tunnel that had been started in 1907 at a distance of 3,600' from the townsite down Little Cottonwood Creek. The object in driving the tunnel was to explore the ground under the townsite at a depth of 500'. Several contacts and well-defined fissures are said to cross the property. In Oct., 1915, a 6" stringer of high-grade copper-silver-lead ore is said to have been cut at a distance of 700' from the portal of the tunnel.

ALTA MINING & SMELTING CO.

Idle. Mail returned from former offices at Superior, and Florence, Pinal Co., Ariz. **Officers:** L. H. Sherman, pres.; Col. G. W. Griffey, v. p. and agent; H. A. Austin, second v. p.; J. C. Ferrall, sec.-treas.; preceding officers and G. R. Charters, directors. **Inc.** Sept. 8, 1905, in Arizona. **Cap.**, \$5,000,000, shares \$1 par. Annual meeting, first Tuesday in September.

Property: 25 claims, area 470 acres, and a 200-acre patented ranch, including a water right on the Gila river, in the Mineral Creek district, at Superior P. O., near the Lake Superior & Arizona mine. Lands have veins in schist and contact deposits between schist and porphyry, ranging 5 to 50' in width, opened by shafts of 96', 127' and 150', with upwards of 3,000' of workings, showing ore giving assays of 2 to 57% copper, with gold and silver values, also a lead vein giving assays of 2 to 57% lead, 4 to 15 oz. silver and 80 cts. to \$14 gold per ton.

Equipment: at the Black Copper shaft includes boiler house and power house, with steam hoist good for 1,000', 4-drill Leyner air compressor and 14,000-gal. oil tanks. There are 9 mine buildings.

A suit against H. W. Augustine, H. F. Clough and I. A. Wood, promoters, for money claimed to be illegally appropriated for their own use, was decided in favor of the present management, compromised by the surrender of 1,190,000 shares of stock to the company.

ALTA PRINCE MINING CO.

C. W. Frees, pres., 739 E. 12th St., South, Salt Lake City, Utah; E. B. Frees, sec.-treas. **Cap.**, 1,000,000 shares, par 25c. Treasury stock, 450,000 shares, of which 100,000 have been sold. Listed on Salt Lake Exchange.

OREGON**UTAH****ARIZONA****UTAH**

Property: has bond and lease on 2 claims, located at Alta, Salt Lake Co., between the Michigan-Utah and the Prince of Wales Mining Co.'s property. Development tunnel 1,065' at 500' depth. Working 2 shifts of 3 men each.

ALTA SILVER MINING CO.

NEVADA

Address: Russ Bldg., San Francisco, Calif. **Directors:** Geo. S. Sturges, Edw. B. Sturges, Edw. S. Spring, R. B. Worthington and Chas. H. Seoy. **Edw. S. Spring, sec.-treas.;** Geo. S. Sturges, Nevada agent. Since Feb., 1912, assessments levied totaling 8c per share on 82,183 outstanding shares, have furnished necessary capital for repairs and development work, leaving a balance of \$1,700 in the treasury, Dec. 26, 1914.

Property: in Gold Hill section of the Comstock, Nevada. **Development:** Mostly old workings and 1,050' shaft. Rumored that operations will be resumed in connection with the Yellow Jacket, Crown Point, and Belcher properties, which are controlled by same interests. See Jacket-Crown-Point-Belcher Co.

ALTA TIGER MNG. CO.

UTAH

Address: Alta, Utah. **J. E. Phillips, pres.;** A. T. Sanford, sec.-treas.; J. R. Jones, supt. **Inc. 1915. Cap., \$7,000,** divided into 700,000 shares, assessable, with 200,000 remaining in the treasury. Report of June, 1915, gives cash \$1,910, bills receivable \$490, bills payable \$25.

Property: the Tiger patented claim, 6 acres and an interest in the Highland Chief claim, in the Alta-Cottonwood district, north of the town of Alta. The management intended to work the Tiger claim ground through the Highland Chief claim tunnel. The tunnel was cleaned out in the summer of 1915 when it was found that the Tiger ground had been mined to a considerable extent in early days. The work since has been devoted to the unexplored ground. In Jan., 1916, company claimed to have 500 sacks of silver-lead ore ready for shipping. This ore was supposed to assay 48% lead and 28 oz. silver per ton. Final returns not available.

ALTA TUNNEL & TRANSPORTATION CO.

UTAH

Office: 618 Newhouse Blk., Salt Lake City, Utah. **F. V. Bodfish, pres. and mgr.;** Jas. Owen, v. p.; John Cain, sec.; preceding officers, Chas. Peter and Geo. H. Rathman, directors; R. L. Mack, cons. engr. John Forsman, supt. **Inc. Sept., 1911, in Utah. Cap., \$1,000,000,** shares \$1 par, 800,000 issued.

Property: 250 acres, includes the Lucky Dutchman group of 16 claims and the old Alta tunnel ground. Ore occurs in fissure veins in limestone with stringers of ore said to assay 9.7% copper, 21% lead and 13½ ozs. silver per ton. **Development:** by drifts and raises which have opened up several rich veins. Company is driving a mile-long drainage and transportation tunnel (1,500' long in September, 1915) to open its own and adjoining properties, with portal 3,500' from Silver Fork on the Big Cottonwood, and 8,500' above sea level. Tunnel will be 600' lower than any mine workings of the district and will cut all the great veins of the section.

Equipment: 50-h. p. motor and compressor, drills, a 10' fan for ventilating purposes, a 2-mile power line, boarding house and other buildings. Mine being worked under lease by the Mines Development Company in 1915.

ALTEZUMA GOLD M. & M. CO.

COLORADO

Office: Montezuma, Summit Co., Colo. **Chas. F. Kennedy, v. p.-mgr. Inc. in Arizona. Cap., \$5,000,000,** shares \$1 par; 2,399,190 shares in treasury.

Property: 4 claims, 2½ miles from Montezuma. **Ore:** lead-silver, picked ore said to assay \$100 per ton. **Development:** 4 tunnels, longest 190' known as the Franco tunnel. Plans in 1915 included the refinancing of company and driving the Franco tunnel an additional 200'.

ALUMINUM COMPANY OF AMERICA.

Offices: Oliver Bldg., Pittsburgh, Pa., and 120 Broadway, New York. **Officers:** Arthur V. Davis, pres.; G. R. Gibbons, v. p.-sec.-asst. treas.; R. E. Withers, treas.-asst. sec., Pittsburgh, Pa. **Directors:** Arthur V. Davis, George H. Clapp, D. L. Gillespie, Roy A. Hunt, Alvah K. Lawrie, A. W. Mellon and R. B. Mellon.

Inc. 1888 in Pa., as the Pittsburgh Reduction Co.; name changed to present title, Jan. 1, 1907. **Cap.**, authorized, \$20,000,000; shares \$100 par; outstanding, \$19,000,000. No bonded debt. Dividends: 6% per annum, paid quarterly, Feb., etc.

Controls the St. Lawrence River Power Co., the Northern Aluminum Co., the St. Lawrence Transmission Co. and the Tallassee Power Co. On Nov. 1, 1915, acquired control of the **Southern Aluminum Co.**, with its unfinished hydro-electric and aluminum manufacturing plants near Whitney, N. C. This company was controlled by French interests until the outbreak of the European war in 1914. The plants were to have cost upward of \$10,000,000. The Aluminum Co. of America formed the Tallassee Power Co., capital \$1,000,000 to complete the hydro-electric plant; it is expected to have this finished early in 1917. The aluminum reduction plant will also be completed.

Company owns extensive bauxite deposits in Saline Co., Ark., from which it secures most of its aluminum ore. Equipment at the property consists of crushing and drying machinery. The bauxite is shipped to a refining plant at East St. Louis, Ill., where the impurities are removed. There are also reduction works at Niagara Falls and Massena, N. Y., where there is a wire and cable mill, and at Maryville, Tenn. The company has a general fabricating plant at New Kensington, Pa., also a plant for the manufacture of aluminum bronze powder and aluminum foil.

The Northern Aluminum Co. is a Canadian corporation, which has a reduction plant and wire mill at Shawinigan Falls, Que., and a fabricating plant at Toronto, Ont.

ALVARADO MINING AND MILLING CO.**MEXICO**

Offices: 60 State St., Boston, Mass., and Mills Bldg., El Paso, Texas. **Mines and reduction plant:** Parral, Chihuahua, Mexico.

Officers: A. J. McQuatters, pres. and gen. mgr.; Gordon Dexter, v. p. and Ch. of Board; J. Dudley Clark, treas.; R. F. Parker, sec. and asst. treas.; with S. R. Kaufman, F. W. Clifford, N. M. Kaufman, Junius Beebe, Herbert Dumaresq, Dr. Leonard Wheeler, and Frederick Parker, directors. Wm. J. Freeman, asst. treas.; T. G. Hawkins, Jr., asst. gen. mgr.; D. V. Fennessy, cons. engr.

Inc. 1910, in Maine. **Cap.**, \$6,000,000; shares \$5 par. Bonds: \$935,500, 1st mtge., 6% convertible, matured Jan. 1, 1916, extended to Jan. 1, 1926. Old Colony Trust Co., Boston, Mass., transfer agent; State Street Trust Co., Boston, Mass., registrar.

Comparative General Balance Sheet

	Assets:		Power		Cons. & Stock		Current	Total
	Property	Plant	Devel.	Discs.				
1915	\$5,355,935	\$100,000	\$1,099,388	\$20,000	\$536,310	\$7,111,634		
1914	5,355,935	100,000	910,616	30,073	371,495	6,768,120		
Liabilities—								
	Cap. Stock	Bonds & Notes (a)	Res. for Bond Conv.	Misc. (b)	P. & L. Surplus		Total	
1915	\$4,305,025	\$ 996,700	\$665,333	\$124,730	\$355,191	\$664,655	\$7,111,634	
1914	4,305,025	1,007,100	665,333	129,000	289,354	371,603	6,768,120	

(a) Bonds, \$935,500; (b) includes power plant No. 2, \$92,000.

Comparative Operating Statement

	Gross Earnings	Oper. Costs	Oper. Profit	Deductions	P. & L. Surplus
1915	\$1,296,631	\$871,156	\$425,475	\$132,423	\$293,052
1913	871,156	650,629	412,567	243,046	169,521

Property: at Parral, Chih., includes the Presena, Las Cruces, and Palmilla groups of mines, the latter including the famous Palmilla mine of Pedro Alvarado. These are old mines which were worked in former days by Mexicans.

Ore: silver, gold. New work in 1915 totaled 13,409', said to have increased ore reserves by 250,000 tons. Total reserves not reported.

Company operates a 400-ton cyanide plant; a 50-ton flotation mill was recently built. Employs, when working, over 1,000 men. Electric power obtained from the Mexican Northern Power Co.

Production:

	Ore to Mill		Gms. Per Ton		Contents	
	Metric Tons		Silver	Gold	Silver-oz.	Gold-oz.
1915	128,612		530.2	1.19	2,192,444	4,932
1914	82,728		548.1	1.06
1913	118,383		570.1	0.79

In 1914 company lost 131 days of operating time; in 1915 operations covered 93.2% of the total time; loss was due mainly to shortage of fuel which had to be transported chiefly from El Paso on special trains operated by the company.

ALVIN DEVELOPMENT CO.**ARIZONA**

Office: Houghton, Mich. Controlled by Tank Pass Consolidated Mining Co., Salome, Yuma Co., Ariz. Temporarily idle except for annual assessment work. Described Vol. X.

AMAJAC MINES CO.**MEXICO**

Address: Guadalajara, Mexico. At last accounts C. A. Sidler, Sunbury, Penna., was trustee for sale of stock. Inc. Dec. 16, 1910, in Delaware. **Cap.**, \$2,500,000, shares \$1 par. Company was formed for purpose of purchasing the Refugio, Animas, and Tres Estrellas mines in the Hostotipaquillo district. Later an option was taken on the Trinidad and Mexicano mines.

The Refugio property, 125 acres, was worked for 25 years prior to its acquisition by present owners, down to the 500' level. The main vein has a width of 5' to 15' with well-defined walls. Ore is said to carry gold and silver with average assay value of \$12.50 per ton. The Animas property, 144 acres, lies west of the Refugio and is apparently on the same vein. The ore is said to contain 20 ounces silver and \$3 to \$5 gold per ton. **Development:** at both mines is by means of tunnels, the Animas having over 2,500' of workings. The Tres Estrellas property, 120 acres, is a mile from the mill and has not been developed at depth.

Equipment: includes a 15-stamp mill and a 50-ton cyanide plant in course of construction in 1914. Hydro-electric power is used. The revolution in Mexico has interfered with operations and the mines have presumably been idle since 1914.

AMALGAMATED COPPER CO.**U. S.**

In liquidation. 42 Broadway, N. Y. City. Stock stricken from N. Y. Exchange, July 30, 1915. In 1914 and 1915, preparatory to dissolution, company disposed of its former holdings; 154,000 shares Greene Cananea Copper Co., 150,000 shares Inspiration Cons. Copper Co., 1,000,000 bonds Butte, Anaconda and Pacific Railway, and entire capital stock of the United Metal, Selling Co., controlling the International Smelting and Refining Co., to the

Anaconda Copper Mining Co., so on April 30th, 1915, practically the entire property of company consisted of \$83,198,425 stock of the Anaconda Co., out of a total of \$116,562,500 issued. On Aug. 16, 1916, the company began a distribution of Anaconda stock share for share and \$3.77 cash to Amalgamated shareholders.

AMALGAMATED PIOCHE MINES & SMELTERS CORP. NEVADA

40 Cedar St., New York. Mine office, Pioche, Nev. Officers: W. J. Palmer, pres.; E. S. Snow, v. p., sec.-treas.; above with E. L. Godbe and M. S. Browning, directors. H. S. Van Wagenen, supt.

Inc. July 27, 1911, in Maine, to take over the properties of the Nevada-Utah, Prince Cons., Ohio-Kentucky, and Pioche Cons. companies. It is the operating company of the Cons. Nev.-Utah Corp.; property is described under that title.

Cap., \$1,000,000; shares \$1 par; in treasury Mar. 31, 1915, \$499,500. Annual meeting 1st Tuesday in June. Treasurer's report of Mar. 31, 1915, shows assets of \$1,153,534, which includes property \$499,575, cash \$9,636, mine development \$66,683, machinery and equipment \$35,125, accounts receivable \$3,508, excess liabilities \$25,901; liabilities; accounts payable, \$16,948, Cons. Nev.-Utah Corp. \$18,118, Pioche Pacific R. R. Co., \$1,442, Pioche accounts payable \$10,520, notes payable (Cons. Nev.-Utah Corp.) \$106,504. Inventory does not include ore on hand or in transit. \$18,753.

AMALGAMATED ZINC & LEAD CO.

MISSOURI

Inc. in New Jersey. Cap., \$200,000. Operates on land of the Granby Mining & Smelting Co., in Jasper County. Has 5 shafts, average depth 186', and a concentrator with daily capacity of 250 tons. Product is zinc concentrate.

AMAZON-DIXIE MINING CO.

MONTANA

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Wesley Everett, pres. and gen. mgr.; Hugh Tool, v. p.; Herman J. Rossi, sec.-treas.; preceding officers, W. W. Woods and A. W. Ellenburger, directors; F. W. Calloway, mg. engr. Inc. 1908 in Montana. Cap., \$750,000, shares 50 cts. par, assessable; 1,450,000 shares outstanding. Stock pooled since organization.

Property: 8 claims, 180 acres, well timbered, at Sildix, Mont., near Lookout, just across the Montana line, adjoining the Leslie Copper Mining Co. Property shows a 15' vein in quartzite, exposed by surface trenching for 2,000', carrying galena, chalcopryrite and lead carbonates, associated with pyrite, with values mainly in galena. Development is by a 35' shaft and 2 tunnels, upper, 1,250' long, giving a back of about 200'. lower, 3,750' long, with back of 700', and to be the main working tunnel, with mouth near the Northern Pacific railway. Tunnels are connected by a 400' raise.

Company claims to be blocking out an orebody, 3'-8' average width and 600' long, of milling ore that assays 7% lead, 2% copper, 1.5% zinc and 6 oz. silver per ton. Plans sinking 500' shaft, 1916, and, if results of development warrant it, building a concentrator. Operating expenses in 1914 and 1915 were \$50,000. Mine has about 5,761' of openings.

Equipment: includes a water-power plant developing 110 h. p., a 10-drill air compressor, 20,000' sawmill, machine shop, smithy, carpenter shop and other necessary mine buildings. Property is served by the Northern Pacific railway, 160' from the mine.

AMAZON GOLD CO.

MEXICO

Mine office: Chacala, Durango, Mex. Jas. T. Dugan, pres.; Edward B. Sowers, mgr.; J. S. Wilkinson, supt., at last accounts. Mine, known as the Candalaria, has auriferous, argentiferous and bismuthiferous copper ores.

Equipment includes a Bryan mill, 6-ton chlorination plant and 10-ton smelter. Closed down and no reports received owing to Mexican revolution.

AMERICAN BALLAST CO.**TENNESSEE**

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

AMERICAN BOY MINE**ARIZONA**

Owned by Geo. Clarke, J. Petersen and J. B. David, Patagonia, Santa Cruz Co., Ariz. **Property:** 6 claims near Patagonia, shows several veins from 8' to 12' wide. Ore contains gold, silver, copper and lead and is said to average \$50 per ton. **Developed:** by an 80° incline shaft, 120' deep, and a 370' tunnel that cuts the bottom of shaft. On the 40' level 200' of drifting has been done, on the tunnel level 250'. The small shipments made have consisted of ore extracted by development work.

AMERICAN CELTIC COPPER CO.**ARIZONA**

Office: Allen G. Shaw, sec., 504 I. W. Hellman Bldg., Los Angeles, Cal. **Inc.** 1912. **Cap.**, \$3,000,000, shares \$5 par; issued \$2,000,000. Is a successor of the Arizona-Morenci Copper Co. and owns all its property.

Property: 98 claims, 2,000 acres, in 9 groups in Clifton-Morenci district, Greenlee Co., Ariz. Mines are adjacent to and surrounded by the Phelps-Dodge, Arizona Copper and Shannon properties. Mill and town sites are on the San Francisco river and the Morenci Southern railway crosses the ground.

AMERICAN COMMANDER M. & M. CO.**IDAHO**

Address: Mullan, Shoshone Co., Idaho. **E. J. Cark, pres. Cap.**, \$1,250,000, increased in 1915 to \$2,500,000, shares \$1 par. **Property:** 2 claims patented, 40 acres, located 3,000' north of Mullan, shows lead-silver ore of good grade in a vein 50' wide on surface. It is claimed that the You Like vein of the Federal M. & S. Co. and the Hunter vein cross the claims. Property is developed to a depth of 1,000' by several tunnels varying in length from 500' to 1,200'.

AMERICAN CONSOLIDATED COPPER CO.**UTAH**

Office: Judge Bldg., Salt Lake City, Utah. **Mine office:** Brighton, Salt Lake Co., Utah. **Officers:** John C. Barnard, pres. and mgr.; John Brandborg, v. p.; D. C. Dart, sec.-treas.; with L. L. Smith and G. W. Alexander, directors; G. Malmborg, supt. **Inc.** 1907, in Utah. **Cap.**, \$500,000; shares \$1 par; non-assessable; 480,000 shares issued. Stock listed on Salt Lake Stock Exchange in September, 1915.

Property: 16 claims, 1 patented, in Big Cottonwood district, adjoin the Tar Baby mine on the west. **Development:** Several tunnels, longest 1,200', driven to cut the Silver King & Garfield fissures, showing heavy mineralization. Samples said to assay 48% zinc, with lead, gold and silver values. **Equipment:** Includes machinery and necessary mine buildings. Operations resumed Dec., 1914, after an idleness of several years.

AMERICAN COPPER MINING & MILLING CO.**UTAH**

Office: Lehi City, Utah. **J. N. Butt, pres.;** Charles Anderson, v. p.; A. O. Slade, treas.; preceding officers, Howard Murdock and Chas. Herron, directors; William Asher, sec. **Inc.** Aug., 1912. **Cap.**, \$100,000, shares 10 cts. par. An assessment of 1 mill called March, 1914. Property is in Tooele county, but as officers do not reply to letters, no details of the company's holdings are available.

AMERICAN EXPLORATION CO.**UTAH**

Office: 618 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Park City, Summit Co., Utah. **Frederick V. Bodfish, mgr.**

Property: American Flag mine, and other claims 266 acres, patented, adjoining the Ontario and Silver King Coalition mines, and including the Constellation group. Ground covers 3,000' along the strike of the main

veins, which lie in a central area of Weber quartzite, dipping 20° N. and cut by porphyry dikes. The veins are fault fissures, the main vein running N. W.-S. E., dipping 63°-80°, and filled with iron and manganese stained quartz and crushed rock. The Eastern vein between limestone and quartzite is faulted by the other. It is 30 inches wide and carries gold, silver and very little copper.

The property is a meritorious prospect since it has much virgin ground and carries the apex of the McGregor fissure. The mine is drained by the Ontario tunnel, and has a 1,120' shaft, and the Curtis tunnel, aggregating about 2½ miles of workings, and yielding gold and silver ore.

Equipment: includes steam power and a 60-h. p. air compressor. In the summer of 1915 a small number of men were employed, and an output of 20 to 25 tons per day of second-class ore secured and sent to the Park City milling plant for treatment.

AMERICAN EXPLORATION & MG. CO. MEXICO & NEW MEXICO

Office: 60 State St., Boston, Mass. Operating office: 518 Trust Bldg., El Paso, Tex. Mine offices: Steeple Rock, Grant Co., N. M.; Ahumuda, Bravos, Chihuahua, Mex., and Terrazas, Iturbide, Chihuahua, Mex. W. Franklin Burnham, pres., sec. and gen. mgr.; Henry A. Haile, treas.; preceding officers, Jas. Duckworth, Geo. Empsall, Hinsdale Smith, Arthur Smith, Jesse W. Morton and Harry Hinckley, directors; Wm. A. Farish, cons. engr.; John A. Rice, engr.; John Searls, supt. Ahumuda mines; Frank Hickman, supt. Steeple Rock mines. Inc. Sept. 28, 1907, in Maine. Cap., \$500,000, shares \$1 par, non-assessable; issued, \$275,748.

Lands: 600 acres, including 16 claims in New Mexico and 12 different properties in Mexico, also 3 mill sites at the different properties.

Property includes mines known as the Burnham at Terrazas, San Ignacio at Ahumuda, and Hinckley at Steeple Rock. The New Mexican property has tunnels of 100' and 313' and shafts of 100', 100' and 150', with 1,223' of workings, carrying mainly silver ore. The property at Ahumuda has shafts of 25', 100', 160' and 474', giving ore assaying about 30% lead, 6% zinc and 12 to 20 oz. silver per ton. The property at Terrazas shows contact deposits between limestone and porphyry, giving assays of about 3% copper, 24% lead, 8 to 20 oz. silver and \$2.50 to \$12 gold per ton. Development is by shafts of 187' and 200'. Equipment includes a 55-h. p. gasoline plant and necessary mine buildings.

Company plans milling about 30 tons daily at Ahumuda, concentrating 6 into 1, and continuing development work at the various properties.

AMERICAN FINANCE & SECURITIES CO. (THE) NEW YORK

Malcolm G. Buchanan, receiver, Trenton, N. J. **Office:** Drexel Bldg., Philadelphia, Pa. Owns majority of stock of the El Tiro Copper Co., which see. Inc. Dec. 29, 1903, in New Jersey. Cap., \$500,000 (decreased Dec., 1903, from \$5,000,000), shares \$10 par. Receiver appointed by Vice-Chancellor of the Chancery Court, Feb. 25, 1915, and made permanent Apr. 13, 1915. Bonds \$1,250,000, 6% issued, Jan., 1904. Interest defaulted Jan., 1913, to 1915, inclusive. Empire Trust Co., trustee.

Company owns a majority of the stock of the Empire Lumber Co., the N. J. Steel Co., and the El Tiro Copper Co., and controls the Guanajuato Red'n & Mines Co. by a voting agreement, though it owns less than a majority of the stock. The receivership was made on application of stockholders, who alleged that proceeds of sale of large amounts of bonds had been used to pay extravagant salaries and that large sums had been loaned insolvent corporations.

AMERICAN FIREPROOFING & MINING CO. WYOMING

Address: Investment Clearing House, Fin. Ag'ts, 513 Denham Bldg.

Denver, Colo. A. E. Minium, pres.; S. E. Coyler, mgr. Inc. 1913. Cap., \$10,000,000, shares 10 cents par. Stock was offered at 2c with a guarantee of refund attached should the company's statement not be verified.

Property: 8 and a fraction claim, 200 acres, in the South Pass mining district, 35 miles from Lander, Fremont Co., Wyo., the nearest railroad, comprising the Jerry Dain and Hidden Hand Fraction group, a bond and lease on the Bobtail. Denver and Bluebird Claims, near Lewiston, and control of 120 acres of partially developed mineralized land. **Ore:** quartz, with gold in oxidized iron, occurring in fissure veins, 15-24" wide; ore said to average better than \$100 per ton in gold. **Development:** Includes several shafts 40-70' deep, drifts, opencuts, including 500' of underground workings on the Bobtail claim. **Equipment:** Shaft house, blacksmith shop, pumping station, engine, boiler, crusher, electric plant and other machinery.

AMERICAN FLAG MINING CO. UTAH

Office: 815 Newhouse Bldg., Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. **Officers:** Geo. H. Rathman, pres., treas. and gen. mgr.; Wm. M. Curtis, v. p. and mgr.; John Cain, sec.; F. V. Bodfish, supt. Inc., 1902, in West Virginia. Cap., \$500,000, increased to \$1,000,000 on reincorporation in Nev., 1910; shares \$1 par, assessable; fully issued. American Flag property is leased to the Park City Mines Co. and described under that title.

AMERICAN METAL CO., LTD. (THE)

61 Broadway, New York City. **Officers:** Berthold Hochschild, pres.; C. M. Loeb, v. p.; Theodore Sternfeld, treas.; Julius Goldman, sec. Otto Sussman, remaining director and cons. engr. Inc. 1887 in N. Y. as exporters, importers and dealers in metal. Cap., \$3,500,000, \$100 par, all issued. No bonded debt. Dividends not reported. Controls the Consolidated Interstate Callahan Mng. Co., Wallace, Idaho; American Zinc & Chemical Co., Langeloth, Pa.; the Compania Minera de Penoles, of Mapimi, Mex.; Compania de Minerales y Metales de Mexico; Ohio & Colorado Smelting & Refining Co., of Salida, Colo.; Bartlesville Zinc Co., of Bartlesville, Okla.; Lanyon-Star Smelting Co., of Bartlesville, Okla., and Metallurgical Company of America, of New York. Company is American agent for Henry R. Merton & Co., Ltd., of London; Metallgesellschaft and Metallurgische Gesellschaft, of Frankfurt am-Main; Société le Nickel, of Paris, and Balbach Smelting & Refining Co., of Newark, N. J.

AMERICAN-MEXICAN SMELTING & REFINING CO. MEXICO

Is a subsidiary company of the Pacific Smelting Co. T. C. Kirkland, mgr., Fundicion, Sonora, Mex. Idle owing to revolutionary conditions during most of 1914-15, but began intermittent shipments, 1916.

AMERICAN-MEXICO MINING & DEVELOPING CO. MEXICO

Office: Watertown, S. D. Mine office: Velardena, Cuencame, Durango, Mex. In July, 1915, company had debts amounting to \$14,518, and creditors began action for appointment of receiver. Is not regarded favorably. See description by Horace J. Stevens in Vol. X.

AMERICAN MINE. COLORADO

Wm. Mitchell, supt., Breckenridge, Summit Co., Colo. Property shows a fissure vein with ore shoot of gold and silver-bearing copper ore, developed by shaft. **Equipment:** Includes steam plant and air compressor. Three men employed.

AMERICAN MINES CO. COLORADO

Address: 328 Foster Bldg., Denver, Colo. **Officers:** A. E. Blakesley, pres.; E. M. Howell, v. p.; J. N. Caldwell, sec.-treas.; preceding officers, W. A. Burke, L. M. Beck, directors. J. W. Kirkbride, supt. Inc. in Wyo. Cap., \$1,500,000; issued \$1,300,000; shares \$1 par.

Company owns one claim in the Gold Hill district, 12 miles north of Boulder, Boulder Co., Colo., which management claims has a body of ore 200' wide, proven for a length of 600', and assays \$4 in gold per ton. **Development:** by 300' tunnel. A 25-ton stamp mill has recently been put in commission.

AMERICAN MINES SYNDICATE.**UTAH**

Office: Houghton, Mich. Mine office: Eureka, Juab Co., Utah. Walter Fitch, pres.; J. H. Rice, v. p.; Wm. P. Seager, sec.-treas.; preceding officers, M. M. Duncan and F. W. Denton, directors. **Inc.** 1907, in Arizona. **Cap.**, \$100,000, shares \$100 par; paid in, \$80 per share; issued, \$86,350. Is a holding company, controlling the Chief Consolidated Mining Co. through ownership of 361,000 shares.

AMERICAN MINING CO.**CALIFORNIA**

Address: Redding, Shasta Co. **Inc.** and controlled by Jas. Sallee. In 1914 the company started to work the old American mine in the French Gulch district, whose holdings consist of 11 claims. **Development** work of the old mine includes 4 tunnels from 50' to 1,400' in length, and one stope 125' long and 240' in height. When mine shut down under former management ore is said to have assayed \$20 in gold per ton. It occurs in a fissure vein, strike N. 70° W., dip S. 75° E., slate walls. Pay shoot is 2' wide. A 10-stamp mill is on the property. Results of work of the new company not known.

AMERICAN MINING CO.**UTAH**

Office: 27 Latimer Bld., Salt Lake City, Utah. Mine office: Brighton, Salt Lake Co., Utah. I. A. Benton, pres.; A. L. Headberg, first v. p. and gen. mgr.; Wm. Crome, sec.-treas.

Inc. 1896 in Utah. **Cap.**, \$500,000, \$1 par; assessable; all issued; 18 assessments levied to end of 1910. Annual meeting 3rd Monday in May.

Property: 10 patented claims, on Scott hill, in Big Cottonwood district, 5 miles from a railroad. Ore occurs as sulphides in lime. Orebody is from 2" to 2' wide and average assays run from 5-18% copper, 10 oz. silver and \$3.50 gold. **Development:** About 1,800' of shafts and tunnels. Only assessment work done in 1915. Plan driving tunnel to reach the Silver King orebody.

AMERICAN MINING CO., LTD.**IDAHO**

Office: 630 Monroe Ave., Helena, Mont. Mines are located in the Seven Devils district, Washington Co., Idaho. A. H. Kleinschmidt, pres.; Maria Kuphal, sec.; A. H. Kleinschmidt, treas.; preceding officers and Louis Hillehecht are directors. **Inc.** Oct. 2, 1910, in Montana. **Cap.**, \$50,000, shares \$1 par, non-assessable; issued 25,000 shares, sold at \$1.

Property: A number of patented claims and also a one-half interest in the Blue Jacket and Queen mines, near Landore, Washington Co., Idaho. The Blue Jacket mine, 295 acres, has a 400' shaft, and the Queen has a 1,500' tunnel having a back of about 300'; these properties said to have produced about \$250,000 in ore, with smelter returns up to 47% copper. The company's half interest in this group was leased Oct., 1909, for 10 years to P. H. Miller and Franz Kleinschmidt, Landore, Idaho, on a royalty basis, giving the company 15% of the gross product of the mines.

Holdings also include a five-eighths interest in the Peacock, White Mountain, a two-third interest in the Helena mines, held jointly with A. M. Holter and S. T. Houser; and a one-half interest in the Blue Jacket No. 2, Norma, Legal Tender, Copper Crescent and Calumet mines, held jointly with Messrs. Johnson and Kleinschmidt. The old American Mining Co., Ltd., whose charter expired Oct. 1, 1910, owned nine-sixteenths of the Peacock, White Mountain and Helena claims and one-half of the Blue

Jacket claim in Idaho and various other claims in Montana. On the dissolution of the company Albert, R. H. and Ellen Kleinschmidt, holding 50% of the company's stock, became joint owners of one-half of the company's holdings; the above individuals are in no way connected with the new American Mining Co., organized by R. H. Kleinschmidt. The new company is understood to have acquired a one-half interest in Mr. C. A. Johnson's one-half interest in the Queen and Blue Jacket groups, which with the one-quarter interest derived from the old company makes a one-half interest. These properties are also in the Seven Devils district, 20 miles west of Homestead, Ore., the nearest railway point.

The Peacock mine, discovered 1869, is the most noted property and the largest producer in the Seven Devils district, having 1,500' of workings, said to have produced 15,000 tons of high-grade ore, and estimated to show 200,000 tons of 4½% copper ore with about \$5 combined gold and silver values per ton. Ten shipments, 1903, to the Bingham smelter, returned 13.3 to 18.3% copper, from 3 to 5 oz. silver and from nothing to \$1.33 gold per ton; and 11 shipments to the Oregon Smelting & Refining Co. gave returns of 20.5 to 40.2% copper, 1.15 to 8.7 oz. silver and \$1.20 to \$3.40 gold per ton. Mine is said to have considerable ore ready for shipment, as soon as railroad transportation is available, and the Oregon-Washington railroad line, when extended down the Snake river from Homestead, will pass within 3½ miles of the mine. Production, 1905, was 500 tons of ore, of about 15% copper tenor, equal to 150,000 lbs. fine copper. Property idle since 1909, owing to litigation.

AMERICAN NETTIE MINE.

COLORADO

Property an old-time producer, near Ouray, Ouray Co., Colo. **Ore:** gold in broad, flat shoots, in quartzite, about 7' thick and proven for 700' in length. These orebodies believed to be the northerly continuation or downward faults of the Wanakah orebodies, which intersect the great monzonite porphyry dike running due east through the Nettie ground. **Development:** 700' tunnel and upraise. **Equipment:** Compressor, drills, and machinery. **Production:** In gold since 1889, \$1,500,000.

AMERICAN PIPE LINE CO.

KANSAS-OKLAHOMA

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

AMERICAN REDUCTION CO.

WASHINGTON

Address: Republic, Ferry Co., Wash. **Inc.** in 1915 by F. R. Clark, of Spokane, P. N. Clark and G. W. Sommer. The property of the North Wash. Power & Reduction Co., which had been held by a receiver for 2 years, was purchased together with adjoining holdings. **Equipment:** Includes concentrator, mill, and power plant. No returns available.

AMERICAN RUTILE CO.

VIRGINIA

Address: Pacific Bldg., Washington, D. C. W. M. Slater, pres.; Albert Harper, sec.-treas.; H. Wanke, supt. **Inc.** in Va. **Cap.**, \$100,000; shares \$100 par; issued \$97,500.

Property: 5 claims at Roseland, Nelson Co. Rutile, containing 96% titanium oxide, is mined from open-cut workings. Equipment includes steam hoist, pump, a 2,500' aerial tram, and a 10-stamp mill. The mill, with a daily capacity of three tons, is equipped with Wilfley tables, and a Wetherill magnetic separator. Gross earnings for 1914-1915 were \$70,000, with operating expenses of \$25,000. Production amounted to 250 tons of rutile, with ilmenite as a by-product.

AMERICAN SM. SECURITIES CO.

UNITED STATES & MEXICO

Office: 120 Broadway, New York. Mine and works offices, at numerous points, given hereinafter. **Inc.** March 25, 1905, in New Jersey, and name

changed to present title, May, 1905. Cap., \$77,000,000, shares \$100 par, in \$17,000,000 Series A cumulative 6% preferred stock; outstanding Dec. 31, 1915, \$16,649,800; \$30,000,000 Series B cumulative 5% preferred stock, and \$30,000,000 common stock Series A has preference as to dividends, and both preference series have equal rights as to assets, both having priority rights to assets and dividends over common stock. Is controlled by American Smelting & Refining Co., through the ownership of the entire issue of common stock, and the American Smelting & Refining Co. guarantees the Series B. preferred stock. An issue of \$15,000,000 of 15-year 6% debenture bonds, outstanding Dec. 31, 1915, \$12,720,500, created Feb., 1911, to liquidate a floating debt of \$10,816,406, and going entirely to the American Smelting & Refining Co., are convertible into common stock of that company any time before Aug., 1918, that bonds may sell at or above par. Bonds are redeemable Feb. 1, 1926, at par, or, after Feb. 1, 1915, at 105, on 90 days' notice.

Inc. April 4, 1899, in New Jersey. **Cap.**, \$115,000,000, with \$65,000,000 common and \$50,000,000 cumulative 7% preferred stock; shares \$100 par. Original capitalization was \$54,600,000, increased to \$100,000,000 and again increased Jan., 1911, by \$15,000,000 common stock authorized to exchange for 6% debenture bonds of American Smelters Securities Co. at any time before Aug., 1918, that bonds may sell at par. Annual meeting, first Wednesday in April. Has about 11,000 shareholders.

The American Smelting & Refining Co. controls the American Smelters Securities Co. through the ownership of the entire common stock issue of \$30,000,000, and has guaranteed 5% dividends on the entire stock issue of Series B preferred stock of the American Smelters Securities Co. Company's consolidated balance sheet of Dec. 31, 1915, shows assets of \$201,816,351, including \$14,642,460 cash, \$4,080,652 demand loans, \$320,509 advances made to affiliated companies; \$12,103,766 accounts and notes receivable, metal stocks \$23,618,862. Surplus same date was \$20,525,139.

*Equal to 14.1 per cent on the company's \$50,000,000 common stock after allowing \$1,646,565 for depreciation; 6.03 per cent was earned on the same amount of stock in 1914, when \$1,540,350 was charged off.

†Of smelting and refining plants and industries dependent thereon.

Cash in bank amounted at the close of the year to \$18,642,460, an increase over the preceding year of \$10,607,682. Of this, \$4,000,000 is loaned against Stock Exchange collateral.

The increase in cash was partly the result of the payment of loans secured by copper in process of refining, amounting to \$4,453,292.

During the year there has been added to the cash working capital of the company the sum of \$2,903,737.

The par value of the bonds held by the sinking fund trustees and in the treasury now amount to \$2,387,500, an increase during the year of \$738,500.

Of the issue of series "A," preferred stock of the American Smelters Securities Company, there were drawn for redemption during the year \$180,200 par value.

In accordance with the privilege granted to the holders of the bonds of the Securities Company these were exchanged for common stock of the Smelting Company to the extent of \$108,000, making the common stock now outstanding \$50,108,000.

The business of the company is so varied that it almost defies analysis, save by a certified accountant. It mines gold, silver, copper, lead, zinc ores and coal. It smelts its own ores of all these metals, and most of the ore produced by the lesser mines of America. It refines not only these five metals, but manufactures them into copper sheets, rods, tubes, etc., at Baltimore; makes white lead, sheet lead, etc., at Selby; zinc white, etc., at its zinc smelters; sulphuric acid at Perth Amboy, N. J., and Garfield, Utah, and coke at its mines. It refines and sells bismuth, cadmium, arsenic, nickel and platinum, palladium and selenium largely from the slimes of its electrolytic refineries, and makes blue vitriol.

It owns and operates ten mines in Mexico. It owns and operates a number of railways in Mexico under the title of the Mine Lines of Mexico, and the Mexican Union R. R.

The American Smelters Securities Co.

Most of its mining and smelting business is done through the American Smelters Securities Co., owned entirely by the A. S. & R. Co., the mines mostly held in fee or by lease, the smelting plants by subsidiary corporations.

Following is the list of metallurgical plants of the company:

Lead Smelting

Plant—	Location	Manager	Supt.	No. FCS.	(c) Tons

(a) To be increased to 240,000 tons in 1916. (b) Recently increased to 72,000 tons.

The mining properties of the company are under the general charge of Mr. W. M. Drury, general manager; R. F. Manahan, assistant. The operating mines are as follows:

Silver Lake Mine, L. R. Clapp, supt., Silver Lake, Colo.

Anganguero Unit, A. W. Edelen, supt., Anganguero, Mich., Mexico.

Bonanza, Unit, W. Davis, supt., Bonanza, Zac., Mexico.

Charcas Unit, S. F. Shaw, supt., Charcas, S. L. P., Mexico.
 Dolores Unit, E. E. Reyer, supt., Matehuala, S. L. P., Mexico.
 Federal Lead Co., H. G. Washburr, supt., Flat River, Mo.
 Sierra Mojada, W. B. Gates, supt., Sierra Mojada, Coa., Mexico.
 Santa Eulalia, W. J. Deavitt, supt., Santa Eulalia, Chi., Mexico.
 Santa Barbara, W. P. Schumacher, supt., Santa Barbara, Chi., Mexico.
 Velardena, R. E. Adams, supt., Velardena, Dgo., Mexico.
 Christmas Mine, S. H. Sherman, supt., Christmas, Ariz.
 Bush-Baxter Mine, Edw. Thornton, supt., Twin Buttes, Ariz.

American Smelters Securities Co.'s properties are all included in the above; the same applies to the National Metallurgica Co., the Tacoma Smelting Co., the Baltimore Copper S. & R. Co., the Selby Smelting & Lead Co., the Federal Lead Co. and the Garfield Smelting Co.

The Federal Smelter is supplied with ores principally from the Company's mining operations in Southeast Missouri. At present the output of ore is, roughly speaking, 1,200,000 tons per annum, which is concentrated into approximately 60,000 tons of concentrates, containing more or less 43,000 tons of lead.

The plant at Chihuahua is largely supplied with ores from the Company's Mines in the Santa Eulalia and Sierra Mojada Districts of Mexico.

The Velardena Smelters are supplied largely from the Company's Velardena Mines.

Matehuala Smelter handles principally the ore from the Company's Dolores Mines, which are in the same district.

The recent installation of an electrolytic zinc plant at the Murray, Utah, smelter, and construction of a 100-ton sulphuric acid plant, using the chamber process, at Garfield, Utah, show that the company is still in the fore in its metallurgical-practice.

The American Smelting & Refining Co. is much the largest general smelting and metallurgical enterprise in the world. There has been much complaint, through the mining districts of the United States and Mexico, regarding the exactions of this so-called "Smelter Trust," but it seems obvious that the company continues to expand and prosper, mainly because of its superior metallurgical and business ability, backed by large and modern works and adequate capital, rather than because of special advantages.

AMERICAN STAR MINING CO.

UTAH

Office: 403 Dooly Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Imer Pett, pres. and gen. mgr.; Jas. P. Graves, v. p.; Fred R. Sands, sec.-treas.; preceding officers, Geo. E. Davis and Thos. P. Billings, directors. Inc. 1909 in Utah. Cap., \$1,000,000, shares \$1 par; issued 599,500 shares. Lands, 2 claims, 25 acres, including the Town View group and other properties lying between the Victoria and Chief Consolidated mines, and touching the Plutus on the east and Eagle & Blue Bell on the west. Mine has about 1,000' of workings, made from the 900' level of the Eagle & Blue Bell mine, and plans a 1,100' shaft, about one-half mile south-east of the Chief Consolidated. Workings show an ore channel of about 60' width. Property considered promising.

AMERICAN TUNGSTEN CONS. CORP'N.

WASHINGTON

Address: Hutton Bldg., Spokane. Wm. Sheck, gen. mgr.; Henry Becker, supt., at last account. Company a reorganization, 1912, of the Germania Mng. Co. Cap., \$1,000,000, shares \$1 par. The Germania Co., composed principally of German investors, was organized 12 years ago to develop the Roselle mine, 25 miles west of Springdale, Stevens Co. It is said that \$500,000 was spent in driving tunnels, in the concentrator and buildings. In 1911 the company became involved in litigation, later going

into bankruptcy. In Jan., 1916, eastern interests, represented by F. T. Hamshaw, of Seattle, obtained a lease and bond on the properties held by the Corporation and started operations. Holdings include the Germania and Roselle mines. Development, consisting of a 200' shaft and 3 tunnels with 3,000' of work, is said to have exposed a considerable tonnage of ore that the new management is planning to extract. Electric power is used.

AMERICAN VANADIUM CO.**PENNSYLVANIA**

Vanadium Bldg., Pittsburgh, Pa. Plant at Bridgeville, Pa. **Officers:** James J. Flannery, pres.; E. E. Fernandini, 1st v. p.; J. C. Gray, 2nd v. p.; J. L. Replogle, 3rd v. p.; C. B. Aylesworth, sec. and asst. treas.; H. A. Neeb, treas., with Jos. M. Flannery, J. R. Flannery, P. J. Barry, G. H. Gerding, and G. H. B. Martin, directors. Inc. Feb. 15, 1916, in N. J., to mine vanadium ores and manufacture vanadium alloys. **Cap. \$700,000;** shares \$100 par. Oakland Savings & Trust Co., Pittsburgh, registrar. Controls the Standard Chemical Co. Company gives out no information.

AMERICAN ZINC CO.**MONTANA**

Is a corporation created to take a 5-year lease and bond on the Emma mine, at Butte, Mont., from the Butte Copper & Zinc Co., which see.

AMERICAN ZINC CO. OF ILL.**ILLINOIS**

A subsidiary of the Amer. Z. L. & Sm. Co. and described under that title.

AMERICAN ZINC CO. OF TENN.**TENNESSEE**

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

AMERICAN ZINC, LEAD & SMELTING CO.**U. S.**

General offices: 55 Congress St., Boston. **Sales office:** 120 Broadway, New York City. **Corporate office:** 85 Exchange St., Portland, Me.

Officers: H. S. Kimball, pres.; C. W. Baker, L. A. Coolidge, C. A. Hight, P. E. Coyle, v. p.'s.; F. W. Batchelder, sec.; S. E. Farwell, treas.; M. A. Donovan, asst. treas. and asst. sec.; directors are H. S. Kimball, E. P. Brown, C. A. Hight, C. W. Baker, L. A. Coolidge, B. P. Bole, F. H. Goff, E. A. Clark, P. E. Coyle, E. G. Hothorn, N. B. MacKellvie, L. Vogelstein, W. H. Coolidge, J. N. Lovell, and C. G. Rice; H. I. Young, mgr. Mo. mines, Cartersville, Mo.; J. N. Houser, mgr. Tenn. mines, Mascot, Tenn.; W. F. Rossman, 1012 Pierce Bldg., St. Louis, mgr. smelters. Transfer agts.: F. W. Batchelder, 55 Congress St., Boston, and Guaranty Trust Co., New York; Registrars, First National Bank, Boston, and Bankers Trust Co., New York.

Inc. Jan. 26, 1899, in Maine. **Cap., \$500,000;** shares \$25 par; increased on Apr. 24, 1899, to \$2,500,000; on Oct. 17, 1906, decreased to \$1,250,000; on Dec. 19, 1906, increased to \$3,750,000; on Oct. 4, 1912, increased to \$7,500,000, outstanding Dec. 31, 1915, \$4,828,000. All bonds have been cancelled. Stock is listed on Boston and New York Stock Exchanges. Annual meeting, second Wednesday in April.

Balance sheet of Amer. Zinc, Lead & Sm. Co., and subsidiary companies as of Dec. 31, 1915, shows: assets \$10,919,679, which includes property account \$5,858,737, investments \$589,604, insurance fund investments \$26,291, deferred charges to operations \$48,184 and current assets \$4,396,862, which includes ore stocks \$1,299,153; spelter stocks \$631,013, sulphuric acid stocks \$6,556; cash \$640,414, inventories \$416,074; accounts receivable, m'fd products, \$1,342,039; accounts receivable, miscellaneous, \$61,611; liabilities include: capital stock issued \$4,828,000; depreciation and reserve funds \$2,540,360; insurance reserve fund \$26,291; surplus \$2,796,871; current liabilities of \$728,155, which includes accounts payable, \$3,057; notes pay-

able, property purchased, \$83,000; interest and taxes \$63,250; drafts in transit \$108,848. Operating statement for 1915 shows; total profits from results of sale of zinc and lead ores, sales of spelter and sulphuric acid, receipts from royalties, after deducting all cost of mining, manufacture, marketing ores, spelter and sulphuric acid, other expenses of operation and all administrative and general expenses, taxes and interest, \$5,135,055, plus miscellaneous profits, \$158,822; total \$5,293,878; appropriated to depreciation and reserve fund: \$2,642,377; balance carried to surplus \$2,651,500.

It is the aim of the directors to make the Zinc company a permanent business, regardless of the life of its present mines; to add to its mining properties, wherever possible; to strengthen and protect its manufacturing plants and to have a sufficient working capital so that the company need not borrow any more money. This use of earnings precludes the immediate distribution among stockholders of cash dividends. In order to guarantee something to the stockholders for these earnings retained as capital it is proposed to issue $\frac{1}{3}$ of the authorized capital as 6% cumulative preferred shares, to be preferred as to assets to the amount of \$100 per share; the company reserving the right to redeem at any time these preferred shares at \$100 per share.

Dividends: have been \$2 in 1899, \$1 in 1900, \$1.25 in 1907, \$1.50 in 1910, \$2 in 1911 and 1912 and \$1 in 1913.

The Amer. Zinc, Lead & Sm. Co. is an operating and holding company, owning the following: Amer. Zinc Co. of Tenn., Amer. Zinc Co. of Ill., Amer. Ballast Co., Amer. Pipe Line Co., Amer. Zinc Ore Separating Co., and 628,145 shares of 925,000 shares issued, of the Wisconsin Zinc Co. These companies are listed under their own title but are described below. Reported in June, 1916, that company had arranged to purchase property and assets of the Granby Mng. & Sm. Co. of Missouri, which see.

In the Joplin district, Mo., the company owns 2,160 acres of land. The principal operations are at the Davey mines, on the 655-acre Davey property, and the Vogey mine, on a 40-acre tract in the Porto Rico district. There are 4 mines in the Davey group, 2 worked out and 2 producing. The ore, sulphides of lead and zinc, is found in the horizontal Grand Falls chert in bands between the barren zones of flint that comprise the Grand Falls chert. It is from this formation the term sheet ground mines, is derived, and in it the ore is generally uniform in character and covers large areas. In the Davey mines 110 acres have been mined out in one continuous chamber. Ore faces are from 14' to 20' in height.

Development is by means of 6 vertical 2-compartment shafts, all in the ore formation. Two shafts are used for mining purposes, and 4 for ventilation. The ore level is at 250' depth. The ore is very low grade, zinc concentrates recovered representing 1.79% and the lead concentrates 0.67% of rock treated. Ore output has been approximately 50,000 tons ore per acre, from 15% to 20% ore, being left as pillars. Timbering is not necessary. The blanket formation permits of development in wide areas, average yearly advance on all faces in the mine is 125'.

There are 2 mills on the property, No. 3 mill of 1,200 tons ore and No. 4 mill of 1,000 tons ore daily capacity.

With normal output the estimated length of life of the Davey property is 5 years, this is without recent addition of 40 acres.

The Vogey mine is similar to the Davey. Operations have been irregular, depending on price of zinc and lead concentrates. Zinc concentrates recovered represent 1.76% and lead concentrates 0.20% of rock hoisted. There is a mill on the property, with daily capacity of 1,000 tons.

Production and costs at the two mines are as follows:

		-----Concentrates Produced-----				
Cost Per Ton		Zinc	Zinc	Lead	Lead	
Mine	Mill	Tons	%	Tons	%	Conc. Ratio
(D) \$0.755	\$0.222	93,451(b)	57.12(b)	35,039(b)	82.03(b)	45 to 1(b)
(V) .782	.172	10,387(c)	62.11(c)	1,177(c)	78.34(c)

(D) Davey; (V) Vogey; (a) average for last 3 years; (b) since production was begun in 1905 to end of 1914; (c) 1909-1914 inclusive.

In addition to the above properties the company owns 4 separate tracts, about 2,150 acres, in the Joplin district, partly developed by churn drilling.

The company owns 2 smelting plants in the gas belt at Caney and Dearing, Kan. The Caney plant has 6,080 retorts, the Dearing, 4,480 retorts. Combined yearly capacity is 110,000 tons concentrates. The length of life of these smelters depends upon the fuel supply of natural gas, now obtained from the Oklahoma-Kansas belt.

Amer. Zinc Co. of Tenn.

Inc. Feb. 24, 1911, in Maine. Cap., \$10,000; shares \$1 par, all owned and issued by A. Z. L. & S. Co.

Principal mining operations of the Tennessee Co. are at Mascot, Knox Co., where the company owns 2,400 acres land. There has recently been acquired 4,000 acres mineral land in Jefferson Co., adjoining Knox Co. on the east, where drilling is now being done with encouraging results. Additional options on 1,000 acres farther east in Jefferson Co. have also been obtained.

Orebodies of the Mascot mines occur in the Knox dolomite, dip 15° to 30° south and strike north of east, in lenses of varying sizes and in well-defined brecciated areas which lie in certain recognized zones or bedding planes. The ore is a light colored sphalerite. The zinc formation may be followed for many miles from Knoxville, in an easterly direction. In 1910 the company obtained an option on the Holston property, started drilling and proved up a large tonnage of pay ore. A 3-compartment shaft, mine No. 1, was sunk in 1911 and the orebody developed in 1912. The main orebody is developed on the 280' level, and, as exposed, is 1,300' long, 700' to 880' wide, and 30' to 40' thick. Limits of the orebody have not been reached by development to date. In 1913 a 4-compartment shaft, mine No. 2, was sunk 2,000' east of No. 1 and a second orebody developed, with length of 1,500', thickness of 40' to 125', width of 300' and limits not yet reached. Average grade of ore as shown by drill records is 5% to 5½% zinc. Greatest depth of workings, 800', is at mine No. 2. A tramway connects No. 2 mine with No. 1 mill. Development has shown the ore to be continuous between No. 1 and No. 2 orebodies. Further drilling 3,000' east of eastern limits of mine No. 2 has indicated a third orebody; this will not be developed until some future time. Recently there has been acquired another ore deposit adjoining the Holston property on the West and 2,900' from No. 1 shaft. Drilling and underground developments have proved a good sized orebody with limits not yet known.

From the east to west the ore development as now shown is 7,900' in length. There has been blocked out 4,000,000 to 5,000,000 tons of ore which will average 4% to 5% zinc.

In May, 1913, mill No. 1, with 1,000 tons daily capacity, was completed. Additions to this mill were finished in July, 1915, bringing its daily capacity up to 2,200 tons. It is now treating over 2,000 tons daily. On the Roseberry property adjoining the Holston on the west there has recently been completed a mill of 700 tons daily capacity. Mill equipment at Mascot consists

of crushers, rolls, jigs and tables, followed by flotation treatment of slimes and fine sand.

Power is obtained from the Knoxville Railway & Light Co., a subsidiary of the Tenn. Power Co.

Costs and results of operations are as follows:

	Cost Per Ton		% Zinc in	
	Mine	Mill	Ore Milled (a)	Recovery
1914.....	\$0.97	\$0.233	4.06	75%

(a) In 1913 this was 4.19% and 3.99% in first 10 mos. of 1915.

Mascot concentrates average about 60% zinc and are, with one exception, the purest zinc concentrates produced in the U. S., the spelter produced therefrom commands a substantial premium per lb. over Prime Western quotations.

The company has developed the town of Mascot, owning 200 houses, a company store and hotel.

Amer. Zinc Co. of Wisconsin

Inc. June 27, 1908, in Maine. Cap., \$1,000,000, shares \$1 par, issued 925,000 shares, owned by A. Z. L. & S. Co., 628,145 shares. Properties lie in the southwestern part of the state in the Wisconsin District. The ore deposits exist in the forms of flats and pitches, the flats being horizontal deposits along the bedding planes of the rocks, while the pitches are dipping crevices. The chief deposits lie in the lower part of the Galena limestone at a depth of 100' to 200' and vary in length from 1,000' to 5,000', in width from 30' to 300', and in height from 12' to 60'. The ores consist of the sulphides of zinc, lead and iron, the latter in the form of marcasite.

The principal operations in the Wisconsin field are as follows:

Champion property, 434 acres, on which there has been developed an orebody 1,500' long, 800' wide, and 40' high. —A mill of 500 tons daily capacity is in operation.

Winskell mine, operated on leased land, 10% of gross output going to the land owners. A mill of 450 tons daily capacity is in operation. Total production to end of 1914 was 31,089 tons zinc concentrates, averaging 36.51% zinc, and 1,073 tons lead concentrates, averaging 76.28% lead.

East End property, operated on leased land at 10% royalty, has ore reserves of 50,000 tons high grade ore. A mill with daily capacity of 250 tons is in operation. Production to end of 1914 amounted to 11,485 tons zinc concentrates, averaging 44.11% zinc, and 117 tons lead concentrates, averaging 73.85% lead.

Federal property, operated on leased land, at 11% royalty, has only a small ore tonnage developed. There is a mill on the property with daily capacity of 350 tons. Production to end of 1914 amounted to 11,171 tons zinc concentrates averaging 32.21% zinc, and 109 tons lead concentrates, averaging 75.30% lead.

The company owns a number of other leases in the district, on which valuable ore discoveries have been made by drilling. Three of these properties, the Thompson, Longhorn and Birkbeck, will be developed by shafts, and equipped with mills in the near future. Most of the mines are from 1 to 3 miles from the railroad.

The life of the Champion property, with its surrounding leases, as estimated at present, is from 5 to 10 years.

The low grade of concentrates necessitates further treatment by means of partial roast and magnetic separation. Plants for this purpose are operating at Plattville, Wis., the Empire plant, and at Galena, Ill., while a third was recently completed near the Champion property.

Amer. Zinc Co. of Illinois

Inc. Aug. 15, 1911, in Maine. Cap., \$10,000, shares \$1 par, all issued and owned by the Am. Z. L. & Sm. Co.

Property consists of 200 acres land, on which is located a pottery, capacity 15,000 retorts, a modern smelting plant of 4,000 retorts furnace capacity, capable of handling 40,000 tons concentrates per year, 2 Hegeler muffle kilns, a sulphuric acid plant, machine shop, warehouse and large ore storage bins. The acid plant produces 30,000 tons of 60% sulphuric acid annually.

Amer. Ballast Co.

Inc. Nov. 9, 1911. Cap., \$2,000, shares \$1 par, 5 shares issued and owned by Am. Z. L. & Sm. Co. The company disposes of mill tailings of the Mascot mill of the Amer. Zinc Co. of Tenn. Table and flotation tailings are sold for fertilizing purposes, other tailings are sold for railroad ballast, road construction, etc. Company's operations are said to net over \$50,000 annually.

Amer. Pipe Line Co.

Inc. June 16, 1910, in West Va. Cap., \$50,000, shares \$100 par, all issued and owned by A. Z. L. & Sm. Co. Property consists of gas lands, and leases, gas wells and oil wells, located in the southeast corner of Kansas, near the Caney and Dearing smelters and a system of trunk pipelines in Kansas and Okla., with the necessary feeders. There are over 36 miles of main pipe line, 12" dia., now laid.

Amer. Zinc Ore Separating Co.

Inc. Oct. 13, 1908, in Maine. Cap., \$25,000, shares \$5 par, all issued and owned by A. Z. L. & Sm. Co. This company owns certain patents for the separating of zinc ores by the Huff electrostatic methods. Its business is to lease machines constructed under these patents on a royalty basis. Companies using Huff process are as follows:

Zinc: U. S. Sm., Ref. & Mng. Co., Midvale, Utah; Carnegie Lead & Zinc Co., Cananea, Mex.; Kittimac Mng. Co., Silverton, Colo.; Mary Murphy G. Mng. Co., Romley, Colo.; Sunnyside Mines Co., Eureka, Colo.; Pinos Altos Mng. Co., Pinos Altos, N. M. Copper: Tilt Cove Mng. Co., St. Johns, Nfld.; Det Metallurgiske Akt., Bergen, Norway. Graphite: Flaketown Graphite Co., Flaketown, Ala.; Jennings G. Co., Alabama G. Co., Ashland, Ala.; National G. Co., Toronto, Can. Misc.: Carborundum Co., Niagara Falls, N. Y.; Soc. Francaise des Metaux, Australia. Testing Plants: University of Illinois, Urbana, Ills., and Canadian Dept. of Mines, Ottawa, Can.

AMERICAN ZINC ORE SEPARATING CO.

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

AMY-MATCHLESS M. & M. CO.**IDAHO**

Wallace, Ida. Gus Smith, mgr. and principal owner. Inc. Dec., 1913, in Arizona. Cap., \$1,250,000, shares \$1 par.

Property: several developed claims on Pine Creek, 3 miles from a railroad. At last accounts company was planning to build a 50-ton mill.

ANACONDA COPPER MINING CO.**MONTANA**

42 Broadway, New York City. Mine office: Hennessy Bldg., Butte, Mont. Smelting works: Anaconda, Mont., Great Falls, Mont., Tooele, Utah and Miami, Ariz.

Officers: John D. Ryan, pres.; B. B. Thayer, v. p.; C. F. Kelley, v. p.; A. H. Melin, sec.-treas.; J. T. Roberts, asst. sec.; D. B. Hennessy, asst. treas. **Directors:** John D. Ryan, B. B. Thayer, George H. Church, Nicholas F. Brady, Wm. Rockefeller, C. F. Kelley, J. Horace Harding, Andrew J. Miller and H. H. Rogers.

Operating officials:**Mining Department**

John Gillie, gen. mgr. of mines; B. H. Dunshee, asst. gen. mgr.; C. W. Goodale, chairman Safety First committee. W. B. Daly, gen. supt. of mines; John O'Neill, asst. gen. mgr.; C. L. Berrien, asst. supt. The mine supts. are as follows:

Anaconda Group

Ed. Renouard, Badger State Mine.	D. J. O'Neill, Never Sweat Mine.
Jas. S. Egan, Mountain Con Mine.	Dan P. Sullivan, Original Mine.
Con O'Neill, Bell-Diamond Mine.	Dan Griffin, Steward Mine.
Thos. Chope, High Ore Mine.	W. H. Price, Moonlight Mine.
D. H. Crowley, St. Lawrence Mine.	Thos. McGrath, Gray Rock Mine.
Wm. Nevin, Anaconda Mine.	John Andrew, Belmont Mine.
R. S. Foster, Safety engr.	W. C. Douglass, Asst. Safety engr.

Boston & Montana Group

John Varker, Mountain View Mine.	E. M. Norris, Tramway Mine.
Herbert R. Tunnell, Pennsylvania Mine.	Geo. Bennett, Leonard Mine.
K. P. Krueger, West Colusa Mine.	John C. Gaul, Berkeley Mine.
G. E. Moulthrop, Tramway Mine.	Wm. McLain, Silver Bow Mine.
R. S. Foster, Safety engr.	Jas. McQuay, Tropic Mine.

Zinc Group of Mines

J. J. Carrigan, gen. supt.	Jas. Brennan, Emma Mine.
Herbert Tonkin, Poulin Mine.	John Hewitt, Alice Mine.
John Berkin, Nettie Mine.	M. Finnigan, Southern Cross Mine.
Wm. E. Kane, Lexington Mine.	R. S. Foster, Safety engr.

Reduction Departments**Washoe Red'n Works, Anaconda**

E. P. Mathewson, mgr.	W. M. Kelly, gen. smelter foreman.
L. V. Bender, gen. supt.	W. C. Capron, asst. chief engr.
L. E. Jones, supt. elec. dept.	R. B. Kelly, safety engr.

Boston & Montana Red'n Works, Great Falls

James O'Grady, mgr.	A. T. Elliott, gen. smelter foreman.
J. H. Klepinger, supt.	Edgar C. Maclay, chemist.
M. W. Krejci, asst. supt.	W. T. Burns, supt. elec. refinery.
E. S. Bardwell, Metallurgist.	Dan'l Tracy, supt. furnace refinery.
W. H. Gunniss, mgr. brick dept.	Peter Thill, asst. chief engr.

F. J. Brule, supt. surface dept.

International Smelting Co.

For Tooele, Utah and Miami, Ariz. smelters, the East Chicago and Raritan refineries, see International Smelting Co.

Coal Dep't

F. W. C. Whyte, mgr., Anaconda.
 Thos. Snedden, supt. Diamond Coal & Coke Co., Diamondville, Wyo.
 Thos. Good, supt. A. C. M. Co. Coal Dep't, Washoe.
 C. A. Sederholm, supt. A. C. M. Co., Coal Dep't, Sand Coulee, Mont.

Lumber Dep't

Kenneth Ross, mgr., Missoula, Mont.
 M. M. Ross, supt., St. Regis.
 J. E. Totman, mill supt., Hamilton.

B. A. & P. Railway

H. A. Gallwey, mgr., Anaconda.	C. F. Murphy, supt.
C. H. Spengler, master mechanic.	C. A. Lemmon, chief engr.

Inc. June 18, 1895, in Montana, as successor of Anaconda Mining Co. Cap., \$150,000,000, shares \$50 par, 2,331,250 issued. **Funded debt:** \$16,000,000, 2-year 5% gold notes, due March 1, 1917. Company has a very broad

charter permitting it to acquire, mortgage, lease, assign and transfer the capital stock, bonds or securities of any other corporation. National City Bank, N. Y., transfer agt.; Bankers Trust Co., N. Y., registrar. Pogson, Peloubet & Co., auditors. Annual meeting 3rd Wed. in May at Anaconda. Stock listed New York, Boston, London.

Dividends declared quarterly; present rate \$1.50 quarterly (1916).

Net earnings 1905-1915 were \$87,587,422, or \$32.68 per share and dividends paid \$27.79 per share, averaging \$2.50 annually. Earnings for 1915 were \$16,695,806, or \$7.16 per share.

Gross revenue:

1915	1914	1913	1912
\$87,273,886	\$51,533,659	\$61,258,755	\$67,262,041

Assets, Dec. 31, 1915, amounted to \$174,785,526, or \$75 per share of stock compared with \$54 Dec. 31, 1914.

Production:

	Lbs. Copper	Oz. Silver	Oz. Gold
1915.....	254,311,574	9,005,618	106,702
1914.....	223,720,292	8,314,116	99,651
1913.....	270,303,644	10,321,296	64,898
1912.....	294,474,161	11,014,737	61,314
1911.....	259,407,092	9,731,561	48,950
1910.....	266,608,461	9,534,888	57,260

Production and operating costs can be summarized as follows:

	Tons Ore Mined	Mining Costs p. t.	Reduction Costs	Trans- portation
1915.....	4,383,339
1914.....	3,904,883	\$4.134	\$1.612	\$0.274
1913.....	4,651,445	4.124	1.679	.320
1912.....	4,579,957	3.912	1.749	.308
1911.....	3,848,673	3.766	1.820	.331

Copper content in 1915 averaged 2.85% and costs are estimated at 10 cts. per lb. of metal sold.

Smelting operations of company are shown in the following table:

Plant:	Smelteries				
	Ore Smelted tons	Copper lbs.	Silver oz.	Gold oz.	Lead tons
Washoe	4,421,629	189,483,047	6,982,822	75,680
Great Falls	384,065	64,828,527	2,022,795	31,023
Tooele	665,948	14,271,174	5,090,157	48,020	56,501
Miami	87,408	51,769,669	69,999	822
Totals	5,559,050	320,352,417	14,165,773	155,545	56,501

Plant:	Refineries				
	Copper lbs.	Silver oz.	Gold oz.	Lead tons	
Great Falls	64,828,527	2,022,795	31,023	
East Chicago	4,031,610	18,135	56,142	
Raritan	323,850,718	16,025,993	174,408	
Totals	388,679,245	22,080,398	223,566	56,142	

The figures for the refineries duplicate to a large extent those of the smelteries, the difference representing bullion that was refined for other smelters. In 1916 zinc will be added to the list of metals.

As company reports do not give details of operating costs, the actual cost of producing a pound of copper can only be calculated from the fig-

ures given which gives an apparent cost of 10c per lb. of copper produced. Inasmuch as this includes a \$1,900,000 depreciation fund, \$984,232 interest and there is an equity in metals inventoried at cost, this figure is high. It is believed that the cost is not over 9c per lb. of copper.

Property: Company owns 1,168 acres mineral claims at Butte including all the property formerly held by the following companies: (1) Boston & Mont. Cons. C. & S. Mng. Co.; (2) Butte & Boston Cons. Mng. Co.; (3) Red Metal Mng. Co.; (4) Washoe Copper Co.; (5) Parrot Silver & Copper Co.; (6) Alice Gold & Silver Mng. Co.; (7) Trenton (formerly Colorado) Mng. & Dev. Co.; (8) Big Blackfoot Lumber Co.; (9) Diamond Coal & Coke Co.; (10) Original Cons. Mng. Co.; (11) Colusa Parrot Mng. & Sm. Co. It acquired the Internat'l Smelting Co. in 1914 together with its subsidiaries the Tooele Valley R. R., a lead refinery at East Chicago, the Raritan Copper Refinery. In 1915 it acquired the United Metals Selling Co., 150,000 shares Inspiration Copper, 30,800 shares Greene Cananea and 1,100 shares Mountain Trading Co. It owns the Southern Cross Gold Mines near Anaconda. In 1915 it bought the Alex Scott mine at Butte and in 1916 the Pilot Butte mine, the latter purchase ending all existing apex litigation at the camp. Company owns 1,100,000 acres lumber land (Big Blackfoot Lumber Co.) and sawmills at Bonner and St. Regis, Mont., and 13,280 acres coal lands at Diamondville, Wyo., Washoe, Belt and Sand Coulee, Mont. The Raven mine was bought Aug. 4, 1915, for \$65,000. Company has a 5-year lease on the Emma mine (Butte Copper & Zinc Co.) and owns 88,300 shares of the stock thereof, operated as a zinc producer and bought the Czarroma claim fraction containing the continuation of the Emma vein for \$225,000 late in 1915. Company is also prospecting the big low grade gold property called the Porphyry Dike, near Rimini, under lease and bond.

The reduction plants at Great Falls and Anaconda, including the new zinc plant, are described later. The Anaconda plant produces fire and building brick and sulphuric acid as well as copper, zinc, gold and silver, with a small amount of arsenic, and in the future probably bismuth. Through ownership of the Internat'l Smelting Co., the Anaconda owns the Tooele, Utah, and Miami, Ariz., smelters, the East Chicago and Raritan refineries (described under International Smelting Company).

By the merger of the Anaconda and Boston & Montana, both among the six largest copper producers of the world, and the addition of a number of other mines of second and third rank in productive capacity, the Anaconda became the largest copper company in the world, employing about 12,000 men, at high wages, and with a payroll in Butte alone of over \$1,000,000 monthly, with very large additional payrolls, at its works in Anaconda and Great Falls. Since the absorption of the other mines of Butte has practically eliminated property lines so far as underground work is concerned and workings have been so connected as to permit the most economic mining regardless of claim boundaries, the property can be most usefully described in sections called by the familiar names used under former ownership, or by the names of the 22 operating shafts of the company.

The mines of the company produced in 1915 4,376,556 tons of ore and 6,783 tons of copper precipitate. The Anaconda mine was opened, 1880, as a silver producer, but at about 150' depth the oxidized silver ores were succeeded by high-grade copper ores, mainly chalcocite and bornite, while at depth there is a large amount of enargite. Net earnings of the mine, during the 15 years, 1880-1894, are unknown, but may be safely estimated as not less than \$50,000,000. At a depth of about 1,600' quartz pyrite veins

of the Anaconda showed impoverished values, there being considerable pyrite, but the fault veins showed large orebodies at depths of 1,200' to the deepest levels yet reached in mining which is 3,400' in the High Ore mine. The various mines of the Anaconda have immense reserves of ore of all grades.

The Anaconda mine proper has a 3-compartment shaft, 2,800' deep, connected underground with the Never Sweat, St. Lawrence, Bell, Belmont and Moonlight mines. Considerable trouble has been had, at times, with gases, from the adjoining St. Lawrence mine, and the fire has crept from the St. Lawrence into several of the upper levels of the Anaconda. The mine has electric locomotives for tramping, installed 1907, on several levels. Hoisting is by 8-ton skips, swung under double-deck cages and worked in counterbalance.

The St. Lawrence mine has a 2,600' three-compartment main shaft, connected underground with the Anaconda, Never Sweat, Mountain View and Pennsylvania mines. The St. Lawrence has been on fire since 1889, in an extensive area above the 1,100' level. The fire has been fought constantly, and walled off by cement bulkheads wherever possible, but cannot be extinguished, and must be allowed to burn itself out, though it is possible to control its progress to a considerable extent. While the fire is troublesome, it does not result in the loss of copper, as the sintered ore remaining after the burning of the sulphur can be mined later, and the mine waters are strongly charged with copper, much of which is recovered by precipitation on surface where it is run over scrap iron and "cement" copper made. The hoist has 32x72" cylinders, raising 5-ton skips swung under double-deck cages.

The Never Sweat mine has a 2,500' three-compartment main shaft. Square-set timbering is used in stoping as well as back filling. Some trouble has been had with fire from the St. Lawrence. The surface plant includes a 28x48" double drum Nordberg hoist, raising 3-ton skips swung under single-deck cages.

The Belmont mine, about 1 mile south of the main shaft of the Anaconda, and 375' lower, has a new 2,400' four-compartment working shaft, the largest in the district. Connections have been made with other mines and a 1,500-ton ore bin erected. Equipment includes a powerful new hoist, with capacity of 3,500', taken from the Corra mine.

The Diamond mine has a 3,400' three-compartment shaft, developing the Corra vein and other veins to the bottom level. Equipment includes a 34x72" Risdon hoist, operating double-deck cages with 8-ton skips.

The High Ore mine is one of the deepest in Butte, having a 3,400' three-compartment shaft, producing high-grade chalcocite. The High Ore does the pumping for a number of connecting mines of the Anaconda, handling all water from the Anaconda, Washoe and Parrot properties. The mine has 9 electric pumps, each good for 600 gals. per min., with 1,200' lift. These are located on the 1,200, 2,200 and 2,800' levels. Relief pumps to run by steam or air are also installed on different levels.

The Modoc mine has a 2,500' three-compartment shaft, connected with the 2,500' level of the High Ore mine. The Modoc has several veins besides the one of this name, its chief ore supply coming from the veins, which are stoped up to the North Butte Co.'s boundaries on the north and to the Ballaklava mine on the south.

The Mountain Chief mine, area 1.15 acres, lies next north of the Butte-Ballaklava, and is said to have produced about \$1,500,000 worth of ore from a shallow shaft. The Mountain Chief is developed to 500' by its own shaft but its deeper levels are worked through the High Ore mine.

The Parrot group of properties includes the former holdings of the Parrot Silver & Copper Co., 19 fractional claims, area 40.6 acres, embracing the Parrot, Little Mina, Bellona, Original No. 6 and the Oro Butte, Champion and Copper Reef mines, and various other small properties. Main shaft of the Parrot mine is now used as an air shaft and the ground is worked from the West Steward and Never Sweat shafts.

The Little Mina 1,200' shaft is now used for air only.

The Original, Steward and Gagnon shafts are on a western continuation of the Anaconda and Steward veins and in 1912 a continuous ore shoot of good grade, over 2,700' long, was opened in the bottom level of these mines.

The Original mine has a 3,100' shaft with 3 compartments below 1,100'. The mine was located, 1864, in the first stampede to the new Silver Bow diggings and was the first mine patented in Butte.

The Steward mine has a 3,000' vertical shaft, showing, in the bottom workings, a 30' vein carrying ore of good copper tenor, with fair silver values. Equipment includes a 120' steel headgear and a 34x72" first-motion duplex hoist, good for 3,500'.

The Gagnon old 2,300' three-compartment incline shaft, sunk at an angle of 74°, is now used as an auxiliary shaft, all ore being hoisted through the Original shaft. The new vertical 2,200' shaft near the west end of the property, is as yet used for ventilation only. Equipment includes a 22x48" Dickson hoist, raising 3-ton skips with capacity of about 800 tons daily.

The Gagnon is the westernmost of the productive copper mines of Butte. Its ores have carried more silver than those of the mines farther east and have held a number of minerals, such as hübnerite, unusual elsewhere in the camp.

The Moonlight mine, once the principal producer of the Washoe Co., has ore averaging about 1 oz. silver for each unit of copper. The Moonlight has a 1,700' three-compartment shaft, connected underground, with the Blue Jay, Never Sweat and Anaconda.

The Poulin mine, formerly owned by the Washoe Co., has a 1,200' shaft, but is operated through the 1,500' Buffalo shaft, and is to be operated for zinc ore.

The Silver Bow No. 1 mine has a 1,000' shaft, connected with the Pennsylvania, Berkeley and No. 3 mines. It has been a good producer for many years.

The Berkeley 1,500' three-compartment shaft has a 28x48" double drum Nordberg hoist handling 3-ton skips in each compartment.

The Rarus mine has a 2,000' three-compartment shaft, connected with the Tramway mine. The veins have divergent branches, and constitute a sort of stockwork, with an ore zone up to 300' in width, in places.

The Tramway mine, lying between the Minnie Healy and Rarus, formerly owned one-third by Butte Coalition and two-thirds by Butte & Boston, has a new shaft that is being made the central shaft for the Minnie Healy-Rarus group. The Tramway shaft, 2,400' deep, has 3 compartments, each 5'x4'x2" in the clear. The first of the new levels in the Minnie Healy is the thirteenth, about 50' below the old 1,500' level, in which fire was burning, 1908-1909. The Tramway has numerous bodies of ore, of 5 to 6% copper tenor, with good gold and silver values, the really great orebodies coming in between the 1,300 and 1,400' levels, and on the 1,700' level there is an orebody up to 75' in width, averaging nearly or quite 7% copper.

Equipment: at the Tramway mine includes a 92' steel headgear with 12' sheave wheels. A 34x72" Allis-Chalmers 2-cylinder Corliss hoist, with 12' drums, using 1½" round wire cables, has capacity to raise 7-ton skips from a depth of 3,500'. Each compartment has 5-ton skips changeable to

4-deck cages, for lowering men, an auxiliary hoist being used for sinking and handling supplies through the third compartment. The main surface plant of the department, at the Tramway shaft, includes a boiler house, engine house, carpenter shop, machine shop, office building, warehouse and changing house with hot and cold water and shower baths.

The Nipper mine of the Red Metal group, includes the Nipper, Chief Joseph, Balm and L. E. R. claims. The Nipper mine, area 15.18 acres, has 2 shafts, of 1,000 and 1,200' depth, with 12 exits, being connected underground with the Parrot, Never Sweat and Little Mina mines, and has been operated to some extent through the Parrot shaft.

The Green Mountain mine has a 2,200' three-compartment shaft, not deepened for several years.

The Mountain Consolidated mine has a 2,500' three-compartment shaft, with a good ore showing on the 1,400' level and below, and an especially good showing on the bottom level, at 2,500'. The mine has a 28x72" Union Iron Works hoist, operating 2 four-deck cages. The East Grey Rock shaft is used for ventilation only.

The West Grey Rock mine, producing ore carrying values mainly in gold and silver, with a small percentage of copper, has a 1,826' shaft, the 1,800' being the deepest level open in 1916. The veins, though small, carry good ore, rich in silver. The Corra shaft is kept open for ventilation.

The Leonard has an old 1,800' shaft, used for men and supplies and the main or No. 2, a new shaft of 4 compartments, 2,200' deep. Mine is timbered with 12x12" and 14x14" square sets, requiring monthly an average of about 1,000,000' of mine timber, board measure. The 2,000' level shows equally large and good orebodies. Water from the Mountain View, Pennsylvania, Tramway, East Colusa and West Colusa mines drains to the 1,200' level of the Leonard and is forced thence to surface by 4 electric pumps. Valves are of pot form, and the entire water end is phosphor-bronze, columns being lined with wood, thoroughly soaked in oil, to withstand the corrosive action of the mine waters.

The Leonard surface equipment is the show plant of Butte, and is very complete, including a 152' steel headgear and 2,000-ton ore bins. The power plant has ten 250-h. p. boilers, and a 34x72" Nordberg hoist, good for 3,500' depth, raising cages with 5-ton skips swung under, with 1½" round cable. There also is a 12x14" Risdon sinking engine. Plant includes 3 air compressors, of 3,000, 4,000 and 5,000 cu. ft. capacity per minute, respectively.

The West Colusa mine has a 2,200' three-compartment shaft, with levels 100' intervals to depth of 1,200', and thereafter at 200' intervals. Shaft was retimbered, early 1910, and cut down to 3 compartments, being given false sets, to obviate squeezing, which caused much trouble in the past. Mine is timbered with 10x10" and 12x12" square sets, and shows vein matter up to 400' in width. Connection is had underground with the Mountain View and Leonard mines. Surface equipment includes a 23x60" Nordberg hoist, operating 2 double-deck cages, and a 28x48" Nordberg single drum auxiliary hoist.

The East Colusa mine has a 900' three-compartment shaft with levels opened at 100' intervals from 300 to 700'. The mine has a vein of about 65' width, formerly averaging 3 to 4% copper, but mine is now an important producer of zinc ore for the new electrolytic zinc plant. Production is about 200 tons daily.

The Pennsylvania mine has a 2,400' three-compartment shaft, with levels at 100' intervals from 100 to 1,000', and at 200' intervals below. This property has extensive stopes above the 600' level, ore lying nearer

surface than in most of the Butte mines. Equipment includes a 350-gal. electric pump on the 1,800' level, forcing water to a crosscut to the Leonard mine, whence it goes to the precipitating plant. Surface equipment includes 2,000-ton ore bins, a 34x72" Allis hoist, operating 2 5-ton skips and a 28x48" single drum Nordberg hoist sinking engine.

The Badger State mine in the northwestern part of the camp, develops the Badger State, Jessie, Edith May, Emily and several other veins. Mine has a 2,200' four-compartment shaft with extensive orebodies opened up on the 1,100, 1,300, 1,400, 1,600, 2,000 and 2,200' levels. The Emily shaft, auxiliary to the Badger, was deepened from 400' to 917', or 1,000' level of the Badger and connection made in 1912. Property is now an important producer of copper-and-zinc ore.

The Mountain View mine has a 2,249' three-compartment shaft, and a 1,800' air shaft. The Mountain View shows 6 veins of 8 to 60' width, ore averaging nearly 5% in copper tenor, being among the richest mines in the camp. Equipment includes 4,500-ton ore bins, a hoist good for 3,000' depth, and a 28x48" single drum auxiliary hoist.

The Tropic shaft on one of the most easterly claims of the company is 900' deep and mine is now a producing property.

The Greenleaf mine, located east of the proven ore zone of Butte, has a 1,000' shaft, with a hoist good for 2,500'. Mine has about 800' of lateral workings. Work was suspended, July, 1908, but the property is by no means devoid of promise.

The Southern Cross mine, situated in the Georgetown district, west of Anaconda, purchased 1912, for \$370,800, is a gold property developed by a 500' shaft, equipped with electrical machinery.

Butte hill is a network of metalliferous veins, the older with nearly east and west strike being displaced by a number of northwest fault veins cut in turn by still later northeast fault veins and these all cut by the Rarus fault. The geology is fully described in Prof. Paper 74 of the U. S. Geol. Survey, which can be had free of charge from that bureau. The matter of clearly defining apex and extra-lateral rights, under the present Federal mining laws, is one of the greatest possible difficulty, and in the past had led to litigation costing millions of dollars, all of which ultimately had to be paid out of the profits from copper produced. In 1915 the mines now owned by the Anaconda were developed by 35.3 miles of new openings, of which 4,980' was shaft sinking.

The mine waters are highly charged with copper and precipitation tanks have been built at practically all of the big mines merged in the Anaconda. Old scrap iron, tin cans and wire rope are used as precipitating agents, these articles commanding a standard price of 1 ct. per pound. The flow of the water in the precipitation tanks and launders is much more rapid than is the case in the large Spanish lixiviation plants. The principal plant, at the Leonard mine, cost about \$20,000, and treats water from all of the Boston & Montana mines. It has a building for drying and shipping the copper precipitate.

The air compression plant at the Leonard mine has three 1,200-h. p. Nordberg air compressors, each with a capacity of 7,500 cu. ft. of free air per minute. A building 300' long, contains 25 receivers, each 10x30' on the ground, for the compressed air, this air-storage plant having reserve power for 8 hours. In connection with this plant is the largest steel water tank in the world, 100' in diameter.

Electric power, supplied by the Montana Power Co., is brought from Great Falls, 130 miles, and from Canyon Ferry, near Helena, 70 miles distant, current being wired to the mine with a primary voltage of 50,000

volts, reduced to 2,000 volts in a transformer station, just outside of Butte, power being distributed to the various workings from a main station at the Never Sweat mine, the current being used at 440 volts.

The Washoe Smelter: At present this plant can treat 16,000 tons of ore per day using 500 tons coke, 900 tons coal for reverberatory furnaces, 3,000 tons limestone flux and 260 tons for power and heating. 60 million gals. of water are used each day and 42,000 gals. per minute. 3,200 men are employed at a monthly wage of \$400,000 in and around the works.

The accompanying plate shows the course of the ore through the plant. From the storage bin the ore passes through an automatic sampler; thence to the concentrator plant of 2 great buildings, each housing 4 units comprising Black crushers, Harz jigs for coarse and Evans jigs for medium and fine concentrates, 4 sets of 55x24" rolls, 8 Wilfley tables using Butchart riffles, six 8' Anaconda classifiers, six 7½"x72" Hardinge mills, each with 225-h. p. motors and using steel linings and steel balls; 6 Dorr classifiers, 4 Mineral Separation flotation machines, each having 15 agitators and 14 spitzkasten with 150-h. p. motors.

No. 1 section differs from the other 7 in having Hancock instead of Evans jigs, and 8x12' tube mills using Forbes liners and pebbles.

The coarse concentrate goes to the blast furnace; the fine to settling tanks, the flotation concentrate to Dorr thickeners, 12x50', discharging 60% solids to Oliver filters.

The slime treatment is very fully described in the *Mining World*, Mar. 4, 1916, and in *Transactions of A. I. M. E.* for 1916.

There are 2 Roaster divisions, one having Evans-Klepetko type of McDougal roasters, each handling 215 tons per day of fine concentrate, fine limerock and first class screenings. A Ruggles Coles dryer prepares concentrate for the acid plant and for converter. Roaster No. 2 contains 28 Anaconda roasters, a modified Wedge-McDougal furnace and treats material from the Tank house and Oliver filter cake.

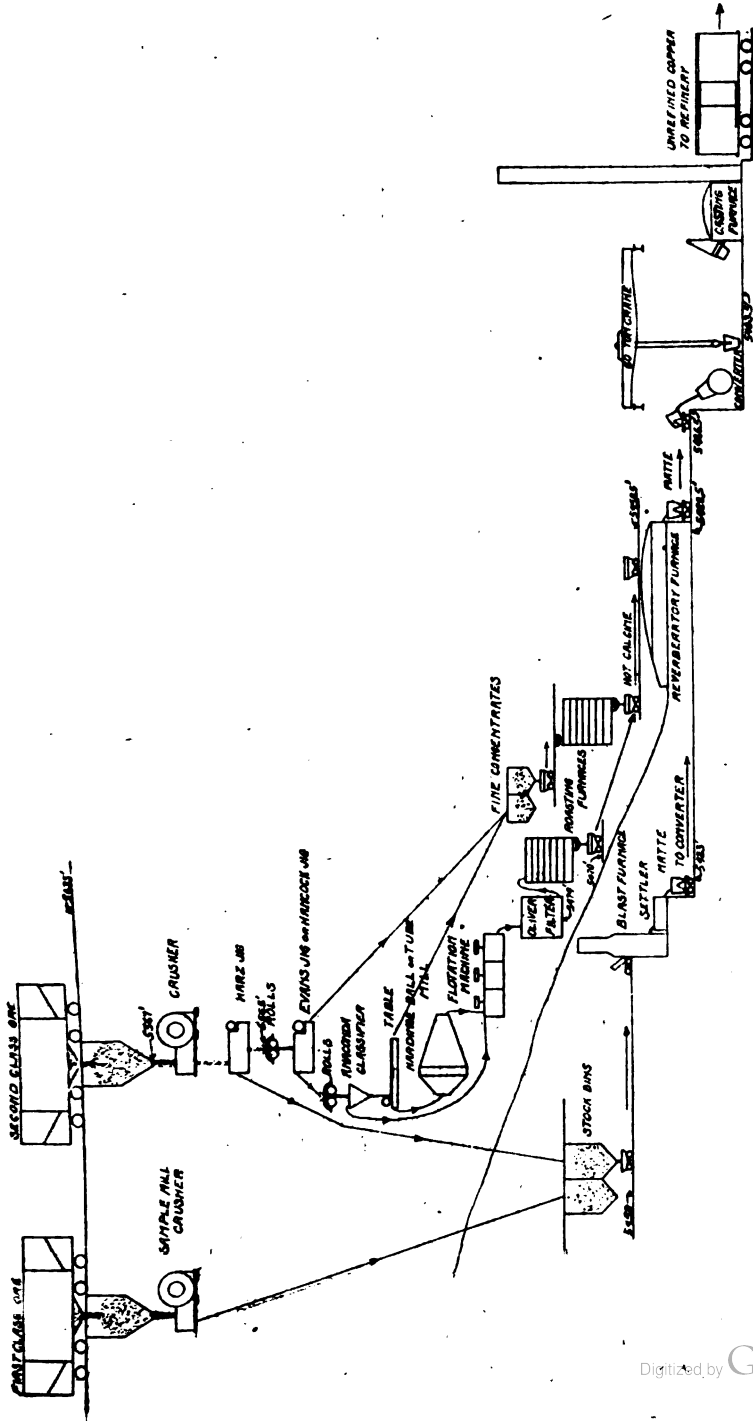

The reverberatory furnace plant is in 2 buildings, each with 4 furnaces and 5 boiler sets. Each furnace is 143x23' and handles 700 tons material per day when burning 100 tons coal in 24 hours. The coal previously ground in Raymond Bros. 5-roller pulverizer to 100 mesh, is blown into furnaces through Warford burners under 16 ounces pressure. Coal dust firing is much more efficient than grate firing and each furnace develops 6½ boiler h. p. per ton coal burned, hot gases passing through Sterling boilers. Furnaces are fed from top, banking concentrates against side walls. Slag flows off continuously instead of being intermittently skimmed and matte is tapped at intervals, running into 10-ton ladles trammed direct to converters.

The blast furnace building contains 2 51' furnaces, and one 87' long, each 56" wide at tuyeres. The latter handles 3,000 tons per day, the others 1,600.

Converter building contains 7 stands for Great Falls type converters. Latter are 20' diam., 17' high and weigh 450,000 lbs. with magnesite brick lining. The charge for each converter is 85 tons matte, 35 tons ore, blown to blister copper in one converter. Blister copper is poured into 2 casting furnaces, each of 140 tons capacity, with one in reserve. Air at 15 lbs. pressure oxidizes copper which is then skimmed and poled and poured into a casting machine. All handling of material is done by electricity.

The Sand leaching plant, 2,000 tons capacity, recovers the copper from sands of the old tailings dump. These sands are roasted in McDougal furnaces, cooled in a rotating drum, wetted to lay dust and conveyed to tanks 50' in diam. and 14' deep, each holding 1,050 tons, where it

ANACONDA COPPER

is leached by hot solution of salt and sulphuric acid and copper precipitated from solution by scrap iron.

The arsenic plant treats flue dust in Howell White rotary furnace, the dust-laden gas going to a Cottrell electrical treater for removal of dust, then cooled and condensed arsenic trioxide removed by a second Cottrell treatment, the fine powder being discharged by a screw conveyor into barrels.

A brick plant making 11,000 standard fire brick per day and another making 15,000 building brick from retreated tailings is one of the newer features of the works.

The reverberatory costs have been reduced from \$1.75 to \$1.25 per ton of ore by coal firing and other changes in practice, as compared with \$1.35 per ton of charge for the blast furnaces, but so much limestone has to be used in the blast furnaces charge that the cost, per ton of copper ore, is higher.

It has been found that leaching produces cleaner tailings than flotation, though other factors equalize the 2 processes, since for leaching the roasting costs are 25c-30c, excavating 14c, hauling 8c, and other costs 33c, a total of 80c per ton, using 65 lbs. of 60% acid for 9 lbs. copper.

Full descriptions of the new plant and the technical treatment have been published in the Trans. Am. Inst. M. E. and in Mining & Scientific Press, Feb. 26, 1916, and Mining World, Mch. 4, 1916.

The acid plant produces 150 tons a day of 60% acid, but a much bigger plant will be built in the next few years to supply acid for the zinc plant and other uses. In March, 1916, the leaching plant and zinc plant used 75% of the acid output, the balance being sold.

The changes in the Great Falls plant have been equally important. No ore is now received for concentration, but the refinery has been enlarged 50% and now turns out 620,000,000 lbs. of refined copper a year.

At the experimental 10-ton electrolytic zinc plant at Anaconda the company began late in 1915 to produce electrolytic spelter with such success that a new \$2,000,000 plant is now under construction at Great Falls, which will turn out 100 tons per day.

The Washoe smelter, where all the Anaconda ore is now concentrated and most of it smelted, is about 2 miles from Anaconda and 26 miles from Butte, all ore being hauled by electric power over the Butte, Anaconda & Pacific R. R., owned by the company. In 1914-15 the entire plant was remodelled, the capacity increased to 15,600 tons per day, leaching and flotation plants installed, an acid plant erected, a zinc plant put in operation and brick works built, the improvements costing, it is said, over \$6,000,000. The results are so remarkable as to be almost startling. The great items of saving of the remodelled plant comprise coal dust firing of reverberatory furnaces with greatly increased capacity (583 compared with 239 tons per day) with less slag loss; the abandonment of briquetting and blast furnace smelting in favor of the new reverberatory practice; the treatment of all ore in the Anaconda concentrator, instead of sending it to Great Falls; the introduction of flotation and the operation of the leaching plant. The saving has been increased from 75% to 96%, the tailings formerly carrying 0.62% copper now carry but 0.1% copper—that is, 2 lbs. of copper to the ton. The savings amount to 8.4 lbs. copper per ton, and paid the entire cost of reconstruction in the first half year of operation. This work has put the Anaconda company in the ranks of low cost producers and is a great triumph for its metallurgists.

ANACONDA GOLD MINING CO.

SOUTH DAKOTA

Address: Martin Brede, pres., Metropolitan Life Bldg., Minneapolis, Minn. A. E. Hale, supt.

Property: The Anaconda claim, in Roubaix district, near Deadwood, S. D., carries gold-quartz ore in a vein said to widen to 45' on 200' level.

Development: 300' shaft and crosscuts. **Equipment:** steam power and compressor. Work resumed 1914 after 2 years' idleness, owing to lack of working funds. Plans sinking 3-compartment shaft to depth of 1,000' and erection of mill on north end of property.

ANACONDA SKOOKUM COPPER GROUP. NEW MEXICO

Address: c/o E. H. Rodgers, 310 West Missouri St., El Paso, Texas. Owned by E. H. Rodgers, L. H. Davis and J. F. Dowling. **Lands:** 4 claims, unpatented, located at north end of the San Andres Mts., Socorro Co., New Mex., 26 miles west of Oscuro, on the E. P. & S. W. R. R. Claims are said to cover 6,000' of a quartz lode in granite, varying in width from 20' to 100', and to show disseminated copper sulphide ore, assaying 2½% copper, 1½ oz. silver and \$2 to \$3 gold per ton. **Development:** Opencuts and pits along the strike of the lode. Churn drilling and 100' tunnel are planned.

ANCHOR MINING CO. UTAH

Idle several years. **Office:** Calumet, Mich. Mine office: Myton, Wasatch Co., Utah. John D. Cuddihy, v. p.; F. W. Taylor, sec.-treas.; and Henry L. Baer, directors. Inc. June, 1908, in Michigan. **Cap.**, \$150,000, shares \$25 par; issued 1,800. Annual meeting, second Tuesday in June. **Lands:** 9 claims, patented, 131 acres; in the Snake Creek district, one-half mile south of Daly-Judge mine, near Park City. Company is the successor of the Wolverine Mining Co.

ANCHORIA COPPER MINING CO. WYOMING

Idle several years. **Office:** 55 High St., Oshkosh, Wis. Mine office: Copperton, Carbon Co., Wyo. Hon. David H. Craig, pres.; H. O. Granberg, sec.-treas. Inc. April, 1901, in Wyo. **Cap.**, \$1,000,000, shares \$1 par. **Lands:** 4 claims, 80 acres, patented, in the Battle Lake district, developed by a 200' shaft and tunnels of 45' and 60', showing an orebody estimated at 45' width, giving average assays of 17% copper, and from a trace to \$5 gold per ton. Has a 40-h. p. steam plant, with hoist good for 500', 3 power drills and 4 substantial mine buildings of logs.

ANCHORIA LELAND M. & M. CO. COLORADO

Address: Cripple Creek. Inc. about 22 years ago. **Cap.**, \$600,000; shares \$1 par. Irving Howbert, principal stockholder; Chas. Howbert, mgr.

Property: Anchoria mine on Gold Hill, Cripple Creek, is one of the old-time producers and dividend payers. In 1914 the company had a debt of \$30,000, due to attempts made in recent years to open up new orebodies. The mine has been worked down to the barren zone, reaching from a depth of 500' to 1,000', the lowest development. Recent work has been done by leasers. In 1915 company was planning to resume operations, sinking the shaft an additional 100', claiming there were large bodies of gold ore in the mine that could be worked profitably with modern methods.

ANDERSON-APACHE COPPER CO. NEW MEXICO

Robt. Anderson, El Paso, Tex., chief owner. **Mine address:** Hachita, Grant Co., N. M. Hon. Geo. H. Neale, pres.; Harry Duey, v. p.; Chas. H. Howe, sec.-treas.; Arthur Houle, cons. engr. Inc. June 1, 1907, in Arizona. **Cap.**, \$500,000, shares \$5. par. Held lands under a \$100,000 bond and lease, with \$20,000 paid.

Property: the Apache mine, 5 claims, 100 acres, 5 miles southeast of Hachita. Mine, opened 1883, was worked continuously until 1907, by leasers, producing approximately \$200,000. Property shows contact deposit 50'-150' wide between quartz-feldspar-hornblende-porphyr and Carboniferous limestone, with ore, oxidized to present depth, and running 4 to 30% copper

with one ounce silver to each unit of copper. Bornite ore occurs at the bottom of the shaft. **Development:** by a 360' shaft, for a length of 400' and along the surface for 600', said to show 200,000 tons of ore, with about 40,000 tons blocked out for stoping, which estimates are considered high. Equipment includes a 25-h. p. Fairbanks & Morse gasoline hoist. Shipments of low grade copper and silver ore with lime gangue were made in 1914 and 1915, to the El Paso smelter.

ANDERSON GROUP.**NEVADA**

Address: Luning, Esmeralda Co., Nev. **Property:** 5 claims, 4½ miles east of Luning and adjoining Nevada Champion Copper Co. ground. Development by tunnels and 120' shaft. Was under lease and bond to Mason Valley Mines Co., but bond relinquished.

ANDES COPPER CO.**CHILE**

Office: 42 Broadway, New York City. **Inc.** Jan. 20, 1916, in Delaware. **Cap.**, \$50,000,000, shares \$25 par. **Incorporators:** Herbert E. Latter and Norman P. Coffin, of Wilmington, Del., and C. M. Egner, Elkton, Md. Will acquire and develop mineral, timber and railroad lands in Potrerillas district, Chile. For officers and directors, see Andes Copper Mining Co.

ANDES COPPER MINING CO.**CHILE**

Office: 42 Broadway, New York City. **Inc.** Jan. 20, 1916, in Delaware. **Cap.**, \$50,000,000, shares \$25 par. **Incorporators,** Herbert E. Latter and Norman P. Coffin, Wilmington, Del., and C. M. Egner, Elkton, Md. **Officers:** B. B. Thayer, pres.; Wm. Braden, v. p.; C. F. Kelly, v. p.; A. H. Melin, treas.; with W. D. Thornton and Paul M. Herzog, directors; D. B. Hennessey, sec.

Property: A very large tract of ground at Potrerillas, Chile, held by the Anaconda Copper Co. under option in 1914-15, and drilled by that company. This work is reported to have shown the existence of a very large tonnage, over 50,000,000 tons, it is said, carrying 1.67% copper. The property is now being further developed and prepared for operation. Will acquire and develop mineral, timber and railroad lands in Chile (Potrerillas district).

ANDES SILVER MINING CO.**NEVADA**

381 Bush St., San Francisco, Calif., and Virginia City, Nev. **Officers:** H. Zadig, pres.; Wm. Bannan, v. p.; J. W. Twigg, sec.; Wells Fargo National Bank, treas.; Thos. F. McCormick, supt.; H. Zadig, F. R. Hadley, W. W. Turney, Wm. Bannan and A. F. Coffin, directors.

Inc. Dec. 18, 1873, in Cal. **Cap.**, authorized and outstanding Dec. 17, 1914, \$100,000; shares \$1 par. Registration Security Co., San Francisco, registrar. Annual meeting, third Tuesday in Dec. at San Francisco. Stock is listed on New York Curb and San Francisco Exchange. Gross receipts from assessments, for year ended Dec. 17, 1914, were \$5,997.

Property: In the Virginia mining district, Virginia City, Nev.

ANDY FITZ M. & M. CO.**CALIFORNIA**

Address: 1391 Fruitvale Ave., Oakland, Calif. Andrew Fitzgerald, supt.

Property: The Fruitvale mine, in the Allegheny district, near Downiesville, Sierra Co., carries a vein of gold quartz ore. Developed by tunnel.

Company refinanced 1914 and underground development work resumed. Plan construction of new surface plant.

ANGELICA MNG. & DEV. CO.**MONTANA**

Address: Wickes, Montana. **Officers:** C. d'Autremont, Jr., Duluth, Minn.; Geo. W. Wilson, v. p.; C. M. d'Autremont, sec.-treas.; preceding officers, T. T. Hudson, John D. Pope, directors; Geo. W. Wilson, mgr.; Chas. D. Horton, supt.

Inc. Jan., 1915, in Mont. Cap., \$200,000; shares \$10 par; nonassessable; outstanding Jan. 10, 1916, 14,320 shares.

Earnings: Gross income from ore sales in 1915 was \$47,278; operating expenses, \$60,421. Balance sheet for 1915 shows assets; property account, \$134,970; bills receivable, \$14,140; cash, \$612; development, \$41,067; ore breaking, \$10,942; liabilities; ore returns, \$22,639; bills payable, \$45,550.

Property: 6 claims, 110 acres, in Colorado mining district, 2 miles west of Wickes, Jefferson Co., show a contact vein in andesite and rhyolite, strike N. 80° W., dip 75° N. The ore, sulphides below the 400' level, contains lead, silver and gold occurring in shoots 100' to 200' long, with average width of 4½'. Average assay of shipping ore, \$13.80; concentrating ore, \$4 to \$12.

Development: 536' incline shaft, 1,830' tunnel and levels at 200', 300', 400' and 500'; total underground workings, 3,913'.

Equipment includes steam hoist, air compressor, capacity of 360 cu. ft. Work planned for 1916: connecting the tunnel and shaft, opening up and developing the 600', 700' and 800' levels, and construction of a 200-ton concentrating mill. Property has been examined and reported on by E. J. Collins, T. F. Field and Reno Sales.

ANGLO-NEWFOUNDLAND DEV. CO. NEWFOUNDLAND

Address: Grand Falls, Newfoundland. Mining properties transferred to Terra Nova Properties, Ltd., which see.

ANIMAS PEAK GOLD MNG. CO. NEW MEXICO

Property: at Hillsboro, Sierra Co., N. Mex., formerly owned by the defunct Hillsboro Cons. Mng. Co., of odious fame. Present management, in 1915, planned refinancing company and development along same lines in accordance with available funds. Work on 200' double compartment shaft started March, 1915. On the 200' level an oreshoot, 3' wide, is said to average \$35 per ton in gold.

ANITA COPPER MINES CO., S. A. MEXICO

Office: Fundicion, Sonora, Mex. Geo. M. Ryall, pres.; T. C. Kirkland, asst. gen. mgr. Organized 1904, under laws of Mexico, and now controlled by Pacific Smelting & Mining Co.

ANNA LEE MINING CO. MISSOURI

Inc. in Ariz. Cap., \$100,000. Operates on 120 acres of land of J. W. Allen in Newton Co., Mo. Has 7 shafts, average depth 100', and a 200-ton concentrator. Output is zinc concentrate.

ANNIE MINING CO. WYOMING

Mine office: Jelm, Albany Co., Wyo. L. A. Hancock, sec. **Inc. 1903 in Wyoming. Cap., \$250,000, shares \$1 par. Lands:** 100 acres, near Jelm, said to show two 4' contact veins between granite and schist, opened by a 140' shaft and a 138' tunnel, showing copper carbonates and bornite, assaying up to 20% copper and \$10 gold per ton. Idle since 1907, except for representation work performed each year.

ANTELOPE GROUP. NEVADA

Held by Louis W. Trankle, Yerington, Nev. Claims, 23, unpatented, 430 acres; in the Buckskin Range, Douglas Co., 16 miles from Yerington.

The ore bearing formation is a monzonite belt 4,200' wide, extending N. 7° W., dip 47° to east, for 1½ miles, with diorite on the west and andesite on the east. This monzonite is highly altered, showing strong kaolinization and sericitization to depth of 150 feet, deepest working. Surface shows scanty copper carbonates throughout length and breadth, with small streaks of copper sulphide ore near foot wall side. Water encountered in lower workings shows strong copper content.

The property is a promising prospect. Has been examined by L. A. Wright, V. A. Hart, E. R. Richards, Fred Alsdorf and W. H. Weed.
ANTELOPE & PRINCE OF WALES MINING CO. UTAH

Controlled by Walker Bros., of Salt Lake City. **Cap.**, 1,250,000, shares \$1 par; 400,000 shares held in treasury.

Property: 9 claims, patented, in the Alta-Cottonwood district, cover a mile of the Prince of Wales fissure, worked years ago to a depth of 900', said to have produced \$1,000,000 from one shoot alone, and was the "bone of contention" in a celebrated lawsuit in the seventies.

Development: 930' incline shaft and 600' "Annie" tunnel. In 1915 lessees continued the tunnel several hundred feet, cutting the vein 140' below bottom of shaft. Vein where cut is said to have shown good ore containing silver chloride and galena. Company, at last accounts, was planning to continue the work of the lessees.

ANTELOPE SPRING MINING CO. NEVADA

Office: 625 Dooly Bldg., Salt Lake City, Utah. Mine office: Jungo, Humboldt Co., Nev. Wm. H. Fitch, pres.; Gust Holm, v. p.; John W. Geiger, sec. and mgr.; Allen C. Eakin, treas.; preceding officers, Edith M. Brounzell, Fred Hubbard and E. R. Reitsch, directors. Inc. April 11, 1906, in Utah. **Cap.**, \$300,000, shares \$1 par, assessable; 200,000 issued; 8 assessments levied, amounting to 13 cts. per share.

Property: 17 claims, partly patented, 15 miles from Humboldt House, developed by several tunnels, longest 1,150' and a 95' shaft, with about 3,000' of workings, show argentiferous lead-zinc-copper ores, reported by management to average 2% copper, 13% lead, 12.9% zinc and 11 oz. silver per ton. Management estimates 10,000 tons of ore blocked out.

Shipments of crude ore in 1915 said to have averaged \$27.90 per ton. Gross earnings during past year from ore sales amounted to \$609, and about \$8,500 was expended on development work and erection of 25-ton wet concentrating plant.

ANTIMONY CORPORATION. MEXICO

Address: Room 1209, 71 Broadway, New York City. **Officers:** Chas. F. Rand, pres.; Jos. S. Fay and Olaf Wenstrom, v. p's; Chas. F. Smith, sec-treas.; preceding with Freeman Hinckley, Robt. A. Manning and Geo. Tyson, directors. Olaf Wenstrom, mine mgr.

Inc. Feb. 15, 1916, in Delaware. **Cap.**, \$1,000,000, shares \$5 par; 100,000 preferred; issued 10,000 preferred, 100,000 common, no bonds. Company organized to take over a remarkable deposit of jamesonite, a lead antimony ore, on one of the properties of the Cortez Associated Mines Co., in Zimapan, Mexico.

Property: 48 hectares, 120 acres patented, Zimapan, State of Hidalgo, Mex., shows a tabular replacement deposit 1,300' long in Cretaceous limestone, dipping 20° S. and exposed for 80,000 square feet, in a canyon wall.

Ore: Contains jamesonite, consisting of 50.8% lead and 29.5% antimony, and carrying silver. Nineteen samples aggregating 830' cut across the orebody, averaged 17.5% lead, 10.5% antimony and 1.25 oz. silver per ton. It is the most remarkable body of ore of this character ever found. The occurrence is fully described by W. Lindgren, and W. L. Whitehead, Econ. Geol., July, 1914, p. 435, and R. W. Raymond, E. & M. Journal, Jan. 2, 1915, p. 9.

Company plans to expend \$50,000 in 1916 in proving further tonnage available and in determining whether concentration or direct roasting and smelting is most profitable. Shipments of selected ore will also be made.

ANTIMONY-SILVER MINING CO. IDAHO

Address: Wallace, Ida. H. J. Rossi, Theo. Brown, John Fimmel,

directors. Inc. April, 1915. Cap., \$100,000, shares 10c par. Claims, on Pine Creek, are said to show silver-antimony ore in a vein 10 to 36" wide, exposed by tunnels and a shallow shaft. Management planning to develop the property in 1916.

ANTI-PERIODIC GROUP.**COLORADO**

Property, at Rain Gulch, Silverton, Colo. owned by Galena Mt. Gold & Silver Mng. Co., which see.

ANXIOUS SIX MNG. CO.**MISSOURI**

Address: Joplin, Mo. Company holds a lease on the Rex land, covering the site of the old Green Castle mine. Good zinc-lead ore is said to occur at 90' depth. Production started in a small way in Oct., 1915.

APACHE CONSOLIDATED COPPER CO.**ARIZONA**

Mine office: Globe, Gila Co., Ariz. Hon. John I. Mullins, pres.; F. S. Pfister, v. p. and gen. mgr.; Chas. T. Martin, sec.; E. M. Hurd, treas.; preceding officers and Joseph Pfister, directors; Frank Pfister, mine supt. Inc. May, 1906, in Arizona. Cap., \$2,000,000, shares \$1 par; issued \$1,200,000.

Lands: 15 claims, unpatented, area 300 acres, in the Richmond district, about 12 miles from Globe, showing fissure veins and contact deposits between limestone and quartzite, of which 1 vein, of about 5' width, is traceable about 1,200'. Mine has shafts of 65', 45' and 20', with 6 tunnels, longest 335', giving 719' of workings, showing about 400 tons of ore averaging about 3.5% copper, up to 15 oz. silver, and from a trace to \$2.50 gold per ton. Mine in hands of leasers at last accounts.

APACHE MINES.**ARIZONA**

See Morajeski Mines.

APEX CONSOLIDATED MINING CO.**UTAH**

Mine at Silver City, Juab Co., Utah. **Officers:** Jesse Knight, pres. and gen. mgr., Provo, Utah; Elmer B. Jones, v. p.; R. E. Allen, sec.; M. H. Walker, treas.; preceding officers, Lafayette Hanchett, W. Lester Manguam and Amanda M. Knight, directors. Inc. Oct., 1908, in Utah. Cap., \$1,000,000, shares \$1 par.

Lands: the Armandale group, carrying lead-silver ores, near the Grand Central mine, developed by a 3-compartment shaft of 2,200' depth. **Equipment:** includes a good hoist and air compressor.

APEX COPPER CO.**COLORADO**

Office: 304 Colorado Bldg., Colorado Springs, Colo. **Mine office:** Hayman Park Co., Colo. **Officers:** John K. Vanatta, pres.; J. J. O'Driscoll, v. p. and gen. mgr.; J. Vanatta, sec. Inc. March, 1903, in Ariz. Cap., \$2,000,000, shares \$1 par. **Lands:** 9 claims, 90 acres, on Apex hill, in the Lower Tarryall district, showing 2 nearly vertical contact veins of 3' average width, between spar and limestone, carrying chalcopryrite and bornite assaying 2 to 30% copper, 7 oz. silver and \$1.20 gold per ton, opened by shafts of 50', 120' and 250', and by 4 tunnels of 500' aggregate length. Has a 10-h. p. steam plant, with hoists, and a 7-drill Leyner air compressor.

APEX GROUP.**ARIZONA**

Controlled by S. O. Stewart, and Joe Lavell, Winkleman, Gila Co., Ariz. **Claims:** 7, unpatented, 5 miles north of Hayden, on top of the Dripping Springs Mts., adjoining the ground of London-Ariz. Cons. Co. on the north. Discovery was made in Jan., 1915. **Ore:** gold, silver and lead, occurs at contact of lime and shale, dipping 32° S. E. Shipments started in April, totaled \$4,800 at end of 1915, the ore shipped assaying about \$25 per ton.

APEX MINING CO.**WASHINGTON**

James P. Blaine, superintendent, Chesaw, Okanogan Co., Wash. **Property:** the Ben Harrison mine, showing fissure veins carrying gold-silver-

copper ores. Developed by a shaft with gasoline hoist. Mine intermittently operated.

APEX PORCUPINE MINES, LTD.**CANADA**

J. A. Jacobs, Traders Bank Bldg., Toronto, Can. Inc. 1911. Cap., \$2,000,000; shares \$1 par. Owns 80 acres in southern Tisdale Twp., Porcupine district, Ont., showing pyrite and free gold. Shaft 108'. Shut down 1912-15. Reopened March 16, 1915, with funds from stock sold at 15c.

APP MINE.**CALIFORNIA**

Owned by estate of T. W. Patterson, Fresno, Calif. Alex. Chalmers, agt., Angels, Calaveras Co., Cal. Under option to the Dutch-Sweeney Mining Co.

Property: 40 acres, including 2 mill sites, located 2 miles south of Jamestown, Tuolumne Co., on the northwest slope of Quartz Mt.

Ore: gold, in a 30' vein of dolomite and mariposite, containing stringers of quartz. Hanging-wall is a hard diorite; foot wall is Calaveras slate. Vein strikes N. 30° W., dips 65° N. E. Two orebodies were worked when the mine was formerly operated.

Development: 1,340' incline shaft, with levels at 100' intervals. **Equipment:** 250-h. p. double-drum hoist, Ingersoll-Rand compressor, electric power. **Mill:** 60-stamp, 1,000-lb. stamps, 2 Blake crushers, 24 Frue vanners. Mine was being reopened at last accounts by the Dutch-Sweeney Mining Co., which was planning on development from the 1,600' level of the adjoining Dutch mine. See M. and M. Res. of Tuolumne Co., pp. 136, State Mineralogist's Rep.

ARADOS COPPER CO.**MEXICO**

Address: 25 Broad St., New York. Clarence W. Hoyt, pres., 41 Donovan Bldg., Lowell.

Lands: about 2,000 acres were taken over 1910 from Chihuahua Copper Co., Quo Vadis Copper Co., and include a number of adjoining claims privately owned.

The Chihuahua group has several shallow shafts, and 9 tunnels with about 1,500' of workings, estimated by management to show several thousand tons of ore. **Equipment:** includes a 25-h. p. hoist, good for 500', and small Gardner air compressor and necessary mine buildings.

The Quo Vadis and other groups show numerous contact veins between limestone and porphyry, ranging from 2 to 40' in width, development work said to have yielded enough ore shipped to pay for machinery in use on these properties, ore averaging better than 5% copper.

Idle several years owing to political disturbances, but president writes that property will be vigorously and systematically developed as soon as conditions in Mexico warrant. Company is controlled by strong interests who are successful copper producers, and stock is privately held by a few people.

ARAPAHOE MINING & MILLING CO.**COLORADO**

Address: 218 Colorado Bldg., Denver, Colo. **Officers:** Thos. B. Everett, pres., treas. and gen'l mgr.; Chas. J. Jordan, v. p.; Harry A. Stewart, sec.; Will McLeod, mgr.

Inc. in Colorado. Cap., \$1,000,000, shares \$1 par; nonassessable. Treasury stock offered to the public at 3c a share in blocks of 300 shares with a bonus of 20% and guarantee of refund out of initial earnings.

Property: 4 mining claims near Idaho Springs, 2 mill sites and water rights in Wisconsin mining district, Gilpin Co., a contract with miners of Wisconsin district for daily supply of 50 tons of ore at \$3 per ton and a long lease on Rocky Mt. concentrating mill at Blackhawk, Gilpin Co. Rocky Mt. mill has daily capacity of 75 tons, fully equipped and reported in

operation June 15, 1914. Management will "take no chances in the mining business," but intends sub-leasing mining claims and doing only a custom-milling business with expected net earnings of \$150 per day, to be divided among the stockholders in return for their confidence in the management.

ARCANE MINING CO. NEVADA

Address: 1605 Walker Bank Bldg., Salt Lake City, Utah. Mine office: Pioche, Nev.

Officers: H. W. Rand, pres.; A. M. Cheney, v. p.; S. P. Kinney, sec-treas.; preceding officers, Frank Holman, Frank Manning, directors. H. E. Freudenthal, supt. **Cap.**, \$100,000, shares 10c par.

Property: five claims, adjoining the properties of the Ohio-Kentucky and Amal. Pioche at Pioche, through which the Susan Duster lode of the Ohio-Kentucky extends, with 45° dip to the south. The ore from the lode on the O. K. property is said to have had an average assay value per ton of 7% lead, 20% zinc, 20 oz. silver and \$2.50 in gold.

Development: 1,200' of underground work has been done. Company at present is sinking a vertical double-compartment shaft to the 650' level, at which depth it expects to cut the Susan Duster lode, 200' distant from the Arcane-O. K. line. The O. K. company is said to have followed the lode to the property line.

Equipment: power house, blacksmith shop, 40-h. p. gasoline engine and air compressor.

ARGENTA-DILLON MINING CO.

MONTANA

Idle. Property operated under lease by newly organized Beaverhead Copper Mining Co., which see.

ARGENTINE MINING CO.

NEVADA

Company inactive. Mines and mill optioned to Geo. Threlfall in 1914, together with the Diablo mine.

Property: Northern Belle and Holmes Mines, with mill and water rights and the Lucky Hill Mine (owned outright by Threlfall) in camp of Candelaria, Mineral Co., Nev., 9 miles from Redlich, on Tonopah & Goldfield R. R.

Ore: gold-silver. Country rock is lime with rhyolite intrusions; ore occurs as oxides in lenses as an alteration of lime and rhyolite, carrying chlorides and from 60c to \$1 in gold values. Vein system said to be 4,000' long and proven to cover entire ground.

Development: 60 miles of old workings, consisting of shafts, tunnels and crosscuts. **Ore reserves:** estimated after a resurvey and sampling, 400,000 tons in mines and ore dumps, besides 2,000' of unprospected mineralized ground on the Lucky Hill.

Equipment: 40-stamp mill and cyanide plant. Company plans erection of new 60-ton mill and aerial tramway for ore haulage.

ARGO MINES CO.

ARIZONA

Address: Oatman, Mohave Co., Ariz. **Officers:** S. S. Jones, pres. and gen. mgr.; J. M. Francis, v. p.; J. E. Shank, treas.; J. S. Withers, sec. Inc. in Ariz. **Cap.**, \$1,000,000, shares \$1 par; 600,000 shares held in treasury.

Property: 7 claims, 110 acres, in the Oatman district, show a vein 40' to 130' wide on surface, supposed to be a continuation of the Tom Reed vein. **Development:** a two-compartment shaft is being sunk to the 500' level.

Equipment: 25-h. p. gasoline hoist, and a 360 cu. ft. air compressor.

ARGO MG. DRAINAGE, TRANSP. & TUNNEL CO. COLORADO

Office: 79 Milk St., Boston, Mass. Mine office: Idaho Springs, Clear Creek Co., Colo. Chas. C. Parsons, pres.; H. W. Robinson, sec.; R. E. Schirmer, treas. and gen. mgr.; L. S. Stewart, supt. Inc. 1893 in Colorado

Cap., \$100,000. Is controlled, through ownership of entire stock issue, by Argo Mining & Tunnel Co., Ltd. **Property:** the Newhouse or Argo tunnel, described under title of Argo Mining & Tunnel Co. Balance sheet for fiscal year ending Aug. 31, 1915, shows net profit of \$1,112.92 over incurred expenses of \$40,545.71 as compared with a net profit of \$3,500 in 1914, the decrease being due to inactivity of several properties and subsequent slackening of transportation business.

ARGO MINING & TUNNEL CO.

COLORADO

Office: 79 Milk St., Boston, Mass. Mine office: Idaho Springs, Clear Creek Co., Colo. **Officers:** F. A. Schirmer, pres.; Chas. C. Parsons, v. p.; Chas. G. Schirmer, sec.-treas; with F. Hargreaves, H. W. Anderson, J. A. Caldwell and H. W. Davis, directors; R. E. Schirmer, mgr. **Inc.** 1909 in Delaware. **Cap.**, \$1,250,000, shares \$5 par; issued, \$952,335. Debentures, \$150,000 authorized; \$135,000 issued. Company succeeded Argo Transportation & Tunnel Co., Ltd., which succeeded Argo Tunnel & Mining Co., Ltd., which succeeded Newhouse Tunnel Co., Ltd. Owns the entire stock issue of Argo Mining, Drainage, Transportation & Tunnel Co., which holds direct title to the tunnel.

The Argo or Newhouse tunnel, 21,968' long, with nearly 20 miles of workings, is perhaps the most celebrated mining tunnel in existence. It starts at Idaho Springs and passes under Russell gulch and Quartz hill, with terminus in the Gunnell vein. The tunnel has double tracks, of 18" gauge, laid with 30-lb. rails. For the first 12,000' the tunnel is 9' high and 10' wide, balance being 8' high and 6' wide. Grade is 5" per 100'. The tunnel was begun Jan., 1894, and completed Nov. 18, 1910, and provides drainage, transportation, ventilation and air service for drilling operations.

The mines under which this tunnel passes are estimated to have produced about \$75,000,000 in metallic values, and the tunnel cuts sundry veins of ore carrying gold, silver, lead and copper, and several laterals have opened various orebodies of greater or less promise. The tunnel connects with the Concrete, Tremont, Prize, Burroughs, Kansas Golden Edge, Gem, Sun & Moon, Old Town, Poso, Saratoga and Gunnell shafts at depth of 1,600'. During 1915, 6,000' of rails were replaced and tunnel cars thoroughly overhauled. Equipment includes 5 locomotives, handling 53-ton cars each. Transportation charge for waste work through the tunnel is 17c per ton and on ores from 40c to \$1.25, according to values. Ore is turned over to the Argo Mill, whose charges are from \$3.50 up, including sampling and treatment.

ARGO MINING & TUNNEL CO., LTD.

BRITISH COLUMBIA

Office and mine: Greenwood, Yale district, B. C. Ole Lofstad, pres. and gen. mgr.; A. S. Black, sec.-treas.; preceding officers, John Williamson, Jerome McConnell and Oscar Hartman, directors. **Inc.** June 10, 1909, in British Columbia. **Cap.**, \$125,000, shares 25c par.

Lands: the Argo Mine, near the British Columbia smelter, developed by 1,150' tunnel, at a vertical depth of 500', with portal about 500' from track of the Canadian P. R. R. A vein of milling quartz, 10' wide, shows in face of tunnel, a 4' body of concentrating ore, on the foot-wall, talc. Property under development in 1915. Expect to make shipments to smelter in 1916. Four men employed.

ARGO REDUCTION & ORE PURCHASING CO.

COLORADO

Office: Idaho Springs, Clear Creek Co., Colo. J. Meyer, Jr., pres.; R. E. Schirmer, sec.-treas. and purch. agt.; preceding officers, F. A. Schirmer, C. G. Schirmer, directors. Otto Heizer, gen. mgr.; J. A. Pearce, mill supt. **Inc.** July, 1912, in Colorado. **Cap.**, \$150,000, shares \$10 par, fully paid and nonassessable; issued \$112,000.

Property: 2 acres mill site at the portal of the Newhouse, or Argo tunnel, on which a 500-ton mill has been erected to treat custom ores. Process consists of amalgamation, concentration and cyanidation of ores, all of which are purchased on their assay values from samples taken by the manager. Operations under former management from April to Nov., 1913, were unsuccessful, attaining extraction of only 59.8%. Radical alterations have increased extraction to over 90%, and installation of flotation process in Jan., 1916, insures further saving of values.

ARGONAUT CONS. MINING CO.

CALIFORNIA

Office: 43 Cedar St., New York City. Controls Argonaut Mining Co., and is itself controlled by the White Knob Copper & Development Co., owning a majority of its capital stock. **Officers:** John T. Smith, pres.; H. H. Carlisle, v. p.; M. M. Salomon, treas.; Arthur Kennedy, sec., New York. **Inc.** Jan. 5, 1907, in Maine. **Cap.**, \$2,000,000, par \$5; \$1,855,000 issued; \$1,200,000 owned by White Knob Copper Development Co. **Dividends** 30c, 1914; 10c Mch. 20 and June 20, 1915. Annual meeting, first Tuesday after June 1. Security Registrar & Transfer Co., tran. agt. and registrar.

ARGONAUT MINING CO.

CALIFORNIA

Address: 404 Humboldt Bank Bldg., San Francisco. Mine office: Jackson, Amador Co., Cal.

Officers: Jesse W. Lilienthal, S. F., pres.; R. S. Rainsford, mgr.; W. J. Nettle, mine supt.; Geo. W. Green, mill supt.

Inc. in 1893. **Cap.**, \$1,000,000, shares \$5 par; all issued. Is the operating company of the Argonaut Cons. Mng. Co., control of which is held by the White Knob Copper & Dev. Co., Ltd.

Dividends: to July, 1915, totaled \$1,740,000, yearly dividend \$1.20 per share. In May, 1915, had cash on hand \$220,615, and a surplus of \$254,000 in bonds, yielding 6% annually. Listed in San Francisco.

Property: one mile north of Jackson, on the Mother Lode; adjoins that of the Kennedy Extension Mng. Co. on the south.

Ore: soft shattered white gold quartz in a very regular and continuous vein 8 to 12' wide, with strike N. 10° W. Vein outcrops in a metabasite; above the 290' level it passes into the Mariposa slates, where, apparently, the fissure was originally opened by a thrust fault with a throw of 120'. One wall is a soft black slate, the other is slate or a greenstone schist. Two ore shoots have been developed; the north shoot 325' long, with average width of 10'; the south shoot 600' long, with average width of 10'. On the 1,240' level there is a split in the vein, a branch running off into the schist hanging wall. Ore yields in the mill about \$5.50 in free gold and \$1.50 in concentrates.

Development: shaft 4,650' deep, sunk at an angle of 60°, with levels at 150' intervals. At 290' level shaft cuts the vein in diabase, from the 1,460' level to present depth it is in the slate hanging wall. Present work is being done on the four lower levels. Ground is very heavy and the square-set mining method is used. Nearly half the force employed underground are timbermen. Ore is hoisted, in 4-ton skips, by a 500-h. p. double-drum electric hoist, automatically dumped into storage bins, then fed to a 10 by 16" Knight crusher and trammed in 2½-ton cars to the mill.

Mill: forty 1,000-lb. stamps, dropping 98 times per minute, with 7" drop, and crushing 5 tons per stamp through 20-mesh wire screen, with capacity of 200 tons daily. From the amalgamating plates pulp flows to 16 Frue vanners, tailing goes to hydraulic classifiers, overflow being concentrated on 20' Darrow rotary concentrator. An 83% extraction is made by amalgamation and concentration. Company employs 145 men.

Costs per ton are: total mining, \$2.80; total milling, \$0.55; office and general, \$0.09; making total operating cost of \$3.45. Net earnings: said to be over \$33,000 per month.

In June, 1909, the Kennedy Ext. Mng. Co. brought suit against the Argonaut Co., claiming the Argonaut ledge apexed on their land; decision was rendered in favor of the Argonaut Co. on June 29, 1914. This litigation cost the company \$113,000.

Management, in 1916, has started to sink the shaft to the 6,000' level, using an electric hoist on the 3,900' level for the work and to enlarge the mill, and will erect an Eastwood multiple arch dam for tailings storage.

ARICHISE COPPER CO.

ARIZONA

Address: C. M. Skinner, pres., 18 Broadway, New York City. Property in Arizona transferred to San Chez Copper Corporation 1916. Company will be wound up. See Vols. X and XI.

ARIO COPPER CO.

MEXICO

Idle owing to political disturbances in Mexico. Mine office: Ario de Rosales, Ario, Michoacan, Mex. Frederick Moser, pres.; Geo. H. Walsh, Jr., treas.; A. P. Stramler, supt. **Cap.**, \$2,000,000, shares \$10 par. Holds lands through Ario Copper Co., S. A. Inc. April 13, 1907, in Mexico. **Cap.**, 500,000 pesos.

Lands: 126 hectares, including the Flora, Roma, Bohemia, San Antonio and San Valentin mines, old properties showing silver and copper ores, about 5 miles from the Inguaran mines, on the projected line of the Morelia y Tacambaro railway, partly constructed. Principal development is on the Flora and Bohemia mines, with 7 shafts aggregating 500' depth, and 12 tunnels aggregating 2,600' length. La Roma has ore assaying up to 25% copper. Equipment includes steam and gasoline power.

Patzcuaro, 70 miles distant, is the nearest railway point.

ARIZONA BELMONT MINING CO.

ARIZONA

Office: Bullitt Bldg., Philadelphia, Pa. **Mine:** Silver Bell, Pima Co., Ariz. Meyer Schamberg, pres.; John Rice, treas.; with J. S. Harwood, N. S. Keith, W. P. O'Meara, G. D. Woodside and E. E. Young, directors. **Inc.** 1911 in Arizona. **Cap.**, \$1,000,000, shares \$1 par; issued 870,000. Treasurer reported \$192 on hand Dec. 31, 1913. Lands, 16 claims, adjoin the Imperial Copper Co. on the east and northeast and are developed by 392' shaft. Operations suspended in 1913 and company now reported considering acquisition of more promising property.

ARIZONA CALIFORNIA MNG. CO.

ARIZONA

Address: Prescott, Ariz. W. S. Wilhelm, pres.; G. W. Lavender, v. p.; H. G. Wilhelm, sec.-treas. **Inc.** April, 1915, in Ariz. **Cap.**, \$250,000, shares \$1 par; outstanding, \$100,000.

Property: 6 claims, 122 acres, patented, in the Hassayampa mining district, 6 miles south of Prescott, show a quartz vein containing gold, silver, zinc and lead ore.

Developed by the Shamrock and Ruth mines, latter having a 250' vertical shaft. **Equipment:** includes a 10-h. p. hoist and a 40-ton mill, with Huntington mill and Wilfley tables. Mill concentrates said to assay 36% zinc, 55% lead and 30 oz. silver.

ARIZONA-CELTIC COPPER CO.

ARIZONA

Office: 504 I. W. Hellman Bldg., Los Angeles, Cal. Mine office: Clifton, Greenlee Co., Ariz. B. F. Taylor, pres.; D. M. Lynch, v. p.; A. G. Shaw, sec.-treas.; preceding officers, R. T. O'Donnell, Archibald Morrison and G. M. Chartier, directors. **Inc.** Feb. 20, 1912, in Ariz. **Cap.**, \$3,000,000, shares \$5 par; issued 400,000.

Lands: 37 claims, area 768 acres, and a 1,040-acre mill and smelter site, in the Greenlee Gold Mountain district, showing 3 orebodies, 1 vein of 80' width, said to average 3% copper. Property, which was formerly owned by the Arizona Morenci Copper Co., is only slightly developed.

ARIZONA COMMERCIAL MINING CO.

ARIZONA

Offices: 50 Congress St., Boston, Mass., and 188 Middle St., Portland, Me. Mine at Globe, Gila Co., Ariz. **Officers:** Chas. S. Smith, pres.; Harry M. Stonemetz, v. p.; C. H. Altmiller, treas.; preceding officers, E. S. Goulston, G. T. Rice, Wm. M. Bradley, clerk, and Wm. E. Chandler, directors. Robert R. Boyd, supt. Inc. April 4, 1912, in Maine. **Cap.**, \$1,500,000, shares \$5 par, fully paid, nonassessable; issued 265,000. Annual meeting 2nd Wed. in April. Company is successor of the Arizona Commercial C. Co., bondholders of the old company receiving 70 shares of new stock for each \$500 bond held and the stockholders being privileged to subscribe, share for share, for fully-paid stock in the new company upon payment of \$3 per share. Accounts for year ending Dec. 31, 1915, showed cash and loans on hand \$127,235, securities and supplies \$66,414, accounts receivable \$97,131, drafts outstanding \$9,030, and accounts payable \$19,351. Net earnings were \$211,775 in 1915. Balance surplus, Dec., 1915, \$473,714.

Property: 11 claims, 3 fractional, in 2 groups, known as the Black Hawk and Copper Hill groups, separated by the Iron Cap mine of the Iron Cap Copper Co. Lands are at Copper Hill, 3 to 4 miles northeast of Globe, lying just north of the Old Dominion, and adjoining the United Globe and Superior & Boston mines. The property has fine outcrops, and workings have disclosed both oxidized and sulphide ore.

The Copper Hill group, 56 acres, carries the Old Dominion and Copper Hill veins for about 1,500'. **Development:** the 1,320' Copper Hill shaft. The lowest level, 14th, corresponds with the 14th level of the Old Dominion. The 12th level is connected with the O. D. 12th level by an 1,800' drift to the Grey mine. This drift is used for ventilation and drainage, water being pumped from the 14th to the 12th level of the Copper Hill shaft, where it runs to the Old Dominion and is there pumped to surface. About 720,000 gals. are handled daily. The Copper Hill vein has been developed to the 8th level and proved productive to the 7th.

Recent development has been on the Old Dominion vein on an ore shoot which has its apex near the 8th level. It has been drifted on for 614' on the 12th, 852' on the 13th and 384' on the 14th levels. Ore has been found east of the Budget fault, its effect being a vertical displacement of 150' and a lateral displacement of 20'. Where opened up the vein has an average width of 15'. **Ore:** a mixture of pyrite and chalcopyrite and contains 5% copper, 20% sulphur, 30% iron. Concentrating ore containing 4% copper is shipped to the Old Dominion. Smelting ore above 4% is shipped to the Copper Queen at Douglas, Ariz. In 1915 underground work amounted to 3,620'.

Equipment: at Copper Hill shaft includes a 72' steel headgear; a Wellman-Seaver-Morgan hoist, good for 1,500', driven by 175-h. p. Westinghouse motor; one 500-gal. Aldrich electric pump; one 20,000 cu. ft. Sturtevant fan; and 300-ton ore bins. Two 500-gal. pumps will be added to pump from 14th level to surface. Power is obtained at present from Old Dominion.

The Black Hawk group, area 97 acres, which carries the Black Hawk and Old Dominion ledges for about 3,000', has a surface capping of low-grade iron ore, above a 25 to 50' vein, leached to considerable depth, followed by silicious ore, estimated to average about 4% copper, with excess of

iron. There also is a hematite vein of 3 to 4' width giving assays of 4.5% copper, with small silver values.

Development: the 1,200' three-compartment Eureka shaft.

The Eureka mine was abandoned in 1911, but was reopened in July, 1915, and prospecting is being done on the 6th and 7th levels. This work produces a small tonnage of silicious ore averaging 8% copper. The lowest work is on the 10th level, which is now under water. No pumping is being done, as water is 160' below 7th level.

Equipment: at the shaft includes a 56' headframe and a Hendrie & Bolthoff single drum hoist, using steam power.

Buildings include a machine shop, warehouse, office, hospital and a number of miscellaneous buildings. A 20,000-gal. water tank affords high pressure for fire protection.

The 72x80' power house has two 700-h. p. Babcock & Wilcox boilers, a No. 10 Connorsville blower, Nordberg air compressor, 2 Nordberg engines and a 100-k. w. General Electric generator. Plant is now being remodeled; new equipment includes two 600-k. w. turbo generators. All power used will be generated at this plant, which will be connected with the Copper Hill mine by a 6" pipe line for compressed air and an electric transmission line.

Ore shipments from the Copper Hill shaft started in Feb., 1915. Monthly output, June, 1916, amounts to 1,500 tons concentrating ore and 3,000 tons smelting ore, yielding 500,000 lbs. copper. **Production:** in 1915 was 44,353 tons of ore, containing 3,592,274 lbs. copper, 16,511 oz. silver and 282 oz. gold. Company is earning \$70,000 monthly and has no debts; in short, it has "come back" and is making good.

ARIZONA CONSOLIDATED COPPER MINES, LTD. ARIZONA

Letters unclaimed by H. S. Blake, Throgmorton House, Copthall Ave., London, E. C., Eng. Mine office: Clifton, Graham Co., Ariz. Hon. H. A. Stanhope and Jas. H. Hosking, directors. Inc. June 17, 1899, in Great Britain. Cap., £150,000, shares £1 par; issued, £135,007 paid for property and £10,000 cash working capital. Last balance sheet Dec. 31, 1912, showed cash £7,023.

Property: in the Copper Mountain district, bought, 1909, from Continental Finance Syndicate, Ltd., for £135,000 in full-paid stock, is said by company to be the Scioto, Lowland and Chillicothe mines. The claims are said to show a vein that is 2½ to 8' and in places 30' wide, proven for 3,500'. Development by 3 adits; No. 1 in ore for 55'; No. 2, 110'; No. 3, 100'. Property includes a mill site, on the San Francisco river. Claims to own six copper mines, 120 acres adjacent to properties of the Arizona Copper Co. and of the Detroit Copper Co., near Morenci, Ariz.

ARIZONA COPPER CO., LTD. (THE) ARIZONA

Head office: 29 St. Andrew Square, Edinburgh, Scotland. **Board of Directors:** John Wilson (chairman), P. Dickson, G. Readman, W. A. Carter, Young J. Pentland, Alex. McNab, F. L. MacLeod and Lord Salvesen; Sec., William Exley Miller. Mine and works office: Clifton, Greenlee Co., Ariz. Norman Carmichael, gen. mgr.; P. B. Scotland, supt. of mines; J. G. Cooper, cashier and purch. agent.

Inc. August 5, 1884, in Great Britain. (For early financial details see Copper Handbook, Vol. XI, 1914, p. 72.)

Cap., authorized, £755,000; issued £703,984 10s as follows: 160,000 "A" preference shares of 5s each, all uncalled but £7,480 10s paid in advance of calls; £316,530 preference stock; £379,974 ordinary shares (1,519,896 shares of 5s each fully paid). Profits are divided thus: 10% cumulative dividends

on "A" preference shares less 5% interest on amount uncalled and unpaid; 7% cumulative dividends on preference stock; balance to ordinary shares.

Funded Debt: 5% terminable debentures. Amount authorized and fully subscribed £500,000, repayable at 103 May 15, 1922, or at any time after May 15, 1915. On September 30, 1914, £400,000 of these debentures had been issued. Fiscal year ends on September 30. Dividends on ordinary shares for recent years have been as follows: 2s 6d in 1908, 1909, 1910 and 1911; 3s 3d in 1912; 2s 9d in 1913; 1s 9d in 1914. Free profits were £231,411 in 1914. Balance carried forward September 30, 1914, £27,284.

Property: about 220 claims, 4,000 acres, including eight producing mines, each of which is a unit by itself. These are located at Morenci, Metcalf, Longfellow and Coronado, in Greenlee Co., Ariz. Ores as produced give average returns of about 2.2% copper, production being about 4% smelting ore and 96% concentrating ore. Mines with the exception of Coronado are, generally speaking, shallow, being developed to a depth of about 500 feet only, and are served by numerous shafts. Notwithstanding the comparatively shallow zone of ore occurrence, a large amount of ore is in sight.

During the year ending September 30, 1915, the company mined 968,566 tons of ore, yielding approximately 40 pounds of copper per ton of ore smelted.

The Humboldt mine, which is the principal producer, shows a large body of low grade disseminated chalcocite. Contiguous are the Yavapai, Clay and Petaluma mines, all connected, and with a main hoisting shaft at No. 6 concentrator at Morenci, where the ore is concentrated. The Longfellow mine of this group delivers its ore through chutes to a tunnel on the level of the Coronado Railroad, over which the ore is transported to the concentrator at Clifton.

The Coronado mine, two miles west of Metcalf, and at an elevation of 1,500' above it, is developed by a main shaft and adit tunnel 1,100' below the collar of the shaft. There are six main working levels. Both the Coronado and Humboldt group of mines are thoroughly equipped with underground electric transportation. On the short hauls, Jeffrey 6-ton electric locomotives and 5-ton cars are used, while on the long hauls 12-ton locomotives and 10-ton cars are used. In 1915 a new electric haulage road was completed connecting the 1,100' adit of the Coronado mine with the main electric haulage system in the Humboldt group, and the ore of the Coronado mine, which formerly was hoisted to the collar of the shaft and thence transported by incline and steam railroads to Clifton, now drops by gravity into ore pockets on the 1,100' level, from which it is conveyed by electric trains of 200-ton capacity over 4 miles of 20" gauge track, laid with 50-lb. steel, 3 miles of which is underground, to the concentrator at Morenci, a very large saving in transportation cost over the former method of handling.

The Metcalf group is situated seven miles from Clifton, with which it is connected by the Coronado Railroad, a 3' gauge line, owned and operated by the company, which follows the course of Chase Creek on heavy grade. These mines supply the bulk of the oxide ores, and are worked principally by open cut methods, the ore being leached with sulphuric acid, manufactured in the company's plant at Clifton.

The reduction works now consist of a concentrator of 3,000 tons daily capacity (now being increased to 4,000), situated at Morenci. This is a fine steel and concrete plant. The Callow system of oil flotation is being installed. The old concentrators at Clifton are being altered and will treat 500 tons per day of sulphide ore from the King mine at Metcalf. The new smelting plant, which was started up in the beginning of 1914, is situated

two miles below Clifton, on the east bank of the San Francisco River. This plant is entirely of steel and concrete and consists of a bedding plant for receiving and mixing of the ores, supplementary bins also being provided for fettling and for converter ores and fluxes, a roasting plant, consisting of 8 Herreshoff air-cooled roasters; a large test chamber, fitted with No. 10 wires, hanging 4" apart; 3 oil-fired reverberatory furnaces 22' in width by 100' long; 7 waste-heat boilers and 3 auxiliary boilers, all of the Stirling pattern, and with a combined capacity of 5,000-h. p.; 3 converter stands, with 4 converter shells of the Great Falls type, 12' in diameter. The power plant consists of two 10,000 units of 2,500-k. w. capacity each, General Electric turbo-generators which supply electric current for the plant and power for the mines; a transmission line 10 miles in length, carrying the current at 13,200 volts; the usual air compressors and auxiliary engines, making up a very efficient power plant. Well equipped machine shops, boiler shops and supply warehouse are provided.

Miscellaneous enterprises operated by the company include foundry, machine shop, saw-mill, a 30-ton ice plant and town lighting plant. The company also has general merchandise stores at Clifton, Morenci and Metcalf. Recent productions for fiscal years ending September 30 have been as follows: 1907, 27,404,349 lbs.; 1908, 33,980,291 lbs.; 1909, 32,017,487 lbs.; 1910, 32,161,205 lbs.; 1911, 34,569,019 lbs.; 1912, 38,150,000 lbs.; 1913, 34,230,000 lbs.; 1914, 38,942,455 lbs.; 1915, 37,416,010 lbs.

ARIZONA COPPER BELT MINING CO.

ARIZONA

Office: 25 Broad St., New York, N. Y. Mine office: Constellation, Yavapai Co., Ariz. **Officers:** Wm. J. Dilthey, pres.; H. F. E. Gamm, v. p.; J. C. Maugans, treas.; R. A. Camp, sec.; Samuel Bloom, directors; Charles F. Dilthey, supt. at the mines. Inc. Feb., 1906, in Arizona. **Cap.**, \$1,000,000, shares \$1 par; non-assessable; issued, \$680,508. No bonds.

Property: 17 claims, exclusive of water right and millsite, in two groups, known as the Texas Group and the Wren Group. The Wren Group consists of 4 claims and U. S. Government patent issued during the last year. The property is in Central Arizona, in the Black Rock District of Yavapai County, about 15 miles N. E. of Wickenburg, the nearest railroad station on the Santa Fé Railroad.

The two groups are 2 miles apart and work is mainly on the Texas Group, adjoining the Monte Cristo silver mines, some 2 miles nearer the railroad. The working shaft is about 300' deep, with cross-cutting and drifting at that depth. The ore carries copper, with gold and silver. It was deemed advisable by the management to continue sinking the working shaft during the past year. The Company has a well-established camp on the grounds, 15-h. p. gasoline engine, machine shop and camp buildings.

ARIZONA COPPERFIELDS, INC.

ARIZONA

Officers: Wm. B. Ridgely, pres., 40 Exchange Place, New York; Geo. Z. Medalie, v. p.; R. W. Gnekow, sec. Inc. 1916 in Delaware. **Cap.**, \$5,000,000, shares \$1 par. Company took over more than 89% of the capital stock of the Copperfield Porphyry Copper Mining Co., Inc., which see. Also reported to have acquired 13 adjoining claims in the Wallapai mining district, Mohave Co., Ariz. Is a George Graham Rice promotion; 300,000 shares of stock were offered, at 25c per share, July, 1916.

ARIZONA COPPER-GOLD MINES CO.

ARIZONA

Office: 1011 Pabst Bldg., Milwaukee, Wis. Mine office: Cherry, Yavapai Co., Ariz. R. H. Burmister, pres. and gen. mgr. Inc. Oct. 12, 1903, in Arizona. **Cap.**, \$1,000,000, as Arizona Gold Lode Mines Co., and reorganized, April 10, 1906, under present title. **Cap.**, \$1,500,000, shares \$1 par. Company thrown into receivership and property acquired February, 1914,

by bondholders, who plan reorganization and continuation of development work.

Lands: 17 claims, 340 acres, in the Cherry Creek district, 15 miles north-east of Humboldt, including the Bugler group of 4 claims. Development includes several short tunnels, and the Leghorn shaft of 600' depth, with about 3,500' of workings, on a 2' fissure vein. The ore apparently averages about 2% copper, with gold values.

Equipment: includes a 40-h. p. hoist, good for 1,000' depth, and a 3-drill air compressor. A 40-ton mill, at the Leghorn shaft, has a 10' Lane slow-speed Chilean mill. For early history see Vol. XI, Copper Handbook.

ARIZONA COPPER MINING CO. ARIZONA

Office: Tucson, Ariz. John N. Mettler, pres.; Jos. Brunner, v. p.; V. Brunner, sec.-treas.; with Leo J. Wachs, directors. Inc. Aug. 1, 1901, in Arizona. Cap., \$1,000,000, shares \$1 par; 171,000 shares outstanding, Jan., 1916.

Property: 25 claims, about 500 acres, 16 miles W. of Tucson, in Amole mining district, Pima Co., Arizona. Developed by 100' tunnel and 300' shaft, said to show a vein carrying 2% copper. Ore occurs in porphyry and limestone and carries much iron. **Equipment:** includes hoist, engine and several buildings. Company doing development work 1916 and plans installing air compressor with proceeds from stock sales.

ARIZONA COPPER SHIPPING MINES CO. ARIZONA

P. O. Box 592, El Paso, Tex. Mine office: Dragoon, Cochise Co., Ariz. E. E. Wiseman, pres.; C. E. Cummings, v. p.; C. F. Elliott, sec.-treas. Inc. 1910. Cap., \$1,000,000, shares \$10 par; issued \$620,000.

Property: 8 patented claims, 160 acres, 2 miles N. E. of Dragoon. The property shows limestone crossed by numerous veins, averaging 2 to 12' width, said to carry 4 to 7% copper, 1 to 6 oz. silver and a trace of gold. **Development:** by several pits and shallow shafts, deepest 130', with about 600' of workings. Property considered promising. Idle.

ARIZONA-EASTERN MINING CO. ARIZONA

Address: 220 Fifth Ave., New York. Mine office, Kingman, Ariz. **Officers:** Wm. Schuette, pres.; A. V. Brodrick, v. p.; Lewis Lusk, sec.-treas.; preceding officers and S. W. Odell, directors.

Inc. July 9, 1915, in Ariz. Cap., \$1,500,000, shares \$1 par; issued \$600,000. Bonds authorized \$100,000, none issued.

Property: 23 claims, 1 patented, 375 acres, 2 miles east of Hancock siding, on main line of Santa Fé R. R. and 10 miles south of Kingman, Ariz., includes the Red Hill and Fay mines, showing gold quartz fissure veins in granite porphyry. The mine was worked years ago by Mexicans. Mill tests on sorted ore said to show average value of \$11.78 gold per ton, with a 93% recovery in cyanide plant.

Development: 200' incline shaft with 400' of underground workings. **Equipment:** Includes gasoline hoist and a 5-ton stamp mill for testing purposes. Company plans developing the mine and building a 25-ton mill and cyanide plant in 1916.

ARIZONA EMPIRE COPPER MINES CO. ARIZONA

Mine office: Parker, Yuma Co., Ariz. W. A. Moses, pres.; Gen. E. Bouton, v. p.; L. H. Knowlter, sec.; Newton Evans, treas.; preceding officers and F. X. Pfaffinger, directors; Jas. H. Watson, gen. mgr. Inc. Aug., 1909. Cap., \$5,000,000, shares \$5 par.

Property: bought of Carnation Mining Co. 41 contiguous claims, 820 acres, about 10 miles north of Parker and 3 miles from Eagle Landing, on the Colorado river, include the Eagle, Carnation, Belcher and Cyclone groups. Company also has 160 acres of ranch lands on the Colorado river,

including Eagle landing, held for a smelter site. Geological conditions are markedly similar to those at the Planet and Clara mines. The property, as a whole, has about 6,000' of workings, deepest 300', showing a large amount of copper carbonate, with sulphide zone not yet reached. On the 200' level of the Carnation shaft is an orebody said to assay 5% copper and \$5 gold per ton, carrying a 10' paystreak estimated to average 10% copper and \$6 gold per ton.

Surface showing is interesting, but development work is disappointing. Shallow excavations show irregular areas, often 50' wide, well stained with copper carbonate; much of it could be shipped. This green carbonate ore has been carefully piled and makes beautiful patches of color on the desert scenery. Development usually reveals a sheared zone, copper-stained, but only a few feet wide. Throughout this region there are occasionally encountered pockets of rich gold ore with the copper. These seem to be lenses interbedded in the schist, and while one or two important orebodies have been found in the region, no mines of importance have been developed. Company inactive and mines reported taken over by a Los Angeles syndicate in 1914.

ARIZONA GOLD & COPPER MINING CO.

ARIZONA

Clerk's office: Burlington, Vt. Mine office: Gleeson, Cochise Co., Ariz. L. V. Hastings, v. p.; Hamilton S. Peck, sec. Inc., July 28, 1911, in Vermont. Cap., \$100,000, shares \$5 par, as successor of the Vermont & Arizona Copper Co.

Property: 11 claims,, 220 acres, 4 miles from Gleeson, in the Turquoise district, on the western slope of the Dragoon mountains, show 2 gold and silver veins and several copper veins, giving average assays of \$6 gold and 3% copper per ton. Development: a 230' main shaft and 2 tunnels, longest 125'. Company claims to have developed a large body of low-grade milling ore. Equipment: includes steam power and 12-h. p. hoist. Property idle owing to lack of funds.

ARIZONA GOLD STAR MINING CO.

ARIZONA

Office: 347 Title Insurance Bldg., Los Angeles, Cal. R. Mansard, pres.; R. H. Sayers, v. p.; M. M. Mill, sec.-treas. Cap., \$100,000, shares 10c par; issued \$50,000.

Property: owns the Valkyrie and La Paz claims, 40 acres, 2 miles west of the Gold Road mine, in the Tom Reed-Gold Road mining district, Mohave Co., Ariz. Developed by 100' shaft, to be sunk to 400' depth. Equipped with hoist and compressor.

ARIZONA-HANCOCK COPPER CO.

ARIZONA

Idle several years. Office: Hancock, Mich. Mine office: Florence, Pinal Co., Ariz. Officers: John D. Cuddihy, pres.; Alfred C. Sieboth, v. p.; Henry L. Baer, sec.-treas.; preceding officers, C. D. Hanchette, F. C. Mayworm and Philip Carroll, directors. Inc. in Arizona, as successor to Arizona-Hancock Consolidated Mining Co. Property: 4 claims, patented, 2 miles south of Superior, showing a vein traversing 2 claims, parallel to the vein of the Lake Superior & Arizona, with diabase footwall and limestone hanging, opened by a short tunnel and a winze of 55', with drifts on 2 levels, showing lead above and copper below.

ARIZONA HERCULES COPPER CO.

ARIZONA

Stock control passed to Ray Hercules Mining Co., which see.

ARIZONA-IDAHO COPPER EXTRACTION CO. PENNSYLVANIA

Office: 915 Union Bank Bldg., Pittsburg, Penn. Wm. C. Hagan, pres.; Jas. E. Barnes, v. p.; John Bright, sec.; Ernest H. Browne, treas.; Wm. C. Greenwalt, mgr. Inc. about 1908. Cap., \$500,000; shares \$1 par; non-assessable; 429,000 shares outstanding.

Owens no mines; property is a copper extraction process which the company claimed would produce copper at from 4 to 6 cts. per pound. Company was offering 50,000 shares at 50 cts. per share, to raise cash required to enlarge the demonstrating plant at Denver, at last accounts.

ARIZONA MERGER GOLD & COPPER CO. ARIZONA

Idle. Mine near Mayer, Yavapai Co., Ariz. H. C. Hillwell, S. L. Heron, Henry Reefson, Alonzo Hall, Robert M. Bazel and Geo. D. Birch, directors, at last accounts. Inc. 1909, in Arizona, as a reorganization of the Lyon Copper Co. Cap., \$5,000,000; shares \$1 par. Property: 64 claims near Mayer, Yavapai Co., Ariz., show fissure veins developed by a number of tunnels and crosscuts with 250' shaft. Property considered worthy of development.

ARIZONA & MICHIGAN DEVELOPMENT CO. ARIZONA

Office: Benson, Ariz. Mine office: Johnson, Cochise Co., Ariz. A. J. Pidgeon, of San Diego, Cal., pres. and gen. mgr.; P. N. Lindley, sec.; J. T. Tong, mgr. Inc. 1904, in Arizona. Cap., \$2,500,000; shares \$5 par.

Property: 7 claims, patented, 140 acres, showing porphyry and limestone. Claims said to carry 4 orebodies, 1 opened by vertical and incline shafts and tunnels, showing a 5' vein with poorly defined walls and impregnations in the limestone hanging and porphyry footwall. Has a 450' two-compartment main shaft with 24 openings showing cuprite, malachite and copper sulphides said to give average assays up to 12% copper, 18 oz. silver and \$1 gold per ton. Has a 60-h. p. gasoline engine with double-drum hoist, and has shipped a little good ore to El Paso smelter. Company owns a short railroad connecting with the Southern Pacific railway at Dragoon. Reported, July, 1916, to be shipping one car 4½% ore daily.

ARIZONA MINING & TRADING CO. MEXICO

Idle. Office: Douglas, Ariz. Mine near Nacozari, Sonora, Mex. E. O. Wolf, gen. mgr.; H. C. Holbrook, mine supt. Inc. 1906. Property: in 2 groups, 8 miles and 16 miles S. E. of Nacozari, former known as Los Angeles mine, having a 75' shaft showing chalcopyrite of good grade. A carload of ore shipped to the Copper Queen smelter gave returns of 12.5% copper and 46 oz. silver per ton. Has a concentrator.

ARIZONA NATIONAL COPPER CO. ARIZONA

Idle. 327 Pine St., Williamsport, Pa. Thos. M. B. Hicks, pres. and treas.; C. S. Messerly, sec.; LeRoy Scholl, gen. supt. Inc. Feb. 1, 1906, in Arizona. Cap., \$3,000,000; shares \$10 par. Bonds \$300,000, at 5%.

Property: 14 claims, also a 15-acre mill site and 100 acres timber lands, formerly known as the McNelly-Crowley property, on Pinto creek, carrying contact veins between schist and granite, said to average 14' in width and traced 785', showing considerable high-grade oxidized ores, including chrysocolla and native copper, with some chalcopyrite and occasional bornite. The 80' ledge of decomposed schist is slightly impregnated with copper sulphides. Development: by shafts and tunnels, with a total of 2,000' of workings. Has steam power. No recent returns secured.

ARIZONA SMELTING CO. ARIZONA

Office: 15 Broad St., New York. Works office: Humboldt, Yavapai Co., Ariz. Inc. Feb., 1905, in New Jersey. Cap., \$150,000, presumably increased later. Is controlled, through ownership of entire stock issue, by Consolidated Arizona Smelting Co. Bonds, \$180,000, at 5%. Annual meeting, first Monday in December. Property is described under title of Consolidated Arizona Smelting Co.

ARIZONA-SOUTHWESTERN COPPER CO. ARIZONA

Mine office: Yucca, Mohave Co., Ariz. Officers: R. H. Weber, pres.;

sec.; C. Hoffman, treas.; preceding officers, W. G. Laidley, T. A. McNeal, C. L. Davidson, E. B. Schermerhorn and John T. Switzer, directors; John Lefler, mine supt. **Inc.** 1907, in Arizona. **Cap.**, \$4,000,000; shares \$1 par, non-assessable; issued 3,300,000. Authorized bond issue \$150,000; \$107,000 outstanding. Annual meeting held in Kingman, Ariz., in April.

Property: 14 claims, 9 patented, 276 acres, including the Pittsburgh mine, in Crow canyon, Cedar Valley district, Hualapai mountains, 25 miles from Yucca, the nearest rail point. Mine has 2 orebodies under development, estimated by company to average 30' in width and to be traceable 2 miles, opened by tunnels of 500' and 682', and shafts 400' and 300' connected on the 200' level, with about 5,000' of workings. Mine, which is quite wet, shows chalcopyrite, galena and sphalerite, estimated by company to average 0.25% copper, 3% lead, 4% zinc, 10 oz. silver and \$1 gold per ton, which seems too high for a large orebody of this type. Company claims 100,000 tons of \$12 ore blocked out for stoping on the 200' level.

Equipment: includes an 85-h. p. electric hoist, steel headframe, a 12-drill Ingersoll-Rand air compressor, smithy and 300-ton concentrator, with 14 Overstrom tables. Company has been idle for some time, but started operating late in 1915. Plans to continue shaft sinking and do development work on the 400' level.

ARIZONA SUCCESS MINING CO.

ARIZONA & NEVADA

Idle and probably dead. See Volume XI. Not favorably regarded.

ARIZONA TELLURIUM MINES CO.

ARIZONA

Kingman, Ariz. **Officers:** Thos. H. Condon, Parker, Ind., pres.; W. L. McKay, Kingman, v. p. and gen. mgr.; Geo. A. Shea, sec.-treas.; preceding officers, Carl Bertschinger, W. C. Pedlar, directors. **Property:** claims in the Maynard district, 15 miles east of Kingman. **Development:** 200' tunnel and a shaft which is being sunk to the 300' level.

ARIZONA TOM REED GOLD MINES CO.

ARIZONA

Oatman, Mohave Co., Ariz. **Officers:** Geo. F. Moser, pres.; Chas. S. Seelye, v. p.; C. L. Moser, sec.-treas.; Geo. F. Moser, gen. mgr. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; issued \$500,000.

Property: owns the Trio and Lilah claims, 29 acres, patented and has a 2-years lease and bond on the Snowball group, 90 acres, all adjoining the property of Oatman Pioneer Gold Mines, Inc., on the north. Main ledge of the Pioneer supposed to continue into company's claims.

Development: by several shafts 10' to 100' in depth and on the 400' level by a crosscut from the Oatman Pioneer. Company plans sinking a shaft on the Snowball group. Corporation reported to be backed by W. P. O'Meara, of the Arizona Belmont.

ARIZONA UNITED MINING CO.

ARIZONA

Office: Pennsylvania Bldg., Philadelphia, Pa. Mine office: Johnson, Cochise Co., Ariz. **Officers:** Alfred S. Miller, pres.; Alfred C. Harmer, v. p. and sec.; David H. Ross, treas.; preceding officers, Stanley L. Conklin, John K. Kane, Wm. M. Houston, Alfred H. Miller, J. Wesley Allison, Chas. B. Cox, John Gleeson and Robt. Mackay, directors; J. M. Libbey, mgr.; F. H. Minard, cons. engr. **Inc.** Aug. 12, 1910, in Arizona, as successor to Arizona United Mining Co. of Delaware. **Cap.**, \$5,000,000; shares \$1 par; nonassessable. Company is a close corporation.

Property: 45 claims, 30 patented, about 1,000 acres, 7 miles N. E. of Dragoon, in the Johnson mining camp. Land includes the Mammoth, Republic, Copper King and Southern group of claims. Principal development is on the Republic claim, opened by an 820' shaft, with about 6,000' of workings, in ore averaging about 5% copper.

The Mammoth mine has a 350' shaft, with about 3,000' of workings, in argentiferous and auriferous copper ore, giving average values of about 8% copper, selected ores shipped to the smelter running as high as 40% copper.

Equipment: includes power plant, with hoists at the Republic and Mammoth mines, an electric plant, 4 Ingersoll-Temple electric drills and Ingersoll air compressor. Transportation is by a standard-gauge railway from Johnson to Dragoon, connecting with the Southern Pacific railway.

Property under lease to the Cobriza Mines Development Corporation since Jan., 1915. Idle for several months in 1915 due to low price of copper, resumed operations and was producing 4,500 tons per month until May, 1916, when production was increased to 6,500 tons. Ore runs about 4½% copper with minor values in silver and zinc.

ARIZONA VENTURE CORPORATION

ARIZONA

W. D. Grannis, mgr., Kingman, Mohave Co., Ariz. Cap., \$500,000, increased to \$1,000,000 in 1915; shares \$1 par. **Property:** 5 groups of 12 claims, about 240 acres, includes the Great Republic mine, near Kingman, formerly a silver producer and on which recent development work has shown copper ore. Mine is near the old Diamond Joe mine and is being developed. Company plans erecting a mill. **Equipment:** includes hoist, air compressor, drills and electric power plant.

Company also owns the Waldron group at Deluge, Wash., and reports cutting a lead-bearing vein on the 100' level while sinking a new shaft to 400' level. According to the mining press, this company has been sending out a report by their expert who describes the mine as opened by a tunnel 150' long with a maximum depth of 120' showing 5' of \$38.48 ore. The expert says, "Cut this to one-half and there is a handsome average value left to pay handsome profits," and remarks that "by extending the tunnel about 80' further there should be encountered . . . a tremendous body, or chamber, of ore, of unusual thickness, fully 20' wide." As our contemporary remarks, an expert who is able to see into the ground to this extent possesses a valuable gift, even if he assists himself with a Spanish needle, a goldometer or just a plain dowsing rod. In 1915 management announced production of "lenzite" in commercial quantity, used for wireless telegraphy, in crystals valued at from \$4 to \$65 each.

ARIZOTA MINING CO.

ARIZONA

Mine office: Wenden, Yuma Co., Ariz. Seth Bullock, pres., Deadwood, S. D. Inc. May, 1912. **Property:** 59 claims, 1,180 acres, in the Harcuvar mountains, 11 miles north of Wenden, is developed by a 125' shaft, showing gold-copper ore.

ARK GROUP MINING & MILLING CO., LTD.

WASHINGTON

Presumably idle. **Office:** 616½ Market St., Hillyard, Spokane Co., Wash. J. J. Budd, pres. and gen. mgr.; D. E. Grobe, v. p.; O. L. Budd, sec.-treas.; preceding officers, H. Karlsten and Mary Kneeland, directors. Cap., \$250,000; shares 25 cts. par, 20 cts. paid, 5 cts. assessable; issued 437,595; assessments to date \$3,000. Annual meeting Oct. 1.

Property: 12 claims, partly patented, in the Kootenai district, British Columbia, and Kettle Falls district, Stevens Co., Wash. Ore occurs in contact between granite and lime with S. W. strike and dip of 45°. Vein reported to be from 2 to 60' wide, traceable for three-fourths of a mile and proven to depth of 150' and carries 10 to 20% copper with good silver values.

Developed by 3 shafts and 3 tunnels, longest being 500'. Equipped with steam power, 1 air compressor and 2 air drills. No recent returns secured.

ARKANSAS & ARIZONA COPPER CO.**ARIZONA**

Office and mine: Jerome, Yavapai Co., Ariz. Wm: R. Tucker, pres.; C. W. Clark, v. p.; J. E. Leeper, mgr., Jerome, Ariz.; Col. H. S. Spivey, sec.-treas., Little Rock, Ark.; preceding officers, Judge J. B. Jones, P. H. Reubel and Hon. J. T. Robertson, directors; James Rice, supt. **Inc.** Jan. 25, 1906, in Arizona. **Cap.**, \$1,500,000; increased Jan., 1912, to \$3,000,000; shares \$1 par. Company refinanced in 1915 and bond issue of \$150,000 authorized for further development work.

Property: the Royal Irish group, 14 claims, 280 acres in the Verde district. Claims show feldspar porphyry and diorite cut by olivine basalt dikes running north and south and dipping 60° to the east. Orebodies lie on each side of the basalt in the porphyry and quartz schist. Orebody said to be 85' wide where encountered on 1,400' level and shows chalcocopyrite and some bornite. Extent of shoot not yet determined.

Development: by 1,648' shaft with 5,750' total workings of mine. Management plans development of orebody on 1,400' level and sinking shaft to 2,000' depth. **Equipment:** includes three 150-h. p. boilers, 1 hoist good for 2,000', air compressors, machine shop, power house, etc. Company is preparing to build a mile of road to connect with United Verde Copper Co. railroad. Employs 50 men.

ARKANSAS COPPER CO.**MONTANA**

Mine, on Ten Mile creek, near Helena, Mont., and about 2 miles west of the summit of Mount Helena, is developed by a 200' shaft. Property shows a 30' vein in diorite, traceable 800', assaying well in copper, with small gold and silver values. Was in hands of lessees early 1915, but now inactive.

ARLINGTON MINING CO.**MONTANA**

Idle. **Office:** Wallace, Idaho. Mine near Thompson, Sanders Co., Mont. Cyrus W. Gossert, pres.; Chas. T. Fisher, sec. **Cap.**, \$1,500,000; shares \$1 par.

Land: 20 claims, well timbered, in the Mountain House (unorganized) mining district, near the Idaho-Montana divide. Property shows a ledge said to be traced 6,000' by surface cuts, 30 to 100' in claimed width, carrying, at shallow depth, galena of concentrating grade, with some ore assaying up to 78% lead. The 175' upper tunnel is said to show 3' of good concentrating galena, and the 900' lower crosscut tunnel shows a 10" stringer assaying 8% copper, 15% lead and 15 oz. silver per ton. No recent returns secured.

ARMENDAIZ-SUCESORES; FRANCISCO**MEXICO**

Office: Apartado 37, Monterey, N. L., Mex. Mine office: Cerralvo, Nuevo Leon, Mex. Francisco Armendaiz, mgr. **Property:** includes the Refugio, Barredon and Purisima mines, carrying slightly argentiferous lead ores, which are properties of merit, and the Colorado mine, carrying up to 3% in copper tenor. Mines, which have been small but fairly steady producers of silver lead ores, with a little copper, are under lease to other interests.

ARMINIUS CHEMICAL CO., INC.**VIRGINIA**

Office: 44 Pine St., New York. **Cap.**, \$10,000. Frederic Kernochan, pres.; A. Neustaedter, mgr., Mineral, Louisa Co., Va. **Property:** shows a large lens of pyrite in ancient schistose rocks, worked for iron pyrite. Mine worked by shafts. Equipped with steam hoists, Ingersoll compressors and output is concentrated in a 350-ton mill.

ARNOLD MINING CO.**MEXICO**

Office: Nogales, Ariz. Mine office: Santa Cruz, Sonora, Mex. E. D. Arnold, pres.; A. O. Koppes, mgr. **Property:** the Del Pilar mine, about 35

miles N. W. of Cananea, developed by a 400' shaft, showing ore said to carry 10% copper. Employs about 25 men. Property was reported sold to the Manhattan Development Co., for \$88,000, May, 1913. No recent information obtainable.

ARNOLD MINING CO.**MICHIGAN**

Idle. Office: 62 Devonshire St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich. John C. Watson, pres.; John Brooks, sec.-treas.; Capt. Wesley Clark, supt.; preceding officers, Chas. H. Weston and W. H. Currier, directors. Annual meeting, second Tuesday in May. Inc. 1864, in Michigan. Cap., \$2,500,000; shares \$25 par; issued, \$1,550,000.

Lands: 3,323 acres, in T. 58 N., R. 31 W., in 2 tracts, including the Old Copper Falls mine and the Arnold mine proper, with frontage of about 3 miles on Lake Superior. The Copper Falls mine, worked 1850, until Aug., 1893, made 25,686,429 lbs. fine copper, mainly from the Owl Creek fissure, and paid dividends of \$100,000. The Arnold mine proper, developed on the Arnold ashbed, was opened 1863, reopened 1897, closed 1901, rock stamped averaging under 0.8% copper. Has a stamp mill and 2½-mile narrow-gauge railroad, known as Arnold & Eagle Harbor, rolling stock of which has been sold. No. 1 shaft of the Arnold is about 1,000' deep, sunk at an angle of 26° with the horizon. Total production, 1899 to 1911, inclusive, was 2,065,817 lbs. fine copper.

ARPS GROUP**CALIFORNIA**

Owned by C. L. Wilson of San Francisco. Property: 15 claims, unpatented, in T. 34 N., R. 4, W., Shasta Co., Cal., developed by 5 tunnels, of about 1,600' aggregate length, showing sulphide ore. A deposit of manganese ore, 1,200' long and about 125' wide, was discovered in 1914; samples said to assay 40% metal. Shipments to Heroult smelter were made in Spring of 1916.

ASCOT MINING CO.**QUEBEC**

Property: in Ascot township, Sherbrooke Co., shows an ore formation similar to that in the Eustis mine nearby, but not quite so high in sulphur and iron, carrying 2 to 6% copper, with small gold and silver values. Mine, first opened in 1859, is developed by shafts. Equipment: includes a Rand 7-drill compressor, steam hoist and necessary mine buildings. Was controlled by a Montreal syndicate, at last reports.

ASHBED MINING CO.**MICHIGAN**

Office: 62 Devonshire St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich. Francis L. Maguire, pres.; John Brooks, sec.-treas.; Cap. Wesley Clark, supt.; preceding officers, John C. Watson and Charles G. Lund, directors. Inc. 1880, in Michigan. Cap., \$1,000,000, shares \$25 par. Annual meeting, second Tuesday in March. Land: 1,143 acres, Peterick mine, in vicinity of Copper Falls, adjoining the Arnold mine. The last mining work was done 1905-1906. Described Vol. II.

ASHBORO COPPER MINING CO.**NORTH CAROLINA**

Mine office: Ashboro, Randolph Co., N. C. H. D. Landers, pres.; D. M. Holliday, v. p.; W. C. Hammond, treas.; M. W. Parrish, sec. Inc. in North Dakota. Cap., \$100,000; shares \$1 par. Lands: 93 acres, just north of Ashboro. A carload of ore gave returns of \$16.85 per ton, with 8.6% copper and small gold values. Idle from 1907 to 1913, when work was resumed and shipments made. Presumably again idle in 1915-16.

ASIENTOS MINING CO.**MEXICO**

Mine office: Asientos, Ocampo, Aguascalientes, Mex. Chas. Adler, v. p.; Abram Rapp, gen. mgr. Inc. 1898, in Delaware. Cap., \$1,000,000; shares \$10 par; nonassessable; fully issued.

Lands: 190 acres, including the Nopensada and Alta Palmira mines, which are antiquas, and the Veta Grande and Refugio mines. The Nopensada, said to have been a considerable producer in early days, carries mainly slightly argentiferous copper ore, of about \$40 per ton average value. **Equipment:** includes steam and electric power. The Alta Palmira mine, having a 450' shaft, produces auriferous and argentiferous copper ore. **Equipment:** includes a 150-h. p. steam plant and hoist. The Refugio mine shows ore carrying up to 10% copper and 1,100 grains silver per metric ton, with small gold values. Idle owing to revolutionary disturbances.

ASPEN MINE CO.**COLORADO**

Property: the old Aspen mine at Silverton, Colo., supposedly controlled by American Smelters Securities Co. Ike Camp, operating a lease on the upper workings, is reported to be making daily shipments to Silver Lake mill.

ASSETS REALIZING MINES CORP'N**CALIFORNIA**

Address: 210 Citizens' Nat'l Bank Bldg., Los Angeles, Calif. **Officers:** J. V. Priest, pres. and gen. mgr., with F. R. Kellogg, Chas. P. Grogan and E. S. Parker, directors.

Property: 300 acres, including the Arica, Big Butte, Crescent, Eldorado and January 1-11 claims, in the Ironwood Mng. district, Riverside Co., Calif. **Ore:** gold-silver, in six veins between dolomite hanging and schistose foot-walls.

Development: 2 shafts, one 508' deep, with 4 levels from the 80' to 330' levels. The 138' level said to be opened for 270' in ore averaging \$10 to \$30 per ton in gold. The second shaft, 330 deep, has levels at 165', 230', and 330' depths, and ore is said to average \$20 per ton. **Equipment:** 100-ton plant, equipped with crusher and rolls. Hardinge mill is being built.

Ore reserves: reported, 18,000 tons ready for stoping.

ASSOCIATED MINES DEVELOPMENT CO.**NEVADA**

Office: 617 Pacific Bldg., San Francisco, Cal. C. N. Miller, pres.; E. N. Bannon, sec. Inc. in Nev. **Cap.**, \$500,000; shares \$500 par. **Lands:** at Rochester, Humboldt Co., Nev. Owns the Wild-Cat and Tiger patented claims, the Taylor Hill, Colorado and the Plainview group, also the stock of the Tohoqua mine, Gerlach, Nev. Claims to have \$200,000 worth of silver and gold ore in sight and no debts.

ATHABASCA MINING CO.**CANADA**

Inc. in Alberta, Can., April, 1914. **Cap.**, \$1,000,000. Hon. G. H. V. Bulyea, Gov. of Alberta, Hon. Chas. R. Mitchell, E. J. Taylor and C. L. Freemann, directors, all of Edmonton.

Property: assets and properties of the Athabasca Mng. Syn. consisting of 800 acres of nickel claims, 160 acres iron claims, on and near Lake Athabasca, near Edmonton, Alberta, Canada.

Ore: nickel-iron-copper. Assays of surface samples showed 1½ to 5% nickel, iron samples ran 66.70% iron, 2.12% silica, .014% phosphorous and .013% sulphur. Copper occurs as bornite. Property still undeveloped.

ATHLETIC MINING CO.**MISSOURI**

Address: Duenweg, Jasper Co., Mo. Property bought by Chas. T. Orr and associates of Webb City, Mo., in 1915, purchase price said to be \$150,000. Formerly operated under name of Gopher M. & M. Co.

Property: 40 acres of the Jasper Co. Royalty Co.'s land at Duenweg and a lease on adjoining 140 acres. Lead-zinc ore occurs at depth of 250'.

Development: on the 40-acre tract consists of two 250' shafts. On the 140-acre tract 5 shafts are down to the ore level. **Equipment:** on the 40-acre tract includes a 700-ton concentrating mill. Company plans to build a second mill.

ATKINS KROLL CO.**NEVADA**

Address: 311 California St., San Francisco, Calif. Company owns directly and leases and controls through subsidiary companies a number of operating tungsten mines in Nevada and elsewhere. **Properties:** include the Silver Comet mine near Pioche, Nev., a scheelite mine, 12 miles south of the Bonita mine near Garrison, Utah, W. L. Chapman, supt.

Atkins Kroll also control the Doyle Mining Co., mining tungsten ore, 6 miles north of Osceola, Nev.

ATLANTA-HOME GOLD MNG. CO.**NEVADA**

Suite 3249 No. 120 Broadway, New York City. Mine office: Atlanta, Lincoln Co., Nev. **Officers:** F. R. McNamee, pres.; E. B. Bronson, v. p.; M. Justice, sec.; E. M. Bray, treas.; preceding officers, R. W. H. Smith, and H. A. Geisendorfer, directors. J. J. Stubenbord, supt.

Inc. 1915, in Delaware. **Cap.**, \$2,500,000; shares \$5 par; nonassessable; outstanding 500,000 shares. Security Transfer & Register Co., 66 Broadway, New York City, transfer office. Company was organized to take over the holdings of the Atlanta Cons. Gold Mng. Co.

Property: 11 claims, patented, 180 acres, at Atlanta, Lincoln Co., 47 miles northeast of Pioche, show a contact deposit between porphyry and limestone, that is said to average from \$2 to \$4.50 per ton in gold, and is 50' to 80' wide, proven for a length of 300' and depth of 200'. Ore reserves claimed to be 320,000 tons.

Development: two shafts sunk 300' apart, No. 1 is 200' and No. 2 is 82' deep, with drifts and crosscuts totaling 1,600'. **Equipment:** includes a steam hoist and compressor. Company plans continuing shaft sinking and development and building a cyanide plant. Reports on property have been made by Paul W. Meyers, Geo. Kislingbury and Kirby Thomas.

ATLANTA MINES CO.**NEVADA**

Office: 406 Columbia St., Goldfield, Nev. **Officers:** Geo. Wingfield, pres. and mgr.; A. H. Howe, sec.-treas.; Chas. E. Knox, v. p.; preceding officers, C. B. Zabriskie, Frank C. Favier and Clyde A. Heller, directors; A. I. D'Arcy, mgr. **Inc.** March 3, 1905, in Arizona. **Cap.**, \$5,000,000; shares \$1 par; nonassessable. In treasury, 1,750,000. Annual meeting April 6th. Receipts for 1914, \$30,718. Disbursements for 1914, \$56,445.65.

In 1912 the company was reorganized and refinanced for deep mine development, \$100,000 cash being raised by Geo. Wingfield and associates. The capitalization was increased from two to five million shares. Work was begun Dec., 1913.

Threatened apex litigation with the Florence was settled 1914, by a sideline agreement, the Florence to be opened from Atlanta workings. In 1915 the company secured a lease on the southern half of the Grizzly Bear claim of the Goldfield Cons. Co., to all ground below the 1,400' level.

Property: 74 acres, patented, at Goldfield, Nev., includes the Atlanta, Black Bear and Union Jack mines, adjoining the Florence on the east and the Goldfield Cons. on the north. Contains the extension of the Goldfield Cons. orebodies on the shale-lattice contact. Exploratory work carried on through the St. Ives shaft of the Goldfield Cons. cut the Atlanta vein on the 1,750' level. This vein is 40' to 100' wide, runs N. S. and dips at 45°. The ore is pyritic with tetrahedrite, and varies from gold ore, free from copper, to ore carrying 9% to 14% copper. The great ore shoot thus far shows bands of medium grade shipping ore, but is, as a whole, a low grade concentrating ore that may average \$8 per ton, besides a shoot of shipping ore .6'-15' thick that averaged \$25 per ton in monthly smelter returns. The orebody is proven for 110' upward and for 380' on the strike having been opened on the 1,660' level, and by a winze below the 1,750' level.

Production: began April, 1915, and has averaged about 20 tons a day, mainly from the 1,580' and 1,620' levels.

The geology of the district is described in Prof. Paper No. 66 of the U. S. Geological Survey, 1909, by Ransome, and by J. E. Spurr, in Econ. Geology, Feb., 1916. Property promises to be an important producer of low-grade concentrating ore from which it should be able to pay dividends in 1916.

ATLANTA MINING CO.

IDAHO

Inc. Sept., 1915, in Idaho, by Henry L. Lillienthal, of Spokane, Jas. A. Baxter and M. B. Inghram, of Wallace, Idaho. **Cap.**, \$1,250,000, shares \$1. **Property:** The Bald Knob group on which work was said to be started at once.

ATLANTIC MINES CO.

MONTANA

Address: care Anaconda Copper Mng. Co., 42 Broadway, New York. Ross W. Lynn, pres.; Jas. Dickson, sec. Inc. Jan. 20, 1913, in Delaware. **Cap.**, \$1,000,000, shares \$10 par; \$250,000 paid. **Property:** the holdings of the old La France Copper Co., including the Lexington mine and concentrating plant at Walkerville, Butte, Mont. Company is controlled by Anaconda Copper Mng. Co. interests and was incorporated for the purpose of purchasing the Lexington group of mines at foreclosure sale. One share of new stock was issued for each \$100 bond of the La France Co. and 10% of face value of unpaid coupons, amounting to \$50,000, was paid in stock. Underwriters had option on 10,000 shares at \$14 a share for 12 months, 10,000 more for 18 months at \$18 and 10,000 for 24 months at \$22.

In May, 1916, the Anaconda Company offered to buy the property at public sale at a price to net stockholders \$12.50 per share, or equivalent to par, plus 8%, plus \$250,000 originally in the treasury.

Lands: 8 fractional claims, 32 acres, known as the Lexington mine, held from the French owners under a \$250,000 bond and lease, running in the name of Louis Girard, assigned to La France Copper Co. Property is at Walkerville, in the northern part of the Butte camp.

The Lexington mine has a 1,450' three-compartment main shaft, connected on the 600' level with the Alice mine, with several miles of workings. The mine was worked many years ago for gold and silver, but ore became zinciferous with depth. The lower workings carry chalcopryrite, galena and sphalerite ore, of which about 30,000 tons milled gave an average assay of 1.2% copper, 3.5% lead, 18% zinc, 5.5 oz. silver and \$1.60 gold per ton, which may be taken as a fair average assay of about 400,000 tons of ore blocked out in the lower levels. In addition there are several small bodies of chalcopryrite ore up to 3% in copper tenor, with proportionately higher gold and silver values, and having smaller quantities of zinc. There are electric pumps on the 650' and 1,450' levels capable of handling 500 gals. of water per minute.

Property is one of the zinc producers of the Anaconda company, the ore going to the experimental zinc plant of the Washoe reduction works at Anaconda.

ATLANTIC MINING CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. **Mine office:** Painesdale, Houghton Co., Mich. **Officers:** Wm. A. Paine, pres.; Frederic Stanwood, sec.-treas.; preceding officers, John R. Stanton, S. L. Smith, Frank P. Son and J. H. Blodgett, directors.

Inc. Dec., 1872, in Michigan; reincorporated, 1901, for 30 years. **Cap.**, increased, 1902, to \$2,500,000, shares \$25 par; fully issued; paid in, \$11.80. Last assessment was \$2, Oct. 11, 1909, the first in 30 years. Has paid dividends of \$90,000, last in 1905. Owns \$40,000 stock in Michigan Smelting

Co. Boston Safe Deposit & Trust Co., registrar; American Loan & Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in March. The Atlantic Co. is controlled by Copper Range Consolidated Co., through ownership of 93,470 shares of the capital stock. Balance sheet of Dec. 31, 1915, shows surplus of \$246,329.

Lands: 8,217 acres, including 1,351 acres of mineral lands, 4,760 acres of timber lands, and 2,106 acres miscellaneous lands, latter including the mill site, and a valuable frontage on Portage lake. Mineral lands are S. $\frac{1}{2}$ of Sec. 4, except S. E. $\frac{1}{4}$ of S. E. $\frac{1}{4}$; N. $\frac{1}{2}$ of Sec. 9; N. W. $\frac{1}{4}$ of Sec. 10 and Sec. 16, all in T. 54 N. R. 34 W. Principal holdings are the old Atlantic mine, 640 acres, including the mines known before 1872 as the South Pewabic and Adams, located about 2 miles south of Portage lake and 4 miles southwest of Houghton, and the Sec. 16 tract of 640 acres. The mines, idle since 1911, are very fully described, Vol. X.

ATLAS MINING CO.

YUKON

Mine office: White Horse, Yukon, Canada. R. K. Neill, pres.; Wilbur D. Greenough, gen. mgr. Inc. Dec., 1909, in Washington. Cap., \$600,000; shares \$100 par.

In Feb., 1916, company holdings were taken over by the Yukon Copper Co., Ltd., a Canadian company, which see.

ATLAS MINING & MILLING CO.

COLORADO

Office: Ouray, Colo. C. H. Wagner, pres.; C. H. Austin, v. p.; C. C. Carson, sec.; A. B. Shipman, treas.; with Wm. Story, Jr., Fred Carroll and Chas. D. Lofler, directors. W. P. Casey, supt., Sneffels, Colo.

Inc. Feb., 1904, in Colo. Cap., \$2,000,000; shares \$1 par; 1,921,000 shares outstanding. Authorized bond issue \$50,000; all outstanding. Annual meeting in August.

Property: 28 claims, patented, 204 acres in Mt. Sneffels district, Ouray Co., Colo., includes the Atlas & Crown Point mines. Ore, which occurs in 3' fissure vein in andesite, is a complex sulphide, carrying grey copper, gold, silver and lead. Average assays are reported to run 17 oz. silver and 0.05 oz. gold per ton. The vein is developed by 100' incline shaft and a 2-mile tunnel to depth of 1,500', with a total of 20,000' of underground workings.

Equipment: includes electric power, air compressor, tramway and 150-ton 20-tamp mill with table and flotation (Min. Separation Co., Ltd.) concentration, giving a 90% recovery of ore values. Management expects to further solve treatment of complex ores and increase recovery to 95%. Employs 75 men.

Production: 30,000 tons in 1913, 35,000 tons in 1914 and 40,000 tons in 1915. Management estimates 50,000 tons of ore blocked out.

ATOLIA MINING CO.

CALIFORNIA

Address: 311 California St., San Francisco. Mine office, at Atolia, San Bernardino Co., Cal. Controlled by Atkins, Kroll & Co., San Francisco. Chas. Taylor, supt.

Property: a number of claims at Atolia on the Randsburg branch of the A. T. & Santa Fé R. R. are being worked for tungsten ores. The ore occurs as scheelite in both placer deposits and fissure veins.

Development: a 1,000' shaft with electric hoist and full equipment. The loss of the concentrating mill, destroyed by fire on Jan. 25, 1916, caused suspension of all operations for several months, but a new mill with a daily capacity of 200 tons has been built.

The ore is hauled from mine to mill on 4-ton trucks which deliver 100 tons a day. From a large bin the ore is fed to a 10x18 Joshua-Hendy jaw crusher; then passes by bucket conveyor to the hopper feeding the rolls

for finer crushing. Half of the product is fed into a single mill unit, composed of two 5' Huntingtons. The discharge passes over two large Deister roughing tables, where the most of the tungsten is extracted; the residue passes on to the Frue vanners. The other half of the rolls product goes to the 8' Marcy ball mill whose capacity is 30 to 40 tons in 24 hr. The 30-mesh pulp is discharged onto a Deister roughing table and then passes to a Dorr classifier. The slime from both units is thickened for concentration by use of three 8' Callow cones and then passes over three double-decked sliming tables; thence to three double-decked Deister tables, whence the tailings are carried to the pond. The plant is operated by about 25 electric motors, each unit of machinery being driven by a separate motor. The mill will use 30,000 gal. of water when running full capacity and will produce 5 to 7 tons of concentrates every 24 hr. The new electric hoist will be installed on the 900' level of No. 1 mine, to be used in sinking a winze on the ledge for prospecting the vein at greater depth.

Over 300 men are reported to be employed. Is one of the largest tungsten producers of the country.

A. T. S. MINING CO. (Not Incorp't)

MISSOURI

Formerly known as the A. B. C. mine. Owned by A. T. Swan, Joplin, Mo. Property is the A. B. C. zinc-lead mine at Joplin, Mo. Equipped with 90-h. p. gasoline engine, hoist, Ingersoll-Rand compressor and 175-ton mill.

ATWOOD COPPER CO.

NEW MEXICO

Property the Atwood mine, near Lordsburg, Grant Co., N. M., sold to 85 Mng. Co. in 1915 for \$100,000.

AUFEAS MINES, LTD.

BRITISH COLUMBIA

Address: Hope, B. C. **Property:** the Jumbo group on Silver creek, 4 miles west of Hope in the Yale district, 3 claims, in steep gorge, 1,100' above sea level, containing fissure veins in granodiorite. Veins average 8" in width but carry arsenopyrite and chalcopyrite in quartz. Gold is the principal value and the ore varies from \$10 to \$60 per ton.

Development: by 3 tunnels and several open cuts. A new tunnel driven in 1913, cut a vein 3' wide 385' from portal at depth of 450'. Ore in this face carried more copper than found in the older workings. An aerial tram is to be installed and shipments made to the Tacoma smelter. 40 tons of ore sacked and 100 tons on dump, when work was suspended, in July, 1914.

AUGUSTA METAL MINING CO.

COLORADO

Address: C. L. Arzeno, 9 E. 5th St., Covington, Ky. **Officers:** C. L. Arzeno, pres.; E. A. Darling, v. p.; F. A. Abbot, sec.-treas.; preceding officers, R. V. Lewis, Sydney Maddock, G. T. McDuffie, F. E. Laimbeer, directors. Inc. in Colo. **Cap.**, \$2,000,000; shares \$1 par; issued 1,953,000 shares.

Property: about 300 acres, patented, on Augusta Mt., 10 miles north of Crested Butte, Gunnison Co., Colo., at an elevation of 12,625', shows a fissure vein containing gold, silver, lead and zinc, with general average said to be \$10 per ton. Vein is in diorite. Has been worked spasmodically since 1880.

Development: 320' vertical shaft and several tunnels, longest over 3,000'. The property has been idle for several years and surface equipment, including a 60-ton mill, has been destroyed by snowslides. Management expects to resume operations in 1916.

AURELIA CROWN CO.

WASHINGTON

Office: P. O. Box 187, Seattle, Wash. O. Robert Dahl, pres., treas. and gen. mgr.; A. E. Coxhead, v. p.; H. M. Dahl, sec.; preceding officers,

Geo. C. Whipple and L. A. Sherman, trustees. Inc. in Washington. Cap. \$10,000,000; shares \$10 par; nonassessable; issued \$8,137,600.

Lands: 36 claims, 730 acres and 2 mill sites of about 10 acres, 16 miles west of Lucerne, Chelan Co., Wash. Property includes gold, copper, silver-lead and molybdenite mines, having 8 tunnels, of about 1,300' aggregate length, and several open cuts. The Crown Point molybdenum mine has 3 tunnels, said to develop 2,000 tons ore. The Silver Trail silver-lead mine has a 6' fissure vein. Tunnel No. 3, on the copper vein, shows 4 ore shoots, of 4 to 8' width, carrying ore said to give average assays of 15.5% copper and \$8.65 gold and silver per ton. Mine has an aerial tram.

Equipment: includes a hydraulic plant, with 2 Pelton wheels and 832' of 10" and 11" and 472' of 6" double-riveted steel hydraulic pipe. There is an air compressor. Buildings include a machine shop, engine house, sawmill, warehouse and 3 cabins. The mill has 2 crushers, rolls and a Schull concentrator.

Company makes claims of large annual profits to be earned from the operation of its mines, sawmill, water power plant and in water and rail transportation, but the railroad is yet to be built, the mines are only slightly developed and the tonnages which would make annual earnings of \$2,800,000 possible, are neither blocked out nor reasonably assured. The total expenditure on the property to Jan. 1, 1913, is \$86,552, a small sum compared with the amount of stock issued. The company's circulars considered misleading and not liked. Company fails to answer letters, possibly because of the comments given above.

AURORA CONSOLIDATED MINES CO.

NEVADA

Office: Goldfield, Nev. Mine office: Aurora, Mineral Co., Nev. **Officers:** Geo. Wingfield, pres.; J. H. Miller, v. p.; A. H. Howe, sec.-treas.; J. W. Hutchinson, mgr.; R. A. Hardy, supt.

Inc. in 1913, in Utah. Cap., \$100,000; shares 10c par; all outstanding. June 30, 1914, 87% of the issued stock of the Aurora Cons. Mines Co. was sold to the Goldfield Cons. Mines Co. for \$763,000, by Jesse Knight and associates.

Property: at Aurora, Nev., shows gold-silver ore in fissures in andesite. **Development:** 400' vertical shaft, connecting with main working tunnel, 4,500' long. **Mill and cyanide plant:** 40-stamp with daily capacity of 500 tons, weight of stamps 1,580 lbs.

Operations for 1915 show a loss of \$22,377 for the treatment of 138,399 tons of \$4 ore; this loss, however, is computed by charging \$55,361 equipment and construction expense to operation, the real operating profit being \$32,984. Ore in sight Jan. 1, 1915, is stated to be 414,000 tons; the profit per ton is not given by the company. Neither tonnage nor value checks the original estimates made of the mine, but there is much promising ground yet unexplored.

AURORA COPPER MINING CO.

WASHINGTON

Mine: Chewelah, Stevens Co., Wash. Conrad Wolfe, pres., 417 Hutton Bldg., Spokane, Wash. Property is the Copper Queen mine adjoining the United Copper Co.'s property, 6 miles N. E. of Chewelah. Is developed by tunnels, and 2 deep diamond-drill holes. Ore contains chalcocopyrite with streaks of tetrahedrite in a vein of 25' average width. No recent returns secured.

AURORA MINES CO.

NEVADA

Address: 300 Severance Bldg., Los Angeles, Cal. Mine office: Aurora, Mineral Co., Nev.

Officers: Wm. R. H. Weldon, pres.; C. H. Chrisman, v. p.; F. C. Langdon, sec.; John H. F. Peck, treas.; preceding officers and J. Frank

Mercereau, directors. Wm. B. Davis, supt. Reorganized Mar., 1913, in Nevada. Cap., \$1,000,000; shares \$1 par; issued \$900,000. Annual meeting March 19th.

Property: 13 claims, patented, 150 acres, located in the Esmeralda mining district, Mineral County, comprise some of the mines worked in early days for high grade gold-silver ore in fissure veins.

Development: several tunnels. The Monarch tunnel cut the veins at 300' depth, and 260' of drifting was done. Work was then started on a tunnel 350' lower, already 900' long. At present the tunnel has a length of 1,570' with 400' farther to go to cut the veins. There has been no production to date.

AURORA-SAMPSON MINING CO.

IDAHO

Consolidated Jan. 14, 1916, with H. E. M. Mng. Co. to form the Western Union Mining Co., which see.

AURORA Y ANEXAS; CIA. MINERA LA, S. A.

MEXICO

The Cia. Minera Aurora y Anexas, owned by the late Ernesto Madero and brother, has worked for several years past, the Aurora mine, with 160 hectares in the Cuchillo district, near Coyame, Chihuahua and the Justicia copper mine, 4 miles east of Marquez station on the Kansas City, Mexico & Orient railroad. These properties were purchased from Don Francisco Diaz in 1908.

Owing to the revolution, followed by a revolt and establishment of local revolutionary government in Chihuahua, it is impossible to get recent information.

AUSTIN DAKOTA DEVELOPMENT CO.

NEVADA

Address: Valley City, North Dakota. Mine office: Bank Bldg., Main St., Austin, Nev. J. F. Puttrew and C. C. Newman, directors, Valley City. No. Dakota; C. F. Littrell, mgr.

Property: X-Ray group, 24 claims, in Marshall Canyon near Austin, Lander Co., Nev. **Ore:** gold-silver in chloride zone, in 2 parallel ledges, each 20' thick and cut by several mineralized dikes in granite. Vein system exposed in workings for about 400'. Average assays said to show up to \$2.60 gold and \$300 silver per ton.

Development: the O. K. and X-Ray incline shafts and tunnels. **Ore reserves:** Estimated 11,000 tons of \$26 ore blocked out. **Equipment:** pump, 80-h. p. hoist, ore bins, compressor, storehouse and stable. Company plans sinking the X-Ray shaft to the 250' level.

AUSTIN GOLDFIELD MINING CO.

NEVADA

Owens the Watt mine, in New York Canyon, Lander Co., which see.

AUSTIN MANHATTAN CONS. MNG. CO.

NEVADA

Idle. Wm. A. Marshall, res. agt., Austin, Nev. The company purchased the principal mining properties, first operated in the early 60's and credited with a production of \$19,000,000, in and adjacent to Austin, Nev., in 1908, and started development work, but on too large a scale commensurate with the limited money on hand. See Copper Handbook, Vol. XI, and Bull. 208 and 408, U. S. Geol. Survey. Result was a receivership begun in 1911, culminating in a public sale of the property 3 years later. It was purchased by one of the largest creditors, the present owner, H. C. Fownes, German Nat'l Bank Bldg., Pittsburgh, Pa., who placed it on the market after expiration of the redemption period.

Property. 115 claims, 1,200 acres, 73 claims patented, in the Reese River mining district, at Austin, Lander county, shows in the Lander Hill section, a vein system of 5 fissure veins in granite, N. W.-S. E. strike, dip 25° to 60° N. E. Maximum width of veins is 6'. Ore, sulphide of silver, occurs in lenticular shoots. **Development:** 6,000' tunnel and shafts. The

western portion of the property contains north-south veins yielding gold and silver, developed by the Jack Pot mine to the 400' level.

Mine shows but little ore in sight. Old workings largely caved and inaccessible. Report on the property made by A. W. Daw, of the firm A. & T. Daw, London, Eng., states there is a possibility of ore reserves in the principal veins below the main tunnel level; that suspension of operations in 1887 was due to failure to carry development ahead of stoping, to poor ventilation in the deeper workings and to falling price of silver, and that failure of subsequent operations has been due to lack of development work below the old work and to bad management. There is a 20-stamp mill on the property.

AVINO MINES, LTD.

MEXICO

Idle. Office: 638 Salisbury House, London, E. C., Eng. Mine office: Minas, Durango, Mex. Lionel W. Harris, chairman; Edw. Hooper and A. Glenecross, directors; F. F. Fuller, sec.; Hooper, Speak & Co., cons. engrs.; R. H. Jeffrey, gen. mgr. Inc. March 6, 1909, in Great Britain. Cap., £100,000, in 1,000,000 priority shares and 1,000,000 deferred shares of 1s par; issued, 500,000 priority shares and 978,429 ordinary shares. Was a reconstruction of Avino Mines of Mexico, Ltd., which was reorganized Feb. 24, 1903, as successor of company of same name, organized Feb. 13, 1899, which was the successor of Avino Syndicate, Ltd. Present company took possession of property Aug. 1, 1909. Stockholders of old company were given 1 ordinary share, par 1s, full paid, for each fully paid £1 share of the old company, with the right to buy priority stock at par, share for share. After payment of 200% on priority shares, they became ordinary shares. Shares are listed on the London Stock Exchange.

Accounts for year ending June 30, 1915, show a loss of £1,356, leaving a credit balance of £665, brought forward into debit balance of £6,914; cash, £5,555; ore in transit £5,350; ore on dump £2,123, calls in arrears £230; creditors, £1,275.

Lands: 166 acres, and a 350-acre dam site, 10 miles from Gabriel, on the Mexican International railway, the nearest rail point. Property includes El Sangre de Cristo mine, which has a 500' shaft and 1,050' tunnel, with several large tajos or pits, 1 being nearly 400' in width and of considerably greater length.

Ore is a complex mixture of auriferous and argentiferous lead and copper sulphides.

Production: for 14 months to June 30, 1910, was 43,350 long tons of ore, of which 17,937 tons was rejected and 18,094 tons shipped, yielding 910,499 lbs. fine copper, 261,000 oz. silver and 993 oz. gold, giving a profit of £4,338. Operations during 1912 were seriously interrupted by revolutionary disturbances. As the present mill is not successful the company has been shipping ore to smelters, at such times as the revolutionary troubles in Mexico permitted. All work was stopped in April, 1913. During 1912-13, 6,199 tons were sorted out for shipments, of an estimated value of £21,840.

Ore reserves: are reported June, 1913, as 113,167 tons, averaging 1.8% copper, 9.7 oz. silver and \$6 gold per ton.

Equipment: includes a steam and a 300-h. p. electric plant, operated by a Crocker-Wheeler gas engine.

The former management spent too much money on surface, and not enough underground, besides making a mistake in the plan of ore treatment. The mine now has competent consulting engineers and managers, and ought to make money, when peaceful conditions once more prevail in Mexico.

A. W. C. MINING CO.**MISSOURI**

Address: Joplin, Mo. **Owners and operators:** W. O. Cragg and A. W. Canada. **Inc. in Maine. Cap., \$40,000. Property:** 120 acres in center of West Joplin sheet ground district. **Ore:** lead-zinc, occurs at a depth of 190'. **Development:** 3 vertical shafts. Three mills are operated on the property, 2 on Luke land and one on Expansion Co.'s land, adjoining on the south.

Production: in Feb., 1916, company is reported to have sold 1,000 tons zinc concentrates, assaying 60% zinc for \$130,000. This represented an output of 7 weeks.

A. Y. & MINNIE M. & M. CO.**COLORADO**

Leadville, Colo. Is a subsidiary of the A. S. & R. Co., S. D. Nichol森, gen. mgr. Produces lead-zinc sulphide ore, which is shipped to Sand Springs, Oklahoma, and to Pueblo, Colo. Developed by shaft and employs about 50 men.

AYUTLA SMELTER**MEXICO**

Owned by Carrizo Copper Co., at Ayutla, Autlan, Jalisco, Mex.

AZALIA MINING CO.**NEVADA**

Address: F. M. Berry, sec.-treas., Union Oil Bldg., Los Angeles, Calif. **Officers:** F. W. Cole, pres.; S. E. Vermilyea, v. p.; preceding officers, John Woodson, F. O. Wilkinson, directors; W. L. Kemp, supt. **Cap., \$1,000,000; shares issued 458,000.**

Property: 4 claims, 8 miles N. W. of Platina on a spur of the Spring Mt. range, cover a vein in limestone, containing zinc-silver ore, for 3,000'. At last accounts an 80' incline shaft passed over the ore, which is said to be 6' thick and faulted at a depth of 30'.

AZTEC COPPER CO.**NEW MEXICO**

Office: 707 Colorado Bldg., Washington, D. C. **Mine office:** Organ, Dona Ana Co., N. M. **Gen. H. H. C. Dunwoody, pres. and mgr.; Geo. B. K. Roberts, sec.-treas.; preceding officers, Col. M. C. Wyeth, C. F. Humphrey and C. C. Clements, directors. Inc. in Arizona. Cap., \$1,000,000; shares \$1 par; nonassessable.**

Lands: 7 claims, 140 acres, in the Organ Mountain mining district, about 12 miles by good road southeast from Las Cruces. Claims cover the mineralized limestone porphyry contact worked by the Modoc mine. Developments are on the Orejon claim opened by a 140' 45° inclined shaft, sunk on a 12 to 18" vein. Three claims, known as the Orejon group, have been leased for the year 1916. Company reports that "we owe nothing and do not pay salaries."

AZTEC GOLD MINE**NEW MEXICO**

Operated by the Maxwell Land Grant Co. Described in U. S. G. S. Bull. No. 620-N.

AZTEC MINES CO.**ARIZONA**

Letter returned unclaimed from Chicago office and mine office, Prescott Yavapai Co., Ariz. L. H. Beyerle, pres. **Inc. 1908, in Arizona, practically as successor of Gold Copper Mining Co. Cap., \$3,500,000, shares \$1 par.**

Lands: 7 claims, 100 acres, well timbered and watered, 5 miles west of Poland and 13 miles south of Prescott, in middle of the Senator district, near the Hassayampa river. Property includes the Aztec, Peacock, Fairview, Mountain View and Iron Duke claims, said to show fissure veins of 2 to 15' width. Main development on the 15' vein, by a shaft cutting auriferous and argentiferous copper ore. A tunnel 900' long, is intended to open up the main vein through the 3 claims, and will have a back of about 500'. The ore from the main shaft on the Peacock claim is reported

to average \$13 in copper and \$9.92 in gold. Besides 2 main veins of the group there are 8 other cross and parallel veins on the claims.

In 1915 the Savage mine of the Aztec group was leased to L. E. Paquin and J. R. M. Gordon, who report having found a vein carrying high values in lead, zinc and silver.

Past history of company, with Mr. Stevens' unfavorable comments, given Vol. X.

AZTEC MINES CO.

COLORADO

Property is the O. K. mine at Central City, Colo. A. H. Frost, pres., and J. R. Hastings, sec., Winona, Ont., Canada. Operated in a small way, 1915, by Henry R. Eilmann, lessee. Mine shows narrow fissure vein, carrying gold and copper values.

AZURE MINING CO.

NEW MEXICO

Mine office: Tyrone, Grant Co., N. M. Employs 30 men, when in full operation. Louis Kahn, pres.; M. D. Rothschild, sec.-treas., 14 Church St., New York. Wm. Rogers Wade, supt. Inc. 1890, in New York. Is operated as a close corporation.

Lands: 110 claims, 1,800 acres, near the Burro Chief group of the Chemung Copper Co. Company sold 73½ acres, 1909, to Mangas Development Co.

Geology: property shows monzonite, quartz-porphry and granite, with fissure veins in granite and disseminated ore in porphyry, there being 7 orebodies with 2 under development. The Santa Fé vein is from 15 to 75' wide, averaging 40' and is traceable for 6,000'. This vein is developed by a 417' shaft, having 5 levels with 15,500' of workings showing gem turquoise as well as copper ore. The old turquoise mine has 2 tunnels and large open-cast workings.

Besides the Santa Fé vein, the property has disseminated ores, one orebody on the contact between granite-porphry and monzonite-porphry being 152' thick, developed for 500' in length and carrying 2½% copper present as disseminated particles of chalcocite. Property has been explored by churn drills and diamond drilling.

The mine was at one time the largest turquoise property in the world, systematic mining having begun in 1891. Gem production has practically ceased and the property is considered valuable for its copper ore alone.

Company is also developing the Tres Hermanos zinc mine in the Tres Hermanos district, 23 miles S. of Deming, Luna Co., N. Mex., said to show oxidized ores carrying zinc-lead-silver values. **Ore:** occurs as blanket and chamber deposits in limestone, 2-5' wide, reported to assay from 30-35% zinc, 30-40% lead and 6-8 oz. silver. Developed by several vertical shafts, from 30-100' deep.

Equipment: includes compressor and 20-h. p. gasoline hoist. **Production:** in 1915, mainly from development work, was 720,000 lbs. zinc, 300,000 lbs. lead and 2,000 oz. silver. Further development planned.

AZURITE MINING CO.

NEVADA

J. W. McFatridge, mgr.-sec.-treas., 941 W. 35th St., Los Angeles, Cal. **Mine address:** Goodsprings, Clark Co., Nev. A. C. Black, pres. and purch. agt.; T. D. Knights, v. p.; preceding officers, M. P. Erwin, M. M. McFatridge and Samuel Yount, directors. Inc. Feb. 7, 1911, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; issued 440,879 shares.

Property: 9 claims, 174 acres and a 3-acre smelter site, in the Yellow Pine district, sections 26, 27, 34 in T. 24 S.; R. 57 E., 12 miles from Goodsprings and 20 from Jean on the Salt Lake railroad. The mines adjoin the Boss mine on the east.

Ore: carries plumbojarisite, a very rare mineral, carrying gold and platinum (see U. S. Geol. Survey Bull. 620). The Shenandoah, Jolly Boy and Copper Chief mines, all producers, adjoin the Azurite. A 150' tunnel, 80' below the incline shaft, at the Azurite mine, will give working ground for stopes. Claims show ores carrying gold, silver, copper, lead, zinc and platinum, lowest assay at the copper mine said to be \$3.60 gold, \$4.50 silver, 27% copper, .03 oz. platinum. Ore occurs in replacement orebodies of irregular size and shape, the largest 35x40' and 8 to 10' thick. These replacements occur in thick bedded limestones cut by porphyry dikes.

Development: the Azurite copper mine has a 78' and a 20' shaft. Property has 1,626' of workings, including several tunnels, the longest being 450', estimated to block out 8,800 tons of 20% copper ore and 30% lead ore.

Company plans installation of cable tram and concentrator for 1916. Company bought the Nevada Copper Realty property, Feb. 7, 1911. The proposed Parump Valley branch of the Salt Lake railroad from Jean to Good Springs will open up this district and enable many of the mining companies to ship ore. The mine shipped four carloads of high-grade copper and lead ore in 1914, but no mining was done in 1915.

AZURITE MINING CO.

NEVADA

Bankrupt. Properties in Hawthorne and Mina districts, Mineral Co., Nev., sold in 1915 to H. Geile of Grand Rapids, Mich., for \$30,000, under judgment for \$65,000. Mines, reported to carry sulphide ore, are to be reopened.

AZURITE MINING CO.

WYOMING

Idle. **Office:** 55 High St., Oshkosh, Wis. Henry L. Larsen, pres., Green Bay, Wis.; Arthur Bishop, v. p.; H. O. Granberg, sec.-treas. and gen. mgr. **Inc. Dec. 17, 1904, in Wyoming. Cap., \$1,000,000, shares \$1 par; issued, \$624,650. Lands:** 5 claims, 63 acres, in the Battle Lake district, near Dillon, in Carbon Co., Wyo., showing 3 fissure veins, in gabbro, of 15 to 20' estimated width, opened by 305' of work, including a 65' shaft and 70' tunnel, showing ore giving assays of 18% copper. Company paying taxes yearly.

BABINE BONANZA M. & M. CO.

BRITISH COLUMBIA

Jas. Cronin, mgr. Owns a group of claims at the head of the Tuchi river in the Babine range, Skeena district, 22 miles by trail from Smithers, on the Grand Trunk Pac. R. R. Orebodies occur on contact of granite porphyry and altered sediments, and in fissure veins, 1' to 3' wide, in the porphyry. Values are in the silver-lead-zinc contents. Average assays show 20 to 60 oz. silver, 11 to 56% lead, 10 to 34% zinc.

Development: Several tunnels, longest 400', and shafts, deepest 105'. Property has had only a little development work done during the last few years. It is a promising prospect, but handicapped by its inaccessibility. See Ann. Report, Min. of Mines for B. C., pp. 174, 279.

BACA MINING CO.

COLORADO

Property known as the Baca Land grant originally belonged to Senor Don Luis Mana Baca as a gift from a King of Spain. The present owners opened the land to prospectors in July, 1914. B. T. Tipton, mgr., Crestone, Saguache Co., Colo.

Property: 35,000 acres of mineral land, including 23 partially prospected mines near Crestone, Saguache Co., Colo., on the D. & R. G. R. R. The largest mines of the group are the Eastern Star, Sunset, Julia D., Queen Esther, Von Moltke, Great Western and Independent, the latter being the only one developed by the company.

Geology: Ore occurs in 8 well-defined contact veins, along dikes and in true type fissure veins, in pockets and shoots; country rock is altered granite and schistose gneiss, cut by intrusive dikes of porphyry, phonolite and iron stained quartz, containing gold, silver, lead, copper and zinc. Mother Lode said to be traceable for 12 miles on surface. Smelter assays ran \$18 gold, 500 oz. silver and 8% zinc.

Development: considerable amount of old workings, shafts and cross-cuts. There is an unlimited water supply. Ore is shipped to the Pueblo smelter. Property worked by prospectors and lessees under 2-5-year leases. Miners receive free timber, water and assay services and pay 10-15% royalty on ore extracted. At last accounts were planning new Edison type mill.

BACA ORTIZ; COMPANIA RESTAURADORA DE MEXICO

Mine office: Tepehuanes, Santiago Papasquiaro, Durango, Mex. Property is the Candelaria mine, carrying auriferous and argentiferous copper ore. Idle on account of revolution, 1912-16.

BACHELOR KHEDIVE MINES CO. COLORADO

P. O. Box 1,139, Denver, Colo. **Officers:** Henry A. Dubbs, pres.; Henry Lyne, v. p.; J. S. Williams, sec.; W. A. Johnston, asst. sec.; with W. J. Kerscher, T. J. Hyland and W. B. McDonald, directors. L. G. Eakins, gen. mgr., Denver. **Inc. in Colo. Cap.,** \$1,000,000, shares \$1 par, all outstanding. Ann. meeting 1st Monday in October. Company is a subsidiary of the A. S. & R. Co.

Property: 11 claims, patented, 83 acres, at Ouray, is a silver producer. Was leased in 1915. Ore sales 1915 said to have been \$7,630, with net receipts of \$5,920.

BADGER-HALL MINING CO. ARIZONA

Office: 1125 G Ave., Douglas, Ariz. Mine at Paradise, Cochise Co., Ariz. H. C. Beumler, pres.; C. P. Harvey, v. p.; S. S. Badger, sec., all of Douglas, Ariz. **Inc. 1907 in Arizona. Cap.** \$1,000,000, shares \$2 par; fully paid. Is controlled, through ownership of 60% of stock issue, by Bisbee-Sonora Development Co., which see.

BAGDAD COPPER CO. ARIZONA

Office: Suite 3249, No. 120 Broadway, New York. Mine at Bagdad, via Hillside, Yavapai Co., Ariz. **Officers:** E. B. Brown, pres.; F. C. Hart, v. p.; B. E. Page, sec.-treas.; Herman Cook, asst. treas.; preceding officers, H. Richardson, Gideon Giroux and G. D. Hopkins, directors. **Inc. in 1911 in Delaware. Cap.,** \$6,500,000, shares \$5 par; outstanding 1,097,428 shares.

In May, 1911, an unsuccessful attempt was made to finance the company by the offer of 100,000 shares to the public at \$4 a share. In Oct., 1912, a 2-year bond on the property was given to the General Development Co. of New York (Lewisohn), and this company at once began drilling operations to develop more ore. Work with 3 churn drills was carried on up to April, 1913, when the bond was relinquished, but a new option on control of the company was taken in Oct., 1913, and was still in force Dec., 1915.

Property: 53 patented claims and 9 unpatented, over 1,000 acres, in the Copper Creek region, Eureka district, Yavapai Co., 26 miles by wagon road from Hillside, on the Sante Fé line to Phoenix. Company has spent over \$600,000 on the property in purchase and in development.

Development: by tunnels and churn drilling. There were about 8,000' of underground workings and 33,255' of drilling Oct., 1915. In 1911 Allen H. Rogers estimated 4,324,500 tons of ore, averaging 1.93% copper. In 1912 F. H. Clark estimated 4,883,600 tons, averaging 1.934% copper. In 1914 H. A. Geisendorfer made detailed estimates of 6,031,000 tons of blocked ore, averaging 1.77% copper and 7,246,200 tons probable ore, averaging 1.60%

copper, a total of 13,277,200 tons of ore, averaging 1.68% copper, underlying 67.88 acres. Average thickness of ore is estimated at 58.4'.

In 1915 a reconnaissance survey for a branch railroad was made. Work planned includes a branch railroad, water-power installation, mining equipment and a 3,000-ton concentrator.

BAILEY COBALT MINES, LTD.

ONTARIO

John L. Woods, pres.; Floyd Weed, supt. Inc. Aug. 15, 1906, in Ontario. Cap., \$5,000,000, shares \$1 par. Trusts & Guarantee Co., Ltd., Toronto, Can., transfer agt. and registrar. In 1914 company, being deeply in debt, including about \$90,000 owing to E. A. Benson, former president, a permanent liquidator was appointed. A Protective Committee was formed by Buffalo stockholders to guard their interests. It is said that E. A. Benson, former president, and other promoters issued 4,250,000 shares of stock to themselves, retaining 750,000 in the treasury for financing the property. This promotion stock, it is claimed, was disposed of, and the treasury stock remained unsold, with the foregone result of such practice. Company now in hands of liquidators.

Reorganization Committee: Because of the financial condition of the company and appointment of liquidators by Supreme Court of Ontario, the following consented to act as a committee and prepare the plan for reorganization: Albert G. Wheeler, Jr., chairman, Wm. E. Stevenson and H. S. Langdon, with Walter Laier, sec., 22 William St., New York. Lawyers' Title Insurance & Trust Co., New York, is depository.

Reorganization Plan: The plan issued by the above committee is dated Oct. 13, 1914, and provides for the formation under the laws of the Province of Ontario of a new company with \$600,000 capital stock, of a par value of \$1 a share. Holders of existing stock consenting to plan shall receive one share of new stock for each ten shares of old. The remaining new stock shall be offered for subscription to stockholders at par, in proportion to their present holdings. New company shall have the power to issue 6% First Mortgage bonds covering its property to Edwin A. Benson, of Chicago, in payment of judgment of \$90,789 held by said Benson against the company.

The suit brought against the former directors by the Protective Committee is still pending, and the Reorganization Committee can do nothing until it is settled.

Property: 38 acres, adjoining the Penn Canadian mine in Coleman Twp., Nipissing district. Several veins have been opened up, from which shipments have been made at different times. Developed by shaft. Lowest workings on the fifth, or 280' level. In 1913 underground work totaled 1,370'.

During first five months in 1914 mine was worked with force of 16 men, doing 600' of development work. Property in charge of caretaker since 1914.

BAKER MILLING, SMELTING & REFINING CO. OKLAHOMA

John Baker, pres., writes that he has never deceived anybody, and simply holds the charter, keeping it in force for the present, with no stock for sale. Unfavorably regarded. See Vol. XI, Copper Handbook.

BAKER MINES CO.

OREGON

John M. Baker, supt. Inc. 1913 as a leasing company to work the Last Chance mine, formerly worked by the Cornucopia Mines Co. The mine is at Cable Cove, near Sumpter, Baker Co., Ore., about 18 miles W. of Copperfield, on the Oregon R. R. & Navig. Co. line.

Ore: massive white quartz containing pyrite, chalcopyrite, zincblende and gold in the Last Chance vein, strike N. 20° E., dip 45° west. **Develop-**

ment: 700' tunnel cutting the vein at 500' depth on the dip, and a 265' winze sunk in the vein with several hundred feet of drifting on the 100' and 200' levels, also crosscuts to surface for drainage.

Equipment: 20-stamp amalgamation mill, cyanide plant, aerial tramway, laboratory, offices and dwelling houses. Employs about 25 men. Company was operating in 1915.

BALAKLALA CENTRAL MG. & SMELTING CO. CALIFORNIA

Address: Coram, Shasta Co., Cal. Inc. in Wyoming. **Cap.**, \$5,000,000, shares \$5 par; one-third of issue owned by Balaklala Consolidated Copper Co., the remainder by another large mining company. Owns 3 claims surrounded on all sides by Balaklala Consolidated Copper Co.'s holdings. Inactive.

BALAKLALA CONSOLIDATED COPPER CO. CALIFORNIA

Office: 111 Broadway, New York. Mine office: Kimberly, Cal. Works office: Coran, Shasta Co., Cal. **Officers:** Thos. W. Lawson, pres.; W. A. Kerr, v. p. and treas.; Frank M. Leland, gen. mgr.; preceding officers and H. W. Hoops, directors. A. R. Buchanan, sec. Inc. Feb. 24, 1906, in Nevada. **Cap.**, \$10,000,000, shares \$25 par. Bonds, \$1,500,000 have been retired.

Company was a reorganization of the Balaklala Mining Co., control of which was sold simultaneously to two parties, making a snarl requiring reconstruction to untangle. Is controlled, through ownership of entire stock issue, by the First National Copper Co. Windsor Trust Co., New York, and Federal Trust Co., Boston, transfer agents; Trust Company of America, New York, and First National Bank, Boston, registrars. Company report for fiscal year ending June 30, 1914, gives cash \$260,762, and since operations were resumed in Aug., 1915, this has been increased to \$308,000.

Management declared a dividend on First National Copper, the holding company, of 25 cts. a share, payable Aug. 25, 1916.

Property: 65 claims, patented, 1,169 acres, also 800 acres of miscellaneous lands, including a smelter site, the town site of Coram and right-of-way for tram line. Mineral holdings are at Kimberly, in the Flat Creek district, 4 miles northeast of the Iron Mountain mine, and adjoin the Trinity mine. Property reported to carry 5 orebodies, with 2 developed. Apparently 4 orebodies are portions of the same ore zone, separated by faulting. Lands carry 3,040' of the strike of the main ore zone, developed for about 1,100'. Country rock is rhyolite, ore occurring in lenticular masses as replacement of country rock. in flat bodies, with slight dip to north, and greatest extension east and west, with a series of north and south step faults, causing displacement from a few feet to more than 100'. The two main orebodies are developed for lengths of 900' and 1,100'. Ore is cupriferous pyrite, copper values being mainly in chalcopyrite, with a little chalcocite and covellite, all carrying gold and silver values, estimated by management to average about 2.65% copper, 0.9 oz. silver and 50 to 60 cts. gold per ton. The larger orebody developing about 1,000,000 tons, gives a typical analysis of 2.7% copper, 0.95 oz. silver, 0.03 oz. gold, 21.4% silica, 31.5% iron, 0.3% lime, 3.4% alumina, 2.2% zinc and 35.2% sulphur.

Principal workings are known as the Windy Camp and Weil. The mine has large reserves of low-grade ore. Development is by a large glory hole, and by tunnels, with upraises, providing for open-cast mining, giving cheap extraction, there being about 20 tunnels, including the Weil tunnel of nearly 6,000' length. Mining operations were resumed Aug., 1913, and were of a desultory nature for 2 years. The property has been working steadily since Aug. 13, 1915, shipping 250 tons of ore daily, increased May 13, 1916, to 300 tons, to the Kennett smelter of the U. S. Smelting Co. under a 10-year contract. Ore shipped assays about 2.85% copper per ton.

Ore reserves: said to be about 3,000,000 tons of 2.83% copper ore with 1.32 oz. silver and 60 cts. gold per ton.

Power equipment includes a steam plant installation of about 1,000 h. p. and electric power. Machinery includes a number of hoists, 5 compound air compressors and about 40 rock drills. Buildings include an office, store, school, hospital, sawmill and about 75 dwellings, all but the necessary mine buildings being located in the town site at the smelter.

The mine and smelter are connected by a Bleichert aerial tram of 16,130' length, of 75-tons hourly capacity, operated by gravity, having 62 wooden towers, highest 85'. The 1,700-ton smelter is thoroughly modern and well equipped. Ore passes through 4x10' revolving sizing drums, coarse material going to the blast furnaces and fines to the calciners. The 500' bin house has bins for ore, fluxes and fuel. The roast building has four 50-ton McDougal calciners.

The furnace building, of steel frame, no wood being used, has three 600-ton water-jacket blast furnaces, each 56x240", first blown in Oct., 1908, and a 17x96' reverberatory furnace, of 150 tons daily capacity, for fines, burning petroleum, the waste heat generating power in 2 Stirling boilers, the power house having 3 additional Stirling boilers, burning petroleum. The converter plant has 96x150" shells of horizontal type, and an electric traveling crane. The product when operating is 99% blister copper carrying 75 oz. silver and 1.5 oz. gold per ton, sent to Perth Amboy works for electrolytic refining. Power plant includes 3 Connersville blowers, each driven by a 450-h. p. tandem compound steam engine, direct-connected. The slag line has electric locomotives.

Although the smelter is about 14 miles from the nearest cultivated lands, the "smoke farmers" of northern California were busy and controversy with the Shasta County Farmers' Protective Association led to the installation of the Cottrell electrolytic flue dust precipitator, which took out the dust, but not the acid fumes, and hence was not successful. The Young process used at Campo Seco (Penn Mining Co.) and the Hall process were also unsuccessful. The Heslewood method in 1915 was the last one to be tried out, but was not satisfactory.

The smelting record is given in Vol. XI, the Copper Handbook.

Production: 1915-16, to June 30, 76,000 tons, netting \$175,000. Management spent \$25,000 on development 1915, and will diamond drill lower workings in 1916, spending 50c on development work for each ton of ore mined.

Property considered good and capable of making money with copper at 14 cts., provided some settlement could be made with the farmers, or a process found for elimination of the sulphurous fumes. Like Trinity Copper, it is a member of the Thos. W. Lawson family. Stock was raised from around \$1 $\frac{3}{8}$ to over \$10 per share in 1915 by a market campaign. Company had \$450,000 in First National Copper Co. treasury and can, in normal times, produce 10,000,000 lbs. per year at a fair profit.

BALAKLALA COPPER CO.

CALIFORNIA

Reorganized as First National Copper Co.

BALBACH SMELTING & REFINING CO.

NEW JERSEY

Office: 580 Market St. **Works:** 111 Passaic Ave., Newark, and on Newark Bay, N. J. **Officers:** Edward Randolph, pres.; C. M. Loeb, v. p.; F. Schmutzer, sec.-treas.; E. E. Dieffenbach, supt.; preceding officers and Jas. F. Bless, directors. **Inc.** 1891 in New Jersey. **Cap.**, \$1,000,000, shares \$100 par, nonassessable, in \$500,000 preferred and \$500,000 common stock; 3,900 preferred and 3,900 common shares issued and outstanding. **American**

Metal Co. is the purchasing and selling agent, but does not control the company.

Plant at Newark comprises an electrolytic refinery, a lead desilverizing plant, and a small copper smelting plant. The refinery has 444 tanks, in parallel, with two 360-k. w. generators. Plant has a capacity of 1,800 to 2,000 tons electrolytic copper per month, employing 150 men. The metallurgical practice of the works ranks deservedly high. The lead refinery, with a capacity of 4,000 tons per month, erected at Newark Bay, went into operation July, 1913. Company does a custom business in ores, bullion, residues, blister copper, etc., containing gold, silver, platinum, copper and lead.

BALKAN BUTTE COPPER MINING CO.

MONTANA

Office: 13 N. Wyoming St., Butte, Mont. Officers: Chas. Steele, pres.; Paul Germolgez, v. p.; Thos. Tomich, sec.-treas. Inc. Jan. 26, 1907, in Montana. Cap., \$450,000, shares \$1 par. Property: 4 patented claims, 80 acres, in Elk Park, Jefferson Co., Montana, shows gold, silver, copper, lead ore. Idle.

BALL COPPER CO.

ARIZONA

Office: 723 Title Ins. Bldg., Los Angeles, Cal. Mine office: Winkelman, Pinal Co., Ariz. Chas. E. Finney, pres.; Edward W. Brooks, v. p.; Robt. J. Simpson, sec.-treas.; preceding officers, C. T. Joslin, Jos. Ball, H. L. McNair and C. E. Finney, Jr., directors. Inc. Feb. 1, 1908, in Arizona. Cap., \$3,000,000, shares \$10 par; \$1,250,000 issued. Bonds, \$50,000 outstanding, at 6%. Annual meeting, third Tuesday in January. Company owns 40,000 shares of the London Arizona Consolidated Copper Co., and has transferred its mineral claims, to that company; they are described under that title.

BALLARD GROUP.

ARIZONA

Formerly under option to the United Verde, Jr., Co. Located at Jerome, midway between United Verde Copper Co. and United Verde Extension on the north and the Copper Chief, Equator and Green Monster on the south. Claims cover an area of 110 acres, 86 patented. Development work amounts to 1,100'. Ore contains copper, gold and silver.

BALTIC MINING CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Mine office: Baltic, Houghton Co., Mich. Works office: Redridge, Houghton Co., Mich. Officers: Wm. A. Paine, pres.; Frederic C. Stanwood, sec.-treas.; preceding officers, Samuel L. Smith, F. W. Paine and Thos. S. Dee, directors; Fred W. Denton, gen. mgr.; John Wagner, purch. agt.

Inc. Dec., 1897, in Michigan. Cap., \$2,500,000, shares \$25 par; fully issued, \$18 paid in. Is controlled, through practically entire stock ownership, by Copper Range Consolidated Co. Owns \$80,000 stock in the Michigan Smelting Co. Annual meeting, first Monday in March. Paid dividends of \$7,950,000 to end of 1913, dividends being \$12.50 in 1905; \$14 in 1906; \$10 in 1907; \$9 in 1908; \$10 in 1909; \$10 in 1910; \$5 in 1911; \$7 in 1912; \$2 in 1913. Net earnings, 1915, were \$949,965, and company ended the year with a surplus of \$1,440,516.

Lands: 800 acres, near the eastern limit of the Michigan copper belt, about 75 acres being on the eastern sandstone and non-mineralized. Holdings comprise all of Sec. 21 except the S. E. $\frac{1}{4}$, and W. $\frac{1}{2}$ of Sec. 20, T. 54 N., R. 34 W. Lands are bounded on the north by the Wheal Kate and Sec. 16 of the Atlantic; on the east by St. Mary's Mineral Land Co.; on the south by St. Mary's lands, lands of Hussey, Howe & Co., and the Trimountain mine; on the west by the Trimountain. Exchanged 39 acres, 1905, with the Atlantic mine, which will enable the Baltic to sink No. 5 shaft to much greater depth than otherwise possible. To the southward

the Trimountain and Champion mines are opened on the same bed, which has a strike of N. 63° E., from Baltic shafts 2 to 5, and to the northward is the Superior mine, on the same bed. The dip of the bed averages about 73°, being the sharpest of any developed cupriferous bed in the Lake district.

The Baltic amygdaloidal bed is exceptionally strong, ranging 15 to 60' in width, and so well mineralized that at most points it can be more or less thoroughly stoped from wall to wall. The great width of the stopes has brought about the use of a walling system, by which waste rock is built into dry walls along the drifts, thus saving timbering, while giving stronger walls than any timber could supply, and saving the cost of hoisting lean rock. The walling system of the Baltic has proven a success under actual test, and is now in general use in the Lake district, the credit being due Mr. Denton. A little melaconite is found in narrow fissures crossing the lode, these being too small to follow, but the black oxide ore mined in the stopes is saved in the milling, carrying 35 to 40% copper as dressed, and smelts readily with the native copper mineral. The native copper of the Baltic is arsenical, and it is probable that some copper arsenides are mined and milled, as narrow arsenical fissure veins occur occasionally in the district south of Portage lake. While the finished copper is arsenical, it makes wire of great tensile strength.

Development: Shafts are numbered from south to north. Mine makes about 2 miles of new openings yearly.

No. 1, the discovery shaft, located between Nos. 2 and 3, was sunk at a wrong angle, and was abandoned at depth of 219'.

No. 2, the southernmost shaft, is 2,566' deep, began production 1906 and furnished about half of the 1915 production. The surface plant at No. 2 includes a boiler house with two 250-h. p. Stirling boilers, and an engine house with a Nordberg air compressor reducing 4,000' of free air per minute to a pressure of 70 lbs. per square inch, and a Nordberg hoist with double-conical drum. The shaft rock house has a crusher operated electrically, and the shaft has concrete stringers.

No. 3 shaft, 1,170' northeast of No. 2 and 2,926' deep, has a steel shaft rock house of the circular type, with 1,200-ton bins, equipment including a 16x18" engine, two 18x24" Blake crushers and a large crusher operated electrically.

No. 4 shaft, 900' northeast of No. 3 and 2,667' deep, has a frame shaft rock house sheathed with steel, 36x71', with 17x31' wing, 88' high, with 1,400-ton rock bins and two 18x24" Blake crushers.

No. 5 shaft, the northernmost, 885' N. E. of No. 4 and 1,624' deep, has a shaft rock house duplicating that at No. 4. Stoping was done on the 9th and 14th levels, inclusive, and drifts run to the Atlantic boundary. The ground was considerably disturbed in the upper levels, but is growing more settled at the bottom, and good showings are reported on the West lode. Hoist is a duplex Nordberg, good for 1,500' depth. Shaft has been abandoned and ground tributary thereto is mined and ore hoisted through the No. 4 shaft.

Hand power cranes for handling mass copper have been installed at all shafts, and the mine has electric pumps. In 1915 installation of additional dynamo for underground haulage and construction of transformer house for new transmission line from stamp mills was completed.

The compressor house, between shafts Nos. 3 and 4, is 36x58' in size, with concrete foundations, stone walls and steel roof, housing a compressor with capacity to reduce 4,000 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. Adjoining is a boiler house of similar material, 49x76', with wing 12x62', having four 250-h. p. Stirling boilers and a 140' self-supported

steel smokestack. This boiler plant supplies steam for shafts 3 and 4. A new boiler plant was constructed in 1916. Adjoining the boiler house is a 360' coal trestle, of 5,000 tons capacity, underneath being a 5x8' concrete tunnel, through which coal is hauled in tram cars, on a down grade, by endless cable. The mine has a complete electric light plant. A considerable town has grown up about the mine with well-built dwellings for employes, on lands owned by the company. The property is served by the Painesdale branch of the Copper Range railroad, under the same control as the mine.

The mill, on Lake Superior, one-half mile west of the Atlantic mill, went into commission Dec., 1901, and was enlarged, 1907. The building is of structural steel, on stone foundation, equipped with 4 Allis simple heads of 500 to 625 tons daily capacity each, and 2 Nordberg compound heads of about 800 tons daily capacity each, giving the mill a capacity of about 4,000 tons daily. Equipped with Wilfley tables, Woodbury jigs and Deister concentrating tables for treating the finer slimes. The mill has crushing rolls and a Huntington mill for regrinding, and a settling tank for slimes. Mineral carries about 60% fine copper. Power is furnished by a 500-h. p. 14x32" Nordberg cross-compound engine, and a 180-h. p. auxiliary engine.

Adjoining the mill is a boiler house with five 250-h. p. Stirling boilers and a Green fuel economizer. Draft is secured by a set of duplex fans, driven by the mill engine, with a concrete smokestack 226' high and 8' in diameter. Behind the boiler house is a 25,000-ton coal storage yard, for the joint use of the Baltic and Atlantic mills, coal being brought to the boilers, through tunnels, by gravity. A 1,250-k. w. electrical plant, installed 1912, at the Baltic mill, supplied power for a number of regrinding mills at this and other stamp mills of the parent company.

Water for the Baltic and Atlantic mills is furnished by a \$150,000 gravity dam across the mouth of Salmon Trout river. The entire steel structure is anchored to a 2" steel base plate, at the bottom of the concrete, by a large number of 1½", 2" and 2½" steel rods, of 15 to 30' length. Water is taken from the dam about 20' below the crest by three 38" riveted steel pipes, one on the Atlantic and two on the Baltic side. Surmounting this structure is a trestle of the Copper Range railroad.

Production:

	Rock Stamped.	Copper Produced.	Yield Per	Cost	Price
	Tons	Pounds	Ton. Lbs.	Per Pound	Received
1906.....	649,932	14,397,557	22.15	09.53c	19.05c
1907.....	761,288	16,704,868	21.94	10.34c	17.28c
1908.....	764,117	17,724,854	23.19	08.28c	13.39c
1909.....	814,260	17,817,836	21.88	07.98c	13.00c
1910.....	781,419	17,549,762	22.46	08.32c	12.74c
1911.....	696,795	15,370,449	22.06	09.09c	12.54c
1912.....	652,433	13,373,961	20.50	10.94c	16.16c
1913.....	333,289	7,736,126	23.21	11.91c	14.89c
1914.....	324,433	7,001,945	21.58	11.17c	13.38c
1915.....	378,443	12,028,947	31.79	09.50c	17.40c
	6,156,409	139,706,305	22.69	09.42c	14.90c

The ultimate productive capacity of the mine cannot be predicted with safety, but the present milling capacity is equal to making nearly 25,000,000 lbs. fine copper yearly, and ultimately this output, or even a greater production, should be reached. The management is of the best.

BALTIMORE COPPER MINING CO.

MONTANA

R. L. Clinton, pres.; T. J. Fenlon, sec.; Jacob Matson, lessee. Property: The Baltimore mine, Boomerang gulch, 4 miles from Boulder, Jef-

erson Co., shows pyritic ore with sphalerite, silver-bearing galena and a little chalcopyrite. Developed by tunnels and stopes. See Bull. 527, U. S. Geol. Survey, p. 121, for description of mine. Shipments in 1914 said to have returned 25 oz. silver, \$2 gold, 9% lead, 2½% sulphur and 4½% iron.

BALTIMORE COPPER SM. & ROLLING CO. MARYLAND

(Baltimore Copper Works), Fourth Ave. and Fifth St., Canton, Baltimore, Md. Jos. Clendenin, pres.; Wm. H. Peirce, v. p.; Edw. Brush, v. p.; H. A. Thoman, sec.; Chas. N. Sappington, treas. Company succeeded the Baltimore & Cuba Smelting & Refining Co., which built the first American copper smelter, 1845, and is controlled, through stock ownership, by American Smelting & Refining Co. (American Smelters Securities Co.).

Lands: 40 acres, located on one of the best harbors of the Atlantic seaboard, with direct rail connections, being very advantageously located for both domestic and foreign business. The plant is large and modern, including a smelter, nickel refinery, electrolytic plant, and sheet copper rolling mill. The electrolytic refinery, of 600 tons daily capacity, has anodes arranged on both series and multiple plan. Material treated is entirely auriferous and argentiferous, being received in the form of blister copper from various western states, and from several foreign countries. Works employ about 1,500 men.

BAMAR COPPER CO. MONTANA

Mine office: 410 Daly Bank Bldg., Butte, Mont. M. J. Scott, pres.; F. H. Butler, v. p.; J. B. Frisbee, sec.; M. A. R. Scott, treas. Inc. Sept. 24, 1910, in Montana. Cap., \$1,500,000, shares \$1 par, nonassessable. Annual meeting, first Tuesday in June.

Lands: 12 claims, 230 acres, in the Summit Mountain district, near Buxton Switch, in the foothills of Fleecer mountain, 13 miles southwest of Butte. Claims were bought of Butte & Buxton Copper Mining Co. for 150,000 shares of Bamar stock. Lands carry several veins, of which 1, of 50' estimated average width, opened on surface for 6,000', was mined 1890, by several shallow shafts, for silver-lead ores. Country rock is granite, markedly similar to that at Butte, covered by 1 to 8' of wash, with a mineralized zone of about one-half mile width carrying 4 veins, with a diorite dike to the northward. Shallow pits and trenches show continuity of the veins, which are leached at surface, carrying a little carbonate ore below commercial tenor.

Development: Includes several shallow old shafts, and the 180' two-compartment Linda shaft, also the 700' Linda tunnel, with a total of about 1,000' of workings. The tunnel shows a ledge, carrying a mineralized 10' streak along the footwall showing mainly pyrite, with some argentiferous chalcopyrite and occasional carbonate stains, and a highly silicious gangue. Property has yielded ore carrying 1 to 36% copper and 43 oz. silver per ton, with up to \$2.50 gold, also galena assaying 11% lead, 24 oz. silver and \$1 gold per ton.

Equipment: Includes a 40-h. p. boiler, 20-h. p. hoist good for 500', 2-drill air compressor and several mine buildings. Company plans deepening shaft, drifting and crosscutting. Property considered promising.

BANKER MINE. COLORADO

Dr. G. Johnson Rittenhouse, owner, Los Angeles, Calif. Ray J. Barber, mgr. and engr. **Property:** On Breece Hill, near Leadville, Lake Co., Colo. \$200,000 claimed to have been expended on development work and equipment under former management. Mine closed down 12 years ago without showing returns for money invested and sold for taxes to present owner. Planning to unwater shaft and develop orebody in 1916.

BANNACK CONSOLIDATED MINING CO.**MONTANA**

Property reported sold, 1915, for \$75,000 to Bannack Gold Mining Co., which see.

BANNACK GOLD MINING CO.**MONTANA**

Office: 331 D. F. Walker Bldg., Salt Lake City, Utah. Mine address: Bannack, Beaverhead Co., Mont. Officers: John F. Cowan, pres., Ogden, Utah; W. C. Ebaugh, sec.-treas., Salt Lake City; G. T. Hansen, managing director; above, with W. J. McCornick and B. Binnard, both of Salt Lake City, directors. C. W. Stallings, supt.

Inc. April, 1915, in Mont. Cap., \$1,000,000, shares \$1 par. Title Guarantee & Trust Co., New York City, transfer agt. and registrar. Stock listed on N. Y. Curb and Butte Exchange.

The first discovery of gold in Montana was made in the Bannack district in 1862, and in that year the placers are reported to have produced \$600,000 in gold. "Quartz" mining began very shortly after. In 1863 a 6-stamp mill was in operation. A reasonable estimate from available data puts the total production of the district to 1905 at not less than \$4,600,000. From 1905 to 1913 the production reported is approximately \$2,000,000. The ores have been of value almost wholly on account of their gold, but they contain also some silver, lead and copper. The district has been comparatively inactive during the last twelve years. The Bannack property has been operated in the past in a desultory manner by owners and lessees.

Property: adjacent to the town of Bannack, at an altitude of 5,935', consists of the Golden Leaf group of 8 patented claims, part interest in 2 claims, the Junction mill-site, with underground rights, also an additional area of 200 acres, besides the underground rights in Excelsior and Horace Placer mill-sites. Nearest shipping point is at Grant, 12 miles from Bannack, on the Pittsburgh-Gilmore Railroad, which connects with the Oregon Short Line at Armstead.

Geology: the rocks of the Bannack district consist of Paleozoic limestone intruded by a nearly circular shaped boss of syenite about $1\frac{1}{4}$ miles in diameter. Around the edges of this intrusive is formed the irregular contact deposit on which the company's claims are located. The orebodies are along the contact or in irregular masses in the limestone and vary in width from 1' to 30' and even 40', averaging about 10'. The high grade bodies vary in length from 50' to 100'; the milling orebodies are of much greater extent. The best ore is usually in the widest parts of the vein, and is for the most part very soft, requiring little blasting, though the ground stands well without timbering. A large tonnage of shipping ore, estimated at over \$1,300,000, has been removed from the property, leaving in the mine large reserves of milling grades of ore. See U. S. G. S., Bull. 574, pp. 72-75.

Development: approximately 13,000' of underground workings to a depth of 600'. The Priscilla tunnel, the main working adit, was driven 800' to the contact at an elevation of 90' above creek level, and cuts the contact 250' below surface, though the highest point of contact on the surface will be 800' above the Priscilla tunnel.

Ore reserves: estimated June 1, 1915, as 100,000 tons of \$8 to \$10 gold per ton, ready for milling; this tonnage has been increased by later work and latest estimate is: 118,000 tons of old ore, varying from \$6 to \$12 per ton; 79,500 tons of new ore, varying from \$5.50 per ton for 50,000 tons to \$11 per ton for 8,500 tons; and about 6,000 tons higher grade ore, varying from \$15 to \$650 per ton. In addition to the above, work is being done on 10 new ore faces. There are also 10,000 tons of dump ore, said to average \$10 per ton. Values are principally all gold, silver contributing \$0.50 to \$1 per ton. No account has been taken in above estimate of ore below the

Equipment: a well-equipped surface plant, also a reduction plant; the first unit of the cyanide plant, now being built, will have a daily capacity of 150 tons. It is expected to start operating in Sept. The plant will use the continuous counter-current decantation process. Power for mine and mill will be furnished by a hydro-electric plant at the mill; water being obtained from Grasshopper Creek, $2\frac{1}{2}$ miles above the mill, furnishing a net working head of 39'. During the winter when water is not available a Diesel oil engine will furnish the power.

Milling costs estimated not to exceed \$2 per ton; mine and overhead costs not to exceed \$1 per ton. Average mill-heads are estimated at \$10 per ton, with an extraction of over 90%.

Mine is well developed and ore reserves, as estimated, are sufficient for 4 years' operation. The possibility of developing new orebodies seems good and operating costs should be low. Using modern methods and under an efficient management, the Bannack mine has great possibilities and is very favorably regarded.

BANNER & BANGLE MNG. CO.

MONTANA

Address: Leo Greenough, mgr., Old Nat'l Bank Bldg., Spokane, Wash. Mine 5 miles from Troy, Lincoln Co., Montana, said to have an ore shoot 1,000' long, developed by 5 tunnels over a vertical height of 2,500', with commercial ore on each level. Ore contains lead and zinc.

Company owns a water right which will be utilized for developing electric power; dam now under construction. A railroad will be built from Troy to the mine and a 250-ton mill erected 2 miles from Troy. Employs 400 men at present. Improvements estimated to cost \$500,000.

Reported in April, 1916, that property had been acquired under lease and bond by Snowstorm Mines Cons., which see.

BANNER GOLD MNG. CO.

COLORADO

Address: 516 Exchange National Bank Bldg., Colorado Springs, Colo. **Officers:** J. T. Hawkins, pres.; J. R. McKinnie, v. p.; E. C. Sharer, sec-treas.; A. D. Aitken, asst. sec. and treas. **Cap.,** \$2,000,000, shares \$1 par. Treasurer's statement Jan. 1, 1916, shows 11,000 shares in treas., and cash on hand \$185. At last accounts taxes paid to 1915; liabilities, \$490. Last stockholders' meeting June, 1903. Listed on Denver and Colorado Springs Exchanges.

Property: 7 claims, patented, 68 acres, on Beacon Hill, Cripple Creek, show 3' fissure vein, containing gold and silver, and the C. K. & N. vein, 3' wide where cut. **Development:** 90', 110' and 400' shafts, with prospecting on 3 levels. Worked in 1915 by lessees through the 700' level of the Henry Adney shaft on adjoining property, and produced \$1,800. Gross production to Jan. 1, 1916, \$8,149.

BANNER M. & M. CO.

IDAHO

Peter Steele, pres. and gen. mgr.; John C. Abels, v. p., St. Paul, Minn. **Property:** at Silver City, Owyhee Co., Idaho, an old-time producer, idle for some time owing to lack of funds. Authorized bond issue in 1915 has provided sufficient capital for immediate resumption of development work.

Ore: quartz. **Development:** by tunnel. **Equipment:** 4 (Nissen)-stamp mill, compressor and electric power.

BARABA MINING CO.

WISCONSIN

Idle. **Office and mine:** Mellen, Ashland Co., Wis. Nelson Baraba, Sr., pres.; Nelson Baraba, Jr., sec. **Inc.** 1906. **Cap.,** \$1,000,000, shares \$1 par. Has a shallow shaft showing ore assaying 2.8% copper, with traces of gold and silver.

BARBAROSSA MINE.

CALIFORNIA

Address: M. B. Kerr, gen. mgr., 626 Mills Bldg., San Francisco, Calif.; B. G. Parlow, owner, Loraine, Kern Co., Calif.; F. W. Snyder, supt.

Property: 140 acres, near Loraine, 15 miles N. E. of Caliente, Kern Co., Calif., shows 7 veins, of which the Barbarossa alone has been worked. It has a N. W.-S. E. strike, with dip 40° E., average width 4', granite foot-wall, and quartz-porphry hanging-wall.

Ore: free milling gold. **Development:** tunnels. **Equipment:** 5-stamp mill, 1½ miles from the mine, gasoline power. Said to have total production of \$60,000 up to 1915.

BARE HILL MINE.

MARYLAND

Office: Care of F. R. Van Antwerp, owner, Hornell, N. Y. Mine near Mt. Washington, Baltimore Co., Md. Is an old and slightly developed mine, showing auriferous and argentiferous chalcopryrite and bornite. Idle many years.

BARNES-KING DEVELOPMENT CO.

MONTANA

Address: Butte, Mont. Mine offices: Kendall, Fergus Co., and Marysville, Lewis & Clark Co., Mont. **Officers:** C. W. Goodale, pres.; A. J. Davis, v. p.; J. E. Corette, sec.; C. C. Swinborne, treas.; preceding officers, C. R. Leonard, F. L. Melcher, I. A. Heilbronner, T. A. Marlow, directors. Geo. P. McGee, mgr.; Jerome Place, Helena, Mont.; I. H. McCormick, supt. Piegan-Gloster; W. R. Price, supt. Shannon mine.

Inc. 1907 in Montana. **Cap.**, 400,000 shares, \$5 par; all issued. Security Transfer & Registrar Co., New York City, transfer agt. Annual meeting, first Wednesday in March. Stock listed on Butte Exchange.

Balance sheet as of Dec. 31, 1915, shows assets of \$2,428,737, which includes properties and options, \$1,903,092; buildings and supplies, \$277,059; N. Y. City bonds, \$54,764; bullion in transit, \$54,801; accounts receivable, \$7,995; cash, \$117,046; liabilities include a surplus of \$288,486.

Net profits have been as follows: in 1913, \$24,700; in 1914, \$150,419; in 1915, \$147,968, and \$26,011 for quarter ending March 31, 1916. Operating profits of the North Moccasin property in 1915 were \$201,568, while the Piegan-Gloster operated at a loss of \$15,993; \$20,276 was expended on Shannon development. First dividend of 7½c a share was paid March 1, 1916; 2nd of 7½c paid June 1, 1916.

Property: originally owned and operated by the company, consisted of the Barnes-King group of claims at Kendall, developed by the Barnes-King mine.

In 1912, after working spasmodically for several years and spending considerable time and money in an unsuccessful search for new orebodies, the mine was closed permanently, with about \$300,000 left in the treasury. The management now determined to acquire a good property for the company. In 1912 the North Moccasin property, covering about 2,000' in length along the ore-bearing formation adjoining the Barnes-King on the north and the Kendall on the south, was purchased for \$150,000; \$5,000 cash, and the remainder to be paid from net working profits in no prescribed time. In addition a working option was obtained on the Piegan-Gloster property, located near Marysville, Lewis & Clark Co., Mont. Title to this property was obtained in 1913; purchase price paid for it was \$100,000, with an additional cost of \$8,200 for 5 adjoining claims. The Gloster mine had been worked from 1880 to 1888, when the pumps were pulled. It is credited with a production of several million dollars of gold and silver bullion.

In 1915 the company bought all the property of the Kendall Gold Mng. Co., adjoining the North Moccasin on the south, for \$100,000, and an option was taken on the Shannon mine, 2½ miles southwest of Marysville; purchase price is approximately \$228,000, payable from mine profits.

At the end of 1915 the company owned, or had under option, the following properties: At Kendall, the Barnes-King group, 23 claims, 286 acres;

North Moccasin group, 6 claims, 67 acres; Kendall group, 21 claims, 266 acres; total, 50 claims, 619 acres; at Marysville, the Piegan-Gloster group, 34 claims, 391 acres, and the Shannon group, 6 claims, 92 acres, exclusive of 2 claims purchased late in 1915. In Jan., 1916, the company took an option and lease on 2 claims, known as the Parker-Brownlow group, in the Rimini district, 22 miles from Helena. The orebodies at Kendall are irregular replacement deposits in limestone, dipping 25°. The ores are mostly soft and well oxidized.

Development: the North Moccasin group was first worked through the Barnes-King shaft; later the Santiago shaft was completed to the 500' level and it is now the main working shaft. Orebodies have been opened up on different levels to a depth of nearly 800'. In 1915 underground work totaled 6,600'. The Kendall mine was closed by former owners in 1913, after having exhausted all known orebodies to a depth of 560'.

The old Gloster mine had been opened by a vertical shaft to a depth of 500', and a winze sunk 300' below the 500' level. The Piegan claim had been developed by tunnels. The B. K. Co. has unwatered the Gloster mine to the 400' level and opened up the Piegan orebody above water level. The Norman tunnel, connecting the No. 4 Piegan tunnel and Gloster workings with the tramway to the mill, was driven 900'. All ore mined in 1915 from the Piegan-Gloster ground averaged \$6.20 gold and \$1.14 silver per ton.

The Shannon mine, previous to the time of its being taken over by the B. K. Co., was opened by a tunnel with 2,000' of underground workings, chiefly on the vein which, in the tunnel, is 300' long, from 4 to 10' wide, and averages \$15 in gold per ton. The B. K. Co. has sunk a 215' winze on the vein, dip 70°, and opened up the 200' level for a distance of 400' to the W. and 122' to the E. The vein is in slate, and where crosscut on the 100' level is said to have a width of 15'. Ore taken out in drifting amounted to 800 tons of ore, assaying \$16 per ton. The Shannon mine is 13,000' from the Gloster mill, to which it is being connected by an aerial tramway.

Equipment: at the North Moccasin there is a double drum electric hoist, compressor, and a 1,400' electric tramway from mine to mill, which is on the original B. K. group, and has a nominal daily capacity of 200 tons, allowing a 10-days leaching period. There is also a small oil fired roaster for treating the black unoxidized ore found in the eastern ore shoot. There is a 500-ton cyanide plant on the recently acquired Kendall property. The Piegan-Gloster equipment includes a double drum electric hoist, 100-h. p. motor and compressor at the Gloster shaft. The old Gloster 60-stamp mill has been equipped with a No. 5 Symons gyratory crusher, three 10' Chilian mills, 2 Wilfley tables and a cyanide plant. The mill is to be connected to an all-slime treatment plant with a daily capacity of 150 tons. The Shannon mine has a 75-h. p. electric driven compressor.

Power: the purchase of the Kendall property included a 400-h. p. hydro-electric plant on Warm Springs creek, 6 miles from the mine. This plant furnishes power for the Kendall properties, and also supplies the towns of Hilger and Kendall with lighting facilities. The Piegan-Gloster and Shannon properties obtain power from the Montana Power Co.

Production: North Moccasin—

	Tons Milled	Assay per Ton	% Rec.	Lbs.Cons. per Ton			Total Costs per Ton	Net Profits per Ton
				KCN.	Zn.	Lime

(a) Mining and milling figures cover 12 mos.; costs per ton cover 16 mos. (b) 7 mos. operation. (c) Extracted during development work.
 (d) Loss.

Company is prospecting the Woodrow Wilson claim on Bald Mountain, Rimini district. Two carload shipments made to the East Helena smelter early in 1916 gave returns of 1.14 oz. gold, 1.8 oz. silver.

The present officers, by obtaining good properties, have built up a strong company, which promises to be one of the regular dividend payers. This is the result of several years of untiring effort, often under discouraging conditions and in the face of ridicule. The management deserves great credit.
BARNEY COPPER CO.

ARIZONA

Office and mine: Globe, Gila Co., Ariz. Hon. J. D. Coplen, pres. and gen. mgr.; J. B. Coplen, v. p.; W. J. Miller, sec.; foregoing, with F. F. Green and J. N. Porter, directors; 1st Nat'l Bank, Globe, treas. Inc. Aug. 27, 1910, in Arizona. Cap., \$5,000,000, shares \$5 par; nonassessable; fully paid and fully issued, 999,995 shares being given for property. Annual meeting, first Tuesday in October.

Lands: 34 claims, partly fractional, patented, about 560 acres, adjoining the land of the Inspiration Cons. Copper Co. on the west, show Pinal schist and quartzite, partially covered by conglomerate. Property has a number of old pits and shafts, deepest 400', in Gila conglomerate. **Equipment:** includes 15-h. p. gasoline hoist, and there are 7 camp buildings.

In April, 1911, Barney stock was offered for sale in Kansas City at 50 cts. per share. In Jan., 1912, an option on property was given to the General Development Co. for \$600,000. This company put down 2 holes, one at the bottom of the 400' shaft passed out of schist and into dacite and at 1,030' into granite porphyry. This drill hole encountered an artesian flow at 960', which is a valuable asset of the company. The General Dev. Co. soon after relinquished its option and the property has since been idle. Drill hole No. 2 was discontinued at 600' without disclosing ore. The Barney Co. claims to have put down two holes, one of which passed thru 20' of ore, about 1.2% copper, before being lost. Second hole was also lost. Company is planning to do more development work. The surface conditions on property are unpromising, the rocks gray and unaltered and this area is not favorably regarded.

BARSTOW MINE.

COLORADO

Office: 42 Broadway, New York. Mine office: Ouray, Ouray Co., Colo. Works at Ironton, Ouray Co., Colo. J. H. Fennessy, trustee, New York office; A. R. Wilfley, cons. eng.; C. R. Wilfley, mgr., at Denver; O. W. Knous, supt.; A. C. Haskell, mill supt.; W. C. Fulton, purch. agt.

Property: 27 claims, patented, 199 acres mineral land with 5 acres mill site, in Red Mountain district. Ore found in fissure vein in andesite with N. W. strike and dipping 75°, is reported as 8' wide and carries 0.75% copper, 2.5% lead, 4% zinc. Developed by 2 shafts, 425' and 145' deep, and 2 tunnels, 3,200' and 3,300' long. Total length of underground workings 10,300', reported to have developed 17,000 tons of ore with 8,000 tons in sight.

Equipped with 2 hoists, electric compressor, 6-drill capacity, frame stamp mill and concentrator with 2 Blake crushers, 9x15", 40 stamps, 20 Wilfley tables, 2 slime tables and buddles. Mine has 115 h. p., mill 175 h. p.

Mine is 11 miles from D. & R. G. R. R. and the Silverton R. R., operating in the summer, is 1 mile away.

Company plans extensive development and installation of electric hoist, saw mill, etc. Mill in operation from June 1 to Dec. 1 only. Property developed by lessees in 1914-15, reported to be making regular shipments to the Durango smelter.

BASIN MNG. CO.

IDAHO

Wallace, Idaho. **Incorporators:** John P. Gray, Therrett Towles and F. Pfirman. Control purchased May, 1916, by the Hercules Mining Co., which bought 700,000 shares of issued and 500,000 shares treasury stock.

Inc. July, 1915. **Cap.**, 1,500,000 shares, par value 5c. This company is a reorganization of the old Basin Mng. Co., involved in litigation since 1907. Owns 5 patented claims in the Burke section, south of and adjoining the Hercules mine, between the Laclede on the west and the Stanley group. It is valuable to the Hercules Co. for tunnelling from the Hummingbird and Stanley into the Hercules mine.

BATES LEASING CO.

COLORADO

Inc. by Central City parties in October, 1913. **Property:** Bates mine in Chase Gulch, Gilpin Co., Colo., which had been idle for 28 years. **Ore:** occurs as pyrite and chalcopyrite in shoots about 3' wide, carrying gold, silver and copper. Milling concentrate averages 1.23 oz. gold and 7.80 oz. silver; smelter returns average 2.50 oz. gold, 14 oz. silver and 2.94% copper. The ore is treated at the Polar Star mill, leased by the company at Black Hawk and concentrate shipped to Globe smelter at Denver.

Development: consists of winze sunk from the 400' level and drifting from it.

BATOPILAS MNG. CO.

MEXICO

Address: 50 Broad St., New York City. **Mine office:** Batopilas, Chihuahua, Mex. **Officers:** F. D. Merchant, pres.; Sam'l Elliott, N. F. Palmer, v. ps.; preceding officers, Jas. Marwick, Geo. W. Field, Alton B. Parker, Gates W. McGarrah, Louis H. Scott, Walter M. Brodie, Geo. Rowland, E. L. Stevens, all of New York. F. A. Drury, Worcester, Mass.; Robt. M. Currier, Boston, directors; E. W. A. Jorgensen, sec. and asst. treas.; L. H. Scott, treas.; John R. Harbottle, gen. mgr.

Cap., \$9,000,000; shares \$20 par; outstanding \$8,931,980; nonassessable. **Bonds:** authorized \$1,000,000, 1st mtge. 6's, dated Dec. 1, 1887, for 15 years, outstanding \$367,900. Bonds were extended to Dec. 1, 1917, with provision that 10% of amount outstanding at that time, \$45,900, should be retired each year, beginning in 1908. Shares are listed on the New York and Boston Stock Exchanges. Annual meeting 3d Tuesday in April. Union Trust Co., New York, and State St. Trust Co., Boston, transfer offices. Farmer's Loan & Trust Co., New York and Old Colony Trust Co., Boston, registrars.

A concession from the Mexican government was granted April 12, 1886, to A. R. Shepherd for 20 years, covering 61 sq. miles of the richest mineral district in and around Batopilas, together with water rights of the Batopilas River. This concession was assigned to the Batopilas Mng. Co., which was organized Oct. 13, 1887, in New York, as a consolidation of 6 companies, Cons. Batopilas Silver Mng. Co., New Giral Silver Mng. Co., Descubridora Cons. Silver Mng. Co., Camuchin Cons. Silver Mng. Co., Valenzuela Cons. Silver Mng. Co., Animas Silver Mng. Co.; other mining properties were also purchased. The concession expired in 1906, and was renewed for 10 years, expiring May 31, 1916. It gave the company full mining rights over the area mentioned, the company being required to purchase outright at least 100 hectares, 240 acres, per year.

Balance sheet as of Dec. 31, 1914, shows assets, \$12,794,479, of which amount \$12,485,435 represents mines, real estate, buildings, equipment, etc.,

and \$207,322 current assets; current liabilities \$37,258, accrued liabilities \$24,950. Total surplus Dec. 31, 1914, \$3,365,771. Oct. 15, 1915, the company had cash in New York banks, \$87,247.

Property: located around the town of Batopilas, in the Andres del Rio mining district, in the extreme southwestern part of the State of Chihuahua, Mexico. When 1913 began the company had titles in the silver zone for 865 hectares, and in the auriferous zone, 20 miles up the river, for 64 hectares. On account of the revolution it has been impossible, during the last 3 years, to comply with the provisions of the contract and time allowances have been granted. In addition the company owns 130,000 acres of ranch and timber lands.

Ore: native silver occurring with calcite in veins, which are mainly in diabase. Some of the veins have contained very rich ore. The San Miguel property contains many veins, some of which have been worked for more than 100 years. The main veins are the San Antonio, Cancio, Cinco de Mayo, Diablo, Carmen, and Veta Grande now worked out. During 6 months in 1913 the average assay for low grade ore from the San Miguel mine, which produces $\frac{3}{4}$ of the silver output, was 9.27 oz. per ton, while the ore from the Porfirio Diaz Tunnel group averaged 6.55 oz. per ton. High grade ore produced during .8 mos., 609 tons, averaged 411 oz. per ton.

Development: over 10 miles of adit levels and 77 miles of workings. The principal mines are the Porfirio Diaz Tunnel on the Todos Santos Group, the San Miguel mine, El Escritorio, and El Camuchin. Work at El Escritorio and El Camuchin was unsatisfactory in 1913 and they were closed down.

Equipment: the Hacienda San Antonio contains 100-stamp mill with a daily capacity of 40 tons, electric light plant and air compressor, all run by Pelton wheels capable of furnishing 550-h. p. The San Miguel Hacienda contains a 25-stamp mill for high-grade ores, cyanide plant, amalgamating pans, refining plant, a roasting and lixiviation plant for concentrates, with a daily capacity of 8 tons, machine shop, foundry, office buildings, dormitories, boarding house, etc.

Power obtained from the Batopilas River by means of a dam 764' long and an aqueduct 9,900' long. The water after being used in the San Antonio plant, is siphoned under the river and runs to the San Miguel Hacienda, where 32-h. p. is developed by turbines.

Production and profits: have been as follows:

Year	Tons Ore Treated	Oz. Silver	Operating Profits
1915.....	156,862
1914.....	6,630	188,087	\$ 10,556
1913.....	20,887	374,174	60,068
1912.....	34,032	564,398	80,046
1911.....	33,073	516,688	17,409(a)
1910.....	43,612	730,697	106,258(a)

(a) Deficit.

During the last 3 years the Mexican revolution has interfered with the operations of the company, the mines were worked only about 8 mos. of each year with a consequent reduction of output. The future of the property depends upon new development.

BATTLESHIP MINING & MILLING CO. **NEW MEXICO**
 Idle many years. **Office:** 412 Mack Bldg., Denver, Colo. Mine near Lordsburg, Grant Co., N. M. Dr. O. L. Blachly, pres.; O. B. Crum, sec-treas. **Cap.,** \$100,000, shares \$1 par. **Lands:** 2 groups of 2 claims each, area 79 acres, in the Virginia district, 3 to 4 miles from Lordsburg, con-

nected therewith by a good wagon road. Property has no surface improvement, but is opened by 478' of shafts, crosscuts and open cuts, showing ores that are said to have given average returns, from smelter shipments to El Paso, of 8 to 14% copper, 1 to 20% lead, 22 oz. silver, and \$10 to \$20 gold per ton. Property reported under lease to Andrew Bain of El Paso in 1915.

BAY STATE MNG. & DEV. CO.**UTAH**

Address: American Fork, Utah Co., Utah. Geo. B. Tyler, pres.-mgr.; J. H. Wooten, v. p.; J. W. Storrs, sec.-treas.; with A. Chipman and E. J. Bennett, directors. **Property:** at American Fork canyon, developed by tunnels. A shipment made in Oct., 1915, said to have averaged \$21 per ton.

BEAD LAKE GOLD-COPPER MINING CO.**WASHINGTON**

Office: 600 Columbia Bldg., Spokane, Wash. Geo. C. Geisler, pres.; W. E. Allen, sec.-treas. and gen. mgr.; preceding officers, Geo. Potter, A. B. Babb and Jos. Rosslow, directors. **Inc.** Dec. 15, 1910, in Washington. **Cap.**, \$3,000,000; shares \$1 par; assessable; 1,800,000 shares issued, 100,000 shares were offered at 50 cts. a share in 1916 by a New York brokerage firm. **Annual meeting,** first Tuesday in March.

Property: 17 claims, about 7 miles from Newport, Wash., shows 1 undeveloped vein and 2 veins which have been developed and show silver-lead ore to a depth of 300' and 267' along a vein averaging 8' wide. **Development:** includes 300' of shafts and over 4,500' of tunnels. Company claims about 25,000 tons of good concentrating ore blocked out.

Equipment: includes 60-h. p. boiler, steam power, air compressor, diamond drill, smithy, and buildings sufficient to accommodate 50 men. **Management** planning to build a concentrator and begin shipments in 1916.

Company bought controlling interest in Comstock mine and adjoining claims, 8 miles from Newport, in Feb., 1913, for \$25,000 cash and an interest in the company.

BEAR GULCH MINING CO.**MONTANA**

Office: care of Alex. Johnson, Clark Bros. Bank, Butte, Mont. **Mine** at Twin Bridges, Madison Co., Mont. **Property:** the Mountain View group, carrying auriferous and argentiferous copper ores, opened by tunnel about 3,000' long. Has steam power and air compressor. Property has little ore and is not on the contact zone; its chief value is for a tunnel site for the Moffat claims, which adjoin it, and are being worked, 1916, by George C. Stone, former manager of the Alex Scott Mine at Butte. The Moffat Mine has developed a granite lime contact with basic carrying magnetite that varies from 5' wide for 1,000' along the tunnel, to 100' wide near the face. This ore, averaging 2.1% copper, is shipped (1916) to the East Butte smelter. **Tramming** to R. R. costs \$2.00, railroad freight \$1.75 and smelting charge \$3.75 per ton.

BEAR TOP MINE**IDAHO**

Formerly owned by Bear-Top Orofino Cons. Mng. Co., which owed \$162,000 and went into hands of receiver, in 1913. **Property:** in Murray district, Coeur d'Alenes, near Wallace, Shoshone Co., Idaho, shows ore in pockets and irregular shoots, with silver-lead values. Leased to E. Z. Christian, May, 1914.

BEARUP GROUP**NEW MEXICO**

Owned by D. E. Bearup, Cooney, N. M. Located in the Mogollon-Cooney district, Socorro Co., N. M. **Claims:** 4 on Gold Hill and 9 in western part of district. The Gold Hill claims show the Maud S. lode. Vein where opened has width of 2' to 13', and is said to assay \$12 per ton. There is also a narrow high-grade streak. **Development:** by tunnels, long-

est 600'. Total amount underground workings 1,500'. Small shipments have been made of ore extracted during development work, 50 tons said to assay \$98 to \$235 per ton and 50 tons shipped to concentrator said to assay \$21 per ton. There is a small 2-stamp mill and gasoline engine on the property. Employs 6 men.

BEATSON COPPER CO.**ALASKA**

Entire property, assets and liabilities acquired by the Kennecott Copper Corporation, and company dissolved Oct. 4, 1915.

BEAVER AUXILIARY MINES CO.**ONTARIO**

Three-quarters of stock is held by Beaver Cons. Mines, Ltd., which see. H. Donaldson, supt. **Property:** 120 acres, at Elk Lake, Ont., carries silver ore, mainly of milling grade. **Development:** 330' main shaft, crosscuts and drifts. **Equipment:** hoist and surface buildings.

BEAVER-BUTTE COPPER CO.**UTAH**

Office and mine: Beaver, Beaver Co., Utah. Sherman McGarry, supt. **Inc.** 1909, in Utah. **Cap.**, \$50,000; shares 10 cts. par; assessable. Property idle from 1912-1914, owing to lack of capital, but development work resumed in summer of 1914, and property reported under lease to Senator A. B. Lewis, representing Eastern capitalists, 1916.

Lands: 15 claims, unpatented, in the Newton district, 8 miles from a railroad, show gold-silver ore and are believed to carry the continuation of the Sheep Rock ledge. **Development:** by a 150' two-compartment shaft, crosscuts and drifts. Company claims to have 2' of \$10 ore on surface and 19' of \$8 ore on the 150' level with 1' of \$18 ore along the foot-wall side. Plans installing an electric hoist and drifting on the 150' level. See Beaver Gold Mines Corp. and remember Majestic Mines.

BEAVER CONS. MINES, LTD.**ONTARIO**

Lumsden Bldg., Toronto, Ont. **Mine office:** Cobalt, Ont. **Officers:** F. L. Culver, pres.; C. C. James, v. p.; H. E. Tremain, sec.-treas.; preceding officers, Wm. T. Mason, F. L. Lovelace, W. E. Stevenson, F. C. Finkenstaedt, directors; J. W. Moffett, supt., c/o Beaver Mine, Cobalt.

Inc. Feb., 1907. **Cap.**, \$2,000,000, shares \$1 par, fully paid, all issued. Union Trust Co., Toronto, and Security & Registrar Co., New York, transfer offices. Annual meeting in April.

Balance sheet of Feb. 28, 1915, showed assets of \$2,589,901, which included accounts receivable \$5,064, due from smelters \$31,282, ore on hand or in transit, \$216,550, Beaver mine \$1,000,000, Beaver Auxiliary Mines stock, \$141,750, Temiskaming Mng. Co.'s stock \$9,928. Liabilities showed accounts payable \$9,009, depreciation account \$93,040, profit and loss balance \$480,981. The company had \$35,128 invested on capital account. One dividend, \$60,000, was paid in 1914, and a 3% dividend on April 27, 1915. At close of 1915 the company had bullion in storage and due from smelters aggregating an estimated value of \$170,278.

Property: 2 claims, patented, 60 acres, in Coleman Twp., Cobalt district, adjoining the Temiskaming mine, and 120 acres, James Twp.; also 12 months option from Nov. 1, 1915, on Kirkland Lake Mining Co., Teck Twp., and a $\frac{1}{4}$ interest in the Beaver Auxiliary Mines Co.

Ore: silver, cobalt, and arsenic in narrow calcite veins, in diabase and the Keewatin formation. Ore occurs as high-grade in pockets and shoots, or as milling ore. The mineralized lode strikes N. E., 10° dip.

Development: by vertical shaft, 1,234' deep at end of 1915; sinking of this shaft will be continued to the diabase-Keewatin contact at a depth of 1,600' to 1,700'. During 1915, underground work totaled 5,211'. Ore extraction was kept at a minimum, due to low price of silver.

Equipment: includes a 150-ton concentrator, giving an extraction of about 80%, blacksmith shop, dwellings, etc.

Production:

Year	Tons Milled	Tons Concts.	Oz. Ag. in Concts.	Total Oz. Ag. Prod.	Earnings
1915	30,093	474	349,900	746,310
1914	26,724	348	415,707	900,000	\$158,465
1913	25,256	324	379,764	762,699	168,630

The company plans to develop its Kirkland Lake property. It has a surface plant of 2 boilers, small compressor, and mine buildings. Vein has been proven for 1,400'. Company's agreement with the K. L. Gold Mines, Ltd., demands a monthly expenditure of \$2,000 for development for a year.

BEAVER COPPER CO.

UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine at Milford, Beaver Co., Utah. A. D. Moffat, pres.; A. J. McMullen, v. p. and gen. mgr.; F. S. Walden, sec.-treas.; preceding officers, A. D. McMullen, Lewis Merriaru, Chas. A. Weaver and Jas. H. Paterson, directors; D. P. Rohlfing, cons. engr. Inc. 1907, in Utah. **Cap.**, \$1,000,000; shares, 10 cts. par; assessable; all issued. Annual meeting, third Monday in March.

Property: 4 claims, 75 acres, in the Beaver Lake district, carrying an ore zone for about 6,000', with 2 veins, known as North and South, that are fissures in monzonite. Six veins about 4' wide, developed by 4 pits and a 140' shaft, with 308' of workings, show oxidized and sulphide ores, latter chalcopryrite, estimated by management to average 2% copper, 6 oz. silver and 80 cts. gold, per ton. Company has raised sufficient funds to install complete equipment and has begun sinking shaft to 400' level, February, 1916. Shipped 8 tons in 1914 and a total of 80 tons to date.

BEAVER GOLD MINES CORP.

UTAH

Officers: A. B. Lewis, pres.; E. C. McGarry, v. p.; M. P. Braffet, sec.-treas., with B. F. Caffey, W. L. Cook, W. H. Stephens and S. Glazier, directors. A. B. Blainey, mgr. Inc. in 1914. **Cap.**, \$3,500,000, shares \$1 par.

Property: claims covering the Sheep Rock, gold vein in the Newton district in eastern Beaver Co., 12 miles northeast of Beaver City, Utah. **Development:** by a shaft 100' deep, in 1915. Company claims to have cut a vein of milling ore, 15' wide on the 60' level, and 18' wide on the 100' level. At last accounts was planning on sinking an additional 60'. In Jan., 1916, the company is reported to have obtained a bond, \$240,000, on the old Sheep Rock mine, a former high grade producer, developed to the 300' level and equipped with a 5-stamp mill. Promotion methods have caused much comment.

BEAVER HORSESHOE GOLD MNG. CO.

UTAH

Beaver City, Beaver Co., Utah. **Officers:** H. B. Ward, Mina, Nev., pres.; John Waldis, Tonopah, v. p.; C. R. Bunker, Salt Lake City, sec.-treas., with Fred Zimmerman, J. W. Kelley and F. E. Becker, directors. Inc. in May, 1915. **Cap.**, \$250,000. **Property:** 19 claims located on south Fork of Beaver river, 14 miles east of Beaver City. Surface samples are said to assay \$24.60 in gold and 2 to 11% potash.

BEAVER LAKE GOLD MNG. CO.

SASKATCHEWAN

Prince Albert, Saskatchewan, Canada. Fred Cox, sec., at last accounts. **Property:** in April, 1914, the company acquired 32 claims of the Prince Albert Expl'n Co., located on the north shore of Beaver Lake, 118 miles from Le Pas, the nearest R. R. point, is on the Can. Northern Ry., out of Winnipeg.

Development: has been done on the Prince Albert claim where, at the contact of the Huronian schist and Laurentian diorite, a 48" quartz outcrop can be traced for a considerable distance. A 70' incline shaft, sunk on the vein, is said to show a 4 to 5' vein averaging \$16 in gold and 2 oz. silver per ton. Company was planning development work at last accounts.

BEAVER MINES CO. UTAH

Office: 222-23 Continental Bank Bldg., Salt Lake City, Utah. Mine address: Marysvale, Piute Co., Utah. A. H. Cutright, pres. and mgr.; Geo. R. Raymond, v. p.; W. E. Kilburn, treas.; A. Maxwell, sec., and Alex. Beckstead, directors. Inc. Dec. 17, 1910, in Utah. Cap., 1,000,000 shares, 1 ct. each; issued, 850,000 shares. Annual meeting, second Saturday in January.

Property: 11 claims, 220 acres, in the Ohio district, 5 miles from D. & R. G. R. R. Claims carry copper-bearing gold-silver ores in fissure veins in andesitic porphyry, giving average assays of from \$1 to \$60 per ton. There are 7 veins, 2 developed by crosscut tunnels, 725' and 72' long, to reach the main vein. Mine has only a prospecting outfit. Management plans drifting and developing on several veins in 1916.

BEAVER MOUNTAIN MINING CO. ALASKA

Idle. Mine office: Sulzer, Prince of Wales Island, Alaska. Henry Miller, pres.; George Comer, mgr., at last accounts. **Lands:** on the southern side of Beaver mountain, Hetta inlet. **Development:** by tunnels, showing ore carrying copper, nickel and cobalt. Operations confined to annual assessment work.

BEAVERHEAD MONTANA COPPER MNG. CO. MONTANA

Ray A. Cobban, Butte, Mont., sec.-treas. Cap., \$100,000, shares \$1 par. Company obtained a lease and bond on the old Jack Rabbit mine, in Argenta, Beaverhead Co., Mont. **Developed:** by a shaft 100' deep. Ore said to assay 22 oz. silver, and 12% copper.

Equipment: includes a gasoline hoist. Company was planning at last accounts, to sink the shaft an additional 100' and do development work.

BECK TUNNEL CONSOLIDATED MINING CO. UTAH

Office: Knight Investment Co., Provo, Utah. Jesse Knight, gen. mgr.; Wm. Homer, supt. Inc. 1904 in Utah. Cap., \$100,000; shares 10c par; all issued; assessable. Prior to Nov., 1907, paid \$675,000 in dividends, none paid since.

Property: 119 acres, patented, located in the Tintic district, Juab Co., adjoining railroad. **Ore:** gold, silver, lead, zinc. **Development:** by 2 shafts, one double-compartment and 1,100' deep, and by a 1,000' tunnel. For the past year the mine has been worked by lessees; company is now doing prospect work on the 1,100' level.

Production:

	Ore Tons	Gold Oz.	Silver Oz.	Lead Lbs.
1912.....	6,298	1,073	95,031	1,863,559
1913.....	5,371	584	119,120	1,778,317
1914.....	2,934	322	66,605	1,260,713

Shipments of zinc ore, said to contain 36% zinc, started in 1915.

BEE BEE MINING CO. UTAH

Office: Newhouse Bldg., Salt Lake City, Utah. Mine office: Goldstrike, Washington Co., Utah. **Officers:** H. G. Snyder, pres.; John A. Bryson, v. p.; Rolla E. Clapp, sec.-treas.; with E. J. Lund and Thos. Marioncaux, directors; S. F. Snyder, supt.

Inc. April 13, 1915. Cap., \$100,000; shares 10c par, issued \$70,000.

Property: 3 claims, unpatented, in the Goldstrike mining district, Washing-

ton Co. **Development:** in July, 1915, claimed to show 20,000 tons of \$10 to \$35 free milling ore in fissure vein. Employed 3 men at last accounts.

BEECHER GOLD MINING CO. WASHINGTON

Address: Orient, Wash. A. A. MacDowell, pres.; W. J. Gilpin, v. p.; Alex A. Anderson, sec.-treas.; with Ralph Warmelle, Washington, D. C., directors, at last accounts.

Property: near Orient, Perry Co., Wash., has the Beecher mine on it in which gold-quartz ore occurs in stringers.

In June, 1915, C. C. Arrasmith, of Republic, Wash., is reported to have taken a lease and bond on the mine for \$180,000.

BEEMER CONSOLIDATED GOLD & COPPER CO. ARIZONA

Owns the Stormcloud mine at Mt. Union, 12 miles south of Prescott, Yavapai Co., Ariz. Idle, 1915.

BELCHER MINING CO. ARIZONA

Address: Providence, Ariz. Owned by E. S. Pennebaker, W. W. Lewis and Frank S. Kirkland of El Paso, Tex. **Property:** the Red Rock, Belcher, Mammoth and Eugenia claims in Big Bug district, Yavapai Co., Ariz., 13 miles south of Prescott.

Ore: copper, gold and silver, with gold values predominating, occurs as a sulphide in a vein, in Yavapai schist. The vein is from 17' to 27' wide and claimed to be traceable for 6,000' along surface, traversing entire ground from N. E.-S. W. Average assays said to be \$5.90.

Development: in the Red Rock mine is by several shafts, one 300' and adits, underground workings totalling about 500'. **Equipment:** mill, compressor, hoist, operated by electricity. Power is obtained from the Arizona Power Co. Management expects to be able to mine and mill its product at \$1.48 a ton, leaving a net profit of \$2.50.

Ore reserves: estimated by F. W. McConnell at over \$1,000,000 ore in sight.

BELCHER MINING CO. NEVADA

Merged with Jacket Crown Point Belcher Mines Co. (which see), March 10, 1915.

BELCHER MINING CO. WASHINGTON

Mine office: Republic, Ferry Co., Wash. Jos A. Anderson, pres. and mgr. **Property:** the Belcher claim shows irregular replacement deposits of pyrite associated with garnet, epidote, tremolite and magnetite in marble and interbedded shale, etc., intruded and metamorphosed by monzonite porphyry dikes and sheets.

Development: by 3 tunnels showing sulphide orebody 5'-20' thick, on dip plane. (see Bull. 550 U. S. G. S. 1914, pp. 167, 175, 179).

A 1,000' aerial tram connects the tunnels with ore bins on the railroad. Water, brought 2,000' from Lambert creek, through a steel pipe, generates electric power, supplemented by a gasoline auxiliary plant. **Equipment:** includes an air compressor and power drills.

Property was reopened May, 1911, and shipped low-grade gold-bearing pyritic copper ore to Granby smelter. Mine reported, 1914, to have opened up lenses of low-grade ore on the lower level.

BELGIUM-BOHEMIAN MINING CO. CALIFORNIA

A Belgium company, that in 1914, owned the Highland mine, Liberty mining district, 11 miles S. E. of Etna mills in the Klamath Reserve, Siskiyou Co., Calif. **Property:** 100 acres at 6,400' elevation. **Ore:** free-milling gold in shoots 130' long and 2' wide; strike N. 40° E.; dip 30° S. E. Foot-wall is a dioritic schist and hanging-wall is quartz porphyry.

Development: tunnels with several thousand feet underground workings; main tunnel 600' long. All work has been done near apex of moun-

tain so that only a shallow depth has been obtained. Supplies are packed in over a 3-mile trail.

Equipment: includes a 10-stamp mill, run by gasoline. Company employed 26 men in 1914. Mine is credited with a production of \$350,000.

BELMONT-BANNER MINING CO.

IDAHO

Office: Eagle Block, Spokane, Wash. Mine at Delta, Shoshone Co., Idaho. I. Waldo Murphy, pres.; J. H. Masks, sec., and D. W. Jackson, directors. **Cap.**, \$1,000,000, shares \$1 par. **Property:** 3 claims, 1 fractional, near Delta, showing a fissure vein of 3 to 4' surface width, in quartzite, carrying silver, lead and copper values. Mine has about 700' underground workings. Company doing annual assessment work only.

BELMONT-CANADIAN MINES, LTD.

BRITISH COLUMBIA

500 Bullitt Bldg., Phila., Pa. Inc. 1915, by the Tonopah Belmont Development Co. **Officers:** Clyde A. Heller, pres.; K. Kitto, sec.-treas.; C. S. Verrill, resident director in Vancouver; F. W. Holler, supt.

Company exercised an option Jan. 1, 1916, on a gold mine, belonging to Surf Inlet Gold Mining Co., Surf Inlet, B. C. **Ore:** gold-quartz with iron sulphides. Orebody proven to depth of 500'. Average assays run \$12 per ton.

Development: for year ending Mar. 1, 1916, consisted of about 4,000' of tunnel and drifting by machine drills. **Ore reserves:** estimated at 200,000 tons developed. **Equipment:** power plant, boilers, compressor, office buildings and bunk houses. Plan driving tunnel 2,000' to cut orebody.

Company spent \$150,000 during life of option and \$500,000 installing 250-ton mill, hydro electric power, and cyanide plant. A new company will be formed to operate the property, control of which will be held by Tonopah Belmont Development Co., through ownership of 80% of the stock.

BELMONT MILLING CO.

NEVADA

Officers: Clyde A. Heller, pres., 500 Bullitt Bldg., Philadelphia, Pa.; Wm. M. Potts, v. p.; K. Kitto, sec.-treas.; R. G. Wilson, asst. sec.-treas.; preceding officers, Rich. G. Park, M. B. Cutter, S. D. Sinkler, T. W. Synnot, Jos. C. Fraley, C. Berkeley Taylor and H. C. Brougher, directors.

Inc. May 11, 1910, in N. J. **Cap.**, \$250,000, shares \$1 par, non-assessable, all owned by Tonopah Belmont Dev. Co., which see.

BELMONT MINING CO., LTD.

IDAHO

Office: Wallace, Shoshone Co., Idaho. Mine in Two Mile gulch, Evolution district, 3 miles north of Wallace. Inc. 1900. **Cap.**, \$100,000, shares 10 cts. par, with 200,000 shares in treasury. Reorganized 1909, 1,000,000 shares at \$1.00 par, assessable; placing 500,000 shares in treasury. William Sheave, pres.; D. C. Nicholson, v. p.; Frank P. Hess, sec.-treas., with Ida Sheave, Christ Anderson, Dr. J. C. Witherspoon and John Mickels as additional directors (Jan., 1916).

Property: 12 claims showing several contact veins in Burke and Revett quartzite. Ore is said to assay 2.5% lead, 2 oz. silver, 15% manganese with only a trace of copper. **Development:** by tunnels and total work amounts to 1,770'. Continued development work is planned for 1916. **Claims** are in a silver-lead district and copper values incidental. Is a development proposition only.

BELOROPHON MINING CO.

UTAH

Cap., \$100,000, shares 10 cts. par; 850,000 shares issued. **Property:** 250 acres adjoining the Live Yankee group on the north in American Fork Canyon, Utah. The Live Yankee vein is said to cross the claims. **Ore:** occurs in contact between lime and quartzite, showing gold, copper, silver and lead values.

Shipped 1 carload in Sept., 1914, running 1.38 oz. gold, 10 oz. silver, 5.8% lead and 3.45% cu. Planning to resume development work in 1916.

BEN HARRISON MINE

OREGON

Owned by A. L. White, Lima, Ohio. W. C. Fellows, mgr. **Property:** 10 claims, 7,000' above sea level, in Grant Co., Ore., in N. W. corner of Sec. 36, T. 9 S., R. 34 E., 23 miles by road west of Whitney, and 28 miles by road from Sumpter, the nearest railroad stations, was purchased in 1911 for \$45,000. \$200,000 is said to have been spent before production started.

Ore: occurs in the Ben Harrison vein, strike N. 3° E., dip 67° E., which varies in width from 18" to 21", with an average stopping width, where opened, of 77". The vein is a brecciated replacement in granodiorite. **Ore minerals** are pyrite, stibnite, chalcopyrite, sphalerite, pyrrargyrite and stephanite, with gold of about equal value to the silver in the ore.

Development: by adits, the lowest at the 600' level. Several hundred feet of drifting has been done on the various levels and at the beginning of 1915 there was said to be above the 500' level, 87,000 tons of ore blocked out on 3 sides, with an average value of \$10 per ton. The 600' level has had several hundred feet of drifting done; here the ore is said to be 20% higher in value than the ore in the upper levels.

Equipment: includes 20-stamp mill, tube mill, classifiers and vanners. A 75% extraction was obtained in the mill. This low recovery and high cost of transportation of concentrates caused the owner to plan on building a roasting and cyanide plant in 1915. No later returns. See Mineral Res. of Ore., Vol. 1, No. 8, p. 176.

BEN HUR LEASING CO.

WASHINGTON

S. P. Domer, sec., Rookery Bldg., Spokane, Wash. **Mine office:** Republic, Ferry Co., Wash. Alex. McKay, supt. **Property:** held by lease from Ben Hur Mining & Milling Co. (See Vol. X, Copper Handbook), consists of the Little King and Queen claims on Gold hill, developed by 800' shaft, showing gold, silver and copper ore. **Equipped:** with steam power, compressor, etc. New plant installed 1913. Property was intermittently worked, 1911-12, and drifting done on the 200' and 400' levels. Mine was operated under lease by Cons. Mining & Smelting Co. of Canada, Ltd., during 1914-15, but given up early in 1916.

BEN HUR MINING CO., LTD.

MONTANA

Address: Saltese Supply Co., Saltese, Missoula Co., Mont. D. S. Dickson, pres.; Frank H. Bell, v. p. and purch. agt.; Chas. J. Luedke, sec.; C. A. Keating, treas.; preceding officers, Peter Peterson and A. J. Matthiesen, directors. **Cap.,** \$1,500,000 shares, \$1 par. Annual meeting, last Saturday in April.

Lands: 5 claims, adjoining the Last Chance mine, 3 miles from a railroad, showing a fissure vein, in quartzite, of 10 to 60' width at surface. **Development:** by 3 crosscut tunnels, the lower, of 1,100', cutting a vein carrying silver-lead and gray copper ores. Property considered a promising prospect.

BENDIGO MINES CO.

CALIFORNIA

Address: Vidal, Riverside Co., Calif., J. E. Meyer, mgr. Purchased, Jan., 1915, the Morgan and Bradley group of claims, 7 miles from Vidal and did development work during the year. The ore is copper-gold and returns from shipment of several cars are said to be \$50 per ton. **Developed:** by a 150' incline shaft, with a 60' vertical winze from lower level which is claimed to have opened up a 3' vein of ore. \$75,000 said to have been taken from the small block of ground opened by the shaft. There is

also a large deposit of gypsum on the property. Company plans to sink a vertical shaft connecting with the winze.

BENGAL TIGER-GORDON MINE**COLORADO**

Operated by Twin Lake M. & M. Co., which see.

BENNETT-STEPHENSON M. & M. CO.**NEW MEXICO**

Officers: O. Jolliffe, pres.; Jas. C. White, v. p.; C. B. Gill, treas.; J. L. McCullough, sec. Annual meeting April 7th at Las Cruces. Controls through stock ownership the Organ Mountain Mining Co., which see. Fully described Vol. X. Mines under 10-year lease to the American S. & R. Co.

BENTON MNG. CO.**IDAHO**

Address: Burke, Shoshone Co., Idaho. **Officers:** John Callahan, pres. and mgr.; F. P. Candee, sec.-treas.; E. G. Gnaedinger, cons. engr.; with Fred Richardson and L. V. Tyler, directors. **Cap.**, \$1,250,000; shares \$1 par; issued 1,165,000 shares; assessable; 3 assessments totaling 10½ mills have been levied, last one, 3 mills, was 2 years ago. \$1,000 in treasury in Oct., 1915. Annual meeting in April at Wallace.

Property: 6 claims on east side of Gorge Gulch, adjoining the Stanley and Moonlight, near Burke, supposed to have a continuation of the Stanley vein system. **Ore:** silver-lead-copper-antimony, occurring in fissure veins, said to assay 60% lead, up to 12% copper and up to 65% antimony. Lead vein dipped out of winze at 60' depth and at 200' the McNeil fault was passed through. Crosscutting at this level exposed lead vein to the S. E., but main orebody is supposed to be deeper.

Development: adits, 200' winze from main adit level, with over 1,000' of drifting. Employs 7 men.

BERNICE RED ROCK MINING CO.**MONTANA**

Address: P. O. Box 616, Butte, Mont., Sam Jones, pres., Bernice, via Basin, Mont.; H. D. Fagon, v. p.; N. B. Lewis, sec.-treas.; J. B. Anderson, agt., 1924 13th St., Washington, D. C.

Property: 4 claims located in sec. 10, T. 6 N. R. 6 W., 3 miles from Bernice station on Gr. Northern Ry., 26 miles from Butte, shows a large vein with scattered mineralization of lead carbonate and sulphide ore; but low average values, containing gold, \$0.40 to \$1.60, silver 2 to 7 oz., 0.5% copper, lead 2%, and zinc 5%. Course of vein is N. 70° W. with dip 70° S. and where exposed has a width of 8' in the upper tunnel, and 23' in lower tunnel.

Development: 2 tunnels, upper one 150' long, the other 100' vertically below the upper, cut the vein at a distance of 200' from the portal. A 20' winze was sunk on the vein from the lower level. The ore can be cheaply mined and is capable of flotation, but value is low. Company officers and stockholders are all colored men.

BERTHA A. MINING CO.**MISSOURI**

Office: Webb City, Mo. **Inc. in Missouri.** **Cap.**, \$10,000. Operates a lease on 160 acres of mineral land, owned by the Newell-Morse Royalty Co., in S. 12, T. 28, R. 33, Webb City, Jasper Co., Mo. Company is one of the largest producers of zinc lead concentrates in the Prosperity district. **Developed:** by 8 shafts to a depth of 221' and equipped with 1,000-ton concentrator, pumps, steam drills and hoist. Company employs 125 men.

BESSIE-CORA MINING CO.**COLORADO**

Ralph Roseberry, supt. Owns a group of claims, including Silver-Wave, at Montezuma, Summit Co., Colo. **Ore:** silver-lead, in paystreak, 2½' wide and proven for about 100' in Silver Wave ground. **Development:** tunnel, winze and drifts. **Equipment:** aerial tramway, air-compressor and electric power. Employs about 15 men.

BEST CHANCE MINING CO., LTD.**IDAHO**

Main office: 203 Paulsen Bldg., Spokane, Wash. **Mine office:** Wallace, Shoshone Co., Idaho. Chas. H. Bell, pres.; W. A. Cox, v. p.; Chas. A. Gram, sec.-treas.; Robert J. Edgren, mgr. and purch. agt. Other directors, J. A. Scott and Chas. Harr. Inc. March, 1909, in Idaho. **Cap.**, \$1,500,000, shares \$1 par, fully paid and assessable.

Lands: 12 claims, unpatented, in the Yreka mining district of the Coeur D'Alenes, Idaho.

Fissure veins said to be 100' wide in Burke quartzite with 2,800' of underground work. Development work in progress Dec., 1915. Is primarily a silver-lead property.

BETTY ALDEN MINING CO.**MONTANA**

Mine office: Basin, Mont. Thos. C. Kelly, sec.-treas., and Thos. F. Fitzgerald, directors. Inc. about April, 1913, in Arizona. **Cap.**, \$4,500,000, shares \$15 par. Succeeds the Montana Mineral Land Development Co., and apparently has taken over its Montana holdings.

Property: 19 claims, 300 acres, known as the Eva May and Red Bird group, on Cataract creek, showing fissure veins in granite carrying sulphide ores, mainly chalcopyrite. Mine has a 1,200' vertical shaft and tunnels of 525', 1,400' and 800', developing a vein of 100' claimed width, giving assays of 6% copper, 6 to 12% lead, 15 to 30 oz. silver and 20 cts. to \$3 gold per ton. The property shows a considerable body of low to medium grade ore, and the management estimates 50,000 tons blocked out for stoping which probably is an overestimate.

Equipment: includes a 200-h. p. steam hoist, having two 75-h. p. hoists, one being a 14x16" Vulcan hoist raising single-deck cages, and a 4-drill Ingersoll-Sergeant air compressor. Buildings include machine shop, smithy, carpenter shop, and power house. The concentrator is equipped with a 7x10" Blake crusher, 1 set of rolls, 8 three-compartment jigs and 2 Wilfley tables.

The new company planned unwatering the mine, finishing a tunnel now almost completed to cut the orebody and shipping ore from the King's claim. Editor is familiar with the property and considers it can be profitably worked if railroad were built to the mine. The King tunnel, which was driven to hold some unpatented claims, is drifted along a tourmaline vein 2½ to 3' wide, carrying pyrite, arseno-pyrite, sphalerite and galena. The ore of the Eva May mine is a coarse, white quartz carrying pyrite, chalcopyrite, galena, sphalerite and gray copper with much black tourmaline. The latter caused trouble in concentration work. No recent returns secured.

BEZANT GOLD MINING CO.**COLORADO**

Office: 517 Exchange Bldg., Denver, Colo. **Mine office:** Central City, Colo. **Officers:** O. J. Duffield, pres.-mgr.; G. H. Putnam, v. p.; D. D. Chirley, sec.; C. C. Hendrie, treas., directors. Inc. Aug., 1908, in Colorado. **Cap.**, \$500,000; shares \$1 par; 100,000 outstanding. Dividends to date, \$2.20 per share.

Property: 3 claims, one patented, 14 acres, has a quartz fissure vein in granite and porphyry, 1-5' wide, carrying gold ore with copper sulphides said to assay from 0.20 to 30 oz. gold per ton. Developed by a 500' shaft and about 4,000' of drifts and stopes. Equipped with 50-h. p. electric hoist. Operated intermittently and total production to end of 1915 about \$8,000,000.

B. & H. MINES & MILLING CO. (not inc.)**MONTANA**

Owners: N. J. Bielenberg and W. I. Higgins, Deer Lodge, Mont. H. F. Widdicombe, engr. & supt. **Property:** known as the Bielenberg-Higgins, consists of 20 claims, 10 patented, 360 acres, 3 patented millsites

and 1 unpatented tunnel site, in Bear Gulch, 14 miles from Twin Bridges, Madison Co., Mont., on a branch line of the No. P. R. R.

Ore: complex sulphides, occurs in porphyry and altered granite. There are 9 known veins, said to be traceable for 4,000' and to contain gold, silver, lead, iron and copper values. Veins strike E. W. with dip of 38°, becoming flatter as work progresses; 4 veins have been extensively developed and proven to be from 7' to 105' wide and continuous at depth, containing ore of commercial value, said to average \$4 per ton. Ores are treated by wet concentration, making a recovery of 90%. Concentrates run \$54 to \$80 gold, 11 oz. silver, 25% lead, 2% zinc and 0.5% copper. Ore reserves are estimated approximately at 200,000 tons of \$4 to \$10 ore.

Development: a 7x7' crosscut tunnel, 900' long, drifts, raises and winzes, underground workings, totaling 2,000'. **Equipment:** 100-ton mill, 2 air hoists, pumps, wet concentration plant and compressor, 640 cu. ft. capacity.

Property has been in development stage for several years. Management now plans adding electric power, driving the tunnel to 3,000' and increasing daily capacity of the mill to 300 tons.

BIG BLUE MINING CO.

ARIZONA

Inc. in Arizona. Col. E. F. Brown, owner; J. A. Gaskey, supt. **Property:** the Big Blue and Copper Prince mines on the Hassayampa river, 14 miles from Wickenburg, Yavapai Co., Ariz., showing fissure veins in schist, that yield high-grade silver-gold-copper ore.

Development: by 2 shafts, connected on 200' level, drifts, crosscut and tunnels. An ore shoot developed on 100' and 200' level is now being stoped.

Equipment: includes crusher, pump, gasoline engine, hoisting plant and a concentration mill. Shipped regularly to Douglas in 1914. Ten men employed.

BIG BUTTE MINING CO.

MONTANA

Idle. Company owns 20 acres on S. W. flank of Timber Butte, south of the city of Butte, Mont., and has a lease and bond on Carey claim west of Walkerville, Butte. The latter claim is developed by a 287' tunnel.

BIG CASINO GOLD MINING CO.

CALIFORNIA

Office: Call Bldg., San Francisco, Calif. **Property:** the Mack quartz mine, at Big Oak Flat, Tuolumne Co., Calif. **Ore:** free milling gold in lenses in an E. W. vein, dip 30° N.; width 5'. East of New Mack shaft both walls of vein are in quartz diorite; west the vein is in slate. There are two parallel veins on the property, but most of the work has been done on the Mack-Longfellow vein.

Development: the New Mack shaft, sunk 700' on the vein, is 270' east of Old Mack shaft, 450' deep; drifts on the vein at 100' intervals to the 600' level. Below 600' the vein is in slate.

Equipment: includes 50-h. p. hoist; compressor driven by 100-h. p. motor; and a 20-stamp mill. Pulp from batteries is treated on Frue vaners. Mill is driven by 75-h. p. motor. Electric power furnished by Pacific Gas & Electric Co. 7 men employed at last accounts. Output not given.

BIG CLIFF MINING CO.

CALIFORNIA

Address: Seattle, Wash. M. E. Olsen, pres. and mgr. Company reported to have purchased the Big Cliff mine for \$85,000 in Oct., 1915. **Property:** 6 claims (which include Big Cliff mine), in the Salmon River district, 18 miles from Etna Mills, Siskiyou Co., Calif., said to show a main orebody 200' wide and 2 parallel veins, each 30' wide, carrying milling ore. Company plans building a 200-ton mill and a 7,700' tram connecting the mine and mill.

BIG COTTONWOOD CONSOLIDATED MINING CO. UTAH

Office: Dooly Block, Salt Lake City, Utah. Mine office: Brighton, Salt Lake Co., Utah. **Officers:** J. M. Howell, pres.; Fred E. Rowley, v. p.; Jay Eliot Johnson, sec.-treas., mine supt. and mg. engr.; preceding officers, Wm. Howell and A. M. Cheney, directors. **Inc.** Sept., 1909, in Utah. **Cap.**, \$250,000; shares 25 cts. par, assessable; 900,000 shares issued; listed Salt Lake Exchange. Annual meeting, first Monday in October. **Lands:** 11 claims in South Fork, Big Cottonwood district, Salt Lake Co., carry auriferous and argentiferous lead and copper ore on which work is being done. Driving crosscut tunnel, now 310' to cut fissure veins in lime and quartzite at 700' and 1,000'. No ore reserves developed, as yet. Property is a prospect.

BIG COTTONWOOD COPPER & GOLD MINING CO. UTAH

Office: 521 Atlas Bldg., Salt Lake City, Utah. Mine office: Brighton, Salt Lake Co., Utah. **Officers:** Col. Nicholas Treweek, pres. and gen. mgr.; W. Mont Ferry, v. p.; J. Leonard Burch, sec.-treas.; preceding officers, J. E. Galligher and John S. Bransford, directors, at last accounts. **Inc.** in Utah. **Cap.**, \$1,500,000, increased 1906, to \$3,750,000; shares \$5 par; non-assessable. Is operated as a close corporation.

Property: 140 acres, adjoining the Mountain Lake Consolidated Mining Co., on the southeast, and carrying same ore zone, near the head of Big Cottonwood canyon, and also in the Snake Creek district. **Development:** by a shaft, showing ore assaying up to 8% copper, with small gold and silver values, and a long tunnel with about 2,000' of workings. Mine apparently has considerable bodies of sulphide ore, averaging about 5% copper and \$2 'per ton in combined gold and silver values.

BIG CREEK LEASING CO. IDAHO

Address: Kellogg, Idaho. D. W. Price, pres.; R. R. Price, v. p.; A. O. Larson, sec.-treas.; Wm. Beandry, mgr.; A. E. Miller, supt. **Cap.**, \$50,000; shares \$10 par; all issued.

Company has a 5-year lease, to 1918, on the ground below the 500' level of the Yankee Boy Mng. Co. property (which see). Claims to have spent \$15,000 on development in 1914 and 1915.

BIG ELK MINING CO. MONTANA

Office: Wallace, Idaho. Mine office: Saltese Missoula Co., Mont. **Officers:** E. L. Proebsting, pres.; H. J. Rossi, v. p.; A. H. Featherstone, sec.-treas.; Peter Peterson, gen. mgr.; preceding officers and W. S. Brown, directors. C. F. O. Merriam, mg. eng. **Inc.** April, 1909, in Idaho. **Cap.**, \$2,000,000; shares \$1 par; assessable; fully issued. Last assessment 1 mill per share, July 22, 1914.

Property: 15 claims, 300 acres, unpatented, on Bald mountain, in the St. Joe district, showing 3 fissure veins in St. Regis quartzite, various trenches exposing veins with 4' thickness carrying streaks of chalcopryrite and spathic iron, in spar and quartzite. A carload shipment, to Helena, from an 18' prospect shaft, returned 28.7% copper, 28.9% iron, 15% sulphur and 2 oz. silver per ton. A 125' upper tunnel and a 200' lower diagonal crosscut tunnel show chalcopryrite and bornite, carrying small gold values. The C., M. & St. P. R. R. crosses property. Management considered good and property promising. Four men employed continuously.

BIG FIVE COPPER CO. WYOMING

Main office: Rock River, Wyo. Mine office: Arlington, Wyo. **Officers:** John F. Pierce, pres.; W. A. McIntyre, v. p.-mgr.; R. W. S. Donell, sec.-treas., with Ralph Booth, and S. Morris, directors. **Inc.** in 1908, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; 520,000 shares outstanding. Annual meeting, July 17.

Property: 2 claims, 40 acres near Arlington, Carbon Co., Wyo., shows small vein of copper ore carrying gold and silver values. Only assessment work done, but management plans sinking to 220' and crosscutting at 175' level in 1916.

BIG FIVE MINING CO.**COLORADO**

Office: Cheyenne, Wyo. Mine office: Idaho Springs, Colo. **Officers:** Wm. P. Daniels, pres.; Geo. A. Benton, v. p.; H. C. Von Reimer, sec-treas. Inc. in Wyo., June 1, 1912, as a reorganization of the old Big Five Tunnel Ore Reduction & Trans. Co. **Cap.**, \$750,000, shares \$1 par; issued 400,579. Bonds outstanding July 1, 1915, \$188,210. Treasurer's report for fiscal year ending June 30, 1915, shows cash on hand July 1, 1914, \$8,154; receipts from operations, \$15,163; from assessments \$36,066; other income \$27,508; disbursements during year \$74,601, which includes \$49,252 operations at Idaho Springs, and \$6,291 operations at Frances; salaries \$5,993. Cash on hand June 30, 1915, \$12,290.

Property: company's principal enterprise is the Central tunnel over 9,000' long, at Idaho Springs, developing several claims. During the year 2,047' of drifting and crosscutting was done. The Edgar vein showed up better than the others under development, receipts from Edgar ore were \$10,096. Also owns several patented claims in San Juan County and the Frances property, now idle, in Boulder Co., Colo.

BIG FIVE TUNNEL, ORE REDUCTION & TRANS. CO. COLORADO

Reorganized, 1912, as Big Five Mining Co., which see.

BIG FOUR EXPLORATION CO.**UTAH**

Office: 804 Newhouse Bldg., Salt Lake City, Utah. Inc. Dec., 1912, in Utah. **Cap.**, \$500,000, shares \$1 par; assessable. **Officers:** Morris P. Kirk, pres.; J. H. Leavell, v. p.; John Pingree, sec-treas.; preceding, with E. B. Critchlow and L. R. Eccles, directors. Company operates a 250-ton wet concentrating mill at Atkinson, 7 miles north of Park City, Utah. Mill was constructed to treat a dump estimated to contain over 1,000,000 tons of tailings, the accumulation from Park City mills.

Production: In 1915, 11,365 tons treated; shipping ore totaled 198 tons, yielding 164,509 lbs. zinc; concentrates, average grade 38.4%, totaled 668 tons, yielding 371,538 lbs. zinc. Extraction 62%. A 500-ton addition to the mill is being built.

BIG INTERIOR GOLD MINES, LTD.**BRITISH COLUMBIA**

Alvo von Alvensleben, pres.; A. J. Engvick, sec. **Property:** the Della group of 5 claims, located 9 miles above Great Central lake, near Big Interior copper mine. Claims show a vein of gold-copper ore in porphyry, from 1½ to 5' wide, running north and south and proven by open cuts for a length of 1,700'. Property reported on by W. K. Edwards, whose 2 sets of samples averaged \$25 and \$15.44 per ton in gold.

BIG JIM GOLD MINING CO.**ARIZONA**

Office: 561 I. W. Hellman Bldg., Los Angeles, Cal. Mine office: Oatman, Mohave Co., Ariz. **Officers:** C. C. Spicer, pres.; E. H. Newland, v. p.; S. M. Warmbath, sec.; N. A. D'Arcy, treas.; with H. E. Wood, directors; A. G. Keating, supt. Inc. March, 1915, in Ariz. **Cap.**, \$100,000, shares 10c par, non-assessable; outstanding, \$63,000. Stock listed in Los Angeles and San Francisco, and on New York Curb.

Property: 9 claims, 112 acres, unpatented, in the Tom Reed Gold Road mining district, located in three different groups, two of which adjoin the Tom Reed and United Eastern properties. The third group, 3 claims, is 3,000' west of the Tom Reed.

Ore: gold occurring in andesite. On the 400' level company claims to have cut a 46' vein that will assay from \$10-\$75 per ton, with N. W. strike and dip of 72°.

Development: 500' vertical shaft, with drifts on the 400' and 485' levels; drifting is in progress on both levels. **Equipment:** includes a 25-h. p. gasoline hoist and Ingersoll-Rand compressor. There has been no production. Property is yet in the development stage. Stock sold at 10c per share a year ago, advanced to \$2.50 and was selling under \$1, June, 1916, evidently the result of stock manipulation.

BIG LEDGE DEVELOPMENT CO.

ARIZONA

Office: 310 Sellwood Bldg., Duluth, Minn. Mines near Humboldt, Ariz. Ernest Le Duc, pres.-gen. mgr.; Chas. Batre, v. p.; D. D. Murray, sec.-treas. **Cap.**, \$1,500,000, shares \$1 par; 900,000 issued; increased in March, 1916, to \$7,500,000, shares \$5 par. Old shares convertible into new stock, share for share, name being changed from B. L. Mining Co. to present title. Registrar & Transfer Co., 32 Nassau St., New York, registrar. Claimed to have \$65,000 in treasury Sept., 1915. Company is a reorganization of the Big Ledge Mining Co. of Ariz. Deed conveying 34 claims to new company filed March 1, 1915, at Humboldt. Purchase price said to be in excess of \$250,000. In Oct. the company obtained the additional neighboring groups, Henrietta and Butternut, 1½ miles apart.

Property: original holdings, about 3½ miles from Humboldt, were claimed to show a disseminated orebody 700' wide and 3,000' long, containing copper ore that would average 2¼% copper with gold and silver values additional. The management also claimed there were fissure veins of "considerable importance" on the property. The large orebody was proven by very shallow workings, deepest a 38' shaft. The company commenced developing and exploration by sinking 3 shafts, one on the Copper Kettle claim, supposed to be sunk 300', a second on the Mountain View claim; to be sunk 250', and a third on the Bee claim, to be sunk 300', and churn drilling on the Pick and Shovel claim.

The Henrietta group, when acquired by the company, was developed by 4 shafts and 2 tunnels, with several thousand feet of underground workings and equipped with a 20-stamp mill. The mine is credited with a past production of several hundred thousand dollars. It was closed in 1904 and later reopened and worked by lessees. The Big Ledge Copper Co. is said to have shipped several cars of ore from the property and claims reserves of 100,000 tons \$20 ore; values are in copper, gold and silver content.

The Butternut mine, idle since 1906, had been credited with a production, under former management, of 6,000 tons ore, averaging 12% copper, 4 oz. silver and \$1.20 in gold. It was developed by a shaft to a depth of 310', with several hundred feet of underground workings. The Big Ledge Copper Co. claims ore reserves of 15,000 tons, gross value \$258,000; values are in the copper, gold and silver content. Shipments are said to have been made recently and company planning to build a mill on the property.

The several properties of the company may have merit, but the methods of promotion, the grossly exaggerated reports sent out by the company cannot be criticized too severely.

BIG PINE CONSOLIDATED MINING CO.

ARIZONA

Prescott, Ariz. **Officers:** A Bjorkman, pres.; J. J. Hawkins, sec.; A. Bergquist, treas.; with Felix Durocher and C. H. Dunning, directors. C. H. Dunning, supt. Inc. April 30, 1915, in Ariz. **Cap.**, \$500,000, shares \$1 par; outstanding \$400,000. Annual meeting 1st Monday in April. Commercial Trust & Savings Bank, Prescott, registrar. Is a consolidation of the Big Pine Mng. Co. and the Lake Superior & Western Mng. Co.

Property: 14 claims in Senator district, 12 miles south of Prescott. **Ore:** gold occurs in 3 parallel veins, which cross the claims. **Development:** by 7 tunnels, principally on a vein claimed to show ore for 1,800' in one pit.

nel, 700' in a second and 1,100' in a third. Company claims ore reserves of 70,000 tons, average grade \$9 per ton.

Mill: the 100-ton cyanide plant of the Mascot mine, Lake Sup. & Western Co. is to be moved to the Big Pine property and erected near portal of tunnel No. 6. Electric power will be obtained from the Ariz. Power Co.
BIG PINE MINING CO. **NEVADA**

Address: Manhattan, Nye Co., Nev. Operated by Mushett and Wittenberg. **Property:** Big Pine claim covering the gold mineralized schist belt for 1,000'. **Development:** the Mushett & Wittenberg 200' vertical shaft, sunk 350' from north end line of claim. Between the shaft and north end lines the ore found is mined by glory-hole methods, dropped to the 200' level and hoisted through the shaft. Dimensions of the glory-hole late in 1915 showed ore equal to 240,000 tons from surface to the 200' level. South of the shaft the known extent of the ore zone to the 200' level is 400' long and 60 to 75' wide, equal to 370,000 tons. Average daily tonnage hoisted is 375/.

Mill: equipped with a 5x20' tube mill, which treats 125 tons daily, plates, classifiers, etc. Heads average \$5.60, tailing 40c per ton; 90 h. p. used in mine and mill. Tube mill consumes 170 lbs. pebbles per day. Operating costs are reported the cheapest in Nevada, totaling 45c.

BIG SEVEN GROUP.**ARIZONA**

Near Harrington, Yavapai Co., Ariz. Mine, developed by 1,200' tunnel, shows a well-defined vein with high values in gold-silver-copper. Ten men employed during 1914.

BIG SEVEN MINING CO.**MONTANA**

Property: the Big Seven mine, an old-time producer, near Neihart, Cascade Co., Mont. Dave Barker, mgr. **Development:** 3,000' tunnel. Rich strike reported in June, 1914, said to have resulted in shipment of 40 tons of ore, which returned \$20,000. Operated as a close corporation.

BIG THOMPSON MINE.**COLORADO**

Worked under lease by L. G. Carlton and I. T. Russell, Elkton, Colo. **Property:** the Big Thompson mine, an old-time producer, near Elkton, Teller Co., Colo. Ore occurs in vein 15' to 25' wide, reported to average \$14 per ton; mined by stoping. Shipping in 1915.

BIG THREE MINES.**NEW MEXICO**

Situated 3 miles north of Organ, Dona Ana Co., N. M. Owned and operated by Capt. C. B. Gill, Geo. Luchen and Dr. J. H. Johnson. **Property:** 7 claims shows copper, silver and lead deposits. Workings 116' deep, and equipped with 14-h. p. gasoline hoist. Plan sinking shaft on Rubyin mine to 200' depth and drifting.

BILL NYE MINE.**OREGON**

J. H. Beeman, mgr., Grant's Pass, Oregon. **Property:** near Grant's Pass, Josephine Co., Ore., shows sulphide ore in veins, said to average \$4 gold. **Development:** by tunnels. **Equipment:** 10-stamp mill and cyanide plant. Operated jointly with Lucky Bart mine in 1915.

BI-METALLIC MINE.**NEVADA**

Owned by M. G. Bradshaw, Crown King, Yavapai Co., Ariz., and P. A. Simon, Mina, Mineral Co., Nev. Mine is located at Candelaria, Columbus district, Mineral Co., Nev. Management claims gross earnings from ore sales in 1914 were \$33,000, with operating expenses of \$17,000.

Property: 3 claims, 47 acres, unpatented, shows a vein in slate; course of vein is N. 5° W., dip 65°. Ore occurs in shoots and lenses, and is said to average 30 oz. silver and \$2 gold per ton. **Development:** 2 incline shafts, 280' and 600' deep, equipped with gasoline hoist. Mine was closed down in 1915 and reopened 1916.

BINGHAM AMALGAMATED COPPER CO.**UTAH**

Office: 61 Commercial Block, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. B. F. Grant, pres.; L. A. Marks, v. p.; F. R. Snow, sec.-treas.; Jos. E. Edmunds, gen. mgr.; preceding officers, W. P. Davis, R. E. Miller and Dr. A. McCurtain, directors. E. W. Jones, supt. Inc. Jan. 7, 1907, in Utah. Cap., \$5,000,000, shares \$5 par; nonassessable; issued, \$3,500,000. Shares are listed on the Salt Lake City Stock Exchange.

Property: 24 claims, 300 acres, patented, known as the Illinois and Copper Glance groups, carrying 7 mineralized veins. The principal ore-bodies exposed in the Bingham Amalgamated are on the same vein as the Congor orebodies and of about the same character of ore. Vein is 15 to 40' thick, developed for several hundred feet in depth, but the water and high cost of wagon haul stopped further development. In a tunnel on the west side of the property a 20' vein shows streaks of good ore all through it. The Montana Bingham tunnel cut this vein about 100' deeper, 3,948' from the portal, and crosscut it for 100'. Samples taken from this vein said to run from 3.2-6.5% copper, 7 oz. silver, \$1.20 gold and 25% iron. Development work resumed the latter part of 1915 after an idleness of several years.

The Illinois has a 640' shaft, with a 6 to 9' vein carrying a 2' pay-streak of about 5% copper ore, with occasional assays up to 40%, the average of 50 assays being 2.8% copper, 2 oz. silver and \$2 gold per ton. The Copper Glance group has a 1,400' tunnel, in McGuire gulch. Mine has a total of 2,450' of workings, and ore, including chalcopryite, bornite, chalcocite and cuprite, is estimated by management to average 3% copper, 2 oz. silver and 90 cts. gold per ton.

BINGHAM CENTRAL MINING CO.**UTAH**

At Bingham Canyon, Salt Lake Co., Utah. Idle. This company and the Bingham Standard Copper Co. were controlled by the Bingham Central Standard Copper Co., which sold this stock, 1909, to Utah Metal Mining Co. for stock in latter company and is now controlled by the Utah Metal & Tunnel Co., which see. Described Vol. X.

BINGHAM CENTRAL STANDARD COPPER CO.**UTAH**

Was organized as a holding company, controlling, through ownership of practically entire stock issues, the Bingham Central Mining Co. and Bingham Standard Copper Co., and sold these subsidiary stocks, 1909, to the Utah Metal Mining Co. for 300,000 shares of latter, which was escrowed until 1911 and extended upon payment of 10,000 additional shares until Nov. 8, 1912, and subsequently to Jan. 1, 1914, to permit building by Utah Metal Mining Co. of a \$150,000 aerial tramway from the western end of the big tunnel to the International smelter at Tooele. On release of escrow, 1914, company was to be wound up.

Minority stockholders formed a committee in 1915, with E. J. Huff, chairman, offices at 405 Atlas Blk., Salt Lake City, and will attempt to recover property, claiming irregular disposition of the company's assets. Stock valueless.

BINGHAM COPPER BOY MINING CO.**UTAH**

Out of funds and idle several years, with no sale or market for the stock, so far as known. See Vol. XI, Copper Handbook.

BINGHAM EMPIRE CO.**UTAH**

Address: Knight Investment Co., Provo, Utah. Officers: Jesse Knight, pres.; with A. M. Knight, W. L. Mangum, K. S. Jordan, G. A. Storrs, E. G. Jensen, directors. Inc. July 31, 1915, in Utah for development of property in the Bingham district. Cap., \$10,000, shares 1c par; 484,000 shares in treasury Aug., 1915.

BINGHAM MINES CO.**UTAH**

Office: 60 Congress St., Boston, Mass. Imer Pett, gen. mgr., 404 Dooly Bldg., Salt Lake City, Utah; Joseph Hyland, supt., Lark, Utah. **Officers:** Jas. P. Graves, pres.; Sydney S. Millet, sec.-treas.; preceding officers, Henry N. Sweet, Alfred B. White, Thos. S. Woods, Arthur W. Chesterton and Lewis B. McCornick, directors. Fred R. Sands, purch agt. **Inc.** April 6, 1908, in Maine. **Cap.**, \$1,500,000, shares \$10 par, nonassessable; issued \$961,126.

Bonds authorized \$513,000, 6% due April 1, 1919; \$271,000 outstanding, May 15, 1916. Is a reconstruction of the Bingham Consolidated Mining & Smelting Co., having exchanged 1 share of new stock for 1 of old, plus \$3.50 cash, payable \$1 cash and five 50c installments. Controls the Eagle & Blue Bell Mining Co., a dividend payer, of Eureka, Juab Co., Utah, and Yosemite Mines Co., of Bingham Canyon, Salt Lake Co., Utah, through ownership of \$451,250 out of \$900,000 issued stock. Purchased the entire capital stock of the Victoria Cons. Mng. Co., owning 49 acres mineral land at Eureka, adjoining the Eagle and Blue Bell, in 1914. The entire bond issue will be either converted or retired in 1916, as company's earnings are large enough to warrant this and, if continued, to pay a dividend thereafter. First National Bank, Boston, registrar. Federal Trust Co., Boston, transfer agent. Stock listed on Boston and New York curbs. Annual meeting, third Wednesday in April, at 57 Exchange St., Portland, Me.

Balance sheet Dec. 31, 1915, shows assets \$63,421 cash and loans, and \$64,654 accounts receivable, etc., with accounts payable of \$88,173. Gross earnings in 1915 were \$320,966 and operating expenses \$114,619, leaving a net operating gain of \$95,465, after deducting \$19,154 for prospecting and development work. No dividends have been paid.

Property: 60 claims, patented, 430 acres mineral land, in the Tintic district, comprising the Dalton & Lark and Commercial mines, and 596 acres non-mineral lands. The ores carry lead, copper, silver and gold. The lead ore averages 90c gold, and 11.65 oz. silver per ton, with 0.67% copper, and 18.64% lead. The copper ores average \$1.40 gold and 4.92 oz. silver per ton, with 1.58% copper and no lead. The lead ore shipped in 1915 averaged \$16.39 gross value per ton; the copper ore \$4.96 per ton. Some of the ores are high in iron, hence desirable for fluxing the ores of the district, which are highly silicious, as a rule.

The company now has the deepest shaft in the Tintic district, as connection is made between the Mascotte tunnel and the Yosemite shaft, a distance of 2,150' on dip of the vein. About 3,500' of drifts, crosscuts, raises and winzes was accomplished in 1915. Plans for 1916 include exploration of North Extension claims and development of virgin ground above 1,000' level. Lessees working in the old workings mined 6,846 dry tons of ore in 1915, netting the company \$21,964 as royalty. Mining is by square sets in the large deposits, up to 20' across, and by stulls in the smaller veins. There are many miles of workings.

Equipment: at the Dalton & Lark includes a 250-h. p. steam plant, with several hoists and a 25-drill Ingersoll-Rand air compressor. There are 10 buildings, including machine shop, smithy, carpenter shop, office and dwellings. A private rail line, with electric locomotives, connects with the Denver & Rio Grande railway.

The Commercial mine comprises 5 claims, patented, 30 acres. The main orebody occurs as a fissure in limestone and replacement in latter, with E.-W. strike and average dip of 38°. Ore is exclusively chalcopyrite. All work is prosecuted through the Niagara Mining & Smelting Co. tunnel,

which was lengthened to cut the Commercial orebodies at a depth of about 1,400' on the plane of the vein.

Production: in 1915 was 12,756,525 dry tons of \$41,460 gross value, netting \$29,148. Present ore reserves are chiefly valuable for smelter flux, and as smelter did not require this material the mine was closed down Sept. 1.

Equipment: of the Commercial mine is exclusively electric, including a double-drum electric hoist with 52-h. p. induction motor, 75-h. p. induction motor, a 10-drill Ingersoll-Rand air compressor, and three 50-k. w. electric transformers. Buildings include an office, warehouse, sawmill, smithy, barn and ore bins. Company has no mill, but has privilege of 1/10 of capacity of 2,000-ton mill near mine. Mine is served by the Copper Belt line of the Denver & Rio Grande railway. Company plans complete electrification of property in 1916.

The Eagle & Blue Bell property is described under that title.

Property of Yosemite Mines Co. was closed down, 1914, owing principally to low metal prices. Development resumed in 1916.

The present management has made splendid progress in handling difficult financial and mining problems. Ore shipped to smelters: 49,986.81 tons in 1912, 38,987.95 tons in 1913, 49,866.87 tons in 1914 and 44,975.19 tons in 1915; a total of 269,941.88 tons since 1909. Average grade of shipments in 1915, \$16.39 lead, 4.96% cu. per ton gross value. Production for 1916 estimated by management at 16,000,000 lbs. lead.

As the mines have been producers for 40 years, and company owns 3 and controls 2 others, the life of the property seems assured, and the company has a roseeate future. Figuring 1916 prices, applied to a production equal to that of 1915, profits will be very much larger and earnings of company will approximate \$6 per share, which would justify a \$2 dividend.

BINGHAM-NEW HAVEN COPPER & GOLD MINING CO. UTAH

Taken over by Utah Metal & Tunnel Co., Nov., 1915; for the present the two properties will be operated separately, but the work will gradually be merged. **Office:** 508 McCornick Bldg., Salt Lake City, Utah. **Mine office:** Bingham Canyon, Salt Lake Co., Utah. **Officers:** J. E. Rothwell, pres.; E. B. Critchlow, v. p.; W. E. L. Dillaway, sec.-treas.; preceding officers, L. E. Stoddard and W. B. Farmer, directors; C. H. Doolittle, gen. mgr.; F. N. Wichman, mine supt.

Inc. Oct. 12, 1902, in Utah. **Cap.,** \$2,000,000, shares \$5 par, nonassessable; issued \$1,143,445. A \$46,000 bond issue was paid, 1909. **Dividends:** paid since 1906; \$275,861 paid in 1915, with total of \$960,493 to 1916. Union & New Haven Trust Co., New Haven, registrar. In Sept., 1915, the company brought suit for \$100,000 against the Utah Metal & Tunnel Co., alleging extraction of ore from the Levant lode, whose apex was claimed by the Bingham-New Haven Co. The result of the suit was the merger of the two companies, the most logical solution of the difficulty, for valuable orebodies lie on the boundary line and litigation, which was inevitable, is now avoided.

Property: 26 claims, 500 acres, adjoining the Utah Consolidated on the S. E., includes the Zelnora mine, near the head of Carr fork. Claims show 3 fault fissures in porphyry and a contact deposit, 3' to 8' in width, between quartz-porphry and limestone. The copper ore averages 3.5% copper, \$6 in gold and silver and about 12% excess iron. The lead ore averages 20% lead, \$7 in gold and silver and 1.5% copper, ores being chalcopyrite, galena and sphalerite. The main ore supply is from 3 beds of limestone, which strike E. W. and dip N. Company now mining 2 deposits of copper, 2 of lead and 1 of complex ore.

Development: by tunnels with a blind shaft starting 900' from the portal of the lowest tunnel, there being a vertical distance of 1,200' between

the highest and lowest workings. The 1,030' lower tunnel cuts a wide fissure vein, giving assays of about 3% copper, 2.3 oz. silver and \$2.50 gold per ton. Terminal at the upper tunnel was moved to the lower tunnel and mine is operated through the latter. The shaft is now down 320' below the 500', or Highland Boy, level, and crosscuts have been driven 200' and 320' below the tunnel level to cut a recently found orebody which averages 6' in width where cut. Estimated 2-3 years' ore reserves in sight. Mine has several miles of workings, with an aerial train connecting with loading bins on the Copper Belt railroad.

Equipment: includes electric power, air compressor and 175-ton mill, equipped with jigs, Wilfley and Deister tables, vanners and ball mill for fine grinding. The completion of a connection with the main working tunnel of the Utah Consolidated Copper Co. in Dec., 1912, permits shipments over that company's tram line to the Tooele smelter, reducing transportation costs 20 cts. per ton.

Production:	Lbs. Copper	Lbs. Lead	Oz. Silver	Oz. Gold
1914	908,424	6,791,644	294,995	9,478
1915	2,574,261	4,903,906	325,448	6,617

Gross earnings were \$718,676 in 1914 and \$726,203 in 1915, derived solely from ore sales.

Daily output of ore, 300 tons at present, will be increased and a flotation plant will be built. About 165 men are employed.

BISBEE & DULUTH MINING & DEVELOPMENT CO. ARIZONA

Mine office: Bisbee, Cochise Co., Ariz. Is controlled, through ownership of 60% of stock issue, by Bisbee-Sonora Development Co.

BISBEE-SONORA DEV. CO. ARIZONA & NEW MEXICO

Office: 1125 G Ave., Douglas, Ariz. **Mine office:** Paradise, Cochise Co., Ariz. H. C. Beumler, pres.; J. P. Sexton, v. p.; S. S. Badger, sec.-treas. and mg. engr.; G. T. Colvin, supt. Inc, Feb., 1907, in Arizona, as successor of the Paradise Development Co. **Cap.**, \$2,500,000, shares \$2 par. Annual meeting, second Tuesday in March. Is a holding company only, controlling, through stock ownership of 60% of stock issue of each, the Badger-Hall Mining Co. and Paradise Mining Co., near Paradise. Properties are described as a unit, under the title of this company, instead of separately.

Property: 35 claims, 595 acres in the California mining district in the Huachuca mountains, near Paradise, Ariz. Lands include the town site of Shamrock, 22 miles from Rodeo, the nearest rail point, in which some lots have been sold. The lands lying mainly between the Manhattan and Sullivan properties are developed by 4 tunnels, 287', 170', 560' and 125' long, and by 2 shafts, 240' and 80' depth, respectively. The Badger-Hall property, 30 claims, 540 acres, is claimed to show an orebody 62' wide at surface and 50' wide at 200' depth, where cut by tunnel. The Paradise property near the Badger-Hall has a crosscut, said to show medium-grade sulphide ore. The Morning Star group of the Paradise Mining Co., lying west of the Cochise Development Co., has a 90' tunnel, showing a little auriferous and argenteriferous carbonate and sulphide ore. **Ore:** occurs as contact deposit running N. W., and dipping at 18° S. W., that lies between limestone and porphyry. Deposit exposed for 600' length and 100' width and to depth of 280', said by management to average 4% copper and 18% lead with \$1.50 in gold and 12 oz. silver per ton. Discovered in 1905 and continuously worked. Has a whim, blacksmith shop and company store.

BISHOP CREEK GOLD MINE. CALIFORNIA

Owned by Rocky Point Cons. Mines Co., which see.

BLACK BEAR CONSOLIDATED MINING CO., LTD. IDAHO

Officers: Peter Bernier, pres., Wallace, Idaho; L. L. Brainard, sec.;

directors are Peter Bernier, Otto Grice, S. D. Lemieux, M. J. Sweeney and E. P. Howard.

In Dec., 1915, the Rex Cons. Mng. Co. acquired control of the Black Bear Cons. by agreeing to take 250,000 shares of stock of that company, paying \$112,500 therefor in monthly payments extending over a period of 10 months. Option has been allowed to lapse, due to a hitch in carrying out the plan called for by option; the \$10,000 initial payment was taken by Black Bear in exchange for treasury stock.

Property: 4 claims, 70 acres, patented, lying between the Frisco and Mace mines of the Federal Mng. & Sm. Co., near Wallace. **Development:** No. 1 tunnel cut the main vein 250' from the portal and has a winze, 125' deep, sunk in ore. No. 2, the main working tunnel, intersects the vein 2,530' from the portal and at a vertical depth of 1,180' below No. 1 tunnel. Workings on this level total 5,500' and are said to expose considerable ore. Vein said to be 5.7' wide, averaging 2.2 oz. silver, 7.7% lead and 16.5% zinc. Estimated ore reserves between tunnels No. 1 and No. 2 are 800,000 tons. See Rex Cons. M. Co.

BLACK BEAR MINING CO.

COLORADO

Mine office: Telluride, Colo. **Inc.** about 1894. Ike Navala, supt. **Property:** 39 claims, includes Black Bear mine in Ingraham basin, Telluride Co., Colo., showing gold, silver, lead and zinc values in an 8' quartz vein; the ore is free milling. Mill returns average about \$5.50 per ton, gold bullion recovered running 30% of the total. Developed by shafts and equipped with electric plant and aerial tramway, connecting with the Smugler Mill at Pandora.

Property was idle for many years; operations resumed the latter part of December, 1914. **Shipments:** averaged 100 tons daily in 1915. Mining and milling costs total \$2.50 per ton, leaving a monthly profit of several thousand dollars if present production is maintained.

BLACK CHIEF COPPER CO.

ARIZONA

Mine near Dewey, Yavapai Co., Ariz. John Milligan, pres.; J. M. Sullivan, v. p.-mgr.; Eugene Milligan, sec.-treas.; preceding officers are the directors. **Inc.** 1908 in Arizona. **Cap.**, \$2,000,000, \$1 par; 914,455 shares issued. Annual meeting 2nd Tuesday in July. About \$8,000 expended in 1914-15.

Property: 6 claims, 10 miles south of Jerome, known as the Uncle Sam group, has several short tunnels and two 100' shafts, with a total of about 700' of underground workings, showing ore said to give assays up to 22% copper, \$4 gold, \$3 silver, 6% zinc and 10% lead. Has a hoist. Plans doing 200' of sinking and 700' of drifting during 1916-18.

BLACK CLOUD MINING CO.

COLORADO

R. H. B. Little, lessee, Salina, Colo. **Property:** Black Cloud mine and mill at Salina, Boulder Co., Colo., shows quartz with gold values. Developed by shaft and equipped with air compressor, electric power and a 20-stamp mill.

BLACK COPPER CO.

NEW MEXICO

Mine office: Elizabethtown, Colfax Co., N. M. Work resumed on this property May, 1914. Developed by shafts and credited with past gold production of \$200,000.

BLACK DIAMOND COPPER MINING CO.

NEVADA

Idle. Address, care Wm. D. Thompson, pres., 524 Monument Sq., Racine, Wis. Mine near Yerington, Lyon Co., Nev. John W. Owen, v. p.; Louis W. Trankle, sec.; preceding officers, W. A. Kohmar and Adam I. Wood, directors. **Inc.** April 9, 1907, in Nevada. **Cap.**, \$1,000,000, shares \$1 par; nonassessable; issued, \$621,700.

Property: 8 claims, patented, 4 miles east of Yerington, shows granodiorite carrying fissure veins of 4 to 9' width, one under development. **Development:** several shallow shafts and 500' of tunnels. Principal work is on Diamond No. 2 claim, with a tunnel run to cut a considerable body of sulphide and carbonate ore shown on surface where average assays are about 3% copper. No work contemplated in 1916.

BLACK EAGLE MINING CO.**NEVADA**

P. E. O'Brien, mgr., 2740 Telegraph Ave., Berkeley, Calif. **Property:** Black Eagle mine and mill at Rawhide, Mineral Co., Nev., said to show gold ore. Employs 20 men. Treating 50 tons daily at the mill at last reports.

BLACK HAWK MINE.**CALIFORNIA**

Owned and operated by D. A. Blue, Randsburg, Calif. **Property:** 7 claims, in the Stringer district, near Randsburg, Kern Co., Calif. **Ore:** quartz in 6" vein shows coarse gold veins, assaying \$20 per ton. Mill test of 50 tons of gravel from the placer claims said to have assayed \$6 gold and 3 oz. of 60% tungsten per yd. Developed by 125' shaft. Equipped with 5-stamp mill and water power. Developing only in 1915.

BLACK HAWK MINING & DEVELOPMENT CO., LTD.**IDAHO**

Controlled by Federal Mining & Smelting Co., which see.

BLACK HILLS COPPER CO.**SOUTH DAKOTA**

Idle. **Office:** Benton Harbor, Mich. Mine near Rochford, Pennington Co., S. D. **Officers:** E. A. Hoffman, pres.; George M. Thresher, sec.; John H. Kerr, treas. Inc. June 2, 1900, in South Dakota. **Cap.,** \$2,000,000, shares \$1 par.

Property: 27 claims, 510 acres, in the Hornblende district, shows fissure veins in slate, with heavy gossan capping, carrying carbonate and oxide ores. Orebody under development is said by company to average 20' width, and to be more than a mile in length, opened by incline shafts and crosscut tunnels, giving a total of about 1,200' of underground openings. Ores average 1.5 to 3% copper, with small values in gold, silver and nickel. Has steam power, with 60-h. p. hoist, good for 1,500', and 4 power drills. **Property** considered of doubtful value.

BLACK HILLS MINING CO.**KANSAS**

Fred Stone, supt., Galena, Kan. **Property:** includes Black Hills, Amboy and Doughball mines, at Galena, Cherokee Co., Kan., showing lead-zinc ore developed by shaft.

Equipment: 100-ton concentrating mill, gas engine, compressor and electric power. Employs about 25 men.

BLACK JACK CONSOLIDATED MINING CO.**UTAH**

Office: Provo, Utah. Mine office: Mammoth, Juab Co., Utah. **Officers:** Jesse Knight, pres.; H. G. McMillan, v. p.; W. Lester Mangum, sec.-treas.; with J. Wm. Knight and S. D. Kimball, directors; E. F. Birch, asst. mgr. Inc. 1907 in Utah. **Cap.,** 100,000 shares, 10 cts par, assessable, as a merger of the Black Jack Mining Co. and Star Consolidated Mining Co. Is controlled by the Knight Investment Co. Shares are listed on the Salt Lake Stock Exchange. Last assessment called in May, 1915, 1/2c per share.

Property: 26 claims, patented, 350 acres in Tintic mining district. **Development:** by a 2,000' tunnel and a two-compartment shaft, planned to be deepened eventually to 2,000'. The 1,000' level shows auriferous copper ore, of fair tenor, in broken ground, and the bottom level, at 1,400', showed a 10' vein carrying silver-lead ore. Mine also has some copper ore high in iron, available for fluxing use.

Results to date, discouraging, although about 25,000' of work has been done. New workings have passed from white into gray limestone, consid-

ered more favorable for ore. Shipments of low grade ore from old workings made to Knight-Christensen mill in 1914 for experimental purposes only.

Management plans prospecting the southern section of the property on the 800' level. Production insufficient to pay operations under present conditions.

BLACK OAK MINES & MILLING CO.

CALIFORNIA

Office: First Natl. Bank Bldg., San Francisco. Mine office: Soulsbyville, Tuolumne Co., Calif. Chas. E. Knox, gen. mgr., Tonopah, Nev.; R. C. Knox, supt.; F. N. Watts, mill supt.

Property: several claims 1 mile west of Soulsbyville. **Ore:** quartz, containing pyrrhotite, sphalerite, marcasite and galena, in a vein in granodiorite. Vein has strike of N. 15° E., with dip 60° to 70° W., varying in width from 1' to 25', and has several branches coming in from the hanging-wall side. The ore occurs in lenses at the intersections of diorite dike crossings and also near faults. Diorite dikes have a strike of N. 55° E., vertical dip, and are 1 to 2' in width.

Development: by a 70° incline shaft sunk in the foot-wall and levels at intervals of 100'. Lowest workings are on the 1,800' level. Two ore-shoots have been developed, one north of the shaft, 500' long, average width 4', the other south of the shaft, 300' long and average width of 20'. Ore milled averages \$20 per ton. **Equipment:** 100-h. p. single-drum electric hoist, Ingersoll-Rand air-compressor, and pumps.

Mill: 20-stamp, weight 1,250 lbs. each, drop 6", 100 drops per minute, crush 3.5 tons per stamp through 10-mesh screens. Ore is crushed in 1.85% KCN solution. Remainder of equipment includes a Dorr classifier, a 5x18' tube mill, treatment tanks, and Oliver filter, capacity 100 tons per day. CaO, 0.15%, is added to batteries and agitators, and 24 lbs. PbO to the tube mill and agitators. Mill makes an extraction of 96%, consuming 1.5 lbs. KCN and 3 lbs. lime per ton of ore. Daily capacity of mill is 75 to 100 tons. Costs per ton are: development, \$1.63; mining, \$2.22; treatment, \$1.59; general and misc., \$0.56; material in mill, \$0.96; labor in mill, \$0.62; total, \$7.59. Employs 85 men. See State Mineralogist's Rep., Mines & Min. Res. of Tuolumne County, p. 138.

BLACK PINE MINING CO.

IDAHO

Hunter B. Supplee, pres. and mgr. **Property:** Black Pine and Crown Point mines, at Elk City, Idaho Co., Idaho. **Ore:** gold-silver, in veins believed to be a continuation of the Mascot lead. **Development:** by 700' tunnel. **Equipment:** 5-stamp mill, operated by power obtained from 120-h. p. water turbine.

BLACK PRINCE COPPER CO.

ARIZONA

Office: 440 Gas & Electric Bldg., Denver, Colo. Mine office: Johnson. Cochise Co., Ariz. Robt. N. Bell, pres. and gen. mgr., Denver, Colo.; F. T. Henry, v. p.; J. B. Wright, sec.-treas.; preceding officers, M. A. Hoag and Richard McKnight, directors. Inc. May 10, 1901, in Arizona. **Cap.,** \$1,500,000, shares \$1 par, non-assessable; issued, 1,221,350 shares. Annual meeting, last Wednesday in May.

Property: adjoins Peabody mine and comprises 8 patented claims, 147 acres, showing deposits in limestone. Mine has a 950' two-compartment shaft, sunk in limestone and showing copper oxides and carbonates, bornite and chalcopyrite. **Shipments:** for 1912, 513,327 tons, returned 8.75% copper and 4.9 oz. silver, and 79,322 tons in 1913, returned 16.1% copper and 12.1 oz. silver. **Equipment:** includes a 15-h. p. hoist, compressor, pump, and 3 mine buildings. In 1915 the company built a new power house. **Claims, Dec., 1915,** to be out of debt and doing development work.

BLACK PRINCE MINE.**BRITISH COLUMBIA**

Operated under lease by J. A. Tipping, Slocan City, B. C., Canada. **Ore:** silver, in 6" vein, in schist. **Development:** by tunnels only. Property is said to have made first shipment in Nov., 1915, and expected to have output of 1 car of ore every 2 weeks. Owing to inaccessibility of property, only the high-grade ore can be profitably mined. Twelve men employed.

BLACK RANGE MINING CO.**ARIZONA**

Address: Oatman, Mohave Co., Ariz. **Officers:** D. P. Wright, pres. and treas.; Del Sherer, v. p.; L. P. Morel, sec.; with J. S. Withers, directors. **Inc.** Oct. 30, 1913, in Ariz. **Cap.**, \$1,000,000, shares \$1 par; outstanding \$650,000. Annual meeting 1st Tuesday in Nov.

Property: 8 claims, 2 patented, 150 acres, located 5 miles south of Oatman, shows fissure veins in andesite. Ore is said to average \$2 per ton. Developed by 300' shaft. **Equipment:** includes a gasoline hoist, air-compressor and pumps. Probably is still in the development stage.

BLACK RANGE TUNNEL & MINING CO.**NEW MEXICO**

E. D. Randolph, sec.-gen. mgr., 219 Main St., Lafayette, Ind. **Officers:** H. E. Black, pres.; A. O. Behrn, v. p.; W. C. Mitchell, treas.; with T. F. Gaylord, B. L. Phillips and Martin Hardsocg, directors; C. B. Hullinger, supt., Chloride, Sierra Co., N. M. Company presumably a reorganization of the Black Range Copper Mining Co. and Black Range Reduction Co. (see Vol. X), both now dead. **Property:** the Silver Monument mine, showing a vein of silver-copper ore.

Development: 2,300' tunnel and shaft. Management working in crosscut on 300' level, 1916, where large flow of water was encountered. Main vein has apparently not yet been found. Equipped with steam plant, Rand compressor and a 25-ton concentration mill.

BLACK ROCK, LTD.**ARIZONA**

Mine near Wickenburg, Maricopa Co., Ariz., has ledge of copper glance, said to be 100' wide, carrying gold and silver values. Developed by 360' shaft, drifts and crosscuts, and equipped with 2 Huntington mills and concentrating tables. Developing at last accounts.

BLACK ROCK MINE.**NEVADA**

Office: 524 Main St., Racine, Wis. Mine office: Yerington, Lyon Co., Nev. Property privately owned by Wm. D. Thompson, of Racine, Wis. **Lands:** 3 patented claims, 52 acres, in Mason district, show 4 parallel fissure veins in quartz-monzonite, of which 2, of 8 to 10' average width, traceable 2,500', have shafts of 40', 80' and 150', showing chrysocolla and chalcopyrite, bottomed in ore estimated to average about 4% copper and 40 cts. to \$3 silver per ton. The incline shafts of 80' and 150' were sunk in ore; the two 40' shafts are in granodiorite and dacite.

BLACK TRAVELER COPPER MINING CO.**MONTANA**

Office: Mullan, Idaho. Mine near Saltese, Missoula Co., Mont. **Officers:** Oliver Roof, pres. and gen. mgr.; Chas. Bryant, v. p.; Dr. J. R. Beau, sec.-treas.; with R. E. Seysler and F. J. Luedke, directors. **Cap.**, \$1,500,000, shares \$1 par; 746,000 issued; assessable; 5c per share called Dec., 1913. **Lands:** 6 claims, 3 miles N. E. of Saltese, near the Saltese Cons. Copper M. & M. Co., show 2 parallel veins, 1, of about 6' width, having a strong gossan.

Development: by 2 crosscut tunnels, the upper cutting a vein of 12' estimated width, carrying copper ore, mainly chalcopyrite, giving assays of about 3%, with richer streaks assaying up to 32.4% copper and 15.8 oz. silver, with traces of gold. The 1,200' lower tunnel planned to be driven 1,800' to reach the vein, cut a vein, 1913, showing 30" of ore assaying 7.7% copper.

BLACK WARRIOR MINE.**ARIZONA**

At Black Warrior, Gila Co., Ariz. See Warrior Development Co.

BLACKBIRD COPPER & GOLD MINING CO., LTD. IDAHO & UTAH

Office: 807 Newhouse Bldg., Salt Lake City, Utah. Mine offices: Newhouse, Beaver Co., Utah. **Officers:** John E. DuBois, pres.; Chas. J. North, v. p.; F. O. Frick, sec.; B. N. Lehman, treas. and gen. mgr.; with L. N. Morrison, directors, at last accounts. Inc. in West Virginia. **Cap.**, \$2,000,000, shares \$1 par; nonassessable. Bonds, \$500,000, at 6%. Annual meeting, fourth Tuesday in January. Is a close corporation and has not answered letters sent them.

Property: Brown Bear mine and adjoining ground, covering 29 claims, patented, 482 acres, in the central part of the Blackbird district, Lemhi Co., Idaho. **Development:** 3 shafts, with drifts and numerous short tunnels. Orebodies are irregular replacements along fracture zones in schist and quartzite. Idaho property is in one of the best mineralized sections of the state and is said to show wide zones of disseminated ore carrying 2½% copper and 50 cts. gold for each per cent copper. This district is regarded as promising. Property shut down since patenting.

Company also owns 97 claims, 87 patented, adjoining the Cactus mine in the San Francisco district of Utah. This property has considerable development and was explored by diamond drilling. Development of the 300' level from an old shaft disclosed a vein of chalcopyrite ore.

BLAINE & EMMETT MINING CO., LTD.**IDAHO**

At Murray, Shoshone Co., Idaho. Is a silver-lead mine, copper being incidental and not recoverable. Described Vol. X.

BLANCHE ROSE MINING CO.**ARIZONA**

Practically dead in 1916. Company relocated land of the bankrupt Chesterfield Copper Co., described in Vol. XI, Copper Handbook.

BLAND MINE.**ARIZONA**

Dr. A. W. Hardtmayer, owner; Jack Evans, mgr. **Address:** Patagonia, Santa Cruz Co. Mine in the Santa Rita mountains, Harshaw district, Ariz. Operated several years in a small way and has about 2,500' underground workings. Property shows 12' vein with sulphide ore. Formerly owned by Bland Mining Co. No recent returns secured.

BLAZING STAR MINE.**CALIFORNIA**

Owned by Union Development Co., 713 Iowa Loan & Trust Bldg., Des Moines, Iowa. Mine, 1½ miles east of West Point, Calaveras Co., Calif., has a 2' quartz vein, strike N. 30° W., dip 80° W.; developed by 400' shaft. Was being reopened at last accounts.

BLISTERED HORN MINE.**COLORADO**

Owned by C. J. Carpenter, John Waldron and Andrew Lejune, supt. Tin Cup, Gunnison Co., Colo. Property shows several veins of gold-silver-lead ore developed by 2,900' tunnel, drifts and raises. The veins are from 2-12' wide and ore of good milling grade. Developing at last accounts.

BLOCK MINES CO.**ARIZONA**

Ed. Block, sec.-treas., Prescott, Ariz. Owns the Billy Boy and Christmas group of mines on the Hassayampa river, Yavapai county. Inc. Aug., 1913. Billy Boy mine developed by 300' tunnel, showing 14" pay-streak carrying gold, silver and copper ore, said to assay \$20 per ton.

BLUE BELL MINE.**ARIZONA**

Owned by Consolidated Arizona Smelting Co. At Mayer, Yavapai Co., Ariz.

BLUE BELL MINING & REDUCTION CO.**ARIZONA**

Mine P. O.: Swansea, Yuma Co., Ariz. W. P. Martin, pres.; E. T. Miner, v. p. and supt.; K. E. Newcomb, sec. **Property:** 23 claims, about 5

miles from Swansea, just across the Bill William's Fork river from the Swansea pumping plant. **Development:** 200' two-compartment shaft and several hundred feet of tunnels, showing ore carrying up to 10% copper, with fair gold and silver values.

BLUE BIRD-CORBIN GOLD, SILVER & COPPER

MINING CO.

MONTANA

Idle. Wickes, Jefferson Co., Mont. Wm. Q. Ranft, owner and mgr. John W. Johns, supt. **Property:** about 4 miles west of Wickes, is one of the old mines of the district, taken over in 1911 together with the Penn Yan claim. Claims show 2 veins of 4 to 14' in width, carrying ore shoots averaging 5% copper, 5% lead, 25 oz. silver and \$1.50 gold per ton. Ore occurs in a tourmalinized vein in andesite tuffs and diorite along a contact with a 50' wide dacite dike that forms the footwall.

Developed by 2,248' tunnel and 225' shaft, with levels at 100' and 200'. Equipped with electrical power. No recent returns secured.

BLUE BULL MINE.

NEVADA

Described under Reorganized Blue Bull Co.

BLUE FLAG GOLD MINING CO.

COLORADO

Office: 703 Exchange Bldg., Denver, Colo. **Officers:** J. F. Erisman, pres.-gen. mgr.; Jos. J. Gunnell, v. p.; R. Shoemaker, sec.-treas.; preceding officers, Jos. S. Pigall, D. A. Schaffint, C. W. Walker, F. S. Brooks, W. E. Doane, directors. Company is a close corporation.

Properties: Blue Flag Mine on Raven Hill, Cripple Creek, the Laurium group at Breckenridge, also holdings in the Harshaw mining district, Ariz., and at Ballarat, Calif. Ore is gold quartz. Blue Flag main shaft is 1,100' deep; management plans sinking to the 1,400' level. Equipped with 150-ton cyanide plant.

The Laurium group is developed by tunnels, one over 1,800' long. Ore: gold-silver-lead-zinc. Property equipped with 75-ton mill.

BLUE GROUSE MINE.

IDAHO

Owned by V. W. Brasch, Paulson Bldg., Spokane, Wash. **Property:** in the Orogrande district, 1½ miles N. W. of Orogrande, Idaho county, said to have the extension of veins opened up in the adjoining Umatilla mine. **Development:** 600' of tunnels, said to show veins 4½ to 10' wide, averaging \$12 per ton in gold and silver.

BLUE JACKET COPPER CO., LTD.

IDAHO

Company has discontinued operations. Fully described Vol. XI, Copper Handbook.

BLUE JACKET MINING CO.

IDAHO

Mine P. O.: Lucile, Idaho Co., Idaho. **Officers:** W. B. Clark, pres., Johns Hopkins University, Baltimore, Md.; B. N. Baker, v. p.; J. M. Lawford, sec.-treas.; with F. T. Homer and Frank E. Johnesse, directors; F. E. Johnesse, gen. mgr. and supt. **Inc.** Oct. 20, 1908, in Idaho. **Cap.**, \$50,000, shares \$1 par, fully paid. Annual meeting, first Monday in January. Company is a close corporation. **Property:** 7 claims, unpatented, about 132 acres, in Crooks Corral mining district, Idaho Co., Idaho.

Geology: ore occurs as replacement along contact between diorite and andesite porphyry. Orebody is from 50 to 70' wide, runs east and west, and dips at an average angle of 35°. It has been opened up by a 300' shaft, numerous tunnels, crosscuts and drifts, aggregating 3,395'. These workings blockout 33,000 tons of ore, carrying 3.7% copper with 1.5 oz. silver and \$1.80 gold per ton. The orebody is more or less oxidized down to the 700' level, though the greater part of the ore in the lower levels is original sulphide and the enriched portion lies between the 1st and 4th levels. Reserves estimated at 542,000 tons. Property has no mill, hoist nor reduction plant of

any kind and has been closed down since 1909 awaiting railroad transportation, which is now 40 miles away. Property is a good one and officers able and responsible.

BLUE JAY MINE.**NEVADA**

Mine office: Yerington, Lyon Co., Nev. Developed by shaft with several drifts. Equipped with steam power and a 30-h. p. gasoline hoist. Mason Valley Mines Co. did not exercise its option taken August, 1913. Messrs. Elbert and Summers reported operating property under lease in 1915 and small shipments made to Salt Lake smelter said to run 20% copper.

BLUE LEDGE MINE.**CALIFORNIA**

Office: 82 Beaver St., New York City. Mine near Hutton, Siskiyou Co., Cal. Property is held by the Mexican S. & R. Company, a subsidiary of the Compania Metalurgica Mexicana, R. S. Towne, pres.-treas. Mine merely being kept in repair and no plans made for resumption of operations.

Property: 27 claims, patented, about 440 acres in the Elliott mining district on Upper Applegate river, 4 miles south of the Oregon line, also a large smelter site at Seattle Bar. Property located 1889, but only slightly developed until 1909. Mr. Towne has spent over \$700,000 in work since that time.

Geology: the vein, with strike of N. 10° S., and almost vertical dip, slightly inclined west, traceable some 3,000' by prominent outcrops of 50 to 250' width, lies between a footwall of gray to black, slightly micaceous schist, and a hanging wall of soft white mica-schist, the walls not always being clearly defined, and with mineralization extending into the hanging wall. Orebodies are lenticular deposits, with clay gouge, said, by several authorities, to be in huge laminations in the schist formation, but ore apparently is persistent to depth. Ore is mainly chalcopyrite, associated with a little sphalerite and occasional native copper, average value being 6% copper and \$5 gold per ton. Development: 9 tunnels, with upwards of 2 miles of workings, blocking out considerable ore, and nearly 7,000' of diamond drilling showed several orebodies.

Equipment: includes a hydro-electric power plant, taking water from Elliott creek under a head of about 150', at pressure of 85 lbs. Buildings include an office, assay office, boarding house, dwelling and sawmill. The company has improved the town site with waterworks, sewers and a school house, and has built a good road between Hutton and Yreka. A 40-mile railway to connect with the Southern Pacific, at Medford, Ore., has been projected. Mine is likely to become an important producer as soon as fully equipped and the railway line to the mine is built.

BLUE LIGHT COPPER CO.**NEVADA**

Address: care C. W. Marsh, pres., Washington, D. C. Mine office: Mina, Mineral Co., Nev. Henry L. Dollman, v. p.; F. M. Baker, Carson City, Nev., sec.; Wm. C. Osborne, treas.; preceding officers, Chas. N. Van Cleave, Chas. E. Test and Richard Stegemeier, directors. Inc. Oct., 1907, in Nevada, as successor of Blue-Light Mining Co. Cap., \$2,500,000, shares \$1 par; nonassessable.

Property: 14 miles from Mina, developed by 600' shaft from which several carloads of rich carbonate ore have been shipped. Shaft has reached sulphide zone, but workings have not yet passed through leached material. Mine is equipped with hoist, buildings, etc. Examined 1913 by R. W. Hadden.

BLUE MOUNTAIN MINING CO.**OREGON**

Office: 9 E. Fifth St., Covington, Ky. Mine office: Sumpter, Baker Co., Ore. Works office: Cable Cove, Grant Co., Ore. Jos. Grever, sec.-

treas., 17 Thoms Bldg., Cincinnati, O. **Officers:** C. L. Arzeno, pres., gen. mgr.; B. J. Stagge, v. p.; A. E. Buxsel, asst. sec.-treas.; Clemens Backhus, Jr., Chas. Neblett, Geo. H. Vonderahe, Bernhard Moeller, Alvin Davidson, directors. O. L. Simons, supt.

Inc. in Ariz. Cap., \$2,000,000; shares \$1 par; fully paid; nonassessable; 1,373,999 issued. Authorized \$50,000 6% bonds; \$37,000 outstanding. Annual meeting 4th Friday in April.

Property: 27 claims, about 500 acres, 200 patented, is said to be covered with timber with the exception of 35 acres, in Cable Cove district, 11 miles N. W. of Sumpter in Baker and Grant counties, Oregon, at head of the north fork of John Day river. Claims include the Baby McKee group, Annex, Last Chance and others, said to carry the Eagle, Rawson, Cloud and Marty veins with gold-silver ore.

Ore: occurs in fissure veins in grano-diorite, running slightly E.-N. and dipping in opposite directions. One vein has an average width of 4', a proven length of 2,200' and proven depth of 700'. The Eagle vein is said to be 60' wide and developed for 6,800' in length.

Development: includes a 1,900' main working tunnel with a 262' cross-cut at 1,500'; showing a 6' vein opened up for 25' with concentrating ore. The 640' Baby McKee tunnel, now caved, yielded specimen rock years ago. Company owns the Alpine mill, besides a 10-ton experimental mill and the 60-ton Imperial mill.

In 1916 company took a lease on the Imperial Gold Mng. Co. property, 20 patented claims, of which the Blue Mountain holdings are an extension. The property carries 5 veins with ore shoots 100'-200' long, carrying arsenopyrite 38.70%, galena 8.20%, zinc blende 12.10%, pyrite 3.4%, copper pyrite, 1.4%, lime 2.7%, insol. 30%. This assays 1.5 oz. gold per ton, 12 oz. silver, 7% lead, 8% zinc, 18% iron, 30% insol., 17.8% arsenic and 15% sulphur.

Ore reserves: at the Imperial tunnel are reported to be 1,000 tons averaging \$110 per ton and 13,000 tons \$10 ore. Company appears to have too small a capital to develop its property and is not in experienced mining hands.

BLUE RIBBON GOLD MINING CO.

UTAH

Minersville, Utah. **Officers:** W. B. Seymour, pres.; L. Shaw, v. p.; Fred R. Pryor, sec.-treas., with J. H. McOmie and Clara D. Smith, directors. **Inc. Feb., 1915, in Utah. Cap.,** \$100,000; shares 10c par; issued \$60,460.

Property: 8 claims in Jarlose mining district, 6 miles E. of Minersville, Beaver Co., Utah. **Ore:** gold in shoots in vein 6' to 12' wide, between well-defined walls of rhyolite. Average assay said to be \$9.40 per ton. **Development:** by 50' shaft. Plan the addition of a 25-h. p. gasoline hoist, and sinking shaft to 500' depth. Is a prospect only.

BLUE VEIN COPPER MINING CO.

MONTANA

Office and mine: 17 Owsley Blk., Butte, Silver Bow Co., Mont. F. L. Melcher, pres.; Lewis A. Smith, sec.; W. F. Noyes, treas. **Inc. June 21, 1906, in Montana. Cap.,** \$1,000,000; shares \$1 par. **Property:** 9 claims, patented, being the Little Boulder, Valentine, Bunker Hill, Blue Vein, Blue Vein No. 1, Myrahl, North Star No. 1, the Ozone and Columbia lode claims in the southern part of the Butte district. Idle since Nov., 1909.

BLUE WING MINING CO.

NORTH CAROLINA

Office: 35 Congress St., Boston, Mass. Operating office: Virgilina, Va. **Officers:** F. E. Wood, pres.; T. M. Russ, v. p.; D. M. Hill, sec.; J. P. Sylvester, treas.; Robt. G. Lassiter, gen. mgr. **Inc. 1907, in West Virginia.**

Cap., \$100,000; shares \$1 par, nonassessable. Property is in the Virgilina copper belt, Granville and Person counties, N. C.

Property: 1,488 acres, showing a 4' fissure vein in schist, with north and south strike, traceable 1 mile, and proven to depth of 350', estimated by management to carry ore averaging 3% copper, 1 oz. silver and 10 to 20 cts. gold per ton. Ore is highly silicious, and difficult of treatment without admixture of basic ores, which are unobtainable in the district. **Development:** by shafts, the ore showing bornite and glance with quartz and occasional calcite gangue.

Equipment: includes a 40-h. p. hoist, air compressor and 7 power drills. Buildings include engine house, boiler house, ore-sorting shed with picking belt, and carpenter shop. Mine poorly operated in the past, owing chiefly to lack of working capital and proper equipment for operating on a big scale. All ore mined thus far has been hand-sorted and shipped to smelters. Property valuable and with fine crushing and concentration by flotation process could be profitably operated. No recent returns secured.

BLUEBIRD COMPANY (THE)

MONTANA

Office: 706 Sears Bldg., Boston, Mass. **Officers:** W. B. Dickerman, v. p.; Clarence W. McGuire, sec.-treas.; with F. M. Stone and H. K. McHarg, directors. **Inc.** 1893, in New York. **Cap.**, \$500,000; shares \$5 par; 66,667 shares issued.

Property: 237 acres, in Butte, Montana, shows silver, copper and zinc ores. Company has never operated its property, but the mine was under option to J. H. Simpson of Butte, April, 1916.

BLUESTONE MINING & SMELTING CO.

NEVADA

Office: 43 Exchange Place, New York. **Mine office.** Yerington, Lyon Co., Nev. **Capt.** J. R. DeLamar, owner; W. O. Fletcher, sec.; Chas. A. Weck, supt. Is not incorporated.

Property: the Bluestone mine and a group of 20 claims adjoining the Mason Valley mine. The Bluestone is the oldest property in the district, claims having been patented previous to 1890. Mine has been opened to a depth of 540' and has about 6,500' of workings, including a 1,300' main haulage tunnel, cutting an ore shoot about 300' wide and 500' long at a point 300' below the apex. This shoot is said to carry an 80' paystreak of high-grade ore, ranging up to 20% in tenor, with balance of ore carrying 2.5% copper. Management estimates 1,600,000 tons of ore in sight, averaging 2.6% copper.

Ore is mainly chalcopyrite, associated with considerable epidote, in a garnet-limestone gangue, there being practically no oxidized ores, even at the outcrop. Ore is uniform in character, and after a light roast is well adapted to magnetic separation. Drill holes prove that ores extend to 750' depth.

Equipment: includes a 50-h. p. hoist and a 35-drill electric air-compressor. A 100-ton mill pulverizes the ore, in rolls, to pass an 8-mesh screen, after which ore is slightly calcined in a tower roaster, to magnetize the pyrite. Roasted ore is then passed through a Wetherill magnetic separator, which takes up the mineral, and discharges the waste, giving a concentrate of about 15% copper. Magnetic separation is claimed to have given a 95% extraction, though 85%, under working conditions, will be satisfactory.

The magnetic concentrating plant is reported running and the furnace has been enlarged. Company has spent \$250,000 in development and equipment of property. Oil flotation process is being experimented with in 1915-16. Management is able and property considered valuable.

BLUSTER CONSOLIDATED MINING CO. NEVADA

T. B. Beadle, pres.-gen. mgr.; Frank Benan, v. p.; H. L. Rummel, sec.; J. D. Goodwin, treas. **Property:** at Jarbridge, Elko Co., Nev., shows gold ore in 7' veins, said to assay \$10 to \$40 per ton.

Equipment: 10-stamp mill, sawmill, aerial tramway, electric power. Tailing being impounded for cyaniding at a later time. **Ore reserves:** management estimated 100,000 tons of milling ore, valued at \$12 per ton, blocked out and on dumps, Jan., 1915. **Production:** claimed to be \$12,000 in bullion per month.

BOB LEE CONSOLIDATED MINING CO. COLORADO

Idle. H. H. Mitchell, sec.-treas., 65 Independence Bldg., Colorado Springs, Colo. **Cap.,** 1,500,000 shares, 1c par; issued Jan. 1, 1916, 1,325,000 shares. **Property:** 5 claims, 19 acres, patented, on Tenderfoot Hill, Cripple Creek, Teller Co., Colo.

Development: includes 3 shafts, deepest 300' with 700' drifting at bottom; \$15,000 spent on property. Company in arrears for 7 years taxes, \$1,800. No cash in treasury; liabilities \$1,500.

BOB MCGEE MINING CO. MISSOURI

Operating on land of J. I. Walker at Duenweg, Jasper Co., Mo. **Cap.,** \$30,000. Mine opened by three 160' shafts. Developing in 1915.

BOBS FARM MINING CO. CALIFORNIA

Sacramento, Calif. J. H. Byers, pres.; W. H. Montgomery, sec. **Property:** 100 acres, in Sec. 5, T. 37 N., R. 12 W., in Trinity Reserve, at an elevation of 5,000', was located in 1883. Said to be the best producer in the New River mining district, Trinity Co., but is very expensive to operate as supplies must be packed over a trail from Hawkins Bar or North Fork, a distance of 40 miles from the latter town.

Ore: gold in vein with diabase hanging wall and quartz porphyry foot-wall; strikes E.; dips 45° N.; width of orebody 2', and length 260'; maximum depth of workings 700'. **Development:** tunnels; longest, 1,300'; 6 levels from 60' to 700' long; 2 crosscut tunnels, 300' and 600' in length; several thousand feet of workings.

Equipment: includes 3-stamp mill and one 3' Huntington mill, run by steam and water power. Twelve men employed in 1914. Said to have produced \$350,000.

See Mines & Min. Res. of Trinity Co., State Mineralogist's Report, 1915, p. 151.

BOHEMIA MINING CO. MICHIGAN

Office: 85 Devonshire St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich. Operating office: Dee Bldg., Houghton, Mich. **Officers:** Wm. A. Paine, pres.; Chas. A. Snow, v. p.; Robt. H. Gross, sec.-reas.; preceding officers, John H. Rice, Thos. S. Dee, Richard M. Edwards and F. Ward Paine, directors. Inc. Jan. 29, 1910. **Cap.,** \$2,500,000; shares \$25 par; assessable; paid in, \$8; issued, \$1,875,000. Of the 75,000 shares issued, 30,000 were given for lands, and 45,000 were sold to the public, at \$8. Boston Safe Deposit & Trust Co., transfer agent. Stock is listed on the Boston curb, 1916 quotations around \$2. Annual meeting, third Wednesday in April.

Property: 960 acres, originally known as the Piscataqua, in very early days, and later as the Henwood. It is hoped that the property is traversed by the cupriferos amygdaloidal bed of the Lake Copper Co. Diamond drilling was done 1910. Drill holes have yielded a number of cores, from various amygdaloidal beds, with copper in fair quantities, but with nothing remarkably promising or that would justify sinking a shaft. Suspended operations March, 1911.

Annual report, Feb., 1915, shows cash in bank, \$129,454, and states that as soon as sufficiently important developments are made on adjoining properties, development work will be resumed.

BOISE ROCHESTER MINING CO.

IDAHO

Atlanta, Elmore Co., Ida., and care of J. D. Falk, pres., Boise, Ida. R. H. Richardson, supt. **Property:** the Bagdad-Chase Gold Mining Company holdings, also known as the Pettit mine. Claims show a contact fissure vein, on which a tunnel (1915) has opened up an ore shoot 3' to 6' wide and 500' long, said to run \$10 to \$15 per ton in gold and silver. The quartz carries sulphides, including pyrite and rich silver minerals. Ore is treated in a 20-stamp concentration mill and then cyanided. A Bleichert tram connects mine and mill. Recent addition of tube mills and Pachuca tanks is expected to raise extraction from 60% to 85%.

BOLEO; COMPAGNIE DU

MEXICO

Secretary and office: M. Georges Odier, 56 Rue de Province, Paris, France. Mine at Santa Rosalia, Sur, Baja California, Mex. Albert Mirabaud, pres.; Charles La Forgue, managing director; William d'Eichtal, Maurice Ephrussi, Marquis de Montaigu, Henri Puerari, Ernest Tambour, Charles de Wendel and Alex. Tombelaine, directors. Ernest Michot, director-general; R. Plonin, mgr. M. Michel Berger and André d'Eichtal, auditors.

Inc. May 16, 1885, in France. **Cap.**, \$12,000,000; shares \$100 par. There are also 46,000 founders' shares. Is controlled jointly by the French house of Rothschild and the Banque Mirabaud, and owns a considerable share interest in the Compagnie d'Inguaran. Is exempt, until Dec. 17, 1925, from all federal and local taxes, except stamp taxes; is exempt, until 1935, from export and import duties on fuel consumed; is exempt, until 1942, from custom duties and local duties.

Balance sheet of Dec. 31, 1915, published May, 1916, shows; assets, \$37,119,557, which includes: works \$1,000,000; ore and copper matte, \$6,198,029; supplies on hand and en route, \$5,792,483; live stock \$488,267; cash on hand and in banks, \$7,233,532; notes receivable, \$5,799,642; acct's receivable, \$10,214,122. Liabilities include: stock outstanding, \$12,000,000; reserve fund, \$8,517,189; acct's payable, \$8,335,418. Operating profit for 1915 was \$7,941,489, as compared with \$4,587,442 in 1914.

By a fixed rule 5% of the profit goes into the reserve fund, 8% to the ordinary shares and 2% of the remainder to the directors. Of the balance then left, 77% goes to the ordinary shares and 23% is divided among 46,000 "founders' shares. The result is that ordinary stockholders get 73½% of the profit, founder shareholders 19½% and directors 2%.

Dividends: \$62.5 in 1901; \$62.5 in 1902; \$104.16 in 1903; \$135.41 in 1904; \$200 in 1905; \$312.5 in 1906; \$200 in 1907; \$25 in 1911; \$36 in 1912 with \$34.1 for founders' shares; \$35 in 1913, with \$21 for founders' shares; \$22 in 1914, with \$10.90 for founders' shares; \$40 in 1915, with \$24 for founders' shares.

Property: 11 groups of copper claims, 20,000 hectares, granted by the Mexican government, also 11,920 hectares of grazing lands south of the mines. Principal groups are the Soledad, Providencia and Purgatorio. Lands include 5 known copper deposits of importance, the copper-bearing formation covering 3,000 hectares, with possibilities of further extensions.

Geology: the ore occurs in a formation of Tertiary conglomerate, sandstones and tuffs, the cupriferos tuffs overlying conglomerates of eruptive rock pebbles, and being surmounted by argillaceous tuffs, all traversed by fissures. The ores comprise a remarkably varied series of oxidized copper minerals in which the metal occurs in combination with silver, lead,

cobalt, manganese and other metals. The prevailing oxide is melaconite, more or less mixed with manganese and iron oxides; and the prevailing sulphides below water level are covellite and copper glance. The following rare minerals are peculiar to this deposit: boleite, an oxychloride of lead, copper and silver; cumengeite, oxychloride of lead and copper; fosegeneite, a chlorocarbonate of lead; sphaerocobaltite, a carbonate of cobalt. Practically every known oxidized ore of copper occurs here, as well as those of lead, manganese and iron. Gypsum is abundant and native sulphur occurs. All minerals occur in an unctuous, decomposed tuff, locally called soap-clay. There are 3 cupriferous beds, the upper averaging about 3' in thickness, the middle 2 to 3', and the bottom 2 to 10'. The middle bed carries oxide and carbonate ores in oolitic concretions, known locally as boleos, hence the name of the mine. The lowest bed, partly below the water line, carries sulphide ores, as well as oxides and carbonates. This bed, No. 3, has been the chief source of ore supply of the property. It has averaged 1 meter in thickness, but varies from a few inches up to 16' in different parts of the property. The ore is disseminated through the tuffs in thin, irregular veins, with clay gouge, and has a marked concentration toward the bottom of each bed, where the ore forms compact layers of 6 to 12". The main workings are 15 to 200 meters above sea level, the mine being opened by numerous tunnels, and by 7 shafts of the following depths: Sombrero, 98 meters; Carmen, 53 m.; Purgatorio, 55 m.; Central, 156 m.; Amelia, 48 m.; Santa Rita, 86 m.; San Juan, 86 m. The mine is extensively developed.

Owing to the peculiar nature of the mine, all drilling is done by hand, the ore is hand-sorted, and about half is machine-briquetted at a cost of only about \$0.8 per ton, the argillaceous gangue serving as a natural binder.

Equipment: the mine has complete steam and electric plants, generating upwards of 2,500-h. p. from steam engines, of which 2,000-h. p. is transformed by two 500-k. w. 3-phase current generators and two 250-k. w. 3-phase generators. The electric plant, at Santa Rosalia, furnishes power for hoisting, traction engines and a lighting system having 50 arc lights and a number of incandescent lamps. The company is courageous in installing new machinery. The climate is tropical, and the country extremely arid. Potable water is brought from a reservoir on the Yaqui plateau, through a 16,074-meter pipe line, having pumps at Santa Agueda and Santa Rita. The mines and works are connected by a 30-kilometer private railway, equipped with 9 locomotives and 250 cars.

The smelter, rebuilt 1901 and 1906, has 12 water-jacket blast furnaces, of 200 to 250 tons capacity each, 6 with 12 and 6 with 15 tuyeres each. There are 6 large Root blowers, driven by three 175-h. p. compound engines. Sea water for jackets is supplied by a duplex pump of 2,400 cubic meters hourly capacity, operated by a 250-h. p. engine. Electric locomotives on the slag line dump molten slags into moulds in rough holes in the ground, and, after cooling, the masses of slag are dumped over the end of the breakerwater, serving a useful purpose in its extension. Fuel for smelting is German coke and English coal, and patented coal briquettes are used for general fuel. The first fusion product is a matte of 60 to 65% copper tenor, blown up to black copper of 93 to 94% average tenor, production being about two-thirds matte and one-third black copper. Matte and bars are shipped to England and France for refining, the management believing this preferable to adding a converter plant.

The works at Santa Rosalia include a 2-story power building, of steel, concrete and brick, and extensive machine shops, capable of handling all classes of mining work, the company occupying a singularly isolated position.

The harbor of Santa Rosalia has breakwaters of 650' and 2,500', with a 340-meter jetty and 2 new wharves, the dock having an area of 15 hectares, with breakwaters composed of large blocks of slag. The harbor works include a dredge and three 200-ton lighters used therewith. The port handled only 47,879 tons of freight in 1915, as compared with 148,536 tons in 1914. The company owns two steamers, plying between Santa Rosalia and the eastern coast of Mexico. These boats were seized by the Revolutionists in 1914, but later were returned to the company. Copper is shipped to Europe on the steamers of the Compagnie Chargeurs Reunis.

The town of Santa Rosalia has a population of 9,500, of whom 200 are Europeans, dependent solely upon the mines and works, and is controlled absolutely by the company. The town is well laid out, and has 4 general stores, warehouses, saw mill, church, 4 school houses, theater, amphitheater and market. The company gives free medical and surgical attendance, medicines and an excellent hospital service to employes.

The labor question has given considerable difficulty, owing to the scant population of Lower California, necessitating the importation of workmen. Wages average about 2 pesos daily for miners.

In 1915 the company employed 3,360 men. Almost all hand labor is Mexican with some Yaqui Indians. Europeans are only employed as foremen and for special work.

Production: 29,120,000 lbs. in 1910; 27,686,400 lbs. in 1911, and 28,336,000 lbs. in 1912. The production of ore mined for 1911 was 355,100 tons of 3.47% ore; 364,850 tons of 3.51% ore in 1912; 371,300 tons in 1913; 324,000 tons in 1914; 316,800 tons in 1915. The smelter handled 356,700 tons of ore in 1911; 360,000 tons of ore, yielding 12,650 tons of copper in 1912; 374,350 tons, yielding 3.47% or 13,000 tons copper in 1913; 324,000 tons, yielding 3.53% or 11,480 tons of copper in 1914; 317,000 tons, yielding 3.62%, or 11,500 tons of copper in 1915.

Railway transported 607,088 tons, in 1914, as against 675,743 tons in 1913. Reserves of ore amount to 6 years' supply.

The company's policy of secretiveness, concerning mine operations together with its refusal to permit inspection by visiting engineers and geologists, has made it impossible to give detailed information concerning a unique ore deposit and its exploitation. The property is one of exceptional merit and has been ably managed for many years. Company has been able to continue operations despite revolutionary disturbances in Mexico.

BONANZA-BUTTE MINING CO.

MONTANA

Care: John Kenoffel, 131 E. Aluminum St., Butte, Mont. **Inc. June, 1915, in Mont.,** with Chas. H. Lane, Wm. Youlden, J. J. McCarthy, H. H. Walrath, Wm. Meyer, John and Geo. E. Johnson, directors. **Cap., \$500,000;** shares \$1 par.

Property: the Bonanza, Bonanza Extension, and Ruth claims, 4 miles north of Butte. One claim shows 2 parallel veins, of 1' to 5' width; South-erly vein shows no ore; the other, Bonanza vein, is opened by a 55' shaft and 300' crosscut tunnel. The known ore-shoot is too low-grade to be profitably worked. The vein is in a granite area surrounded by rhyolitic rocks, near the B. & M. reservoir, on the road to Lowland Creek. The ore carries a little gray copper, but the bulk of the black material seen in it is tourmaline and not copper glance.

BONANZA MINE

WASHINGTON

Property: 200 acres, located 3 miles from Bossburg, Stevens Co., Wash. The mine, an old-time producer, said to have had an output of \$1,000,000, and idle for 15 years, was reopened in 1915 by lessees who

started shipping silver-lead ore to the Trail smelter. **Developed:** by incline shaft with 6 levels, and a total of 3,000' underground workings. See U. S. G. S. Bull. 550, p. 63.

BONANZA MINING CO.**IDAHO**

Office and mine: Montpelier, Bear Co., Idaho. **Officers:** Col. E. J. Parrish, pres.; E. M. Stewart, v. p.; A. D. Young, sec.; H. H. Hoff, treas.; preceding officers, Chas. Sweet, M. F. Whitman and Ira Chaffin, directors; R. C. Eckloff, gen. mgr., at last accounts. **Inc.** Nov. 1905, in Idaho., as successor of Montpelier Copper Mining & Smelting Co. **Cap.**, \$5,000,000; shares \$1 par.

Property: 25 claims, unpatented, 500 acres, 9 miles S. W. of Montpelier on the Oregon Short Line Ry.

Geology: the U. S. Geological Survey report (Bull. 430-B., p. 49) describes the geological occurrence of the ore as an impregnation of sandstone and underlying shale, only 4' thick in all, with copper carbonate stain associated with carbonized fossil plant stems. There is no well-defined orebody. Good specimens are obtainable but average values are very low. Workings include a shaft said to be 350' deep on a dip of 50° and a 50' shaft farther south. The copper bed is traceable for 8 miles on the east side of a Red Bed ridge of Permian rocks. Property regarded as of doubtful value.

BONANZA MINING CO.**MEXICO**

Office: Cananea, Sonora, Mexico. Geo. Kingdon, pres.; C. T. Knapp, v. p.; Geo. Young, sec.-treas.; Casey Stites, asst. sec.; preceding officers and M. J. Elsing, directors. Is the operating Mexican corporation of the Superior Bonanza Mining Co., which see. **Inc.** June 7, 1904, in Mexico. **Cap.**, authorized and issued, 10,000 pesos; par value of share \$1 (Mexican). Holds title to the mineral properties of that company, located near Imuris, Sonora, Mex., consisting of 198 pertenencias, or approximately 491 acres. Controlled through stock ownership by Greene Cananea Copper Co. Purchase was made in 1911, but the mine has not been worked since that time. Contains a siliceous ore, low in copper content, but with notable quantities of gold. Was purchased to provide a reserve of flux for the iron in the Cananea ores.

BONANZA MINING CO.**NEVADA**

Mine office: Winnemucca, Humboldt Co., Nev. Company controlled by Chas. Baagoe and D. F. Shiveley of Winnemucca. **Property:** 5 claims, 5 miles from Winnemucca, shows a contact fissure vein 11'-22' wide and proven for length of 115', between diorite-porphry hanging wall and lime shale footwall. Development includes 3 shafts, deepest 215' with cross-cuts, a tunnel driven east from No. 2 shaft, 37' deep and a winze sunk all in ore. Mine has no equipment.

BONNEY MINING CO.**NEW MEXICO**

Office: Lordsburg, Grant Co., N. M. Abel L. Allen, pres.; J. B. Foster, sec.-treas.; with J. F. Galster, J. W. Christ, Ed. F. Laffin, directors. Frank Maloit, Jr., supt. **Inc.** in Dist. of Columbia. **Cap.**, \$500,000; shares \$1 par, nonassessable.

Property: 6 claims, 108 acres, includes the Bonnie mine in the Virginia district, 5½ miles south of Lordsburg. **Ore:** occurs as black and red oxides and chalcopyrite, carrying gold and silver values found in 5 fissure veins in andesite forming the hills at the northern end of the Pyramid mountains, at an elevation of 4,500 to 5,500'. Main shaft is 320' deep with 3 levels, said to show veins 2 to 12' wide.

Geology: veins of district, according to U. S. Geological Survey, are narrow and characterized by quartz with plentiful barite, rhodochrosite and

other carbonates and carry ore in bands and bunches in central part of quartz. Wide silicious zones occur but are barren. Values considered superficial by authorities.

Equipment: includes air-compressor, drills, steam hoists, pumps, dwellings, offices and mine buildings. Shipments to Douglas smelter in 1915 averaged \$5 gold, \$4 silver and 4% copper or about \$24 per ton. Total costs given at \$9.50 per ton. Plan sinking main shaft to 500' depth in 1916.

BONNIE MINING CO.

ARIZONA

Address: R. M. Garrett, Prescott, Ariz. Mine on upper Lynx creek, Yavapai Co., Ariz., is an old one recently reopened. The shaft, 123' deep, at last accounts, will be carried down to 250', when drifting, to cut the face of the main tunnel 500' distant, will begin. The ores, formerly gold-silver, are now high-grade copper, in a vein 26" wide at 123' in depth. Operations interrupted in 1914, to be resumed in 1916.

BOREALIS CONSOLIDATED MINES CO.

CALIFORNIA

Address: Dr. G. W. Hillegas, pres., Bacon Bldg., Oakland, Calif. **Property:** 40 acres, including the Eureka mine, in Ophir district, 4 miles from Auburn, Placer Co., Calif. **Ore:** quartz, exposed in shoots, averaging \$12 per ton. **Development:** by 3 compartment shaft. **Ore reserves:** estimated in 1915, by company, at 17,000 tons of \$12 ore in sight on Eureka ground.

Equipment: 20-stamp mill, electric hoist, good for 1,500', and air compressor. Employs 22 men. Regular shipments of concentrates to custom smelter made in 1915.

BOREN GULCH MINING CO.

COLORADO

La Plata, Colo. C. C. Carnell, gen. mgr. Company being reorganized, 1916, as Boren Gulch Gold Mng. Co.

BOSS GOLD MINING CO.

NEVADA

Goodsprings, Clark Co. **Officers:** S. E. Yount, pres.; J. F. Kent, v. p.; F. A. Hale, Jr., sec.-treas.; with O. J. Fisk and R. B. Chapman, directors. O. J. Fisk, gen. mgr. **Inc.** 1914, in Nev. **Cap.**, \$1,000,000; shares \$1 par; outstanding \$408,500. Annual meeting 3rd Wed. in Jan. Financial statement of Jan. 10, 1916, shows cash in bank, \$17,090. During first 11 months of 1915 the property was under lease and bond to the Platinum Gold Mng. Co., which apparently failed to conclude its option on account of poor financial arrangements.

Property: 5 claims, 85 acres, unpatented, 12 miles west of Goodsprings and 3 miles from new townsite of Platina.

Geology: orebodies consist of oxidized copper ore, mostly chrysocolla and limonite, and of gold-platinum-palladium ore in fine-grained siliceous gangue. The latter ores contain a small quantity of bismuth-bearing plumbojarosite (a hydrous sulphate of iron and lead). The shoots can be mined separately. The orebodies occupy a nearly vertical zone of fracturing in the horizontal strata of dolomite. The zone is 30' wide on surface, 100' long, with precious metal shoots confined to the 12' resting on the footwall. **Ore reserves:** blocked out and on dump, estimated Jan., 1916, as 14,200 tons valued at \$296,000. Assays said to be 2 to 15% copper, 0.2 to 100 oz. gold and 0.2 to 100 oz. platinum per ton.

Development: several tunnels, with a total of 5,000' underground work. Equipment includes an 800' tramway. Ten men are employed.

Production: in 1915, of the Platinum G. M. Co., consisted of 160 tons of copper ore, assaying 11.3% copper, 0.3 oz. gold and 2.5 oz. silver per ton. No gold-platinum ore was shipped. Company is shipping copper ore and experimenting with processes for the treatment of the gold-platinum ore. See U. S. G. S. Bull. 620-A.

BOSTON & ALTA COPPER CO.**MONTANA**

Address: c/o Geo. H. Hill, Helena, Mont. Mine near Corbin, Jefferson Co., Mont. **Officers:** John Joyce, pres.; Marcus L. Hewett, v. p. and gen. mgr.; Chas. H. Innes, sec.-treas.; above with Walter Callender, Warren Curtis, Sr., Jas. G. Gregg, Archibald S. Spriggs, Wm. Tatham and Chas. B. Van Nostrand, directors; Richard M. Atwater, Jr., cons. engr.

Inc: Nov., 1909, in West Virginia. **Cap.,** \$3,000,000; shares \$10 par; as successor of Alta-Montana Copper Co. to take over and work the Alta mine, whose output of \$32,000,000 has made it one of the big mines of the world.

The Alta mine, passing from the original owners to the Helena Mining & Reduction Co., was shut down, 1903. The Alta Montana Co., Kelly Mining & Reduction Co., Alta-Montana Copper Co., and Boston & Alta Copper Co., owned property successively. The New Mexican holdings of the Kelly Smelting & Refining Co. were segregated, holdings of present company being exclusively in Montana.

Property: 640 acres, including the Alta group of 8 claims, carrying about 7,000' of the Alta or mother lode of the Corbin camp, property including some placer ground near Corbin, and a townsite. The Alta lode consists of fissures in granite, with dip to the north, the main, or Alta vein, of about 20' average width, being developed for about a mile horizontally. Values in developed workings are mainly in silver and lead, with a little copper and gold, and occasional sphalerite, the lead and zinc decreasing and copper increasing with depth. Copper ore is mainly chalcopyrite, carrying silver and a little gold, apparently of low average grade, and somewhat refractory, though it can be mined cheaply. Mine assay records, during 1903, the last year of work by the old owners, gave an average of 1.75% copper, 4% lead, 9 oz. silver and \$1.40 gold per ton.

Development: the old Alta mine had about 17 miles of workings, developed mainly by tunnels, No. 8 being the main tunnel, and was dry, even to the greatest depth attained. New development is by a 1,000' three-compartment shaft, near portal of No. 8 tunnel, with about 700' of laterals, but money gave out and operations were suspended in Aug., 1910, since which date leasors have gouged the old workings near the surface, but no other work has been done. A crosscut at 665' depth showed the Alta vein to be about 30' wide, 560' from the shaft, said to give a fair copper showing.

Equipment: company is said to have a hydro-electric power plant, estimated as capable of developing 1,400-h. p., on Prickly Pear creek, a small auxiliary steam plant, an electric hoist good for 1,200', and a 10-drill air compressor. There is a 30x70' boarding house, and an old mill, of little present value, but having a good site.

The Alta was a large and profitable producer for 2 decades, but ore became low in grade and refractory, hence suspension in 1893, when silver suffered marketwise. The property was reported upon favorably by Pearse, Kingston & Browne, who stated that it was "not so much a mining venture as a manufacturing proposition on a large scale," and also stated that "mining risks are practically nil" in this venture. Company has issued \$1,400,000 out of its capital stock and in 1912 had an outstanding debt of \$30,000, and at least \$40,000 more is needed to put company on its feet. Company is not regarded favorably, on account of the chain of reorganizations, and its promotion by Marcus L. Hewett, whose record as a promoter includes a number of unsuccessful ventures.

Property operated by lessees in 1915.

BOSTON-AMERICAN MINING CO.**WASHINGTON**

Office: Bloomington, Ill. **Mine office:** Monte Cristo, Snohomish Co., Wash. **Officers.** H. D. Cowden, pres.; D. A. Ward, v. p.; H. B. Cowden, sec.; F. W. Boston, treas.; preceding with J. H. Adams, P. E. Low, C. A. Riddle, directors. D. R. Kyes, supt.

Inc., 1913, in Wash. Cap., \$2,000,000; shares \$1 par; outstanding 1,446,000; nonassessable. The company may be a reorganization of the United Mng. Co., which see, for circular letter of Jan. 23, 1915, to B. A. stockholders says "with but few exceptions the stockholders of the United Mining Co. have an equal proportional holding in the Boston-American Mining Co."

Financial report of the B. A. Mng. Co. as of Jan. 1, 1915, shows: receipts from sale of stock \$37,012, received from loans \$14,000, expenditures \$50,410; balance, \$602. It is reported that, due to lack of finances, it was deemed advisable to suspend all work on the United property and develop the B. A. property.

Property: 17 claims, unpatented, 315 acres, at Monte Cristo, Wash., said to show a dike of low-grade ore 300' wide, containing fissure veins with streaks of ore from a few inches to 4' in width. Ore said to contain gold, silver, copper, zinc and arsenic. Mineralized zone said to have been proven by workings over a length of 750' and to show for 5,000' on surface.

Development: 9 tunnels, the longest, 1,850' in Dec., 1915, is 1,400' below the next higher tunnel. Total underground workings about 5,000'. Management claims to have 120,000 tons ore blocked out and to have shipped 18 carloads ore that assayed \$29 per ton in gold, silver and copper, 8% arsenic and 2½% zinc.

Plans continuing the main tunnel through the property with intention to "ship ore when we encounter the ledge."

The statements made by the management in the literature put out are grossly misleading. Provided the "ledge," when found, does contain shipping ore, and can be profitably worked, it is certain that the costs and net profits promised by company's literature, will never be realized.

BOSTON & ARIZONA MINES CO.**ARIZONA**

General office: Tucson, Ariz. **Officers:** Geo. P. Gregory, pres.; Henry C. Young, Jr., v. p.-gen. mgr.; Gerald S. Howland, treas. **Inc. 1915. Cap., \$100,000; shares \$1 par.** Stock listed on Boston curb. Federal Trust Co., Boston, transfer agents; Exchange Trust Co., registrars.

Property: 5 claims, in the Old Hat mining district, 25 miles south of Tucson, Pinal Co., Ariz., said to show an orebody 25' wide and 100' long, with copper-silver-gold values. Ore occurs between grano-diorite foot and quartz lime hanging-wall. Developed by 247' tunnel. A prospect.

BOSTON-BUTTE COPPER & ZINC CO.**MONTANA**

Hon. W. W. McDowell, pres., Butte, Mont. **Inc. 1913, in Mont. Cap., \$1,000,000; shares \$1 par.** **Property:** 12 patented claims at Butte, adjoining the Anaconda Copper Mining Co. property on the N. E. Idle and undeveloped.

BOSTON-COLBY COPPER MINING CO.**MONTANA**

Mine P. O.: Saltese, Missoula Co., Mont. Peter Peterson, pres.; Hon. Andrew Flaig, 1398 21st St., Milwaukee, Wis., sec., gen. mgr. and principal owner. **Inc. Sept. 16, 1903, in Montana. Cap., \$1,500,000; shares \$1 par; with 1,200,000 treasury shares, 300,000 still in treasury.**

Property: 9 claims, unpatented, 180 acres, and a 5-acre mill site, lying next east of the Butte-Coeur d'Alene Copper Mining Co., immediately west of Saltese, in the East Coeur d'Alene, formerly known as St. Regis district.

Lands have 2 copper-bearing veins, No. 1 of about 40' width, and No. 2, to the south, of about 3' width, carrying mainly chalcopryrite, with some bornite, of good average grade. **Development:** by 2 crosscut tunnels, upper of 400', lower of 900' length with about 500' of drifting in both tunnels. Property crossed by C., M. & St. Paul railroad. Wood and water are abundant. Assessment work only has been done for several years, owing to lack of funds.

BOSTON & CORBIN MINING CO.

MONTANA

C. R. Jeffers, sec.-treas., 67 Milk St., Boston, Mass. **Mine office:** Corbin, Jefferson Co., Mont. **Officers:** Harry M. Stonemetz, pres.; R. C. Grew, v. p.; preceding officers, Chas. H. Cole, E. L. Goulston, Ellis L. Dresel and Wm. M. Bradley, directors. Dan Courtney, mgr. **Inc. Aug.** 1913, in Me. **Cap.,** \$5,000,000; shares \$5 par; nonassessable; issued, 859,570 shares. Paul Revere Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent.

Company was formed to take over the property of the Boston & Corbin Copper & Silver Mng. Co. and shares of the new company were exchanged for securities of the old company on basis of 75,200 shares for \$200,000 6% convertible bonds and 100,000 shares exchanged share for share upon payment of a subscription of \$1.50 per share for the old stock. Balance sheet July 31, 1914, showed a balance of cash and quick assets of \$51,713. Monthly expenses at mine, after closing down, averaged \$597 in 1914.

Property: the Bertha mine and 12 patented claims aggregating 157 acres, about 1 mile west of Corbin, having about 4,500' of the strike of the Bertha vein. **Geology:** country rock is granite with intrusive porphyry rocks, carrying a vein system consisting of a number of parallel fissures. The geological conditions are often called similar to those of Butte, but ore is mainly chalcopryrite, instead of chalcocite, as in Butte, with some enargite and a little bornite of good grade, all argentiferous and slightly auriferous. Lands said to have 16 veins, of which 3 are under development. The Bertha vein is a well-defined, but narrow fissure in granite, varying from 2 to 5' wide with strong walls. The concentrating ore is pyritic and low grade, the concentrates running 7% copper, 8.6 oz. of silver per ton with \$2.38 for excess iron; a total value of nearly \$20 per ton. Former estimates proved too optimistic as to values, development being disappointing. Property examined by Frank H. Probert in March, 1913.

Development: mine is developed to a depth of 1,200' and has 15,000' of workings, not including 4 short discovery tunnels, the Boston Fraction crosscut tunnel, 1,500' Corbin crosscut tunnel and 880' Bertha drift tunnel.

A 200-ton concentrator, costing \$125,000, was finished and put in operation March, 1913, but operations of mine and mill were suspended Nov. 10, 1913, on account of the low grade of ore. Results obtained during the period the mill was operated are as follows: tons ore treated, 30,346; copper assay, 1.85% per ton; silver assay, 2.4 oz. per ton; cost per ton, mining, \$2.87; cost per ton, concentrating, \$1.11; production 611,924 lbs. copper and 45,950 oz. silver. The mill should never have been built, as development of the mine at that time, and since, did not warrant it.

Ore reserves: at time of closing down were figured at 10,712 tons of presumably the same value as the ore milled.

Equipment: includes an electric hoist, capable of raising 5-ton loads from a depth of 2,000', at the rate of 900' per minute, and a 15-drill Ingersoll-Rand air compressor, direct-connected to a 150-h. p. motor. Power is bought from the Montana Power Co. at a considerable saving over steam. There are 19 buildings, including a boiler house, engine house, compressor

house, bunk house, boarding house, changing house, warehouse, office, laboratory, smithy and dwellings. Cost of wagon freight to railway is \$2 per ton on ore.

In February, 1916, the mine was unwatered as it was believed ore could be profitably mined at the prevailing high price of copper. Reported in May that concentrator had started operating and shipments were being made.

BOSTON DEVELOPMENT CO.

UTAH

Office: 325 Judge Bldg., Salt Lake City, Utah. **Officers:** F. H. Vahrenkamp, pres.-gen. mgr.; Thos. Austin, v. p.; E. J. Kearnes, treas.; preceding officers, R. Winder, and B. F. Fitzgerald, directors; R. B. Garff, sec.; T. W. Bowen, supt. **Cap.,** \$500,000; shares \$1 par.

Property: the old Maxfield mine on the north side of Cottonwood Canyon, in the Big Cottonwood district, 3 miles north of the Cardiff mine, and 2 hours by auto from Salt Lake City, was taken over on a \$250,000 bond and lease, 1914. The Maxfield mine, discovered in 1872, is one of Utah's well-known early day mines; it is credited with a production of over a million dollars in gold, silver, copper and lead. The present management is said to have spent \$70,000 in 1915 in unwatering and equipping the mine.

Ore: above the water level is silver-lead, carbonate; below, it is galena, containing gold, silver and copper. Orebodies vary in width from 6' to 24'.

Development: mainly by tunnels. The mine is about worked out above the main tunnel which was driven north 1,465', then west for 1,065'. New management plans systematic development work including the sinking of the incline shaft from its present depth of 218' to 400' depth. **Equipment:** 2 air compressors, pumps, and electric power. **Production:** started in 1915 and in Jan., 1916, the daily output was 20 tons ore, said to average \$40 per ton, all coming from the 1,700' level. Several new orebodies are said to have been discovered which promises well for the venture made when the old mine was taken over. Employs 50-60 men.

BOSTON DUENWEG MINING CO.

MISSOURI

Owens the property being operated by the Wilson Mines Co., and the O. F. & L. Mng. Co., Jasper Co., Mo.

BOSTON-ELY MINING CO.

NEVADA

Dead. Impossible to locate officers; letters unanswered. Appears as if company's officers were afraid of service in some legal proceedings. Hosmer Robinson & Co., of Boston, were formerly interested, and gave company a standing.

BOSTON-IDAHO MINING CO.

IDAHO

Office: 720 Scollay Bldg., 40 Court St., Boston, Mass. **Mine office:** Ketchum, Blaine Co., Idaho. **Officers:** Levi Diamond, pres.; Joseph Briggs, v. p., Winthrop, Me.; M. A. Costello, sec.; E. M. Schwarzenburg, treas.; with A. H. Bailey, Winthrop, Me., David A. Calhoun, Portland, Me., J. H. Hickey, Boston, Mass., and W. C. Smith, directors. C. Fred Howe, supt., Ketchum, Idaho. **Inc.** May 28, 1907, in Maine. **Cap.,** \$2,500,000, in 1,000,000 common, \$1 par; and 150,000 preferred, \$10 par. In treasury \$200,000 common, \$1,300,000 preferred. Bonded debt \$125,000 authorized, \$110,000 issued.

Should not be confused with another company of same name, operating 2 gold dredges on Elk and Moore creeks, near Idaho City, which has a bond on the Banner mine.

Property: 500 acres, 29 claims, 7 patented, 12 held by location, 8 leased and bonded; 2 mill sites, at Boyle Mtn., Idaho, comprising one zinc and two lead-silver mines. Claims cover a granite-limestone contact showing

fissure veins a few inches to several feet wide, cutting across the granite. Veins carry complex sulphide ores showing argentiferous galena, zinc blende and other sulphides in irregular stringers and replacements. The ore shipped is reported to show from 9% lead and 10 oz. silver to 79% lead and 36 oz. silver, per ton, with 19% to 54% zinc. Over a million dollars' worth of ore is reported to have been taken out by former owners. **Development:** 3,000' tunnel work with depth of 900'.

Property large, requiring \$150,000 or more to develop lead-silver and \$100,000 to explore zinc deposits, and company thus far has not been able to secure funds for this work.

A 100-ton Traylor mill was reported making concentration tests in 1914.

Buildings include an office, laboratory, 2 warehouses, boarding house, bunk house, 2 smithies, 2 stables, 2 powder houses, a 5,000' sawmill, 2 ore houses and 8 dwellings.

BOSTON & JEROME COPPER CO.

ARIZONA

Office and mine: Jerome, Yavapai Co., Ariz. J. C. Scott, pres.; C. R. Ewing, v. p.; A. A. Macpherson, sec.-treas.; preceding officers, L. W. Pugh and Jas. Prosser, directors. Inc. 1907, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; increased, May, 1908, to \$2,500,000; shares \$5 par; issued \$129,090. **Lands:** the Juniper group of 9 claims, 146 acres, 2 miles south of Jerome. **Development:** includes 3 tunnels of 400' aggregate length, and a 130' shaft, sunk on a large porphyry and schist dike carrying carbonate copper stains. Ore was not found in commercial quantities and property has been idle since Feb., 1908.

BOSTON & LAKE SUPERIOR MINERAL LAND CO. MICHIGAN

Office: Leopold Bldg., Houghton, Mich. Fred W. Nichols, resident agt. Property is mineral land in the Lake Superior copper district. No mining work ever done.

BOSTON MINE LEASING CO.

COLORADO

Idaho Springs. **Officers:** Wm. P. Brennan, pres.; A. L. Carnahan, v. p.-mgr.; Lombard Williams, treas.; H. H. Bradlee, sec.; preceding officers, J. P. O'Connell, directors. Inc. June, 1915, in Colo. **Cap.**, \$100,000; shares \$1 par; all outstanding; nonassessable. Receipts from ore sold in 1915 were \$30,196, of which \$12,000 was distributed in dividends.

Property: a lease on a large portion of the property of the Edgar mine at Idaho Springs, has options on the lease of all other property eastward owned by the Big Five Mng. Co., and traversed by veins of the Edgar mine, also options on the Bryant-Crystal group. Leases are for 5 years.

Ore: occurs in fissure veins, in schist, strike N. E.; with dip 65° S.; consists of lead and zinc sulphides, containing gold and silver. Smelting ore, from a 2' width of the vein, said to average: gold 0.78 oz., silver 21 oz., copper 1%, lead 13.8%, zinc 5%.

Development: a 65° incline shaft, 100' deep and tunnels. The Central tunnel of the Big Five Co. cuts the main vein 2,460' from portal and 800' below surface. There is 1,100' of drifting on the vein, and 10,000 tons ore blocked out. **Equipment:** hoist, and pump. Compressed air is bought from the Big Five Mng. Co.

Production: 2,582 tons ore, in 1915. Company plans increased development during 1916.

BOSTON & MONTANA DEVELOPMENT CO.

MONTANA

Offices: Daly Bank Bldg., Butte, Mont., and 35 Congress St., Boston, Mass. Mines at French Gulch, Deer Lodge Co., Mont., and Elkhorn, Beaverhead Co., Mont. **Officers:** Hon. W. R. Allen, pres.; W. C. Siderfin, v. p.; L. P. Benedict, sec.; W. H. Coade, treas.; preceding with exception

of L. P. Benedict, J. G. Brown, Helena, Mont., C. M. McCoy, Butte, Mont., Chas. E. Miller, Wisdom, Mont., Geo. Gallup and Joseph J. Wall, Boston, directors.

Inc. 1913, in Mont. Cap., \$15,000,000; shares \$5 par; 1,661,000 issued April, 1916; no bonded debt. Operating expenses July 1, 1914, to July 1, 1915, \$66,812. U. S. Corporation, New York, transfer agt.; Equitable Trust Co., New York, registrar. Stock listed on Boston and New York curbs.

Property: is extensive, covering two entire mining districts, including 27 lode claims and 6 placer claims in the French Gulch district, Deer Lodge county, Mont., and 89 lode claims in the Elkhorn district, Beaverhead county, Mont. Company will practically control all these districts.

Both French Gulch and Elkhorn were opened in 1865, in the rush which followed the discovery of gold at Bannack, a few miles to the south, in 1862.

The French Gulch group of claims includes 1,100 acres, patented, water rights to 5 streams and 15 miles ditches and flumes. About \$750,000 is said to have been spent in development work. The claims have been opened up by shafts and tunnels, principally upon the Spain, Lucky Strike, Golden Crown and Leo. The work on the Spain consists of a 900' tunnel and 200' shaft, with 800' of drifting on the 200' level. The drift tunnel is about 350' below the apex and shows the vein to carry from a few inches to 4' of sulphide ore, averaging \$17 a ton, according to estimates made by James E. Beveridge, E. M. Ore is said to be blocked out to the value of \$500,000.

The Lucky Strike has a 200' tunnel following a contact vein reported to be 20 to 40' wide, and 100' shaft with 300' of drifting on the vein whose thickness is reported to be 35', with a paystreak of ore running from \$41.50 to \$80 gold, 5 to 7 oz. silver and 2½% copper.

The vein has been opened to the west by another 100' shaft, with 600' of drifting, showing an orebody 12' wide averaging \$18 a ton, according to the management. Eight hundred feet of tunneling on the Golden Crown claim shows a 1 to 3' vein said to carry \$8 to \$20 ore.

Besides these there are numerous smaller shafts and tunnels on the various claims in the French Gulch group.

The Elkhorn property consists of the Central and other groups, including the Idanha, Park, Aspen, Blue Eyed Annie and other mines, about 1,500 acres, all adjacent, either owned or held under bond and lease. This tract is crossed by numerous big, strong, well-mineralized quartz veins, cutting quartz monzonite and showing narrow zones of alteration adjacent to the veins. In the western part of the estate the veins are silver bearing and were opened, and high-grade ore extracted many years ago, a mill being erected on one property. The ore contains gray copper and high-grade silver sulphides and occurs in shoots whose size and extent is as yet undetermined, since the workings are shallow, seldom exceeding 100' in shafts or tunnel backs. The veins appear to belong to two distinct systems, one E. W., the other N. E.-S. W., the latter having a southerly and flatter dip and being the larger veins.

The eastern claims include the Park, a large N. E.-S. W. vein, 20'-30' wide and dipping 75° N. W., traceable across four claims. It is formed of hard white brecciated quartz with altered granite streaks and carries shipping ore with copper and lead sulphides, having gold-silver values. Samples from a number of open cuts for a distance of 250' along the vein average 1.7% copper and 13.6 oz. silver, and the lead ore from these cuts carries 7.5% lead, 3% copper and 11 oz. silver for 4' across, the full width of the vein not being disclosed. An old 250' shaft sunk to develop this

vein, encountered a fault and did not reach the vein. High grade ore has also been found in several shallow shafts and cuts to the S. W., but the development does not permit a definite estimate of amounts.

Copper ore occurs in the Idanha or Mono vein, a great lode 20'-30' wide with a dip of 55° to the south. This vein is parallel to the Park and $\frac{1}{2}$ of a mile N. W. of it. It is a copper bearing quartz pyrite vein, which resembles the older veins of the Butte district. It is developed by a 900' tunnel, giving a 250' back at the face. This tunnel cuts the ore at a point 600' from the portal and crosses the vein at a slight angle, crosscuts exposing its full width. Eight samples show an average of 2.9% copper and 6 oz. silver per ton for 10', there being a persistent hanging wall band and two other bands of sulphide ore. This vein will be opened and worked by the new working tunnel, now 2,500' long and 1,200' below the outcrop.

The Aspen is an E.-W. cross vein, and is said to be faulted by the other system. It is 2'-5' thick and has been exposed for 600' by a drift tunnel, showing for this distance a 12" pay streak of silicious ore carrying bornite, chalcopyrite and gray copper. This ore shows values of 0.9% copper, 40-60 oz. silver and \$10 gold per ton.

The Mary Montreal vein, developed by a 250' tunnel, the Red Sky vein, opened by a 100' shaft and long drift tunnel, and the Elkhorn vein, with half a dozen shallow shafts close together, all show high grade oxidized silver ore. The Blue Eyed Annie vein is said to carry 15' of \$15 ore on the 200' level. There are also half a dozen other veins of promising outcrop, but slight development.

The company has driven a new double-track tunnel about 1,000' below the Idanha tunnel (No. 1) for over 2,000', and has 2 crosscuts, each more than 500' long at the present time (May, 1916), which are being driven to intercept the Park vein in the S. E. crosscut and the other neighboring veins and the Idanha copper vein to the west.

Company expects to start hauling ore by motor trucks from both its French Gulch and Elkhorn properties, summer, 1916.

Company controls the Southern Montana Railway, now being financed, which will be built through the Big Hole Basin, and will give both camps railroad transportation. Company will operate through leases and subsidiary companies, in which it will retain around 50% of the stock.

The company's plans are daring and ambitious and the properties long known, but heretofore unworkable for lack of cheap transportation. The property is regarded as promising and the management competent and honest.

BOSTON-PARRY SOUND COPPER CO.

ONTARIO

Mine office: Parry Sound, Parry Sound district, Ont. Inc. June, 1908, in Maine. **Cap.**, \$1,000,000, shares \$1 par. **Property:** 200 acres, in the vicinity of the Willcox and McGowan mines. Idle some years, but owners are well-to-do and expect to reopen property some day. Is a close corporation.

BOSTON-SIERRA MADRE MINE INDUSTRY CO.

COLORADO

Property sold for taxes in 1914 to L. E. Armstrong. Fully described Vol. XI. Copper Handbook.

BOSTON SONORA MINES CO.

MEXICO

Inc. about Dec., 1911, in Arizona, by Thomas Patterson, Wm. A. Clark, H. C. Wilderson, James V. Howard and Royal B. Young, all of Massachusetts. **Cap.**, \$1,000,000, shares \$5 par.

Property: at Cananea, Mexico, includes several claims near the Calumet-Sonora (Carnegie Lead & Zinc Co.) ground, crossed by several re-

placement veins showing bunches of good ore in the shallow pits and prospect shafts thus far put down. Is a prospect only.

BOSTON & TINTIC MINING CO.

UTAH

Office: Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah, Jesse Knight, pres.; Wm. H. Tibbals, v. p.; W. Lester Mangum, sec.-treas. **Inc.** 1899 in Utah. **Cap.**, \$1,000,000, shares \$1 par, assessable; issued, \$747,000. **Property:** 3 claims, patented, 46 acres, near Black Jack mine, carrying 2 fissure veins, in porphyry, of which 1, of 3 to 5' average width, traceable 2,000', has been opened by tunnels of 40', 70' and 120', and by a 240' incline shaft that followed the vein and cut bunches of good ore assaying 1 to 3% copper, 20 to 55% lead, 25 to 45 oz. silver and 80 cts. gold per ton. The ore occurs on a limestone-porphry contact and a new 103' shaft is said to be in shipping ore. Property bonded to Chief Cons. Mng. Co. in 1915 for 2 years, with option to purchase at \$110,000. Royalty of $\frac{1}{8}$ on all ore extracted to apply on purchase price.

BOSTON & WYOMING COPPER MINING CO.

WYOMING

Idle. Office: Care Jas. A. Shinn, Leadville, Colo. **Mine office:** Esterbrook, Albany Co., Wyo. **Inc.** Jan., 1903. **Cap.**, \$500,000. **Property:** the oldest in the district, includes 120 acres mineral lands and 120 acres miscellaneous lands, taken over from Esterbrook Mining Co. The Esterbrook mine has a 4' fissure vein, traversing diorite, schist and granite, carrying cuprite, chalcopyrite, cerussite and galena, estimated by former owner to average 2 to 4% copper, 25 to 30% lead, 2 to 4 oz. silver and \$1 to \$2 gold per ton, developed by 2 short tunnels and 5 shafts, deepest 335'.

BOULDER TUNGSTEN PRODUCTION CO.

COLORADO

Office: Boulder, Colo. **Officers:** J. G. Clark, pres.; M. M. Rinn, v. p.; J. N. Williams, sec.-treas.; F. H. Nye, supt. **Inc.** in Colo. **Cap.**, \$1,500,000, shares \$1 par. Commenced operations Jan. 1, 1912. **Property:** 37 claims, 165 acres, in the Grand Island mining district, 2 miles from Nederland, Boulder county, said to show 4 to 10% tungsten ore in veins, a few inches wide.

Development: by tunnels; main tunnel now in over 500' and 400' below upper workings. **Equipment:** 40-ton concentrating plant. **Production:** said to be \$3,000 per day in tungsten concentrates.

The company has ignored all requests for information.

BOUNDARY CONE GOLD MINES CO.

ARIZONA

Oatman, Ariz. **Officers:** F. H. Biles, pres.; J. D. L. Williams, Rex Arms Apt., Los Angeles, sec.; Calvin Hartwell, treas.; preceding, with W. F. Ball, S. M. Barnes, Chas. Grimes, T. C. Job., directors. Frank Dryden, supt. **Inc.** in Ariz. **Cap.**, \$1,500,000, shares \$1 par; reserved in treasury 500,000 shares.

Property: 8 claims, 82½ acres, patented, 1 mile S. W. of Oatman. **Ore:** gold. **Development:** shaft, 680' deep, March 10, 1916, sinking to 750' level; 4,000' workings on upper levels. On the 450' level management reports an oreshoot 150' long, 15' in width, with average assays of \$14 per ton, and on the 550' level to have a shoot that was 150' long when work was stopped and shaft sinking resumed. Shaft makes 15,000 gallons water daily, handled by bucket.

Equipment: hoist, 300 cu. ft. air compressor, blacksmith shop. Plans crosscutting to vein on 750' level, development of orebody and erection of a mill.

BOWENA COPPER CO.

BRITISH COLUMBIA

Office: 415 Rogers Bldg., Vancouver. **Officers:** D. McCallum, pres.; C. M. Buscombe, v. p.; C. M. Oliver, sec.-treas.; preceding officers are directors. Company promoted by Donald M. MacGregor, **Inc.** May, 1913,

in B. C. **Cap.**, \$250,000, shares \$1 par; outstanding, \$207,500. Annual meeting Dec. 13. Claims to have spent \$800 in development work during 1914-15.

Property: 3 claims, 150 acres, Crown-granted, on the east side of Bowen Island, 12 miles west of Vancouver, said to show disseminated copper ore, assaying 1.9% copper, containing gold and silver.

Development: 170' tunnel, which management claims has blocked out 10,000 tons ore. Trial shipment, July, 1915, of 1,847 tons, said to have assayed 5.5% copper. Plans continuing the tunnel and building a concentrator.

New York Curb in April, 1915, exposed this company, together with the Peerless Oil Co., of Canada, and the Shushanna Mining & Milling Co., claiming they were worthless.

BOWYER GOLD & COPPER CO.

ARIZONA

Office: Quartzite, Ariz. Mine office: Bouse, Yuma Co., Ariz. Jos. Bowyer, pres.; E. N. Jenkins, v. p.-sec.; with E. E. Northrop, E. B. White and Geo. Mee, directors. Phoenix National Bank, treas. **Inc.** July 15, 1909, in Ariz. **Cap.**, \$5,000,000, shares \$5 par, nonassessable. Annual meeting first Monday after first Tuesday in July.

Property: 7 claims, known as the Bowyer group, also 160 acres miscellaneous lands, in the Plomosa district, on the western slope of the Dome Rock mountains, about 20 miles west of Bouse. Property has 3 contact deposits, between schist hanging and limestone foot, showing 50 to 200' gossans and carrying malachite and chalcocite, estimated to average 2 to 10% copper and \$1 to \$10 gold per ton. Company has sunk a 50' shaft near the hanging wall, all in ore, and has reached the sulphide ore beneath the leached zone. Company plans development work in 1916.

BOYER COPPER MINES CO.

NEVADA

Mine P. O.: Boyer, Churchill Co., Nev. Arthur Howe Carpenter, cons. engr., 210 Noble Ave., Crafton, Pa. **Property:** 49 claims, 1,000 acres, also a 10-acre mill site and 160 acres of placer lands, at Boyer, about 30 miles from Wonder, Nev., and 75 miles south of the S. P. R. at Winnemucca, in the copper belt of the Piute mountains, formerly developed by Alva Boyer, now controlled by Crofton Umacke, of Reno, Nev.

Property: covers a mile of the western end of a contact between whitish andesite and an underlying greenstone, or andesite, which shows copper pyrite peppering the rock. The ore bed has a dip of but 20° and a thickness of 100' and is much altered, the footwall being a hard, silicious band. The lower 30' carries 5% copper, but the orebody developed was figured by Prof. Carpenter and A. H. Carpenter to assay 1.7% copper and about 70 cts. per ton in gold. High-grade ore occurs in small iron-capped veins which extend up through the porphyry and carry a breccia of rock fragments cemented by copper glance and bornite.

Development: by tunnels, now inaccessible. Present company has done about 500' of work on Treasury Box hill and exposed a faulted block of 200' length, 100' width and with 500' depth on the dip, assaying as above. Property promising when railroad facilities are provided. Only prospecting done in 1915.

BRADEN COPPER MINES CO.

CHILE

Controlled by Kennecott Copper Corp.

Office: 120 Broadway, New York. **Officers:** S. R. Guggenheim, pres.; Geo. F. Hilton, v. p. and asst. sec.; L. Fredrick, treas.; C. K. Lipman, sec.; directors, J. K. MacGowan, Eugene Meyer, Jr., Murry Guggenheim, S. R. Guggenheim, Wm. Braden, Messmore Kendall, E. L. Newhouse, C. K. Lipman, G. F. Hilton, J. E. Bamberger. **Inc.** May 26, 1909, in Delaware.

Cap., \$10,000,000, shares \$5 par; increased 1911 to \$14,000,000, nonassessable; issued \$6,052,500 to Aug. 31, 1915.

Bonds: \$8,000,000 authorized, \$7,000,000 issued in a \$4,000,000 issue of 10-year 6% first collateral trust convertible bonds, and an issue of \$2,000,000 second collateral trust 7% convertible bonds, of which 1,000,000 are held in trust; also 2,000,000 3-year 7% debentures. Upon the retirement of all convertible bonds the full capitalization of \$14,000,000 will be issued. Also an authorized \$20,000,000 issue of 15-year 6% sinking fund gold bonds, nonconvertible, due Feb. 1, 1931. Issued \$15,000,000. For the purchase of this last issue a minimum of \$1,000,000 per annum will be applied, payments being made semi-annually, starting Feb. 1, 1917.

Owens entire capital stock and bond issue of the Braden Copper Co., the Braden Copper Mines Co. being purely a holding company, controlled by the Guggenheim interests. Farmers Loan & Trust Co., New York, registrar. Annual meeting, fourth Monday in June.

In Dec., 1915, offer was made by the Kennecott Copper Corp. to purchase the stock of the company, payment to be made in Kennecott Copper Corp. stock. As an alternative any stockholder had the privilege of receiving \$15 in cash for each share of the Braden Copper Mines Co. As a result of this offer the K. C. Corp. now owns 97½% of the stock of the company, which, based on the market value of K. C. Corp. stock at the time the offer was made, cost the K. C. Corp. \$42,281,300.

Braden Copper Co.

Office: 120 Broadway, New York. Mine office: Rancagua, O'Higgins, Chile. **Officers:** S. R. Guggenheim, pres.; E. L. Newhouse, v. p.; L. Fredrick, treas.; C. K. Lipman, sec.; G. F. Hilton, asst. sec.; preceding officers, Murry Guggenheim, Wm. Braden, Eugene Meyer, Jr., Messmore Kendall, J. E. Bamberger, Simon Guggenheim, H. F. Guggenheim, E. A. Guggenheim, Karl Eilers, E. A. Cappelen Smith, J. K. MacGowan and H. R. Wagner, directors; Pope Yeatman, cons. engr.; S. Severin Sorensen, gen. mgr.; O. L. Myers, gen. aud.; H. R. Graham, mine supt.; J. K. MacGowan, purch. agt.; R. E. Douglass, mill supt.; B. F. Colley, smelter supt.; Jas. Chambers, supt. R. R.

Inc. June 18, 1904, in Maine, and name changed to present title, Aug. 9, 1904. **Cap.**, \$2,332,030, shares \$10 par, non-assessable; fully issued. Company is protocolized in Chile. Is controlled, through ownership of entire stock issue, by Braden Copper Mines Co. Has a \$4,000,000 issue of 6% first-mortgage convertible bonds. Annual meeting, 4th Tuesday in July. Annual report for fiscal year ending Aug. 31, 1915, gives total profits \$1,344,210; interest on bond and loans, \$806,675; leaving undivided profits for year of \$537,534.

Property: 174 claims, about 2,362 acres, including 16 acres at Rancagua for railroad yards, etc. Mines are reached from Valparaiso by the Chilean State railroad, 158 miles to Rancagua, and from that point by company's narrow-gauge railway, 43 miles to the smelter and mill and 1½ miles farther to the mines. The elevation is 7,700 to 9,000', the mine being in a very rugged region on a part of the main range of the Andes. Holdings include 3 principal orebodies, the Teniente, the Fortuna and the Regimiento No. 2, and two smaller orebodies, the Centinela and the Bornite.

Geology: all the rocks are igneous and the rock at the mine is an andesite surrounding a body of tuff, which represents the old crater of a volcano. This light gray tuff is no longer loose and friable, but cemented into a hard concrete-like mass. The ore deposit is unique, being a volcanic vent of nearly circular section 4,000' across and filled by tuff and an agglomerate of rounded boulders of all sizes. The crater rim is surrounded

by highly fractured and brecciated andesite, the fractures being mineralized around the circumference. The ore zone has been further fractured by porphyry dikes, which occasionally cut into the tuff.

The orebodies occur around, but outside the rim of the crater, in the andesite at, or near, its contact with the tuff. The ore consists of shattered andesite, often finely brecciated near the tuff contact, the copper minerals filling the cracks and openings. The orebodies are limited on one side by the tuff, but in the andesite the grade becomes lower, passing from breccia to fractured rock and fading out in the more blocky country rock. The fractures in the rock range from a mere film of sulphide ore up to 3 to 4" of mixed bornite and chalcopyrite, mainly the latter. The orebodies dip at 70° toward the center of the crater. Five distinct orebodies have been proven, and four, the Fortuna, Teniente, Centinela and Bornite, are being worked. All are marked by strong outcrop stained with copper minerals. The zone of oxidation is shallow, ranging from a few feet to 150' in depth, and as the property carries mainly disseminated ore, the management holds to the belief, with strong reason, that values will carry to great depth.

The Fortuna orebody is typical of all the deposits. It is lens-shaped in horizontal section, is developed for 3,000' in length and has a maximum width of 260'. It has been well developed on all the levels; below the 4th little increase can be expected, as the rock has tightened and ore is lower grade. The lowest tunnel, No. 4, is 1,425' below the outcrop. The copper occurs as bornite and chalcopyrite, associated with ankerite and quartz. The Fortuna orebody is the principal one in point of development. The shrinkage stoping system, similar to that employed at the Ray Cons., is used. Stopes are carried up 7 metres wide, with 5-metre pillars. The topography of the country is such that shafts are unnecessary; all ore can be taken out through tunnels, and, even though parts of the mine are very wet, pumps are not required.

Development: by 5 tunnels; No. 4 and No. 5 are haulage ways at present. The Fortuna was gophered extensively, by former owners, for high-grade ore, which was followed and extracted wherever found. Average grade of Fortuna ore is lower than in El Teniente mine. Workings show copper sulphides and occasional metallic copper throughout the brecciated material for depth of 2,000'.

The Teniente orebody, whose outcrop is supposed to be in the crater of the old volcano, shows high-grade ore at the surface in bunches and stringers. It is the largest and most important orebody, having a length, on Teniente No. 1 level, of 4,800', and an average width of 300'. The depth as taken in computing ore averages about 840'. It is in this orebody that the greatest increase of tonnage is to be expected. It is much the largest of the orebodies and, with the exception of the small Bornite orebody, the richest. Its size and value have only been proved in the last few years, and stoping operations are just beginning.

No. 1 Teniente level and No. 2 Fortuna level have been extended along the tuff contact entirely around the crater, $2\frac{1}{2}$ miles. The Teniente is the oldest mine of the district, having been worked by the Spaniards for the high-grade ore in the small veins.

The Centinela orebody is being mined above Teniente No. 3 level and will probably extend below it. The Bornite orebody is practically worked out above the 4th level. Mining is being done between the 4th and 5th levels. The orebody is rich, but small, and no great extension in depth is looked for. Regimiento No. 2 orebody lies beyond the Fortuna, is lower grade and its size has not yet been determined.

Ore Reserves Estimated Jan. 1, 1915

Ore-body—	Developed Ore		Probable Ore		Possible Ore	Ore Grade
	Dry Tons	Grade	Dry Tons	Grade		
Fortuna	14,318,730	2.42%	2,770,000	2.20%
Bornite	121,800	2.64%
Teniente	45,320,232	3.14%	13,817,436	2.87%	24,197,323	2.68%
Regimiento	5,586,628	2.76%	3,406,490	2.58%	3,051,941	2.67%
Centiniela	104,300	2.20%
Total	66,225,590	2.94%	20,220,028	2.72%	27,249,264	2.68%
Grand total	118,694,880	2.84%

Considered as 2.50%

Figured estimate of grade of average ore, 2.84%, cut down 12% to 2.50% for the following reasons: In mining low-grade copper ores it is found that the average percentage of copper in ore mined is lower than called for by assay plans; lower-grade ore, not at first contemplated, is mined, and there is an inter-mixture of low-grade capping and wall rock.

Electric power is used throughout. The old hydro-electric plant, near El Teniente mine, 72 kilometers from Rancagua, takes water from 2 small cordilleran rivers, La Coya and El Teniente, through a 20x36" wooden flume, of 2 kilometers length, leading to a power house having 3 turbines, 2 developing about 1,000 h. p., and the third actuating a 175-k. w. 3-phase General Electric dynamo. The hydro-electric plant on the Cachapoal river has four 2,000-k. w. Pelton wheels and generators, developing 8,000 k. w., ultimate capacity estimated at 12,000 to 15,000 k. w. Power is delivered to smelter over a line about 18 miles long, at a voltage of 33,000.

The motor-driven aerial tram of 2,630 meters length, with 550 meters drop and 1,000 tons daily capacity connecting the mine and mill, now called Sewell, was formerly used for ore transportation, but is now in use as a store delivery system. The main line, of 2,000 meters length, runs from the mill to the central transfer station, where connection is had with a 1,000-meter line to El Teniente mine and a 500-meter line to La Fortuna mine. An electric tram line covered with snow sheds its entire length, owing to drifting snow and numerous snowslides, connecting the lowest level No. 5 of the mine with the coarse ore bins at the mill, handles the ore, capacity 5,000 tons daily.

There are two separate concentration plants. The old mill, built in 1906, of 250 tons capacity, was planned as the first unit of a 500-ton mill, and was remodeled and capacity increased, 1911, to 450 tons daily. Equipment includes Hartz jigs, Overstrom and Wilfley tables, Frue vanners, Wilfley slimers and the Sherman slime-settling system. The mill yields concentrates of about 25% average copper tenor.

The experimental leaching plant was in operation during the past year, testing the process for extraction of copper from concentrate; believed that process might be successfully carried out on a commercial scale, but cost of plant would be large and, at the present time, not advisable.

A 20-ton sulphuric acid plant provides the acid required in the flotation plant. Wilfley table concentrates are roasted in a Wedge 7-hearth furnace, the feed carrying from 6% to 7% moisture, 16% copper, 13.6% silica, 28.6% iron, and 33.3% sulphur. Hearth temperatures, from 1 to 7, respectively, in degrees Centigrade are 380, 460, 600, 750, 790, 680, 630. The furnace shaft makes one revolution in 3 minutes 20 seconds, and 12 h. p. is required to operate the furnace when treating 35 tons of concentrates per 24 hours. The calcine contains about 3% sulphur.

The lead chambers are four in number, each with a volume of 46,750 cu. ft., and formed of timber framing and $\frac{1}{8}$ -in. lead sheets. The following table gives certain data on chamber operations:

Chamber No.	Temperature, Deg. C.	Color of Gas	Deg. Baume of Drip
1	80	Gray	51-52
2	75	Light gray	50-51
3	60	Slightly yellow	49-50
4	48	Pale yellow	46-48

The daily production of chamber acid is from 23 to 24 tons at 66 deg. Be. Five tons produced in the Glover tower bring the total to 28 or 29 tons per day. The plant has been in operation since March, 1913.

A smelter is now in operation at Rancagua. This plant, with blast furnaces, converters and refinery, was completed during the latter half of 1911. Since that time several improvements have been made, the most important being the addition of nodulizing kilns. These are similar to the kilns used in the manufacture of Portland cement. The 4th and largest one installed is 8' in dia. and 109' in length. Speed of kilns about 1 rpm. Heat is applied by an oil burner at discharge end. By feeding nodules instead of raw concentrates the furnace capacity has been almost doubled, due to absence of water in the charge. Coke consumption was practically cut in two.

The smelter equipment at present consists of 14 storage bins for concentrates, lime, coke, etc.; 4 sinter grates, with a daily capacity of 50 tons concentrates, roasted to 40 tons; 4 nodulizing kilns, with daily capacity for the first 3 installed of 215 tons concentrates, roasted to 180 tons; 2 blast furnaces, one being 48"x300" and the other 48"x360". Daily capacity is 300 tons raw concentrates, or 600 tons nodulized concentrates; 3 Pierce-Smith basic-lined converters, two having 33 tuyères, the other 17 tuyères; 1 copper casting apparatus. The power plant at the smelter includes 1 Nordberg 2-cyl. engine for converter air supply, capacity 10,000 cu. ft. air per min., at 13 lbs. pressure, rope driven, by a 600-h. p. motor; 1 No. 9 Connorsville blower, capacity 20,000 cu. ft. air per min., at 3 lbs. pressure, belt driven, by a 250-h. p. motor, 1 Rateau-Battu-Smoother turbo-blower, for blast furnace supply, direct connected to an 800-h. p. motor, capacity 39,000 cu. ft. per min., at 3 lbs. pressure; 1 Ingersoll-Rand, Imperial type 10, compressor. Another turbo-blower is being erected. This is for converter air supply and will be direct connected to a 1,700-h. p. motor, capacity 24,000 cu. ft. air per min., at 13 lbs. pressure.

General summary of smelter operations:

	Per day
Tons of concentrates treated.....	350
Tons of coke consumed.....	60
Tons of fuel oil consumed.....	10
Tons of matte converted.....	150
Tons of copper produced.....	60
Number of men employed.....	350
Electric energy used, 1,500-h. p.	

The new concentrator has 3 sections of 1,200 tons, nominal capacity, each; the coarse ore goes from bins to gyratory crushers, to two 72"x20" rolls, to a 48" Symmons disk crusher, to Marcy mills and thence to 3,000-ton fine-ore bins for delivery to mill itself. Concentration is effected by 4 impact screens, 2 sets of rolls, 4 trommels, 6 Wilfley tables, 8 Hardinge mills, 2 Yeatman classifiers, 8 conical settling tanks, 6 Wilfley tables, 16 conical settling tanks, 6 Hardinge mills, automatic samplers for concentrate and tail rolls and storage bins.

The experimental Minerals Separation Co.'s flotation plant, with a daily capacity of 240 tons, has been in operation since the fall of 1912. It proved so successful that a 3,000-ton plant, to treat the entire mine output, was built and is now in operation.

It consists of 8 standard M. S. units that treat the tonnage handled by the 3 mill sections. Extraction is over 77%, and it is expected an 80% extraction will be obtained with the completion of the air cell installation. Daily production of all concentrates is about 350 tons. Average assay is: copper, 19%; iron, 23%, sulphur, 28%; lime, 2%; silica, 17%; alumina, 8%.

The complete works, including the concentrators, leaching plant and smelter, are planned to treat 4,500 tons of ore daily, estimated to average 2.50% and to yield 60,000,000 lbs. fine copper yearly, at a cost, estimated by the management, of 7½ cts. per lb. laid down in New York, with the possibility of reducing the cost to 6½ cts. per lb. if capacity of plant is increased to 10,000 tons. This is now being considered.

Production is estimated at 3,000,000 lbs. fine copper in 1908; 7,500,000 lbs. in 1909; 9,000,000 lbs. in 1910; 9,500,000 lbs. in 1912, and 18,098,000 in 1913.

Production:

	Tons Milled	% Cu	% Rec. Mill	Ratio Conc.	% Cu. Smelter	% Rec. Smelter	Net Prod. Lbs. Cu.	Cost Cts. per Lb.
1915 (a)	1,106,420	2.09	74.92	11.29	17.68	94.49	32,733,573	8.78 cts.
1914	900,299	2.12					28,304,092	

(a) For year ending Oct. 31, 1915. 35,444,000 lbs. for calendar year 1915.

The property is one of exceptional promise and is being developed and equipped with the aid of the best technical skill.

BRADEN MINE.

OREGON

Gold Hill, Jackson Co., Ore. Owned by C. R. Ray, of Tolo, Jackson Co., Ore., and at last accounts was leased to the Opp Mng. Co. Located in S. E. ¼ section 27, T. 36 S., R. 3 W., 3 miles from Gold Hill. Opened up about 30 years ago. Largest production for any one year was \$30,000 in 1907.

Ore: gold in 2' vein, strike N. 30° E., dip 25° S. E. Vein filling is quartz and sulphides. Ore assays about \$9 gold per ton. **Development:** several thousand feet of drift tunnels, longest over 1,200'. Equipment includes a 20-stamp mill.

See S. S. G. S., Bull. 546, p. 39.

BRADFORD MINE.

ARIZONA

Near Patagonia, Santa Cruz Co., Ariz. Mine is property of Ferry estate, developed by 400' shaft. Lessees are said to have shipped 5 cars of ore to the Copper Queen smelter at Douglas. Operations to be resumed in 1916.

BRADFORD MINES, LTD.

NOVA SCOTIA

Halifax, Nova Scotia. **Officers:** E. F. Heffler, pres.; A. E. Abrams, v. p.; W. C. Milner, sec.-treas.; with S. Youngman and G. J. Partington, directors. Inc. Oct. 3, 1914, in Nova Scotia. **Cap.,** \$500,000, shares \$1 par; outstanding, 354,823 shares. Transfer office and registrar, Security Reg. & Transfer Co., New York. Listed on New York Curb.

Property: at Sheet Harbor and Tangier, Nova Scotia, contains ore with gold and silver values.

BRADLEY LEAD & ZINC CO.

MISSOURI

W. S. Pate, mgr. Owns a lease on the St. Louis-Joplin Lead & Zinc Co.'s land, comprising a part of the A. B. C. Mining Co. ground and the Martha Ball mine, in the Chitwood district, near Joplin, Jasper Co., Mo.

Ore: lead-zinc occurs in disseminated deposits in the A. B. C. and as sheet-ore, 20' thick at depth of 200', in the Martha Ball.

Development: by shafts. **Equipment:** 250-ton mill on Martha Ball ground. Active operations began March, 1915. Company operating a second 250-ton mill in the West Joplin district, Oct., 1915.

BRANT GOLD & COPPER CO.

COLORADO

Geo. Brant, pres., Pitkin, Colo.; Chas. Albertson, v. p.; L. I. Turner,

sec. Inc. May, 1913, to acquire the Abe Lincoln and Sunnyside mines, 3½ miles south of town of Pitkin. Abe Lincoln has tunnel 254' long, from which a 300' drift has been run on a vein 3' wide that assays up to \$41 per ton in gold and copper.

Ten-stamp mill in operation 1914, and a block of treasury stock offered for sale to public to furnish funds for hoisting plant and other machinery. The Abe Lincoln is operated under lease by the Hahnwald-Leasing Co.
BRANT INDEPENDENT MINING CO. COLORADO

Office: 429 N. Y. Life Bldg., Kansas City, Mo. **Mine:** P. O. Pitkin, Gunnison Co., Colo. R. B. Anderson, pres.; J. F. Anderson, v. p.; G. E. Crowell, sec.; M. J. Ostergard, treas.; preceding officers, M. Woolley, J. W. Hickman, T. R. L. Daugherty, R. J. Edwards and R. R. Thiele, directors.

Inc. April 12, 1906, in Ariz. **Cap.**, 5,000,000 shares, par value \$1, fully paid, non-assessable; 4,600,000 shares issued. **Bonds**, \$150,000, 8% authorized, \$60,000 issued. **Dividends** to date, \$8,174. **Annual meeting**, second Tuesday in January.

Property: 96 claims, partly patented, of about 1,056 acres, in Box Canyon and Quartz Creek districts of Gunnison county, Colo. Four mines, the Camp Bird, I. X. L., Gold Ridge and Roosevelt, opened up and proven by Camp Bird shaft 200' deep; I. X. L. shaft 60' and 90' crosscut and the Gold Ridge tunnel which follows vein for 130'. Ore occurs in fissure veins 6 to 20' wide in diorite and granite, said to carry 8% copper and \$20 gold per ton. The Camp Bird mine has been operated under lease by other parties.

Crosscut tunnel, started in April, 1911, to drain and open up the entire territory at depth, had been driven 1,700' March 1, 1916. **Equipment:** includes hydro-electric plant of 400-h. p. capacity, completed in 1915, 4-drill air compressor, 50-h. p. motor and drills. Quartz creek runs through the property. Mine is only a few feet from D. & R. G. R. R. and county road.
BREWER GOLD & COPPER MINING CO. UTAH

Idle. Office: 212 Utah Savings & Trust Co. Bldg., Salt Lake City, Utah. **Mine office:** Ibabah, Tooele Co., Utah. J. P. Gardner, pres.; S. W. Morrison, v. p. and treas.; H. B. Windsor, sec.; John Mortimer, asst. sec. **Inc.** Feb. 16, 1907, in Utah. **Cap.**, \$50,000, shares 10 cts. par, assessable; 4 assessments have been levied. **Lands:** 11 claims, 6 patented, on Dutch mountain, in the Clifton district, 50 miles from a railroad, having a limited amount of development work, showing silver-copper ore. Shut down several years, awaiting building of branch railway line from Wendover, on the Western Pacific railroad.

BRISTOL CONSOLIDATED MINES & SMELTING CO. NEVADA

Frank Sullivan Smith, 60 Wall St., New York, receiver.

Company originally owned 21 or more patented claims in the Bristol mining district, Pioche, Lincoln Co., Nev. In 1911 practically all this property was transferred to the Day Bristol Cons. Mines Co. In 1914 the latter company went into receivers' hands and the property finally passed to the Cons. California-Nevada Co., which company was recently merged with the Internat'l & Intercontinental Mng. & Ref. Co., holding company (Uvada Copper Co., operating company), which see.

BRITANNIA MG. & SMELTING CO., LTD. BRITISH COLUMBIA

Office: Care Howe Sound Co., Moore & Schley, 747 Fifth Ave., New York. **Canadian office:** 31 Davis Chambers, Vancouver, B. C. **Mine** at Britannia Beach, New Westminster district, B. C. **Smelter** at Crofton, Vancouver Island, B. C. **Officers:** Hon. Edgar Dewdney, pres.; J. W. D. Moodie, v. p. and gen. mgr.; G. M. White, sec.-treas.; preceding officers, D. G. Marshall and C. B. McNeill, directors; E. J. Donohue, gen. supt.; C. P.

Browning, mine supt. Company is a close corporation, controlled by the Howe Sound Co., of New York, in which G. B. Schley, of Moore & Schley, New York, owns control.

Inc. 1908 in British Columbia. Cap., \$2,500,000, shares \$25 par; issued \$2,299,150; was organized to take over the Britannia mine and assets of the Britannia Copper Syndicate and the property of the Britannia Smelting Co., Ltd. Annual meeting, first Monday in March.

Balance sheet: for 1915 showed assets of \$5,478,645, which included plant and property \$4,664,793, and current assets \$283,300. Liabilities showed loans, Howe Sound Co., \$1,186,966; Tacoma Sm. Co., \$53,000; current liabilities, \$191,275; profit and loss account, \$821,589. **Operating statement:** for 1915 shows total operating profit, \$809,924; depreciation, snow-slide loss, miscellaneous, \$615,686, leaving a net profit for 1915 of \$194,238, as compared with \$25,631 for the previous year, but \$411,133 was charged off for construction and equipment in 1914, company's policy being to pay for all new construction and equipment out of net earnings.

Property: 164 Crown-granted mineral claims, 16 beach lots, 7,538 acres; also 167 un-Crown granted mineral claims 7,500 acres, and 8 timber licenses, 4,366 acres on the east shore of Howe Sound. In 1915 company bought the Howe Sound Power Co., owning important water rights on Furry Creek, in South Valley, with the intention of increasing the hydro-electric development.

The Britannia mine lies on Britannia mountain, 4 miles from and about 3,500' above the sea; has approximately 8,500' of the strike of a mammoth mineral zone. Orebody consists of mineralized schist in lenses and large irregular bodies, ranging from 300 to 600' in width, the schistose silicious material being impregnated with copper and iron pyrites. The ore consists of chalcopyrite and pyrite in quartz and averages 2% copper, but as mined, 1915, runs 3.0%. There are 8 known orebodies, of which 3, more or less developed, carry an average of about 2.5% copper, 0.04 oz. silver and 50 to 80c gold per ton.

Development: by large glory holes and by a number of tunnels at elevations below the outcrop of 500', 600', 700', 850' and 1,050', the latter being known as the 1,000' level. A new low-level tunnel, 4,336' long, completed July, 1913, to this distance, but which will eventually be driven on through the mountain, gives a depth of 2,200' on the orebody and 1,200' below the old workings. It is now the main working tunnel and is known as the 2,300' level. At 3,922' from the portal a raise was driven to the 1,050' level and later enlarged to a 3-compartment shaft. Underground work in 1915 totaled 2,595' as compared with 8,000' in 1914.

Ore reserves: estimated Jan. 1, 1916, in the Fairview mine; broken ore in stopes, 578,200 tons, which should average 3.5% copper; ore developed, 2,855,900 tons; probable ore, 2,544,000 tons; possible ore, 4,275 tons; total, 10,253,000 tons, all of which management states should average 2.0% copper in the Bluff, Jane and Empress mines, idle in 1915, management estimates 1,482,800 tons positive ore, with a total of 6,944,000 tons of positive, probable and possible ore of 1.53% copper.

Equipment of the shaft includes a double-drum electric hoist on the 1,050' level and a Gates crusher in the rock-raise between the 1,050' and 2,200' levels, placed on the 1,800' level and run by a 75-h. p. motor. This rock raise, 200' east of and connected with, the shaft, serves as a storage bin for ore, with capacity of 4,000 tons above the 1,800' level and 2,000 tons below the 1,800' level. The raise is lined with 12" by 12" timbers. Electric motors haul the ore from the chute to the portal of the tunnel. From the portal the ore is hauled 3 miles by electric railway to head of a 33% incline,

5,400' long, vertical drop of 1,600', which leads to the bins of the concentrator at the water's edge.

Equipment: includes 300-h. p. steam, 400-h. p. water and 500-h. p. electric power. A new hydro-electric plant of 2,500-h. p. has been installed. A 35-drill Rand air compressor, at the beach, sends air to the mine through an 18" pipe line. There is a 3-mile transmission line, with two 300-k. w. 6,600-volt generators, driving the machinery plant at the mine, actuated by a Pelton water wheel, located at the beach, which receives water from a creek under an effective head of about 1,900'.

The old 300-ton concentrator has been remodeled and added to until its capacity has reached 850 tons daily. It will be kept running until the new mill is in full operation. Equipment includes Gates crushers, Hancock jigs, five 8' and 26' Hardinge mills and concentrating tables. Tailing from tables goes to a Mineral Separation flotation plant, which was added in 1912. Ratio of concentration is 5 to 1, with extraction of 94% copper and 95% silver content.

The new mill when in full operation will have a daily capacity of 4,000 tons. The first 1,000-ton unit went into commission in Nov., 1915, and at last reports was treating 20,000 to 35,000 tons ore per month. Intentions of management are to reduce present 3% average grade to about 2½% copper in order to use the large tonnage of low-grade ore available.

Smelter returns show average value of ore treated to be about 3.08% copper, 0.33 oz. silver per ton, and no gold values.

There are 2 townsites in connection with the company's operations, one at Britannia Beach, on the shore of Howe Sound, and the other, known as the Mine Townsite, laid out at the portal of the new tunnel. It has all necessary buildings for equipment and men, the mine buildings being the best and most comfortably equipped in British Columbia. There is a large company store at Britannia Beach.

The company owns a reduction plant known as the Crofton smelter and formerly shipped its ores across Howe Sound for treatment at this plant. The company's smelting plant is described Vol. X. A contract, dated July 15, 1915, was made for a period of 7 years with the A. S. & R. Co.

When the new mill is operating at full capacity the company estimates costs per ton as follows: Mining, 50c; milling, 35c; transportation, 5c. These are exceptionally low, and it is doubtful if they can be attained. Total tonnage milled in 1915, 212,158 tons, cost per ton \$0.63; mining costs, including development and crushing, \$1.77 per ton. Concentrates assayed 15.04% copper, 1.67 oz. silver and 0.013 oz. gold. Net cost of producing copper said to be 7.3 cts. per lb.

Production was suspended Oct., 1907-1910. Production since 1909 is as follows:

	Lbs.Copper	Oz.Gold	Oz.Silver	Total value
1915.....	9,058,045	397	50,306	\$1,616,133
1914.....	11,841,232	213	68,515	1,640,379
1913.....	13,167,000	89	72,300	2,052,188
1912.....	14,300,000	76,500	2,383,285
1911.....	8,685,000	46,000	1,074,334
1910.....	520,000	1,000	7,500	64,000

Extensive development is planned for 1916; this includes driving 9'x13' tunnels at the 2,700' and 4,100' levels and exploration of new ground.

The Britannia proved a hard problem to handle for years, but has made money under the present management, which is thoroughly capable. A successful future seems certain, and the results are a tribute to the far-seeing judgment and persistency of Mr. G. B. Schley.

BRITISH AMERICAN MNG. CO., LTD.**BRITISH COLUMBIA**

Office: 2616 Chicago Ave., Minneapolis, Minn. **Officers:** H. J. Peterson, pres.; E. E. Harnish, v. p.; O. L. Grondahl, sec.; preceding officers, J. D. Smith, Geo. King, R. C. Payne, A. G. Bylin, directors; L. M. Olson, treas. John Minear, supt. Inc. Dec., 1906, in Ariz. Cap., \$1,000,000, shares \$1 par; outstanding \$591,000.

Property: 3 patented claims on Texada Island, B. C., said to show copper, gold and silver ore in vein. Development is by 160' incline shaft. **Equipment:** hoist, 3-drill air compressor. Plans sinking to 300' level. A prospect.

BRITISH-AMERICAN NICKEL CORP.**CANADA**

Office: Toronto, Ont. Mine office: Sudbury, Ont. **Officers:** F. S. Pearson, pres.; J. F. Taylor, v. p.; J. C. McAllister, managing director; J. A. Holmes, mgr.; C. F. Buck, chief engr.; R. W. Deacon, met. engr.; E. E. Hibbert, supt.; W. C. Wilson, auditor; J. H. Roe, purch. agent:

Inc. Aug., 1913, in Canada by Dr. F. S. Pearson, E. R. Wood and associates. Cap., \$30,000,000; \$10,000,000 in 6% preferred debenture stock, redeemable at \$106, and \$20,000,000 common; fully issued. Company took over the properties, processes, etc., of the Dominion Nickel Copper Co., Ltd.

Property: 17,000 acres, including 10,800 acres mineral land, with 5,000 timber, 1,500 mill and smelter ground and 283 acres townsite in the Sudbury mining district, Ontario. Includes the following mines: Whistle, Wild Cat, Jackson, Nickel Lake group, W. D. 16, Elsie, Gertrude, Victor, Murray, Lady Violet and Falcon Cridge. Lands contain 21 known orebodies, 7 of which have been developed. Company has spent about \$650,000 on diamond drilling, 1907-13. The Whistle mine has been developed and is ready for production. The town of Nickelton has been built at this mine.

Company purchased several properties from the Lake Superior Corporation and now has the largest holdings of ore reserves in the Sudbury district next to those of the International Nickel Co. Diamond drilling at the Murray mine disclosed a large orebody, reported to contain over 8,500,000 tons of ore.

At the Murray mine, a 1,200' three-compartment shaft was sunk 700' and extensive underground development planned, but the mine was closed down in August, 1914.

Smelter now being constructed in Snyder township, about 5 miles N. W. of Sudbury, 1½ miles from the Murray mine, will have 3 blast furnaces of 500 tons daily capacity, 1 reverberatory furnace of 300 tons daily capacity, a converting plant with 3 basic-lined converters, and will treat 1,500 tons of ore daily, turning out 80% copper-nickel matte, which will be refined at the company's own works. Mines are connected with the Canadian Pacific, Canadian Northern Ontario, and Algoma Eastern railroads by a private railroad, 6 miles long, known as the Nickel Range railway, equipped with a 75-ton locomotive and 21 cars. Company has appropriated \$3,500,000 for construction of mine and smelting plants and electrolytic refinery, all of which were expected to be completed and in operation by Sept., 1914, but the outbreak of the European war stopped all work. Properties were examined, in fall of 1912, by B. B. Lawrence, of New York, on whose advice they were purchased.

BRITISH COLUMBIA COPPER CO., LTD.**B. C. & WASHINGTON**

Controlled by Canada Copper Corp., Ltd.

Office: 42 Broadway, New York. Mines and works office: Greenwood, B. C. **Officers:** Newman Erb, chairman; L. W. Mayer, pres.; Colgate Hoyt, v. p.; A. J. Ronaghan, v. p.; R. H. Eggleston, sec.-treas.; preceding officers,

with exception of R. H. Eggleston, August Heckscher, directors. Oscar Lachmund, gen. mgr.; L. W. Mayer, cons. mg. engr.; F. S. Norcross, gen. supt. of mines; all of Greenwood, B. C.; A. F. H. Meyer, chief of office staff, Greenwood, B. C.; Riddell, Stead, Hodges & Winter, official auditors, Vancouver, B. C.

Inc. March, 1898, in West Virginia. Cap., \$3,000,000, shares \$5 par. Original capitalization was \$1,000,000, increased to \$2,000,000 and in 1907 to present amount; 591,709 shares issued; fully paid and non-assessable. New York Trust Co., transfer agents; Empire Trust Co., New York, registrar. Dividends paid are as follows: No. 1, in 1907, \$201,200; Nos. 2 and 3, in 1911, \$147,930; Nos. 4 and 5, in 1912, \$177,512; No. 6, in 1913, \$88,756; total, \$615,399. Control passed March, 1914, to the Canada Copper Corp., Ltd. (N. P. L.) by exchange of 90% of the outstanding stock, the new company loaning \$340,000 for purchase and development of new properties.

The company controls the New Dominion Copper Co., Ltd. (non-personal liability) through ownership of 64% of the stock and bonds to par value of \$237,675. Profit and loss account for 1915 shows operating disbursements and custom ore purchased \$402,390. Proceeds of metal sold and misc. earnings \$467,624, leaving a balance of \$66,033. General expenses and power charges during time plant was shut down amounted to \$90,951, leaving an operating loss of \$24,917 for the year.

Company has borrowed \$460,000 from the Canada Copper Corporation, Ltd., to April 1, 1916. Annual meeting, second Tuesday in March.

Property of the company is extensive, about 1,900 acres, of which 80 are smelter and mill sites and the balance mineral lands. Claims held under Crown Grant or U. S. patents. The producing properties of the company are the Mother Lode mine, at Greenwood, B. C., the Napoleon mine in Washington, the Queen Victoria mine and Lone Star mine and the Copper Mountain group of claims.

The Eureka group near Nelson, the L. H. group and the Butte claim at Wellington camp, held under option in 1914, were abandoned, as exploratory work was unsatisfactory. A $\frac{3}{4}$ interest in the Emma mine was sold for \$55,000 in 1915.

The Mother Lode group of mining claims near Greenwood, in the Boundary district, comprises 339 acres. The copper ore occurs in a contact deposit between limestone and eruptive rocks, largely as altered limestone that has been replaced by massive garnet, magnetite, silica and alumina, together with iron and copper sulphides. Much lime is also present as calcite. All these minerals are present in such proportions as to make the ore practically self fluxing. Copper occurs exclusively as chalcopyrite, the ore carrying from 1 to 1.75% copper with from 75 cts. to \$2 per ton in gold and silver. The main orebody measures about 160x1,200' running nearly north and south, the greatest width being 260' and the dip about 70° easterly. Diamond drill work is reported to have failed to find an extension of the orebody. The new discovery in the southern end of property is apparently a separate orebody. Work during the year amounted to 433' drifting, 666' raising and 711' diamond drilling. There are other smaller and less important ore deposits in the claims nearby.

The ore is mined by both quarrying and underground stoping, though the first method is now almost abandoned owing to the depth of the quarries. Due to different mining methods used at different periods, the mine became honeycombed and stoping was impossible. A large blast was set off in Sept., 1913, which was a record for underground work. Number of holes, 4,830; 40% dynamite, 49,550 lbs.; wire, 18.5 miles; estimated amount broken, 400,000 tons. The shaft has four compartments, 2 for the 5-ton

skips, 1 for a man cage, and 1 for ladders and pipe lines. On the 2 lower levels ore is hauled by electric motors and on the upper levels by horses. It is dumped into capacious pockets at the shaft and hoisted to a bin at the head of the shaft, where it is crushed by one of a pair of Farrel crushers, with jaw openings 24x36" and 36x42", respectively. From the crushers it passes to the railway bins over a 200' Robins belt conveyor. At the bin end of the conveyor the ore passes an automatic sampler, which cuts out the daily sample.

From Jan. 1, 1914, to Aug. 20, 1914, when mine and smelter suspended operations temporarily, resuming July, 1915, the mine produced 178,000 tons ore at a cost of 85½ cts. per ton. **Shipments:** for 1915, 105,085 tons, averaging 0.21 oz. silver, 0.87% copper, 0.037 oz. gold. Management estimates ore reserves at 100,000 tons, April 1, 1916. Other mines of the company produced 13,000 tons.

The Lone Star group of 3 claims, 52 acres, is 8 miles S. E. of Greenwood and is connected with the Canadian Pacific railway at Boundary Falls by a 28,560' aerial tram, having 72 towers of from 15 to 67' in height, with 3 tension and 2 anchor stations. The ore of this mine is contained in two orebodies in a highly altered, eruptive rock now largely altered to a talcose schist. Approximately 300,000 tons have been developed by drilling and other work, the major portion of the area being as yet unprospected. The mine is equipped with a 7-drill compressor driven by an electric motor, the hoist being run with compressed air. The average assay value of the Lone Star ore is higher than that of other Boundary district ores, but it is silicious and as it carries alumina as well, it is much more refractory.

Work in 1914 was largely exploratory, but the 1,988 tons shipped carried 60 cts. gold; ¼ oz. silver per ton and 2.423% copper. Operations were suspended in May. **Development:** in 1915 consisted of 697' of drifting and crosscutting; shipments amounted to 6,510 tons, averaging 0.032 oz. gold, 0.913 oz. silver, 2.60% copper per ton. **Ore reserves:** April, 1916, estimated to be 170,000 tons of 1.60% copper. The ore is amenable to wet concentration with subsequent flotation treatment.

The Napoleon mine, about 60 acres, is in the Pierre Lake district at Napoleon, Wash., 7 miles from Marcus. The ore is needed for its sulphur content. Output for 1914 until shut down in May was 5,332 tons, averaging gold 10.94 cts. and silver 0.08 oz. per ton, with copper 0.204%, silica 20.3%, iron 35.3%, lime 5.3% and sulphur 17.7%.

Equipment: includes 2 compressors of 10-drill capacity, Farrel crusher and a 4,100' aerial tramway to the Great Northern railway. The sulphide ores are capped by 75 to 150' of oxidized ore. To treat this ore a 10-stamp mill has been erected, with a 100-ton cyanide plant. All power is steam, electric lines not having been extended into the district. **Ore reserves:** Jan. 1, 1915, 3,300 tons as floors of stopes. Costs per ton laid down at the Greenwood smelter were \$2.8575. Mine is to be reopened in 1916.

The Victoria mine, purchased 1912, comprises 5 claims near Nelson, B. C., about 110 miles easterly from Greenwood. Ore is an altered limestone, similar in genesis, nature and mineral contents to the Boundary ores, carrying about 1.26% copper with some silver and gold. Mine is equipped with a 5-drill electrically-driven compressor and the ore is taken to the Canadian Pacific railway, on the bank of the Kootenay river, over a 3,000' aerial tramway. Operations were suspended March, 1914, due to low copper content of the ore, but mine was operating under lease in 1915 and shipped 754 tons of ore to the company smelter, averaging 0.77 oz. silver, 0.0037 oz. gold, 2.28% copper per ton.

Copper Mountain: at this camp, 14 miles by road south of Princeton, B. C., the company owns and has bonds on various groups of claims, covering an extensive area of mineralized grano-diorite, a so-called "porphyry" or disseminated ore intruded by barren quartz porphyry dikes. For two years or so the company has been prospecting this ground by diamond drilling and trenching, with especial reference to the location of the barren fikes; 18,315' of trenching and 28,134' of diamond drilling were done in 1914.

Company holds bond and options on the following properties, all considered tributary to the smelter: (1) Ada B. group; (2) Silver Dollar claim; (3) Annie L. claim; (4) Princess Maud claim; (5) Red Eagle claim; (6) Triangle Fractional claim, all in Princess camp; (7) Eureka group, and (8) Queen Victoria group, both near Nelson; (9) L. H. group, near Silverton; (10) Riverside group, near North fork of Kettle river; (11) Copper Mountain district; (12) Greyhound mine, Deadwood camp.

Ore reserves: by Dec. 31, 1915, 9,075,000 tons of "reasonably assured" ore, about 1.7% copper with 20c gold-silver per ton, in addition to 2,000,000 tons of probable ore of same grade copper, were estimated. When work has progressed farther it is planned to build a concentrator to treat this ore.

The B. C. 2,500-ton smelter at Greenwood, 5 miles by rail from the Mother Lode mine, receives its ores over the Canadian Pacific railway, and does a general custom business also. The plant is electrically operated, requiring about 1,600-h. p. A 600-ton sampling mill has a custom ore bin connected with the sampler by a belt conveyer. All ores are coarse crushed at the bins, then pass the samplers, and then go to the receiving bins over a belt conveyer. The cupola building has 3 blast furnaces. The ore bins have a capacity for 12,000 tons ore and 4,000 tons coke. There are 6 Baldwin-Westinghouse electric motors for the charging and slag lines. The slag cars have 25-ton side-dumping ladles operated electrically from the locomotives.

The converter building adjoins the blast-furnace building and has 2 stands, with 84x126" shells, taking matte with from 35 to 55% copper and producing blister copper of 99 to 99.5% copper, carrying 20 to 50 oz. silver and 5 to 10 oz. gold. Stands are tilted by hydraulic accumulators, and shells, matte, etc., handled by a 40-ton, 4-motor traveling crane. There is a 72" silica mill for linings. In the power house are three 300' Connersville blowers, a Nordberg compressor for the converters, and four 300-h. p. motors. There are 3 motor generators furnishing direct current to the railway locomotives and an air compressor for operating furnace gates, steam hammers, etc., and an electrically-operated hydraulic accumulator.

Power is purchased on a watt-meter basis from the Bonnington Falls Co. plant, 85 miles distant. The voltage is 40,000, transformed to 2,200 volts, 60 cycle, 3 phase at the smelter. All machinery is electric or air-driven. The works have a briquetting plant handling flue dust. Smelting fuel is coke, costing under \$6 per ton, consumption being about 90,000 tons yearly.

The new smelter suffered a scarcity of coke in 1912, and for 2½ months but 2 furnaces were running; 740,589 tons was smelted in 13 months ending Dec. 31, 1913, as compared with 608,945 tons for the year ending Nov. 30, 1911; 443,022 tons came from the company's mines; the balance was custom ore. The smelter was idle until July, 1915, when one furnace was put in operation, treating 7,374 tons custom ores and 115,140 tons company ore to Dec. 31, 1915. Output was 1,850 tons of matte, containing 48% copper. In April, 1916, a second blast furnace was blown in and smelter

is now treating about 1,400 tons daily. 350 men employed in Greenwood mine and smelter.

Production:			Fine				Fine

*Jan. 1, to Aug. 23.

The company cannot earn much money from its Mother Lode mine unless copper sells at about 15 cts. a lb., but its Copper Mountain properties will, when developed and equipped, have a production that should restore the company to the rank of dividend payers.

BRITISH COLUMBIA PHOENIX CO., LTD. BRITISH COLUMBIA

Secretary and office: H. W. Batty, 146 Bishopsgate, London, E. C., England. Geo. S. Waterlow, chairman, and L. C. F. Robson, directors. Company is a reorganization, July, 1914, of the British Columbia Phoenix Syn., Ltd. **Cap.**, £5,000 in 20,000 shares of 5s each; 6,205 shares issued and fully paid. Shareholders in the B. C. Phoenix Synd. Ltd., received 1 share of 5s fully paid in the new company for 10 shares, 1s each, of the old company.

Properties and interests taken over from the liquidator of the B. C. Phoenix Syn., Ltd., include an interest in the New Velvet-Portland Mine, Ltd., consisting of a mortgage debenture, loans to the receiver and accrued interest, an unsecured debt and also the equity of redemption. The mine was leased for one year from July, 1915. Other properties and interests include mining claims in British Columbia, real estate in Rossland and sundry shareholdings and other interests.

BROADWATER COUNTY MINING CO.

MONTANA

Idle. Officers: J. J. Fisher, pres., Harlowton, Mont.; Len Jobb, sec.; John A. Matthews, treas. **Inc.** 1910. **Cap.**, \$225,000; shares \$1 par. **Property:** 7 claims, includes the Evening Star, Copper Glance and Lombard, about 5 miles west of Townsend, on the Radersburg road. Claims show good outcrops and development is said to disclose veins 4 to 12' wide, with chalcocite assaying up to 60% copper, 6 oz. silver with gold and lead values. Management plans having property prospected and reported on with a view to resumption of operations in near future.

BROOKLYN ARIZONA MINING CO.

ARIZONA

Address: c/o J. B. Hill., sec. Andover, Mass. Mine near Mayer, Yavapai Co., Ariz. **Benj. B. Tuttle, v. p.;** **Jas. S. May, treas.** **Inc.** March, 1907, in Me. **Cap.**, \$2,500,000; shares \$10 par; nonassessable; fully issued. Bonds authorized \$500,000; about \$75,000 outstanding. Was promoted by the American Securities Co. Annual meeting, first Wednesday in April.

Property: 82 claims, about 1,600 acres, including the Brooklyn group of 14 claims, in the Squaw Creek district, about 20 miles S. E. of Mayer, carries auriferous and argentiferous copper sulphides. **Development:** by 750' main shaft and 2,500' tunnel. **Equipment:** includes compressor, double-drum hoist, 3,000' cable and Partridge smelter. Former mismanagement fully described in Vols. X and XI. Company reported in new hands, 1915, and operations likely to be resumed.

BROOKLYN MINING CO.

CALIFORNIA

Mine at Dale, San Bernardino Co., Cal. **Development:** by 800' shaft,

at which depth a rich find of gold ore was reported in 1914. Has gasoline power and a 3-stamp mill. Property optioned to Los Angeles parties for \$190,000, who were developing and shipping at last accounts.

BROOKLYN MINING CO.**NEVADA**

Idle. E. S. Shields, sec.-treas.; 19 W. Granite St., Butte, Mont. Mine near Contact, Elko Co., Nev. S. V. Kemper, pres.; T. M. Hodgens, v. p. Inc. 1898, in Montanā. Cap., \$500,000; shares \$1 par; 213,000 shares issued. Has no debts.

Property: 7 claims, 75 acres in the Contact district, with ore deposits occurring on the contact between limestone and porphyry. This ore belt is about 18' wide, runs E.-W. for several thousand feet, dips at 75° and is said to contain 8% copper, with about 2 oz. of silver and \$1 gold per ton.

Development: by 196' shaft with 600' of workings, said to have developed 2,000 tons of ore. Property idle, waiting the advent of railway. Equipped with 25-h. p. boiler, 15-h. p. gasoline engine and hoist. Is 40 miles from railway.

BROWN BEAR MINING CO.**CALIFORNIA**

Address: Redding, Shasta Co., and Deadwood, Trinity Co., Calif.; Thos. McDonald, pres.; B. McDonald, supt. **Property:** 586 acres, of mineral land, 200 patented, and 671 acres of timber land, includes the Brown Bear mine, on north side of Deadwood Gulch at Deadwood, discovered in 1875, and worked ever since. The property is a consolidation of several mines and as a whole has been the largest producer in the Weaverville Quadrangle and the most famous mine in Trinity County. It is credited with a production of \$7,000,000 to \$10,000,000.

Geology: there are 2 main veins, the Monte Cristo and the Last Chance 200' south of the former, which lie for the most part in Bragdon slate formation, but also cut an intrusive soda granite porphyry. Veins are parallel, and strike N. 80° E. The Monte Cristo dips steeply to the north; the Last Chance dips south 60° to 80°. Width as a rule is not over 2', more commonly about 6", but stopes have been mined to a width of 22'. Ore-shoots are several hundred feet in length; those of the Last Chance vein pitch at a flat angle to the east. The veins show clay slips along both walls, so it is rare that the ore is frozen to the wall. Quartz is the principal gangue mineral the ore contains pyrite, galena, sphalerite, and arsenopyrite. Pyrite being the most common, rich ore is usually found, where galena and sphalerite are present. The best ore mined runs about \$100 per ton, but the average grade is between \$20 and \$50.

Development: 7 crosscut tunnels ranging in length from 100' to 2,400', the lowest being 1,080' below the outcrop. There are several miles of underground workings. **Equipment:** includes a 10-stamp mill, 2 Wilfley tables and water power obtained from Deadwood Creek through a 3-mile ditch.

At present the company employs only about 5 men. Lessees are working the mine.

See Mines & Min. Res. of Trinity County, State Mineralogist's Rept., p. 141; and U. S. G. S. Bull. 540, p. 70.

BROWN MOUNTAIN SMELTING CO**COLORADO**

T. B. Crawford, sec.-treas., 403 Wyoming Block, Denver, Colo. **Mine office:** Ouray, Ouray Co., Colo. **Officers:** W. E. Kreamer, pres.; P. J. York, v. p.; A. E. Ackerson, mine supt. Inc. 1911, in Colo. Cap., \$300,000; shares \$1 par; issued, 280,000.

Property: the Hill, or Ouray smelter and the Guadalupe mine with 432 acres mineral land and 25-acre mill site in the Red Mountain district. The Guadalupe mine is reported to show an 18' vein of copper ore averag-

ing 3% copper, 5 oz. silver and \$5 gold per ton in sulphide ore. **Development:** totals 3,000', including a 2,000' tunnel and a 500' crosscut blocking out 50,000 tons of ore. **Equipment:** at mine, 350-h. p. water power.

The 250-ton smelter, 6 miles from Ouray, has 2 blast furnaces of the Loder type, turning out 40% matte, which is shipped to the Garfield smelter for further treatment. It was blown in Oct., 1913, and is now under lease to Wanakah Mining Company for a period of two years.

BROWN WHITLOW GROUP **ARIZONA**

Mine address: Superior, Pinal Co., Ariz. Owned by J. C. Brown and J. W. Whitlow. **Property:** 5 claims, in Pioneer district, near Superior; adjoins the old Silver King mine, once the richest silver property of Arizona. **Development:** by tunnel, which cuts a 7' contact vein of copper ore carrying low-grade and silver values.

Reported under lease to parties connected with Magina Development Co., 1914.

BROWNELL-ARIZONA MINING & SMELTING CO. **ARIZONA**

Mine office: Casa Grande, Pinal Co., Ariz. **Property:** formerly held by Producer Mining & Smelting Co., is supposed to include the Jack Rabbit mine, 80 acres, in Pinal county, together with the Producer and Century-Chief group of 320 acres, and Index group of 220 acres, in Pima county, all in the Quijotoa mountains. Company sold stock, 1910, on the strength of a clever brochure, written by Alfred Henry Lewis, the talented writer, whose statements are not hampered by a knowledge of copper mining. Company not favorably regarded.

BRUCE MINES, LTD. **ONTARIO**

Office: St. Catharines, Ontario, Canada. **Mine office:** Bruce Mines, Algoma, Ont. **Officers:** R. W. Leonard, pres.; Alex. Longwell, v. p. and gen. mgr.; J. J. Mackan, sec.; A. B. Wilmott, cons. engr., 404 Lumsden Bldg., Toronto. **Inc.** 1908, as successor of Copper Mining & Smelting Co. of Ontario, Ltd. Idle many years.

Property: the old Bruce mines, freehold, was discovered 1843, and worked extensively, 1846-76, producing copper to the value of about \$3,500,000. Lands are 65 acres of surface rights, and mineral rights to 12,800 acres, or 20 sq. miles, on Georgian bay, granted, 1854, from the crown. The mine has 6 known veins, practically parallel, of which 2, of 4 to 18', have been more or less developed, the principal vein traceable 8,000', having a strike of N. 23° W., and of 18' maximum width, traversing diabase, carrying mainly chalcopyrite, with some chalcocite, and quartz gangue, estimated by former management to average 5% copper, but run-of-mine ore ranges 2.5 to 5% copper.

Development: by 10 shafts, deepest 450'. Practically everything above the 360' level is stoped out. The waste heaps carry about 117,000 tons of discarded ore, estimated to average 1.5% copper, which perhaps is too high.

Equipment: A 200-ton concentrator, 1½ miles from the mine, has an Austin crusher, 5 sets of rolls, 12 Hartz jigs, 18 Frue vanners, 2 double-deck slime tables and 18 sizers.

Miscellaneous improvements include a coal wharf, merchandise wharf, electric light plant, and telephone system.

The Bruce Mines & Algoma railway, formerly under the same management as the mine, is a standard-gauge line, 10 miles long. The extension of the railroad to Ridout on the Canadian Pacific railroad's main line, is reported to have been financed in England.

Production: 1846-75, was 47,593 tons of ore and concentrates, yielding 19,125,920 lbs. fine copper. Property has changed hands repeatedly

but has secured no production since suspension, 1876, by the old company. The ore is rich but occurs in bunches and specks in a quartz gangue. The quantity is not great enough to insure large output and cheap costs. With flotation plant and economical management, property might be made to pay expenses and provide for new development.

BRUNSWICK CONSOLIDATED GOLD MINING CO. CALIFORNIA

Grass Valley, Nevada Co., Calif. **Eastern office:** 136 Liberty St., New York. **Officers:** W. H. Oscanyan, pres.; R. Chester Turner, v. p.-gen. mgr.; J. Stadtfeld, sec.-treas., with J. A. Beckwith, Theo. C. Camp, directors. J. J. Halpin, asst. sec.-treas.; C. H. Mallen, supt. **Inc.** Jan. 11, 1890. **Cap.,** \$500,000, shares \$1 par; 395,287 shares issued. J. J. Halpin, 136 Liberty St., New York, transfer agent; Farmers Loan and Trust Co., New York, registrar. Listed on San Francisco Exchange.

Financial statement: for fiscal year ending Jan. 27, 1916, shows balance Jan. 28, 1915, \$83,034; receipts from bullion, \$196,072; from concentrates, \$26,421; misc., \$4,462; disbursements included dividends, \$71,151; mine, \$71,979; old mill, \$10,484; new mill, \$28,893. Cash on hand and New York City bonds, Jan. 27, 1916, \$49,628. Total production, 1893-1916, \$1,384,843. Dividends: in 1906, 3c; in 1913, 6c; in 1914, 24c; in 1915, 18c per share.

Property: located on the Mother Lode, at Grass Valley, has gold quartz veins in schists and slates. For geology see Lindgren's Gold-Quartz veins of Nevada City and Grass Valley districts, Calif.; 17th Ann. Rept., pt. 2, 1896, pp. 1-262.

Development: by incline shaft to 1,100' level, now being sunk to the 1,300' level. Underground work in 1915 totaled 2,905'. Ore blocked out ready for stoping, Jan. 27, 1916, 16,000 tons. Also a considerable tonnage of low-grade ore indicated by exposed faces. **Equipment:** includes two 20-stamp mills, one going into commission in Oct., 1915.

Production:

	Costs Per Ton			Value Ore Per Ton	%	Bullion Prod.		
	Tons	Mng.	Mlg.			Total	Ext.	Oz. Au.
1915	22,004	\$4.97	\$0.84	\$ 8.59	\$11.11	90.8	9,466	2,069
1914	16,237	6.05	.93	10.22	93.9	12,992	2,622

Company is planning to erect a small cyanide plant to treat concentrates at the mine.

BUCHAN'S MINE

NEWFOUNDLAND

P. O.: Millerton, N. F. Wm. Scott, supt. Property is owned by the Terra Nova Co. and described under that name. This company is a subsidiary of the Anglo Newfoundland Development Co., which has a timber and mineral concession over about a million acres in the center of the island, near Grand Falls. Company has built largest pulp paper plant in the world and mining is merely a side issue.

BUCKEYE BELMONT MINES CO.

NEVADA

1055 Spitzer Bldg., Toledo, Ohio. **Mine office:** Tonopah, Nev. **Officers:** A. B. Tillinghast, pres.; W. B. Kober, v. p.; W. B. Voorhees, sec.; preceding officers are directors. E. F. Rowley, treas.; Letson Balliet, mgr. and supt. of properties.

Inc. 1908, in Nev. **Cap.,** \$2,000,000; shares \$1 par; nonassessable; outstanding \$700,000. Annual meeting 1st Thursday in Jan. Private corporation. Stock unlisted. Is a holding company, operating property formerly owned by Belmont Extension Mng. Co., now defunct, and holding interests in the Buckeye Eagle and Buckeye Tonopah companies. Reported in Oct., 1915, to have taken an option upon a drift gravel property in Plumas Co., Cal.

Property: 15 claims, 13 patented, 300 acres, at Tonopah, adjoining the Tonopah Belmont on a portion of the east end line. **Ore:** quartz with silver sulphides and gold occurring in fissures in trachyte. Veins strike E. W. and dip 30°.

Development: 3 shafts, 125', 900', and 1,234' deep, with 5,000' underground workings. Operations in 1915 consisted of developing the 900' and 1,200' levels. **Equipment:** includes 2 electric hoists, of 52-h. p. and 120-h. p., one 40-h. p. gasoline hoist and two 8-drill air compressors.

Plans for 1916: completing the raise from the 1,200' to 900' level, drifting and sinking the 900' shaft to the 1,500' level. Property is in the development stage; no production has been made to date. It is said to be operated at a high degree of efficiency and along conservative lines.

BUCKEYE COPPER & GOLD MINING CO. ARIZONA

Main office: New Philadelphia, Ohio. **Mine office:** Turkey, Yavapai Co., Ariz. **Officers:** Michael Siebold, pres.; Wm. Rommel, v. p.; Fred Graff, sec.; C. D. Grimes, treas.; with A. W. Reiser, L. Hardman, Geo. Edell, M. M. Davis; Alvin Graff, mine supt. **Inc.** July 24, 1912, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; nonassessable; issued \$1,790,000. Annual meeting, first Tuesday in September.

Property: 35 claims, 720 acres and a 20-acre smelter site, in 3 groups, is 2 miles from Turkey, in Black Canyon district of Bradshaw mountains. Claims show chloritic schists and diorite, carrying fissure veins with occasional native copper and malachite, but mainly azurite, chalcopyrite and bornite, estimated to average 4% copper, 3.5 oz. silver and from a trace to \$6 gold per ton.

Development: 726' two-compartment shaft on the Columbia claim, a 520' two-compartment shaft on the Sullivan claim, with 2 other 200' shafts, various pits of 10 to 40' depth and tunnels of 87' and 314', with about 5,000' workings. **Equipment:** includes 15-h. p. and 40-h. p. gasoline hoists, a small air compressor and several mine buildings.

BUCKEYE EAGLE MINING CO. NEVADA

Tonopah, Nev. Control held by Buckeye-Belmont Mines Co. Same officers and directorate as that company.

BUCKEYE TONOPAH MINING CO. NEVADA

Tonopah, Nev. Control held by Buckeye-Belmont Mines Co.; same officers and directorate as that company.

BUCKHORN MINES CO. NEVADA

Mine at Buckhorn, Eureka Co., Nev. Geo. Wingfield, pres.; E. R. Richards, mgr. Property shows gold ore, occurring in a zone said to be traceable for 2,000' on surface.

Development: shafts and tunnels. **Equipment:** includes hoists, compressor, electric power and 350-ton cyanide plant. Employs 125 men.

BUENA TIERRA MINING CO., LTD. MEXICO

T. D. Pillans, sec., 11 Cornhill, London, E. C. Eng. **Directors:** R. T. Bayliss, chairman; L. A. Butler, W. McDermott, J. H. M. Shaw, cons. engr.; R. M. Raymond, gen. mgr., and A. C. Brinker. **Cap.**, 330,000 shares, £1 par; all issued and fully paid. Reg. Feb. 10, 1912, in England, to acquire from the Exploration Co. of England and Mexico, Ltd., the Buena Tierra mine, 89 acres, in the Santa Eulalia district, Chihuahua, Mex., 15 miles S. E. of Chihuahua. Purchase price was £300,000, payable £178,201 cash, £121,799 in fully-paid shares. Property reported on by R. T. Bayliss and R. M. Raymond. Dividends paid, 2 shillings per share.

Ore: principally lead and zinc carbonates assaying 10 oz. silver, 15% lead and 25-50% zinc. There is also a low-grade mixed sulphide. Ore-bodies occur in limestone lying almost flat, but instead of following the

fissures, spread out into flat beds near them, their average width is 30', average thickness 40'. The Chorro orebody has a depth of over 1,000'. Developed orebodies are most numerous at 450' depth, but most of the mines have ore down to a depth of 1,300'. Ore reserves estimated early in 1915 at 300,000 tons.

Development: by shafts; Buena Tierra shaft is 1,400' deep. Raises are put up from the levels at intervals of 75'-200' and the ore is mined in small bunches, little powder being required and practically no timber.

The Mexican revolution has interfered with production during the past few years and property has not been operated steadily. Lead ore is shipped to the A. S. & R. Co.'s smelter at Chihuahua or El Paso and the zinc ore to the United States.

Development costs are high, due to difficulty of finding orebodies. If a daily tonnage of 300 tons can be maintained, conditions are good for low costs.

BUENA VISTA GOLD MINING CO.

MEXICO

Owned by El Rayo Mines Co., which see.

BUFA MINING, MILLING & SMELTING CO.

MEXICO

Idle. **Office:** 1030 I. N. Van Nuys Bldg., Los Angeles, Cal. Mine at La Bufa, Sahuaripa, Sonora, Mex. Wm. E. Richardson, pres. and gen. mgr.; Baron W. Riley, sec.; Frank R. Richardson, treas. Inc. 1902, in Arizona. **Cap.**, \$1,500,000; shares \$1 par. Has paid 5 dividends, last being \$60,000, July, 1905.

Property: 123 acres, a 10-acre mill site, and 5,000 acres ranch lands, showing 6 fissure veins, of which 2 under development average 4' width, opened by a 600' incline. **Ore:** said to give average assays of 10% copper, 10% lead, 4% zinc, 150 oz. silver and \$2.50 gold per ton, from argentiferous tetrahedrite and copper sulphides. **Development:** shafts of 300' and 600', and a 225' tunnel, with 8,000' of workings and about 20,000 tons of high-grade ore said to be blocked out, with a considerable amount of low-grade ore on the dump, for eventual treatment.

Equipment: includes a 120-h. p. plant at the mine, with 2 hoists, 2 Rand air compressors and 7 power drills. Mine buildings include several small shops, a store, sawmill and about 20 dwellings.

The 35-ton concentrator has a small sampling mill attached. There also is a 20-ton leaching plant.

The smelter, at the mine, receives ore by gravity tram. Equipment includes 10-ton and 25-ton reverberatory furnaces, built of silica brick, made on the ground. Fuel is inferior wood, cut on the premises. Product is a matte carrying 50% copper, 600 to 800 oz. silver and 1.5 oz. gold per ton, shipped, by burro, at Aguascalientes, via Guaymas, for refining, some rich ore being shipped also. Production, 1906, was about 750,000 lbs. fine copper. Management said to be waiting for peace to resume operations.

BUFFALO MINES, LTD.

ONTARIO

Office: 14 Wall St.; New York. **Mine office:** Cobalt, Ont., Can. **Officers:** Chas. L. Denison, pres.; Robt. W. Pomeroy, v. p.; H. B. Crandall, 2nd v. p.; G. C. Miller, sec.-treas.; preceding and A. W. Johnston, directors. T. W. H. Jeacock, asst. sec.; Thos. R. Jones, supt.

Inc. 1906, in Ont. Cap., \$1,000,000; shares \$1 par. **Transfer offices:** Imperial Trust Co., Toronto, and U. S. Mortgage & Trust Co., New York. Registrar, Imperial Trust Co., Toronto. Annual meeting in May.

The Buffalo has been one of the largest producers in Cobalt, yearly output being about 2,000,000 oz. It is said that the greater part of the high-grade ore has been mined, but there remains a large tonnage of low-grade ore capable of being worked at a profit.

Income statement: year ending April 30:

	Total Inc.	Net	Dividends	Surplus	Total Surplus
1915	\$ 372,260	\$ 79,690	\$ 50,000	\$ 27,158	\$379,968
1914	858,825	386,990	660,000	270,218(a)	352,810
1913	1,258,864	891,193	650,000	233,450	623,028

(a) Deficit.

Balance sheet for year ending April 30, 1915, shows: assets of \$1,530,-348, which includes cash and accounts receivable, \$13,015; ore and bullion, \$377,411; plant and equipment, \$150,401; mining rights, \$907,092; liabilities include notes and accounts payable, \$112,092.

Property: 40 acres, in the town of Cobalt, includes the Buffalo mine.

Development: vertical shafts. Work for year ending April 30, 1915, consisted of 2,515' of drifting and raising, compared with 2,463' in 1914, and 40,363 sq. ft. of stoping compared with 53,478 in 1914. Total work to May 1, 1915, comprised shaft work, 1,301'; drifting, 16,698'; stoping, 2,365,906 cu. ft.

Ore reserves: estimated May 1, 1915, as 16,097 tons of broken ore and 26,000 tons unbroken ore.

Production: years ending April 30:

	Tons			Oz. Ag.			Total Prod.
	Milled	per Ton	Rec.	Cyanided	per Ton	Rec.	
1915(a)	51,667	19.50	72.22	8,385	9.86	82.26	822,791
1914	77,616	25.31	76.14	13,388	10.13	77.80	1,637,809
1913	55,783	45.83	82.64	10,320	15.45	74.70	2,235,853

(a) Concentrating mill and cyanide plant closed for 4 mos.

BLUE VALLEY GOLD MINES CO.**UTAH**

Office: 1025 Kearns Bldg., Salt Lake City, Utah. **Officers:** John T. Hodson, pres.; M. R. Evans, v. p.; W. Scowcroft, sec.-treas.; R. G. McQuarrie, mgr., and D. H. Morris, directors. **Inc.** 1913. **Cap.**, \$100,000; shares 10c par.

Property: 15 patented and 2 unpatented claims, millsite and group of placer claims, 35 acres, in Gold Strike district, near Enterprise, about 40 miles from Modena on the S. L. R. R.

Ore: free milling gold quartz found in fissure veins, 3' wide, along porphyry dike in lime, quartz, andesite and rhyolite formation, is said to run as high as \$50 per ton. **Development:** 2,247' of workings, including 2 tunnels, 500' and 705' long. **Ore reserves:** estimated at 10,000 tons milling ore in sight, valued at \$20 per ton. **Equipment:** 3-stamp, 10-ton mill. Employs 4 men.

Production: consisted of several high-grade shipments in 1915. Plan erecting reduction plant in 1916.

Worked under lease by Goldstrike Mining & Leasing Co., with practically same management.

BULL VALLEY HASSIAMPIE GOLD MINING CO.**UTAH**

Goldstrike, Washington Co., Ariz. Officers: H. J. Burgess, pres.; Ren Bryson, v. p. & supt.; J. A. Bryson, sec.-treas.; with S. C. Bryson, A. B. Hemenway, J. D. Alsop, J. Z. Alger, directors. **Inc.** July 28, 1913, in Utah. **Cap.**, \$100,000; shares 10c par; outstanding \$70,500. Annual meeting 1st Monday in July.

Property: 3 claims, 60 acres, unpatented, adjoining Bull Valley Gold Mines Co., in the Goldstrike mining district, covers a large belt of porphyry and quartzite. **Ore:** gold in fissure vein, 17' wide, with 80° dip, said to assay from \$1.20 to \$14.60 per ton.

Development: 150' incline shaft, with 165' of drifting on the 100' level. Plans sinking to the 300' level. Property is still in the development stage.

BULLION BECK & CHAMPION MINING CO. UTAH

Care U. S. Smelting, Refining & Mining Co., 55 Congress St., Boston, Mass., and Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. **Officers:** Geo. W. Heintz, pres.; Jos. F. Smith, v. p.; Ambrose Nord, sec.-treas.; C. E. Allen, mgr.; preceding officers, J. H. Horlick and M. C. Morris, directors. L. C. Doty, supt. **Cap.**, \$1,000,000; shares \$10 par; 63,787 issued; last assessment of 20c called in April, 1914. Dividends: to end of 1909, were \$2,738,400, last dividend being 10 cts., July 11, 1908. Company is a veteran of the Tintic district and a close corporation whose stock is mostly held by the U. S. S. R. & M. Co. through its ownership of the Centennial Eureka Co., which holds a majority interest in the Bullion Beck & Champion Mining Co. Balance sheet December, 1915, shows gross earnings of \$3,453; current assets \$7,459 and current liabilities \$1,363.

Property: 3 claims, adjoining the Centennial-Eureka, which is under the same control, and with which sideline agreements stopping litigation were secured, 1908. Mine was discovered, 1876, and has been a producer since 1880.

Development: 1,300' shaft, with 200' winze below the bottom level, and by the Beck tunnel. Ore is mainly carbonate and chloride in limestone formation, carrying copper, gold, silver, lead and zinc values.

Equipment: includes a 200-ton mill, with steam and electric power.

Production: in 1915 was 2,700 tons, averaging \$11 per ton and yielding 41 oz. gold, 29,306 oz. silver, 775,728 lbs. lead, 27,042 lbs. copper and 375,670 lbs. zinc.

About 60 men working leases on property.

BULLION MINE MONTANA

The Bullion mine lies at an elevation of 7,400' on the N. W. side of Jack mountain, 10 miles by road from Basin. A concentrator and smelter of 200 tons daily capacity, was constructed and several thousand feet of drifts and tunnels run, but property is now idle.

Mine shows fissure veins in Butte granite. Ore contains lead, zinc and copper sulphides with arsenopyrite in quartz gangue carrying tourmaline. Mine, formerly owned by Northwestern Metals Co., bankrupt, was sold in June, 1916, at sheriff's sale, for \$22,000.

BULLION MINING CO., LTD. IDAHO

Mine P. O.: Wallace, Idaho. William Squance, pres.; R. A. Marshall, v. p.; Jas. H. Taylor, sec.-treas. and mgr., with Frank Taylor, directors. Inc. 1902, in Idaho. **Cap.**, \$1,500,000; shares \$1 par, issued 1,248,668; in treasury, 251,332 shares; 9 assessments, one-half cent a share, levied up to Nov. 1, 1912, yielding \$39,229.

Property: 10 claims, 3 patented, 220 acres, near Lookout, 2 miles from the Chicago, Milwaukee & St. Paul railway, and 4 miles from Borax station, on the Northern Pacific line, on the Idaho slope of the Bitter Root divide, with a good wagon road to Borax. Property has a quartz vein of 4 to 20' width, with average of 6 to 12', and nearly vertical dip, carrying shoots of copper ore, 2-4' wide, mainly chalcopryrite. Concentrates estimated to average 19.8% copper, 3 oz. silver, \$2.40 gold, 28.5% iron and 4% silica per ton.

Development: by shafts and 2 crosscut tunnels, 1,500' long, one 200' vertically above the other. The upper one has 130' crosscut and 186' drift on vein. Lower tunnel cuts a 28' vein 350' from portal, with 4' of solid ore. Orebody proved for 35' upward by raise and downward by shaft.

Equipment: includes steam power, a 12-h. p. hoist, Pelton wheel, and a 5-drill Ingersoll-Rand air compressor.

A trial shipment of 24 tons to the East Helena smelter, Sept., 1912, showed 56% copper and 1 oz. silver per ton. Concentration tests on 5.2% ore showed a 73% recovery. No production since 1912. Diamond drill work was done in 1913 and company plans driving lower tunnel 2,533' to intercept ore at depth of 430' in 1916.

BULLWHACKER COPPER CO.**MONTANA**

Reorganized as Butte Bullwhacker Mng. Co., which see.

BULLY CAVE CO.**CALIFORNIA**

Address: c/o Hatch & Clute, 100 Broadway, New York. Mine at Winthrop, Shasta Co., Calif. **Officers:** Walter F. Welch, pres.; Vincent P. Donihee, v. p.; Frank M. Clute, sec.-treas.; first two named and Frank F. Gearn, directors. E. J. McLaggan, supt. **Cap.,** \$5,000.

Property: owns the McClure group and has an option on the Michigan group on Bully Hill adjoining and west of the Bully Hill Copper Co.'s mine. Claims show two mineralized shear zones with clay gouge walls and about 40 "ore channels" 1½' to 6' wide. The ore carries iron pyrite with chalcopyrite and zinc sulphide.

Development: by Hawkeye tunnel, 1,050' with 74' and 150' drifts; Ydalpom II tunnel, 1,115' and 3 drifts; North Star tunnel, 1,050' and 2 drifts; Recorder I, 600' drift and winze; Recorder II, 400' tunnel; Ydalpom I, 150' tunnel.

Equipment: includes all necessary machinery, houses, etc. Company also owns a gold mine at Cave Creek, Maricopa Co., Ariz.

BULLY HILL COPPER MINING & SMELTING CO.**CALIFORNIA**

Office: 30 Church St., New York. Mine P. O.: Winthrop, Shasta Co., Cal. **Officers:** John B. Keating, First Nat'l Bank Bldg., San Francisco, Cal., pres. and mgr.; L. B. Judson, v. p.; M. F. Westover, sec.; Herbert R. Hanley, asst. mgr.; preceding officers, A. H. Jackson, A. W. Burchard and D. M. Riordan, directors. **Inc.** 1900, in New Jersey. **Cap.,** \$2,500,000; shares \$25 par, reduced 1905 to \$1,000,000. Bonds, \$400,000, issued for construction of Sacramento Valley & Eastern railroad, stock of which is owned by the Bully Hill. Is controlled, through practically entire stock ownership, by the General Electric Co., Schenectady, N. Y.

Property: 450 acres, 320 patented, near Delamar, Shasta county, includes the Bully Hill, Rising Star, Rising Sun, and old Winthrop & Baxter groups, all in the eastern end of the copper belt. Owns 14-mile railway (Sacramento & Eastern), connecting with S. P. R. R. at Pitt station.

Geology: ore occurs in nearly vertical N. E.-S. W. shear zones, or veins, in metarhyolite, varying from 4' to 400' and averaging 30'. Definite walls, if present, are post-mineral gouges; basalt forms the east wall. The ore forms irregular lenticular bodies that average 45' wide by 200' long and are connected by narrow seams of ore. Ore is a complex mixture of sulphides carrying chalcopyrite with zinc and antimony and low gold-silver values.

Development: several tunnels, lowest No. 3, crosscutting the vein at 1,100' and 600' below the outcrop. A 950' shaft was sunk at this point with levels 100' apart, and all necessary connections for work and air.

The 400-ton smelter has one blast furnace, two calcining furnaces, five converters and all necessary machinery, etc. It has been idle since 1910.

Company built a small experimental plant at Delamar, Cal., to try out electric smelting and recovery of zinc values. This plant, remodeled in 1915, produces 300 to 400 lbs. metallic zinc per day, using direct electrolysis of zinc sulphate solution with regeneration of acid. (See Met. & Chemical

Engr'g. Feb. 1, 1916, p. 120.) The ore has also been tested by the Minerals Separation Co.'s flotation process with favorable results.

BUNKER HILL CONS. MINING CO.

CALIFORNIA

Office: Humboldt Bldg., San Francisco. Mine office: Amador City, Amador Co., Cal. W. F. Detert, pres.; E. Hampton, sec. Inc. 1907. **Cap.**, \$200,000, shares \$1 par. The mine has paid dividends for several years; in first half of 1915 six monthly dividends were paid, totaling \$30,000. Owing to heavy construction and new equipment expense the dividend rate has been reduced from 5 to 2½ cts. per share.

Property: 3 claims, the Bunker Hill, Mayflower and Nevada, 1½ miles north of Amador City, 2,587' on the lode. **Geology:** the ore is gold, occurring in the Bunker Hill vein, strike N. 25° W., dip 58° E., with average width of 6'. From surface to 200' level the vein occurs on the contact between Mariposa slate on the west and metadiabase on the east; from the 200' to the 1,400' level, the vein is in slate; from the 1,500' to the 2,400' level the vein has a greenstone footwall and slate hanging-wall. On the 1,400' level an orebody has been opened 40' west of the Bunker Hill vein, and running parallel with it. This orebody is 860' long, average width 30', and at a point 860' north of the shaft joins the Bunker Hill vein; at points it forms the footwall of the Bunker Hill vein. Ore occurs in the form of lenses, the schist being cut by numerous stringers of quartz; the rock is highly impregnated with pyrite, as high as 4 to 5%. The gray orebody has been developed on the 1,400', 1,500', 1,750' and 1,950' levels. Three ore-shoots have been developed on the property; the north and south shoots on the Bunker Hill vein have an average length of 500', average width of 6', while the gray orebody is 600' long, average width of 15'.

Development: by shafts; main shaft is double-compartment, 2,587' deep, and sunk on an incline of 58°. From the 1,950' to the 2,400' level it is sunk in metadiabase. On the 2,400' level the distance from the shaft to the Bunker Hill vein is 280'.

Equipment: includes a double-drum hoist, driven by a 300-h. p. motor, Ingersoll-Rand compressor, driven by 100-h. p. motor, pumps, a 40-stamp mill and a cyanide plant. Ore is hoisted in 2½-ton skips, and is crushed by a Knight crusher, before being trammed 550' to the mill. Stamps, weighing 1,150 lbs. each, drop 6½", 96 drops per min., crush 5 tons per stamp daily through No. 4 punched screen. Pulp flows over double-compartment amalgamating plates to 24-6' Frue vanners; tailings from the vanners go to the cyanide plant, where sands are treated in eight 100-ton leaching vats, treatment taking 8 days. Concentrates are first agitated with lime in Pachuca tanks, 50 lbs. lime for 11 tons ore, then agitated 8 hours with strong KCN solution; treatment lasting 3 to 4 days. Mill tailing runs 99c per ton; a 45% extraction is made. Tailing is treated on a royalty basis. W. E. Darrow, V. R. Fitzsimmons et al., Sutter Creek, owners. The Bunker Hill Company employs 155 men. See U. S. G. S. Folio 63; and M. & M. Res. of Amador Co., p. 20, Cal. State Mng. Bureau.

In the first six months of 1915, 42,087 tons of ore was mined and milled, producing \$151,591, an average value of \$3.60 per ton; aggregate total expense, \$109,792.

BUNKER HILL MINES CO.

ARIZONA

Owned by Phelps, Dodge & Co., Inc.

Office: 99 John St., New York. Mine office. Tombstone, Ariz. **Officers:** Jas. Douglas, pres.; C. H. Dodge, v. p.; A. C. James, v. p.; Geo. Notman, sec.-treas.; Dr. E. Grebe, supt. **Cap.**, \$1,000,000; outstanding \$750,000.

Inc. to take over and operate the property of the old Tombstone Cons. Mines Co. at Tombstone, discovered in 1878 and at one time one of the largest producers of gold-silver-lead ore in the Southwest. At a depth of 560' the volume of water became so great all attempts to handle it were unsuccessful and operations were discontinued until Phelps, Dodge & Co. acquired possession.

Development: in 1915 was carried out principally on the claims tributary to the following shafts: Flora Morrison, Grand Central, Telephone, Bunker Hill, Silver Plume, Oregon, Lucky Cuss, Tribute, West Side, Toughnut, Silver Thread and Tranquility. New work totaled 5,049' in 1915. Results from prospecting in the old workings and in new ground have not yet shown orebodies of great size or commercial importance.

The old cyanide plant of the Tombstone Cons. was converted into an experimental plant for the testing of Tombstone ores and was put into operation in June, 1915. Results up to 1916 were inconclusive.

Power is supplied by a central power plant from which compressed air is conveyed by pipes to the different mines. About 300 men are employed.

Production:

	Ore Tons	Gold Oz.	Silver Oz.	Lead Lbs.	Copper Lbs.	Manganese Lbs.
1915	10,746	1,373	109,783	269,303	23,760	1,171,599

BUNKER HILL MINING & SMELTING CO.

WASHINGTON

Office: 1123 Broadway, New York. Mine office and works: Reiter, Snohomish Co., Washington. **Officers:** T. A. Mead, pres.; John D. Campbell, sec.; Le Roy B. Sherman, treas.; preceding officers, J. E. Bowman, A. W. Avery, Wilbur Morris, Eric T. Christensen and Manfred Rockefeller, directors. Inc. Oct. 24, 1902, in Maine. **Cap.**, \$3,000,000; shares \$1 par; reduced, March 23, 1908, to \$1,500,000, and afterward increased to \$2,000,000, shares \$1 par, in \$1,500,000 common stock and \$500,000 cumulative 8% preferred stock, latter to provide for payment of bonds, second mortgage notes and script notes; outstanding Jan., 1916, 1,497,000 common shares and 380,000 preferred shares. Annual meeting, last Tuesday in October. Was the successor of Bunker Hill-Sullivan Copper Mining Co.

Property: 18 claims, 343 acres, known as the Copper Bell group on Bald mountain, one-half mile from Reiter station, Great Northern railroad, and 5-acre mill site, on May creek below Lake Isabel. Mineral claims show 9 fissure veins in granite and a contact deposit between granite and diorite. **Development:** by shafts of 86' and 600' with about 1 mile of workings, shows orebodies of various widths carrying chalcopryite averaging 1% copper, 0.5 oz. silver and 40 cts. gold per ton. Company also owns 3 claims, 40 acres, at mouth of Lake Isabel, about 1¼ miles N. E. of the Copper Bell group.

Production during 1906-08, inclusive, valued at \$7,500. Since 1908 no work has been done except what was necessary to hold the property by possessory rights.

BUNKER HILL & SULLIVAN MNG. & CONCENTRATING CO.

IDAHO

Office: 1022 Crocker Bldg., San Francisco, Calif., and Kellogg, Idaho. **Officers:** Fred W. Bradley, pres.; San Francisco; J. W. P. McFall, v. p.; Wm. H. Crocker, treas.; Geo. F. Holman, sec.; G. D. Abbott, asst. sec.; Stanly A. Easton, mgr.

Inc. 1885, in Oregon. **Cap.**, \$3,270,000, all issued; shares \$10 par. Not listed. Company is practically a close corporation, control being vested in a holding company known as the Nevada Bunker Hill & Sullivan Co.

Transfer agt. and registrar, asst. sec. of the company at San Francisco. Annual meeting, 3rd Thursday in June.

General Balance Sheet (Year Ending Dec. 31)

Assets—

	Property & Plant	Supplies	Cash, Ore & Concts.	Dividend Reserve	Miscel.	Total
1915....	\$4,977,268	\$253,583	\$603,416	\$1,047,554	\$190,274	\$7,072,095
Liabilities—						Total
1915.....	Capital Stock	Surplus	Account	Miscel.		\$7,072,095
	\$3,270,000		\$3,691,165	\$110,930		

Income Account (Year Ending Dec. 31)

	Gross Shipm'ts	Divid's Rec'd	Other Income	Cost Prod'n	Other Deduct's(a)	Bal. to Surplus
1915....	\$4,139,393	\$532,558	\$130,082	\$3,076,591	\$1,062,750	\$445,691

(a) Includes \$1,062,750 dividends, \$217,001 property depletion.

Net earnings available for dividends: \$1,819,888 in 1915; \$1,017,829 in 1914; \$1,285,751 in 1913. Reports state that the cash surplus on March 1, 1916, was \$2,000,000, of which \$1,000,000 was in a contingent reserve and the remainder been set aside to finance the construction of the proposed new smelter.

Recent dividends: in 1910, \$3.15; in 1911, \$2.65; in 1912, \$2.30; in 1913, \$2.50; in 1914, \$3; in 1915, \$3.25 per share; in 1916 to April 5, \$1 per share. Total dividends paid to April 5, \$17,263,500. As a result of apex litigation with the Caledonia Mng. Co., the B. H. & S. Co., controls that company, owning 1,305,000 shares out of 2,605,000 issued. See Caledonia Mng. Co. The Sierra Nevada is also a subsidiary of the B. H. & S. Co. The company is the largest lead producer in the world.

Property: about 5,000 acres, patented, at Kellogg. **Geology:** the larger part of the ore is principally a replacement of the Revett quartzite, in which the replacement is closely connected with fissuring. The principal ore minerals are galena with some pyrite and zinc blende, and in places a little argentite rich in silver. The orebodies are definitely related to a persistent fissure, strike N. 45° W., dip 38° S. W., locally known as the "foot-wall fissure." The zone of fissured quartzite in which the orebodies occur has a maximum width of 300'; ore is found in the hanging-wall of the fissure. The orebodies are very irregular in form and may be several hundred feet in length and depth with width in places as much as 40'. For geology of this district see U. S. G. S. Prof. Paper 62, *Geology and Ore Deposits of the Coeur d'Alene district*.

Development: tunnels and shafts. The Kellogg tunnel, 8x9', in section, and about 2 miles long, is the main working level. It is equipped with electric haulage. Above the tunnel the orebodies have been explored to surface. Below the tunnel at 200' intervals are 5 working levels, Nos. 10, 11, 12, 13 and 14. Development work in 1915 totaled 4,783', costing \$7.32 per ft., as compared with 2,754', costing \$10.77 per ft. in 1914, and 2,203', costing \$8.25 per ft. in 1913.

Ore reserves: Jan. 1, 1916, were 3,573,000 tons. Milling ore averages 9 to 12% lead and 3.7 to 4.5 oz. silver per ton. Shipping ore averages 42 to 50% lead and 17 oz. silver per ton.

Equipment: includes 3 concentrators, power plant, water power, machine shops, saw mill, etc. Replacement value of surface equipment is placed at \$800,000. Mill extraction is about 80% for lead and 70% for silver.

The company has a 25-yr. contract, dated March 20, 1905, to sell all ore, assaying between 30 and 70% lead to the A. S. & R. Co., but friction between the two companies has been constant for the past few years and

the B. H. & S. Co. recently announced its decision to build its own smelter at Kellogg. Initial daily capacity will be 1,000 tons. Power will be obtained from the Washington Water Power Co. of Spokane. Equipment will include Dwight-Lloyd sintering machines and Wedge turret roasters. There will be 3 blast furnaces, bag houses and an electrolytic refinery to desilver the lead bullion. It is thought the plant will be in operation within one year.

Low-grade ore is shipped, at present, to the smelter of the Northport Sm. & Ref. Co., at Northport, Wash., which went into commission March 1, 1916, but this arrangement will not alter the plans for the proposed new smelter.

Production:

	Ore Mined Tons	Cost per Ton	Concts. Tons	Lead Lbs.	Silver. Oz.
1915	452,142	\$1.99	59,901	74,584,741	1,298,284
1914	440,819	1.98	56,163	70,663,236	1,161,324
1913	436,060	2.25	59,471	71,860,773	1,227,076

BURLINGTON-NEVADA COPPER CO.

NEVADA

Address: Yerington, Lyons Co., Nev. Property at Mason Pass, a few miles from Yerington, is developed by a 100' shaft, from which ore was shipped to the Wabuska smelter, 1913. Equipment includes a gasoline hoist.

BURNSIDE GOLD MINES, LTD.

ONTARIO

Kirkland Lake, Ont. Inc. July, 1913, in Ont. **Cap.**, \$3,000,000. Is a subsidiary of the Kirkland Lake Proprietary, Ltd. Owns claims adjoining the Tough-Oakes gold mine at Kirkland Lake.

BURR MINING CO.

ILLINOIS

Connersville, Ind. **Officers:** F. C. Bosler, pres.; Jos. R. Mountain, v. p.; P. H. Kinsler, sec.-treas.; J. H. Billingsly, gen. mgr., Galena, Ill.; preceding officers, J. H. Banghman, directors. F. J. Dewilde, cons. engr. Inc. in Ind. and Wis. **Cap.**, \$30,000; shares \$100 par.

Operating the Triganza lease, 40 acres mineralized land, near Galena, Ill. A 165' shaft develops sheet-ground formation. Company put a new 200-ton mill in commission, Feb., 1916. Output is zinc concentrates.

BURRO MOUNTAIN COPPER CO.

NEW MEXICO

Owned by Phelps, Dodge & Co., Inc.

Office: 99 John St., New York. Mine office: Leopold, Grant Co., N. M. **Officers:** Dr. Jas. Douglas, pres.; Jas. McLean, v. p., A. C. James, c. p.; Geo. Notman, sec.-treas.; E. M. Sawyer, gen. mgr. Inc. 1904, in N. M. **Cap.**, \$50,000, increased 1906 to \$100,000 and Nov. 30th, 1915, to \$8,000,000; shares \$1 par.

Property: 60 claims, 1,000 acres, bought 1906, from Southwestern Copper Co. The Savanna Copper Co.'s holdings of 2,600 acres were added in 1915, bringing the total acreage up to 4,464 acres. Property shows 36 porphyry dikes, carrying 5 orebodies of disseminated ore having 2% to 5% copper.

The old mine, 15 claims, known as the St. Louis, is said to have produced upwards of \$1,000,000 worth of ore, under former ownership, shipping ores ranging 15 to 25% in copper tenor.

Geology: property contains a number of large orebodies of disseminated chalcocite, so-called porphyry ore, that are genetically dependant upon intrusions of monzonite, in pre-Cambrian granite, both rocks being shattered and faulted. The largest orebody is entirely in porphyry, the next largest in a brecciated zone, associated with dikes of aplite and dark felsite (phases of the porphyry), cutting through granite. The Sampson orebody is 100 to 200' in width, about 1,000' in proven length, and of

300' proven depth. The mine has about 5 miles of workings; it is worked largely on the caving system, obviating excessive timber requirements. Actual stoping and milling operations began in March, 1916. The East orebody is mined by milling the ore into 55° chutes going down to the 4,700' Niagara tunnel, where it is loaded directly into standard gauge railway cars. The Breccia orebody is mined through No. 3 shaft, hoisted in 2-ton skips, dumped on an inclined belt conveyor, and discharged on a horizontal conveyor loading by tripping device into railway cars. Company has 5 Star churn drills, one electrically-driven, now at work.

The Burro Mtn. and Chemung mines have been united by the Niagara haulage tunnel, starting at the Tyrone terminus of the Burro Mountain branch of the A. T. & S. Fé railroad; this tunnel, 8x9', was driven to Leopold, a distance of about 1 mile, and serves the double purpose of drainage and haulage. While driving this tunnel the so-called Bison orebody was found.

The old concentrator, built 1905, and twice remodeled, has been dismantled. A standard-gauge 18-mile spur was built in 1913, at a cost of \$350,000, from the main line of the Santa Fé railroad to the mine and mill. A central power plant equipped with two 1,000-h. p. Diesel engines, was built at Tyrone, near the collar of No. 2 shaft. Labor is almost exclusively Mexican, only the bosses being Americans. The new 1,000-ton concentrator, with flotation equipment, at Tyrone, went into operation early in 1916. It consists of two units and is located 3 miles from the portal of the haulage tunnel. It is an all-steel-concrete structure covering 500 sq. ft. There are 5 floors, all equipped with the Kahn ventilation system. With the two units, which can be later raised to four, the estimated cost of the plant was about \$1,000,000. J. T. Hall is supt.

Lands include a town site, improved with waterworks, electric lights and substantial buildings, including a hotel and numerous dwellings.

In 1914-15 work consisted mainly in completing the development, by underground work and churn drilling operations, of orebodies already known. At the end of 1914, thirteen holes, with an aggregate of 11,571', had been drilled. This work continued throughout 1915 and early part of 1916, the holes being rather widely scattered and no effort made to define ore limits, so that estimates of tonnage are not yet possible. An unusual feature is the prospecting of the Mangas Valley where several holes passed through as much as 1,000' of recent Valley gravel before reaching bed rock.

BURTON MINING CO.

MISSOURI

Inc. in Missouri. Cap., \$10,000. Operating two 20-acre tracts of J. I. Walker land in Jasper Co., Mo. Has \$160,000 invested. Developed by 5 shafts, averaging depth 150' and equipped with one 150-ton concentrator. Output is zinc concentrate.

BUSH-BAXTER MINE

ARIZONA

Property: the Baxter Rossi group, formerly worked under lease by Bush & Baxter, is at Twin Buttes, Pima Co., Ariz. Work started May, 1913, from a 10' assessment hole and lessees disclosed ore a few feet below surface, starting shipments almost immediately. Shaft has been sunk several hundred feet and drifting started.

Ore: said to average 7% cu., 2 oz. silver, 33% iron, 3% lime, 25% silica and 15% sulphur. **Production:** in March, 1916, said to average 120 tons of 4% copper ore per day. Bonded late in 1915, to the Amer. Sm. & Ref. Co., for \$450,000.

BUTTE-ALEX SCOTT COPPER CO.

MONTANA

Dissolved. **Property:** 4½ acres at Butte, Mont., sold to Anaconda

Copper Mining Co., for \$750,000 cash, on Feb. 10, 1916. Stockholders received dividend of \$10 a share, and a further small dividend is expected. There were 79,311 shares outstanding and \$80,000 in the treasury. See Copper Handbook Vol. XI.

BUTTE & ANACONDA CONSOLIDATED M. & M. CO. MONTANA

P. O. Box 138, Anaconda, Mont. **Officers:** J. C. Keppler, pres.; L. Winterhalter, v. p.; Andrew Flieger, sec.; John J. Wegener, treas.; with W. R. Allen, directors. **Inc.** 1908, in Montana. **Cap.**, \$1,500,000; shares \$1 par; assessable; 900,015 shares outstanding. Company is a consolidation of the Flint Creek Mining Co. and the Golden Eagle M. & M. Co.

Property: 9 patented quartz claims, 3 unpatented placer claims and 2 millsites, about 240 acres, in Flint Creek Gulch, Granite Co., Mont., 3 miles from a railroad. Claims show quartz veins with gold-silver values in part as tellurides. Average assays said to run \$25 per ton. Developed to depth of 450' by 2 shafts and 2 tunnels, 900' long. Idle, owing to lack of necessary working capital.

BUTTE-ARGENTA COPPER CO.

MONTANA

Idle. Letters neither returned nor answered from Butte or Argenta, Beaverhead Co., Mont. J. P. Oppenheimer, pres.; John F. Cowan, D. F. Walker Bldg., Salt Lake City, mgr. **Inc.** Feb. 12, 1906, in Montana. **Cap.**, \$3,000,000; shares \$10 par. According to statement, Jan. 1, 1914, liabilities were \$53,617.

Property: 12 miles west of Dillon, known as the Iron Mountain mine, has a tunnel and 2 shafts, opened to a depth of 200' on a wide vein of silver-lead and copper ore, having streaks assaying up to 16.5% copper and 30 oz. silver per ton. Upper levels were worked, years ago, for silver-lead, which changed to copper at slight depth. **Equipment:** includes a 125-h. p. hydro-pneumatic power plant, with Pelton wheel, and an 8-drill Ingersoll-Rand air compressor.

BUTTE & ARIZONA COPPER MINING CO.

ARIZONA

Office: 619 Hennessy Block, Butte, Mont. Mine near Hereford, Cochise Co., Ariz. B. H. Dunshee, v. p.; A. S. Nichols, sec.; John C. Adams, treas.; preceding officers, L. O. Evans, Chas. S. Shoemaker, A. P. Henningson, C. B. Mosely, John E. Corette and D. M. Watts, directors. **Cap.**, \$1,250,000, shares \$1 par.

Property: 14 claims, 11 patented, costing considerably over \$60,000, was exchanged for \$450,000 stock. Property is in the Huachuca mountains, 35 miles S. W. of Bisbee, and about the same distance north of Cananea.

Geology: claims show an ochrous gossan of 10 to 300' width, covering a contact vein between syenite and limestone carrying occasional copper oxides, carbonates, pyrite and argentiferous gray copper, and chalcocite of fair tenor, though not in large quantities. **Development:** by a long main tunnel cutting several small veins giving assays up to 18% copper with an average of 4.5% tenor, mine having upwards of 3,900' of workings. Main vein 350' from mouth of tunnel is claimed to show 39' of 6% chalcopyrite, which is an overestimate.

Nearest railroad is 15 miles, with a fair wagon road. Has steam power and an air compressor. Idle since end of 1908. Company has no debts, considerable treasury stock and is being carried by the directors who are advancing the money required to pay taxes and maintain the property.

BUTTE & BACORN MINING CO.

MONTANA

Office: 53 Silver Bow Block, Butte, Mont. Pittsburgh office: Commonwealth Bldg. **Officers:** Chas. Hyde, v. p. and treas.; H. H. Robinson, Fulton Bldg., Pittsburgh, Pa., sec.; E. M. Byers, R. C. Patterson, Chas. Hyde, H. H. Robinson, Chas. W. Brown, J. W. Culbertson, J. B. Eisaman,

directors. H. C. Bacorn, mgr. Inc. Feb. 12, 1906, in Maine. Cap., \$5,000,000; shares \$1 par, fully paid, nonassessable; 4,000,000 issued. Bonded for \$50,000 at 6% of which \$40,000 is issued. Union Trust Co., transfer agent, Pittsburgh, Pa.

Company owns in fee simple 23 claims, 272 acres, in the northeastern part of the Butte district, about 1 mile north of the Black Rock and Badger State mines. Has 1 shaft, the Belinda, 840' deep.

The so-called Calumet ground, consisting of 3 claims, 46 acres, on which there is a 1,000' shaft, was held by the company under contract of purchase; but in 1907, default was made in payments and ground reverted to original owners. It has lately been acquired by interests closely allied to the company, who, in 1913, took a 3-year lease on the entire property of the B. & B. company, the latter receiving 8% royalty on all ore smelted. A plan for reorganization, now underway, includes these claims. The geology is to all appearances identical with that of the producing parts of the Butte district.

BUTTE-BALLAKLAVA COPPER CO.

MONTANA

Office: 510 Sellwood Bldg., Duluth, Minn. **Mine office:** Butte, Mont.

Officers: I. Freimuth, pres.; Gust Carlson, v. p.; R. C. Ogilvie, sec.-treas.; with Millie Bunnell, Frank Bötun and Geo. C. Swallow, directors; C. J. Zachow, asst. sec.-treas.; J. H. Manwaring, supt.

Inc. Mar. 15, 1907, in Ariz. **Cap.**, \$2,500,000, shares \$10 par; nonassessable; fully issued. Bond issue of \$200,000, 7%, dated Jan. 1, 1916, authorized with \$95,200 issued. Listed on Boston and Butte Stock Exchanges. Paid a 50c dividend Aug. 1, 1910. Boston Safe Deposit & Trust Co., transfer agt.; Federal Trust Co., Boston, registrar.

Balance sheet dated April 1, 1916, shows current assets: cash and accounts receivable, \$7,933; mine supplies, \$15,834; unsold bonds, \$106,800; with current liabilities: bills payable, \$50,000; mine acct., \$6,798. Gross earnings for the year ending April 1, 1916, were \$247,648, and operating expenses amounted to \$207,436.

Property: the Burke and Ballaklava claims, about 6½ acres in eastern part of Anaconda hill, adjoining Mountain Chief, Modoc and High Ore mines of the Anaconda Copper Co. Property willed to Bishop Carroll of the Catholic Church, who sold it for \$400,000 cash to this company.

Claims form a narrow tract 1,860' long running with the veins, on the northeastern slope of Butte hill. The Burke vein crosses the claim of that name and has been worked in the Modoc mine. There are 4 veins, but one of which is generally workable. This vein is generally correlated with the Jessie, but complex geologic conditions led to a lawsuit with the Anaconda Co. for ownership of the rich orebody mined on the 800' level. This suit was settled by a division of the orebody, Nov. 28, 1913.

Development: 1,625' three-compartment shaft with 12 levels. The mine has been connected on the 800' level, for ventilation and safety, with the Modoc mine of the Anaconda, and on the 1,200' level with the West Colusa. This crosscut is used for drainage.

The veins on the 100' and 300' levels show ore carrying 5 to 8.5% copper and 45 to 60 oz. silver per ton, from which small shipments were made. The 500' level shows pyrite and a little high-grade silver ore, and the 700' level shows stringers of massive bornite, pyrite, glance and some chalcopyrite, all argentiferous. Principal ore production has come from the 800 to 1,600' levels, inclusive, ore being mainly chalcocite, carrying good silver values. The vein ranges up to 34' in width, carrying rich ore on the 800' level; the 1,200' level shows the vein up to 20' in width, with ore averaging 4 to 4.5% copper, and the 1,400' level carries 9' of chalcocite and bornite of

about 7.5% average copper tenor. This vein has been stoped westward to the workings of the High Ore mine, whose stopes are continuous with those of the Butte-Ballaklava mine.

Development by a drift from the High Ore mine, run by the Anaconda Co., opened up a fine body of commercial ore, but inability to reach it with its own shaft and a crowded capacity at the High Ore has retarded ore extraction. Above the 1,680' level the mine has been practically worked out and the proceeds used to pay off current debts without keeping up development work, with the result that the company must now be content with a smaller production while new ore is opened up.

In April, 1916, company is reported to have made arrangements with the Anaconda Co. whereby that company will mine ore for the Butte-Ballaklava from its High Ore drift at a depth of 2,200', or about 400' below the present bottom of the Ballaklava shaft.

Early in 1916 a winze was sunk from the 1,600' to the 1,800' level and a crosscut run to the vein. It was reported that 24' of 3% copper ore had been found and drifting started.

Electric power is used throughout, an auxiliary steam plant being held in reserve for emergencies. **Equipment:** includes a double-drum Lake Shore hoist, operated in counterbalance, driven by a 300-h. p. General Electric motor, designed to hoist an unbalanced load of 5 tons, at a speed of 800' per minute, from a depth of 3,000'. There also are a 165-h. p. auxiliary double-drum hoist, good for 1,500', and a 10x12" auxiliary steam hoist, 2 Ingersoll-Rand air compressors, with cross-compound air cylinders, each driven by a 100-h. p. General Electric motor, and an electric station pump. The auxiliary steam plant includes a cooling tower for water.

Buildings include an engine house, office with warehouse on the ground floor, carpenter shop, smithy, and steam-heated changing house.

Production: begun April, 1910, was continued until stopped by injunction, granted the Anaconda Copper Co., in Aug., 1910. During this period shipments to the Pittsmtont smelter were about 125 tons daily, of ore assaying about 8% copper and 12 oz. silver per ton, this being the highest average grade of ore produced by any Butte mine for that year. Producing about 250 tons daily, 1916, mainly from 800, 1,000, 1,200 and 1,600' levels.

BUTTE & BOULDER MINE.

MONTANA

Mine near Boulder, Jefferson Co., Mont., comprises 2 claims, formerly held by Butte & Boulder Mining Co. 750' tunnel, expected to cut, at depth of 500', a vein carrying argentiferous and auriferous copper and lead ores. Operated 1916 by Dr. F. A. Ironsides, of Butte, Mont., and reported shipping.

BUTTE BULLWHACKER MINING CO.

MONTANA

John E. Corette, sec.-treas., Hennessy Blk., Butte, Mont.; Wm. F. Love, pres.; Henry Meloy, v. p.; G. A. Lauzier and P. W. Clark, directors. Inc. Oct. 24, 1914, in Wash. Cap., \$1,000,000, \$1 par; assessable; all issued. Annual meeting 2nd Monday in Jan. at Butte. Security Transfer & Registrar Co., New York, transfer agents and registrar. Listed on New York Curb.

Property leased for one year to East Side Mining Co., inc. by I. A. Heilbronner and Patrick Wall, April, 1916. Lease calls for royalty of 25% and shipments of not less than 1,000 tons a month. Controlling stockholders also gave an option on 51% of entire stock at 50c a share, payments in 30 and 90 days and at intervals for 18 months.

Company is a reorganization of the Bullwhacker Copper Co., whose stockholders received share for share in the new company on payment of

15c a share in six months' installments. This wiped out a debt of \$121,200 due the sons of Patrick Clark (Clark Bros. & Klein) and put \$20,000 in the treasury. Mine was profitable when leased, but ran into debt for an experimental leaching plant.

Property: one claim, 20 acres, on the east side of the Butte district, near the Pittsmonth smelter. Easterly part of claim covers a zone of granite impregnated with oxidized copper ores, mined in an enormous open pit 275' across and 75' deep, from which 30,000 tons of 4.07% copper ore were extracted by lessees in 1912-13. It is a highly siliceous ore.

Development: by an old 300' shaft with crosscuts beneath the orebody at that level, also several new shafts, proving an extension of the orebody beyond the open pit.

Equipment: includes hoist, compressor plant and a 75-ton leaching plant, which as yet has not been successfully operated (described in detail by P. E. Peterson in Mining & Engineer's World, Oct. 4, 1913, p. 584).

The orebody is extensive and, though probably not deep, has a large tonnage from which much money should be made. Deep development is expected to show veins carrying sulphide copper ore.

BUTTE-CABLE COPPER & GOLD MINING CO. MONTANA

Louis Feldman, pres.; Nicholas Bossonitz, v. p.; preceding officers, Jas. McMasters, Wm. Henthorne and John Strasser, directors. Inc. Nov. 21, 1906, in Montana. Cap., \$1,000,000, shares \$1 par. **Property:** 6 claims, 4 patented, 15 miles west of Anaconda, near Cable Consolidated Mining Co., show a 3 to 4' vein carrying about 2' of commercial ore, giving assays of 11.9% copper, 156 oz. silver and 0.6 oz. gold per ton. Property closed down. Sullivan & Peterson, of Anaconda, offered stock at 15 cts. a share, Feb., 1913, to raise money for patenting claims.

BUTTE CENTRAL COPPER CO. MONTANA

Austin M. Pinkham, trustee in bankruptcy, 27 State St., Boston, Mass. Holdings sold to Wm. G. Burns and transferred to Butte Central Mng. & Mfg. Co., the operating company for the Butte-Detroit Copper & Zinc Mng. Co., which see. Company was a raw promotion, fully described Vol. XI, Copper Handbook. Property sold to satisfy judgment of D. W. Strong, Butte, Mont., in Feb., 1916.

BUTTE CENTRAL MINING & MILLING CO. MONTANA

See Butte Central Copper Co. and Butte Detroit Copper & Zinc Mining Co.

BUTTE-CHEWELAH COPPER CO. WASHINGTON

J. O. Gillice, pres., Paulson Bldg., Spokane, Wash.; F. M. Bell, v. p.; P. L. Eberhardt, sec.-treas.; preceding officers, G. B. Harrington and R. J. Davis, directors. R. J. Davis, gen. mgr. Inc. March, 1913, in Washington. Cap., \$1,000,000, shares \$1 par; fully paid and nonassessable; 500,000 issued.

Property: 4 claims, 75 acres, in the Valley mining district, Washington. Shows vein in sedimentaries close to a diabase intrusion; average strike N. 25° E., and dip 60°. Ore occurs as mixed sulphides, mainly chalcopyrite and gray copper in a gangue of quartz, calcite and spathic iron. At 100' in depth the vein is said to be 6' wide and the ore to average 2 to 5% copper 1 to 5 oz. in silver and 50 cents to \$1 in gold per ton.

The property is developed by 100' winze, reported all in ore, a 300' shaft and 125' tunnel. Equipment includes a hoist and air compressor, installed in Sept., 1913.

BUTTE-CONCORDIA MINING CO. MONTANA

Inc. Sept. 8, 1915, in Montana. Cap., \$50,000; shares 25 cts. **Directors:** G. F. Pitman, G. W. Deniger, G. Widmer, S. V. Wilking, 615 Phoenix Bldg., Butte; E. C. Schwardner, O. J. Olson, Geo. W. Wall, F. A. Kean and Alfred Pearson, all of Butte, Mont. No further details obtainable.

BUTTE CONSOLIDATED COPPER MINING CO. MONTANA

Mine at Corbin, Mont. Idle and apparently waiting for developments in the Bertha mine of the Boston-Corbin Co. to prove this property. See Vol. XI, Copper Handbook.

BUTTE COPPER CO. MONTANA

Address: care James H. Rowe, pres., 120 West Granite St., Butte, Mont. E. T. Lawlor, v. p., Brookline, Mass.; W. M. Hanson, sec.; preceding officers, R. L. Rhule and B. J. Keenan, M. D., directors. Inc. March 20, 1906, in Montana. **Cap.**, \$1,500,000; shares \$1.50 par; fully paid and non-assessable. Company owns two-third interest in the Robert Emmet claim Nos. 1 and 2; the remaining third being owned by the Anaconda Mining Co. Company also owns approximately one-half of the Anselmo, Anselmo No. 2 and Trifle claims, balance being owned by the Hauswirth family. Property lies directly west of the Gagnon mine and is supposed to carry the extension of the rich veins mined in that property. The group has produced about \$700,000 worth of gold and silver ore, the principal development being the 700' Trifle shaft in which a large vein carrying copper ore was cut at a depth of 375'. The Robert Emmet shaft, 375' deep, is reported to show 7% copper ore.

The company has been dormant for several years and its relations to the Butte Copper Mining Co. and Butte Copper Montana are not fully understood, though the latter company is supposed to control this one through stock ownership. The president reports Feb., 1916, that there is no money in the treasury, and as the Anaconda Co. refuses to sell its equity in the Robert Emmet claim, a reorganization seems impossible.

BUTTE COPPER KING MINING CO. MONTANA

Address: care Beebe Grain Co., Butte, Mont. C. E. Beebe, pres.; D. Dorais, v. p.; A. P. Henningsen, sec.; R. H. Campbell, treas., and Henry Avare, directors, all of Butte. Inc. April 19, 1906, in Montana. **Cap.**, \$1,500,000; shares \$1.50 par. **Property:** 3 fractional claims, 28 acres, known as the Frenchman No. 2, Rare Steak and Missouri Girl, west of the Jennie Dell mine. Idle since organization.

BUTTE COPPER & ZINC CO. MONTANA

Office: 52 Broadway, New York. Mine at Butte, Mont. Control of company is vested for a period of 5 years in the following trustees: A. J. Seligman, Albert Fries, J. Oppenheim. Additional directors, Chas. Wimpfheimer, A. S. Bailey and I. N. Spiegelberg. Inc. 1904 in Me. **Cap.**, \$2,500,000; shares \$5 par; 411,700 outstanding; fully paid and nonassessable. Shares listed on New York Curb.

Property: known as the Emma mine, about 16 acres, is in the Butte district, 1½ miles from the main properties of the Anaconda Copper Mng. Co. Mine was formerly developed to 800' level, but due to low copper and relatively high zinc content of the ore, was idle for several years. Development recently resumed by Anaconda C. M. Co. by virtue of an option and lease, dated July 8, 1915, given to that company. Terms of lease are as follows: the Anaconda Co. acquired an option for 9 months on all or part of the 88,300 shares of Butte Copper & Zinc Co. stock remaining in the treasury of the latter company, at a price of \$1 per share. The A. C. M. Co. takes a lease on the Emma mine for 5 years with privilege of renewal for an additional 5 years, and agrees to install equipment and to unwater mine to the 800' level. For expenditures actually made by the A. C. M. Co. in developing the Emma mine, the Butte Copper & Zinc Co. agrees to make payment in its capital stock in lots of 10,000 shares or fractional parts thereof, but total payment to the A. C. M. Co. for work and equipment shall in no case exceed 50,000 shares of Butte C. & Z. Co. stock. (The A. C. M.

Co. shall have a right to abandon the leased premises if it finds working them impractical, or impossible, in which event all machinery or equipment installed and permanently attached to the Butte property shall belong to that company. Any profits arising from sale of the output of the leased property shall be divided equally between the two companies. Further stipulations are provided in the event of a renewal of the lease.

The A. C. M. Co. has fulfilled the terms of this lease and taken up the shares optioned to April, 1916. An additional option which expired July, 1916, on 100,000 shares, has also been exercised.

Development: aggregates several thousand feet from an 800' shaft with levels at 200', 400', 500' and 800'. The vein for a width of 21' on the 200' level is said to show 11% zinc ore containing fair values in gold, silver and lead. The 400' level has nearly 1,000' of workings. There is a 150' crosscut on the 523' level which does not reach the vein. The so-called 800' level (720' deep) has 795' of work with 465' in ore. The vein is 125' wide and is said to show a 20' width of 18% zinc ore. Two bands of ore were developed by drifting, an 8' band at 60' from the footwall with 185' of drifting, said to show an average of 22% zinc, 8% lead, \$2.20 gold and 12 oz. silver.

It is believed that the Anaconda Co. plans energetic development of the Emma mine and of the adjacent Czaromah claim, bought in 1916. With the completion of a crosscut to the Gagnon 1,800' level and development of the Emma in depth, there is reason to believe it will be a great zinc producer.

BUTTE & CORBIN CONS. COPPER MINING CO. MONTANA

Idle. J. L. Templeman, pres., Lewisohn Block, Butte, Mont.; Lee Williams, v. p.; J. B. Fitzpatrick, sec.-treas., at last accounts. Inc. May 1, 1907, in Montana. Cap., \$700,000; shares \$1 par; nonassessable; issued \$469,000. Annual meeting Feb. 4.

Property: 5 claims, 82 acres, also 10 acres timber lands in the Corbin, or Colorado district, on the eastern side of Valparaiso mountain. The ore is a complex mixture of lead, copper and zinc, occurring in short shoots in fissure veins in granite. Vein reported by company to average 8' 4" in width, and to carry 4% copper, 6% lead, 2% zinc, 8 oz. silver and \$1 gold per ton.

Development: by shaft and the 500' Rarus tunnel, which cut a 10' vein at 165' from the portal, assaying 2.5% copper, with paystreak carrying covellite, averaging 6% copper, 8 oz. silver and \$6 gold per ton. A body of rich ore was reported found in June, 1912, and the Great Northern railroad asked to put a siding on this property. Amount of ore on dump, 7,000 tons of \$10 value, according to Ropes & McIntyre, of Helena, Mont., who reported on property.

BUTTE-CURTIS & MAJORS COPPER MINING CO. MONTANA

Idle. Address: Geo. D. Curtis, 35 W. Granite St., Butte, Mont.

Company organized upon a lease and bond to purchase the surface and mineral rights of the Curtis and Majors addition to the City of Butte, the bond price being \$125,000. The company went bankrupt and still owes about \$700 labor claims. There are no legal assets and having defaulted on bond payment past due, the company has no rights thereunder, save the sentimental courtesy extended by John Curtis and associates who would like to see the company rehabilitated and refinanced.

BUTTE DETROIT COPPER & ZINC MINING CO. MONTANA

Office: Dime Bank Bldg., Detroit, Mich. Is a promotion of Davison Co., 27 State St., Boston, Mass. Officers: J. F. Austin, pres., Detroit; Hon. Sir. Frederick W. Borden, chairman of board of directors; Louis A. Codorette, sec., Montreal; J. S. Pishon, treas., Boston; W. L. Creden,

managing director, Butte, Mont.; other directors, Col. Sir Henry M. Pellatt, Toronto, Can.; Ellery C. Wright, Brockton, Mass., and Chas. A. Wilcox, Federal Trust Co., Boston, transfer agt.; State Street Trust Co., registrar.

Inc. March 7, 1916, in Del. **Cap.**, \$2,500,000; shares \$1 par; with 900,000 shares paid for stock control of the Butte Central M. & M. Co. This stock control, amount not stated, is the only holding of the company. As the Butte Central has a bond issue of \$300,000 outstanding as a prior lien against the Ophir mine, it is easy to see that this one claim must develop ore in large amount and great value to pay off the bonded debt and be worthy of the 900,000 shares of stock paid for control. Should the mine make good, the Butte Central M. & M. Co.'s bonds being convertible will be changed to stock, and if Butte Detroit owned all the remaining stock of its subsidiary, the Butte Central, it would get but 60% of this theoretical profit. In other words, if the Ophir mine should be lucky enough to make the extraordinary profit of \$1,000,000 a year, the owner of a share of stock in the Butte Detroit Co. would get 24 cents.

The subsidiary or operating company is known as the **Butte Central Mining & Milling Co.** W. R. Macdonald, pres., 50 Congress St., Boston, Mass.; W. G. Burns, v. p. and sec.; R. H. Gallagher, treas., 96 Franklin St., Alliston, Mass.; W. L. Creden, mgr., Butte, Mont.

Inc. Aug. 11, 1914, in Del. **Cap.**, \$750,000; shares \$5 par; \$450,000 issued, balance held for conversion of \$300,000 bond issue, all outstanding.

Property: the Ophir claim, 20 acres in Butte, Mont., formerly owned and developed by the Butte Central Copper Co., a rank promotion in which nearly \$700,000 was obtained from the public by near-fraud methods. Possibly one-half of this amount was spent on the property, the mill being financed by separate funds derived from a bond issue.

The Ophir lode is a big quartz and replacement vein, carrying fair silver values for several hundred feet below the surface and irregular, bunched bodies of impure zinc and lead ore at greater depth. Some 40,000 tons of siliceous silver ore said to average \$7 per ton are reported to exist in the upper levels.

Development: by a 3-compartment shaft 1,065' deep on the Ophir with levels at 100', 200', 300' and 500', upon all of which mining has been done and on each of which considerable ore is now blocked out. Company plans to sink the shaft to a depth of 2,500'; a station hoist will be put in at 1,500', and later a new surface hoist will be installed. The company expects zinc as well as copper, as a body of zinc ore running 14% was encountered on the 500' level of the mine. The new owners of the mine hope the Ophir may repeat the performance of the Butte & Superior and the Emma, which latter property is distinctly a zinc mine, located a short distance north of the Ophir, and being developed by the Anaconda company. There are said to be several known veins in the 20 acres of the Ophir claim, including the two main veins known as the north and south veins, and a cross-fissure vein called the Blue vein. The mine is said to have about 3½ miles of workings; on the 300' level two parallel veins have been opened for a combined distance of 1,100', and on the 500' level for 700'. Mine has full equipment, including 150-ton mill, a hoist good for 2,000' depth, a 330-h. p. steam plant and a seven-drill Rand air-compressor. There are seven buildings, including engine house, carpenter shop, smithy and office.

The mill, designed and built by John E. Rothwell, is designed to treat quartz ores by concentration with subsequent cyanidation of the quartz when freed from sulphides.

The mill is regarded as one of the most complete in the West, and with little additional cost its capacity can be doubled. Ore is broken in a

Sullen gyratory crusher, is reduced to 24 mesh in a Chilean mill, passes to 5 Deister concentrating tables, whose tailings go to Atkins classifiers. The resultant sands go to the 5x22' tube mill, grinding to 150 mesh. This product passes to sloughing-off cones, the underflow to 8 Deister slime tables. Tails are dewatered, agitated with cyanide in Atkins-Rothwell continuous agitation tanks for 30 hours and run into Portland continuous slime filters. The filtered solution is treated in zinc boxes.

The new manager, W. L. Creden, whose experience and reputation ensure confidence, will unwater the mine and sink the shaft to the 2,500' level where the full extent of the ground will be explored in hopes of finding large orebodies near the Rarus fault or in the veins cut by it.

BUTTE-DULUTH MINING CO.

MONTANA

Chas. M. Everett, receiver, Lewisohn Block, Butte, Mont. Mine at Butte, Mont. Capt. A. B. Wolvin, pres.; C. M. Everett, sec.-treas.; Meyer Genzberger, Al Green, John W. Neukom, directors.

Inc. in Minn. Cap., \$2,500,000; shares \$10 par; 200,000 issued, balance held for redemption of \$500,000 bond issue, on which interest is overdue since Dec., 1914, and sinking fund provision not fulfilled. Company went into receiver's hands on friendly suit, March 16, 1915. Receiver's report shows \$42,368 liens ahead of bonds and a floating debt of about \$190,833 unsecured. The prior lien is mostly for labor certificates (\$39,000) issued in half payment of wages in 1914. Bankruptcy proceedings instituted in March, 1915, were set aside by the Federal Court, Sept. 29, 1915. In Dec., 1915, an agreement was made with Oscar Rohn, gen. mgr. of the East Butte Mng. Co., to take over the plant. This was agreed to in writing by 95% of the stockholders and bondholders, subject to the Court's approval, but it has fallen through.

In May, 1916, the Court ordered the company's personal property at the mine sold to satisfy labor liens, and the receiver petitioned the court for authority to sell the entire property to satisfy bondholders and other creditors.

Property: Brundy group, at the base of the mountains east of Butte, includes the Macarona, Montgomery and portions of the Altona, Colleen Bawn and Amazon claims. These claims aggregate 67 acres and are crossed by the Columbia Gardens street car line and adjoin the Pittsmtont mine on the southeast.

The ore thus far mined has come from open-cut work on the hillside back of the mill. This ore is an altered granite stained green and impregnated with silicate of copper with carbonate and oxide of copper in nests and bunches. As mined in the cut it has carried a little over 1.5% copper and with a mechanical loader can, it is said, be put in the mill for 15c a ton.

Development: underground is mainly on the Montgomery claim on which there is a tunnel 1,200' long and a 200' shaft, the latter with extensive workings at 100'. The main ore body on Altona hill, to the east of the street car line, has several tunnels, proving the downward extension of the ore on the property. **Equipment:** is electrical throughout and includes a 75-h. p. Nordberg hoist and 750-cu. ft. Nordberg compressor at the Montgomery shaft.

The Butte-Duluth mill is fully described by C. F. Sherwood in the Salt Lake Mining Review, Nov. 30, 1915. Its total cost was \$725,000.

The property has merit, and aside from its leachable ores has a decided prospective value in the veins at depths of 1,000' below the surface.

In bankruptcy proceedings the former supt., Mr. Sherwood, said the mill ran on ore averaging 1.52% copper for 4 months before it was shut

down, and that drill cores to a depth of 202' from the bottom of a 23' pit ran 0.98% to 2.70% copper. With acid at \$12.50 per ton, a saving of 38c per ton could be made in leaching costs.

Production in Feb., 1915, 120,000 lbs. electrolytic copper, 30,000 lbs. cement copper.

BUTTE & ELLISTON GOLD & COPPER MINING CO. MONTANA

Office: 113 Hamilton Block, Butte, Mont. Mine near Elliston, Powell Co., Mont. **Officers:** J. H. McOmney, pres.; D. G. Bertoglio, v. p.; F. H. Cooney, sec.-treas.; preceding officers, J. E. Homple and C. S. Jackman, directors. F. H. Cooney, mgr. Inc. 1906 in Ariz. **Cap.**, \$1,000,000; shares \$1 par; fully paid and non-assessable; issued, 575,000. Dividend of 1% paid 1907, since when company has been inactive.

Property: 1 claim, patented, 17 acres, in the Ontario, or Elliston mining district, known as the Big Dick mine, 6 miles from Elliston on the side of Nigger mountain. Claim shows diorite having 6' fissure vein developed by 280' shaft and 1,000' of workings. **Ore:** said to average 31 oz. gold, 15 oz. silver and 10% lead, with some zinc and copper. A new 1,230' tunnel now being driven will intersect vein 200' below bottom of the shaft.

Equipped with 25-h. p. hoist, compressor, pump and surface buildings. **Production:** by lessees in 1914-15 netted the company \$1,246 in royalties, or a total to date of \$85,000.

Property now under lease and bond to a private company owning the adjoining claims, who are driving the tunnel to connect with the old workings.

BUTTE & ELY COPPER CO.

NEVADA

General office: 1500 Alworth Bldg., Duluth, Minn. **Principal office:** Room 302, O'Rourke Estate Bldg., Butte, Mont. Mine P. O.: Kimberly, White Pine Co., Nev. **Jos. Cotton, pres.;** John D. Pope, v. p.; John W. Neukom, sec. and asst. treas.; Edw. J. Maney, treas.; H. A. Holp, asst. sec.; preceding officers are directors. Inc. July 27, 1905, in Montana. **Cap.**, \$500,000; shares \$1 par; stock was made assessable, 1907. Is a subsidiary of the Consolidated Coppermines Co. Jan. 1, 1915, had \$136,437 in cash and cash assets in treasury. Net income for 1914 was \$3,824. Stock is listed on the Butte Mining Exchange. Annual meeting first Monday in June.

Property: 12 claims, patented, 210 acres, in the Robinson district, lying between the Nevada Consolidated and Giroux, includes a valuable water right, 20 miles distant, said to be capable of supplying 2,000,000 gal. daily; also 80 acres irrigable land near water rights.

Development: 3 shafts, 1 with steam hoist, 310' deep, showing disseminated ore. Mining was suspended late in 1907, but churn drilling was carried on in succeeding years intermittently, developing several bodies of low-grade disseminated ore, said to show an average of 1½% copper. In 1912 a part of the ground adjacent to the Liberty pit of the Nevada Consolidated Co. was leased to that company on a royalty basis and mined.

The sale of control of this mine to the Giroux Co. in 1909, hailed at first as a boon, has been bitterly denounced by many Butte-Ely stockholders. Stock prices went down, development lagged and the sale was said to have been used as a means of securing the cash in the Butte-Ely treasury, it being charged that the Giroux Co. borrowed the money back immediately after paying it. As a matter of fact the Giroux Co. purchased control of the Butte & Ely Co. at a time when there was little or no money in the treasury of the latter company. The Giroux Co. paid into the Butte & Ely treasury something like \$250,000 in cash and did borrow back some of the money, on which it has been paying 6% interest. It is claimed by the Butte & Ely

management that the loan is amply secured and stockholders are in no danger of any loss through it.

In 1913 the Consolidated Coppermines Co. was formed to merge the Butte & Ely with the Giroux and other companies, the Butte & Ely receiving 5% of the capital stock of the new company for its entire holdings, equivalent to 6¼ shares of Butte & Ely for 1 of the Consolidated. Objecting to this merger, certain Butte stockholders began injunction and receivership proceedings, which were decided adversely by the Court. At the present time the Consolidated Coppermines Co. and the Giroux Cons. Mines Co. own all the stock of the Butte & Ely Co. with exception of about 80,000 shares.

BUTTE EXEMPTION COPPER CO.

MONTANA

Idle. P. O. Box 143, Butte, Mont. Inc. May 20, 1906, in Me. Cap., \$2,500,000; \$1 par; supposedly reduced to \$100,000 in 1913. Owned by Spokane capitalists, who sold control to parties represented by Chas. Mattison, attorney, Butte, Mont. Company owns Colleen Bawn, Canyon, Exemption and Mountain Spruce claims on hillside above Bullwhacker and Butte-Duluth properties and crossed by Horse Canyon and street railway to Columbia Gardens, Butte, Mont.

BUTTE & GREAT FALLS MINING CO.

MONTANA

Address: Box 1393, Butte, Mont. Officers: E. Bryant Crump, Bloomington, Ill., pres.; R. M. Green, Butte, v. p. and gen. mgr.; Allen Pierse, sec. treas.; preceding officers, Ira N. Honnold, L. G. Diehl, J. Cohan, Wm. Richardson, J. W. Beckwith, Louis Lauritson, R. M. Sutherland, J. P. Mondloch, Walter A. Kinney and C. F. Murphy, directors. Inc. Nov. 28, 1911, in Mont. Cap., \$500,000; shares \$1 par; assessable; \$400,000 outstanding; \$32,800 was expended on development work during 1914-15.

Is developing the Genevieve group of 8 claims, patented, 134 acres, in the Lost Child mining district, 3½ miles N. E. of the Butte & Superior property, Butte, Mont. Claims show Butte monzonite cut by aplite and traversed by wide, rusty veins carrying tourmaline and occasional specks of chalcopyrite. The Genevieve vein runs S. W.-N. E., with dip of 35° and reported width of 30'. It is mainly decomposed granite with clay and quartz streaks and one 3' band of quartz and tourmaline carrying occasional sulphides. Has a 1½ compartment shaft, 500' deep. The Genevieve is said to have a good showing in a 2' vein on 200' level, but average of assays is small. The Silver King claim has a 200' tunnel. Property reported on by Paul Billingsley, Jesse Cohan & Peterson, 1914.

Equipment: includes electric hoist, good for 1,500', pump, 10-drill compressor, mine buildings and dwellings. Stopping will be started when ore-body is encountered on the 500' level. Property regarded as still a prospect, and management competent.

BUTTE HILL COPPER MINING CO.

MONTANA

Address: Harry A. Frank, sec., Daly Bank Bldg., Butte, Mont. Maurice Eisenberg, pres.; J. W. Murphy, v. p.; preceding officers, J. W. Murphy, Duncan MacRae, W. P. Cary, W. H. Hall, Thos. Driscoll and John S. Davies, directors. Inc. April 18, 1906, in Montana. Cap., \$5,000,000; shares \$5 par; \$2,950,000 issued. Annual meeting, fourth Saturday in January.

Property: 11 claims, 173 acres, in an undeveloped district in granite area, north of Walkerville. Has a 200' shaft, cutting a vein of 40' estimated width, showing stringers and bunches of ore assaying up to 4% copper and 19 oz. silver per ton. Has not been worked for several years and power plant is dismantled. Property is well located, has strong veins and is much nearer developed ground than it was when operating.

BUTTE LODGE EXTENSION MINING CO. MONTANA

Idle. Address: care C. J. Kelly, treas., 805 W. Broadway, Butte, Mont. Chas. S. Warren, v. p.; John M. Murphy, sec. Inc. April 28, 1906, in Mont. Cap., \$500,000; shares \$1 par. Property: 4 claims, known as the St. Angus group, 12 miles N. E. of Butte, has a 150' shaft with a crosscut showing 2 veins.

BUTTE & LONDON COPPER DEVELOPMENT CO. MONTANA

Office: 46 East Broadway, Butte, Silver Bow Co., Mont. Officers: W. W. McDowell, pres.; John D. Haines, v. p.; W. E. Reynolds, sec.; J. W. Wallisch, treas.; preceding officers, Fred Whiteside, Guy W. Stapleton, John P. Reins, J. W. Pratt, H. B. Byrne, E. J. Anderson and T. H. Emery, directors. Inc. Jan., 1906, in Ariz., as Butte & London Copper Co. Cap., \$5,000,000; shares \$5 par; nonassessable; \$2,830,000 outstanding. Annual meeting, third Tuesday in January.

Property: 113 acres, known as the Greendale placer claims, lying immediately north of the Pittsburgh & Montana in the valley of Silver Bow creek, east of Butte. Property claimed by the management to carry the possible extension of the Rainbow lode. Forty acres of the property is said to be valuable for town-site purposes.

Development: 1,350' three-compartment shaft, 2 crosscuts on the 1,100' level cutting 9 veins, none carrying ore of commercial value, except a streak that gave assays of 2% copper, 50 oz. silver and \$2 gold per ton.

The company agreed Dec. 24, 1912, to accept a contract with Thos. F. Cole, for the transfer of all its property to a new company, the Greendale Exploration Co., with a capitalization of \$200,000, to be organized by him. The terms of the contract provide that in consideration of sinking the shaft to 1,600' level, running crosscuts north and south 2,500' the entire width of the property, and doing other stipulated development work, Mr. Cole is to receive 51% of the stock of the new company, one-half to be paid as the work progresses, the balance remaining in escrow until the work is finished. Mr. Cole announced his intention of spending \$300,000 on this development, which was begun the latter part of 1915.

BUTTE MAIN RANGE COPPER MINING CO. MONTANA

Controlled by Tuolumne Copper Co.

Office: Daily Bank Bldg., Butte, Mont. Officers: Edward Hickey, pres.; P. J. Brophy, v. p.; Frank X. Giard, v. p.; Ray J. MacDonald, treas.; Edward Hickey, Jr., sec.; preceding officers, Charles R. Leonard, M. Sellers Largey, Pat. Sheehan, J. J. Harrington and T. E. Murray, directors.

Inc. Aug., 1912, in Mont. Cap., \$1,500,000; shares \$1 par; 750,000 shares issued. Directorate authorized sale of 150,000 shares of treasury stock in April, 1914, to provide necessary working capital, but this has not yet been sold.

In May, 1916, $\frac{2}{3}$ of the stock of the company was optioned to the Tuolumne Copper Co. for \$300,000, to be spent in deep development of the company's property. The company therefore becomes a subsidiary of the Tuolumne, which at the same time takes over 51% of the Colusa Leonard Extension.

Property: 39 acres, include the Sinbad Lode, Tentpeg, Spread Delight, Rory O'More, Kingstella and larger fractional part of the Lillie claim, at the mouth of Horse canyon, Butte, Mont. On the Sinbad claim the vein of this name is said to show an outcrop of altered granite 30' wide, running E. W. and dipping N. On this vein the Largey shaft was sunk 716' deep. On the 400' level, which is only 40' below the bottom of the "wash" of the valley-filling, the crosscut disclosed a 12' vein, containing several bands 4" to 12" thick of partly oxidized copper ore.

On the 700' level, crosscuts north and south each encountered veins. The northern one, having but a short segment in the company's property, was not explored. The Southern vein, 140' south of the shaft, is said to be 35' wide. Drifts were run and crosscuts made, disclosing numerous bands of 3" to 4' of ore. One sample 10' across is reported to carry 3.1% copper and 13.5 oz. silver per ton. A geometric average of 8 samples cut at different points in the vein is 2.6% copper (Corry report). A third vein was cut at the face of the south crosscut when work was stopped in 1902; this is supposed to be the Spread Delight lode, which shows an iron-stained outcrop 30' wide on the claim of this name.

The Lillie lode also shows in various pits as a broad rust-stained outcrop, running across the north part of the Rory O'More, Kingstella and Lillie claims. The largest vein cropping is reported to be on the Lillie claim; it is said to run east to and to be cut and displaced northward by the Bullwhacker-Birtha fault. The intersection and "drag" are supposed to make the big blow-out seen on the Lillie. The south half of the Lillie claim was deeded to the North Butte in 1915, in settlement of all litigation over a division of the claim.

Property has a small acreage and is still a prospect, but the ground has merit and is worthy of development.

BUTTE-MILWAUKEE COPPER CO.

MONTANA

Assets sold 1914 to Butte & New York Mng. Co., a Butte & Superior subsidiary, for \$500,000. Stockholders were obliged to exchange their stock at the rate of 2½ old for 1 new share, or 30c cash per share. Company paid a liquidating dividend of \$0.3278 per share in July, 1914, and is now in course of liquidation. Fully described under Butte & New York Mining Co.

BUTTE MINE EXPLORATION CO.

MONTANA

Clinton C. Clark, pres., 408 West Granite St., Butte, Mont.; C. P. Conolly, sec., at last accounts. Inc. 1901. Cap., \$250,000; shares \$1 par. Is no relation to the company of same title formerly holding the Six O'Clock property, in Butte, or to the Butte Mines Exploration Co., formerly having property at Tecoma, Box Elder Co., Utah. Property is the Pacific quartz lode claim, on which considerable work was done, 1901-02. Company practically defunct, but property reported under option to the North Butte Mng. Co.

BUTTE-MINNESOTA MINING CO.

MONTANA

Peter E. Peterson, pres.; Angus McLeod, Butte, Mont., William Vuoti, J. E. Porthan, A. W. Havela, John Kukko, Emmanuel Autio, John Lampi, Ade Herranen, directors. Mines near Butte and Helena. Inc. June, 1912. Cap., \$750,000; shares \$1 par.

Owens 6 claims, about 1 mile south of Rocker, at the western end of the Butte district. Ground shows well-defined veins, 1 of which is traceable for 3,000' across the surface. The country rock is granite and part of the same mass as that in which the mines of Butte occur.

Development: 400' tunnel on the vein and an incline shaft 35' deep sunk on the vein disclosing well-defined walls, 6' apart, from which ore has been taken carrying 0.5% copper, 8% lead, 12 oz. silver and \$28 gold per ton.

The property is equipped with a gallows frame, boilers and hoist.

Late in June, 1913, the company bought a group of mining claims in the Wolf Creek district, 40 miles east of Helena, Mont. Reports state that development on these claims shows more than 100,000 tons of ore assaying 4 to 25% copper blocked out. A mill was to be built, but company has not reported any recent work.

BUTTE MONITOR TUNNEL MINING CO.

MONTANA

Idle. Address: care C. J. Kelly; Daly Bank & Trust Co., Butte, Mont.

Inc. in Montana. **Cap.**, \$3,750,000; shares \$1 par; 1,013,000 in treasury; 2,736,500 issued. **Lands:** 8 claims, the Monitor, Sunlight East, Fraction, Alta, Emporium, Ironside No. 1 East and Burner patented claims in the eastern section of the Butte district. The usual Butte monzonite is cut by a great quartz porphyry dike on this group; the veins run E.-W. and are of the quartz vein type with wall alteration.

Development: by shafts 30'-50' deep and the 1,412' Monitor tunnel. Tunnel passes for 445' through other property. In the Sunlight claim 2 veins, the No. 1 Sunlight, 5', and No. 2 Sunlight, 4' wide, are cut; the 4' Sunlight discovery vein is cut 250' beyond, while the tunnel face shows presumed wall of So. Monitor vein. A winze on the vein at 700' from the portal showed 12' of ledge matter, and according to John R. Ryan, assays 6% copper and 4.2 oz. silver per ton. At 735' a 6' vein carried, according to Mr. Ryan, a 10" streak of 13% ore.

There is also a 230' crosscut tunnel on the Burner claim cutting a 12' vein, developed by a 30' winze with 45' of drifting at the bottom. This disclosed a 14' vein with a 10" to 20" band of shipping ore, from which 22 tons taken out by lessees and shipped to smelters returned 8% copper and 8½ oz. silver per ton. The remainder of the vein is reported to average 1.5% copper and 1.4 oz. silver per ton. Work was stopped by John R. Ryan, who had a lease, because of the heavy flow of water.

BUTTE & NEW YORK COPPER CO.

MONTANA

Subsidiary of the Butte & Superior Mining Co.

Office: 25 Broad St., New York. **Officers:** M. M. Ferguson, pres.; R. J. Schaefer, v. p.; C. E. Connell, sec.-treas.; preceding officers, A. B. Wolvin, Leo Schlesinger, N. B. MacKelvie, Philip Lawrence, A. P. Ronaghan, J. B. Kremer, G. M. Minzesheimer and T. F. Nelson, directors. A. J. Ronaghan, asst. sec. **Inc.** Oct. 17, 1906, in South Dakota. **Cap.**, \$4,000,000; shares \$5 par; issued, \$2,900,000. **Cap.** increased by 300,000 shares in April, 1915, and par value of stock reduced from \$5 to \$1; \$500,000 10-year 1st mtge. convertible income bonds authorized at the same time, of which \$150,000 were offered to stockholders at par, to furnish necessary working capital. Empire Trust Co., New York, registrar; B. Liddle, transfer agent. Annual meeting second Monday in January.

The properties and assets of the Butte-Milwaukee C. Co. were acquired in June, 1914, for \$500,000. Stock was exchanged at the rate of 1 share Butte & New York for 2½ shares in the old company, or 30c cash per share, and proceeds were distributed among Butte-Milwaukee stockholders.

Holdings consist of 4 claims, patented, known as the Pollock, Colonel Sellers, Florence and Bird, lying immediately north of the Butte & Superior, and 3 lode mining claims in the Argenta district, Beaverhead Co., Mont.

The Colonel Sellers claim has a promising surface showing with strong, persistent quartz veins in granite. The Butte & Superior completed the sinking of the 1,200' Milwaukee shaft on Colonel Sellers claim and connected it by crosscutting with 1,200' level of Black Rock mine. This work was continued beyond the Colonel Sellers shaft so as to open the Mastodon vein on the Florence claim. The Milwaukee shaft is well equipped with power plant and hoist. The Butte & Superior Co. has spent \$24,000 in development work on the Butte-Milwaukee property and in return received 205,000 shares of the capital stock of the Butte & New York Co. Development work in 1916 said to have proved good zinc orebodies.

Surface outcrop on Bird claim is 100' wide and resembles outcroppings of the typical fault veins of the district.

The Pollock mine has 4 veins, 2 more or less developed by a short tunnel and a 730' three-compartment shaft. A silver vein was opened on the 300' level, and mine is said to have produced, years ago, about \$400,000 worth of ore, with values mainly in silver and gold, from above the 200' level. A little ore running 2% copper and 15 oz. silver per ton, with small gold values, was produced, 1906. No work is being done on these claims.

BUTTE & RED EAGLE COPPER CO. MONTANA

Fayette Harrington, pres., Missoula, Mont.; Jas. A. Canty, sec.-treas., Butte, Mont. Inc. May, 1907, in Montana. Cap., \$5,000,000; shares \$5 par. Lands: 7 claims, patented, S. E. of the Butte & Bacorn and N. E. of the Butte and Superior, the Red Eagle claim having a 400' tunnel, showing a little ore. Shut down since 1907, but company still alive.

BUTTE & ROCHER DE BOULE COPPER CO. BRITISH COLUMBIA

Office: 49 East Broadway, Butte, Mont. Branch office: Hazelton, B. C. Samuel McConnell, pres.; C. J. Stone, v. p.; J. W. MacLane, sec.-treas.; preceding officers, Paul Ozanne and P. J. Jennings, directors. Inc. 1912 in Arizona. Cap., \$1,000,000; shares \$1 par; fully issued and nonassessable.

Property: the Highland Boy group adjoining, but 1,000' above the Rocher de Boule mine and covering 400 acres on Juniper basin, Rocher de Boule mountain, Omineca mining district, 3 miles from New Hazelton and 4 miles from the Grand Trunk railroad. Claims show the extension of the Rocher de Boule veins, 2 of which have been opened by tunnels and open-cuts. Ore occurs in fissure veins following intrusive dikes of porphyry in granite. Samples from veins 18" to 5' wide assayed from 1.5% to 5.7% copper, with 0.5 to 0.8 oz. silver and slight gold values.

Idle since June, 1914. Property considered promising and worthy of further development.

BUTTE & SUPERIOR MINING CO. MONTANA

(Butte & Superior Copper Co.)

Office: 25 Broad St., New York. Mine office: Butte, Mont. Officers: N. Bruce MacKelvie, pres.; D. C. Jackling, v. p.-managing director; K. R. Babbitt, v. p.-gen. counsel; A. J. Ronaghan, sec.; C. W. Peters, treas. Directors: N. Bruce MacKelvie, K. R. Babbitt, D. C. Jackling, F. L. Ames and C. L. F. Robinson. J. L. Bruce, mgr.; Angus McLeod, mine supt.; F. G. Janney, mill mgr.; J. T. Shimmin, mill supt.

Inc. Oct., 1906, in Arizona. Cap., originally \$6,000,000; shares \$5 par; reduced Dec. 3, 1910, to \$2,500,000; shares \$10 par; nonassessable; increased Sept., 1912, to \$3,500,000. Outstanding Dec. 31, 1915, \$2,726,970. Outstanding bonds, Dec. 31, 1915, none. Stock listed on Boston, New York and Butte Exchanges and on the Paris Bourse. Name changed May, 1916, and new stock issued.

Controls the North Butte Extension Development Co., through ownership of 80% of the stock; also controls the Butte-New York Copper Co., through ownership of more than 55%. Equitable Trust Co., New York, and Old Colony Trust Co., Boston, transfer agents; Guaranty Trust Co.,

BUTTE & SUPERIOR MINING CO.

Our Statistical Department will furnish complete information on application.

HAYDEN, STONE & CO.

Members New York, Boston and Philadelphia Stock Exchanges.

25 Broad Street, NEW YORK

87 Milk Street, BOSTON

New York, and National Shawmut Bank, Boston, registrars. Annual meeting 3rd Friday in April, at New York.

Comparative General Balance Sheet: Years ending Dec. 31—

	Assets—Prop.			Total	Liabilities—			Prem. on Sales		Total
	Equip.	Invest's	Current Charges		Cap Stock	Current	Cap. Stock	Profits	Undiv.	
1914.	\$4,170,872	\$338,587	\$1,269,633	\$271,330	\$ 6,073,402	\$2,726,089a	\$111,384	\$1,213,985	\$2,021,944	\$ 6,073,402
1915.	4,458,133	574,295	5,267,080	486,129	10,785,638	2,726,970	606,317	1,214,886	6,287,965	10,785,638

(a) Includes \$5,900 first mortgage bonds.

Dividends: in 1914, \$611,908; in 1915, \$4,908,115, in 4 quarterly payments of 75c each and extra payments of \$15 per share; in 1st half of 1916, \$1.50 per share and \$20 extra.

Property: 27 mining claims, 164.90 acres, about 2 miles N. E. of the business section of Butte, with the exception of 4 claims, Peake, Parker, Prescott and Pardee, which lie about 3 miles N. W. of Butte. In addition, fractional interests equivalent to 8.88 acres are owned in 11 claims, 60.3 acres, and surface rights only for 34.15 acres. The North Butte Extension Development Co. owns 4 claims and a fractional interest in a fifth, amounting in all to an equivalent area of 29.48 acres.

The Butte-New York Copper Co. owns 4 claims and a small unpatented fraction lying to the north of the Butte & Superior group, amounting to 50.77 acres, and in addition 3 claims in Beaverhead county, having a combined area of 52.84 acres.

All operations to the end of 1915 were from Black Rock shaft, and all concentrating operations subsequent to June, 1912, have been conducted in the mill of the company, located upon its property immediately adjoining the mine. The Black Rock shaft is now 1,900' deep, with no developments conducted as yet below the 1,600' level. The ore consists of zinc blende, galena and small quantities of pyrite and chalcopyrite occurring with gangue material, mostly quartz, silicified granite, rhodochrosite and rhodnite as vein replacement of the granite. The ore occurs in parallel or branching ore shoots ranging in thickness from narrow stringers up to orebodies as much as 100' wide within the limits of a broad general zone of mineralization known as the Rainbow Lode. Near the surface the commercial ore consisted principally of silver ore, which was mined in the early days of Butte mining. The commercial zinc ore shoots as developed during recent years occur downward from approximately the 500' level, and as far as disclosed by present development, increase in horizontal area and in importance as greater depth is gained. Ore actually blocked out ready for mining is maintained at about one million tons, greater development than this being inadvisable owing to the difficulty in maintaining developed drifts and crosscuts for any considerable period before actual mining operations are to be conducted.

The ore carries from 10% to 30% zinc, averaging about 18% zinc, 1.25% lead, 0.2% copper, 8 oz. silver and 30c gold. The small amount of iron, lead and copper contents permits of the production of a good grade of zinc concentrates, but the very fine dissemination of the mineral requires fine grinding for efficient concentration, and most of the zinc mineral is afterwards recovered by oil flotation.

The mill has been developed from an originally designed capacity of 1,000 tons per day to the present capacity of 1,800 tons per day, and zinc recoveries range from 93% to 96%, depending upon the tonnage treated and the character and grade of ore and concentrates.

Part of the concentrates are sold under contract to the American Metal Company for treatment at their smelters in the Oklahoma gas fields. The balance of the concentrates are treated in plants of the American Zinc, Lead & Smelting Co. in the Kansas gas fields under a toll basis, though small

quantities have been disposed of by sale to various zinc retort smelters throughout the country or to the Anaconda Copper Mining Co. for treatment at its electrolytic plant at Anaconda, Montana.

Figures for the production of the property prior to 1913 are not available, but the results of operations since that time are as follows:

	Tons Milled	Oper. Cost	Tons Concs.	Assay Concs.	Lbs. Zinc In Concs.	Zinc Rec.	Aver. Price	Net Total	Profit per Share
1916 (a)	164,500	\$5.81	45,121	53.12%	47,938,530	92.86%	16.10c	\$3,544,940
1915	522,300	5.10	158,171	53.61%	165,382,921	93.00%	12.34c	9,125,947	\$38.47
1914	327,210	5.33	101,383	53.16%	108,844,120	88.71%	5.04c	1,417,138	5.31
1913	296,940	5.70	106,443	49.00%	102,997,916	88.43%	5.52c	642,988	8.47

(a) First quarter.

In addition there was contained in the concentrates produced: 3,563,382 oz. silver; 1,792,210 lbs. copper; 11,474,168 lbs. lead; part of this came from 5,274 tons lead concentrates.

The suit against the company over the use of the flotation process of concentration is still in the courts. The apex controversy with the Elm Orlu Mining Co., owned by Hon. W. A. Clark and his son, was decided by the U. S. District Court in the latter's favor, but giving the Butte & Superior Co. all rights to the Rainbow lode east of the point where it enters the Black Rock claim; the company thus loses only the westernmost 301' along the vein claimed by it, but subject to the prior rights of the Pyle vein of the Elm Orlu company below its junction with the Rainbow.

In 1912 the controlling interests of the company passed into the hands of Hayden, Stone & Co., who have been closely identified with the Utah Copper Co., Chino, Ray and other of our greatest and most successful mining companies, thus ensuring ample finances and competent direction.

BUTTE & VIPOND GOLD MINING & MILLING CO. MONTANA

Office: 34 Owsley Bldg., Butte, Mont. Officers: Jas. M. Hinkle, pres.; Thos. P. Manley, v. p.; Wm. Worth, treas.; preceding officers are directors; Wm. E. Carroll, sec. Inc. May 14, 1910, in Mont. Cap., \$600,000; shares \$1 par; outstanding 363,412 shares. Annual meeting 3d Tuesday in May.

Property: 5 claims, unpatented, at Vipond Park, Beaverhead Co., Mont., said to show free milling gold ore in fissure veins 4-7' wide in granite. Ore is said to have an average assay of \$30 per ton.

Development: 200' vertical shaft and 235' tunnel, with total underground workings of 680'. Equipment: includes boiler, hoist and pumps. Little work was done in 1915. Company expects to connect the tunnel with shaft workings. Value of property remains to be proven.

BUTTE & YERINGTON COPPER CO. NEVADA

Office: care W. E. Wright, sec.-treas., 410 Phoenix Bldg., Butte, Mont. Mine at Yerington, Lyon Co., Nev. W. C. Siderfin, pres.; D. C. Bard, v. p.; preceding officers, Dr. Thos. B. Moore, Dr. Donald Campbell, John D. Pope and Wm. Mitchell, directors; L. W. Trankle, supt. Inc. Jan. 29, 1907, in Montana. Cap., \$1,000,000, shares \$1 par, fully paid; issued, 351,520. Annual meeting, third Wednesday in January.

Property: 2 groups of patented claims, one of 14 claims, about 4 miles east of and across the valley from Yerington and south of the Copper Mountain mine. The land has very attractive surface showings, but is without deep development work.

The second group of 9 claims, is in the heart of the camp adjoining the big Mason Valley mine and the Yerington Malachite Co.'s ground. This property is well located and has attractive showings of ore in the tunnels and on the surface outcrops. It has been idle during the past two years.

BUTTE & ZENITH CITY MINING CO. MONTANA

Office and mine address: 30 E. Broadway, Butte, Mont. Officers:

I. Freimuth, pres.; G. T. Paul, v. p.; Sol. Genzburger, sec.; John Killorin, treas.; preceding officers, W. D. Gibson, C. O. Baldwin, and L. S. Loeb, directors. John D. Pope, chief engr.; Wm. D. Gibson, supt. **Inc.** Oct., 1912, in Montana. **Cap.**, 300,000 shares; \$10 par, 157,660 issued. In 1915 50,000 shares of treasury stock were offered for sale at \$3 per share to provide funds for further development work.

Property: 320 acres patented ground and several unpatented claims, all in a compact group in Secs. 18 and 19, T. 3, R. 8 W., about 2 miles west of the developed section of the Butte district and a short distance south of Silver Bow junction, where 4 railroads meet. Ground shows Butte granite and aplite cut by numerous strong and persistent quartz veins and also the later fault veins which in the copper district of the Butte camp have proven so productive.

Development: by shaft, now 670' deep with a crosscut at 460', which was closed down in Oct., 1914, owing to a heavy flow of water from the vein, but reopened and unwatered, Feb., 1916. The veins show occasional values at the surface, but not in commercial quantities. The quartz veins are of the silver type, but the cross veins are similar to the copper veins of Butte. Samples taken from the shaft are said to assay 2% copper and 4 oz. silver. Equipment includes electric hoist, pump and air compressor.

BUTTERS DIVISADERO CO.

SALVADOR, C. A.

Office: 625 Market St., San Francisco, Calif. **Mine office:** Divisadero, Dpto. Morazan, Salvador, C. A. **Officers:** Chas. Butters, pres.; Chas. W. Slack, v. p.; Sidney M. Stone, sec.-treas., with Chauncey S. Goodrich and Sydney A. Cloman, directors. R. R. Leslie, supt. **Inc.** Jan. 23, 1905, in Calif. **Cap.**, \$750,000; shares \$5 par; all issued. Annual meeting 2nd Monday in April. Owns gold-silver mines at Divisadero, Dpto. Morazan, Salvador, C. A.

BUTTERS SALVADOR MINES, LTD.

SALVADOR, C. A.

Office: 61 Commercial Union Bldg., St. James St., Montreal, Que. **Officers:** Chas. Butters, pres.; D. J. Pullinger, v. p.; J. J. Meagher, sec.; with J. Johnston, directors. J. F. Thorn, mgr., Santa Rosa, Salvador. **Inc.** Nov. 9, 1912, in Canada. **Cap.**, \$750,000; shares \$5 par; all issued.

Annual report for fiscal year ending June 30, 1914, published Nov. 15, 1915, showed receipts from ore sales, \$499,911; net profit, \$116,042; surplus balance, \$110,264, after payment of \$92,063 in dividends. Dividends: 17½% in 1914; 15% in 1915; 7½% in Jan., 1916.

Property: 546 acres of gold-bearing land near Santa Rosa, Salvador, C. A.

B. V. N. MINING CO.

NEW MEXICO

Pinos Altos, Grant Co., N. M. **Officers:** Dr. A. M. Torello, pres.; J. W. Bettes, T. B. Fischer, Robt. Noble, Jos. Vinot, H. Bettes and S. D. Bettes, directors. Wm. Donovan, supt. **Inc.** Nov., 1914, in N. M. **Cap.**, \$250,000.

Property: Silver Hill mine, in Pinos Altos district, shows gold-silver-zinc ore in vein, 1' wide, believed to be continuation of rich orebody on adjoining Lankston and Pacific No. 2 claims. **Development:** 3 tunnels, 280', 300' and 400' deep and 260' stope. Little work was done in 1915.

BY-CHANCE COPPER CO.

NEW MEXICO

Office: Brice, via Oro Grande, Otero Co., N. M. Properties optioned July, 1912, under lease and bond to Jarilla Copper Syndicate and company

is inactive at present.

CABABI MINING CO.

ARIZONA

Secretary and address: Wm. H. Kershner, 1021 Hume-Mansur Bldg., Indianapolis, Ind. **Mine P. O.:** Camp Cababi, via Tucson, Pima Co., Ariz.

Officers: Chas. N. Wilson, pres.; Allen W. Conduitt, v. p.; preceding with H. A. Walker, E. B. Peck, E. J. Scoonover, Albert Off, W. H. Kershner and R. A. Wilcox, directors. H. F. Scheerer, gen. mgr., P. O. Box 1116 Tucson Ariz. C. J. Price, mg. engr.; Harry Orndorff, purch. agt.

Inc. 1908, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, nonassessable; issued \$1,250,000. Annual meeting, third Monday in June.

Property: 50 claims, about 1,000 acres, 35 claims patented, also 2 mill sites of 5 acres, situated in the Cababi mountains, 69 miles S. W. of Tucson.

Development: by numerous shallow shafts, and main shaft 450' sunk on the Picacho claim, includes an antigua, reopened about 1860, by Francisco Padrea, and which, years ago, was a small producer of silver-bearing copper and lead ores.

Equipment: includes a steam hoist good for 500', an adobe store building and several frame structures and tents utilized as dwellings.

A full report on the property made, Oct., 1912, by C. J. Price, mg. engr., shows 2,240 tons of ore, valued at \$28,485, on dumps. Manager reports 10,000 tons high-grade ore blocked out April 25, 1913. Mine now idle, but company claims it will be reopened upon completion of E. F. & S. W. R. R.

CABIN BRANCH MINING CO.

VIRGINIA

Office and mine: Dumfries, Prince William Co., Va. Is controlled by the Virginia-Carolina Chemical Co.

Property has a large lenticular body of iron pyrites carrying up to three-fourths of 1% copper recovered as a by-product after roasting.

Development: by shaft, equipment, including a steam hoist and air compressor. Mine employed 50 men at last accounts.

CABLE CONSOLIDATED MINING CO.

MONTANA

Office: 53 Silver Bow Blk., Butte, Mont. Mine office: Cable, Deer Lodge Co., Mont. H. C. Bacorn, supt. **Property:** 700 acres, 15 miles west of Anaconda, include the Cable gold mine, in vicinity of the Southern Cross mine. The Cable mine, worked since 1870, with varying success, has produced about \$4,000,000 worth of ore, with values mainly in gold, but has auriferous copper ore on the tunnel level. **Equipment:** includes steam power, air compressor and a 30-stamp mill. Reopening planned for 1916.

CACTUS CONSOLIDATED MINING CO. MONTANA-CALIFORNIA

Office: 808 Lonsdale Bldg., Duluth, Minn. A. F. Becker, pres.; R. B. Harrington, sec. Inc. 1914, in Delaware. **Cap.**, \$1,000,000; shares \$1 par. Is a reorganization of the Cactus Copper Co., which was a reconstruction of the Cactus Development Co. Both companies fully described in former volumes.

Stockholders in the old company were given until June 10, 1915, to exchange their holdings for shares in the Cactus Cons. at the rate of 2½ for 1 and a payment of 6 cts. per share. In March, 1915, the Mammoth group, consisting of 22 quartz claims, 440 acres, in Kern Co., Calif., was acquired.

Development: by several tunnels, said to show 32' of ore, assaying \$10.40 per ton in silver, and a vein on claim No. 8 is claimed to assay 64-74% pure antimony and to be the richest ore in the district. Company also owns and is operating the Leona gold mine, developed to depth of 150' and said to have several veins, 3-4' wide, averaging from \$12-\$30 per ton. Frank Enzensperger, supt., is credited with an estimate of \$400,000 worth of ore blocked out on the Leona property.

CACTUS COPPER CO.

MONTANA

Reorganized, 1914, as Cactus Cons. Mng. Co., which see.

CACTUS MINE**UTAH**

At Newhouse, Beaver Co., Utah. Owned by Consolidated Nevada-Utah Corporation.

CADENA DE COBRE MINING CO.**MEXICO**

Address: care C. A. McDonald, sec., Bisbee, Ariz. **Mine office:** Sahuaripa, Sonora, Mex. **Officers:** Emil Marks, pres.; C. H. Holz, v. p.; M. Newman, treas.; R. F. Koehler, J. Pennypacker and John Treu, directors; Arthur Houle, cons. engr. **Inc. Jan. 5, 1905. Cap., \$1,000,000; shares \$1 par.** The former directors issued to themselves 550,000 shares of stock, and when this was learned the old board resigned and suit was brought, resulting in the cancellation of the stock so issued, it having been a grab, pure and simple.

Property: 84 hectares, in Los Chinos mountains, on the Yaqui river, shows iron outcrops up to 300' in width. **Development:** by the 96' Bisbee tunnel, showing ore assaying 4 to 25% copper, with small gold and silver values, and 2 shorter tunnels. Idle on account of revolutionary disturbances in Mexico. Property was fully reported on by Arthur Houle, E. M. **CALAMONT COPPER CO. MONTANA**

Idle. Office: 263 Twelfth St., Oakland, Cal. **Mine office:** Norris, Madison Co., Mont. **Officers:** Walter V. Harrington, pres.; Wm. F. Davis, v. p.; Mark E. Davis, managing directors; Hugh J. Leonard, sec.; Thos. F. Hogan, treas.; preceding officers, Jas. Keller and F. G. Crist, directors. **Inc. Nov., 1909, in Arizona. Cap., \$5,000,000; shares \$10 par, non-assessable.** Apparently is connected in management with the Montana-Hecla Mining Co.

Property: 22 claims, 380 acres, include the Old Colony group, adjoining the Montana-Hecla, 5 miles southeast of Norris, carrying auriferous and argentiferous copper ore. **Development:** includes several shallow shafts, with an old 100' two-compartment shaft on the Big Jack claim, and a 160' tunnel, with about 900' of workings. Not regarded favorably by late H. J. Stevens. A report on the property made by Reeves Davis, E. M., Sept., 1911, recommended development of 2 surface outcrops. Mark Davis, former manager, reported to be protecting the property with a view to refinancing the company.

CALAVADA COPPER CO.**NEVADA-CALIFORNIA**

Suite 3249, No. 120 Broadway, New York. **Mine near Luning, Mineral Co., Nev. Officers.** E. B. Bronson, pres.; H. Richardson, v. p.; F. C. Hart, sec.; A. C. Hurt, treas.; H. A. Geisendorfer, Pioche, Nev., mgr.; with M. G. Lane and Geo. D. Hopkins, directors. Frank Breckenridge, Luning, Nev., supt. Kirby Thomas, cons. engr.

Inc. 1913, in Delaware. Cap., \$2,500,000; shares \$5 par; 180,300 shares held in treasury. Security Transfer & Registrar Co., New York, transfer agent.

Property: Copper Mountain Group, known as the Luning Unit, 21 patented and 10 unpatented claims, 500 acres, in Sante Fe mining district, 8 miles E. of Luning, Mineral Co., Nev., on the So. P. R. R., and the Darwin Unit, 9 patented claims, 180 acres at Darwin, Inyo Co., Calif. This group is not being developed at present.

Ore: copper occurring as oxide and carbonate in vein 40' to 150' wide with sulphides at depth, in contact deposit between granite and limestone. Average assays said to run 3 to 10% copper with small precious metal values.

Development: 1,000' shaft, Copper Mtn., 100' Cyclone shaft and prospect tunnels. Underground workings total 3,000'. Crosscutting and drifting on the 700' and 1,000' levels now being done.

Equipment: 60-h. p. hoist, Ingersoll-Rand air compressor, mine and office buildings. Plans deepening the main shaft and shipping ore in 1916.

CALAVERAS COPPER CO. CALIFORNIA

Office: 87 Ames Bldg., Boston, Mass. Mine office: Copperopolis, Calaveras Co., Cal. **Officers:** Chas. M. Hayden, pres.; Herbert Goff, sec.-treas.; preceding with Oliver Ames, F. Lothrop Ames, Samuel Carr, Gilmer Clapp, Wm. J. Maloney, John S. Ames, directors. S. M. Levy, supt. **Inc.** Aug. 31, 1909, in Del. **Cap.**, \$5,000,000; shares \$5 par; reduced, Aug. 24, 1910, to \$2,500,000 common, shares \$5 par; issued, \$1,868,750; \$300,000 preferred, shares \$5 par; none issued. Bonds, \$450,000, 6%, \$90,000 due annually, owned by the Ames estate, which formerly owned the property, and \$75,000 2-year notes, 6%, convertible. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agt. Stock is listed on the Boston curb. Annual meeting, second Monday in February.

Property: 2,833 acres, including the Union, Keystone and Empire mines, and also including ranch and water power lands, bought Aug. 31, 1909, of Union Copper Co., 14 miles from Milton, the nearest rail point. Mines, opened 1861, were considerable producers, paying fair dividends, 1861-66, and yielded 125,739 tons of ore, said to average 10% copper, 1861-1907.

Geology: ore occurs in amphibolite schists underlying Mariposa slates, near intrusions of granodiorite, the ore-bearing schist ranging 100 to 200' in width. Ore occurs as lenses of about 15' average and 70' maximum width, connected by stringers, reported by company to yield one-fifth smelting ore, of 8% copper tenor, and four-fifths concentrating ore, of 3% tenor, giving an average of about 4%. The alteration zone, about 30' in depth only, carried rich oxides and carbonates and some native copper and is succeeded by chalcopyrite, without gold or silver values, but free from arsenic, antimony, zinc, bismuth and other undesirable elements, blister copper therefrom making good wire bars without electrolytic refining.

Development: the strike of the vein is proven for 8,000' by 20 shafts, mainly old workings of little present value. Principal development is on the Union, Keystone and Empire mines, with about 3 miles of workings.

Equipment: includes a 1,000-h. p. steam plant at the Union mine, with 3 hoists and 15-drill Nordberg and 5-drill Leyner air compressors; company also reports 500 electric h. p. at the mill and same at the smelter.

The company owns about 60 buildings, including office building, boarding houses, bunk houses, 3 warehouses, machine shop, smithy, 3 barns, and about 40 dwellings. The 600-ton mill is connected with the mines by a 4,000' electric tram. A dam, impounding water for the mill has 90,000 gals. storage capacity.

The 300-ton smelter, connected with mill and mines by 4,000' of electric and horse trams, has 2 McDougal calciners, a 150-ton blast furnace and a 150-ton reverberatory furnace. The converter has 2 Allis-Chalmers stands. Smelter fuel was petroleum and coke.

The concentrator was treating about 600 tons of 3-4% ore daily, June, 1913. Total output of copper from all sources at this time was at the rate of about 10,000,000 lbs. per year. The company was hard pressed for funds in 1913; the manager attached the property for \$18,000 unpaid salary, and in June the company ceased active and new work, because of practical operating difficulties and lack of sufficient funds. Arrangements, however, were made with the unsecured creditors and payments were made from time to time with funds loaned to the company by persons largely interested therein.

While the property was closed it was investigated by several experts and as a result of these investigations, made on behalf of various persons, some contemplating the purchase of the property and some contemplating operation under a leasing arrangement, it was finally determined, in October, 1914, to place the property under the charge of Mr. S. M. Levy. Under Mr. Levy's management and with Mr. Frank W. Royer, acting as consulting engineer, operations have been carried on at the mine in a small way for the last year and experiments have been made for the purpose of treating the ore by the oil flotation process. It has been determined that the average grade of the ore is approximately 3% and that under oil flotation a concentrate of at least 16% can be made. There is said to be in sight at the present time ready to mine, 149,000 tons of ore, and it is estimated that the development work now being carried on will show an additional tonnage of 151,000 tons. Mining operations will be commenced upon the installation of new milling machinery which has been ordered and it was estimated that the company should be able, by May, 1916, to treat 200 tons of ore a day. The market manipulation of the stock has been of a flagrant nature, stock selling up to \$11 and afterwards down to \$2.50 during 1910, and again in 1913. The stock has been persistently praised by a prominent New York Curb house, producing an unfavorable impression on conservative investors.

CALEDONIA MINING COMPANY

IDAHO

Office: Wallace, Idaho. **Mine office:** Wardner, Shoshone Co., Idaho. **Officers:** S. A. Easton, pres.; C. F. Kratzer, v. p.; Chas. McKinnis, sec-treas. and mgr. **Inc.** July 9, 1907, in Idaho. **Cap.**, \$2,605,000; shares \$1 par; assessable; all issued. **Dividends:** total \$882,781 to Jan. 1, 1916; has paid \$364,700 to May 6, 1916. Listed on San Francisco and Butte exchanges.

Property: 5 unpatented claims, about 50 acres; adjoining property of the Bunker Hill & Sullivan Mining Co., at Kellogg, Idaho, shows a strong fissure vein with an oreshoot 1,000' long, that is in places 50' wide and carries cupriferous silver-lead ores, averaging 15 to 40 oz. silver, with a little native copper.

Development: by a 500' shaft and 2 tunnels, lower tunnel, 4,000' in length, giving a back of about 1,300'. The 1,000' level is reported to show 7' of shipping ore, though broken faulted ground was encountered. Feb., 1916, reports show a drift being run from Keating level, 75' below the 1,000' level to pick up orebody.

The mine was idle from 1912 to July, 1914, on account of litigation with the Bunker Hill & Sullivan Mining Co. over apex rights. A compromise was effected whereby the capital stock of the Caledonia company was increased from \$1,500,000 to \$2,605,000, the B. H. & S. Co. taking 550,000 shares. The company is virtually a subsidiary of the Bunker Hill company. 150,000 tons of ore reported blocked out, Dec., 1915. Major portion of ore is being taken from between the 500' and 700' levels. Production is at the rate of 1,200 tons monthly, crude ore and concentrates in about equal proportions. Ore is treated at the mill of the B. H. & S. Co. plant. **Equipment:** includes an electric hoist, air-compressor and electric pumps. Company employs about 35 men when active.

Costs per ton for 1915: mining, \$1.88 on 42,628 tons mined; milling, \$0.67 on 35,996 tons concentrates produced; shipping, \$0.23 on 15,561 tons shipped. Net operating profits were \$760,324. Net earnings for Jan., 1916, were \$100,264.

Production:	Copper Lbs.	Lead Lbs.	Silver Oz.	Net Profits
1914(a).....	245,610	6,599,720	537,854	\$761,797
1915.....	659,660	11,142,580	1,212,730	760,324

(a) For 7 mos. after operations were resumed.

Ore reserves: estimated by company as sufficient for almost a year's production, but property is believed to have a possible future of several years more. Management capable and efficient.

CALHOUN CONSOLIDATED MINES CO. COLORADO

Mine office: Central City, Gilpin Co., Colo. **Officers:** A. M. Stearns, pres.; L. D. McCall, v. p.; P. R. Alsdorf, sec.-mgr.; D. H. Coble, treas.; with C. A. Constable, T. E. Green and Geo. Diehl, directors. **Inc.** 1912, in Colorado. **Cap.**, \$1,000,000; shares \$1 par, fully paid and nonassessable; 800,000 issued. Annual meeting 1st Tuesday in October. Company is a reorganization of the Jefferson Calhoun Mng. Co., described in Vol. XI, Copper Handbook.

Property: bought at sheriff's sale, consists of 7 patented claims, 32 acres, on the east slope of Quartz Hill, developed by 5 shafts, deepest 1,400', and by the Newhouse tunnel, shows gold-copper-uranium veins. Average assays run 1.4% copper, 2.20 oz. silver and 0.40 oz. gold per ton. **Equipment:** includes hoists, air-compressor, drills and 8 buildings.

Production in 1913 estimated at \$27,500. Idle since 1914.

CALIF. & MASS. COPPER MINES CO. CALIFORNIA

Inactive. Property, at Red Bluff, Tehama Co., Cal., is leased, for 99 years, to Chicago Copper Refining Co. Described Vol. VIII.

CALLAHAN MINING CO. IDAHO

Property acquired by Interstate Silver Lead Mng. Co., in 1912, and Consolidated Interstate-Callahan Mng. Co., formed, which see. Company dissolved by order of Court, May, 1916.

CALUMET & ALGOMA MINING CO. ONTARIO

Secretary's address: Lucas Hermann, 109 Fifth St., Calumet, Mich. Mine near Massey, Algoma, Ont. Christian Schenck, pres.; Jos. Vertin, v. p.; Lucas Hermann, treas. **Inc.** 1905. **Cap.**, \$1,000,000; shares \$5 par, assessable; issued, \$100,000, paid in, \$1.75. Was a reconstruction of the Copper Queen Mining Co., Ltd. At last accounts had no debts, with \$600 in the treasury.

Property: 957 acres, freehold, shows a 45' fissure vein, traceable about 3 miles, carrying medium-grade chalcopryite ore, more or less auriferous, with occasional bornite and malachite, giving assays of 5 to 25% copper. Has 2 shafts, No. 1 being 138' deep, and 2 tunnels, longest 195'. Lands are heavily timbered and well watered. Idle several years.

CALUMET & ARIZONA MINING CO. ARIZONA

Office: Calumet, Mich. **Mine office:** Warren, Cochise Co., Ariz. **Works office:** Douglas, Cochise Co., Ariz. **Officers:** Chas. Briggs, pres.; Capt. Jas. Hoatson, v. p.; Capt. Thos. Hoatson, second v. p.; Gordon R. Campbell, sec.; Peter Ruppe, treas.; preceding with Thos. F. Cole, Chester A. Congdon, Chas. d'Autremont, Jr., William E. Corey, Henry R. Rea, and Geo. E. Tener, directors; John C. Greenway, gen. mgr.; W. B. Gohring, mine supt.; James Wood, smelter supt.; J. H. Whiteley, engr.; J. B. Rawlings, purch. agt. John Hooper, supt. at Superior, and J. Curley, supt. at Ajo.

Inc. March, 1901, in Arizona. **Cap.**, \$2,500,000; shares \$10 par, increased Feb. 15, 1911, to \$6,500,000; shares \$10 par; issued 617,412 shares; held for exchange, 27,100 shares. The company which already controlled the Superior & Pittsburgh Copper Co., through ownership of 1,494,333 shares out of a total of 1,499,792 shares issued, in Feb., 1916, took over the property. All S. & P. assets were transferred to the C. & A. Co., effective Dec. 31, 1915, basis of exchange being 3½ shares Superior & Pittsburgh for 1 Calumet & Arizona, and a bonus of \$1 per share for quick delivery of

stock. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Stock is listed on the Boston Stock Exchange. Annual meeting, second Monday in April.

Balance sheet of Dec. 31, 1915, gave quick assets of \$7,162,795, including \$2,561,931 cash; copper, silver and gold in process, \$3,688,841; notes and accounts receivable, \$577,748; supplies, \$334,274; with accounts payable of \$224,548, and total surplus, \$30,971,627. Total earnings on copper, gold and silver were \$11,647,415, interest and misc., \$36,308; expenditures were \$6,225,595. Has paid dividends as follows: \$2 in 1903, \$6.50 in 1904; \$8.50 in 1905; \$13 in 1906; \$16.50 in 1907; \$4 in 1908, 1909, 1910, 1911; \$4.25 in 1912; \$5 in 1913; \$3 in 1914, and \$3.25 in 1915.

In 1911 the company took an option on the New Cornelia claims, 243 acres in the Ajo district, 42 miles south of Gila. The C. & A. was to receive treasury stock of the New Cornelia Copper Co. (described under its own title), for all money expended in development work on the property. It exercised its option in 1913 and now owns 918,821 shares, 76.57% of the stock of the subsidiary company. Stock cost C. & A. \$1,617,325, about \$1.76 per share. Recently it subscribed at par for \$3,100,000 bonds of an issue of \$4,000,000, which amount it set aside from earnings over dividends during 1914-15. In Jan. it finished building, jointly with the E. P. & S. W., the 40-mile Tucson, Cornelia and Gila Bend railroad running from Gila Bend to Cornelia. All told C. & A. has about \$6,000,000 in New Cornelia so that dividends during the past two years have necessarily been lower than earnings would warrant if it did not have this extra burden to carry. The New Cornelia Co. will not enter the producing class until late in 1916. Described under its own title.

Property: includes the original claims at Bisbee, claims formerly owned by the Superior & Pittsburgh C. Co., bought Dec. 31, 1915; the American Saginaw group, bought in 1912; the Calumet & Bisbee group and the Higgins group, bought in 1913; total area of about 2,000 acres, patented, within the mineral zone of the Warren district, Ariz.

Side-line agreements with the Copper Queen Cons. Mng. Co., the Denn-Arizona Mng. Co. and the Shattuck Arizona Copper Co., insure freedom from possible litigation, and continuance of the friendly feeling and neighborly co-operation existing from the very inception of this company.

Geology: the mine is opened in limestone, near a porphyry contact, with occasional porphyritic intrusions. The surface gives small indications of values, showing but small and infrequent outcrops, the existence of the original orebodies in the Irish Mag claim, farthest to the north, having been inferred from underground work in the adjoining territory of the Copper Queen, after careful study of the general geological conditions of the district. Ore occurs in highly irregular bodies, the mine having native copper, cuprite, melaconite, azurite, chalcocite and chalcopyrite, usually with a talcose gangue, and with considerable hematite and manganese ores, the latter carrying malachite in small disseminated nodules, frequently averaging 10 to 18% in copper. The ore, which is practically self-fluxing, averages about 2 oz. silver and 0.05 oz. gold per ton, as smelted.

Development: diamond-drill borings to depth of 1,800' have penetrated limestone strata to that depth. The orebodies are extensively developed, but are not largely blocked out, owing to the constant shifting of the ground, caused by the creeping of the mountain above, as is the case at the neighboring Copper Queen mine, requiring very heavy timbering, with frequent bulkheading, and constant care for all openings, which renders it prudent to keep costs down by blocking out ore but a comparatively short time ahead of actual stopping requirements. Timber is secured from

a great distance, and to guard against emergencies, large stocks are carried. The mine, as a whole, is not especially wet. Several small mine fires have caused trouble, but have not done serious damage. New openings in 1915 were 81,284', compared with 70,660' in 1914. Mines have electric traction on 1,150' and 1,350' levels.

The 4-compartment Irish Mag shaft, sunk on a single 20-acre claim, was the original mine, and the shaft is sunk in hard limestone throughout, except where occasional orebodies were cut, rendering it unusually safe from drawing. The Irish Mag has yielded some of the best copper ever mined, including some entire stopes of 30 to 40% copper tenor. The Irish Mag shaft has a 78' steel headgear, a 114' ore bin and a 250-h. p. electric hoist, raising 3-decked cages. The shaft is 1,350' deep. The Oliver shaft, 4 compartments, 1,600' deep, develops both of the Senator and Bucyeye claims, cutting ore at 710'. Sulphide ore averaging about 5% copper, is being mined from orebodies on the 1,250' and 1,350' levels. Development work is now being prosecuted on the 750' level to explore hitherto undeveloped ground. The Oliver has a 600-gal. Nordberg electric pump and is equipped with a powerful Nordberg electric hoist.

The Powell shaft, started Nov., 1908, is on the line between the Hope and Wagner claims, which lie 2,000' S. W. of the Irish Mag shaft. This ground was explored by a crosscut from the Irish Mag that traversed 600' of the Copper Queen ground, stopping about half way across the group, showing nothing of value. This shaft, about 600' deep, has an electric hoist.

The area below the 1,350' and 1,450' levels was diamond drilled, 1911, showing a downward extension of the mineral zone, several hundred feet to the bottom of the limestone, but without disclosing commercial ore.

The Washington, Angel and Old Republic claims lie on the porphyry side of the gulch, and were secured mainly as a possible smelter site, then being considered of little promise for ore.

In 1915, 5,165' of churn drilling on this group developed a substantial tonnage of low-grade disseminated ore in an irregular body from 170' to 450' below the surface.

The Cole shaft handles the output from the southwestern part of the company's holdings. The greater part of the recent production has come from a body of oxide ore of great size between the 800' and 1,000' levels. Smaller bodies have contributed sulphide ore on the 1,000' and 1,100' levels. A small body of lead carbonate ore of good grade is being developed on the 900' level. This shaft has Prescott and Cameron station pumps caring for a flow of 225 gals. of water per minute.

The Congdon shaft, on the Black Bear claim, only 650' from the Mag, is 1,267' deep, but has been out of commission several years, as the territory can be worked to better advantage through the Cole shaft. Surface equipment includes a 300-h. p. steam plant, with a 12x36" double-drum hoist.

The Hoatson shaft, on the Del Norte claim, 2,500' from the Briggs, has 5 compartments, and is 1,530' deep. An appreciable tonnage of both oxide and sulphide ore is being mined from bodies between the 1,200' and 1,400' levels. This ore is taken by electric haulage to the Junction shaft, where it is hoisted. Equipment at the Hoatson shaft includes a steel headgear, double-drum hoist, good for 2,000' depth. Power plant has 6 boilers.

The Junction shaft has 4 compartments and is 1,837' deep, being the deepest by nearly 300' of any shaft in the Bisbee district. Shaft is concreted to bottom level. The Junction is the main hoisting shaft of the Briggs-Hoatson-Junction division and virtually the entire production of the 3 mines, about 2,000 tons daily, is hoisted through it. Ore is hoisted in 5-ton

skips, crushed in Allis-Chalmers gyratory crusher, and loaded by belt conveyor into railroad cars.

Large bodies of both oxide and sulphide ore have been opened up on the 1,300', 1,400' and 1,500' levels. Development of the 1,600', 1,700' and 1,800' levels was started in 1915 and valuable orebodies have since been found. In addition to the ore of shipping grade developed, immense bodies of solid pyrite, carrying between 1% and 2% copper, have been found on the 1,400' and 1,500' levels. The mine is equipped with electric traction on the 1,400' and 1,600' levels.

The Junction shaft drains the entire Calumet & Arizona and Copper Queen group of mines. Water pumped during 1915, exceeded 1,900,000,000 gals., about one-half coming from the 1,800' level, remainder from the 1,500' level.

Pumping plant consists of five 1,000-gal. pumps on the 1,000' level, two 2,250 and one 1,500-gal. pumps on the 1,500' level; one 1,000, one 1,500 and one 1,650-gal. pumps on the 1,800' level.

Surface plant consists of 13 250-h. p. Marine boilers, a 4-cylinder Nordberg, double-reel Main hoist, good for 2,500' depth, and a Sullivan single-drum hoist. used as an auxiliary hoist for handling men and timber.

There is a 5,000' Nordberg compressor having compound air cylinders driven by a four-cylinder triple expansion steam engine. This machine has an attached air pump and condenser. In addition there is a 3,500' Nordberg compressor, having compound air cylinders, driven by a cross compound steam end.

The Briggs shaft, about 3,000' south of the Junction shaft, is 1,550' deep and 3,000' east of the Lowell shaft of the Copper Queen. Large bodies of enriched sulphide ore of much greater horizontal than vertical extent, averaging about 5½% copper, have been developed between the 1,200' and 1,400' levels. A substantial tonnage of oxide ore of slightly lower grade is being mined from the 1,100' to the 1,400' levels from nearly vertical fracture zones. With the exception of about 150 tons of oxide ore, hoisted at the Briggs shaft, the tonnage from this mine is handled by electric haulage on the 1,400' level to the Junction shaft and hoisted.

Equipment at the Briggs shaft includes wood gallows frame. Power plant has 2 boilers of 250-h. p. each, burning crude petroleum, with a powerful hoist.

The Copper Giant group, at Copper Creek, Graham county, Ariz., includes 35 claims, known as the Scanlon or Clark-Scanlon property, 16 miles northeast of Mammoth. This property, bought Sept., 1908, has been extensively tested by diamond drills, giving good cores, and has a 600' two-compartment working shaft, with several levels opened, and considerable medium to high-grade sulphide ore is blocked out. A 15-mile railway will be required to render this property a producer.

Equipment: surface equipment is very complete. The original machinery plant was clustered about the Irish Mag shaft, on a steep hillside, where limited room was secured by grading, but the principal plant is now at the Oliver shaft, including five 280-h. p. marine boilers, burning crude petroleum, with storage tanks.

The principal compressor plant, at the Oliver, has a 35-drill Sullivan Corliss cross-compound 2-stage air compressor, with 17x34" steam cylinder and 20x34" air cylinder, having a piston displacement of 6,600 cu. ft. of free air per minute. There also are 3 Sullivan straight-line air compressors. Much of the ore is so soft that it can be bored with a breast auger, thus reducing requirements in the way of air for power drills. Electricity is used extensively on surface and also for pumping. The electric power

plant at the Oliver shaft has 1,000-k. w., 500-k. w. and 300-k. w. Westinghouse-Parsons 2,200-volt, 60-cycle 3-phase turbo-generators, two 220-k. w. 2,200-volt 60-cycle 3-phase motors, direct-connected with the steam turbine, a 300-k. w. General Electric rotary converter, transforming a 2,200-volt alternating current to a 550-volt direct current, for operating the street-car line to Warren.

The steel-frame machine shop is divided into two 60x48' parts, for the machine shop and smithy. Adjoining is a plate shop, 40x128' of steel frame, with corrugated iron roof and siding. There is a framing mill at the Irish Mag shaft, also a warehouse and office building. A 60x125' administration building is planned to be erected at Warren, the town site adjacent to the Calumet & Arizona. A hospital with an efficient staff is maintained for employees, and a model changing house has hot and cold running water, tub and shower baths and lockers for 500 men. Fire protection is furnished by direct pipe lines to large storage tanks, all hose couplings being made to connect with those of the Bisbee fire department. An automatic telephone system has stations underground and on surface, and is connected with the smelter at Douglas.

The company's smelter is located at Douglas, 25 miles from the mine, receiving ore over the El Paso & Southwestern railway, at a very favorable freight rate. The original smelter was blown in Nov. 15, 1902, and has been twice enlarged, giving the old works a capacity of nearly 3,000 tons daily.

The new smelter, completed 1913 at a cost of about \$2,000,000, was designed by C. H. Repath and built and equipped with the able assistance of Messrs. Greenway and Wood. It is fully described by Richard H. Vail, in the Eng. and Min. Journal, vol. 98, p. 102, July 18, 1914. The works consist of a sampling mill, crushing plant, calcining plant, reverberatory blast furnace and converter departments and 6 mixing beds each of 10,000 tons capacity, together with a 5,000-ton coke storage bed.

The crushing and sampling plant, 40x84' on the ground and 5 stories high, is built of steel and concrete throughout, and is divided into 2 sections, operating independently of each other. Each section has a crushing and sampling department. Ore from the crushers at the receiving bins is delivered over an incline conveyor to the crushing and sampling plant, where the large sizes are screened out for the blast furnaces. The sampling department, equipped with Snyder automatic samplers, cuts the ore 4 times, making a sample weighing 1.6 or 3.2 lbs., as desired, per ton of ore passing through. The plant is flexible and ore may be crushed and screened and discharged at any desired size.

The material from the sampling and crushing plant is passed to mixing beds similar to those in use at the Cananea smelter, there being 3 beds for coarse and 3 for fine ore. The coarse ore mixed with coke is conveyed directly to the coke charge bins over the blast-furnace charge floor, the fine ore going directly to the calciner, or roaster plant.

The roaster plant has twelve 258" Herreshoff roasters, having a capacity of approximately 80 tons of fine ore per day. The plant is equipped with a tile and steel dust chamber, 60x140x70' high, equipped with baffles and wires and roofed with copper, discharging into a brick-lined steel chimney, 20' inside diameter by 279' high.

A 222x460' building, of steel frame, sheathed with iron, covers the blast furnace, reverberatory, converter, and copper-casting departments. The blast-furnace department consists of two 48x40' blast furnaces, and has a steel dust chamber, 60x180x70' high, equipped with suitable baffles and wires. The gases from the converters will also pass through this chamber and be discharged into a brick-lined steel chimney, 25' inside diameter by

305' high. Ore and coke is discharged directly from the bin over the charge floor into cars resting upon platform scales, the charge car being propelled from the scales to the charge doors of the furnace by an electric motor.

The reverberatory department contains 4 reverberatory furnaces, 19x100' in size, with a foundation and building for a fifth furnace in place. Each furnace is equipped with two 712-h. p. Stirling boilers. The furnaces are charged directly from the calcine cars running on a track overhead. Matte is tapped into 20-ton pots, and transferred by cranes to the converters, slag being skimmed directly into 25-ton pots, running on tracks underneath and just in front of the skimming end of the furnaces.

The converter department, having a main converter aisle 55' wide, and two 40-ton electric traveling cranes, has stands for 6 Great Falls type converters. There are also 2 straight-line casting machines and other necessary equipment. The converter slag is poured directly into the reverberatory furnaces.

The power house, formerly 80x160' in size, was increased, 1907, by the building of a transverse section 100x100' in size, the new building being divided through the center by a row of columns into 2 bays, each 50' wide, and each served by a 10-ton hand-power traveling crane. Equipment includes two 14 & 28x36 Allis-Chalmers Tandem Corliss engines, all driving No. 10 Connersville blowers. One 22 & 48 & 52 & 52x48 and one 22 & 42 & 48 & 48x48 Nordberg cross compound Corliss blowing engines, and one 20 & 40 & 44 & 44x48 Allis-Chalmers blowing engines.

There are also a 750-k. w. and a 500-k. w. Allis-Chalmers steam turbines, driving 440-volt, 60-cycle, 3-phase generators and one 165-k. w. and one 200-k. w. motor generator sets for converting alternating current to direct current for cranes and locomotives.

There are also 2 triple expansion steam pumps, size 8 & 12 & 20 & 22x24, and 3 motor-driven centrifugal pumps for water service; also two 14 & 25 & 2-36x24 Prescott beam condensers. Steam is supplied from the boilers over the reverberatory furnaces and the old boiler plant is closed down.

The smelter plant includes a machine shop and smithy, both of steel frame, and a considerable number of dwellings.

Production: since 1912 production and costs of the C. & A. and Sup. & Pgh. have not been published separately. Production of the combined properties, domestic and purchased ores, since 1910 is as follows:

Year	Lbs. Copper	Oz. Silver	Oz. Gold	Net Cost Selling Price	
				Copper (a)	Copper
1911.....	49,945,905	453,947	18,114	7.34 cts.	12.49 cts.
1912.....	53,108,628	594,319	22,881	7.02 cts.	16.25 cts.
1913.....	52,987,383	880,915	18,989	7.65 cts.	15.57 cts.
1914.....	52,667,929	922,143	24,122	8.19 cts.
1915.....	65,268,910	1,381,077	35,264	8.00 cts.

(a) Per pound copper, after crediting gold and silver.

After the outbreak of the European war, in 1914, production was curtailed and did not return to normal for several months. In 1914 C. & A. furnished 12.2%, and Sup. & Pgh. 87.8% of ore treated. During 1915 ore mined amounted to 690,881 tons, dry weight. There was shipped 29,400 tons low grade sulphide ore to El Paso and Miami, where a premium was paid for high iron and sulphur contents.

CALUMET & BISBEE DEVELOPMENT CO.

ARIZONA

Houghton, Mich. Property sold in 1913 for \$60,000, affairs of company wound up and final dividend in distribution of assets paid in 1914. F. W. Nichols and Joseph Bosch, trustees in liquidation. See Vol. XI.

CALUMET & CALIFORNIA MINING CO.**CALIFORNIA**

Office: Calumet, Mich. Mine office: Washington, Nevada Co., Cal. Thos. Rundell, pres.; Wm. Wedlyn, v. p.; Elbert E. Boyd, sec.; Neil Dick, treas. **Inc.** Aug. 3, 1914, in Wyoming. **Cap.**, \$200,000; shares \$1 par; assessable. Property was idle for several years when held by Fairview Mng. Co.; company reorganized 1914 under present title.

Property: 7 claims, 160 acres, 21 miles N. E. of Nevada City, nearest rail point, has 5 to 12' vein with schist hanging and serpentine footwall, capped by an iron-stained schistose gossan. **Development:** by 375' tunnel on the vein, with a back of about 170', showing chalcopryrite, with some gold, in a gangue of quartzite and iron oxide. The ore averages 1.1% copper, 16 cts. silver and \$4 gold per ton. Company has been doing development work since July, 1915. Property is a prospect.

CALUMET COPPER CREEK MINING CO.**ARIZONA**

Succeeded by Copper State Mining Company, which see.

CALUMET-CORBIN MINES CO.**CANADA**

Main office: 35 Congress St., Boston, Mass. Mine office: Gold Lake, Manitoba, Can. Wm. Bracken, pres.; J. K. Heath, v. p.; Erik Huneker, sec.-treas.; preceding officers are the directors.

Inc. Jan. 11, 1915, in Me., as a reorganization of the Calumet-Corbin Mng. Co. **Cap.**, \$2,500,000; shares \$1 par. Paul Revere Trust Co., Boston, registrar. Shares in the old Calumet-Corbin Co. are exchangeable on certain terms for those of the new company. Listed on Boston curb.

Company has a lease on the Gold Seal and Gold Pan claims, 102 acres in Gold Lake mining district, Manitoba, Can. Free gold occurs in a vein of gray quartz, in porphyry and schist. Samples evidently not representative of the quartz as a whole, are reported to show from \$600 to \$4,880 per ton gold with no silver contents. Property is a prospect on which development work is said to have begun 1916.

It appears that the Gold Lake lease covers a swamp in which quartz is found. Such quartz exposures are known at a great many places in Western Canada, but so far as known none of them are now commercially worked.

The New Era mine near Idaho Springs, Colo., taken under lease for \$150,000, was lost through default of semi-annual payments of \$7,500 in 1914, with local debts of \$10,000. The Montana holdings were previously abandoned.

It appears that the company has no real property and its stock represents nothing but paper whose only value is that it is saleable at about 5c per share (May, 1916). The sponsors for the stock are apparently interested in stock dealing, not mining, and Caveat emptor applies to all stock buyers.

CALUMET-CORBIN MINING CO.**MONTANA**

Succeeded by Calumet-Corbin Mines Co., which see.

CALUMET AND HECLA MINING CO.**MICHIGAN**

Address: 12 Ashburton Place, Boston, Mass. Mine office: Calumet, Mich. **Officers:** Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; Francis L. Higginson, Robt. F. Herrick and W. Hunnewell, directors. John F. Perkins, sec.-treas.; Chas. A. Hall, asst. treas.; A. J. Garceau, asst. sec.; W. A. Childs, supt.; W. M. Gibson, asst. supt.; E. S. Grierson, chief engr.; E. D. Leavitt, cons. mech. engr.; John Knox, chief mg. capt.; Ocha Potter, chief efficiency engr.; Fred S. Eaton, chief clerk; E. D. Johnson, purch. agt. Mill office: Hubbell, Mich., Henry Fisher, supt.; C. H. Benedict, mill metallurgist. Smelter offices: Hubbell, Mich.; H. D. Conant, supt.

Inc. 1871, in Michigan. Cap., \$2,500,000; shares \$25 par; paid in, \$12. Charter renewed, 1900, for 30 years, and amended, 1905, under the new laws of Michigan, making the corporation a securities-holding company, as well as a mining and smelting company. Was organized as a consolidation of the Hecla, Calumet, Portland and Scott mining companies. Stock is listed on the Boston Stock Exchange, and traded in on the unlisted department of the New York Stock Exchange. Annual meeting, second Thursday in June. Old Colony Trust Co., Boston, transfer office; American Trust Co., registrar of stock.

Balance sheet, of Dec. 31, 1915, gave cash and quick assets of \$9,543,283, with liabilities of \$1,286,837, leaving a balance of quick assets of \$8,256,446, not including notes outstanding at this date, which were \$4,134,000 at 4%, due Feb. 18, 1919. By July 10, 1916, there had been purchased by the company and placed in its sinking fund all but \$1,764,000 of these notes.

Dividends: \$5,000,000 in 1905; \$7,000,000 in 1906; \$6,500,000 in 1907; \$2,000,000 in 1908; \$2,700,000 in 1909; \$2,900,000 in 1910; \$2,400,000 in 1911; \$4,200,000 in 1912; \$3,200,000 in 1913; \$1,000,000 in 1914; \$5,000,000 in 1915; \$3,000,000 1st half of 1916. Total to July 1, 1916, \$132,250,000, or \$1,322.50 per share, being the largest dividends ever paid by any incorporated mining company, and, in addition, the Hecla Mining Co. and Calumet Mining Co. before their amalgamation under the present title, paid dividends aggregating \$950,000. Dividends received from other mining companies amounted to \$3,929,194 in 1915.

Since the change in charter, 1905, permitting the acquisition of stock in other corporations, the Calumet & Hecla has secured control of various other mines and mineral tracts, by organizing subsidiary corporations, and also by acquiring stock in companies previously organized. In 1905 the company bought the following stocks, at a cost of \$8,592,129.99 in cash and notes; 9,600 shares of Osceola; 19,400 shares of Tamarack; 24,796 shares of Ahmeek; 27,507 shares of Isle Royale; 10,316 shares of Seneca; 25,000 shares of Laurium. The attempt to secure physical control of the Osceola Consolidated Mining Co., at the annual meeting March, 1907, was met by determined opposition, which took the fight into the Michigan legislature and the federal courts. After nearly 2 years of strenuous litigation, the Calumet & Hecla secured control of the Osceola and other Lake Superior mining companies formerly under the management of A. S. Bigelow, through a bargain with Mr. Bigelow, by which his entire stock interests were sold to the Calumet & Hecla.

In 1916 Calumet & Hecla offered to purchase the remaining shares of Tamarack Mining Co., but to date the sale has not been accomplished. See Tamarack Mining Co.

The share holdings of the Calumet & Hecla in subsidiary companies were as follows on Dec. 31, 1915: 41,000 shares of Allouez Mining Co.; 41,500 shares of Centennial Copper Mining Co.; 19,400 shares of Cliff Mining Co.; 50,100 shares of Gratiot Mining Co.; 152,977 shares of La Salle Copper Co.; 32,750 shares of Osceola Consolidated Mining Co.; 50,100 shares of Superior Copper Co.; 37,823 shares of Laurium Mining Co.; 11,207 shares of Seneca Mining Co.; 32,910 shares of Isle Royale Copper Co.; 98,048 shares of Ahmeek Mining Co.; 19,400 shares of Tamarack Mining Co.; 34,259 preferred shares and 42,602 common shares of White Pine Copper Co.; 3,000 shares Calumet Transportation Co. The Frontenac, Manitou, Dana and St. Louis companies have been completely absorbed.

Property: the landed holdings of the Calumet & Hecla, including property owned outright, property controlled through subsidiary corporations, mining lands under option, and timber and miscellaneous lands, in Hough-

ton, Keweenaw and Ontonagon counties, Michigan, amounts to approximately 209,051 acres, of which 102,804 acres are in Keweenaw county. The company, with its subsidiaries, has a water front of more than 34 miles, on the shores of Lake Superior, Lac La Belle and Torch Lake, and approximately 60,000 people are supported by the operations of the company and its allied interests.

The Calumet & Hecla mine proper, about 2,750 acres, lies in a compact tract in Secs. 11, 13, 14, 15, 22, 23 and 24, T. 56 N., R. 33 W., in addition to which the company owns considerable tracts, west of the Tamarack mine, carrying the underlay of the Calumet conglomerate at such stupendous depth that opening would require a 2-mile vertical shaft, and it is very doubtful whether these lands ever will become available for mining on the Calumet conglomerate. The lands west of the Tamarack were explored, 1904, by diamond drill, in search of a supposed cupriferous conglomerate, but nothing of promise was found.

The original Calumet & Hecla mine is opened on the Calumet conglomerate bed, and a parallel mine has been developed on the Osceola amygdaloid, while a third parallel mine has been partly developed on the Kearsarge amygdaloidal bed.

The Calumet conglomerate has proven unprofitable both to the north and south of the Calumet & Hecla, though workable at the Tamarack mine, which has developed the underlay by vertical shafts. The conglomerate has an average strike of N. 33° 30' E., with average dip of 37° 30' with the horizon. The bed is of 5' to 26' maximum width, with an average of 13', giving about 2,400 fathoms of stoping ground, or about 43,200 tons of stamp rock, per acre. As a rule, the richer portions of the conglomerate are in the central part of the Calumet & Hecla tract. The walls of the conglomerate carry considerable copper, especially the amygdaloidal footwall, and much of the adhering trap rock formerly rejected is now milled. Pillars of 75' and even up to 150' width, left on either side of every conglomerate shaft, contain stamp rock equivalent to about 18% of the stoping ground available before the robbing of the pillars. The conglomerate mine is opened 6 to 8 years in advance of immediate requirements, and has upwards of 200 miles of shafts, drifts, crosscuts and winzes.

About 18,000,000' of timber, board measure, is used in the mine annually, and to the end of 1914, fully 900,000,000' of timber had gone underground. Iron pillars are used as supports, in crosscuts connecting the Red Jacket shaft with drifts on the bed, and in various incline shafts to support the hanging wall. Iron, mainly scrap material, such as worn out skip rails, cut to 10' lengths and placed above I-beams, is used for lagging, to some extent. The conglomerate bed in the lower workings is not up to its average value above, being wide, but low in copper contents, and it is evident, from the results secured by the deep shafts in the district, that while the cupriferous stratified beds of Lake Superior may descend to tremendous depth, copper values decrease below 4,000'.

The conglomerate mine, which, until a few years ago, was the entire Calumet & Hecla, has a life, at the present rate of production, of between 8 and 12 years, followed by 5 to 10 years of scrambling, with greatly decreased output. The conglomerate is deteriorating rapidly in average copper contents with depth. The mine works normally 175 power drills on the conglomerate, and 125 drills on the amygdaloid.

The Calumet & Hecla has suffered severely from underground fires. The rock carrying native metal cannot burn, like sulphide ore, but the old timbering eventually becomes nearly as inflammable as tinder. The really

serious mine fires, 5 in number, occurred in 1884, July and Nov., 1887, Nov. 30, 1888, and May 27, 1900. All possible precautions are taken against mine fires, these including the partial fire-proofing of all mine timber with zinc chloride solution, regular sprinkling of all shafts, the maintenance of water pipes and hydrants, fire hose, chemical engines, an electric alarm system and 18 telephones at various pump stations, from the 8th to the 51st levels, inclusive, in 5 different shafts, so distributed as to be most readily accessible from all part of the mines. From the first 4 fires the Calumet & Hecla suffered aggregate losses of several millions of dollars, while a number of lives were lost, and 3 valuable shafts were drawn so badly that they were abandoned. The fifth and last fire, in May, 1900, severely tested the mine's fire system, the fire breaking out on Sunday evening, when the mine was deserted by all but a few employees, and gaining great headway before it was discovered. The burning portion of the mine was shut off by closing the fire doors, and the mine was sealed at surface, by covering the mouths of the shafts with heavy timbers, with dirt tamped tightly into the crevices between. Wherever gas escaped through holes in the earth, dirt was tamped in and luted with water. The fire was extinguished in 3 weeks, and the South Hecla portion of the mine continued working without interruption. All fires have been of mysterious origin, and there seem reasons for suspecting incendiarism. Great precautions are taken to prevent unauthorized persons entering the mine, and permission to go underground is given only by the president, in writing, each pass being for a single trip.

Equipment: the conglomerate property of the Calumet & Hecla is worked as 2 separate mines, known as the Hecla and Calumet branches, the South Hecla being a southerly continuation of the Hecla branch, and the Red Jacket vertical shaft a part of the Calumet mine. The Calumet to the north, the Hecla in the center, and the South Hecla at the south, form one continuous mine, developing the Calumet conglomerate by incline shafts, the Red Jacket shaft opening the same bed vertically. The conglomerate, opened for 2 miles along the outcrop, has 11 shafts, 8 being known as single compartments, which means a single hoisting compartment, with 2 shafts having 2 hoisting compartments and 1 vertical shaft having 6 compartments. The blind shaft has an electric hoist and the mine has electric station pumps for forcing water to surface with steam pumps actuated by compressed air for short lifts, but it is planned replacing these latter by electric pumps also.

The conglomerate shafts on the outcrop are as follows, from north to south: Nos. 6 and 5, Calumet, latter a 2-compartment shaft, bottomed at the 57th level, 5,855' from surface. There is a considerable stretch of lean ground from No. 6 shaft to the Centennial boundary.

No. 4 Calumet, with 1 hoisting compartment, has a vertical depth of 4,748' and an actual depth of 7,995' on the incline of 37° 30', with a 200' winze from the bottom, giving a total depth of 8,290' from the collar of the shaft to the bottom of the winze. No. 3 Calumet shaft has been abandoned.

No. 2 Calumet shaft, with 1 compartment, is 6,186' deep, practically at the boundary, and the shaft pillars and arches were removed above the 55th level.

No. 2 Hecla shaft, 4,400' deep, and No. 3 Hecla shaft, 4,000' deep, are bottomed at the Tamarack boundary. Stopes are exhausted and the mine has been robbed by removal of shaft-pillars.

No. 4 Hecla shaft has been abandoned for some years. No. 6 Hecla shaft, with 1 compartment, is 7,875' deep, in good ground, and can be sunk to 8,500' depth. Nos. 7 Hecla and 8 South Hecla shafts of 1 compartment each, are 7,978' and 6,102' deep, respectively. Sinking was permanently dis-

continued at the 630' level in South Hecla No. 8, and in 1915 the shaft was abandoned after removal of shaft pillars and arches.

Nos. 9 and 10 South Hecla, a double shaft with 2 compartments, is 8,132' deep and can be sunk to 8,500' depth. Openings south below the 72nd level have shown a marked improvement.

No. 11 Hecla, 2,400' deep, showed very poor ground at the bottom, and has been robbed by the removal of all pillars from the bottom up.

No. 12 Hecla shaft, at the company's southern line, is 6,700' deep, bottomed in poor ground, disclosing a formation nearly barren of copper at depth. This shaft is practically abandoned.

The Red Jacket vertical shaft, of 1,800 tons daily capacity, permanently bottomed at 4,900' depth, cuts the bed at 3,287'. Rock temperature was 87° F., reduced to about 70° by connection with No. 4 Calumet shaft, exhausted air from the power drills aiding in cooling the mine. The Red Jacket shaft is 14' 6" x 24' 6" within timbers, and is built of brick and cement from collar to the solid rock, and timbered below with Georgia pine. There are 6 compartments, 2 used for hoisting, 2 for water, and 2 for men and supplies. The 2 hoisting compartments, at the eastern end, have cages with 9-ton Kimberly self-dumping skips swung under. The 2 western compartments have double-deck cages for men and material, and the 2 middle compartments have large cylindrical steel bailers, for raising water. Timber for the Red Jacket shaft is lowered through No. 4 Calumet, with which the Red Jacket is connected by a crosscut. The Red Jacket shaft hoists rock from all of the northern shafts below the 56th level, at which point the conglomerate is intersected. There are 9-ton steel storage bins at the various productive levels, which aid in maintaining the uninterrupted hoisting service that is absolutely essential in a shaft of a mile depth. The shaft rock house of the Red Jacket is 100x100' on the ground, and 110' high with 4 crushers, 1 for poor rock.

The "Five Forties" is a tract of 200 acres, a quarter-mile wide and 1¼ miles long, lying between the Tamarack and Tamarack Junior mines, carrying the underlay of the conglomerate at great depth, and, to obviate sinking a deep and costly vertical shaft, this tract is opened by a blind shaft 1,588' deep, starting from the 57th level, 2,750' N. E. of the Red Jacket vertical shaft. The blind shaft is sunk 40' under the footwall, at the same angle as the dip of the conglomerate, thus assuring solidity of walls while saving long and expensive crosscuts to the bed on each level. A footwall lateral on the 57th level parallels the regular drift, at a distance of 40' in the footwall, between the Red Jacket vertical shaft and the blind shaft, offering an avenue for operation that obviates the confusion certain to result were the regular mine drifts given double duty. The blind shaft starts in the footwall drift, under and parallel with the 57th level, and eventually will be about 1 mile in depth, opening 4 of the five 40-acre tracts, leaving the 5th and last to be opened by a sub-shaft from the blind shaft, which doubtless will be sunk on the same system. The necessity for this peculiar method of development arose from the fact that the boundary lines of the property run north and south, while the strike of the bed is N. 33°-30' E., giving a plane of dip of N. 56°-30' W. Owing to the incline shafts being sunk on the dip of the bed, while the blind shaft must follow the section lines, the latter descends diagonally on the dip of the bed, giving the blind shaft an average dip of about 22° only, although the bed dips at 37°-30'. This unusually flat incline permits the hoisting of rock in tram cars, by an electric hoist on the 57th level, cars being hauled through the blind drift and dumped into the steel bins of the Red Jacket shaft for hoisting, thus saving a transfer at the mouth of the blind shaft. The workings of the

"Five Forties" show the conglomerate bed to average about 14', with about 10' carrying stamp rock, the bed as a whole being very lean at this great depth. The abandoned workings of the Tamarack Junior mine of the Osceola Consolidated, which adjoins the "Five Forties," are drained by holes bored by diamond drill from the boundary stopes.

A drainage drift is driven, at depth of about 5,000', measured on the incline. 250' from the conglomerate, with a length of 5,100', extending from No. 10 South Hecla shaft to No. 7 Hecla and from the Tamarack boundary to Nos. 5 and 6 Calumet. This drift will drain water to shafts Nos. 7, 5 and 6, from which it will be lifted to surface by centrifugal electric pumps.

The Amygdaloid mine of the Calumet & Hecla is opened on the Osceola amygdaloidal bed, which outcrops 730' east of the Calumet conglomerate, with parallel strike and average dip of about 38°, underlying the entire main tract of the Calumet & Hecla mine. There are 6 shafts in the Amygdaloid mine, Nos. 13 to 18 inclusive, numbered from south to north. Shafts are duplicate in size, each having 3 compartments, of which 2 are used for hoisting and 1 for pipes and ladderways. The Amygdaloid mine has nearly 35 miles of workings and has frequent connections with the conglomerate by crosscuts. The Amygdaloid mine was closed 1901, and reopened 1904. In this mine the Osceola bed runs about 35' in width, with principal values along the foot and hanging, the middle third being lean, as a rule. Laterals in the Osceola workings are carried as drift stopes of 12' height along the hanging wall. The Calumet & Hecla owns, on its main tract, about 11,000' of the strike of the Osceola bed. Developed ore reserves of the Amygdaloid mine were estimated Jan., 1916, at 6,000,000 tons, and the Osceola bed has been found to carry fair copper values, at a vertical depth of nearly 1 mile, in the Tamarack property.

Depths of Shafts Jan. 1, 1916	Distance Between Shafts
No. 13..... 3,232'	13 to 14..... 2,780'

No. 15..... 3,002'	15 to 16..... 2,100'
No. 16..... 3,274'	16 to 17..... 1,800'
No. 17..... 1,799'	17 to 18..... 1,600'
No. 18..... 1,460'	

The Kearsarge amygdaloid bed outcrops about 2,200' east of the Osceola amygdaloid and 2,900' east of the Calumet conglomerate, with parallel strike and dip of about 38°, underlying the entire main tract. Work of development was begun Aug., 1903, and there are 3 shafts, numbered from north to south, each having 3 compartments and being practically duplicates of those on the Osceola amygdaloid. The shafts above the ledge are "timbered" with steel, brick and concrete, the hanging wall being lined with 3 arches of brick, laid in 3 to 5 courses, thickness being increased with depth, supported by 2 rows of I-beams, which serve also as dividers for the shaft. The Kearsarge bed, as opened by these shafts, is erratic, though showing stretches of ground that probably will yield 18 to 22 lbs. fine copper per ton, with reasonable selection. No work has been done on this lode since the beginning of the strike, July 23, 1913.

No. 19 shaft, about 1,000' south of the Centennial boundary line, is 1,350' deep, and was closed down Oct., 1907. No. 20 shaft, next south of No. 19, is about 1,350' in depth, and idle also.

No. 21, the southernmost shaft on the Kearsarge bed, is 8,000' south of No. 20, and, at shallow depth, showed well in copper, but deeper workings were not so promising, the rock yielding only about 12 lbs. of copper per ton of rock mined. The shaft is 2,291' deep; not working since July, 1913.

The Calumet amygdaloid, lying between the conglomerate and the

Oscola amygdaloid, has been little opened, but might prove payable, as it shows some good ground in a crosscut on the 900' level.

The shaft rock houses at the conglomerate incline shafts, of uniform pattern, accommodate 40-ton railroad cars. Rock is hoisted to the top of each shaft rock house, passing thence over grizzlies that allow the finer rock to fall through, the larger masses being reduced in 24x36" crushers. Crushed rock falls by gravity into storage bins, whence it is dumped into cars that take it to the mills, railroad tracks running underneath each rock house. The standard equipment includes a 50-h. p. induction motor at each shaft, for driving crushers.

Equipment: on surface at the Calumet & Hecla is probably the most complete installation to be found in the world. With few exceptions everything is duplicated, to prevent possible delay or suspension, by reason of fire or accident.

The power plants at the main mine, on the Calumet conglomerate, include 4 large boiler plants and 6 hoisting plants. The hoists of the conglomerate mine are very powerful, ranging in capacity from 1,000 to 5,600-h. p. each. Miners are carried to and from work, in the incline shafts, by man cars, these being long trucks having tiers of circus seats, replacing skips when needed, being shifted quickly on or off the skip tracks by large cranes. This method has proven the safest, quickest and cheapest for moving men in and out of deep incline shafts.

At No. 4 Calumet shaft there is a group of the most powerful mining machinery in existence. Engine house contains the 2,500-h. p. Corliss engine "Superior," with 40" cylinders and 72" stroke; the auxiliary engines "Baraga" and "Rockland," of 1,000-h. p. and 600-h. p. respectively; 2 Rand air compressors, of 25 and 40-drill capacity, and the engine "Mackinac," a 4,000-h. p. quadruple-cylinder triple-expansion steel giant, operating 4 Nordberg air compressors with a combined capacity of 500 drills. There also are four 35-drill auxiliary compressors. In the old Leavitt compressor, water was injected into the compression cylinders, while the Nordberg machines deliver the compressed and greatly heated air to a cylindrical steel cooler, 12' in diameter and 30' high, into which water is sprayed from above and drawn off at the bottom, this cooling the air to 80° F. Power is supplied by batteries of boilers in 2 boiler houses adjoining. Locomotives haul the coal into the boiler houses, where it is fed to the grates by stokers.

The Hecla engine house, flanked by a large boiler house, contains the 1,200-h. p. compound hoisting engine "Frontenac" and 2 auxiliary engines, of 600 h. p. each, also a 30-drill Rand air compressor and a pair of water-plunger air compressors, with combined capacity of 144 drills, being the largest machines of this type ever constructed.

South of the Hecla plant is the "G. H. & S." engine house, having the "Houghton" and "Seneca" engines, of 1,300-h. p. each. The Hecla boiler house has 5 large boilers and a 200' smokestack, of 9' 6" internal diameter.

The engine house operating Hecla shafts Nos. 7 and 9 contains the engines "Hancock" and "Pewabic," each of 140-h. p., which operate 25' drums by spur gearing, and two 600-h. p. vertical compound engines for man cars. Boiler house has 5 boilers and a 250' smokestack of 12' 6" internal diameter.

The South Hecla engine house at shaft No. 11 has a 1,000-h. p. Lidgerwood hoist.

The Red Jacket shaft has two 2,850-h. p. triple expansion hoists, and in an adjoining building are five 300-h. p. boilers. In raising 10-ton loads perpendicularly from a depth of 1 mile, the weight of the cage and steel cable nearly equals that of the cargo of rock, but with the aid of counter-

balance the engines can hoist 10-ton loads at a speed of 40 miles per hour, the regular hoisting time being about 90 seconds for the vertical distance of nearly a mile, including time taken for starting and stopping, an achievement no locomotive could duplicate on a horizontal plane. The engine operates on a system devised by S. B. Whiting, formerly manager of the company. To overcome the dangerous strain caused by unequal wearing, Walker differential rings are placed on the sheaves, the cables taking 4 complete turns around the driving sheaves.

Equipment at the Amygdaloid shafts on the Osceola bed is practically the same at shafts 13, 14, 15, 16 and 17, the new shaft, No. 18, having a combined engine and boiler house, with a small Lidgerwood hoist. Shafts 13 to 16, inclusive, have Nordberg first-motion double conical-drum hoists, operating $7\frac{1}{2}$ -ton skips in balance, good for 5,000' depth each. Shafts 17 and 18 are equipped with small Lake Shore and Lidgerwood hoists and single 5 and $2\frac{1}{2}$ -ton skips. All the shafts have permanent shaft rock houses, similar to those of the conglomerate workings. No. 15 engine house has an electric air compressor, used as a "booster," bringing the pressure up to 85 lbs. All engine houses have air connections with the main compressor plants at the old mine.

The machine shop has an equipment excelled by only a few of the largest shops in the country, including a 25-ton electric traveling crane and mammoth planers, with electric power throughout. These shops are capable of handling anything and everything in the line of repair work, and also have complete manufacturing facilities for the making of mining, milling and smelting machinery, and have turned out hundreds of Wilfley tables, and other special machinery, under agreement with the owners of the patents.

The foundry has 2 iron cupolas, and a brass foundry, with a 20-ton electric traveling crane. The pattern shop has 2 departments, one for the shop proper and one for storing patterns.

The carpenter shop is equipped with as complete a line of labor-saving machinery as can be found in any general woodworking establishment.

The blacksmith shops are as large as those of the largest manufacturers of machinery, and are fully equipped. The Calumet shop alone sharpens upwards of 50 tons of steel drills daily. The Hecla shop does blacksmithing and forging for the entire mine. The various shops employ upwards of 150 blacksmiths.

The main electric plant of 12,000-h. p. capacity is at the mills, in Lake Linden, with a substation at the mine.

The office building is a large and handsome stone structure, housing the various executive departments and the engineering force of the mine. The company's private telephone system has an exchange with about 220 instruments, including a number of deep underground stations, with local and long-distance connections.

The Calumet & Hecla public library had 42,120 volumes in 1915; ranks third in point of circulation in the state of Michigan, with an attendance, 1915, of 89,284. In addition to books in English, there are works in German, French, Italian, Swedish, Danish, Bohemian, Finnish and Croatian, with periodicals and newspapers in a score of languages, about 30 different nationalities being represented on the company's payroll. There also is a combination branch library and club house at Lake Linden, for employees of the stamp mill and smelters.

The company maintains a hospital, for employees solely, with complete surgical and laboratory apparatus and a dozen physicians.

The company owns about 1,200 dwellings, furnished to employees at **am**

average rental of 6% on actual cost, plus cost of maintenance, and upwards of 1,200 dwellings are owned by employees on lands leased from the company at low yearly rentals. This low rent is equivalent to an increased wage, compared with Western mines.

There are 15 school houses on the lands of the Calumet & Hecla, most of which were built by the company, including a fine manual training school, and a truly magnificent high school building at Calumet.

On Calumet & Hecla lands there are upwards of 30 churches, of a dozen different denominations. All of these sites were donated by the company, and in most cases substantial aid has been given in their erection and maintenance, entirely regardless of creed.

The company built a \$50,000 bath house containing tubs, showers and a 26'x40' swimming pool. A charge of 2½ cts. per bath is made, except in the women's department, which is free to women and children. The charge covers merely the cost of washing the towels and in no way compensates for the operation of the bath house proper.

In 1904 the Calumet & Hecla Mining Co. started a pension fund. Certain employees who had attained the age of sixty years or more and who had been in the company's employ twenty years or more, were retired on a pension proportionate to their length of service and their wages. These pensions have run from \$9 per month to \$38 per month.

The company maintains 3 distinct systems of waterworks, one at the mines in Calumet, one at the mills in Lake Linden, and one on the shore of Lake Superior, 4 miles N. W. of Calumet. The Lake Superior plant pumps water for domestic uses at Calumet against a head of 733', with an electric centrifugal pump of 3,000,000 gals. daily capacity. This plant also furnishes water to the mill and smelter boilers, on Torch lake. At the Calumet dam and mine there are 7 pumps, having a combined daily capacity of upwards of 45,000,000 gals.

The company maintains a fire department, affording protection to the mine buildings and location, and responding to calls from Red Jacket, Laurium and the other towns that go to make up the mining camp of Calumet, with 40,000 population.

The Hecla & Torch Lake standard gauge railroad, owned by the company, connects the mines, mills, smelter and shops by upwards of 20 miles of main tracks, spurs and sidings. Equipped with 150 forty-ton steel rock cars and several locomotives.

The 2 stamp mills, known as Hecla and Calumet, are at Lake Linden, 4 miles from the mine, on a tract of 998 acres, having several miles of frontage on Torch lake.

The mills have steel frames, with concrete foundations, spaced 20" apart, with 2 and 3 tiers driven to bed-rock, and topped with 6x12" square timber, capped by a 4' 6" bed of concrete. The mills have 27 Leavitt heads and 1 Nordberg steeple-compound head; 20 heads treating conglomerate rock and 6 crushing amygdaloid rock. Stamps are actuated by steam power, except the 6 stamps in the Hecla addition, which have independent 25-h. p. motors each, but the other milling machinery is operated electrically. The Leavitt heads have a daily capacity of about 400 tons of conglomerate, 500 tons of Osceola amygdaloid or 550 tons of Kearsarge amygdaloid.

The mill equipment below the stamps, includes Woodbury-Benedict jigs; ten 4-deck Evans-Rawlings round tables, from which slimes are treated by 96 Wilfley tables; Chilean regrinding mills. The 220 Wilfleys effect a considerable saving of the very fine copper formerly lost, and greatly reduce the water consumption.

As the mills stand on the flat western shore of Torch lake, but little

above water level, tailings speedily filled the shallow lake for some distance off shore, and to waste the sand it became necessary to secure a considerable initial elevation, which is gained by sand wheels. The material entering the mills as conglomerate rock leaves as coarse sand to the extent of fully 8,000 tons daily. The sludge is washed through launders to the sand houses, where it is scooped up by the buckets of the wheels and dumped, high above, into launders running on trestles far out into the lake, these spouting forth miniature brick-red Niagaras. There are two wheel houses, one for each mill. The Calumet wheel house has sand wheels of 50' diameter, and the Hecla 50' and 64' diameter. The sand wheel is to all appearances a gigantic bicycle wheel, fitted with spur gearing where the rubber tire should be. The complete wheel weighs 500 tons, and is mounted upon massive concrete masonry. Four 25-ton iron bed plates support the pillars carrying the 21-ton Krupp forged steel axle, which is 27" long and 32" in diameter with a hollow core of 26" diameter. Radiating from axle to rim are 2" steel spokes 32' long. The completed wheel is 10' wide and 64' in diameter, driven by gear and pinion, power being furnished by a 700-h. p. dynamo, and has a capacity of 55,000 gals. per revolution. Nearly 2 years were required to build and adjust this monstrous wheel.

The No. 1 regrinding plant, built 1908-09, and in full commission Jan., 1910, occupies a 195x340' building. The frame is of structural steel, resting on concrete foundations, the floor being of stamp sand, with a concrete capping, no particle of wood entering into the construction of the building. Power is furnished by eight 250-h. p. induction motors, giving about 100% excess capacity, to provide against delays through overhauling and repairing. The plant has cost about \$400,000. Equipment, built almost exclusively in the shops and foundries of the company, consists of 48 Chilean mills, resting on concrete piers, in 2 parallel rows, each pier being a hollow octagon 6' high and 7' in diameter, with a 10" wall, the hollow being filled to a height of 10' with stamp sand, capped by 4' of concrete. All piers are joined by concrete ribs, in which a heavy steel cable is embedded, passing through each pier connection. The Chilean mills are being replaced by Hardinge mills. There are 200 Wilfley tables, each section of the plant having 1 grinder, 18 tables for roughings, 4 tables for middlings, and 12 tables for slimes. Product from each set of 2 grinders goes to a settling tank, from whence the roughings go to the first 3 tables, and the slimes to 2 other tables, the middlings from each 15 tables going to 2 additional tables. The coarse sands from the Calumet mill go to sand wheel No. 2, and waste sands to wheel No. 1, the coarse sand elevated by wheel No. 2 running to the regrinding plant, where the amount going to each mill is regulated by feed gates, an overflow tank at the end of the launder caring for the surplus, in case of stoppage of the mill. A Hardinge conical tube mill, crushing coarse tailings, is 8' in diameter at the larger end, the pulverizing of sands being accomplished by the use of Danish pebbles on a lining of hard brick.

The regrinding mill has traveling cranes, and every piece of machinery is duplicated, so that breakages can be repaired quickly. The mill is fed with tailings from the stamps treating the richer rock in the Calumet mill, sands carrying up to 12 lbs. copper per ton. No slimes go to the regrinding plant, which treats exclusively coarse gravel and sand from the jigs and tables. The product is clean mineral, of good average tenor, which is pumped into bins, and thence loaded into cars for shipment to the smelter. Labor costs are very low, the plant being automatic throughout, and the force is only 12 men and boys per shift.

The management figured on an extraction of about 5 pounds copper per

ton from the tailings reground, at a cost of about 6 cts. per lb., on a basis of about 2,000,000 lbs. yearly production. Production, to end of 1915, from the tailings plant was 12,370,966 lbs. fine copper. Comparative results in No. 1 regrinding plant for several years are as follows:

Year—	Tons Coarse Tailings Crushed	Lbs. Cu. per Ton	Lbs. Cu. Rec.	Lbs. Copper Produced	Cost (a) per Lb.
1911.....	477,794	12.66	4.50	2,152,110	5.01c
1912.....	481,320	12.86	4.48	2,155,292	4.99c
1913.....	388,164	11.92	3.94	1,529,097	5.87c
1914.....	351,929	11.52	3.74"	1,316,704	7.38c
1915.....	337,243	13.14	4.01	1,352,869	6.52c

(a) Exclusive of smelting and refining.

The regrinding plant has proven its ability to treat fresh tailings at a substantial profit. The tailings at the Lake Linden mills are the most extensive in the world, containing about 40,000,000 tons of stamp sand, carrying an average of 8 to 10 lbs. of copper per ton in the newer sands, and 12 to 20 lbs. in the older sands, these tailings carrying about 500,000,000 lbs. of copper—an amount greater than the total production of any but the largest copper mines of the world.

The No. 2 regrinding plant, begun 1912, operations started in 1914, is practically a duplicate of No. 1. The mill is equipped with 64 Hardinge conical mills and will retreat tailings in Torch Lake. These are obtained by means of a specially designed dredge, which will dig to a depth of 100' below the surface of the lake.

Results for 1914 and 1915:

	Tons Coarse Tailings Crushed	Lbs. Cu. per Ton	Lbs. Cu. Rec. per Ton	Lbs. Cu. Produced	Cost (a) per Lb.
1914.....	75,630	11.84	4.59	347,363	5.66c
1915.....	168,461	13.14	4.73	796,858	4.36c

(a) Exclusive of smelting and refining.

A leaching plant will be completed in summer of 1916. It will retreat tailings from the regrinding plants by leaching with an ammoniacal solution, the ammonia being reclaimed, and is expected to take another 4 lbs. of copper from the tailings.

Water for the mills is supplied by 4 pumps, of which the "Michigan" is the most powerful in the world, having a daily capacity of 60,000,000 gals. Auxiliary pumps are the "Huron" and "Ontario," of 20,000,000 gals. capacity each, the "Erie" of 10,000,000 gals., and an I. P. Morris pump of 22,000,000 gals. daily capacity.

The electrification of the Calumet & Hecla was begun in 1904, and eventually will be completed, at mines, mills and smelters, except for some of the big compounded hoists and air compressors at the mine, where a change from steam to electricity would be doubtful economy, as well as necessitating enormous initial outlays.

Machinery at the power plant includes the old engines "Saginaw" and "Gratiot," the former an Allis-Chalmers twin vertical tandem compound-expansion engine having 17x40x48" cylinders, each engine being direct connected to a 1,000-k. w. alternating current generator, and the Leavitt engines "Owego" and "Ontonagon," of 3,000-h. p. each, built originally for hoisting purposes, direct-connected to 2,000-k. w. generators. The electric equipment of the mills includes 15 motors, of 20 to 250-h. p. each.

The boiler house has twenty 500-h. p. Babcock-Willcox tubular boilers. There are coal crushers, feeding an endless link-belt system with 308 steel link buckets, of 60 tons hourly capacity, taking coal to overhead bins, whence it is fed to the grates by Roney automatic stokers. Water require-

ments at the boiler plant are about 750,000 gals. daily, obtained from a 750,000-gal. reservoir, fed from Lake Superior via the Calumet pipe line.

The Torch Lake smelter is at Hubbell, about a mile south of the mills, on a 30-acre site having ample frontage on Torch lake, with deep water in front and 3 railways at the rear. The smelter has 4 stone furnace buildings, and a 50x70' furnace building, both blast furnaces and reverberatories having been rebuilt within the past few years. There are 15 reverberatories, which are top-charged, having platforms above on which the mineral is thoroughly dried before charging. The blast furnace is 40x96" at the tuyeres, its comparatively small size being due to the use of reverberatory furnaces for the bulk of the smelting work. A new steel-frame smelter building houses two 150-ton reverberatory furnaces, of the so-called Jumbo pattern, modeled after the furnaces of the Lake Superior Smelting & Refining Co. The practice of the smelting plant is fully abreast of the times, in all essentials.

The electrolytic plant, 155x270', at Hubbell, has superseded the Buffalo reduction plant, which has been abandoned. It is built of steel and brick, contains four 7½-ton traveling cranes and 512 lead-lined wooden tanks, 3'x11'x3' 9" deep, in 4 sets of 128 tanks. Each set is arranged in 4 sections of 32 tanks, and each section in two tiers. The electric current is furnished by four 125-volt direct current generators driven by alternating current motors operating on current transmitted at 13,000 volts from the power plant at Lake Linden, transformed to 2,300 volts. There is a continuous circulation through the deposition tanks of the electrolyte which contain about 3 to 4% copper and 10 to 12% sulphuric acid. The plant has a capacity of 65,000,000 lbs. copper per year. Company markets its own copper.

There is 1 concentrate or mineral house, with a storage capacity of 18,000 tons, at Hubbell. Calumet & Hecla concentrate, locally called mineral, carries less than 60% copper.

The power plant at the smelter has three 125-h. p. boilers, and each of the two large reverberatory furnaces has a 300-h. p. boiler attached through which the waste gases pass:

The smelting works have an assay office and laboratory, office and large warehouse for supplies.

The dock system of the Calumet & Hecla is extensive, including a series of very large coal sheds at Lake Linden and a series of docks at the mills and smelters on Torch lake. The 750' coal wharf has 11 Hunt hoists, and three 52' movable derricks.

The Calumet & Hecla owns and operates the ship canal connecting Torch lake with the government waterways on Portage lake, this canal being 21' deep and accommodating the largest vessels plying the great lakes. Tolls, ranging from 10 cts. on soft coal to 50 cts. per ton on package freight, are charged by the company, on independent cargoes entering Torch lake through this canal.

A saw mill, at the head of Torch lake, receives logs by rafts, and ships sawed lumber and timber by a branch of the Hecla & Torch Lake railway. The company owns extensive tracts of pine, hemlock and hardwood timber along the southern shore of Lake Superior, this land carrying between 400,000,000' and 500,000,000' of standing timber. The company also has a long-term timber contract with the Keweenaw Association, Ltd., and buys extensively of jobbers, the requirements for underground timbering alone being 25,000,000 to 30,000,000' annually, in addition to the many million feet of timber and lumber used on surface at the mines, mills and smelters.

The conglomerate rock from the old Calumet & Hecla workings has

shown a strongly declining tendency in values for many years past, and a rather alarming decline within the past few years. Net returns were almost 5% or 100 lbs. of fine copper per ton in 1873; 4.75%, or 95 lbs. fine copper per ton, in 1880; 3.012%, or 60.24 lbs. per ton, in 1889; 59.93 lbs. in 1900; 52.44 lbs. in 1902; 39.68 lbs. in 1907; 35.96 lbs. in 1908; 33.14 lbs. in 1909; 30.12 lbs. in 1910; 30.38 lbs. in 1911; 29.73 lbs. in 1912; 27.85 lbs. in 1913; 26.38 lbs. in 1914; and 29.74 lbs. in 1915.

Rock from the Osceola amygdaloid returned 18.45 lbs. per ton in 1907; 17.67 lbs. in 1908; 16.40 lbs. in 1909; 15.82 lbs. in 1910; 15.89 lbs. in 1911; 15.08 lbs. in 1912; 14.31 lbs. in 1913; 13.62 lbs. in 1914; and 13.32 lbs. in 1915.

Average for all rock milled, during the calendar year 1912, was 24.18 lbs. fine copper per ton; 22.11 lbs. in 1913; 20.70 lbs. in 1914; and 22.38 lbs. in 1915.

Detailed figures, by years, of both production and dividends, from the organization of the company, in 1871, may be found in the statistical chapter.

Production has shown a steady decline since 1906, in which year the high mark of 100,023,420 lbs. fine copper was reached, and in 1913 was only 45,016,890 lbs. copper, climbing to 53,691,562 lbs. in 1914 and 71,030,518 lbs. in 1915. Production in 1913 and 1914 was seriously affected by the labor strike, called by the Western Federation of Miners on July 23, 1913, and declared off on April 12, 1914, and by the extraordinary conditions prevailing in the copper market in 1914, due to the European war. The mine was operated on a ¼-time basis from Sept. 1, 1914, until Feb. 1, 1915, when work was resumed on full time.

Production and costs since 1910:

	Tons R'k Treated	Lbs. Cu. per Ton R'k	Mine Cost per Ton Exc. Cons.	Copper Produced Lbs.	Cost per Lb. for Cons.	Net Cost per Lb.	Rec'd Per Lb.

Reviewing the 50 years' career of this company, several features deserve attention. To the investor, the total dividends, \$132,250,000 paid on an investment of \$1,200,000 is not only remarkable for its amount but because dividends have been continuous.

To the technical man this record is particularly noteworthy, when the

mining record is considered. Beginning in 1866, with a small production from the rich native copper ore of the Calumet conglomerate, the company's present daily production of 10,000 tons now comes from 3 separate lodes, mined by 17 shafts, several of them a mile deep. The yearly production of copper is from 65 to 75 million pounds, with a record amount, 100 million, in 1906.

This production comes from very low-grade ore—lower, in fact, than that of the Utah Copper or other great porphyry deposits. The ore originally mined, carried nearly 5% or 100 lbs. of copper per ton, but the grade of ore decreased from year to year as depth was gained until it is now only 1½% or 30 lbs. copper per ton of ore. The maintenance of dividends despite this decrease in value is due to the ability of the management to steadily reduce costs from \$10 per ton to the present cost of \$3 per ton, so that a pound of copper is now produced as cheaply from the lean ore as it was from the richest ore. The company is also producing 5,000,000 lbs. of copper annually by retreating the old waste or tailings made many years ago at its mills and dumped into the lake, and has installed a leaching plant which promises to give a new youth to the entire district, by its treatment of ore carrying flake copper.

In 1906 the company, realizing that the Calumet conglomerate lode, on which the company was started, would eventually be exhausted, began the purchase of other properties and of shares in other Lake Superior companies. Controlling interest in six companies, bought for \$8,592,000 by issue of company notes (since reduced to \$1,764,000), has proven very profitable, these stocks returning \$3,300,000 in dividends, and meanwhile increasing over 25% in market value.

With its White Pine property and its new leaching plant, it looks as if a new era of prosperity was just beginning.

CALUMET & JEROME COPPER CO.

ARIZONA

Office and mine: Jerome, Yavapai Co., Ariz. **Officers:** G. W. Avery, pres. and gen. mgr.; Jos. Larson, v. p.; Geo. H. Avery, sec.-treas.; preceding, with J. W. Avery and Chas. F. Avery, directors. **Inc. May, 1907, in Arizona. Cap., \$1,500,000; shares \$1 par; issued 600,000.**

Property: 7 claims, 3 patented, 100 acres, one-half mile south of the United Verde mine, and adjoining the Cleopatra. Lands are traversed by an immense dike, of 600' estimated width. Ore occurs as lenticular deposits in sericitic schist in quartz porphyry, showing iron pyrite and copper glance. Mine has not yet reached the producing stage.

Development: several tunnels, one 115', a new main tunnel now 1,100' long and a shaft 100' deep, planned to connect with main tunnel at depth of about 500'. **Equipment:** 4-h. p. engine and blower. Company a local organization, working but few men. Management plans continuing main tunnel and drifting in 1916.

CALUMET & MONTANA CONSOLIDATED MINING CO. ONTARIO

Office: Cobalt, Ont. **Officers:** H. A. Oswald, Minneapolis, pres.; Jas. A. Patterson, v. p.; John Boyle, sec.-treas.; above, with W. W. Sloan, C. H. Collins, Wm. Weichel, directors. Geo. G. Thomas, gen. mgr.; W. W. Mulholland, supt. **Inc. 1912 in South Dakota. Cap., \$5,000,000; shares \$10 par; outstanding 200,000 shares. Annual meeting second Tuesday in October.**

Company is a reorganization of the Calumet & Montana Mining Co., which see. At last accounts the company had one claim of 51 acres in Coleman Township, Cobalt, Ont., said to show fissure veins in diabase carrying silver ore. Developed by 225' vertical shaft with 500' of underground workings. In June, 1916, operations were reported to be in full swing and ore hoisting to have begun.

CALUMET & MONTANA MINING CO.**MONTANA**

Company went into bankruptcy and affairs in Montana wound up in 1915. See Vol. XI, Copper Handbook. Company reorganized as Calumet & Montana Consolidated Mining Co., which see.

CALUMET-NEW MEXICO MINING CO.**NEW MEXICO**

Office: 154 W. Randolph St., Chicago, Ill. **Mine office:** Magdalena, Socorro Co., N. Mex. **Officers:** Alex. McCallum, pres.; Alpheus McCallum, v. p.-treas.; J. A. Pement, sec.; preceding, with Jacob Ehrenberg, directors. J. A. McCallum, supt. Inc. in New Mexico. **Cap.**, \$1,000,000; shares \$1 par; outstanding 908,609 shares.

Property: 12 claims, 10 patented, 240 acres, in Magdalena mining district, 2 miles from a railroad, and 5 miles from Magdalena, shows ore assaying up to 21.2% copper, 20 oz. silver and \$19.84 gold per ton, with occasional lead and zinc. **Development:** by tunnels with about 3,000' of openings. Company also controls 3 claims in the Pinos Altos mining district, N. M., developed by 570' of shafts and drifts on a fissure vein of ore said to assay 36% zinc, 9% lead, 9 oz. silver and .4 oz. gold. Company is putting in power plant with intention of shipping ore in 1916.

CALUMET-SONORA MINING & MILLING CO.**MEXICO**

Bonds foreclosed, Feb. 13, 1915, and property sold to R. P. Burgan for \$82,000. New company organized as Carnegie Lead & Zinc Co., which see.

CAMAS COPPER MINING & MILLING CO.**MONTANA**

Idle. Property near Camas, Sanders Co., Mont. Fully described Vol X.

CAMBRIA COPPER CO.**NEVADA**

Property near Aurum, White Pine Co., Nev., assessed at \$6,600, was advertised delinquent for taxes, July, 1913. See Vol. XI, Copper Handbook.

CAMERON-JOHNSON GOLD MINING CO.**ALASKA**

Recently reorganized as Valdez Gold Co., J. D. McDougall, supt.

Valdez, Alaska. Owns a group of claims on the right side of Shoup Glacier, N. W. of Valdez, which show fissure veins in graywacke and argillite. **Ore:** free milling gold quartz. About 3% of the ore is said to be sulphides of iron, lead and zinc.

Development: several hundred feet of tunnels. The upper workings are mainly on the Treasury Note vein, said to show from 3" to 36" ore. Lower workings are chiefly on the Mazuma claim, said to have the largest vein, as well as lowest grade on the property. In 1914 over 700' of work was done.

Equipment: includes a 3,850' aerial tram, 5-stamp mill, a 7' Lane mill, concentrator and bunkhouse. Power is supplied by a No. 3 Pelton water wheel operating under a 240' head. Thirty men are employed on the property. Report for 1913 shows an expenditure of \$41,267 with a production of 180 oz. bullion in test runs. See U. S. G. S., Bull. 622, p. 172.

CAMP BIRD, LTD.**COLORADO**

Offices: No. 1 London Wall Bldgs., London, E. C., and Telluride, Colo. H. C. Hoover, chairman, F. W. Baker, L. Clerc, F. A. Govett, F. H. Hamilton, G. de Pass and O. De Rivaud, directors. R. J. Frecheville, J. A. Agnew and L. Chevrillon, technical committee. A. A. Kelsey, sec.; Wm. J. Cox, gen. mgr.; J. B. Glasser, asst. mgr.; Jos. H. Scott, mine supt.; Thos. H. Woods, mill supt.

Registered Sept. 8, 1900, in England. **Cap.**, £1,100,000, increased to £1,350,000 in Dec., 1909, and in July, 1911, to £2,100,000, consisting of 750,000 7% cumulative participating preference shares of £1 each, 649,625 issued, and 1,350,000 ordinary shares of £1 each; 1,100,051 issued. Total dividends to end of 1915: \$9,750,836, averaging almost 20% yearly on outstanding stock.

Accounts for fiscal year ending June 30, 1915, showed a profit of £117,899, making with balance forward a sum of £123,291, of which dividends absorbed £100,476. Balance carried forward was £6,589. An income of £50,710 was derived from Santa Gertrudis shares. Balance sheet June 30, 1915, showed assets of £1,853,844.

Company's holdings in Santa Gertrudis, Ltd., Mexico, are 1,126,901 shares, or 75.13% of the issued capital, and in The Messina (Transvaal) Dev. Co., Ltd., 29,944 shares out of a total of 727,154. Of the latter company the Santa Gertrudis Ltd. holds 33,500 shares. Ore reserves of the Messina Dev. Co., at Messina, Zoutpansberg, Transvaal, estimated June 30, 1915, as 131,700 tons, 6.6% copper, of practically proved ore, and 43,700 tons, 3.7% copper, of prospective ore.

The company was formed in 1900 by F. W. Baker and John Hays Hammond to acquire from Thos. F. Walsh the Camp Bird gold mine, near Telluride, Ouray Co., Colo. Purchase price was \$5,000,000. This property returned handsome profits for 10 years, when the lower levels showed signs of impoverishment. Other properties were then sought with the idea of making the company a mines-investment organization. The Santa Gertrudis silver mine was floated in this way and holdings acquired in the Messina.

The Camp Bird mine is located at an altitude of 11,000' and 8 miles from the railroad, which necessitates hauling supplies and concentrates over a mountain road, making operating costs comparatively high. The Camp Bird orebodies occur in a fissure vein in andesite. The ore has for its base hematite and is associated with iron, zinc and lead sulphides; it occurs in streaks, being less persistent and narrower with depth, and less regular in its relation to the walls. Stopping width is 5 to 8'. Ore reserves: after treating 32,313 tons dry ore, from which a profit of £112,548 was obtained (or 6,604 tons, and £49,000 in excess of both the tonnage and profit estimated June 30, 1914), the reserves June 30, 1915, were estimated as 14,800 tons of broken ore and 1,100 tons of unbroken ore that would yield a profit of \$275,000.

Content and value of ore per ton recovered in 1914-1915 is as follows:

Year—	Gold	Silver	Lead	Copper	Value
1914.....	1.13 oz.	4.27 oz.	1.32%	0.26%	\$26.19
1915.....	1.33 oz.	3.78 oz.	1.05%	0.17%	29.47

Development: shafts and tunnels. Work done in year ending June 30, 1915, amounted to 3,031', which included 102' of sinking shaft No. 3. This shaft, the main working shaft, is 1,003' deep and opens up the 9th level at the 1,000' point.

Equipment: includes a 60-stamp mill, of which 25 stamps only are used at present, and a cyanide plant. An aerial tramway connects the mine and mill.

During the year ending June 30, 1915, the mill treated 32,313 tons of ore, compared with 30,595 tons the previous year, and the cyanide plant treated 20,655 tons of tailing.

Of total value extracted there was obtained by amalgamation 58%, by concentration 37%, by cyanidation 5%. Gold recovery was 96%, with a 94% recovery for combined gold and silver. Exclusive of depreciation the cost per ton was \$9.82, with additional \$1.60 per ton spent on development.

Plans systematic exploration in depth by means of a low-level adit. This adit will be 10,700' long and will cut the lode 450' deeper than any existing workings and 800' below the main ore-bearing ground. In this part of Colorado the sedimentary series is overlain by a great thickness—10,000' maximum—of lava flows and breccias.

It has been proven by experience that the richer veins in breccia cov-

ering do not continue into the sedimentaries, but become impoverished before reaching that horizon. As the adit will be from 1,000 to 2,000' above the sedimentaries, it seems as though there is sufficient margin of safety between it and the limit of possible productivity.

It was thought several years ago that the mine was on the verge of paying its last dividend, but each year has seen it well up on the list of dividend payers, and if present plans of the management are productive of the results they deserve the mine will continue to be a profitable producer for a long time to come.

CAMP BIRD MINING, LEASING & POWER CO. COLORADO

Office: Pitkin, Gunnison Co., Colo. **Officers:** T. R. L. Doughtrey, pres.; F. E. Gilbert, v. p.; O. C. Gilbert, sec.; G. R. Calhoun, treas. Inc. in Aug., 1914, to operate the Camp Bird mine, located between Pitkin and Bowerman. The mine is said to have produced high-grade gold ore. Present management at last accounts was sinking a shaft with intention of cross-cutting 80' to the old mine workings at a depth of 230'. Company refuses to furnish information for publication.

CAMPO SECO MINES. CALIFORNIA

Owned by Penn Mining Co., at Campo Seco, Calaveras Co., Cal.

CANADA COPPER CORPORATION, LTD. (N. P. L.).

BRITISH COLUMBIA AND WASHINGTON

Office: 42 Broadway, New York. **Officers:** Newman Erb, chairman; L. W. Mayer, pres. and cons. engr.; Colgate Hoyt, 1st v. p.; A. J. Ronaghan, 2nd v. p.; R. H. Eggleston, sec.-treas.; preceding officers, with exception of R. H. Eggleston, C. H. Burke, August Heckscher, C. A. Starbuck, C. I. Stralem, directors. Equitable Trust Co., New York, transfer agent; Empire Trust Co., registrar.

Inc. March, 1914, in Virginia. Cap., \$5,000,000; shares \$5 par; outstanding Dec., 1915, 600,200 shares. Authorized \$1,000,000 in 10-year 6% convertible debentures. Assets Dec. 31, 1915, include B. C. Copper Co. stock, \$3,000,000; notes receivable, \$460,000; mining property, \$13,554, and cash, \$49,374.

The corporation is a holding company, organized for the purpose of financing and taking over the British Columbia Copper Co., which needed funds for development work and other obligations; 444,952 shares were exchanged for B. C. Copper Co. shares, which were put in the treasury; balance 155,048 shares and \$155,048 par debentures were taken up by the underwriters. The company loaned \$340,000 to the B. C. Copper Co., December 31, 1914, secured by a first mortgage. These funds are for purchase and development of properties optioned.

In January, 1916, the company refinanced its indebtedness, retiring the outstanding \$600,000 debentures by a conversion of the bonds into stock, the holders receiving 2½ shares of stock for each \$5 par of debentures.

Management, practically the same as the B. C. Copper Co., is able and thoroughly experienced, but more money is needed before the new properties can be worked and the ore milled. See British Columbia Copper Co.

CANADIAN COPPER CO. ONTARIO

Subsidiary of International Nickel Co.

General office: 43 Exchange Place, New York. Mines and smelter office: Copper Cliff, Ontario. Mines in the Sudbury district. **Officers:** A. D. Miles, pres.; F. S. Jordan, 1st v. p.; Andrew Squire, 2nd v. p.; J. L. Ashley, sec.-treas.; A. D. Miles, W. A. Bostwick, F. S. Jordan, Andrew Squire, F. S. Whitcomb, directors; G. E. Sylvester, asst. to the pres.; J. L. Agnew, gen. supt.; J. C. Nicholls, mine supt.; Wm. Kent, smelter supt.;

J. W. Rawlins, metallurgist; Frank Ludlam, gen. pur. agt.; E. Horton Jones, chief eng.

Inc. Jan. 6, 1886, in Ohio. Cap., \$2,500,000; shares \$100 par. Licensed in Canada by special act of Parliament. Controlled through entire stock ownership by International Nickel Co. The Canadian Copper Co. is the world's largest producer of copper nickel ores and copper nickel matte. Ore was discovered 1884, mining commenced 1886 and smelters were started in 1888.

Property: about 18,000 acres, mostly on the south range of the Sudbury nickel belt. The ore consists of a mixture of chalcopyrite, pyrrhotite and pentlandite in a norite gangue. The ore may be massive sulphides, as in the Creighton mine, or disseminated sulphides scattered through the gangue, as in "No. 3" mine. For geology see Eng. & Min. Jour., Vol. 101, No. 19.

The Creighton mine is developed by 2 incline shafts of about 47° and 340' apart, the maximum vertical depth of hoisting at present being 760'. Open pit mining was the principal system until 1912, since which time underground stoping has been almost exclusively carried out, the mine being fully developed to the 10th level. Trimming is done by electric locomotives with 3-ton cars on the main levels. Primary crushing of the ore is carried out underground at two main level stations. The crushers are the jaw type, 42"x36", and are set at 6". The shafts are equipped with electrically driven hoists for handling skips in balance, mechanical appliances being in use for quick loading of skips. The handling of men in the mine is provided for by a separate hoist. Secondary rock crushing and sorting is carried out in two rock houses embodied in the head frame at the shafts, picking belts being provided for hand sorting.

The Creighton mine has 4 air compressors, the largest of 5,000 cu. ft. capacity, the whole equipment being sufficient for operating 100 rock drills. Two more 5,000 cu. ft. compressors have been ordered. An extensive construction program is in progress embracing new 5-compartment incline shaft at 55°, complete with rock house and sorting plant of 500 tons per hour capacity. A 4,000-ton surface storage bin is provided with extensive surface tracks and sidings for ore storage. Main electric hoist operated on the Ilgner system is being installed, handling 9-ton skips at a speed of 2,500' per minute. Warehouse, new workshops and subsidiary buildings are approaching completion. Producing 2,500 tons of ore per day and employing 1,000 men in 1916.

Crean Hill mine, about 2 miles east of Victoria mine, is opened by a 4-compartment shaft, 780' deep, the first 300' at an angle of 57° and the remainder at an angle of 71°. Active exploration by diamond drilling and development has recently proven large additions to ore reserves. The daily production is about 600 tons of sorted ore with stoping in progress down to the 9th level.

Surface equipment consists of rock house for crushing and sorting ore, power house containing compressors, suitable for operating 40 drills, workshops, warehouses and necessary housing facilities for employees.

No. 2 mine, situated at Copper Cliff, is developed to the 11th level at a depth of 860', and produces about 200 tons of sorted ore per day. Surface equipment at No. 2 mine is similar to that at Crean Hill.

A quartz quarry about 15 miles south of Copper Cliff produces the necessary quantity of quartz used for fluxing. This quartz quarry is operated during the summer months, when the output is so arranged as to provide the necessary storage of crushed quartz for the winter's requirements.

All the mines are operated by electric power, which is transformed to

2,200 and 550 voltage. A subsidiary corporation of The International Nickel Co., known as the Huronian Co., has a hydro-electric installation at High Falls, on the Spanish River, about 30 miles from Copper Cliff, utilizing an effective head of 85', which yields about 10,000 k. v. a. The current is transmitted at 35,000 volts.

Ore from the various mines is sent in part to the new roast yards, about 10 miles from Copper Cliff, and in part direct to the smelter. The old roast yard at Copper Cliff was abandoned in 1916. The new yard is about 7,500' long and is served by four tracks. It contains space for 116 roast beds. The ore is reloaded from the beds by steam shovel and taken to the smelter in 50-ton drop-bottom steel cars, from which it is dumped into bins 30'x600'x23' deep.

The blast furnace building contains 7 furnaces, 5 of which are 4' 2"x17', one 4' 2"x21' 3", and one 4' 2"x25' 6". Four of the furnaces are now 18' deep, a 3' 6" jacket having been inserted between the upper and lower tiers to lower the settlers sufficiently to receive molten converter slag. The new settlers are oval, 23' 6"x17' 6"x5' 6", lined with chrome brick.

The jackets, except the top row, are of cast iron with a grid of cooling pipes cast in. The lower jackets are 8' 6" in height and carry 2 tuyeres 6" in diam.; there are 8 jackets on each side, thus making 16 tuyeres on each side of a 17' furnace. The center line of tuyeres is 3' 10" above the sole plate. The upper jackets of steel plate are 6' in height. The furnace building is served by two 50-ton and one 25-ton cranes.

The charge is a mixture of raw and roasted ores which, as a rule, is self-fluxing, but which can be adjusted as required, by the admixture of quartz or limestone. About 11% coke is used on the charge. The slag carries about 32% silica and is sent to the dump in standard gauge slag pots of 225 cu. ft. capacity. Matte from the blast furnace is taken to the converter building, which is parallel to the blast furnace building and 60' away. This matte averages 24% CuNi. Fine ore from the mines is in part smelted in the blast furnace department and in part sent to the reverberatory department.

The reverberatory department contains a fine grinding plant, 4 Wedge roasters and 2 reverberatories, one working. This department is served by a high level track 70' above the main yard and has steel storage bins of 126,000 cu. ft. capacity for ore and fuel. The ore is ground in ball mills and roasted in Wedge furnaces. These are 22' 6" diameter, have 7 roaster hearths and 1 dryer hearth, producing calcines containing about 7% sulphur. The reverberatory charge consists of a mixture of calcines, green ore fines and flue dust. Ore is fed along the side and end walls of the reverberatory from a continuous trough shaped bin, served by a charge car, and drops into the furnace through feed pipes in such a manner that the side walls are continually protected by a blanket of fresh charge. The furnace smelts about 500 tons charge in 24 hours. The furnace burns pulverized coal, which is crushed to pass 200 mesh and is blown in by fan blast; about 100 tons a day is consumed, and has proved entirely satisfactory. The slag is skimmed from the front of the furnace into 225 cu. ft. iron pots. Matte is tapped from the front near the slag skimming door. It averages 23% CuNi.

The matte from both departments goes to the converter building, which is served by two 50-ton cranes of 55' 8" span with 20-ton auxiliary hoist. Matte is charged into 5 basic converters of the horizontal type 37'x10' diam., using about 7,000' free air per min. A mixture of quartz and mine rock which carries a little ore is used for flux. The operation is conducted exactly as in the conversion of copper matte, but is stopped as soon as the iron is eliminated. The final product contains about 25% Cu., 54% Ni. and

0.50% Fe. The slag contains about 27% silica and 4% CuNi, most of which is recovered by passage through blast furnace settlers. The matte is cast into iron moulds, broken up and sent to the refinery at Bayonne, N. J.

A separate refinery for the manufacture of nickel in Canada is planned and will be erected shortly.

Output: of the Canadian Copper Company in 1915 was approximately 49,800 tons of finished matte. Company employs directly about 3,100 men.
CANADIAN EXPLORATION CO. ONTARIO

Offices: 28 Victoria Sq., Montreal, and Naughton, Ont. **Officers:** Geo. E. Drummond, managing director; R. W. Brigstocke, supt. **Property:** Long Lake gold mine, near Naughton, Ont. Orebody consists of an elliptical mass of quartzite, carrying considerable mispickel and pyrite with gold values.

Development: 225' shaft with levels at 80 and 180', and development below the 180' by means of a winze. **Equipment:** 20-stamp mill, daily capacity 120 tons, cyanide plant, and compressor and steam-power. Employs about 100 men.

Production: 5,800 oz. gold in 1913; has been operating since, but production figures not available. Present method of treatment said to have increased profits.

CANADIAN MINING CORPORATION, LTD. ONTARIO

Secretary and office: V. Layman, Balfour House, Finsbury Pavement, London, E. C., England. **Directors:** A. C. Fitz-George, chairman; P. N. Furber, vice-chairman; R. F. Eden, T. W. Inwood, T. Plunkett, H. H. van Cutsem, R. E. G. van Cutsem.

Registered March 12, 1914, in England, to consolidate the several mining companies described under Mining Corporation of Canada, Ltd., which is the Canadian and operating company. Consideration was 1,529,118 fully-paid shares. Cap., £1,660,050; shares, £1 par; 1,529,130 shares issued, credited as fully paid.

For period ending, March 31, 1915, dividends received from the Mining Corporation of Canada, Ltd., amounted to £98,154 and net profit, after deducting general expenses and writing off £1,698, $\frac{1}{3}$ of preliminary expenses, was £92,132; dividends absorbed £76,456 and taxes £1,808, leaving £13,867 carried forward; cash £43,984, preliminary expenses £3,396; creditors £9,328; unclaimed dividends £24,271.

Dividends: $2\frac{1}{2}\%$ Nov. 25, 1914; $2\frac{1}{4}\%$ March 31, 1915; $2\frac{1}{2}\%$, interim, Oct. 14, 1915.

CANADIAN MINING & FINANCE CO., LTD. ONTARIO

Officers: L. H. Timmins, pres.; J. McMartin, v. p.; D. A. Dunlap, treas.; J. B. Holden, sec.; P. A. Robbins, gen. mgr. Company is a privately owned corporation, which has title to and operates the Acme Gold Mines, Ltd., and the Millerton property, at Porcupine, Ont., both adjoining the claims of the Hollinger Gold Mines and acts as general manager for the latter company. Also owns Claim 13,147, adjoining Acme on south and Hollinger on east, and the townsite of Timmins, adjoining the Millerton property on the northwest. The above properties were consolidated in May, 1916, under the name of Hollinger Cons. Mining, Ltd., which see. The company is sinking a six-compartment concrete-lined central shaft on the Acme property, close to the Hollinger line. The shaft has stations at 425', 800' and 1,250' and is equipped with electric haulage and a central crushing plant, capacity 5,000 tons daily. It is expected to have this shaft in operation by the middle of 1916.

A central power plant has been built at the edge of Gillies Lake, to furnish power for the 3 companies. It is equipped with an emergency boiler-

plant, consisting of 4 Wick boilers, 350-h. p. each; 3 electrically-driven air compressors with a capacity of 4,500 cu. ft. free air per min. each; pumps for supplying water to the Hollinger mill, and an emergency fire pump. Entire plant, including distributing pipe lines, cost \$244,273. Up to Jan. 1, 1916, the company had invested in plant and equipment, \$483,695.

CANADIAN SMELTING & REFINING CO. ONTARIO

Office: Orilla, Ont. **Officers:** J. B. Tudhope, pres.; Geo. Hayward, treas.; W. L. Vail, sec.; M. B. Scott, metallurgist; C. Doolittle, supt. Inc., Oct., 1914, in Canada, and took over the assets of the Canada Ref. & Sm. Co. Works at Orillia have been partially rebuilt and an additional blast furnace added. Capacity of the cobalt refining department has been increased to 2 tons of oxide per day. Products shipped are refined silver and arsenic, and the oxides of cobalt and nickel. Company employs 75 men.

CANANEA CONSOLIDATED COPPER CO., S. A. MEXICO

Mines and works: Cananea, Sonora, Mexico. Dr. L. D. Ricketts, pres. and gen. mgr.; C. T. Knapp, v. p.; Geo. Young, sec.-treas.; J. W. Allen, asst. treas.; Casey Stites and W. S. Harper, asst. sec'ys; Geo. Kingdom, gen. supt.; T. Evans, traffic mgr. and purch. agt.; G. W. Prince, smelter supt.; F. J. Strachan, mill supt. **Directors:** L. D. Ricketts, C. T. Knapp, Geo. Young, Casey Stites and M. J. Elsing.

Inc. Sept. 30, 1899, in Mexico. **Cap.**, 20,000 pesos, shares \$1 gold par. Entire stock owned by Greene Consolidated Copper Co., the C. C. C. Co. being merely the operating company, holding direct title and right to operate the property, as is necessary under the laws of Mexico. Description of the property owned by this company is given under the title Greene-Cananea Copper Co., which corporation owns over 95% of the stock of the Greene Consolidated Copper Co.

In addition to the properties owned by the Cananea Consolidated Copper Co. previous to the formation of the Greene-Cananea Copper Co., it now owns an undivided three-fifths interest in the properties formerly owned by the Indiana Sonora Mining Co., and it also owns a controlling interest in the Superior Bonanza Mining Co., which company's properties are located near Imuris, in the state of Sonora, Mexico.

No separate financial statement of the Cananea Cons. Copper Co. is issued, but the combined balance sheet of the Greene Cons. Copper Co. and the Cananea Cons. Copper Co., S. A., as of Dec. 31, is as follows:

Assets:	Prop & Equip.		Copper			Total
		Current	On Hand	Supplies		
1914.....	\$10,010,029	\$4,253,403	\$228,123	\$689,767		\$15,181,322
1915.....	10,055,191	5,188,334	105,662	535,219		15,884,405
Liabilities:	Capital		P. & L.			Total
	Stock	Current Reserves	Miscel.	Surplus		
1914.....	\$10,000,000	\$243,358	\$281,006	\$29,585	\$4,628,373	\$15,181,322
1915.....	10,000,000	270,997	102,906	19,523	5,490,979	15,884,405

Total income in 1915 was \$4,030,905; total expenditures were \$2,668,300. In 1915 there was mined 270,310 tons domestic ore at a total cost of \$2.468 per ton. The yield per ton was 2.307% copper, 1,827 oz. silver, 0.011 oz. gold.

CANANEA-EASTERN MINING CO. MEXICO

Has a lease and bond on the Cananea Eastern claims, acquired from the Charlot Mining & Smelting Co., which in turn had a bond from the Fay-Cananea Copper Co. The Charlot bond is for \$300,000 gold. **Property:** 20 miles east of Cananea, Sonora, Mex., is reported to cover 500 hectares,

or 1,235 acres, containing veins showing chalcopyrite ore and lead ore. Operations have been stopped by revolution.

CANYON MINES CORPORATION**CALIFORNIA**

Office: 33 State St., Boston, Mass. Frank B. Keever, pres.-gen. mgr.; Sharon Bldg., San Francisco, Calif.; Geo. H. Morrill, v. p.; H. A. Makay, sec.-treas.; Jas. J. McCarthy, and Frank G. Hobbs, directors. **Inc. in Me. Cap.** 1,000,000 shares, \$1 par. Company owns the shares of an operating company of same name.

Property: 500 acres, 2½ miles from Gorge on the S. P. R. R., 35 miles west of the Nevada-California line, and 172 miles east of San Francisco. Holdings cover a lode with hanging-wall country of gray Calaveras slate and a diorite dike footwall. This lode, said to vary from 5' to 10' in width at north end to 140' across at south end, consists of a stockwork of quartz stringers and seams.

Development: aggregates 6,188', mostly tunnels, the 1,137' uppermost being 400' deep at face, the 1,862' No. 2 tunnel, 110' lower, while No. 3, 186' below No. 2, is 2,349' long, with a 112' winze below its floor; the 840' Mill tunnel is 700' lower. The superintendent figures reserves to average \$4.91 per ton. Mill runs averaged \$5.15 when mine was worked.

CAPE BRETON COPPER CO., LTD.**NOVA SCOTIA**

Mine near Coxheath, Cape Breton Co., N. S. **Cap.**, \$2,000,000. **Property:** the old Coxheath mine and adjoining lands, 10 miles from Sidney, Cape Breton, shows several cupriferous veins, of which the principal, averaging 10' width, traverses felsite and diorite, carrying argentiferous and auriferous chalcopyrite, in a silicious gangue, ore averaging about 4.5% copper. Deepest shaft, 420'. Idle many years.

CAPE D'OR COPPER DEVELOPMENT CO.**NOVA SCOTIA**

At Cape d'Or, Cumberland Co., N. S. Idle many years.

CAPE NOME COPPER MINING CO.**MONTANA**

Office: 1 Dixon Bldg., Missoula, Mont. Mine office: Clinton, Missoula Co., Mont. Edw. Donlan, pres.; F. H. Woody, v. p.; H. T. Wilkinson, sec.-treas. and gen. mgr.; preceding officers and A. L. Coffey, directors. **Inc. Nov.**, 1906, in Montana. **Cap.**, \$1,000,000, shares \$1 par; issued, \$924,400. Annual meeting, first Monday in June.

Lands: 3 claims, patented, 40 acres, adjoining the Aladdin Mining Co., show 4 fissure veins in granite, 1 of 8' average width, traceable 800', being opened by 4 crosscut and 5 drift tunnels, with 3,750' of workings. **Equipment:** includes two 60-h. p. boilers, a 40-h. p. Lidgerwood hoist and a 12-drill Ingersoll air compressor. There are 6 buildings. Property considered promising, but has been idle for several years.

CAPITAL MINING & TUNNEL CO.**COLORADO**

Georgetown, Clear Creek Co., Colo. Edw. C. Bauman, supt. **Property:** the Aetna mine, developed by 5,200' tunnel, is said to show sulphide ores running up to 18 oz. gold, 35 oz. silver, 55% lead and 5% copper. Has electric as well as steam equipment, Leyner compressor, 200-ton concentrator and employs about 50 men. Company and lessees are working the mine.

CARACAHUI MOUNTAIN COPPER CO., LTD.**MEXICO**

Office: 3222 Jefferson St., Kansas City, Mo. Mine near Llano, Magdalena, Sonora, Mex. M. H. Greene, pres. and gen. mgr.; Chas. M. Howell, v. p.; H. J. Sprink, sec.-treas.; preceding officers, T. McClure, J. C. Brewer, Thos. James and Wm. R. Berryhill, directors. **Inc. May 20, 1907, in Arizona. Cap.**, \$1,500,000; shares \$1 par, nonassessable; issued \$964,000. Annual meeting, first Tuesday in June.

Lands: 2 groups, 50 hectares, 9 miles S. E. of Llano, said to show 20

parallel beds in granite, 8 in a cross section of about 250', reported as 4 to 60' in width, and traceable 1 mile, carrying cuprite, malachite and chalcocite. Ore said to average 10 to 40% copper, 4 to 40 oz. silver and \$2 to \$10 gold per ton. **Development:** by shafts of 50' and 410', and a 195' cross-cut tunnel.

Equipment: includes a 40-h. p. boiler and 8x10" hoist good for 1,000' depth, with smithy, superintendent's house and 6 dwellings for workmen. Idle since 1910, but company has no bonded indebtedness, pays all taxes and expects to resume work as soon as peace is restored in Mexico.

CARAMBOLA; MINA**MEXICO**

Office and mine: care D. Pablo Palacio, owner, Indé, Durango, Mex. **Property:** 18 pertenencias, in 2 groups, opened by La Chusa shaft, shows a 10' vein of gold-copper ore. Average assay values range from 3.5% copper and 300 grams silver, in the silver ore, to 14.5% copper and 100 oz. silver in the silver-copper ore. Idle on account of revolution.

CARBON HILL MINING & MILLING CO.**MONTANA**

F. S. Earnest, Spokane, chief owner. **Property:** 9 claims, in the Grass Valley section, 1 mile north and west of Fort Harrison, Helena, shows a vein for 2,300'. **Development:** by 58' incline shaft showing 5½' of carbonate ore and galena, said to assay \$48 per ton. Value is chiefly in the gold content. A 15' shaft with 20' drift, shows a 9' vein of carbonate ore said to assay from \$23 to \$111 per ton.

Two carload shipments yielded \$23 and \$11 per ton respectively. Employs 3 men. Has a 6-h. p. gasoline hoist. Plans sinking the 56' shaft to 100' level.

CARBONATE CENTER MINING CO.**IDAHO**

Mine office: Mullan, Shoshone Co., Idaho. Archie Gillis, pres.; John H. Foss, v. p.; John E. Sherrard, sec.-treas.; preceding officers, John Erickson and Hans J. Rice, directors. **Inc.** 1912, as successor of Tombstone Mining Co. **Cap.,** \$1,500,000, shares \$1 par, assessable. Last assessment of 1 mill per share called Nov. 5, 1914.

Property: 8 claims, near the Carney mine, on Stevens peak, south of Mullan, shows a promising vein of 8 to 15' surface width, carrying a little silver-lead ore. The mine has a 500' crosscut tunnel, with about 1,000' of workings, showing ore that has given assays up to 15% copper and 2.5 oz. silver per ton. Idle, but plans to resume operations.

CARBONATE HILL MINING CO.**IDAHO**

Mullan, Idaho. **Cap.,** \$1,500,000, shares \$1 par, issued \$1,470,000. Listed in Spokane, Wash. Bonds on stock at 40c per share said to have been given to H. L. Martin, auditor Spokane and Int. R. R. Co. of Spokane; first payment of 5c per share being due Nov. 1, 1916, with equal payments thereafter until whole amount has been paid.

Property: 10 patented, 2 unpatented claims, 200 acres, 1½ miles S. E. of Mullan. **Development:** by adit with 3,500' of workings. Orebody said to have been cut at 900' and drifted on for 200'. Development is said to indicate an ore zone 125' wide in which a footwall orebody shows 24' lead-zinc ore with zinc predominating, in the center 8' of ore, and on the hanging-wall or south side, 27' of milling ore.

CARBONATE LEAD MINES CO.**CALIFORNIA**

John Salsbury, mgr.; H. F. Bruce, supt. **Property:** Carbonate mine, in Carbonate Camp, Death Valley, about 40 miles from Zabriskie, Inyo Co., Calif., shows lead-silver, gold and copper ore in well defined ledges in limestone formation. Ore is said to average \$30 per ton. **Development:** 300' of underground workings in 1915. Shipping 200 tons per month in 1915.

CARDIFF MINING & MILLING CO.**UTAH**

Office: 218 So. Main St., Salt Lake City. **Mine office:** Alta, Salt Lake Co., Utah. Ezra Thompson, pres.-gen. mgr.; Fred N. Price, v. p.; J. D. Murdock, sec.-treas., with L. H. Thompson and T. A. Reamer, directors. R. Barney, supt. Inc. 1906, in Utah. **Cap.**, \$500,000; shares \$1 par; assessable, all issued; last assessment of 1c per share delinquent June 1, 1914. An initial dividend of 25c was paid Oct. 15, 1915. Last dividend, 25 cts. per share, payable June 1, 1916. Stock listed on the Salt Lake Exchange. Annual report July 1, 1915, showed \$44,670 in treasury. Receipts from ore shipments July, 1913-15, amounted to \$62,190.

Property: 14 claims, partly patented, 25 miles from a railway, in the Alta Cottonwood district, Salt Lake county, include the Mountain Chief group. N. W. of the Columbus Cons. Development is by two 300' shafts, 200' of crosscuts, 300' of raises and 4,500' of tunnels.

Geology: ore occurs in a fault fissure on a limestone quartzite contact. A strike in the lower tunnel opened up 5' of solid galena ore, for 180' in length with rich carbonate ore on either side, from all appearances a bedded replacement deposit with bands of galena. The galena is heavily oxidized and mixed with nodules of white and gray quartz. Prospecting at depth is carried on by a winze, driven to connect tunnel workings at 350', said to have disclosed 4' of ore averaging 30% lead, 50 oz. silver and about \$7 gold per ton.

Equipment: includes air compressor, drills, electric power, dwellings, machine and blacksmith shop. A 200-ton concentrator is to be erected. **Production:** was begun in 1910 and to 1913 amounted to 3,339 tons, valued at \$100,549. Recent production was made from the stopes above the 850' level. Shipments in 1915 to the Salt Lake smelter averaged 100 tons daily, returning 38.2% lead, 13.4 oz. silver, 3% copper. Management estimates ore reserves at 100,000 tons of \$30 ore blocked out in the mine, Feb., 1916. Employs about 65 men. Shipments will be materially increased with better transportation facilities.

CARIBOU COBALT MINES CO.**ONTARIO**

Offices: 61 Broadway, New York and Cobalt, Ont. **Officers:** Herman Cook, pres.; F. M. Loper, v. p.; E. H. Westlake, sec.-treas.; with J. H. Susman and Sam A. Lewisohn, directors.

Inc. Sept. 29, 1913, in Maine. **Cap.**, \$1,000,000; shares \$1 par, all outstanding, of which 837,400 shares were owned by the Kerr Lake Mining Co., Aug. 31, 1915. The Caribou Cobalt Mines Co. owns the entire capital stock of Cobalt Comet Mines, Ltd., which is the operating company.

CARIBOU GOLD MINES CO.**IDAHO**

Office: 325 Kearns Bldg., Salt Lake City, and Mount Pisgah, Idaho. **Officers:** John W. Clark, Jr., pres.; J. P. Fanning, v. p. and gen. mgr.; J. W. Stringfellow, sec.-treas.; with C. R. Bates and A. B. Rockhill, directors. Company was formed in 1915 to take over the property of the Idaho Gold Mining Co. **Cap.**, 1,000,000 shares, par value 1c. All outstanding.

Property: 13 claims and a millsite, 2 claims and millsite patented, in Mount Pisgah district, Bonneville County, 42 miles from Soda Springs. The mine was first operated in the early 70's, but was closed down on account of poor management, after an accredited production of \$200,000 from free milling gold ore. Mine has been idle for 15 years, but present company believes it can be made to pay as the ore though low-grade, is said to be in a vein 18 to 30' wide, and capable of being mined cheaply.

Developed by tunnels, main tunnel over 400' long and a 280' shaft. **Equipment:** 10-stamp mill, 100-h. p. engine, air compressor and hoist.

Ore reserves: said to have blocked out 12,000 tons, in 1915, averaging \$6.14 per ton in gold.

CARIBOU MINES & MILLS CO.**COLORADO**

Cardinal, Boulder Co., Colo. **Officers:** F. H. Wickett, Chicago, pres.; Geo. L. Nye, Denver, v. p.; I. A. West, sec.; W. C. Russell, gen. mgr. Inc. in 1916. **Cap.**, \$200,000. Company purchased from the trustee in bankruptcy the holdings of the Cariman Mining & Milling Co., in the Cardinal district of Boulder County.

Property: the Caribou and Poorman groups of claims, former producers. Also the Boulder County tunnel, projected as a great development, drainage and transportation tunnel from Cardinal toward the Caribou workings. The tunnel is now in about one mile. In the 80's the Caribou mine is said to have been considered the best silver producer in Colorado.

Equipment: includes the 100-ton Caribou mill, the 150-ton Cardinal mill and a cyanide plant. The Cardinal mill was built to treat dump ore. **Management** plans installation of flotation plant. Work on tunnel will be deferred.

CARIDAD; COMPANIA MINERA**MEXICO**

Address: Frederick W. Messer, gen. mgr., Silao, Gto., Mex. Owns the Caridad mine near the city of Guanajuato, developed by shallow shaft, sunk, 1913, showing ore carrying 1 to 2% copper with 5 grams gold and 1,377 grams silver per ton.

CARISA GOLD & COPPER MINING CO. OF MAINE**UTAH**

Office: 414 Judge Bldg., Salt Lake City, Utah. Mine office: Mammoth, Juab Co., Utah. Col. C. Edw. Loose, pres.; Edward Riggs, mgr. Inc. 1907, in Maine. **Cap.**, \$500,000, increased Jan., 1909, to \$600,000, shares \$1 par; issued, \$545,000. Was a reorganization of the Carisa Gold & Copper Mining Co., which levied assessments of \$30,000 and paid dividends of \$60,000.

Property: the Carisa and Spy mines with 8 claims, patented, 57 acres, adjoining the Centennial-Eureka at Mammoth, Tintic district, Utah. Claims said to show 6 orebodies, occurring as fissures in limestone and as contact deposits between limestone and quartzite, 3 of which, more or less developed, of 4' average width, were said, by former management, to give average returns of 5% copper, 3 oz. silver and \$2 gold per ton, from oxidized ores. Mine, as sampled by Newton A. Dunyon, gave average assays of 4.51% copper, 3.54 oz. silver and 0.037 oz. gold per ton. Mine is very pockety, though occasionally carrying bunches of rich ore, and the estimate, by former management, of 80,000 tons of ore blocked out for stoping, was a gross exaggeration, though considerable concentrating ore is in sight. The ore channel has been opened on every level, but the grade of ore encountered is disappointingly low.

Development: by 3 shafts, including the 350' Cornish shaft and the 800' Spy shaft, and a 7,000' tunnel, with about 5 miles of workings.

Mine is worked by lessees, mining mostly above the 400' level. Producing about 50 tons of shipping copper ore a week at last reports.

CARMAN CONSOLIDATED COPPER CO.**MEXICO**

Mine near Arizpe; Sonora, Mex. Joseph Backus, of Virginia, Minn., pres., reported to have taken over the property for an indebtedness of \$50,000 in 1916 and to be planning organization of new company. Inc. 1906. **Cap.**, \$500,000, increased to \$750,000, shares \$2.50 par. Held title to lands through Compania de Oro y Plata, S. A., inc. in Mexico.

Lands: 351 pertenencias, 877 acres, in 9 groups, in the vicinity of the Pedrazzini and Chispas mines, show several strong veins, with 1,911' of workings. The Carman and Don Placido groups have dumps carrying

about 1,100 tons of ore, claimed to average 4.65% copper, 62.2 oz. silver and 0.21 oz. gold per ton. The Blanca Rosa group gives ore assaying up to 16.8% copper, 77 oz. silver and 0.42 oz. gold per ton. The Maria group has given ore assaying 3% copper, 107 oz. silver and 1.32 oz. gold per ton. Los Toros group has given ore assaying 4.2% copper, 29% lead, 38 oz. silver and 0.03 oz. gold per ton. Shipments to El Paso smelter have given returns ranging from \$82.98 to \$4,575.79 per ton.

CARMAN CREEK MINING CO.**IDAHO**

Salmon City, Lemhi Co., Idaho. J. W. F. Halcombe, pres.-mgr.-sec.; John Harlan, v. p.; Wm. Wallace, treas. Inc., Dec., 1905, in Washington. Cap., \$1,000,000, shares \$1 par; nonassessable; 999,500 issued. Property: 7 claims, about 140 acres, 16 miles from Salmon, said to carry an oreshoot showing gold, silver and copper ore. Assessment work only was done in 1915.

CARMEAN & SQUIRES MINING CO.**MISSOURI**

Office: Webb City, Mo. Inc. in Missouri. Cap., \$2,000. Operates 5 properties in S. W. Missouri, including Gwinn land, 2 tracts, one 20, the other 40 acres of Kelly Land, all located in Jasper Co. Is reported to have bought the old John L. mine, 20 acres, in the north Webb City sheet ground district, for \$30,000, in Nov., 1915. The Gwinn tract has 2 shafts, depth 186', and a 250-ton concentrator. The 20-acre Kelly tract is opened by 200' shaft, and has a 150-ton concentrator; the 40-acre tract is opened by 180' shaft and has a 200-ton concentrator. Production: lead-zinc concentrates, not reported.

CARMEN COPPER CO.**MEXICO**

Idle. Office: 52 Front St., New York. Mine office: Mineral del Carmen, El Oro, Durango, Mex. Thos. B. Bell, pres.; Stephen A. Levy, sec.-treas.; I. Wayne Von Leer, gen. mgr.; F. C. Seley, supt. Inc. in New York. Cap., \$750,000; shares \$50 par. Property: includes El Carmen mine, 160 hectares, and a considerable acreage of miscellaneous lands, 45 miles from Rosario, the nearest rail point. The mine carries silver-bearing copper ores, with considerable development. Mill has 40 stamps, 3 crushers and Frue vanners.

CARMEN-GUANAJUATO GOLD MINING CO.**MEXICO**

See Guanajuato Cons. M. & M. Co.

CARMI MINE**BRITISH COLUMBIA**

Property at Carmi, near Phoenix, B. C., Canada, was operated by Alex Robinson and associates, 1914-15.

Ore: free milling gold-silver in two fissure veins. Equipment: includes a stamp-mill. Employs about 20 men. Produced 1,000 tons of ore when formerly active, but transportation charges made operations unprofitable. The Kettle Valley Railway has since been built and runs through the property. Shipments were made during 1915. See B. C. Annual Rept. for 1914, p. 335.

CARNEGIE COPPER CO.**VIRGINIA**

Address: W. H. McLean, supt., Jeffress, Va. Lands: 176 acres, carry about 2,000,000' of timber, about half fit for sawing and show a vein 64" wide at surface, and 5' at bottom of shaft, with a 12" hanging wall paystreak of rich ore. Test shipment, to the Pennsylvania Lead Works, Pittsburgh, gave returns of 10.5% copper, 6.3 oz. silver and \$10.80 gold per ton. Mine has a 76' shaft. Idle since 1906, but has no debts.

CARNEGIE LEAD & ZINC CO.**MEXICO**

Office: Sherwood Bldg., Duluth, Minn. Mine office: Apto. 265, La Mesa, Cananea, Sonora, Mex. R. P. Burgan, pres.; J. E. Cooley, v. p.;

John A. Percival, sec.-treas.; Carl Zachow, asst. sec.; preceding officers and N. F. Hugo, C. W. Stillson, J. F. Faunce, T. Pasco, directors.

Inc. 1915, in Ariz. Cap., \$500,000; shares \$5 par, 64,700 shares outstanding. Transfer office: 510 Sellwood Bldg., Duluth, Minn. Company is a reorganization of the Calumet-Sonora Mining & Milling Co., described in Vol. XI, which defaulted on payment of interest on the bond issue. Bonds were foreclosed Feb. 13, 1915, and on Feb. 27 the property was sold for \$82,000, to R. P. Burgan, who immediately organized the present company. Shareholders in the Calumet-Sonora Co. were allowed to subscribe for stock in the new company for from 10 to 15% of their holdings in the Calumet-Sonora Company.

Income and expense account for 1915 shows receipts from stock sales \$30,537 and miscellaneous \$152; disbursements include redemption of C. & S. bonds \$18,000, legal expenses \$2,000, mine account \$1,214. Green Cananea C. Co. \$6,613; gen. expense and printing \$990. Cash on hand \$389.

Property: 631 acres, about $2\frac{1}{2}$ miles northwest of Cananea, shows fissure veins cutting both diabase and the more recent volcanic tuffs which form the foothills and table lands of the Cananea mountains. Many of these veins show as mere discolorations, or bleaching of the rock, but in places widen into broad masses of leached, silicified ledge matter, resembling the outcrop of the Duluth Cananea. Three veins have been opened by underground workings.

The Chivera mine has thus far been the chief producer of the company. It has an inclined shaft, 625' deep, with levels at 60', 200', 300', 400', 525' and 625'; developing a well-defined fissure vein in indurated volcanic breccia, or tuff, of varying width that opens out into an orebody 300' long and 150' wide, composed of large and small angular blocks of country rock cemented by argentiferous galena, chalcopyrite and sphalerite, with less abundant tetrahedrite, mixed with quartz. The orebody is in places a glittering mass of galena, but as a whole is a complex mixture of lead, copper and zinc sulphides, the mill feed carrying 4.7% lead, 0.4 to 0.8% copper and 9% zinc. The ore minerals disseminated through the mass of breccia above the 525' level, appear to be concentrating in a narrower ore shoot, 300' long and 50 to 60' wide on this level.

Equipment: includes an electric hoist, a 1,435-cu. ft. electric-driven Rand compressor, General Electric motors for all machinery and a 36x24" Farrel crusher with Robins conveying picking belt and ample storage bins. Machinery is run by electric current supplied by the Cananea Consolidated Copper Co., at $2\frac{1}{2}$ cts. per k. w. hour.

Ore is sorted on the picking belt and hauled over a surface tram to the concentrating mill. Latter is an old mill brought from Missouri and altered for local conditions, but a makeshift at best. In this mill the silver-lead ore is taken out and the middlings containing zinc and copper are sent to the dry, or electrostatic mill. Tailings average 0.21% lead, 0.12% copper and 0.77% zinc. The dry mill contains Huff electrostatic separators, which separate the copper from the zinc. Concentration is 8.5 into 1, being 87.9% of the lead, 74.8% of the zinc and 70% of the copper in the ore; the lead concentrates carry 33 oz. silver per ton, averaging 70% lead. Shipments of zinc concentrates in 1913 averaged 50% and the copper 17%.

In addition to the workings mentioned, there is the No. 2 Catalina shaft, now idle and dismantled, 225' deep, vertical, with levels at 70', 110', 145' and 212', exposing an oreshoot $2\frac{1}{2}$ to 6' wide and as much as 60' long, but cut by cross faults and not continuously minable. The ore shoot has been practically mined out to the 145' level, yielding about 1,800 tons of antimonial copper-lead ore carrying zinc. This ore is higher in value than

that now milled. The vein expands west of the mine into a large outcrop which is the most promising surface exposure seen on the company's property and warrants deep exploration.

The company has a large acreage, at least 2 very promising surface outcrops and a dozen or more fissure veins and should, with proper development, become a large producer of low-grade complex ores. The treatment problem has been solved; total mining and milling costs reduced to \$4.50 per ton and the property splendidly equipped for work. Company plans making the working shaft 3-compartments from surface to the 625' level and putting a raise through from the 625' level to surface for ventilation; also sinking to the 700' level. Sixteen cars of concentrates in transit, March, 1916.

CARNEY COPPER CO., LTD.

IDAHO

Mullan, Shoshone Co., Idaho. J. L. Martin, pres.; A. P. McRae, v. p.; C. D. Miller, sec.-treas.; preceding officers, Henry Bilberg, C. D. Martin, directors. Inc. 1906, in Idaho. Cap., \$1,150,000; shares \$1 par.

Lands: 11 claims, 4 fractional, 175 acres, carrying a good water right, is next north of the Reindeer, on the northern slope of Stevens peak, about 4 miles from Mullan. **Development:** by 2 tunnels, the uppermost showing a body of chalcopryite ore that has not been found in the lower tunnel. The upper, or No. 1 tunnel, is 450' long, with 3 crosscuts, and No. 2, the lower tunnel, 1,500', with 1,000' of crosscuts and drifts. There also are several open cuts and pits, showing ore of about 3% copper tenor. Workings show up to 4' of solid ore, carrying chalcopryite, with some chalcocite and bornite. No. 1 tunnel shows an ore shoot up to 40' width, and about 175' long, averaging about 2% copper, with small values in lead and silver, with a paystreak of 6 to 18" assaying 5 to 35% copper. Litigation with Jos. Carney, former owner of lands, was decided in company's favor June, 1908, giving an absolute title. Development work was done in 1915. Company plans driving No. 3 tunnel for 2,000'.

CARNEY MINING CO.

ARIZONA

P. G. Carney, pres. and business mgr., Mesa, Maricopa Co., Ariz. Homer Davidson, supt. **Property:** the Royal Gorge mine, shows a vein with gold-copper ore. **Development:** by 800' tunnel and 100' shaft. **Equipment:** includes gasoline engine and air compressor. Plans to erect cyanide mill.

CAROLINA COPPER CO.

NORTH CAROLINA

Office: 15 Atwater St., West, Detroit, Mich. Mine near Cullowhee, Jackson Co., N. C. Lewis C. Waldo, pres. and treas.; Thomas A. Cox, v. p. and supt.; Hugh M. McCormick, sec.; preceding officers, Stephen H. Knight, Geo. W. Clark, Thomas W. Newton, Chas. E. Bredin, David E. Thomas and Edwin P. Snider, directors. Inc. Oct. 12, 1901, in Michigan. Cap., \$2,500,000, shares \$25 par; issued, \$1,585,000. **Lands:** 1,450 acres, freehold, including the Wayehutte mine, show 4 veins, of 27' estimated average width, carrying mainly chalcopryite, with estimated average values of 3% copper, 4 oz. silver and \$1 gold per ton, opened by a 55' shaft and a 200' tunnel. Lands also include an undeveloped water power. Regarded as promising if worked under proper direction. Idle.

CARRARA MINING, MILLING & LEASING SYNDICATE NEVADA

Jules V. Baird, supt., Carrara, Nye Co., Nev. Company owns the Shindel and Hampton-Sutton properties and Bull Moose mine, the latter said to have been acquired from the Bull Moose M. & M. Co. in 1915 for \$156,000, in Bullfrog district on Bare Mountain, 2 miles N. of Carrara and near Beatty, Nye Co., Nev.

In the Bull Moose mine, gold ore occurs in stringers of calcite in a belt

of dolomitic-limestone about 100' wide. Values average \$9, with highest values on the footwall. The Shindel orebody, 3' wide, and uncovered for over 40' contains rich pockets and stringers of gold in calcite, claimed to run as high as \$100 per ton.

Development: 130' Shindel tunnel; 2 incline shafts and tunnel on the Bull Moose. **Equipment:** includes compressor and 10-stamp mill. Shipments in 1914 to Western Ore Purchasing Co., netted \$60 per ton after deducting \$21.50 for freight and treatment charges. Employs about 5 men.

CART LAKE SILVER MINES, LTD. ONTARIO

Operated the Gould lease on Cart Lake during 1914 with a production of 150,000 oz. silver. Production for 1915 not available. Ore came from the extension of the Seneca-Superior vein. **Development:** in 1914 amounted to 1,003'. No. 2 shaft is 195' deep with 400' of workings on the 185' level, at last accounts.

CARTER GOLD MINING CO. ARIZONA

Oatman, Ariz. E. A. Shaw, pres.; Henry Lovin, v. p.; W. K. Ridenour, sec.; and H. H. Watkins, treas. Inc. in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: New York, Giant and Gold Cross patented claims, 55 acres, in Tom Reed-Gold Road mining district, near Oatman, Mohave Co., Ariz. Developed by incline shaft, being sunk from the 250 to the 500' level with several hundred feet of workings on the 150 and 250' levels. The vein on the 150' level is said to be 12' wide, but contains small values. On the 250' level management reports that the vein is over 7' wide and averages \$8.60 gold per ton.

CARTER MINING CO. COLORADO

Ohio City, Gunnison Co., Colo. C. M. Carter, mgr., at last accounts. Inc. 1897, in Colorado. Cap., \$750,000; shares \$1 par. Company was originally known as the Ashland Mining Co.

Property: 80 claims, 800 acres, near Ohio City, shows fissure veins in granite. Ore consists of lead and iron sulphides and quartz. **Development:** by tunnels, main working tunnel about 8,000' long with several thousand feet of workings. **Equipment:** includes a 20-stamp mill, daily capacity 100 tons. Output is concentrates and gold bullion. Management planning to develop large low-grade veins said to be on the property.

CARTWRIGHT GOLD FIELDS, LTD. ONTARIO

Property: on the south shore of Painkiller Lake, district of Temiskaming, on lot 8, concession V, Beatty, said to show a small quartz vein containing gold, telluride and pyrite. Developed by a shaft 100' deep in 1915. **Equipment:** includes two 60-h. p. boilers, hoist, air compressor and 10-stamp mill.

CASANEGA-DALY MINING & REDUCTION CO. ARIZONA

Amadoville, Santa Cruz Co., Ariz. A. D. Daly, supt. **Property:** 7 claims, 140 acres, in the Tyndall mining district, Santa Rita Mountains, Santa Cruz Co. Sulphide ore said to contain copper, gold, silver, lead and molybdenum, occurs in orebodies 3 to 8' wide in monzonite. **Development:** by 600' tunnel, said to have blocked out 50,000 tons ore. **Equipment:** includes a 50-ton concentrator, that started operating in Dec., 1915. Twenty men employed. Management plans driving a 1,000' development tunnel and increasing mill equipment.

CASCADIA MINING & DEVELOPMENT CO. WASHINGTON

Mine office: Toledo, Wash. **Officers:** E. A. Sessions, pres., 106 W. 6th St., Vancouver, Wash.; W. A. Gray, v. p.; W. D. Scott, sec.-treas.; J. F. Hartley, asst. sec.; preceding with M. A. Poppleton, J. P. Finley, Geo. S. Reid, W. H. Bennett, directors.

Inc. March 12, 1887, in Washington. **Cap.**, \$6,000,000; shares \$1 par; \$1,164,615 in treasury.

Property: 108 claims, 2,170 acres; 330 patented in St. Helen's mining district on the divide at the head of the Toutle river in Cowlitz, Lewis and Skamania counties, includes the Polar Star and Minnie Lee groups. Properties show fissure veins in grano-diorite, running N. E.-S. W. and dipping 40°-60'. The copper ore which carries gold and silver values, occurs in shoots 2'-12' thick and 20'-100' long. This ore is said to average 17.9% copper, 24.85% iron, 10.75% silica, 4% aluminum, 1.2% lime, 34.5% sulphur, 5.68% antimony, 0.8% zinc and 0.05% nickel.

Development: 5,000' of work including 300' to 700' tunnels with about 1,500' on ore. About 100,000 tons of shipping ore has been mined and put on the dump. Production has been deferred waiting for cheaper transportation. The mines are 16 miles from a railroad over a heavy grade, but a new line 48 miles long to Castle Rock, Wash., is planned for 1916. Property has been under development in a small way for 19 years past. Property has been examined and reported on by Prof. F. L. Barker, State Metallurgist, Eugene, Oregon, Robt. E. Hanley and G. B. Wilson.

CASEY-COBALT MINING CO., LTD.

ONTARIO

Office: Balfour House, Finsbury Pavement, London, E. C., Eng. **Officers:** W. R. P. Parker, pres.; J. P. Watson, v. p.; with G. M. Clark, R. E. G. van Cutsem and Graeme Watson, directors.

Inc. in April, 1907, in England, to acquire 99,995 fully-paid shares of \$1 each, being the entire issued capital, with the exception of 5 shares of the Casey Cobalt Silver Mng. Co., Ltd., of New Liskeard, Ont. Consideration was 199,993 in fully-paid shares, vendors agreeing to provide £15,000 working capital. Company paid total dividends of \$203,249 to end of 1914.

CASEY COBALT SILVER MINING CO., LTD.

ONTARIO

New Liskeard, Casey Township, Ont. **Officers:** W. R. P. Parker, pres.; J. P. Watson, v. p.; with G. M. Clark, R. E. G. van Cutsem and Graeme Watson, directors. John W. Shaw, mine mgr. Company controlled by the Casey Cobalt Mng. Co., Ltd. q. v.

Property: 40 acres in Harris Twp., and the Casey-Cobalt mine in Casey Twp., 9 miles N. E. of New Liskeard. In 1914 development work totaled 5,052'. A shaft has been sunk on the East Casey claim to a depth of 350' with stations at 275' and 335'. **Equipment:** includes a 30-stamp mill.

CASEY JONES MINING CO.

ARIZONA

Oatman, Ariz. **Officers:** H. M. Caswell, pres.; V. S. Rowley, v. p.; J. E. Shank, sec.-treas., with J. J. Casey and Geo. Z. Mellen, directors. **Inc.** in Ariz. **Cap.**, \$100,000; shares 10c par; 600,000 shares in treasury. Listed in San Francisco. Owns the Swallow group, 12 claims, 120 acres, adjoining the Oatman Gold group on the east, said to show 3 veins from 6' to 25' wide and assaying on the surface from \$0.80 to \$2.86 gold per ton. Management plans sinking two 2-compartment shafts; east shaft will be 300', the west shaft 500' deep. In March, 1916, the east shaft was 60' deep. Property in the development stage.

CASH BOY CONSOLIDATED MINING CO.

NEVADA

Tonopah, Nev. A. S. Ross, pres.; M. M. Johnson, v. p.; E. H. Mead, sec.-treas.-mgr., with H. S. Knight, L. A. Blakeslee, directors. **Inc.** March 21, 1914, in Nev. **Cap.**, \$2,000,000; shares \$1 par, all outstanding, assessable; 5th assessment, 1c per share, called Jan. 15, 1916. Annual meeting November 21. Listed on New York Curb and San Francisco Exchange. Company is a reorganization of the Tonopah Cash Boy Cons. Mng. Co., which suspended operations in 1914 with debts of \$3,476 and 76,870 shares

in the treasury. Financial statement of Cash Boy for period Nov. 21, 1914, to March 21, 1916, shows receipts of \$80,694, which includes: assessments, \$80,000; ore shipments \$620; royalties, \$74. Cash on hand, \$9,870.

Property: several fractions, patented, 30 acres, at Tonopah, Nye Co., adjoin the Tonopah Merger on the west, Tonopah Victor on the south, and Tonopah Extension on the north. **Ore:** gold-silver, occurs in narrow stringers, E.-W. course and dip about 35° in rhyolite. Average assays said to be about \$15 per ton.

Development: 1,480' vertical shaft, with most of the recent work on the 1,350' and 1,450' levels, where drifting and crosscutting is being done, but with unsatisfactory results. **Equipment:** includes a 75-h. p. electric hoist and a 3-drill air compressor.

Production: for 1915 amounted to 150 tons ore, said to assay \$15 per ton. There are no ore reserves. Property is a prospect.

CASH MINE

ARIZONA

Prescott, Ariz. **Property:** leased to N. E. Getchell, Maxton, Yavapai Co., Ariz., shows veins with gold-silver-copper-lead ore. Developed by a shaft with extensive workings. **Equipment:** includes a 10-stamp mill. Six men employed. Shipments of concentrates made in 1915.

CASHIER GOLD MINING & REDUCTION CO.

COLORADO

Office: P. O. Drawer 46, Warren, Pa. Mine office: Central City, Gilpin Co., Colo. Wm. Muir, pres.; F. M. Lockwood, sec.; E. E. Allen, treas.-mgr.; with H. P. Stone, M. A. Bliss, J. T. Meals, E. J. Lesser, W. P. Volgamore and F. L. Bensinger, directors. Wm. Auger., supt. **Cap.**, \$1,000,000; shares \$1 par; 555,843 issued. Report issued August 1, 1915, showed monthly earnings of \$3,428. Dividends paid during fiscal year amounted to \$36,696.

Property: includes the Pittsburgh, Meeker and Brooklyn mines, carrying chalcopryrite and tetrahedrite, principal values being in silver, running up to 700 oz. per ton. The Pittsburg mine is developed to depth of 1,000', by shafts, drifts and upraises. Equipped with boiler, pump, hoist and drills. Stopping method is used.

Production: 1,276 tons in 1914 and 1,800 tons in 1915, netting \$40,106. Average assays run 3.64 oz. gold, 7 oz. silver and 6.10% copper. Plan sinking shaft 100' and installing electric power in 1916. Has been a small but steady producer, partly from work of lessees.

CASS COPPER CO.

MICHIGAN

Houghton, Mich. Inc. 1916, by Dr. L. L. Hubbard, John W. Black, Fred Smith, Jas. MacNaughton, John T. Reeder and J. H. Rice of Houghton and Calumet; E. W. Decker, of Minneapolis; W. L. Clements, of Bay City, and J. H. Johnson, of Detroit, to take over the Norwich mine, owned by the Copper Crown Mining Co. **Cap.**, \$3,750,000; shares \$25 par; 40,000 shares were paid for property and 20,000 offered for sale at \$3 per share, to pay for diamond drill campaign.

Property: 1,320 acres, on Ontonagon river, near the Mineral Range railroad, has several well-known lodes crossing the ground. See Copper Crown Mining Co.

CASSIAR CROWN COPPER CO.

BRITISH COLUMBIA

Promoted by Pohlman Investment Co., Empire State Bldg., Spokane, Wash. **Officers:** I. W. Anderson, Tacoma, pres.; R. P. Thimble, Portland, v. p. and gen. mgr.; Cadwalader Jones, Tacoma, sec.-treas., with W. C. Miller, Spokane and J. D. Galloway, Victoria, directors. Inc. early in 1916. **Cap.**, 1,000,000 shares, \$1 par; in treasury, 510,000 shares.

Property: five 50-acre mineral claims, 260 miles east of Prince Rupert,

B. C., 18 miles from Telkwa on the Grand Trunk Pac. R. R. Little development work has been done, a 60' shaft being the deepest working. It is claimed that this shaft shows ore assaying 7.2% copper, 2.4 oz. silver and \$3.40 in gold per ton.

Company was planning to begin work March 15, 1916, on a 500' tunnel to cut the vein 250' below surface. Property is a prospect only.

CASTLE COPPER CO.

ARIZONA

Property: 11 claims, known as the Dunkirk or Mt. Trittle group, 12 miles south of Prescott, on the southern slope of Mt. Trittle, near the head of Slate creek, in the Hassayampa district. Formerly owned by Dunkirk Gold & Silver Mining Co., later by Mt. Trittle Copper Co., and purchased in 1914 by D. M. Clark of Prescott, Ariz. Is an old mine, with tunnels of 150', 160', 170' and 300', driven at vertical intervals of 100', showing copper and lead sulphides, with values in copper, gold and silver, in about the order named.

Equipment: includes steam and gasoline power, air compressor and electric light plant. A 40-ton mill has 4 Nissen stamps, 3 Wilfley tables, 100-ton ore bin and a 10,000-gal. water tank. Oil flotation unit installed 1915, reported to be an unqualified success, saving as high as 98% on assay value of ore. 2,500 tons of ore reported on dump Jan., 1915.

CASTLE DOME DEVELOPMENT CO.

ARIZONA

Mulford Martin, pres., 7 Wall St., New York. Inc. in Maine. Company has bond and lease on the Inspiration Extension Copper Co. (which see) property at Miami, Ariz. Began work, April 15, 1916, on a tunnel, now 400' long, running N. E. into the property, in anticipation of opening a low-grade "porphyry" copper deposit.

CASTREJON; HERMANOS

MEXICO

Office and mine: Huacana, Ario, Michoacan, Mex. **Property:** the China mine, an old and small producer of copper ore, employing about 25 men normally. Presumably idle.

CAVE SPRINGS LEAD & ZINC CO.

MISSOURI

M. Grundler, supt. Operates a lease on 50 acres of land owned by the Kansas-Missouri L. & Z. Co., including the Grass Roots and Cave Springs mines, both old-time producers, at Cave Springs, west of Joplin, Jasper Co., Mo.

Ore: contains zinc and lead as sulphides. Developed by several shafts, deepest 260', with levels at 130' and 240'. This shaft was unwatered to the 240' level in 1915. Ore in Grass Roots mine is taken out by open-pit work. **Equipment:** 100-ton concentrating mill, centrifugal pumps, hoist, electric power and surface buildings.

CAYUGA DEVELOPMENT CO.

MONTANA

Office: 616 Lyceum Bldg., Duluth, Minn. **Mine office:** Divide, Silver Bow Co., Mont. C. T. Fitzsimmons, pres.; Nels Anderson, v. p.; E. J. O'Rourke, sec.; Max P. Shapiro, treas.; John Helehan, gen. mgr.; preceding officers, Jacob Stein and Jas. L. Norman, directors. Inc. April 4, 1910, in Minnesota. Cap., \$150,000; shares \$1 par, nonassessable; issued, \$65,000.

Lands: 4 claims, 80 acres, in the Fleecer district, 15 miles southwest of Butte, near the Oregon Short Line railway. Property shows granite, with dikes of porphyry, aplite and quartzite, carrying veins with a generally E.-W. strike, main vein being estimated to range 50 to 125' in width, traceable for 2,000', carrying cuprite, melaconite, malachite, azurite, chrysocolla, chalcopryrite, chalcocite and bornite. **Development:** by 100' tunnel, and shafts of 45', 125' and 150', showing ore assaying up to 30% copper, and from a trace to 70 oz. silver per ton. The 125' shaft has crosscuts of 150'

and 180', cutting the vein for an apparent width of 30'. The vein at this depth is nearly vertical. Idle, and no work done on property since 1912.

C. B. S. MINING CO.**ARIZONA**

Near Globe, Ariz. Claims show several veins with 62' shaft developing a 6' orebody, assaying 9% copper, \$10 silver and \$3 in gold. Vein dipped out of shaft and bottom of workings show a 10" ore streak of native silver. Owned by same people as the Climax Mining Co., near Prescott, Ariz.

CEDAR TALISMAN CONS. MINES CO.**UTAH**

515 Newhouse Bldg., Salt Lake City and Milford, Beaver Co., Utah. **Officers:** S. S. Pond, pres.; F. B. Sherwood, v. p.; Geo. Baglin, sec.-treas.; with H. M. Chamberlin and Geo. Lynch, directors. Inc. March, 1909, in Utah, as a merger of the Cedar Mining Co. and the Talisman Mining Co.; latter company described in The Copper Handbook, Vol. XI. **Cap.**, \$500,000, shares 50c par, assessable. All outstanding. Stock transferred at company office. Listed in Salt Lake City.

Production in 1915 did not start until after April 1st. Statement covering operations for 1915 shows expenses of \$11,794 with receipts from zinc ore sales, \$8,672; from lead ore sales, \$653; leaving an operating loss of \$2,468. Cash in bank Jan. 1, 1916, \$1,877, with estimated net value of ore in transit, \$2,200.

Property: 13 claims, 8 patented, 250 acres, in the Star mining district, Beaver Co., Utah. **Ore:** carbonate of lead, copper and zinc containing gold-silver values. **Development:** several thousand feet of shafts and underground workings, the lowest on the 1,000' level of the incline, or main working shaft. Recent work has been done from the 200' to the 1,000' level. Previous to the consolidation the two properties are said to have had a total net production of \$130,000, but for years they have not shown a production of any importance. In 1915 considerable development work was done on Talisman Hill. This work is said to have opened up, in addition to some high-grade zinc ore, a large body of 11% zinc ore. It will be necessary for the company to find a method for treating this low-grade ore before it can be realized upon and a 10-ton electrolytic zinc plant has been proposed for the purpose.

Electric power was substituted in 1915 for steam power whereby a monthly saving of \$190 is claimed.

CENTENNIAL COPPER MINING CO.**MICHIGAN**

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Houghton Co., Mich. **Rodolphe L. Agassiz**, v. p.; **Jas. MacNaughton**, 2nd v. p. and gen. mgr.; preceding officers, **H. F. Fay**, **Dudley S. Dean**, **Benj. Joy** and **E. V. R. Thayer**, directors; **Geo. G. Endicott**, asst. sec.-treas.; **John Pentecost**, mg. capt.

Inc. 1896, in Michigan, as successor of Centennial Mining Co. **Cap.**, \$2,500,000, shares \$25 par; issued, \$2,250,000; paid in, \$19.50. Last assessment, 1905, was \$4. Is controlled, through ownership of 41,500 shares, by Calumet & Hecla Mining Co., and is a borrower therefrom.

Profits were \$6,046 net in 1911, \$50,511 net in 1912, \$31,397 in 1913, \$3,213 deficit in 1914, and \$142,440 in 1915. Balance sheet, Dec. 31, 1915, shows assets of cash and accounts receivable \$275,229; supplies, \$29,841; total, \$305,071. Liabilities for notes and accounts payable, \$31,953; balance, \$273,118. **American Trust Co.**, Boston, transfer agent; **Old Colony Trust Co.**, Boston, registrar. Annual meeting, first Tuesday in April.

Lands: 670 acres, Sec. 12, T. 56 N., R. 33 W., and a triangular patch of about 30 acres, at the S. E. corner of the main tract, bought to secure

the outcrop of the Kearsarge lode, and including about 10 acres, bought 1905, of the Old Colony, for the surface plant. The first work was done, 1863, by the Schoolcraft Mining Co., which failed to open a paying mine, and was reorganized, 1876, as the Centennial Mining Co., and again reorganized, 1896, with present title. Expenditures of upwards of \$1,500,000 were made by the old companies, in unsuccessful efforts to open a paying mine on the northern extension of the Calumet conglomerate. Seven shafts, 3 of considerable depth, were sunk on this bed, No. 3, the deepest, being bottomed at 3,200'. The Centennial lands are in the great mining area of Calumet, and are available for building purposes. Two additions have been platted, and surface rights sold at good prices, mineral rights being reserved.

The present company did a little work, 1897, on the old conglomerate shaft, then turned attention to the Osceola bed, deepening 2 shallow shafts to 1,050' and 1,150' depth, respectively. The Osceola bed, where opened on the Centennial tract, averages about 15' in width, but is lean.

Work on the Kearsarge bed was begun Sept., 1899. Owing to the outcrop of the Kearsarge occurring on the 30-acre tract bought of the Osceola, with only a 100' right-of-way connecting it with the main tract, it was necessary to open the mine on the Kearsarge bed in a peculiar manner, by 2 shafts. These are but 90' apart, on surface, and continue parallel, on the dip of the bed, until the 13th level, when the main tract is reached, after which No. 2 shaft diverges from No. 1 at an angle of 15° on the plane of the bed, 300' being taken by the curve. This method of opening gives short drifts until the shafts enter the main Centennial tract. Each shaft is 17x18' inside of timbers, with 3 compartments, sunk at an angle of 39° with the horizon, through an overburden of about 100' depth. The Kearsarge bed averages about 16' in width, and showed fair copper values in the upper levels, followed by a comparatively barren zone until the 14th level, when there came a gradual improvement, which unfortunately has not been maintained, the mine as a whole proving disappointing. New openings, made during 1915, amounted to 2,366', all contributory to the No. 2 shaft.

No. 1 shaft, 3,821' deep, has been idle since 1910. No. 1 has a steel shaft rock house, with 3,000-ton bins and a 32x72" Nordberg duplex hoist, with double conical drum, good for depth of 6,000', operating 5-ton skips.

No. 2 shaft, 4,293' deep, shows fair ground from the 18th to the 31st levels, inclusive. This shaft shows poor ground to within 50' of the South Kearsarge boundary, where drifts were stopped. The South Kearsarge drifts are in rich ground up to the boundary, which seems strange. **Equipment:** includes a cylindrical steel shaft rock house, with 1,000-ton bins, and a 32x60" Sullivan duplex straight-face hoist, with 2 drums of 14' diameter and 15' 6" winding face, grooved for 1¾" cable. The hoist is fitted with devices to prevent overwinding, and is calculated to raise 5-ton skips at the rate of 4,000' per minute, operating under 150 lbs. steam pressure.

The mine is served by the Copper Range and Mineral Range railroads, and has a private line connecting the shops and shafts.

Rock is stamped by the mill of the Lake Milling, Smelting & Refining Co., which is separately described.

Production was seriously curtailed for a time in 1913 and 1914 by the Western Federation of Miners' strike, called July 23, 1913, and declared off on April 12, 1914. Conditions prevailing in the copper market after the European war started were the cause of the mine operating on three-quarter time from Sept. 1, 1914, to Feb. 1, 1915. In Aug., 1915, the rock-house of No. 1 shaft was gutted by fire and production suffered for a month at that time. Centennial at best is a small producer and this series of misfortunes has worked an extra hardship on it.

Production:		Lbs. Cu. Mine Cost		Lbs.			
Year	Tons R'k Treated	Lbs. Min. Prod.	per Ton R'k Stpd.	per Ton (a)	Copper Produced	Total Cost per Lb.	Rec'd per Lb.
1915	150,191	2,347,500	15.63	\$1.753	2,347,500	12.45c	18.14c
1914	138,136	3,311,780	16.56	1.838	2,287,130	12.56c	12.11c
1913	85,443	2,324,040	18.87	2.179	1,612,262	13.38c	15.36c
1912	106,517	2,567,385	16.36	1.920	1,742,338	13.46c	16.98c
1911	36,543	2,321,200	17.26	1.869	1,493,834	12.69c	12.92c

1909	196,525	14.15	2,583,793	15.61c	13.28c
1908	169,693	12.94	2,196,377	18.49c	13.39c

Note: Production for first 6 months, 1916, 1,269,697 lbs. copper.

(a) Includes mining, transportation, stamping and taxes.

CENTENNIAL DEVELOPMENT CO.

NEVADA

Ely, White Pine Co., Nev. E. E. Vanderhoef, pres. and gen. mgr.; D. C. McDonald, v. p.; G. F. Boreman, sec. and treas. Inc. April 20, 1911, in Nevada, as successor of the Ely Centennial Copper Co. Cap., \$1,000,000, shares \$1 par; issued 400,000 shares. Total assessments, \$15,198.46 to end of 1912. Annual meeting, first Tuesday in December.

Property: 5 claims, about 75 acres, in the city limits of Ely, between the McDonald-Ely and Ely-Calumet, in the eastern portion of the Robinson district. Mine has two 50' shafts and a 2,000' tunnel shows a 400' zone of crushed silicified limestone with low-grade copper ore. Properly idle for lack of funds, 1912-13. Reported under lease to Edw. Weal, 1915.

CENTENNIAL-EUREKA MINING CO.

UTAH

Office: 55 Congress St., Boston, Mass. Operating office: Newhouse Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Wm. G. Sharp, pres.; C. G. Rice, 1st v. p.; C. W. Van Law, 2nd v. p.; F. W. Batchelder, sec.-treas.; preceding officers, B. Preston Clark, J. J. Storrow, Sidney W. Winslow, directors. Geo. W. Heintz, gen. mgr. Clarence E. Allen, mgr.; A. P. Mayberry, supt. Inc. 1876, in Utah, and reorganized, 1899, in Maine. Cap., \$5,000,000; shares \$25 par; issued, \$2,500,000. Stock is listed on San Francisco Exchange. Is controlled by United States Sm., Ref. & Mining Co., through ownership of 99,964 shares of the 100,000 shares of issued stock, there being only 4 other shareholders. Dividends: \$7 per share in 1906; \$2.50 in 1907; \$11.50 in 1908; nothing in 1909; \$6 in 1910 and 1911; \$3 in 1912 and 1913, making a total of \$4,050,000 to end of 1914. Last dividend of \$1 per share declared April 1, 1916. Annual meeting, third Wednesday in April.

Property: in the Tintic district, includes the Centennial, Eureka, Tintic, Dove, Swan and Pelican group. Ores carry fair values in gold, silver, copper and lead.

Development: by a 3,260' shaft, and the 2,160' Holden tunnel, completed 1909, connecting with the shaft just below the 500' level. This tunnel permits the ore to be delivered directly to railroad cars, eliminated the rope tramway and handles the water from the mine. During 1914-15 development work was carried on from the 3,100' level. Ores are shipped to the Midvale smelter of the U. S. Smelting Co., at West Jordan, Utah. The mine is timbered with square sets, and formerly was dry, but the lower levels are wet, water being handled by a 500-gal. Sulzer-Winterthur electric pump. About 300 men are employed. Surface equipment includes 40-stamp mill, steam and electric power with necessary engine houses and shops.

Production: in 1915 was 49,530 tons as against 58,461 in 1914; 101,101 in 1913; 117,957 in 1912; 108,275 in 1911; 90,375 in 1910, and 109,430 tons in

1909. An option taken on the property of the King William Mng. Co. was relinquished March, 1915.

CENTENNIAL MINE**COLORADO**

See Kennedy Gold M. & M. Co.

CENTER CREEK MINING CO.**MISSOURI**

Robt. F. Stewart, sec.-treas., Webb City, Mo. Inc. 1889. Cap., \$1,000,000; shares \$10 par. Dividends to 1915 amount to \$520,000. Company does not carry on active mining operations, but leases its land to operators among whom are C. Y. Ramage; C. D. & R. Mng. Co.; Incline Mng. Co., J. R. Wisby; Three C's Mng. Co.; Twin Cities Mng. Co., and the Good Shepherd Mng. Co., receiving royalty on all ore produced.

Property: 200 acres and millsite between Webb City and Carterville, Jasper Co., Mo., developed by 13 shafts from 116' to 165' deep, producing both lead and zinc ore.

Production: valued at \$300,000 to \$400,000, annually. Total output about \$12,500,000 worth of ore.

CENTRAL EUREKA MINING CO.**CALIFORNIA**

Office: 246 Russ Bldg., San Francisco, and Sutter Creek, Amador Co., Cal. **Officers:** John H. Grady, pres.; Morris Brown, v. p.; Wm. A. Van Bokkelen, sec.-treas.; J. E. Davis, supt. **Cap.,** \$400,000; shares \$1; assessable; outstanding \$398,883. Annual meeting 3rd Thursday in April. Results of operations have been a disappointment for many years, but a dividend of 2c per share was paid in Feb., 1915.

Property: adjoining the South Eureka on the north, $\frac{1}{2}$ mile south of Sutter Creek, shows 3 parallel veins which have been developed. The veins are in the form of stringers, with strike N. 20° W., dip 55° to 70° E., and an average width of 6'. The east vein is 20' from the west vein, while the hanging-wall vein is 200' east of the west vein. East and west veins have slate walls; hanging-wall vein has a slate footwall and greenstone hanging-wall. Two series of ore-shoots have been developed, the north shoots being 60', the south shoots 200' long.

Development: 3-compartment shaft 3,170' deep, sunk on 57° incline. Shaft cuts the hanging-wall vein on the 500' level, and is sunk on the vein to the 2,000' level. From the 1,800' to the 3,100' level the new shaft was sunk in the foot-wall. On the 3,000' level the shaft cuts the west vein. Present work is mainly on the 2,800', 3,000' and 3,100' levels, where good grade ore is said to have been developed in the east and west veins.

Equipment: includes an Ingersoll compressor driven by 150-h. p. motor, and two 60-h. p. oil-fired boilers. Ore is hoisted in 2-ton skips and run through a Blake crusher before being trammed to the mill.

Mill: 40 stamps, 20 dropping at present, of 1,150 lbs. each, making 100 drops per minute and crushing $4\frac{1}{4}$ tons per stamp through a 24-mesh screen. Mill is driven by a 75-h. p. motor.

CENTRAL LEAD CO.**MISSOURI**

Entire capital stock owned by American Smelters Securities Co. **Property:** 1,603 acres in Flat River mining district, Saint Francois Co., Mo.

CENTRAL MINING & DEVELOPMENT CO.**ARIZONA**

Winkelman, Pinal Co., Ariz. C. G. Werner, pres., treas. and gen. mgr.; F. G. Angeny, v. p. and sec.; preceding officers, Chas. E. McGee, T. C. Wells and David McClure, directors; F. B. Garden, supt., at last accounts. Inc. July 13, 1906, in Arizona. **Cap.,** \$10,000,000; shares \$1 par. Property was bought for \$6,000 and capitalized at \$10,000,000. The three chief promoters were convicted of fraud in connection with the company's affairs and sentenced to Leavenworth. See Vol. X and XI, Copper Handbook, for full description. Property idle and company probably dead.

CENTURION ARIZONA MINING CO.**ARIZONA**

Dragoon, Cochise Co., Ariz. J. P. Richardson, pres. and gen. mgr.; Samuel Bennett, v. p.; H. A. Morgan, sec.-treas.; preceding officers, S. N. Kemp, J. C. Page, J. W. Angle and H. E. Dunlap, directors. Inc. July 26, 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; nonassessable; issued, \$527,000.

Property: 23 claims, 5 fractional, 240 acres, and a 5-acre mill site, 2 miles N. W. of Dragoon, in the Dragoon mountains, shows a contact deposit between pre-Cambrian limestone and altered schist, averaging about 15' in width, and carrying azurite and malachite, associated with hematite. Ores carry an average of 2.7% copper. Development is by a 650' incline shaft, several shallower shafts ranging from 40 to 100' in depth, and a 3,000' tunnel, with about 5,000' of workings, estimated by management to show 160,000 tons ore in sight. Work on the 600' level said to be in 8.12% ore for 50'.

Equipment includes a 15-h. p. gasoline hoist, good for 800', a small air compressor, a machine shop, smithy and other necessary mine buildings. Large pumps to be installed in 1916. Shipments to smelter in 1915 reported to have netted 22.65% copper per ton. Property considered promising.

CENTURY MINING CO.**MISSOURI**

Property: Century mine, at Neck City, Jasper Co., said to have been one of the most productive mines in Missouri in 1914. Ore is zinc blende; rich orebody on 200' level said to have yielded a recovery of 12% in 60% concentrate. Developed by two 190' shafts. Equipped with 150-ton mill. Produced 2 to 4 carloads of ore weekly in 1914. Output greatly increased in 1915.

CENTURY ZINC CO.**MISSOURI**

Inc. in New York. Cap., \$20,000. Operating on land of Longacre & Chapman, in Jasper Co., Mo. Has 2 shafts 185' deep and a 235-ton concentrator. Product is zinc concentrate.

CERRO DE PASCO COPPER CORPORATION.**PERU**

Office: 15 Broad St., New York. **Officers:** L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.

Inc. Oct. 28, 1915, in New York, succeeding the Cerro de Pasco Copper Investment Co. Cap., \$1,000,000; shares without par value; 666,666 shares issued; 333,334 in treasury for conversion of \$10,000,000 10-yr. 6% convertible Gold Bonds, dated Nov. 1, 1915; int. payable May and Nov. 1. Bonds convertible at option of holder after 2 years into stock at \$30 per share. Bonds subject to redemption at option of company, on 90 days' notice, on any semi-annual interest date after 2 years at \$105, plus interest. Stock listed on New York Curb.

Dividends: initial quarterly dividend, \$1 per share, was paid March 1, 1916.

Owns 95% of Cerro de Pasco Copper Co. stock and all of the Morococha Mining Co.

COMPANIES CONTROLLED BY CERRO DE PASCO COPPER CORP.**Cerro de Pasco Investment Co.**

Dissolved Dec. 23, 1915.

Cerro de Pasco Mining Co.

Office: No. 15 Broad St., New York. Peruvian general office: Lima, Peru. Mine office: Cerro de Pasco, Junin, Peru. Works office: La Fundición, Tifahuarca, Junin, Peru. **Officers:** L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.; W. J. Hamilton, gen mgr.; Lima; P. S. Couldrey, mine supt., Cerro de Pasco. Inc. June 6, 1902, in New Jersey. Cap., \$10,000,000, all issued. Owns the entire stock issue of the Cerro de

Pasco Railway Co., and entire stock issue of Sociedad Minera Copaycocha, and entire stock issue, excepting founders' shares, is owned by Cerro de Pasco Copper Co., which in turn is controlled, through stock ownership, by Cerro de Pasco Copper Corp. Estate of J. B. Haggin is said to hold about 40% of the total investment.

Property: over 940 claims, and 70,000 acres miscellaneous lands in the Morococha and Yauli districts and about 400 acres of land that includes three-fourths of the rich Cerro de Pasco district, with a smelter site and extensive coal tracts north of Cerro de Pasco.

Cerro de Pasco lies 14,300' above sea level, rendering physical labor very fatiguing. The population of the town is about 6,000, of whom only a small percentage are white. The region is bleak and all food and supplies must be brought in from considerable distances. The year has but 2 periods, the wet and dry, the former from November to April. Both are said to be bleak and exceedingly disagreeable. Snow and hail fall at any time, summer or winter, but rarely remain on the ground as long as 48 hours, even in winter. The fluctuation between mean summer and winter temperature is about 20° F. only, less than the daily variation.

Silver was discovered at Cerro de Pasco in 1630, and the mines produced, to the close of the nineteenth century, about 450,000,000 oz., from 40,000,000 tons of silver and copper ore, nearly all extracted by hand work and carried 3 to 6 miles on the backs of llamas, to primitive smelters, whence the silver bullion was transported by llamas 200 miles to Lima, until 1870, when a railroad was completed to Oroya. Formerly only the copper ores of 25 to 40% copper were shipped.

Geology: authorities disagree as to the geology of the district, but over an area a mile wide and nearly 2 miles long, nearly every claim carries ore, proving Cerro de Pasco one of the richest mineral fields of the globe. The orebodies outcrop prominently, as crestones, or ridges, and carry gold, silver, copper, lead, zinc and cobalt. The oxidized zone carries considerable gold, running as high as 1 to 2 oz. per ton, occurring in rich but erratic shoots. The high silver values usually extend to about 100' depth only, occasionally running up to thousands of ounces per ton, followed by rich silver-copper ores, which in turn, at a little greater depth, are succeeded by ore low in silver but richer in copper, the copper ores being estimated to have averaged 15 to 35 oz. per ton in the old workings. Primary ores below the water level contain bornite and chalcopyrite, associated with pyrite, tetrahedrite, arsenopyrite and sphalerite, containing little silver and only traces of gold. There are occasional veins of high-grade silver-lead ores, with others carrying up to 8% zinc; practically all the copper ores are bismuthiferous, hence refractory in reduction. The ores carry about 35% silica and 14 to 30% iron, the excess of silica requiring considerable limestone for fluxing.

Development: includes hundreds of old mine workings, some opened to 300' depth, though the majority not over 100' deep. The surface of the property shows scores of tajos, big pits resulting from the caving in of old open cast workings, some of these being 300' deep. The property lies in a basin, and the mines are very wet, especially below a depth of 400'. The Rumiallana drainage tunnel, begun April, 1877, by Henry Meiggs, was completed 1907, by the Compañía Empresa Socavonera del Cerro de Pasco, with which a financial arrangement was made, through a 5% stock interest given in the Cerro de Pasco Copper Co., obviating the payment of the 20% royalty to which the former company was legally entitled.

The present company has disregarded old workings and opened a new mine, by 2 tunnels, of about 2 miles length each, and 5 new shafts. The

Diamante, Peña Blanca, Carmen and Noruega 2-compartment shafts have 4 levels opened, and are bottomed at 410'. The 4-compartment Esperanza shaft is planned to do the hoisting for the entire mine and the shops and power plant are near this shaft. Waste is used for filling, timber being very expensive, and used only for lining shafts and timbering important tunnels. The mines are equipped with powerful pumps. Estimates of ore in sight vary from 2,000,000 to 75,000,000 tons, the latter figure being excessive, and not countenanced by the management. Reserves of ore blocked out are said to be kept 4 years ahead of smelter consumption, these including first-grade ore of 8 to 10% copper tenor, with good silver values, and second grade ore, of uncertain copper tenor, though probably workable in the main.

The reduction works, at La Fundición, near Tifahuarea, 9 miles from the mines, are connected therewith by rail. All buildings are of steel frames, covered with corrugated iron. The plant treats a small quantity of custom ores and has a sampling mill with crushers, rolls and chain-bucket elevators. The works are terraced throughout, permitting the handling of material by gravity, and are built on the unit plan, so that their capacity may be doubled or, if desired, quadrupled at later date.

The furnace building has twelve 2,000-ton flat-bottomed steel ore bins, filled from railroad tracks above, and loading into charging cars run alongside, that are drawn by small locomotives on a narrow-gauge track running on either side of each furnace, 2 cars constituting a charge. There are five 56x180" water-jacketed blast furnaces of about 300 tons actual daily capacity each. Slag is granulated by running water. The smelter building has a steel stack, 220' high and 20' in diameter. There are three 60' reverberatory furnaces and fourteen 18' six-hearth McDougal calcining furnaces. Six Dwight-Lloyd sintering machines were added in 1913.

The converter department, in a separate building, has 4 Pierce-Smith basic lined converters. Product of the converter is 99% blister copper, in cakes, shipped to Baltimore for refining.

The power plant includes a boiler house with sixteen 250-h. p. Babcock & Wilcox boilers, and an engine house, latter having a 600-h. p. Nordberg cross-compound engine, direct-connected to a 440-k. w. Westinghouse generator; two 475-h. p. Nordberg engines, direct-connected to two 250-k. w. generators; a 750-k. w. Westinghouse alternator and dynamo and 2 smaller dynamos furnishing electric power and light. There are 3 No. 11 Connorsville blowers, driven by a Nordberg cross-compound engine, a large Nordberg air compressor for converter blast, and an air compressor for the pneumatic operation of furnace doors, etc. The power plant is practically duplicated, as a precaution against accidents.

A 12,000-h. p. hydro-electric plant was completed in 1913 and will greatly help the company's operations. The plant has a 10½-mile ditch and pipe line with a fall of 750', delivering 200 second-feet of water to 6 Pelton wheels connected in sets of 2 with three 3,000-k. w. dynamos. The transmission line is 70 miles long and will serve both Cerro de Pasco and Morococha. The entire plant cost \$1,000,000.

The adoption of electric power has greatly relieved the fuel situation and made the company practically independent of foreign coke.

The company furnishes its own fuel, owning extensive beds of bituminous coal, of rather indifferent average quality, though with some coal of coking grade. The principal coal mines are at Goyllarisquisca, Quishuarcancha and Vincuscancha. A branch line of the railway to Goyllarisquisca is 21 miles long, to Quishuarcancha 11 miles, the Vincuscancha coal mine being about midway. The coke plant, near the smelter, has seventy 75-ton

beehive ovens, making a satisfactory coke for blast furnace use, no coke being imported. The coal contains 50 to 60% fixed carbon, 20% volatile matter and about 13% ash, with considerable sulphur.

The company's brick plant has proven an important success, as imported brick of all kinds are very costly, and the local plant turns out fire and silica brick of very fine quality, from clays found in the mines, and common building brick are made from a clay pit near the Vincuscancha mine. This plant also makes tile and tile pipe. A limestone quarry, 12 miles from the works, furnishes flux.

The Cerro de Pasco railway, owned by the company and operated under a government concession, has a main line of 83 miles, running from Cerro de Pasco to Oroya, where connection is made with the Central Railway of Peru, which runs thence 130 miles to Callao, the latter line being one of the most notable in the world, having cost \$43,000,000 and gaining nearly 3 miles vertical elevation, reaching the highest altitude of any railroad on the globe, after surmounting almost incredible obstacles, having an average grade of 2.5%, with no less than 57 tunnels, including the Galera tunnel of 1 kilometer length which cuts through a ridge of the Andes. The Cerro de Pasco railway has a branch to the coal fields, and, with all spurs, sidings and yards, has about 135 miles of standard-gauge track, laid with 70-lb. rails. The main line has an average grade of 1.5%, with a maximum grade of 3%, and cost upward of \$2,000,000. Equipment includes 13 locomotives, in addition to 6 light switching engines at the smelter, and 59 steel ore and coal gondolas, with a total of 247 forty-ton cars, rolling stock being of the best American manufacture. The railroad is on a paying basis.

The company has 2 hotels, one for native and one for American labor, and maintains a clubhouse with bowling alley, swimming pool, gymnasium, etc., which is a social center and aids greatly in keeping the American workmen and their families contented. The company also furnishes facilities for riding and hunting. Although the altitude is very high, people of normal good health find no difficulty in living comfortably in the rarified air of Cerro de Pasco. Wages range from \$2.50 to \$4 per day for white labor, and 60 to 75 cts. per day for native common labor, the latter being tractable, and, for some purposes, fairly efficient. Up to \$2, and even \$2.50 per day, is paid the native timberman. The company employs about 2,200 men at the copper mines, 1,500 men at the smelter, 1,000 at the Goylarisquisca coal mine, 400 at the Vincuscancha coal mine, and 200 at the Quishuarcancha coal mine.

Production: 3,389,787 lbs. copper in 1906; 20,258,689 lbs. in 1907; 23,646,921 lbs. in 1908; 30,327,423 lbs. in 1909; 34,713,012 lbs. in 1910; 48,600,926 lbs. in 1911; 45,272,000 lbs. in 1912; 43,856,000 lbs. in 1913; 40,753,000 lbs. in 1914; 60,000,000 (approximately) in 1915; and in 1916, to June, has averaged 6,000,000 lbs. per month. Of the 1915 production practically $\frac{1}{4}$ was furnished by Morococha.

The Cerro de Pasco is undoubtedly the most expensive copper proposition ever developed, the total investment to date being nearly \$25,000,000. Many serious discouragements were met in the earlier days, but overcome, and sufficient progress has been made to justify terming the property a success. The ores are refractory and the great altitude of the smelter, which is 14,300' above sea-level, coupled with inefficient native labor, have given rise to an exceedingly complex and tiresome problem in ore reduction. Estimating cost of production at 8c per lb. and annual output at 70,000,000 lbs., earnings per share of the Cerro de Pasco Copper Corporation would be \$4.20 on a 14c, \$8.40 on a 20c and \$12.60 on a 26c copper market.

Morococha Mining Co.

Office: 15 Broad St., New York, and Morococha, Junín, Peru. **Officers:** E. H. Clark, pres.; L. T. Haggin, v. p.; H. Esk Moller, sec.-treas.; H. Kingsmill, mng. supt. **Inc.** 1908 in New Jersey. **Cap.**, \$10,000,000. Company is a subsidiary, formed by the New York interests of the Cerro de Pasco Co., prior to the settlement of litigation with the Socavon del Cerro de Pasco.

Property: the Gertrudis, San Francisco and San Miguel mines and a one-half interest in the Natividad mine, which is owned jointly with the Backus & Johnston Co.

The Mina Gertrudis, opened 1897, on the Cerro San Marcello, shortly west of Lake Morococha, shows 3 limestone beds with ore impregnations following the bedding planes; vein has strike of N. 51° E. and nearly vertical dip. It averages about 2 meters in width, with a paystreak of 60 cm. to 1 meter, carrying gray copper and chalcocopyrite averaging about 14% copper and 1,000 grams silver per metric ton, balance of vein carrying about 5% copper and 300 grams silver per metric ton. The mine has a 12-meter shaft, but is developed mainly by a tunnel, just above the level of Lake Morococha, mining through winzes sunk from short crosscuts in the hanging. Ore is hand-cobbed at the portal of the tunnel.

The Natividad mine is opened to about 300 meters depth, developing a vein about 4' wide, carrying ore averaging about 14% copper and 14 to 70 oz. silver per ton. A new tunnel, planned to be 750 meters long, is being driven under the old workings.

The Mina San Miguel is developed by the Copaycocha and Vulcano tunnels, lower of about 500 meters length, and ore is mainly enargite, with some tetrahedrite and tennantite, associated with pyrite. Mine was opened 1894, and in 10 years produced from ore averaging about 20% copper and 333 grams silver per metric ton, 6,476,400 kgs. fine copper and 10,794 kgs. fine silver.

The San Francisco is opened by a 4,000' tunnel, completed in March, 1916, known as the Carlos Reynaldo adit.

Production is gradually increasing and the greater part of the ore is sold to and smelted by the Cerro de Pasco Mng. Co. Production is approximately 20,000,000 lbs. per year. In 1915 company furnished $\frac{1}{3}$ of the output of Cerro de Pasco Mng. Co.

CERRO GORDO MINES CO.**CALIFORNIA**

Office: 1011 First Nat'l Bank Bldg., San Francisco, Calif. Mine address: Keeler, Calif. Frank J. Mambly, pres.; L. D. Gordon, v. p. and gen. mgr.; A. L. Dornberger, sec.; F. J. Hagenbarth, treas.; preceding officers and J. E. Richards, directors. J. C. Climo, supt. **Inc.** July 16, 1914, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; 975,000 issued.

Property: the Cerro Gordo mines, 35 claims, 8 miles from Keeler, including the Union mine on Cerro Gordo hill and a water power on Lone Pine creek; formerly belonged to the Four Metals Sm. & Mng. Co.

The Union mine is an antigua, worked by Mexicans in early days and opened to a depth of 1,200'. The principal ores produced are silver-lead mostly carbonates, with some galena and lead sulphate; also zinc carbonate. The zinc ore occurs from the surface to the 900' level, and the silver-lead ore from the surface to the 1,150' level. Ores also contain gold and copper values. See U. S. G. S. Bull. 540, pp. 97-105.

Development: by the 900' Belshaw shaft, with a winze to the 1,150' level, and tunnels. The Tröeger tunnel is now in over 6,000' and cuts the vein system 1,200' below the workings of the Union mine. Underground workings are said to aggregate 20 miles.

Equipment: includes a Joshua Hendie 100-h. p. electric hoist; an

Imperial type 10 Ingersoll-Rand compressor, capacity 600 cu. ft. free air per min., driven by a 75-h. p. constant speed motor. The former steam plant is intact and consists of 70-h. p. steam hoist, 350 cu. ft. Ingersoll-Rand air compressor and 130-h. p. boiler. Electric power, voltage 400, is obtained from the Southern Sierras Power Co.

The Swansea smelter has a 50-ton furnace that was operated for a few months in 1909.

Production:	Tons	Oz.	Oz.	Lbs.	Lbs.	Lbs.
	Ore	Gold	Silver	Lead	Copper	Zinc
1915.....	8,926	126	112,541	748,952	121,510	4,544,666
1914.....	4,367	312	303,085	1,195,006	283,086	58,736

Ore produced in 1915 reported to average 33% zinc, or \$40.00 per ton. Ore is shipped to the United States Smelting Co. at Salt Lake City. Company employs 70 men.

Management plans erecting a concentrator.

CHAINMAN CONSOLIDATED COPPER CO.

NEVADA

Property sold to Consolidated Coppermines Company in Dec., 1913.

CHALCHIHUITES MINING CO., S. A.

MEXICO

Idle. Mine office: Chalchihuites, Sombrerete, Zacatecas, Mex. Milton R. Straight, pres.; Francis E. Agnew, v. p.; Jose de Ranchos, sec. Inc. Oct., 1909, in Mexico. **Property:** includes La Florencia, San Felipe and Ampliacion de Milagros mines, near Chalchihuites, carrying values mainly in silver. Operations suspended by revolution.

CHAMBERS-FERLAND MINING CO., LTD.

ONTARIO

Cobalt, Ont. **Officers:** C. Jorgensen, pres.; C. A. Richardson, v. p.; Alex. Fasken, sec-treas. Inc. 1908 in Ontario. **Cap.**, \$2,500,000; shares \$1 par. fully paid; 2,312,850 shares outstanding. Company controlled through ownership of $\frac{2}{3}$ of stock by Alladin Cobalt Co., Ltd.

Property: adjoins the Nipissing at Cobalt, Ont., and is supposed to have the extension of the Nipissing vein system. Faulting has made necessary a thorough system of crosscutting.

Ore: silver, in veins of calcite. **Property** supposed to have good chances of becoming a large producer, but the output has been comparatively small. Development work on the whole has been disappointing. Late in 1915 a 3" vein of high-grade silver ore was cut in a winze from the 350' level and stoping on this vein on the 426' level has yielded some shipping ore. Up to May, 1916, the vein has been drifted on for over 100'. The winze is 750' from the shaft and 37' from the Nipissing boundary line. Company employs 25 men.

Production: for 1914 amounted to 19,066 oz. silver.

CHAMPION CONSOLIDATED MINING CO.

OREGON

Officers: C. V. Bobb, managing director; H. C. Mahon, sec., Portland, Ore.; Olaus Jeldness, 2029 Second St., Spokane, Wash.; J. S. Lewis, v. p-treas. Inc. June, 1916. **Cap.**, \$300,000; shares 10c par.

Property: 49 claims, 800 acres, near Champion, in the Bohemia district, southern Oregon, including the Champion, Helena and Music mines. The properties discovered 1858 have a reputed gross production of \$2,200,000.

There are three parallel veins averaging 3' in width, which carry oxidized ores down to water level at 300' depth. Two ore-shoots are reported as 400' long and 25' wide and to assay \$3.50 per ton. Also a porphyry dike 150' wide which assays from \$1.60 to \$3.50 per ton in gold.

Development: all three mines are developed down to and have been stoped above the 300' level, with about 2,000' of workings. The most extensive work is at the Champion mine. New company is drifting on 300' level of Champion and Music mines, opening \$40 ore.

Equipment: power plant, hoists, etc., and a 30-stamp mill with concentration plant. Management plans enlargement to 50 stamps and addition of flotation unit.

CHAMPION COPPER CO.**MICHIGAN**

Office: 82 Devonshire St., Boston, Mass. **Mine office:** Painesdale, Houghton Co., Mich. **Mill office:** Redridge, Houghton Co., Mich. **Officers:** Wm. A. Paine, pres.; Chas. J. Paine, Jr., v. p.; Frederic Stanwood, sec.-treas.; Frederick W. Denton, gen. mgr.; preceding, with Samuel L. Smith, Geo. P. Gardner, W. Cameron Forbes and Hon. Richard Olney, directors; H. Schacht, asst. gen. mgr.; John Jolly, underground supt.; Edw. Koepel, mill supt.; M. L. Cunningham, asst. mill supt.; H. F. Mercer, chief engr.; E. W. Kruka, chief clerk; W. J. Richards, master mechanic.

Inc. Dec., 1899, in Michigan. Cap., \$2,500,000, shares \$25 par. Is controlled jointly by Copper Range Consolidated Co. and St. Mary's Mineral Land Co., through equal ownership of stock, and owns \$110,000 stock in the Michigan Smelting Co. Balance sheet of Dec. 31, 1915, showed a net profit of \$3,709,049 and a surplus of \$1,815,868. Receipts from ore sales in 1915 were \$5,814,279. Dividends: \$3 in 1903; \$2 in 1904; \$10 in 1905; \$12 in 1906; \$10 in 1907; \$5 in 1908; \$8 in 1909; \$9 in 1910; \$5 in 1911; \$11 in 1912; \$9 in 1913; \$31 in 1915; \$30.60 in 1916, to Aug.; a total of \$145.60 per share, or \$14,560,000.

Property: 1,240 acres, being the S. $\frac{1}{2}$ of Sec. 30, W. $\frac{1}{2}$ and N. $\frac{1}{2}$ of N. E. $\frac{1}{4}$ and S. W. $\frac{1}{4}$ of N. E. $\frac{1}{4}$ of Sec. 31, T. 54 N., R. 35 W., practically all on the mineral belt. Neighbors are the Copper Range and Trimountain on the north, lands of St. Mary's Co. and Hussey, Howe & Co. on the east; Hussey-Howe lands and the Globe tract on the south, and Copper Range lands on the west. The tract carries 9,047' on the strike of the bed, and, at the present angle of dip, the deepest shaft could go down to the impossible depth of 18,950' before reaching the western boundary.

Geology: development started in 1899, under direction of Dr. L. L. Hubbard, and 3 parallel amygdaloidal beds were uncovered by trenching, one of which, the Baltic, showed phenomenal copper values. The 2 amygdaloids paralleling the Baltic bed showed copper in sufficient quantities to render their future exploration advisable. A fourth amygdaloidal bed, about 15' wide, discovered 1901, east of the Baltic bed, carries heavy copper to an encouraging extent, and there also is a fissure vein of arsenical ore, apparently algodonite (copper arsenide) near "C" shaft. The width of this vein at surface is slight, and mineral contents variable, but on the second level the fissure is 2' wide, and well mineralized.

The dip of the Baltic bed at the Champion is about 70° and strike same as at the Trimountain, not the easterly trend of the Baltic mine. The bed runs 13 to 45' and averages 24' width, carrying more epidote than at the Trimountain and Baltic. The surface of the tract is very hilly, but the overburden is less than is found either to the northward or southward. The stretches of lean ground in the mine are few, and the bed carries heavy copper in profusion, mostly in barrel size, but running up to masses of 10 tons in weight. Only about 60% of the rock broken is hoisted, waste rock being sorted out and used for dry walling, packing itself.

All shafts are connected on numerous levels and about 2 miles of new workings are made yearly. The bed shows so little poor ground that nearly every level will be opened from end to end of the mine, eventually giving the longest average drifts of any Lake Superior property. The only really poor ground found in the mine was shown in "E" shaft, between the 3d and 4th levels, and the mine shows some stopes of phenomenal width and rich-

ness. The ground opened, 1914, was of average value. A large area of good ground was opened between Nos. 2 and 3 shafts in 1915.

Development: by 4 shafts, named from north to south: "B" shaft, the northernmost, 1,835' south of the Trimountain boundary, is 2,356' deep; "C" shaft, 1,050' south of "B," is 2,334' deep; "D" shaft, 1,300' south of "C," is 2,168' deep; "E" shaft, 1,300' south of "B" and 3,900' north of the Globe boundary, is 2,388' deep. The third level of "E" shaft has been driven 3,000' toward the Globe boundary. "F" shaft, started 1,300' south of "B," was abandoned on account of treacherous overburden, but the Baltic bed was located, 1907, by diamond drill at a new site, 1,800' south of "E," and 2,100' north of the Globe boundary.

No shaft sinking was done in 1915, but about 15,000' of drifting, 749' of crosscutting and 5,094' of raises was accomplished.

Equipment: the shafts are practically duplicates in all essential particulars, having 40x50' shaft rock houses, with 90-ton ore bins, enlarged, 1908, by the Wisconsin Bridge & Iron Co. Equipment at each rock house includes a steam hammer for heavy copper, and one 12x15" rock crusher, taking everything hoisted from the mine direct from chutes. The shafts have duplicate first-motion Nordberg hoists with 24x60" duplex cylinders and double conical drums of 14' diameter, with capacity for two 3,000' cables each, hoisting 6-ton skips. The boiler houses have Bradley and Burt boilers, with coal trestles connecting. Water for boilers is furnished from a 12,000-gal dam.

Very extensive use is made of electric power on surface, and there are some underground electric pumps. The electric plant at "F" shaft has a 250-k. w. General Electric generator, direct connected to an Allis-Chalmers cross-compound vertical engine.

The main steel compressor building at "F" shaft has a 100-drill Nordberg quadruple expansion 2-stage air compressor, with capacity to compress 9,120 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. The compressor operates at a steam pressure of 280 lbs., and has a regenerative feed-water system. Power is furnished by three 250-h. p. Geary water-tube boilers. At "B" shaft there is a 40-drill Ingersoll-Sergeant cross-compound 2-stage air compressor with vertical receiver inter-cooler. The electric plant, with a 100-k. w. generator, is in the main compressor building.

Buildings at the mine include a change house, dwellings and machine shop, with traveling crane and trolley rail for its entire length, with a 30-h. p. electric motor.

The stamp mill is at Freda, on Lake Superior, 2 miles west of Redridge. Lower-pressure turbine and accessories were installed in 1915. The mill has 6 Nordberg stamps, there being 4 compound stamps, with 15½" cylinders, each treating about 700 tons daily, and 2 simple stamps, with 28" cylinders, of about 660 tons daily capacity each, giving the mill a total capacity of fully 4,000 tons daily.

The concentration department was remodeled, 1908, and given additional tables and larger settling tanks. The wash for the heads has Hodge graduated adjustable-speed jigs, with plungers working simultaneously or alternately, in pairs, Woodbury jigs and Deister concentrating tables. Raggings are reground by Allis-Chalmers crushing rolls having 1 roll fixed and the other in a spring bearing. The preliminary discharge from the stamp heads is treated on very large jigs, having 30x48" sieves, of punched steel, with one-eighth inch openings, installed in connection with the head. Each head has a V-shaped settling tank, 40' long, 9' deep, 12' wide at the top and 6" wide at the bottom, slimes being drawn from spigots at the bottom. The flow of water through the settling tanks does not exceed 6' per minute.

The mill is heated by hot water from a Green fuel economizer.

The steel boiler house has four 200-h. p. Stirling boilers, 5 Dutch oven Scotch marine boilers and 2 Hawley down-draft furnaces. Coal is brought to the boilers by tram, and reduced to uniform size by a grinder before feeding to the grates, and ashes are washed into the lake through a launder. Exhaust steam passes through dry condensers, thence to a hot well, from which water is fed to the boilers. Power for the mill is supplied by a 500-h. p. Nordberg cross-compound engine, with a 180-h. p. engine in reserve.

The steel pump house, with truss roof and traveling crane, has a 20,000,000-gal. Nordberg triple-expansion pump. Water for the mill and boilers comes from the lake through a 1,020' tunnel, the shore end having a well with bottom 8' lower than the lake level, this being the longest tunnel ever driven under Lake Superior. The intake crib has an area of 45 sq. ft. and, with a second crib, the tunnel could furnish water for 10 stamps. Water cost is less than 1½ cts. per ton of rock stamped. Screens have been installed in the tunnel, obviating the trouble formerly caused by sand and wood pulp in the water. A sand loading plant was erected in 1915. During the year 220,920 cu. yds. of stamp sand were run into the mine for fill.

	Stamped Tons	Produced Pounds	Yield per Ton	per Pound	Price Received	Net Profits

The Champion is one of the largest and richest of Lake Superior mines and has been admirably managed.

CHAMPION COPPER CO.

NEW MEXICO

Offices: 7 Government St., Kittery, Me., and 1853 Commonwealth Ave., Boston, Mass. Mine address: Copper Hill Box, Dixon, Taos Co., N. M.
Officers: A. M. Bartlett, pres.; Benj. B. Earle, v. p.; Arthur M. Cripps, sec.-treas.; preceding, with Ralph Thompson, Chas. W. Kokerda, directors. Jas. A. Burton, gen. mgr., Dixon, N. M. Inc. July 7, 1911, in Maine. **Cap.**, \$200,000, shares \$1 par, assessable. Listed Boston Curb. Annual meeting Feb. Commonwealth Tr. Co., Boston, transfer agt.

In report issued March 1, 1916, company reports assets of \$39,185.27 cash, \$136,206.70 in accounts receivable, \$2,622.23 due on assessments, and \$21,985.80 as cost of property, development and expenses to Dec. 31, 1915. Work at the mine was resumed March 6, 1915. In July, 1914, judgment was entered for \$12,500 and property ordered sold to satisfy claim of Champion Copper Co. against another company of same name, which operated property prior to present corporation.

Property: 5 claims, patented, 100 acres, also four 5-acre mill sites and a 40-acre water right, on Copper hill, in the Copper Mountain district of Taos county, 9 miles east of Embudo, the nearest railroad station, and 25

miles N. E. of Taos. Mine is said to have 8 practically parallel veins of 18' to 20' width, between a schist footwall and quartzite hanging wall, carrying cuprite, malachite and chrysocolla, succeeded at depth by chalcocite and gray copper, ore all argentiferous and auriferous, with chalcopyrite beginning to show in lower workings, all with quartz gangue.

Development: includes shallow shafts and surface cuts on several claims, a 160' shaft on the Champion, a 180' shaft sunk on a 4' vein in the Oxide mine, and a 500' tunnel, which has stoping ore and cuts a 45° blanket vein. Company plans sinking Champion shaft to 500' and opening drifts at 100' intervals. **Equipment:** includes a Leyner air compressor, in the mill, with a power house adjoining. A 1,000' ground tram leads from the mouth of the Champion tunnel to ore bins. Improvements include a 15,300' gravity pipe line, of 7" spiral steel-riveted pipe. Was not regarded favorably by the late Horace J. Stevens.

CHAMPION COPPER MINING CO.

IDAHO

Idle. **Office:** 311 Sprague Ave., Spokane, Wash. Mine near Mullan, Shoshone Co., Idaho. **Officers:** Adam O'Donnell, pres.-mgr.; Wm. J. Coates, sec.; J. H. Wourms, treas.; preceding officers, Patrick Sullivan and F. C. Robinson, directors. **Cap.**, \$1,500,000, shares \$1 par, assessable. **Property:** 6 claims, south of the Reindeer mine, 3 miles from a railroad, near the head of Boulder creek, on the southern slope of Stevens peak, 4 miles south of Mullan. Said to show a mineralized zone of 75 to 100' width, with a vein ranging up to 25', carrying chalcopyrite and occasional bornite, said to average about 5%, with quartz and calcite gangue. **Development:** by 2 tunnels, lower of about 900'.

CHAMPION MINING CO.

IDAHO

Idle. R. T. Badger, sec.-treas., Utah National Bank Bldg., Salt Lake City, Utah. Mine office: Mackay, Custer Co., Idaho. **Officers:** Edw. R. Hall, pres.; C. T. Mixer, v. p.; preceding, with O. D. Mallory and J. E. Frick, directors; H. A. Brown, supt. **Inc.** 1905 in Utah. **Cap.**, \$100,000, nonassessable. **Property:** 9 claims, unpatented, in the Alder Creek district, 6 miles from a railroad. Developed by tunnel, with about 1,500' of workings, showing silver, lead and copper ores.

CHAPARRAL MINING CO.

ARIZONA

C. H. Blacker, gen. mgr. Company has a lease on the Little Jessie gold mine, owned by the Ohio Mines Co., at Chaparral, Yavapai Co., Ariz., and described thereunder. Was operating in 1915, but returns not reported.

CHASE CREEK COPPER CO.

ARIZONA

Mine office: Clifton, Greenlee Co., Ariz. Clarence K. McCornick, pres.; H. G. Smith, treas.; S. S. Campbell, mgr.; Isaac N. Stevens, supt. **Cap.**, \$5,000,000. **Property:** 52 claims, 1,040 acres, 8 miles west of Clifton, having a 2,300' tunnel, 6x8', on lands adjoining the Longfellow mine, cutting the Longfellow orebody, of concentrating grade, at a distance of 493', having a back of about 900', showing low-grade sulphide copper ore. Tunnel practically reaches the Coronado railroad, permitting advantageous shipments. Was making small shipments to the Shannon smelter in 1914. Property considered promising.

CHATTANOOGA COPPER CO.

TENNESSEE

Address: J. I. Carter, Chattanooga, Tenn. **Officers:** J. I. Carter, pres.; John Stagmaier, v. p.; G. H. Miller, v. p.; S. E. Whitaker, sec.; P. B. Carter, treas.; with R. B. Davenport, W. S. Palmer, J. C. Vance, R. G. Brock, W. H. Weatherford and A. E. Tucker, directors. **Inc.** 1914 in Tenn. **Cap.**, \$500,000.

Property: 120 acres in northern part of Ducktown copper district, Polk Co., surrounded on 3 sides by the holdings of the Tennessee Copper Co.,

and the Ducktown Copper, Sulphur & Iron Co., adjoins the East Tennessee mine on the east, owned by the last named company. Several diamond drill holes prove that the ore deposits of that mine extend downward on their dip beneath the land of the Chattanooga Copper Co., and that the ore is identical in character, mineral association and occurrence with that of the East Tennessee mine. Ore was found in the drill holes at depths of 685 to 1,050'. Ownership of surface carries ownership of all beneath the surface, as Tennessee does not have an apex law. Diamond drill records would indicate an orebody 290' long, 415' in depth and 30' thick, equal to about 241,000 tons, allowing $\frac{1}{3}$ for waste. Development might add to this figure.

The property is an attractive one, especially when the low operating costs of the Ducktown district are considered.

CHELAN CONSOLIDATED COPPER CO.

WASHINGTON

Michael J. Corcoran, asst. sec.-treas., 180 Broadway, New York. Operating office: 811 Lowman Bldg., Seattle, Wash. Mine office: Leavenworth, Chelan Co., Wash. F. D. Wilsey, v. p.; Thos. J. Higgins, sec.-treas.; preceding officers, Henry D. Bristol, Edw. W. Kuhn, A. T. La Vallette, J. L. Jurey and Louis Arndt Stein, trustees.

Inc. May, 1906, in Wash. Cap., \$12,000,000, shares \$10 par, nonassessable; issued, \$5,779,140. Guaranty Trust Co., New York, registrar. Annual meeting 1st Tuesday in June. Company absorbed the Red Mountain Gold & Reduction Co., the North Star Mng. Co. and a large number of individual mining properties.

Property: 14 claims at Index, Snohomish Co., and 130 claims at Red Mountain, Chelan Co., Wash., 50 miles north of Leavenworth.

Property: the Index mine, between the Ethel and Bunker Hill Sullivan mines, has a 4' vein, opened by tunnels of 600' and 700', with about 2,000' of workings, showing a 6" paystreak of high-grade bornite and chalcopyrite ore.

The Red Mountain lands, unpatented, 4 miles west of Phelps creek, include 67 claims owned outright, and 58 additional claims held through the North Star Mining Co., which is controlled through stock ownership. Development: by 2,000' main tunnel, supplemented by 600' of diamond-drill borings, showing a 5' vein carrying values in copper and gold, and 2 smaller veins. **Equipment:** includes gasoline power and an Ingersoll air compressor, and there are 6 or 7 buildings.

Company is inactive, as ore is too low-grade and in too small quantity to operate profitably.

CHEMUNG COPPER CO.

NEW MEXICO

Bought out, Aug. 18, 1912, by Phelps, Dodge & Co., and dissolved, after paying shareholders \$1,381,072, or \$6.16 per share.

CHEROKEE COPPER CO.

MICHIGAN

Idle. Herman W. Fesing, supt., Houghton, Mich. Mine address: Lake Mine, Ontonagon Co., Mich. **Officers:** W. A. Hodgson, pres.; Linus Stannard, 1st v. p.; Deen L. Robinson, 2nd v. p.; Wm. D. Calverly, sec.-treas.; preceding, with J. H. Rice, B. M. Chynoweth and R. M. Edwards, directors. Inc. April, 1910, in Michigan. Cap., \$2,500,000; shares \$25 par; issued, \$1,750,000, of which 49,000 shares were given for lands, 5,000 shares went to the promoters, and 16,000 shares were sold to the public at \$5.

Property: 800 acres, Sec. 2 and S. E. $\frac{1}{4}$ of Sec. 3, T. 51 N., R. 57 W., lying between the Bohemia and King Philip, 1 to 2 miles S. W. of the latter, formerly were owned by the Penn Mining Co., and later by the ill-starred Belt Mines Co., Ltd. Land, entirely on the mineral belt, formerly included what is now the Lake mine of the Lake Copper Co., and carries upwards

of a mile of the copper-bearing formation, presumably carrying the Evergreen belt. In 1913 diamond drilling began. No. 6 drill hole cut a cupriferous amygdaloidal bed of 32' width, of which 5' carried good copper. Company has about \$40,000 in treasury. Development work, consisting of shaft sinking and crosscuts, will be done in 1916.

CHERRY CREEK MINES CO.

ARIZONA

Mine office: Cherry, Yavapai Co., Ariz. Main shaft, 115', said to show a vein with 3' paystreak giving assays of about 12.5% copper, 4 oz. silver and \$9.60 gold per ton. Drilling operations reported in 1914.

CHESTERFIELD COPPER CO.

ARIZONA

Bankrupt. See Blanche Rose Mng. Co. Fully described Vol. XI.

CHETICAMP COPPER CO., LTD.

NOVA SCOTIA

Idle. Office: 37 Sackville St., Halifax, N. S. Mine office: Cheticamp, Inverness Co., N. S. Edward Staris, pres.; John W. Regan, sec.-treas.; Milton V. Grandin, supt., at last accounts. Inc. May, 1904, in Nova Scotia. Cap., \$3,000,000, shares \$1 par, as a merger of the Eastern National Copper Co., Ltd., and 3 other corporations.

Property: 950 acres, freehold, also a 200-acre mill and smelter site, 1,000 acres timber lands, and 200 acres water frontage, with a government license for exploring and locating mines on 50 sq. miles.

Property shows a mineralized zone, in micaceous schist, of 350' width, traceable 1½ miles, carrying 4 orebodies, of which 3 are developed by a 200' shaft and by tunnels of 25', 35' and 115', claimed by company to show 250,000 tons of exclusively sulphide ore, averaging 2.5 to 3.5% copper, 18% lead, 30 oz. silver and \$2 to \$30 gold per ton. Nearest railroad is 38 miles, but mine is 5 to 6 miles only from tidewater. Property considered promising, though estimates of tonnage and values are excessive.

CHETKO COPPER CO.

OREGON

Idle. Office: Ashland, Ore. Mine near Kerby, Josephine Co., Ore. Officers: C. W. Evans, pres. and gen. mgr.; C. C. Hicks, v. p. and supt.; A. E. Shepard, sec.-treas.; J. M. Keith, mine supt., at last accounts. Inc. Aug. 10, 1905, in Ariz. Cap., \$1,000,000, shares \$1 par; issued, \$730,516.

Property: 36 claims, 720 acres, fairly timbered, and 2 water rights, all in Curry county, Oregon, about 70 miles from Grant's Pass, the nearest railroad point. Said to show 8 orebodies, with 2 under development, 1 reported by company as of 240' average width, traceable 1¼ miles, carrying native copper in schist, also covellite, bornite and chalcocopyrite, claimed by company as of 9% average copper tenor, with \$4.75 gold per ton. **Development:** by shafts of 45', 34' and 80', and by 6 tunnels, of 30 to 230' length, with 969' of workings, estimated by company to show 600,000 tons of ore, with 115,000 tons blocked out for stoping, all of which figures are regarded as excessive.

CHEWELAH COPPER KING MINING CO.

WASHINGTON

Office: 115 Wall St., Spokane, Wash. Mine office: Chewelah, Stevens Co., Wash. Officers: S. P. Domer, pres. and gen. mgr.; H. H. Hebert, v. p.; J. Grier Long, sec.-treas.; preceding, with E. W. Shively and F. M. Jarvis, directors. Inc. 1898 in Washington. Cap., \$100,000, shares 10 cts. par, changed 1909 to \$1,000,000, shares \$1 par, and increased March, 1912, to \$1,250,000; issued 1,136,230 shares. Bonds \$30,000, authorized at 8%; issued, \$10,360. Annual meeting, third Thursday in May.

Property: 4 claims, 1 fractional, 47 acres, patented, and a 3-acre mill site, with 80 acres miscellaneous lands, 6 miles east of Chewelah, shows 4 orebodies, estimated widths of 8 to 56', carrying mainly chalcocopyrite and gray copper, with estimated values of 3 to 5% copper, 2 to 6 oz. silver and

\$1 to \$2 gold per ton. **Development:** 300' shaft, and tunnels of 1,200' and 1,350', estimated by management to show 300,000 tons of ore.

Equipment: includes 100-ton smelter. Operations were suspended for lack of funds and receivership asked by creditors December, 1915.

CHEWELAH GREY COPPER MINING CO. WASHINGTON

Chewelah, Stevens Co., Wash. A. I. Kulzer, pres.; E. D. Germain, sec.-treas.; F. M. Jarvis, supt. Inc. in 1915. Company has taken a bond on the Lookout claim of the Copper Hoard Mining Co. (See Vol. XI), which adjoins the property of the United Copper Co. on the north and is supposed to have the continuation of the orebody mined by that company. Present management is sinking from the 115' tunnel to the 400' level to open up this orebody in Lookout ground.

CHICAGO-BOSTON MINING CO. IDAHO

Wallace, Idaho. C. W. Gossert, supt. Cap., \$1,500,000; shares \$1 par. Stock unlisted and none for sale. Owns 7½ claims on Lake Creek, 2 miles S. W. of Wallace, said to show two ore-bearing veins, one, the Tin Cup, having high-grade gray copper ore, from which shipments have been made. The second vein, the Kill Buck, is said to have 8 to 12' of milling ore, opened by No. 6 tunnel. Developed by 6 tunnels, lowest 1,200' long. Power is furnished by the company's water-power plant.

CHICAGO COPPER MINING CO. NEW MEXICO

Office and mine: Oscuro, Lincoln Co., N. M. **Officers:** E. G. Rafferty, pres., treas. and gen. mgr.; H. H. Miller, v. p.; H. E. Riddle, sec.; preceding, with H. R. Rafferty and M. Loquis, directors. Inc. Jan. 31, 1906, in New Mexico. Cap., \$1,000,000, shares \$100 par, nonassessable. **Property:** 22 claims, unpatented, include Copper Boy and Copper Queen mines, 18 miles from a railway, in the Oscuro mountains, also real estate in Oscuro. Developed by a 60' shaft, and tunnels of 60', 120', 222' and 1,550', with about 3,000' of workings, from which former owners shipped several carloads of ore, said to have returned \$270 per ton. Has steam power and a 2-drill Sullivan air compressor. Reported shipping ore in 1914.

CHICAGO COPPER REFINING CO. CALIFORNIA

Office: Kesner Bldg., Chicago, Ill. **Mine office:** Red Bluff, Tehama Co., Cal. **Officers:** Wm. Wrigley, Jr., pres.; A. G. Cox, v. p.; N. E. Guyot, sec. and supt.; Edw. Dickinson, treas.; preceding, with Chas. P. Whitney, directors. Inc. Aug., 1908, in Wyoming. Cap., \$2,000,000, shares \$5 par, nonassessable. Has no connection with the Chicago Copper Refining Co., of Illinois, now bankrupt.

Has a 99-year lease on the property of the California & Massachusetts Copper Mines Co. **Lands:** 72 claims, 1,600 acres, unpatented, well timbered and watered, on Tom Head mountain, 25 miles west of Red Bluff, known as the Tom Head mine. **Geology:** property shows schists, cut by rhyolite dikes, carrying 3 veins, with gossans of 90 to 300' width, 1 vein, of 30' estimated average width, carrying chalcopryrite, associated with pyrite, estimated to assay 2 to 3% copper, 0.5 oz. silver and \$1.40 gold per ton. Mine formerly was reported to carry bornite and native copper, and No. 3 tunnel is said to have given ore assaying up to 18% copper, with small gold values. Developed by tunnels of 45', 355' and 460', with about 2,000' of workings, estimated by management to show 250,000 tons of ore.

Equipment: includes an 80-h. p. steam plant, with a small hoist and 4-drill Sullivan air compressor. Lands carry undeveloped water power estimated at 3,200-h. p. There is a 4,000' sawmill, and 10 buildings. Management is said to plan experiments with flotation process. Property, though low in grade, gives evidence of having large orebodies. Superin-

tendent reports that "while property is intact and protected, work will not be resumed until Forestry Bureau exactions cease and smoke restrictions are modified so as to permit smelting."

CHICAGO EXPLORATION & DEVELOPMENT CO. MEXICO

Address: Mina Mexico, Sonora, Mex. W. E. Pomeroy, mgr.; Geo. Squire, smelter supt.; Chas. Gercken, mine supt. **Property:** 45 miles N. E. of Tonichi, the end of a branch line of the S. P. de M. R. R., produces silver-copper ore and concentrates.

CHICAGO MINES CO. MISSOURI

Operates 10 acres land owned by the Conner Investment Co. Property in Sec. 28, T. 28, R. 32, Webb City, Jasper county, is opened by two 200' shafts. Equipped with a 200-ton mill.

CHICAGO-NEVADA TUNGSTEN CO. NEVADA

Lovelock, Nevada. **Address:** care H. M. Byllesby & Co., 208 La Salle St., Chicago, Ill. **Property:** the Ragged Top and Besson group, 11 miles from Toulon, a station on the S. P. R. R., shows tungsten deposits. Ore will be treated in a mill planned to be put up at Toulon on the shore of Humboldt sink.

Production: 550 tons in May and June, 1916. The mill will handle custom ores.

CHICHAGOFF MINING CO. ALASKA

Chichagoff Island, Alaska. Controlled by Hugh P. Wallace and W. R. Rust of Tacoma, Wash. James L. Freeburn, supt.; Angus Mackay, cons. engr. **Property:** the Chichagoff mine, better known as the De Groff, 60 miles from Sitka, 125 miles from Juneau, carries high-grade, free milling quartz, said to average better than \$7 per ton. Reported to be shipping over \$50,000 in bullion a month.

Equipment: 30-stamp mill with tube mill section and daily capacity of 110 tons of ore. A flotation unit is planned for 1916. Company has hydro-electric plant with dam at Rust Lake. 125 men employed. See U. S. G. S. Bull. 504, p. 22.

CHIEF CONSOLIDATED MINING CO. UTAH

Office: Houghton, Mich. Wm. P. Seager, sec.-treas. Mine office: Eureka, Juab Co., Utah. **Officers:** Walter Fitch, pres. and gen. mgr.; F. W. Denton, v. p.; Cecil Fitch, supt.; above with J. H. Rice, W. A. Hodgson and D. L. Robinson, directors. Inc. Feb. 9, 1909, in Arizona. **Cap.,** \$1,000,000; shares \$1 par, nonassessable; issued, \$877,046. Houghton National Bank, registrar; Boston Safe Deposit & Trust Co., transfer agent. Has about 1,900 shareholders. Stock is listed on the Boston curb. Annual meeting, third Tuesday in February.

Dividends: Feb., 1913, 10%; Aug., 1913, 10%; Feb., 1914, 5%; Aug., 1914, 5%; Aug., 1915, 5%; in 1916, 15% to July 15; total to date, \$438,822.

Company controls, through ownership of 98% of stock issue, the Eureka City Mining Co. Sixth annual report for fiscal year ending Dec. 31, 1915, shows receipts from ore sales, \$290,907, and cash on hand, \$186,748.

Property: 14 patented claims, 775 acres and 212 unpatented claims, 3,659 acres, in the Tintic and North Tintic mining districts. Company also owns the mineral rights under the city of Eureka.

The Eureka lands carry about 4,000' of the strike of the Victoria ore channel, which has an extreme width of about 400', the Victoria ore channel being on the Mammoth-Grand Central ore zone, and parallel to the Centennial-Eureka zone. The Victoria ore channel has a practically N.-S. strike, the ore occurring in pipes and shoots in nearly vertical lime beds.

Development: by an 1,800' vertical shaft with about 35,000' of workings,

principal development being on the 1,000', 1,200', 1,400', 1,600' and 1,800' levels.

	Ore Tons	Copper Lbs.	Lead Lbs.	Zinc Lbs.	Gold Oz.	Silver Oz.	Value Net
1915	36,142	8,232,606	4,634	403,854
1914	39,629	237,901	5,782,118	71,665	6,291	645,419	\$324,299
1913	51,173	117,328	2,597,091	4,806	1,030,132	381,287
1912	30,038	1,141,222	7,838	969,907	509,420
1911	6,703	825,551	389	306,362	117,583
1910	8,273	800,802	584	531,483	217,059

Average assays for 1914 shipments were, gold, .159 oz.; silver, 16.29 oz.; lead (on lead ores), 12.68%; zinc (on zinc ores), 29.13% per ton. Gross average value ore in 1914, \$14.71 per ton, net \$7.94; in 1915, \$20.55, and \$9.96 respectively.

In 1914 company obtained a two-year lease, option of purchase on the Scotia mine, West Tintic mining district, about 20 miles W. of Eureka, and has been getting good results from development work. Ore obtained from this work is hauled to the railroad by means of a traction engine.

Equipment: the plant has three 150-h. p. boilers, with mechanical stokers, a hoist and 15-drill Nordberg air compressor. The double-cylinder hoist has 6' balanced drums, 1½" steel cable, and operates 2 triple-deck cages in balance, carrying 1-ton cars, to depth of one-half mile. Buildings include a power plant, housing the boilers, hoists and air compressors; a machine shop, carpenter shop, and a smithy, all of steel frame. Property considered valuable and management excellent.

CHIEF GROUP

ARIZONA

Office: care Bracy Curtis, trustee, Nogales, Ariz. **Property:** 13 claims, 260 acres, 1½ miles N. E. of the R. R. R. mine in the Patagonia mining district, shows a sulphide ore in porphyry and lime. Ore occurs in fissures, giving average assays of 40 oz. silver, 30% lead, \$5 gold and 4% copper.

Development: by 200' main shaft and 600' tunnel. **Equipment:** includes steam hoist and Cameron sinker. Management plans sinking to 400' depth, crosscutting and drifting in 1916. In 1915 about \$1,400 was expended on assessment work.

CHIHUAHUA-ESPERANZA GOLD MINING CO.

MEXICO

Subsidiary of the Mines Co. of America, which see.

CHIHUAHUA MINING CO.

MEXICO

Offices: 734 Fifth Ave., New York City, and Chihuahua, Mex. **Officers:** G. B. Schley, pres.; E. B. Schley, v. p.; W. J. Walworth, sec.; C. G. Raynor, treas.; W. J. Quigly, mgr., Chihuahua.

Inc. Jan. 8, 1890, in New York. **Cap.**, \$600,000; shares \$1 par; outstanding, 587,806 shares nearly all of which is owned by El Potosi Mining Co., control of which company was obtained by Howe Sound Co. in Jan., 1916. Stock transferred at company's New York office. Annual meeting, second Monday in Jan. Stock is closely held.

Property: in the Santa Eulalia district, Chihuahua, Mex. **Ore:** lead, silver and zinc. **Development:** by vertical shafts to a depth of 1,800'. Operations have been hampered by the revolution, though shipments of zinc ore were made in 1915.

CHILE COPPER CO.

CHILE

Office: 120 Broadway, New York. **Officers:** Daniel Guggenheim, pres.; Albert C. Burrage, v. p.; Morris Guggenheim, v. p.; preceding with Isaac Guggenheim, S. R. Guggenheim, Simon Guggenheim, Pope, Yeatman, William Loeb, Jr., John N. Steele, Albert C. Burrage, Jr., Russell Burrage,

Chas. D. Burrage, H. F. Guggenheim, E. A. Guggenheim, H. R. Wagner, E. A. C. Smith, directors. C. K. Lipman, sec.; G. F. Hilton, asst. sec.; L. Fredrick, treas. Inc. April 16, 1913, in Delaware. Cap., \$110,000,000; shares \$25 par; issued, 3,800,000; 600,000 shares held in treasury for conversion of \$15,000,000 7% gold bonds. Shares are listed on the New York stock exchange. Company owns the entire issued capital stock of the Chile Exploration Co. of New Jersey.

Chile Exploration Co.

Office: 120 Broadway, New York. Mine office: Chuquicamata, Chile. Same directorate as Chile Copper Co. Inc. Jan. 11, 1912, in New Jersey. Cap., \$1,000,000; shares \$100 par; entire stock issue owned by Chile Copper Co.

Property: the largest copper deposit known in the world, is at Chuquicamata, province of Antofagasta, Chile, at 9,600' elevation, on the crest of a low ridge some distance from the main range of the Andes. Chuquicamata is about 82 miles E. of the Pacific ocean on a branch of the Antofagasta & Bolivia Railway, 163 miles from Antofagasta. The company owns 420 claims, about 6,294 acres, 567 acres mineral land, 1,949 acres comprising the plant site, 628 acres acquired for waste dump purposes and 3,148 acres covering limestone, salt and sulphur deposits.

The outcrop of the orebody is 8,000' long, with an average width of 554'. The maximum length of orebody as proven up to present time, is about 7,000' with a maximum width of 1,800'. Ten holes have been put down to a depth of over 1,000'; one of these, in Aug., 1915, had reached a depth of 1,530', and was in 2.11% ore at that point, and at a depth of 1,685' it was still in commercial ore. Sixty holes put down had an average depth of 681.8'. Small veins of rich ore cut through the mass, but the average of the entire deposit is estimated at 2.23% copper. The copper occurs in the form of brochantite, a mixture of copper sulphate and copper hydrate, known as a subsulphate of copper. There is also a small amount of atacamite and chalcantite, or natural blue vitriol.

The drill holes show that the oxidized ore changes in depth to an altered grano-diorite, carrying disseminated chalcocite, bornite and chalcopyrite. About two-thirds of the ore developed carries brochantite (a basic copper sulphate containing 56% copper) and the balance has copper sulphides.

The underlying sulphide ore, practically all ore below 400' from surface, can be treated in the customary way by water concentration and direct smelting. This will be work of the future. At present the company is devoting its attention to the sulphate part of the orebody. Mining is done by steam shovel and there is practically no overburden to strip.

Reserves: ore developed to date amounts to 303,300,000 tons of 2.23% copper, which has been considered as 2%, according to Pope Yeatman's report and indications are that this will be increased to 400,000,000 tons without limiting still further possibilities.

Equipment: the reduction plant, 2½ miles from the mine, which started operations May 18, 1915, has a capacity of 10,000 tons a day. Copper is recovered by a leaching process, the ore being peculiarly amenable to treatment by this method. Careful study of the problem by E. A. Cappelen Smith showed that the ore gives little or no slime, and is readily soluble in an 8 or 9% solution of cold sulphuric acid. As it contains no arsenic, antimony or bismuth, the solution is not fouled by repeated use. Results obtained in the experimental plant gave a total recovery of 89.6% copper.

The ore is subjected to crushing in gyratory crushers, Symons disk crushers, and Garfield rolls to ¼" size. It is then distributed to concrete

vats, of which there are six, 110' wide, 160' long and 15' high, each with a capacity of 10,000 tons of ore. Tanks are built of reinforced concrete, lined with mastic asphalt $1\frac{1}{2}$ " thick. The extraction process which might be more accurately termed soaking, rather than leaching, takes approximately 6 days for acid treatment and washing, 1 day for filling the tank, 2 days for leaching, 2 days for washing and draining and 1 day for discharging. The pregnant solution is drawn off into solution tanks and the leached residue taken from the vats by clam-shell buckets, operated on a traveling bridge, transferred to conveyor belts and piled on the waste dump. The copper solution before electrolysis, is dechlorinated by passing it through revolving drums, similar to tube mills, where it comes in contact with shot copper and cuprous chloride is formed. From the drums, the solution, containing cuprous chloride in suspension, flows to Dorr thickeners, made of concrete and lined with mastic asphalt. The thickened cuprous chloride, together with about 1% of the original solution, goes to filter-presses and the resulting cakes are smelted and cast into shot copper for use in the dechlorinating drums.

The clear solution overflowing from the Dorr thickeners goes to the electrolytic tank house where it is electrolyzed, using ordinary copper cathode starting sheets and insoluble anodes made of magnetite. The electrolytic refinery consists of 510 electrolytic tanks, 19' long, $3\frac{1}{2}$ ' wide and 4' 10" deep, made of concrete and lined with mastic asphalt. Of the 510 tanks, 30 are used for making cathode starting sheets, and 480 for electrolytic deposition of copper from solution. The solution enters the head tank of the system containing about 5% copper and $2\frac{1}{2}$ %-3% free acid and leaves the last tank containing about 1.5% copper and 8-9% free acid. Capacity of refinery is 120,000,000 lbs. per year.

The power station erected by Siemens & Schuckert, of Germany, for \$2,856,000, is at Tocopilla, on the Pacific coast. Power is generated at a central station by an oil-burning steam plant of four units, with a combined capacity of 40,000 k. w. or approximately 53,600 h. p. Estimated power required at Chuquicamata for a 10,000-ton plant is 24,000 to 27,000 k. w. at the coast. The electric power is transmitted by 3-phase current of 100,000 volts, a distance of 120 miles to the mine. Four turbo-generators, each of 10,000 k. w., are installed at the station, to be reinforced later by a water power plant on the Loa river, near the mine. The power line consists of 2 parallel wires of 3x95 sq. mm. cross-section placed on steel turrets. The first unit of the plant for the sub-station at the mine consists of 4 transformers, each of 10,000 k. v. a. and 5,000 v. with 7 direct-current motor generators of 2,500 k. w. each.

Estimate by Mr. Yeatman of cost per ton of ore, on a basis of 10,000 tons per day of 2% ore is as follows:

Mining and transportation to mill.....	\$0.50
Crushing, leaching and electrolytic precipitation.....	1.086
Transport of copper to port, port charges and ins.....	0.115
Freight to Europe and selling commission.....	0.214
Depreciation and contingencies.....	0.191
Total.....	\$2.106

Production: in Nov., 1915, the plant was treating 5,000 tons per day and has been obtaining an extraction of over 90% copper. In first 6 months, 1916, output was 19,724,385 lbs. copper.

Estimated annual production of copper on a basis of 10,000 tons per day is 120,000,000 lbs. refined copper, but the plant will be increased to 30,000 tons capacity in the future, which should produce 360,000,000 lbs. copper.

The estimated cost of production per pound of refined copper is 6 cts., including delivery in New York, Hamburg, Germany or England.

CHINO COPPER CO.

NEW MEXICO

Office: 25 Broad St., New York. **Mine office:** Hurley, Grant Co., N. M.
Officers: Charles M. MacNeill, pres.; Daniel C. Jackling, v. p. and managing dir.; Charles Hayden, v. p.; A. J. Ronaghan, asst. sec.; A. Chester Beatty, Sherwood Aldrich, W. Hinckle Smith, Mark L. Sperry, directors. K. R. Babbitt, gen. counsel; C. W. Peters, treas.; John M. Sully, mgr.; Horace Moses, mine supt.; W. H. Janney, mill supt.; R. C. Gemmill, cons. mng. engr.

Inc. Aug., 1909, in Maine. Cap., \$3,500,000; shares \$5 par; increased to \$4,000,000, June 30, 1911; and again increased to \$4,500,000 April 2, 1912, of which 100,000 shares are reserved for conversion of bonds and 30,000 shares remain unissued. Bond issue has been retired. Annual meeting, third Friday in April. Paid initial dividend of 75 cts. per quarter, June, 1913, and has paid a total of \$11.25 per share to July, 1916. Listed on New York and Boston Stock Exchanges.

Property: 131 claims, 2,412 acres, patented, at Santa Rita, title to which was derived from the Santa Rita Mining Co., since dissolved; also 22 claims, 322 acres, held by location and 160 acres, patented, agricultural land, making a total at Santa Rita of 2,894 acres. Also owns 18,568 acres at Hurley for mill site and water rights, 13,800 acres being owned outright and the remainder in process of patent.

The property is the old Santa Rita del Cobre mine, which is the oldest copper mine in New Mexico, and the second oldest in the United States, having been opened, 1804, by Spaniards. The property was worked by an American named Pattie, in 1822 and to 1827. It was in possession of a Frenchman from 1828 to 1834, when an American called McKnight, began operations which ceased in 1836. From 1840 to the late fifties, it was in possession of a Spaniard. In 1851 Santa Rita was the headquarters of the American Commissioners, of the Boundary Survey. Some time before 1860 four Americans attempted to operate the property. In 1862 Gen. Sibley, of the Texas Confederate force held the mine. In 1873 M. B. Hayes, acting on behalf of Denver people, succeeded in purchasing the claims, attempting to perfect the title by obtaining U. S. patents, although patents had been refused by the Commissioner of the Land Office in 1870. Hayes' application was turned down in April, 1873. Between that date and the final decision of the Secretary of the Interior in November, 1873, title was obtained by Hayes from the surviving heirs of the original Spanish estate and final U. S. patent was obtained to the claims covering the Santa Rita del Cobre Grant. Title was acquired by the Chino Copper Co. from the Santa Rita Mining Co., since dissolved.

Geology: Santa Rita is situated in the Central mining district, Grant Co., New Mexico, on a branch of the Santa Fe system which connects at Whitewater with the Deming-Rincon division of the same railroad. The

87 Milk Street, BOSTON

orebody and town of Santa Rita are located in a distinct basin and the rocks exposed in the district may be roughly divided as follows: 1, sedimentary, 2, intrusive, 3, extrusive. The sedimentary formation, of which there is a large area in comparison with the intrusive exposures, consists of limestones of more or less purity, and belonging to the subcarboniferous and carboniferous series, there also being some isolated exposures of Devonian rocks. These beds vary from nearly pure limestones, through cherty limes and shaly limes, to shales. Through faulting there is also exposed a considerable area of Cretaceous sandstones and shales, the former in the immediate neighborhood of the intrusives appearing as quartzites. The principal intrusive rocks in the Santa Rita basin are granodiorite, a quartz-monzonite porphyry, and another of distinct porphyritic texture which may be classed as andesite. This latter rock intrudes the two general types as also the sedimentaries, in sills, lacoliths and dikes. The boundary forming the S. E. side of the Santa Rita basin is composed of two flows, the principal one being rhyolite and rhyolite tufa overlaying an older flow which is of an andesite nature.

The granodiorite is intrusive into and across the edges of the sedimentary series, which form a syncline dipping to the south from the northerly bordering ridges toward the lowest point of the basin. The area within the basin has been strongly faulted in wide zones and in two general directions. The intersections of the numerous faults have resulted in a roughly circular shear zone that has a diameter of $\frac{3}{4}$ of a mile. This shear zone on the southeastern side of the property has a width of some $\frac{3}{8}$ of a mile. The narrowest part is in the N. W. portion where it is some 400' wide. Generally speaking, the center, or core, is of granodiorite. As a result of the conditions mentioned, there is the center of the basin of granodiorite, surrounded by shear zones which affect it at times as well as the surrounding sedimentaries, the rhyolite tufa and quartz monzonite porphyry, the two latter rocks being on the S. E., E. and S. W. This shear zone has been the depository of the valuable copper minerals, chalcocite, cuprite and native copper. Bornite, chalcopyrite and cupriferous pyrites are also found, but to a much lesser extent than the previously named. There also occurs in small restricted areas, malachite and azurite with a very limited amount of chrysocolla.

The old workings, which are very extensive, have been practically eliminated by the steam shovel operations. Some 530 holes, making a total of 214,142', have been drilled to January, 1916, and mine was estimated to have 90,000,000 tons of ore developed, averaging 1.75% copper. Of the above total number of holes there are a number of scout holes which indicate a considerable extension of the orebodies as now outlined.

Equipment: consists of 10 steam shovels, 21 locomotives, 124 dump cars, of 6-20 cu. yd. capacity. Company operates about 24 miles of track, giving access to the pits. There is also a primary crushing plant, equipped with 48"x60" jay crusher, together with bins for handling and breaking up coarse material loaded by shovels.

The concentrating mill at Hurley, 9 miles from the mine, on the Santa Rita branch of the Santa Fe railway, has a nominal capacity of 5,000 tons per day. The first unit went into operation in Oct., 1911, and ore was running through the 5th and last section on Nov. 28, 1912.

Ore is delivered to bin of 18,000 tons capacity. In conjunction with this coarse ore bin is a coarse crushing plant, consisting of 2 sets gyratory crushers, 2 sets 72"x20" Garfield rolls. From here material is delivered into the fine ore bins at maximum size of $\frac{3}{4}$ ". Mill is equipped with 6 sets 16"x42" rolls for preliminary grinding, 9 Garfield Chilean mills for final

grinding. Roughing treatment consists of Garfield tables, followed by Wilfleys and full equipment of Richards-Janney classifiers and Isbell van-ners. Concentration is 15 to 1 with recovery of 66.6%, or 28.697 lbs. cop- per per ton of ore.

Power plant includes twelve 445-h. p. Heine boilers, three 1,250-k. w. generators, direct-driven by Nordberg Corliss engines, and one 2,000-k. w. Allis-Chalmers turbo-generator set. Primary water is secured from the Apache Tejo Spring, 3½ miles south of Hurley, from underflow of White- water draw, Cameron Creek draw and Whiskey Creek draw. There is also in use a storage reservoir below the mill, the dam forming this reservoir having been built out of mill tailings and having storage area of nearly 3,000 acre feet.

Settlement at Hurley includes in addition to mill and accessory build- ings, office building, store, school, shops and dwellings, town having popu- lation of about 3,500 people. Town of Santa Rita, on company ground, has population of over 4,000.

Production:

Year.	Tons		Cost per Ton		% Cu.	% Rec.	Ratio	% Cu.	Lbs.	Cu.	Net Cost	Rec'd
	Treated.	Produced.	Ore.	Waste.								
1912	1,120,875				2.077	61.63	18.6:1	21.20	24.79	27,776,088	7.69	
1913	1,942,700	23.13	16.11	61.08	2.033	67.31	10.6:1	14.52	27.37	50,511,661	8.787	15.489
1914	1,907,300	22.13	16.12	55.01	2.115	67.86	12.9:1	16.50	28.70	53,999,928	7.60	13.325

Note: net cost per pound copper includes all charges except bond inter- est and depreciation, but does not credit miscellaneous income, equal to 0.37c per lb. copper in 1915. Gold produced in 1915 amounted to 3,991 oz., 3.35c per ton ore, or a credit of .12c per lb. copper as compared with 2.71c per ton ore, or a credit of 0.1c per lb. copper produced in 1914.

Both property and management are regarded as exceptionally good, and the stock as a very high-grade investment.

CHISNA CONSOLIDATED MINES CO.

ALASKA

Letters returned, 1916, from Chicago address. **Mine office:** Landlock, Alaska. **Officers:** E. Meers, pres.; Jos. Kreis, v. p. and gen. mgr.; Chas. Kreis, sec.-treas.; Dr. E. T. Griffith, supt.; preceding with J. F. Quinn, Jas. Shaka and A. B. L. Gellermann, directors. **Inc.** April, 1906, in Washing- ton, as successor Central Alaska Gold & Copper Co. **Cap.**, \$5,000,000; shares \$1 par, nonassessable; issued, \$3,500,000, in 1911.

Property: 42 claims, patented, in 4 groups, on Landlock bay, near Valdez. The Steinmetz group has a 50' shaft, claimed to be in a vein 225' wide, 4,500' long, carrying chalcopryite averaging 5% copper, 4 oz. silver and \$1.66 gold per ton, which figures are considered exaggerated. Ore is highly silicious, and development is mainly opencast.

Equipment: includes a Pelton wheel, direct-connected to a 60-h. p. dynamo, and a small hoist, several buildings and a small sawmill. Com- pany, 1913, reported out of funds and outlook gloomy, but property is not without promise. Only assessment work done in recent years.

CHISOS MINING CO. (Quicksilver).

TEXAS

Wayne Cartledge, gen. mgr., Terlingua, Brewster Co., Tex. Property is at Terlingua, 108 miles S. E. of Marfa on the S. P. R. R. Cinnabar ore occurs as replacement deposits in limestone and shale. In the lower lime- stones the ores are generally in nearly vertical calcite veins, or in lodes of friction breccia. For geology see Texas Bull. 405, 1909.

Development: by shafts. The mine, which is the only operator in the district, had a record-breaking year in 1915. **Production:** 1,200 flasks of mer- cury in Nov. and Dec., 1915, yearly output not available. **Equipment:** includes an 18-ton shaft furnace. Employs 150 men.

CHOIX CONSOLIDATED MINING CO., LTD.**MEXICO**

Office: 516 Grant Bldg., Los Angeles, Cal. **Mine office:** Choix, Sinaloa, Mex. **Officers:** R. A. Thomas, pres.; A. E. Pomeroy, 1st v. p.; C. J. Heyler, 2nd v. p.; J. R. Thomas, sec.; A. M. McDermott, supt.; preceding with Leslie F. Gay, W. W. Thomas and W. B. Simmons, directors. **Inc. May, 1902, in Arizona. Cap., \$5,000,000; shares \$1 par, nonassessable; issued, \$3,155,534. Is protocolized under laws of Mexico. Owns 45% of the stock issue of Los Platanos Development Co. Annual meeting, first Monday in October.**

Property: 453 hectares, and a 500-acre smelter site, some distance from a railway, on both sides of the Rio Fuerte, in El Fuerte district of Sinaloa and Urique district of Chihuahua. Orebodies are claimed to measure 50 to 300' in width, occurring as contact deposits between diorite and limestone, with fissure veins in granite and quartzite carrying gold and silver. Property includes several antiguas.

Shipments of 1,062 tons of ore, to the Aguascalientes smelter, gave returns of 19.5 to 28% copper, with gross values of \$127,915.44 and net values of \$47,940.61.

A 100-ton smelting plant, purchased 1911, has been received, but not installed, owing to revolutionary disturbances in Mexico. Company awaiting peaceful conditions before resuming operations.

CHOSEN GOLD MINES, LTD.**KOREA**

Sec. and office: H. R. S. Aldon, Caxton House, Westminster, London, S. W., Eng. **American representative:** H. E. Collbran, 1002 First Natl. Bank Bldg., Denver, Colo. **Korean representative:** H. W. Davidson, Seoul, Chosen (Korea). **Directors:** H. Collbran, chairman, F. B. Lawson, E. T. McCarthy, M. P. Sayce, A. H. Collbran and H. E. Collbran. **A. R. Weigall, cons. engr.; H. S. Weigall, gen. mgr.; D. C. McEwen, metallurgist. Annual report for fiscal year ending June 30, 1915, shows: bullion in transit, £2,325; cash, £757; debtors, £150; debit, £759; acc'ts payable, £8,411. Inc. Feb. 28, 1912, in Great Britain. Cap., £74,400; shares £5 par; £62,310 issued.**

Property: a concession over 750 acres including the Kok Kang Kol Mine at Chung An, Chosen, Province of North Chung-Chung, Southern Korea. A royalty of 1% upon the gross value of the output is payable to the Korean government, also an annual mining land tax of about 30c an acre for acreage actually in use.

Ore reserves: Dec. 31, 1915, estimated at 20,800 tons of \$6 ore, \$124,800.

Equipment: includes stamp-mill and cyanide addition with 50 tons daily capacity.

CHRISTMAS GOLD MINING CO.**COLORADO**

See Vindicator Consolidated Gold Mining Co.

CHURCHILL MILLING CO.**NEVADA**

Office: 572 Bullitt Bldg., Philadelphia, Pa. **E. E. Carpenter, supt. Is a subsidiary of the Nevada Wonder Mining Co., with same directorate. Operates a 100-ton mill at Wonder, Churchill Co., Nev. Treated 58,124 tons of ore of \$812,118 gross value, showing a 95.3% recovery of the gold contents, 93.68% of the silver contents and 94.11% of the total value, or 9,801 oz. gold and 1,123,398 oz. silver. Total cost per ton was \$2,268, compared with \$2,743 in 1913-14.**

Annual report for fiscal year ending Sept. 30, 1915, showed: assets, \$709,360, which include property, \$105,336; accounts receivable \$30,337; stored silver, \$527,316, and liabilities \$420,081, leaving a surplus of \$129,278. Net income for the year was \$18,495. See Nevada Wonder Mining Co.

CIENEGUITA CONSOLIDATED MINES**MEXICO**

Office: 25 Broad St., New York. Is a reorganization of the Cieneguita Copper and Cieneguita Securities companies. **Officers:** James F. Whitney, pres.; August Gauch, v. p.; R. C. Davenport, sec.; preceding with Theodore Martin, Geo. D. Christy, C. Trumbull and F. W. Hunt, directors.

Property: 1,100 hectares, about 40 miles S. W. of Sahuaripa, Sonora, is covered by rhyolitic rocks, mostly fragmental and cut by a diabase dike. The Chipiona and the Cargona groups lie close together and the Ostimuri-Tayapa group about 2 miles to the S. E. The rocks are cut by vertical veins, 1 reported to be from 3 to 50' wide, traceable 3 miles and to carry ore shoots averaging about 2½% copper and 40 oz. in silver.

Development: mainly by tunnels, one of 1,200' with 2 shallow shafts and a total of about 3 miles of workings. These workings are not sufficient to block out any large amount of ore, but show that the property has merit and may develop into a large mine.

Equipment: includes 100-h. p. steam plant, a 6-drill compressor and all necessary mine buildings and houses for employes.

A small smelter has Blake crushers and rolls, a 75-ton calcining furnace and two 50-ton reverberatory furnaces, burning wood. Smelting plant inadequate and poorly adapted for the ore. Idle, pending restoration of peace in Mexico.

CITY ROCKS MINING CO.**UTAH**

Office: Leopold Bldg., Houghton, Mich. **Officers:** N. W. Haire, pres.; John Edwards, v. p.; Jas. P. Edwards, sec.-treas.; W. S. Zehring and Jos. Bosch, directors. **Inc.** 1906, in Utah. **Cap.**, \$1,000,000; shares \$5 par. Has an issue of convertible bonds. Property consists of shareholdings in the Michigan-Utah Mining Co., received for lands sold in 1912.

C. K. & N. MINING CO.**COLORADO**

Cripple Creek, Colo. G. A. Macdermid, gen. mgr.; H. Christiansen, supt. **Property:** the C. K. & N. mine, 5.3 acres, on Beacon Hill, Cripple Creek, shows veins 3-4' wide. Ore occurs in shoots, and is said to average \$20 to \$30 gold per ton. **Development:** by 860' shaft. **Production:** amounts to about 550 tons of ore monthly. Mine worked by lessees in 1915, has been a steady producer for many years and is credited with a total output of \$1,350,000.

CLARA CONS. GOLD & COPPER MG. CO.**ARIZONA**

Declared bankrupt, Jan. 27, 1912. Reorganized as the Swansea Consolidated Gold & Copper Mining Co., receiving 1,500,000 shares of the total of 4,000,000 shares for the transfer of the property with its indebtedness and liabilities. A suit was filed against the Clara Consolidated in Oct., 1912, by George Mitchell, former president, for \$75,000, and by Mary Mitchell for ejectment from several mining claims valued at \$25,000 and the recovery of \$200 a month rental therefrom. At last accounts, this suit had not been settled. The Swansea Cons. is also bankrupt; property leased in 1915 and reported shipping 3 carloads of ore weekly to the Humboldt smelter.

CLARINDA COPPER MINING CO.**IDAHO**

Temporary officers: Judge John E. White, Clark Fork, Idaho, pres.-treas.; John P. Delaney, v. p.-sec.; with Jas. E. White, Russell Guest and Thos. Compton, directors. **Inc.** April 1, 1916, in Ariz. **Cap.**, \$1,500,000; shares \$1 par. U. S. Corporation Co., New York, registrar and transfer agents.

Property: 2 claims, 40 acres, in Coeur d'Alene district, 3 miles from Clark Fork, Bonner Co., Idaho, show gold-silver-copper-iron ore in vein, said to be 6' wide at slight depth. Developed by 2 short tunnels and a main working tunnel, 124' long, May, 1916. A prospect.

CLARISSA MINING & MILLING CO.**ARIZONA**

Gold Road, Mohave Co., Ariz. E. M. Rabb, pres.; A. W. Sydnor, v. p.-treas.; F. T. Bragonier, sec. Inc. 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par, nonassessable; 550,000 shares in treasury. Owns 7 claims, 80 acres, adjoining the United Western on the north, at Oatman, Ariz. Company is sinking a shaft, 80' deep, Mar., 1916. Cut 4' of quartz vein matter at 65'.

CLARK MINE**MICHIGAN**

Idle. **Office:** care Dr. Léon Estivant, owner, 47 Ave. de l'Alma, Paris, France. **Mine office:** Copper Falls, Keweenaw Co., Mich. Fred W. Nichols, agt. **Property:** 2,433 acres, includes mines formerly known as the Clark, Bell and Montreal, about 3 miles south of Copper Harbor, between Lake Fannie Hooe on the north and Breakfast lake on the south, including Lake Manganese. Mine, opened 1858, for copper, also carries a promising 2' vein of pyrolusite, average of assays, 1900, by Duparc, of Geneva, giving 55.73% manganese and 1.36% copper. Has shipped about 1,200 tons of high-grade manganese ore. Was tested, 1905, and again, 1910, by diamond drills. Was under option, 1910, to United States Smelting, Refining & Mining Co. Fully described Vol. II.

CLARK MINING CO.**MISSOURI**

Property: on Pierson Creek, 5 miles S. E. of Springfield, Greene Co., Mo. Ore occurs mixed with "gumbo" clay in limestone and also as sheet ore in the roof rock above the ore horizon. Orebodies are mined at the 150' level. The sphalerite concentrates carry 62% zinc while the galena concentrates average about 82% lead. **Production:** in 1914, 1,898 tons sphalerite and 256 tons galena, more than tripled that of 1913.

CLARK MONTANA REALTY CO.

Address: 20 Exchange Place, New York City. Is a close corporation, controlled by Hon. W. A. Clark, as a holding company for the Ophir mine, Utah; ½ interest in the Elm Orlu mine, Butte; ½ interest in the Timber Butte Milling Co., Butte, Mont.; Sunset mine, Wallace, Idaho, and in general all the Clark properties in the northwestern States.

CLAYTON MINING & SMELTING CO.**IDAHO**

Clayton, Custer Co., Idaho. **Lands:** 18 claims, showing argentiferous copper and lead ores. Has water power and a smelter rated at 50 tons. Reported sold to Idaho Smelting & Mining Co., in 1914.

CLEARWATER GOLD & COPPER MINING CO.**IDAHO**

Mine office: Clearwater, Shoshone Co., Idaho. **Officers:** Samuel Seidenfeld, pres.-mgr., 1027 W. 10th Ave., Spokane, Wash.; Herman A. Bush, v. p.; J. H. Wourms, sec.-treas.; Dennis Reardon, supt. Inc. 1907, in Idaho. **Cap.**, \$2,500,000; shares \$5 par, assessable; 489,000 outstanding.

Lands: 16 claims, including the Cunningham group, on the north fork of the Clearwater river, 20 miles south of Wallace, nearest rail point, with a wagon road connecting. Property shows a vein said to be traceable 5 miles, 1 mile on company's lands, carrying oxidized ores near surface, with chalcopyrite and chalcocite at depth, giving assays of 5% copper, \$1.50 gold, and 1 to 2 oz. silver per ton.

Development: by 3 tunnels, lower tunnel, 1,400' long, cutting the ledge 1,500' below surface. Management estimates 18,000 tons of ore on dumps, June, 1915, and total reserves at 400,000 tons, averaging 4½% copper.

Equipment: includes hoist and air compressor. \$250,000 bond issue contemplated to provide funds for aerial tramway, necessary equipment and development work.

CLEOPATRA COPPER CO.**ARIZONA**

Jerome, Yavapai Co., Ariz. Hon. Geo. W. Hull, pres.-gen. mgr.; Will L. Clark, v. p.; S. F. Denison, sec.; preceding officers are the directors. **Inc.**

1901 in Arizona. **Cap.**, \$10,000,000; shares \$1 par, assessable; 8,644,156 shares issued.

Property: 11 patented claims, about 149 acres, south of the United Verde mine in the Verde mining district, shows fissure and gash veins carrying ores assaying 1 to 65% copper and 1 to 500 oz. silver per ton, with fair gold values. Has 6 shafts, of 25 to 150' depth, and 9 tunnels, the Dillon tunnel, 3,200' long, planned to connect with the "1888" shaft, showing a 3' vein of argentiferous and auriferous copper sulphide, of good average tenor.

The Dillon tunnel passes through the Cleopatra into lands of the Hull Copper Co., and latter has permission to use the tunnel through the Cleopatra tract. Some good ore has been taken from crosscuts driven from the Dillon tunnel, but apparently, no commercial orebodies have been developed thereby. Work in an open cut on the top of the mountain is reported to have exposed 30' of commercial ore.

Equipment: includes a steam and electric plant, with a 30-h. p. electric hoist and 12-drill air compressor.

CLEVELAND GROUP OF MINES & MILL NEW MEXICO

Sold to Empire Zinc Co. and described under that title.

CLEVELAND MINING CO. WISCONSIN

Office: 625 Bank & Insurance Bldg., Dubuque, Iowa. S. W. Burford, mgr.; H. L. Jones, supt. **Property:** 40 acres, includes the Cleveland, Scramble Creek, Lawrence and Square Deal Mines, at Hazel Green, Grant Co., Wisc. Lead-zinc ore occurs in flats and pitches in limestone.

Development: several 150' shafts with 1,500' underground workings said to block out 100,000 tons ore. **Equipment:** includes a 75-h. p. electric hoist, a 6-drill air compressor and a 250-ton concentrating plant, put into commission in May, 1915.

Production: 90 tons of zinc concentrates daily. Shipments made to Mineral Point Zinc Co. under contract. Employs 160 men on double shift.

CLIFF MINING CO. MICHIGAN

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine office: Phoenix, Keweenaw Co., Mich. **Officers:** Rodolphe L. Agassiz, pres.; Geo. A. Flagg, sec.-treas.; Jas. MacNaughton, gen. mgr.; preceding with R. C. Grew, W. E. L. Dillaway, Francis L. Higginson, Francis W. Hunnewell, Thos. N. Perkins and Clarence H. Bissell, directors.

Inc. Jan., 1910, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; issued, \$1,500,000, \$13 paid in. Is controlled through ownership of 19,400 shares, by Calumet & Hecla Mining Co. Ended 1915 with \$23,682 cash, and accounts receivable, and accounts payable of only \$60. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Saturday in May.

Property: includes the Cliff mine proper, and the South Cliff, connected underground on the 3d level. The Cliff mine, 2 miles N. E. of the Ojibway, is the oldest mine in the Lake Superior district, opened 1846, closed 1870, again reopened 1872, and abandoned 1878, paying dividends, 1849-79, of \$2,518,620. The old mine was opened on a fissure vein crossing the bedded formation at practically right angles, and was pretty thoroughly worked out before the property was abandoned. The main fissure vein had several feeders, and a number of independent fissure veins, including the West vein, which was rich in copper near surface, and the East Cliff vein, about an eighth of a mile east of the main vein. The Cliff was notably rich in native silver.

The Cliff carries the Kearsarge amygdaloidal bed for about 2 miles, and

for practically unlimited depth, the shaft being a trifle less than 2 miles from the most northerly shaft of the Ojibway, which is the nearest opening on the Kearsarge lode. The Tamarack Mining Co., which owned the Cliff until 1910, secured a complete geological cross-section of the tract, by diamond drilling, 1903-07, the Kearsarge bed being located by 12 drill holes, the majority of which were said to show commercial values, and, in addition, the property carries about 20 other amygdaloidal beds, under the greenstone bluff, which is such a prominent feature of the landscape, rising to a height of several hundred feet. A temporary vertical shaft, with a single compartment, started Aug., 1910, was sunk 217', entering the bed near the hanging wall of the Kearsarge, the ground being considerably disturbed at this point. Work in this shaft was abandoned during the first half of 1913, as the Kearsarge vein at this place proved narrow, dry and barren.

Five diamond drill holes were put down during 1914 and 1915 to explore the beds eastward in the hope of finding a profitable vein towards the Eastern sandstone. The cross-section crossed the horizon of the Old Colony, Mayflower and St. Louis amygdaloid lodes and the Bohemia and St. Louis conglomerate lodes, but very little copper was disclosed by this work.

The Cliff was the first mine ever opened on native copper, and production, 1845, was 19,903 lbs., which was the first commercial output of copper from Lake Superior. Total production, 1845-82, was 38,054,340 lbs. fine copper.

Equipment: includes a power house, with boilers, duplex hoist, and a 5-drill air compressor. Buildings include a smithy, changing house, combination office and warehouse, boarding house and a number of dwellings. The mine is reached by the Keweenaw Central railway.

CLIFF MINING CO.

UTAH

First Nat'l Bank Bldg., Milwaukee, Wis. **Operating office:** 414 Judge Bldg., Salt Lake City, Utah. **Mine office:** Ophir, Tooele Co., Utah. **Officers:** A. G. Kern, pres.; Grant Snyder, v. p.-mgr.; J. A. Stuart, sec.-treas., with A. D. Thompson, Frank Adams, Geo. Swift and E. McVicker, directors. A. H. Williams, supt. **Inc. May 31, 1906, in Maine. Cap., \$3,000,000; shares \$10 par, all outstanding. Dividends:** to 1916, \$90,000.

Property: in the Ophir district, contains silver-lead-zinc ore as replacement deposits in limestone. **Development:** by tunnels, with several miles of underground workings. **Equipment:** includes electric power and one-mile aerial tram.

CLIMAX MINING CO.

ARIZONA

Prescott, Ariz. M. E. Spaulding, supt. Owns the Climax gold mine on the Hassayampa river, near Prescott. **Development:** by 5 tunnels, longest 1,000', having a pay shoot 2" to 3' in width. Average grade of mill ore, oxidized, is said to be \$35. Sulphide ore in No. 5 tunnel is said to average \$21 per ton. It is claimed the mine has paid for itself since 1904.

CLIPPER MINING CO.

UTAH

Successor of Mohawk Mining Co. **Inc. July, 1916, by T. J. Yates, J. S. Barlow, John Russon, Dr. G. N. Curtis and J. A. Dalton, all of Salt Lake City.**

Property: near Tecoma, Utah, shows two veins exposed throughout property, carrying silver-lead and zinc ores. **Development:** by an 80' shaft with 100' of drifting. Is a prospect only.

C. & O. MINING & MILLING CO.

NEW MEXICO

Pinos Altos, Grant Co., N. M. **Officers:** J. L. Caddel, pres.; A. Caddel, v. pres.; Jackson Agee, sec.-treas.; above with John James, and A. L. McCarty, directors. A. L. McCarty, supt.

Inc. April, 1914, in New Mexico. **Cap.**, \$100,000; shares \$1 par; outstanding 90,000 shares. Annual meeting, Jan. 12th. Gross earnings from ore sales in 1914-1915 amounted to \$50,000 with operating expenses of \$40,000.

Property: 2 claims, patented, in the Pinos Altos mining district, 7 miles N. W. of Silver City. **Ore:** lead-zinc-copper in fissure vein in diorite. Vein has a N.-S. course, dips 65° and is said to have an orebody 6" to 4' wide. Ore minerals are galena, sphalerite, chalcopyrite and pyrite and average assay is said to be 2% lead, 2% copper, 8% zinc, \$4 to \$10 gold, and 10 oz. silver per ton.

Development: by 200' incline shaft with 4,000' of underground workings said to block out 5,000 tons of ore.

Equipment: includes 20-h. p. gasoline hoist, a 50-ton concentrator which is run jointly with P. A. M. & M. Co. Management states that production started in Nov., 1915.

COAHUILA LEAD & ZINC CO.

MISSOURI

Cap., \$100,000. Company operates 120 acres land owned by Horton & Horton, in the Duenweg-Porto Rico district, Jasper Co., Mo. Ore occurs in "sheetground." **Development:** by 3 shafts 240' deep. **Equipment:** includes 300-ton mill.

COAHUILA MINING & SMELTING CO., LTD.

MEXICO

Office: 614 Penobscot Bldg., Detroit, Mich. Operating office: Apartado 72, Monterey, N. L., Mex. Mine office: Jimulco, Viesca, Coahuila, Mex. **Officers:** H. T. Ambrose, pres.; Frank J. Llewellyn, v. p.; Walter E. Parker, sec. and gen. mgr.; Archibald Cattell, treas.; preceding with J. Kirby, Jr., Sidney B. Cohn and C. F. Jennings, directors; J. C. Treadwell, supt.; Alex. McCormick, mine supt.; Harry Reed, mill supt. Inc. Jan., 1902, in Mexico. **Cap.**, \$500,000 gold; shares \$1 par; nonassessable, fully issued. Dividends: 10% in 1902; 6% in 1904; 29% in 1905; 30% in 1907; 10% in 1909 and 16% in 1910, a total of 101%, or \$505,000. Annual meeting, first Wednesday in February.

Lands: include holdings in the Mapimi, Viesca and San Juan de Guadalupe districts. Properties include the Santa Maria, Sultana and other mines at Jimulco, carrying auriferous and argentiferous copper and lead ores, opened by a 700' main shaft, and a 1,000' main tunnel, with steam and electric power. The Alberto mine, in the Mapimi district, was said to have made regular shipments of high-grade ore to the Mapimi smelter, 1910. A 250-ton smelter, with steam and electric power, connected with the mines by rail, was blown in, early 1903, but was idle, 1909-13. The revolution in Mexico has practically stopped all mining in Coahuila and the mines are closed down until peace and safety again prevail.

COBALT COMET MINES, LTD.

ONTARIO

Office: 61 Broadway, New York, and Cobalt, Ont. Same officers as Caribou Cobalt Mines Co., which company owns the entire capital stock of Cobalt Comet Mines, Ltd. Inc. April 16, 1913, in Ont. **Cap.**, \$1,000,000; shares \$5 par; all outstanding. Annual meeting, 2nd Thursday of Feb.

Property: 2 part claims, patented, in Coleman Twp., Temiskaming mining district, formerly known as the Drummond mine. **Ore:** silver in fissure veins, occurs in shoots of variable widths. Ore minerals are native silver and cobalt-nickel sulpharsenides.

Development: by two shafts, 100' and 200' deep, with ore blocked out said to contain 20,000 oz. silver. Underground work in 1914 totaled 2,111'. **Equipment:** includes an air hoist, electric pump, compressed air and electric power. Employs 50 men.

Production: in 1914 amounted to 727,671 oz. silver. Low-grade ore is treated by the Dominion Reduction Co., high-grade ores are shipped.

COBALT REDUCTION CO., LTD. ONTARIO

See Mining Corporation of Canada, Ltd.

COBRE; COMPANIA MINERA EL. MEXICO

Idle. **Office:** Calle de Santa Teresa 6, Mexico, D. F. **Mine office:** Jungpeo, Zitacuaro, Michoacan, Mex. Alfred Stoffel, pres.; M. Herrle, sec.; E. Albert Armour, treas. **Inc.** March 7, 1907, in Mexico. **Cap.**, 95,000 pesos. **Property:** El Cobre y Anexas mines, shows gold, silver and copper ores.

COBRIZA y ANEXAS; COMPANIA MINERA LA. MEXICO

Alamos, Sonora, Mex. D. Manuel Salazar y Perron, pres.-gen. mgr.; Dionisio Acosta, sec. **Inc.** in Mexico. **Cap.**, 250,000 pesos; issued, 24,000 pesos. **Property:** 50 hectares, including La Cobriza mine, developed by a 75-meter main shaft, and a 225-meter main tunnel, showing ore with values mainly in copper. La Continuacion de la Cobriza and La Magdalena are virgin properties. Presumably idle.

COBRIZA MINES DEVELOPMENT CORPORATION ARIZONA

Halstead Lindsley, gen. mgr., room 1508, No. 60 Broadway, New York. **Officers:** David M. Goodrich, pres.; H. M. Jasper, sec.-treas.; W. H. Galligan, supt. Operates under lease, property of the Arizona United Mining Co., which see.

COCHISE COPPER CO. ARIZONA

Property reported sold to Standard Mining Co., for \$100,000, Oct., 1914.

COCHISE DEVELOPMENT CO. ARIZONA

Bisbee, Cochise Co., Ariz. **Officers:** Lemuel C. Shattuck, pres.; Chas. L. Jones, v. p.-gen. mgr.; T. O. McGrath, sec.; Jos. M. Muheim, treas. **Inc.** Aug. 1, 1905, in Arizona. **Cap.**, \$1,000,000; shares \$10 par, succeeding the Cochise Copper Mining Co. Annual meeting, second Tuesday in January.

Property: 16 claims, 176 acres, abutting on the Holbrook mine of the Copper Queen Consolidated, and lying north of the Divident fault and Dubacher gulch. **Development:** by a 900' three-compartment shaft. Drifts on the 300', 600' and 900' levels show small bunches of sulphide ore. **Equipment:** includes a 100-h. p. boiler, a 10x30" first-motion double-drum hoist, good for 1,200', and a 6-drill Sullivan straight-line air compressor. Buildings are an engine house, boiler house, 20x40' carpenter shop, 20x30' smithy, and a coal trestle. Property considered promising for disseminated ore. Idle since 1907.

COCOPAH COPPER CO. CALIFORNIA

Idle. **Mine and works office:** Ivanpah, San Bernardino Co., Cal. Dan. Murphy, pres.; Dr. L. D. Godshall, v. p. and gen. mgr.; G. Holterhoff, Jr., sec.-treas.

Property: on Clear mountain, 20 miles from Ivanpah, the nearest railway point, includes the Copper World and Mohawk mines, formerly operated by the Ivanpah Consolidated Smelting Co. The Copper World group shows a broad mineralized zone, up to 300' in width, with a silicious iron outcrop carrying some malachite and occasional oxides. Mine has a 180' vertical shaft, with about one-half mile of workings, on a 5' vein, carrying mainly copper carbonates and oxides, in irregular masses.

The Mohawk mine, 2 miles south of the Copper World, shows a 4' orebody with nearly vertical dip, between a porphyry foot and limestone hanging, similar to that of the Copper World, but carrying more azurite.

C. O. D. CONS. GOLD MINING & DEVELOPMENT CO. COLORADO

Cripple Creek, Colo. **Officers:** Jas. E. Hanley, pres.; L. A. Van Tilborg, v.-p.; Virgil Mann, sec.-treas. E. J. Evans, supt. **Inc.** 1915. **Cap.**, \$200,000; shares 10 cts. par. Organized to operate the C. O. D. mine in

Poverty Gulch, Cripple Creek, Clear Creek Co., which was one of the old time producers, credited with an output of \$1,000,000 in gold. The mine was closed down years ago as a result of drainage difficulties and was in litigation for a number of years. The El Paso and Roosevelt drainage tunnels have since lowered the water level 1,000' or more below the lowest workings of the mine.

The main 3-compartment working shaft was bottomed at 800' with the 10th level the lowest. Present management claims to have found an ore-body on the 10th level which warrants sinking the shaft to 1,300' level. Lessees are working on all levels from the 4th to the 10th. The first ore was shipped in Sept., 1915 **Equipment:** includes a new 65-h. p. air compressor.

C. O. D. CONSOLIDATED MINING CO.

NEVADA

Goldfield, Nev. L. K. Koontz, pres. Inc. May, 1908, in South Dakota. **Cap.**, \$3,000,000; shares \$1 par. Treasury 1,000,000 shares. Listed on New York curb. Inc. as a merger of the Goldfield C. O. D. and the Gold Bar Mining companies, taking over the C. O. D., Golden Eagle and Zoe from the C. O.-D. Co.; the Gold Bar from the Gold Bar Co., and the Victor and Victor fraction from the Goldfield Cons. Last two claims were obtained by purchase, others by exchange of stock. Controlled by Goldfield Cons.

Claims form a compact group, 90 acres, at Goldfield. **Development:** 350' shaft and several thousand feet of workings. Was operated under 5-year lease by Nevada Co-Operative Co. Reported under option in 1915 to Tonopah Mng. Co. and Tonopah Belmont Dev. Co. Said to have a total production of \$75,000 with \$250,000 milling ore on the dumps. Plan sinking shafts to 500' level.

C. O. D. LEASING CO.

NEW MEXICO

Idle. **Office and mine:** Lordsburg, Grant Co., N. M. Thos. A. Lister, pres., treas. and gen. mgr. Inc. Aug. 13, 1909, in Arizona. **Cap.**, \$1,000,000; shares \$1 par, nonassessable; issued, \$664,700. Annual meeting, first Monday in December.

Property: 2 claims, 40 acres, in the Pyramid district, 8 miles south of Lordsburg, developed by 4 pits and a 55-shaft, showing lead and copper oxidized ores.

COEUR D'ALENE ANTIMONY MINING CO.

IDAHO

Kellogg, Ida. Company in Sept., 1915, reopened antimony mine on Pine Creek, west of Kellogg, that had been idle for 10 years. **Development:** by 150' shaft and tunnels, said to show two shoots of ore, the largest being 240' long and 40' wide. The high-grade ore is said to assay 50% antimony.

Present management built and has started operating a 50-ton mill, turning out 10 tons of concentrates daily.

COEUR D'ALENE CONSOLIDATED MINING CO.

IDAHO

Idle. **Office:** Osborn, Shoshone Co., Idaho. **Officers:** Louis Bolduc, pres.; E. M. Cornelius, v. p.; C. G. Johnson, sec.; Chas. Williams, treas.; preceding with W. G. Parks, directors. **Lands:** 4 claims, 2 to 3 miles from Wardner, have 500' of tunnels and 200' of crosscuts, developing a vein of 5 to 6' width, carrying copper ore and a little lead. **Equipment:** includes a 2-drill compressor, run by water power from Moon creek.

COEUR D'ALENE DEVELOPMENT CO.

IDAHO

Controlled by Stewart Mining Co. and described thereunder.

COEUR D'ALENE PACIFIC MINES CO.

MONTANA

Idle. **Officers:** Dr. Jas. Sutherland, pres., 212 Peyton Bldg., Spokane, Wash.; E. A. Patrick, v. p.; M. N. Stratton, sec.-treas.; preceding with J. A. Reinhardt and N. E. Jesseph, directors. Inc. in Washington. **Cap.**,

\$1,000,000; shares \$1 par; nonassessable. **Property:** 2 claims, 40 acres, near the Silver Cable mine, giving fair surface indications of lead and copper ore, with a short tunnel.

COLDWATER COPPER MINING CO.

COLORADO

Office: Encampment, Wyo. Mine near Pearl, Larimer Co., Colo. Z. L. Baldwin, pres.; H. N. Backus, v. p.; Walter Phipps, sec.; Burr Lobdell, treas. and gen. mgr. **Inc.** May 18, 1900, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par.

Property: 5 claims, 52 acres, in the Pearl district of Larimer county, Colo., known as the Wolverine mine. Claims have 3 fissure veins in granite and diorite, of which 1, of 20' estimated width, shows oxidized ores and native copper, with sulphides at a little depth, estimated to carry an average of 6% copper and 2.6 oz. silver per ton, opened by shafts of 90' and 170', bottom of principal shaft showing massive chalcocite and a little disseminated chalcopyrite, of high average grade. Has steam power. Idle several years.

COLE DEVELOPMENT CO.

ARIZONA

Office and mine: Globe, Gila Co., Ariz. P. J. Cole, pres.; P. J. Cole, Jr., sec.-treas. **Inc.** Sept., 1909, in Arizona. **Cap.**, \$300,000; shares \$1 par; issued, 112,000 shares. **Property:** 17 claims, known as the Cole & Goodwin group, 4 claims wide and 4 claims long, extending along Mineral creek, 3 miles west of the Gibson mine and about 10 miles S. W. of Miami, the nearest available rail point, and 10 miles N. W. of Ray, but is separated from Ray by some extremely rugged country, through which no railway is likely to build within a generation or more. Country rock is Pinal schist, carrying the Cole & Goodwin fault, traceable about 1½ miles, that cuts the schist diagonally. This property carries fissure veins in schist, and also disseminated ores in schist.

Development: by the 420' Cole incline shaft, cutting several bodies of low-grade ore, and a 35' vein carrying an 8' paystreak, mainly of bornite, with a little chalcocite, somewhat similar to the ore in the Gibson mine, estimated to average about 8% copper. There also are several short tunnels, showing schist carrying impregnations of disseminated chalcopyrite, there being a 135' crosscut tunnel about one-half mile from the shaft, and a 480' crosscut tunnel, 1,700' west of the shaft, with portal 500' vertically below the collar of the shaft. **Equipment:** includes a 22-h. p. gasoline hoist. Idle since 1910, but development work resumed 1915 and small milling plant contemplated.

COLLEGE MINE

ARIZONA

Mine, 15 miles from Wickenburg, Maricopa Co., Ariz., is opened by an 80' shaft, said to show a 20' fissure vein carrying gold and copper ore. Relocated Jan. 1, 1914, by Cowell & Jacobs.

COLONEL SELLERS MINE

COLORADO

Office: Symes Bldg., Denver, Colo. Controlled by Empire Zinc Co. J. H. Troutman, gen. mgr.; Chas. Bargler, supt. **Property:** in California gulch, near Leadville, Lake Co., Colo., shows zinc, iron, lead and silver ore, as sulphides, occurring in typical Leadville deposits. **Production:** 200 tons daily. **Ore reserves:** 2 years supply estimated.

COLONIAL COPPER CO.

ARIZONA

Idle. Chelmsford, Mass. Herbert Moseley, sec.-treas.-gen. mgr.: Geo. H. Morrill, Jr., pres.; Adna T. Denison, v.-p. **Inc.** April 29, 1910, in Maine. **Cap.**, \$3,000,000; shares \$10 par, non-assessable; issued, \$1,720,000. Was a reconstruction of the Growler Copper Co. Bonds, \$500,000 authorized, at 5%; issued, \$41,000. Annual meeting, first Monday in June.

Property: 30 claims, 26 patented, 516 acres, in 2 groups, also a 10-acre

mill site, apparently held under bond and lease, in the Growler mountains, 15 miles south of Ajo and about 60 miles southeast of Gila Bend, the railway junction pt. The Copper Hill group, of 18 claims, shows an ore zone up to 300' wide, between diabase and limestone, with a gossan traceable 1½ miles, reported by company to carry 3 veins, of 2 to 7' width, having oxidized ores, silicates, bornite and chalcocite, giving assays of 2 to 46% copper, 1 to 66 oz. silver and 0.12 to 2 oz. gold per ton.

Development: by the 100' Daisy shaft, 260' Copper Hill shaft, and 320' Yellow Hammer shaft, and the 185' Copper Hill tunnel, with a total of 1,600' of workings, estimated by management to show about \$1,000,000 worth of ore.

Equipment: includes 170-h. p. steam plant, with 8-h. p., 26-h. p. and 70-h. p. hoists, and a 2-drill Ingersoll-Rand air compressor. Buildings include assay office and commissary, boarding house and smithy, with 6 tent houses. Property considered promising, but handicapped by very poor transportation facilities.

COLONIAL MINING & MILLING CO.

IDAHO

Watson Beebe, sec., Wallace, Ida. Inc. in 1915 by Beebe Bros. of Wallace with the ostensible purpose of operating the Little Pittsburg mine on Pine Creek which was under bond to them. **Cap.**, \$1,000,000; shares, 25c. It is said that half of this was appropriated by the promoters; the other half placed in the treasury and later 200,000 shares issued. Work was started with the accompaniment of a line of lurid advertising. A payment on the bond became due about March 3 and was not met; in addition to this the company in March owed about \$23,000, including \$5,000 back pay-rolls. There seems to be no hope that stockholders will recover anything. The company was a fake which fortunately died an early death.

COLORADO & CONNECTICUT GOLD MINING CO. COLORADO

Office: Meriden, Conn. Mine office: Lake City, Hinsdale Co., Colo.

Officers: Geo. S. Wilcox, pres.; Wm. C. Corves, v.-p.; R. S. Dossin, sec.; B. F. Barnes, treas. Inc. 1902, in South Dakota. **Cap.**, \$400,000; shares \$5 par, changed later to \$1,200,000, shares \$1 par. **Property:** 3 claims, 21 acres, known as the Dolly Varden mine, in the Galena district, carrying three 2' fissure veins, opened by a 150' shaft and a 738' tunnel, with 1,900' of workings. Ore is chalcopyrite, tetrahedrite and occasional argentite, giving assays of 9 to 19% copper, with occasional silver values, and test shipments have given returns of 141 to 479 oz. silver and as high as \$11 gold per ton. Mine apparently idle in 1915. No returns secured.

COLORADO METALS & CHEMICAL CO.

COLORADO

Controls the Fourth of July Group in Boulder Co., Colo., together with the Cons. Copper M. M. & Sm. Co., and property is described under latter title.

COLORADO MINING CO.

UTAH

Office: Jesse Knight, pres., Knight Bldg., Provo, Utah. Mine in the Tintic district, Utah Co., Utah. J. Wm. Knight, v.-p.; W. Lester Magnum, sec.-treas.; R. E. Allen and A. M. Knight, directors. Perry B. Fuller, supt. Inc. 1898, in Utah. **Cap.**, \$200,000, shares 20 cts. par; fully issued. **Dividends:** paid to date, \$2,600,000, last payment of 3c made in Dec., 1912. Annual report Nov., 1915, shows cash on hand, \$42,053, with bills receivable, \$57,000, against current liabilities of \$580.

Property: 11 claims, patented, 417 acres, contains large deposits of low-grade ore carrying copper and silver values. Two orebodies now being developed on the 500' level, which is 200' below the main ore zone of the mine, and east of the old ore channel. The south deposit, 400' north of the Sioux Consolidated line, shows 10 to 15' of commercial ore. **Produc-**

tion: from leases in 1914 was 2,947 tons and in 1915, 1,489 tons, which had gross value of \$36.15 and net value of \$27.73 per ton. Metal contents were 344.35 oz. gold, 49,359 oz. silver, 413,105 lbs. lead and 295,865 lbs. zinc. Company is doing little work, as long as leasing system continues profitable.

COLORADO MINING LAND & INVESTMENT CO. COLORADO

Idle. Office: Walsenburg, Colo. Mine near Hillside, Fremont Co., Colo. E. L. Neely, pres. and mgr. Inc. 1911, in Colorado. Cap., \$750,000; shares \$1 par.

Lands: 110 acres, owned partly in fee and partly leased, are said to show gold, silver, copper and lead assaying up to \$30 per ton.

COLORADO-NEVADA MINING & MILLING CO. NEVADA

Nelson, Clark Co., Nev. Officers: F. C. Avery, pres.; Alex. Mead, v.-p.; I. W. Bennett, sec.-treas.; G. A. Duncan, mgr.; with Geo. P. Avery, C. R. Welch, P. Anderson, directors. Inc. Oct. 13, 1915 in Colorado. Cap., \$1,000,000; shares \$1 par, none outstanding Annual meeting Oct. 1st.

Property: 11 claims, patented, 163 acres, Eldorado mining district, Clark Co., Nevada, shows gold and silver ore in fissure veins in andesite, with a mining width of 15', and said to average \$10 to \$12 per ton, as fed to mill.

Development: by 500' shaft. Equipment: includes a 25-h. p. hoist, Ingersoll-Rand compressor, and a 10-stamp mill and cyanide plant, daily capacity 75 tons, which is said to give an extraction of 92%. Company started operations late in 1915. No production figures to date.

COLORADO SUPERIOR MINING CO. COLORADO

Officers: Jacob Ojanpera, pres.; John E. Porthan, sec., Ely, Minn. Isaac Nevala, gen. mgr. Cap., \$1,000,000; shares \$1 par, outstanding 561,135 shares. Bonds authorized \$250,000, issued \$155,600.

Statement as of Sept. 30, 1915, for 9 months shows total receipts \$130,465, of which \$128,544 was from ore sales; total disbursements \$111,823, leaving an operating profit for that period of \$18,641. Current quick assets, \$1,947 with current liabilities of \$32,693. Broken ore in stopes, 21,700 tons.

Property: near Telluride at an altitude of 12,500'. Mine was closed down for some time, operations being resumed in Fall of 1914. Ore: sulphides of lead and zinc containing gold and silver in a vein averaging 10' in width and supposed to be a continuation of the Argentine vein in the neighboring Tomboy mine.

Development: by shaft, 500' from N. W. end of property, with levels at 150', 300' and 450'. During early part of 1915 new work totaled 400' on the 300' and 150' on the 450' levels. Ore is treated at the Smuggler Union Mng. Co.'s mill where 20 stamps have been used on Colo. Sup. ore. Ore milled during 1st 9 months of 1915 amounted to 27,733 tons with average assays per ton of 0.186 oz. gold, 2.2 oz. silver, 3.3% lead and 5.6% zinc. Recovery ran from 44% for zinc to 77% for gold.

Production: for first 9 months of 1915, 4,138 oz. gold, 34,092 oz. silver, 1,236,321 lbs. lead and 1,383,100 lbs. zinc.

COLQUITT-TIGNER QUICKSILVER MINE. TEXAS

Marlow Wells, mgr., Terlingua, Texas. Reopened June, 1916, and 40-ton furnace started.

COLUMBIA CONSOLIDATED MINES CO. CALIFORNIA

John Phelan, pres., Bridgeport, Conn. Mine address: Sweetwater, Mineral Co., Nev. Property: 8 claims, unpatented, 160 acres, at Mt. Patterson, 3 miles west of Nevada-California State line. Ore: gold, silver in fissure vein in porphyry. Vein has strike of N. 10° E. with 45° dip and average width of 28", of which 1/3 is workable and said to average .05 oz. gold and 40 oz. silver per ton.

Development: by tunnels: No. 1 has about 850' of workings; No. 2 is in 410' with 700' of drifting. Underground workings total 4500', and are said to block out 4,000 tons ore. **Equipment:** includes 10-stamp 30-ton mill. Output during 1914-15 valued at \$9,836. Work was stopped on account of low price of silver.

COLUMBIA COPPER CO.**WASHINGTON**

Chewelah, Wash. **Officers:** C. M. Carroll, pres., Spokane, Wash.; Alex. Robinson, v.-p.-mgr.; Oscar Olson, sec.-treas. T. J. Vaughan Rhys, cons. engr. **Property:** a 10 year lease and bond, for \$100,000 on the High-grade Mining Co. property in Deertrail Mining district, formerly owned by Carson Bros. of Reardon, Wash. Claims said to show 9' of ore from which shipments have been made.

COLUMBIA COPPER MINING CO.**IDAHO**

Address: care Sharp & Irvine, Paulsen Bldg., Spokane, Wash. **Directors:** B. E. Sharp, pres., Jos. Huber, v.-p., Jos. Andrews, sec., A. G. Kerns. **Inc. May, 1914, at Wallace, Ida. Cap., \$2,500,000; shares \$1 par.**

Property: a consolidation of the properties owned by the Aeolian Cons. Copper Co., the Marguerite Mng. Co. and the California Group, all near Mullan, Shoshone Co., Idaho, and all long idle.

COLUMBIA COPPER MINING CO.**ONTARIO**

Idle. Office: 510 Chamber of Commerce, Detroit, Mich. Mine near Parry Sound, Ont. **Officers:** Dr. A. H. Côte, pres.; Dean S. Fleming, v.-p.; S. S. Southerland, sec.; Dr. W. P. Dick, treas.; Alex. Dick, cons. engr. **Cap., \$3,000,000; shares \$1 par, nonassessable. Authorized, 1910, a \$10,000 bond issue. Lands:** 200 acres, adjoin the McGowan claim of the Parry Sound Copper Co., 1 to 2 miles from Parry Sound.

COLUMBIA GOLD MINING CO.**OREGON**

Operates the Columbia gold mine, with one of the 4 owners, Frank S. Baillie, of Sumpter, Oregon, as manager. Mine described in Mineral Res. of Oregon, Vol. 1, No. 8, pp. 146-159.

COLUMBUS CONSOLIDATED MINING CO.**UTAH**

Property sold, 1913, to Wasatch Mines Co., for 160,000 shares of stock of that company, which stock was distributed. Company dissolved. Described Vol. XI, Copper Handbook.

COLUMBUS EXTENSION MINING CO.**UTAH**

Office: Judge Bldg., Salt Lake City, Utah. **Mine office:** Alta, Salt Lake Co., Utah. **Officers:** Lawrence Greene, pres.; M. R. Evans, v.-p.; F. A. Whitney, treas.; F. B. Cook, sec.; A. O. Jacobsen, gen. mgr., Raymond Greene, and J. R. Walker, directors. Henry Barney, supt. **Inc. 1906. Cap., \$600,000; shares, 50 cents par; issued, 230,000. Stock listed on the Salt Lake Exchange. Lands:** 7 patented claims, and 9 unpatented, 130 acres, west of the mines of the Wasatch Mines Co., and south of the Rexall mine. The claims cover the Oxford and Toledo fissures, both heavy producers, in former years, and the Haskell and Emily fissures.

Development: by present company is by a 5,300' tunnel, started in workings of the Wasatch Mines Co. and driven to cut Toledo vein at 1,800' depth or 3,000' on dip, and with crosscuts to reach the limestone-quartzite contact on the Black Jack claim. A drift was run through the Black Jack and Rex Fraction, and 275' from the tunnel a raise is being driven that shows good mineralization. Several undefined orebodies have been cut, said to assay 6% copper, 10-18 oz. silver, 10% lead and 48% zinc. **Equipment:** includes motors and tramway. Electric power is furnished by the Wasatch Mines Co. Employed about 11 men during 1915.

COLUSA-LEONARD EXTENSION COPPER CO.**MONTANA**

Subsidiary of the Tuolomne C. M. Co.

Dr. O. B. Whitford, pres., 804 W. Park St., Butte, Mont.; W. W. McDowell, v.-p.; Meyer Genzberger, treas.; W. E. Reynolds, sec. Inc. Oct. 1, 1906, in Arizona. Cap., \$5,000,000; shares \$5 par. Trust Company of America, New York, registrar and transfer agent.

Property taken over May, 1916, by the Tuolomne C. M. Co. under an agreement whereby the T. C. M. Co. will acquire a 51% interest in the C. L. property for which it will sink shaft from present depth of 800' to 1600' and drive crosscuts on the latter level to the N. and S. boundaries of the group.

Property: 5 fractional claims, patented, 47 acres, consisting of the Maggie placer, Golden Hematite, Little MacQueen, Undine and Snow Bird placer, about a mile east of the Colusa and Leonard mines, and near the Pittsmont shafts of the East Butte Copper Co. There is an 800' three-compartment shaft on the Little MacQueen claim lying about the center of the group, that has cut several small stringers of ore assaying up to 9% copper, but none of commercial size, and there is a 7' vein of 2% ore carrying a 14" paystreak said to range 8 to 10% in copper tenor, with small gold and silver values and some lead and zinc.

Equipment: includes a good air compressor, a temporary hoist and a 400-gal. electric pump.

Property will be reopened August, 1916, and operated as an unit of the Tuolomne Mining Co.

COLUSA-PARROT MINING & SMELTING CO. MONTANA

Office: 503 Miner Bldg., Butte, Silver Bow Co., Mont. Hon. Wm. A. Clark, pres.; Wm. C. Siderfin, v.-p.; W. C. Messias, sec. Inc. Nov. 26, 1897 in Washington. Cap., \$500,000; shares \$50 par. Company is practically out of business, its only present property being lands, platted as an addition to the city of Butte. Has an asset of considerable value in a million ton tailing dump at the Butte Reduction Works.

COMET GOLD & COPPER MINING CO., LTD. IDAHO

Office: care Jos. F. Whelan, sec., 408 Sixth St., Wallace, Idaho. Mine near Mullan, Shoshone Co., Idaho. Archibald McCullom, pres.-gen. mgr.; A. L. Honeker, treas. Cap., \$100,000; shares 10 cts. par, assessable; ½ mill per share levied 1913 and 1914. **Property:** 4 claims, adjoining the Springfield, east of Mullan, on Stevens peak, and near 2 railroads, shows 2 veins, of 10' and 15' estimated width, about 150' apart, carrying chalcopryrite and bornite, with iron and quartz gangue. **Development:** by tunnel, cutting a hematite vein, with about 1,600' of workings.

Property worked in a small way, with proceeds of assessments levied, but no orebodies of commercial value have thus far been developed.

COMET MINING & MILLING CO. MONTANA

Office: Coeur d'Alene, Idaho. Mine near Whitefish, Flathead Co., Mont. Dr. Max A. Dorland, pres.; Fred Eppinger, v.-p.; J. H. Wiggert, sec., at last accounts. Inc. 1909. Cap., 1,000,000 shares. Developed by a short tunnel. Presumably idle.

COMMERCIAL MINING CO. ARIZONA

Office: care Phelps, Dodge & Co., 99 John St., New York. Mine offices: Prescott and Skull Valley, Yavapai Co., Ariz. Maj. A. J. Pickerell, gen. mgr.; A. B. Peach, supt. Is controlled by Phelps, Dodge & Co., Inc.

Property: includes the Senator and Snoozer mines, producing high-grade sulphide ore from fissure veins and the Copper Basin mine with 18 claims, patented, in the Copper Basin, about 6 miles from the Santa Fé railroad. **Development:** by a 300' two-compartment shaft, bottomed in good ore and 2 tunnels, opening up large reserves of 3% oxidized ores.

Employs an average of 25 men and ships 40 tons per day of 7 to 10% sulphide ore to the Douglas smelter.

COMMONWEALTH EXTENSION MINING CO. ARIZONA
J. S. Metcalf, supt., Pearce, Ariz. C. W. Hicks, pres. Control held in Bisbee, Ariz.

Property: a tract adjoining the Commonwealth mine on the E. and S. E. shows a mineralized contact that carries high-grade ore in the adjacent mine. **Development:** a 250' shaft sunk in andesite with 230' level, equivalent to 7th level of the Commonwealth and corresponding to the water level of the district. **Equipment:** includes steam plant, hoist and compressor.

COMMONWEALTH MINES CO. UTAH
Office: 420 Herald Bldg., Salt Lake City. Mine office: Newhouse, Beaver Co., Utah. **Officers:** Wm. M. Bradley, v.-p.; W. T. Aiken, sec.-treas.; Newton A. Dunyon, gen. mgr.; preceding with C. H. Strevell and Jas. H. Paterson, directors. Inc. Nov., 1906, in Wyoming. **Cap.**, \$600,000; shares \$1 par.

Property: the Commonwealth mine, 7 claims, in the Star district, adjoining Lady Bryan and Progressive mines. Claims show Topache limestone with intrusive sheets of altered green porphyry, cut by fissures, with more or less mineralization along fissures and outward along certain limestone beds. Considerable lead ore was produced from surface workings in the past and the Nellie claim has copper sulphides in its bottom workings. The Beaver claim has ores giving average assays of 13.2% copper and 17.2 oz. silver per ton, with more or less lead. **Development:** by a 1,400' tunnel, with back of about 300'. Said to have secured ore assaying up to 4% copper, 20% lead and 60 oz. silver per ton. **Equipment:** includes gasoline power and an air compressor. Development shows but little ore, mostly low-grade, and claims are not especially promising according to geological reports. Presumably idle.

COMMONWEALTH MINING & MILLING CO. ARIZONA
Office: 300 First Nat'l. Bank Bldg., San Francisco, Calif., and Pearce, Cochise Co., Ariz. **Officers:** Chas. E. Knox, pres.-gen. mgr.; A. Y. Smith, v.-p.; F. L. Bryant, sec.-treas., with E. A. Collins, M. E. McCrate, directors. E. A. Collins, gen. supt.

Inc. 1896 in Ariz. **Cap.**, \$2,000,000; shares \$1 par; all issued. Bonds authorized \$250,000, outstanding \$230,000. Annual meeting May 1. Gross earnings for 9 months of 1915, \$384,854 of which \$375,666 was from ore sales. Operating expenses over same period, \$335,452.

Property: 10 claims, 7 patented, 230 acres, in the Turquoise mining district, Cochise Co., Ariz. **Ore:** silver-gold in fissured zone in andesite and rhyolite breccia. Vein has strike S. 85° E. and dips south 60°. Average assay of ore said to be 0.066 oz. gold, 7.3 oz. silver.

Development: by incline shafts. "C" shaft is 600' deep; "D" shaft is 500' deep. Mining is done by shrinkage stoping. **Equipment:** includes 100-h. p. electric hoist, Ingersoll air-compressor, capacity 1,500 cu. ft., steam and electric power. **Mill:** stamp mill and cyanide plant with daily capacity of 330 tons.

Production:	Ore, Tons	Gold, Oz.	Silver, Oz.
1915 (9 mos.)	89,233	6,150	507,531
1914	103,924	6,546	564,798
1913	10,320	778	41,673

COMSTOCK COPPER MINING CO., LTD. IDAHO
Mine near Burke, Shoshone Co., Idaho. **Officers:** E. S. Amsden, sec., Wallace, Idaho; Otto A. Olsson, treas.; John H. Nordquist, mgr., with C. W. Anderson and A. Swan, directors. Inc. in Idaho. **Cap.**, \$1,500,000;

shares \$1 par. **Lands:** on Baldy mountain, east of Burke are developed by 800' tunnel and 700' of drifting on the vein. Is developing on a small scale, raising money by assessments of 1 mill per share, last one delinquent, Oct. 5, 1914.

COMSTOCK TUNNEL CO.**NEVADA**

Address: 25 Broad St., New York, N. Y. **Franklin Leonard**, pres.-gen. mgr.; **Franklin Leonard, Jr.**, treas. **Cap.**, \$4,000,000; shares \$2 par; \$2,769,000 bond issue outstanding, on which no interest has been paid since 1892. Stock was traded on N. Y. Exchange in June, 1915, at 8 to 20 cts. per share. Company is controlled through stock ownership by the Leonard family.

Property: 7½ miles of tunnel, draining the Comstock mines to depth of 2700'. Income of company was seriously curtailed in 1914 owing to inactivity of many mines on the Comstock lode, who pay 4% royalty on all ore extracted to the Comstock Tunnel Company for drainage and ventilation, but extensive resumption of operations in 1915-16 by the Comstock mines has restored revenues.

CONE MINING & MILLING CO.**ARIZONA**

Office: 132 Edgerly Bldg., Fresno, Calif. **Officers:** **J. P. Eaton**, pres.; **M. J. Walsh**, v.-p.; **Hugh Sparkman**, sec.-treas. **Inc.** Aug., 1911, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 778,875 shares issued.

Property: 12 claims, unpatented, 240 acres, 2½ miles S. W. of Oatman, in the Tom Reed-Gold Road district, Mohave Co., Ariz. Ore occurs in veins in rhyolite dike, traversing ground from E. to W. **Development:** 235' shaft, with crosscutting to reach ledge on 200' level. **Equipment:** includes a 15-h. p. Fairbanks-Morse hoist.

CONGOR GOLD & COPPER MINING CO.**UTAH**

Office: 506 Auerbach Bldg., Salt Lake City, Utah. Mine near Bingham Canyon, Salt Lake Co., Utah. **Officers:** **Glen R. Bothwell**, pres.-gen. mgr.; **R. C. McConaughy**, v.-p.; **Frank E. Loose**, sec.; preceding with **E. F. Jenkins** and **C. G. Hall**, directors, at last accounts. **Cap.**, \$1,000,000; shares \$1 par. **Property:** 10 claims, 150 acres, adjoins the Bingham Amalgamated on the north, in Bingham Canyon, Salt Lake Co., Utah. Developing 3' vein from 4,000' tunnel of Montana Bingham Co., working about 100' from face of tunnel. Mine reported to have about 100,000 tons of ore exposed, running from \$6 to \$50 per ton and averaging \$14.

Company has a contract with the Montana Bingham Consolidated Mining Co., shipping its ores through the Miller Ore Transportation tunnel of that company to the Denver & Rio Grande railroad tracks at a cost of 25 cts. per ton of ore and 12½ cts. per ton of waste.

CONGRESS CONS. MINES CO., LTD. (THE)**ARIZONA**

Office: Room 514, 49 Wall St., New York. Mine office: Prescott, Ariz. **F. M. Murphy**, pres.; **Geo. D. Morris**, sec.-treas. **Property:** 27 mining claims, about 540 acres, at Congress, Yavapai Co., Ariz. A 4 mile standard gauge road connects the mines with the main line of the Santa Fé, Prescott & Phoenix Railway. Company owns two 40 stamp mills, a cyanide plant, together with all necessary mining machinery.

Mine idle 1914-15. Shaft said to be 3,000' deep and mine to have 2,000,000 tons of tailings available for retreatment. Property reported to have produced upwards of \$15,000,000. A retreatment of the tailings dump by the Holden process, is contemplated 1917.

CONGRESS GOLD & COPPER CO.**COLORADO**

Idle. Directors: **J. B. Ross**, pres.-gen. mgr.; **Guy W. Mallon**, v.-p.; **Frank L. Ross**, sec.-treas. **Inc.** April 16, 1908 in Colorado. **Cap.**, \$500,000; shares \$10 par. Bonds, \$100,000 authorized, at 6%; issued, \$50,000.

Property: 3 claims, 30 acres, the Congress and Arlington mines at Red mountain, 12 miles south of Ouray in San Juan county and the Midway mine in Ouray county. The Congress is a famous old mine worked 1884-93, said to have produced about \$400,000 worth of ore, averaging 18% copper and 11 oz. silver per ton, with small gold values. The mine, idle for some years, through litigation, was leased 1912-13. **Development:** 270' shaft with about 1,500' of workings, showing chalcocite, reported by company to average about 16% copper, 6 oz. silver and \$1 gold per ton. Mine has a 50-h. p. steam plant. See Southern Exploration & Mining Co.

CONIAGAS MINES, LTD.**ONTARIO**

St. Catharines, Ont., and Cobalt, Ont. **Officers:** R. W. Leonard, pres. and gen. mgr.; Alex. Longwell, v.-p.; with R. P. Rogers, F. J. Bishop and W. D. Woodruff, directors; J. J. Mackan, sec.-treas.

Inc. Nov. 24, 1906, in Ont. Cap. authorized and outstanding, \$4,000,000; \$5 par. Toronto General Trusts Corp., transfer agt. Annual meeting in Dec. Listed on Toronto Stock Exchange and New York Curb. Owns entire \$4,000,000 (par \$5) stock of the Coniagas Reduction Co., Ltd., which handles this company's product. Also controls the Redington Rock Drill Co. and the Mines Water Supply Co., Ltd., besides owning 6,054 shares of \$1 each, of a total issued of 40,000 shares of stock of the Wabi Iron Wks., Ltd.

Income Account, Fiscal Year Ending Oct. 31

Year	Gross Income	Net Income	Dividends & Bonuses	Surplus for Year
1914-15	\$1,013,513	\$ 658,730	\$ 600,000	\$ 58,730
1913-14	1,407,877	968,387	1,320,000	351,613 (a)
1912-13	2,186,664	1,693,583	1,640,000	53,583
1911-12	2,172,967	1,676,953	1,440,000	236,953
1910-11	1,947,566	1,612,464	1,440,000	172,464
1909-10	1,010,414	752,389	240,000	512,389
1908-09	691,678	473,534	360,000	113,534
1907-08	727,195	501,718	440,000	61,718

(a) Deficit. During year ending Dec. 31, 1914, paid 33% in dividends and bonuses. Total dividends paid to Oct. 31, 1915, \$7,840,000.

Balance sheet as of Oct. 31, 1915, shows assets, \$5,126,662, which includes: mine \$3,985,700; machinery, plant and buildings, \$215,204; Coniagas Reduction Co., Ltd., stock, \$249,400; cash in bank and on hand, \$245,840; ore in transit, \$109,296; accounts receivable, \$265,201. Liabilities include, surplus \$1,118,251.

Property: the Coniagas mine, 40 acres on the townsite of Cobalt, Coleman Twp. In 1915, company purchased 198 acres of Lot 15, Con. 1, Bucke Twp. known as the Agaunico mine, in which considerable development work was done a few years ago on a promising vein of cobalt and nickel ore. The Coniagas mine contains a large number of small, but very rich, veins carrying silver with small amounts of cobalt, nickel and arsenic.

Development: totaled 27,738' of underground workings Oct. 31, 1915. This included shafts 875', drifting 16,608' and 8,715' of crosscutting. Underground work for year ending Oct. 31, 1915, amounted to 2,735' as compared with 2,295' in preceding year. Development work was confined to the 225' and 285' levels. The latter is the lowest level. No important new orebodies were developed during the year, though it will take another year's work to completely prospect the 40 acre tract.

Ore reserves: Oct. 31, 1915, estimated as 215,995 tons containing 12,894,-380 oz. silver. Allowing 20% for possible over-estimation leaves a reserve

of 10,315,504 oz. silver, as compared with 260,000 tons containing 11,904,000 oz. silver in preceding year.

Mill: 60 stamps, daily capacity 160 tons and a small cyanide plant, recently completed. The cyanide plant was built to cyanide about 6 tons per day of low-grade canvas table concentrates and decomposed gouge from the mine, whereby an estimated daily saving of \$100 per day will be made. For year ending Oct. 31, 1915, mill treated 55,437 tons ore, an average of 3.02 tons per 24 hours, compared with 54,522 tons, an average of 2.93 tons per 24 hours, for the previous year. Mill heads averaged 23 oz. silver per ton compared with 24 oz. for the previous year. Number of men employed in mine and mill averaged 141. Electric power is used.

Production (For Year Ending Oct. 31)

Year	Tons - Mine Ore	Tons Concts.	Cost per Oz.		Ounces Silver	Price, Oz. Silver
			(a) Silver	(b)		
1915	267	607	13.62c	3.25c	2,002,053	49.25c
1914	485	688	12.44c	3.58c	2,497,394	56.75c
1913	735	1,034	8.76c	4.32c	3,252,566	60.55c

(a) Includes all expenses except shipping, smelting, refining and marketing charges which are under (b). Total production of mine to Oct. 31 amounted to 22,162,442 oz.

Ore and concentrates are treated by the Coniagas Reduction Co., Ltd., which see.

Is second only to the Nipissing Co. in production and is a splendidly managed property.

Coniagas Reduction Co., Ltd. Ontario

Is a subsidiary of the Coniagas Mines, Ltd. Owns a smelter and refinery at Thorold, Ont. R. L. Peek, supt. During fiscal year ending Oct. 31, 1915, company shipped 3,465,946 oz. silver. Company produces silver, arsenic and the oxides of cobalt and nickel. An average of 139 men employed in 1915.

CONKLING MINING CO.

UTAH

Office: 520 Atlas Block, Salt Lake City, Utah. **Mine office:** Park City, Summit Co., Utah. **Officers:** Col. Nicholas Treweek, pres.; Wm. C. Hall, v.-p.; Geo. A. Lund, sec.; J. Leonard Burch, treas.; preceding and Margaret Treweek, directors. Inc. Sept. 17, 1908, in Utah. **Cap.**, \$500,000; shares \$1 par, assessable. Is a close corporation, with 25% of stock owned by Silver King Coalition Mines Co.

Property: 2 claims, 2 miles from a railroad, shows gold, copper and lead ores, developed by a 1,000' tunnel on the lands of the Silver King. No returns secured.

CONNECTICUT ZINC CORPORATION.

MISSOURI

Office: 500 Fifth Ave., New York. **Officers:** Ross M. Turner, pres.; Geo. Tracy, v.-p.; preceding with P. W. Brooke, A. R. Turner, J. J. Coyle, H. C. Johnson, W. S. Hallowell, W. H. Lyon, A. S. Raymond, D. L. Robertson, G. P. Smith, directors. E. H. Van Wyck, treas.

Inc. June, 1914, in N. Y., to hold securities of Oronogo Circle Mining Co., of which it owns the entire capital stock, and to operate zinc properties. **Cap. authorized and outstanding**, \$1,000,000; \$25 par. Fidelity Title & Trust Co., transfer agt., Stamford, Conn. Annual meeting, second Monday in July.

Bonded debt: \$315,000 sinking fund gold 6% bonds, dated July 1, 1914, due July 1, 1924; int. Jan. and July 1, at Logan Trust Co., Philadelphia, Trustee. Coupon \$500, principal may be registered. At least \$35,000 of the bonds are callable on July 1 each year, commencing in 1915. Sinking fund

equal to 40% of net earnings is provided. Secured by pledge of the entire stock and leases of the Oronogo Circle Mining Co. Authorized and issued \$350,000 of which \$150,000 has been paid off to April 30, 1916. Interest paid without deduction for normal Income Tax. **Dividends:** paid quarterly, Jan., at rate of 4% per annum. See Oronogo Circle Mining Co.

CONSOLIDATED AMADOR MINING CO. CALIFORNIA

In Jan., 1916, company purchased from Hetty Green the old Eureka mine on the Mother Lode, at Sutter Creek, Amador County. The mine, known under the names of Eureka, Amador, Hetty Green and Hayward's and idle for 30 years, is credited with a past production of \$12,000,000 in gold.

Wm. D. Thornton is president of the resuscitated company; among the principal share holders are Thomas F. Cole, John D. Ryan, Chester A. Congdon, Wm. E. Corey, Jas. Hoatson, Ambrose Monell, Wm. W. Mein, and Philip L. Foster. Purchase price said to be over \$500,000. The new management will unwater and reopen the mine. For history of the property see Mining and Scientific Press, Vol. 112, No. 26.

CONSOLIDATED ARIZONA SMELTING CO. ARIZONA

Office: 15 Broad St., New York. **Mine office:** Middleton, Yavapai Co., Ariz. **Works office:** Humboldt, Ariz. **Victor I. Cumnock,** pres.; **Chas. A. Kittle,** v.-p., and **E. S. Hooly,** v.-p.; **Frank W. Thompson,** sec.-treas.; **John H. Flagler,** **Frank A. Dillingham,** **Chas. Hill** and **Ed. Pavenstadt,** directors. **G. M. Colvocoresses,** gen. mgr.; **W. V. de Camp,** supt.

Inc. Dec., 1908, in Maine. **Cap., \$9,200,000;** shares \$5 par, of which \$912,500 is reserved for bond conversion. Stock is listed on the New York Curb. **Bonded debt:** \$1,200,000, 5% 30-year income bonds authorized; \$974,500 outstanding, and \$1,000,000 6% 20-year gold bonds; \$250,000 outstanding. Acquired at foreclosure sale the properties of the Consolidated Arizona Smelting Co. (see Vol. X) and the Arizona Smelting Co. The intricate relationship of the old company and its subsidiaries is fully described in Vol. X. Operations in 1915 resulted in a net profit of \$194,942.

Property: 40 claims, 20 patented, 725 acres near Mayer and near Middleton, Yavapai Co., Ariz. The most valuable mine owned by the company is the Blue Bell, comprising 3 claims, carrying fissure veins with quartzite footwall and granodiorite hanging.

Development: 6 shafts, deepest 1,000' and 2 short tunnels, with about 14,000' of underground workings. Ore contains pyrite and chalcopyrite, all slightly argentiferous and auriferous. The Blue Bell vein has been proved for 350' on the 1,000' level, where it is 15' wide, and averages 3.3% Cu. with 1.2 oz. silver and .04 oz. gold per ton.

Mine is connected with the Bradshaw Mountain railway by a tram line and has electrical machinery, taking current over an 18-mile transmission line. Development and exploratory work in progress in 1916.

The De Soto Mine is also operated by this company. Developed by 4 tunnels, 5,000' in length, to depth of 1,000', with a total of 11,000' of underground workings.

Production: about 100 tons of 3.5% copper ore per day. Copper production from both mines in 1915 amounted to 4,392,000 lbs.

Equipment: the reduction plant, well located for custom business, includes sampling, concentrating, roasting, smelting and converting departments, with a machine shop and smithy. All buildings are of structural steel frame, with brick walls or corrugated-iron sheathing, floored with cement. This plant was made over in 1914, and is described by G. M. Colvocoresses, in the Eng. and Min. Journal, Sept. 5, 1914, p. 425.

A 250-ton Minerals Separation flotation plant was installed in 1913.

The concentrator has two 200-ton units, each having one 10x20" and two 7x10" Blake crushers, 1 centrifugal crusher, 3 elevators, 2 sets of rolls, one 25' Hancock jig, 10 Wilfley tables, 8 Overstrom tables, 8 vanners, 4 trommels, 8 Callow tanks and Richards, Johnson and Anaconda classifiers. The mill has a large slum pond, and overflow water is returned to the mill for re-use.

During 1915, 81,544 tons of ore and old tailings were treated, making an average recovery of 88.6% copper; 62.5% gold and 70.5% silver values. The ratio of concentration was 4.1 to 1; the mill produced 19,877 tons concentrates, containing 10.27% copper. Management plans increasing capacity to 500 tons in 1916, erecting new crushing and receiving plant, in 2 sections, 1 for concentrating and 1 for smelting ores. Average cost of milling, including flotation royalty was \$1.20 per ton in 1915, as against \$1.82 in 1914. The concentrate averages 14% copper, 28% iron, 20% sulphur, 20% insol., compared with smelting ore, carrying 4.5% copper, 20% iron, 20% sulphur, 42% insol.

The first unit of the remodeled smelter is a 7-hearth Wedge roaster, 22' 6" diam., fitted with auxiliary oil-burners and supported on step bearings instead of trunnion. There are two reverberatory furnaces, burning oil and rated at 400 tons daily capacity. Matte from the reverberatory furnaces is tapped into a launder, which delivers it to a ladle in the converter room. Production averages 500,000 lbs. blister copper per month from company ore and custom material. The blast-furnace department has both lead and copper stacks, with a 200-ton 48x60" lead furnace, and a 250-ton water-jacket blast furnace for copper. Slags are granulated. The stack is of reinforced concrete, 180' high, 18' in diameter at the base and 11' at the top.

The converter department has 2 stands, with shells of barrel type, rotated electrically. Equipment includes a 40-ton Whiting electric crane with a 15-ton auxiliary crane, cranes also taking hot slag from the converters and pouring same into the reverberatories and delivering shells.

The power plant has four 345-h. p. Stirling water-tube boilers, burning waste gases from the reverberatories, steam being sent therefrom through a 10" pipe line, under 150-lb. pressure. Machinery includes 2 Connersville blowers, a Nordberg duplex cross-compound air compressor, with 40x42" air cylinder and 18x36x42" steam cylinders. There are two 300-kw. 480-volt 3-phase 60-cycle generators, direct-connected to two 16x32x36" Nordberg cross-compound engines, and an electric turbine pump. Electric power is furnished the Blue Bell mine, 18 miles distant, current being transmitted at 15,000 volts, stepped down to 440 volts, at the Blue Bell transformer station.

The smelter treated 61,034 tons in 1915, producing 5,762,974 lbs. copper; 81,646 oz. silver; 3,092 oz. gold. Shipments averaged 3.05% copper and \$1.40 in gold and silver. Total cost per pound copper produced was 13.32c as compared with 13.92c in 1914, and average price received was 17.67c. Total cost of milling, including flotation royalty was \$1.20 per ton as compared with \$1.82 in 1914 and smelting cost was \$3.34 per ton as against \$5.55 in 1914.

Ore reserves: Feb. 1, 1916, reported as 280,000 tons averaging 3.5% copper and \$1.50 gold-silver per ton in the Blue Bell and 75,000 tons in the De Soto mine, averaging \$1.50 in gold and silver and 3.75% copper. Employed 350 men during 1915. Management is working along sound and progressive lines.

CONSOLIDATED CALIFORNIA-NEVADA MINING CO. NEVADA
Offices: 40 Cedar St., New York, and Pioche, Nevada. Geo. W. Bent, former supt. In receiver's hands. Organized 1915 to take over the Day

Bristol properties, bought in by bondholders' committee at sheriff's sale in 1915. Company started work at Gypsy mine with 50 men, and shipped 800 tons copper-silver ore in November, 1915, deepening Gypsy shaft, and installing engine, hoist and compressor at Hillside and Tempest shafts. Company had 8,300' rope tramway in operation.

In Feb., 1916, owing to inability to ship ore already mined and to secure funds from sale thereof, mines closed down and company went into receiver's hands.

The International & Intercontinental Mng. & Ref. Co., inc. 1916 as holding company, with the Uvada Copper Co. as operating company, were formed to operate the properties. (See two companies named.)

CONSOLIDATED CENTRAL BUTTE COPPER CO. MONTANA

Office: c/o R. M. Cobban, sec., Butte, Mont. **Officers:** R. R. Jones, pres.; R. H. Wearing, v. p.; D. J. Charles, treas., and E. E. Hershey, directors. **Inc. Oct. 29, 1906, in Mont. Cap., \$1,200,000; shares \$1 par, assessable; issued, 446,000 shares. Has levied 3 assessments, aggregating 6½ cts. per share, or about \$28,000. Annual meeting, second Thursday in January.**

Owens a one-third interest in the North Star, South Star and January claims, patented, and mineral and mining rights in about 100 acres of patented placer claims, adjoining the Ophir claim (Butte-Detroit Copper) on the east. The North Star, South Star and January claims are developed by a 225' shaft, said to show an orebody 3 to 6' wide. Idle several years for want of working capital.

CONSOLIDATED COPPER CO.

WASHINGTON

Office: 906 Paulsen Bldg., Spokane and Turk, Stevens Co., Wash. **Mine** at Springdale, Stevens Co., Wash. **Officers:** W. H. Stowell, pres.; Geo. C. Gates, v. p.; V. W. Brasch, sec.-gen. mgr.; preceding and Chas. A. Libby and E. R. Traeger, directors. **Inc. 1913 in Washington. Cap., \$1,500,000; shares \$1 par, assessable; total assessments to Dec., 1915, 16 mills. Annual meeting, Jan. Company is a reorganization of the Togo Mining & Smelting Co.**

Property: about 240 acres, 160 patented, in Cedar Canyon district. Ore occurs principally as copper pyrites in slate, serpentines and quartzite with a N.-S. strike and 40 to 60° dip. One orebody, developed by tunnels, with about 2,000' of workings, is reported by management to average 3 to 5' in width, in upper levels, and to carry 8% copper, 3½ to 5 oz. silver and a trace of .02 oz. gold per ton. Upper levels said to show bornite, copper glance and a little native copper. A 1,000' crosscut tunnel is said to cut several veins, undeveloped at last reports.

Equipment: includes gasoline engine and hoist. The mine has been closed down for several years, but management expects to begin operations in 1916.

CONSOLIDATED COPPER CO. OF PARRY SOUND. ONTARIO

Office: 705 Palladio Bldg., Duluth, Minn. **Mine office:** Parry Sound, Parry Sound district, Ont. **Officers:** Robt. Forbes, pres.; Robt. Millard, v. p.; J. G. Harris, sec.-treas.; preceding, with A. C. Le Richeux, Frank Cox, E. E. Rorem, Dr. J. D. Budd, F. L. Young and C. J. Jackes, directors. **Inc. Feb., 1902, in Ontario. Cap., \$5,000,000; shares \$1 par; issued, about \$3,100,000.**

Lands: 1,500 acres, patented, carry considerable standing timber, in Foley, McDougall, Haggerman and Conger townships. Part of property formerly was held by Hattie Belle Gold, Copper & Nickel Co. **Ores:** occur as contact deposits between slate and quartzite, and as fahlbands, ore being mainly chalcopyrite, with occasional bornite and chalcocite, mainly low in

grade, but with occasional seams of high-grade ore. There are 18 different orebodies, shown by test pits and stripping, of which 2 are somewhat developed. The fahlbands are said to show a width of more than 1,000', carrying 7 bands of fairly good ore, of 200' estimated aggregate width, between which is low-grade ore, part of which may be amenable to concentration. Ores assay 1.5 to 12% copper, 3 oz. silver, and from a few cents up to \$8 gold per ton. **Development:** by 180' vertical shaft, and about 25 pits of 10 to 30' depth.

The Spider Lake mine has a shaft house, and steam hoist good for 500', with necessary mine buildings. A considerable orebody has been exposed by trenching.

The Lefex mine has shafts of 90' and 40', showing nothing of particular promise. The Lefex has an iron gossan, carrying up to 2% copper and \$2 to \$3 gold per ton. A 600-lb. test shipment, from the 65' level, returned 30% copper, and various samples have shown from 0.5 to 3% nickel, and from nothing to \$20 gold per ton. Company has acquired control over 120 acres adjoining property, and plans resuming operations, 1916.

CONSOLIDATED COPPER MINING CO. UTAH

Eureka, Juab Co., Utah. **Officers:** J. C. Jensen, pres.; J. W. Burton, v. p.; A. A. Biorn, sec.-treas.; preceding, with H. S. Birch, Theo. Cederstrom and Cornelius Cederstrom, directors. **Inc.** 1911. **Cap.**, \$100,000; shares 10 cts. par; issued, 550,000 shares.

Lands: 6 claims, in the North Tintic district, slightly developed, show a narrow vein of low-grade copper ore, with gold and silver values, and a deposit of black marble, said to be of good quality. Development work in 1914 consisted of drifting and crosscutting to reach the Kendall-Douglass orebody on the 200' level.

CONSOLIDATED COPPER M., M. & SM. CO. COLORADO

Mine office: Eldora, Boulder Co., Colo. **Officers:** C. C. Munson, pres.; W. H. Hoke, v. p.; M. P. Givens, sec., 325 Bannock St., Denver, Colo.; M. L. Ericson, treas. **Inc.** Oct. 16, 1899, in Colorado. **Cap.**, \$2,000,000; shares \$1 par. Annual meeting, second Tuesday in September. Consolidation with Colorado Metals & Chemical Co. reported in 1914.

Property: 27 lode claims, partly patented, 150 acres, known as the Fourth of July group, 3 additional tunnel claims, a placer claim and a 160-acre timber claim, giving total holdings of about 600 acres, at the southern base of Arapahoe peak, in the Grand Island district. Said to have 4 contact deposits, with phonolite on one wall, of which 1, under development, was said to average about 7' in width, and to carry up to 60' of sulphides, of concentrating grade, including galena, chalcopryrite, bornite and chalcocite, all auriferous and argentiferous. **Development:** by 3 shafts, deepest 360', and the Fourth of July tunnel, of 4,800' length. Has steam power, a 6-drill Leyner 2-stage air compressor and necessary buildings. Development and exploratory work under way, 1914.

CONSOLIDATED COPPERMINES CO. NEVADA

Office: 60 Broadway, New York City. Mine office: Kimberly, White Pine Co., Nev. **Officers:** Chas. H. Boynton, pres.; Jos. B. Cotton, v. p.; Edwin F. Gray, 2nd v. p. and gen. mgr.; Thos. B. Adams, sec.-treas.; E. F. Kellogg, asst. sec.-treas.; with Thos. F. Cole, Isidore Hershheim, Mulford Martin, G. L. Perkins, F. E. Searle, J. T. Morrow and A. J. Selfridge, directors. **Inc.** May 20, 1913, in Delaware. **Cap.**, \$8,000,000; shares \$5 par, nonassessable; \$3,801,084 outstanding Dec., 1915. Bonds authorized, \$3,500,000; amount outstanding, \$225,300; convertible bonds bear 7% and are redeemable by lot at 110 plus accrued interest on any interest day, not later

than 1928. Guaranty Trust Co., New York, transfer agent; Bankers Trust Co., New York, registrar. Stock listed on New York Curb.

Statement shows cash on hand Dec. 31, 1914, \$1,505; receipts to April 30, 1916, \$123,955; expenditures to April 30, 1916, \$121,781, leaving cash on hand April 30, 1916, \$3,679.

Company was organized to secure control of the Giroux Consolidated Mines Co., Coppermines Co., Butte & Ely Copper Co. and Chainman Consolidated Copper Co., acquiring stock in the several companies on the basis of 1 new share for 2½ Giroux shares; 1 for 6¼ Butte & Ely; 1 for 3½ Coppermines, and 1 for 25 Chainman. In Dec., 1913, the company acquired the properties of the New Ely Central Copper Co. on the basis of one share Consolidated stock for 20 shares New Ely stock. These properties, aggregating 90 claims, in the heart of the Ely district, are separately described under their respective titles, though they will hereafter be operated as parts of one company.

Company was launched at a time of unsettled financial conditions and was floated with difficulty. An ore tonnage was shown June, 1915, of 25,500,000 tons ore, 1.31% copper, 17,000,000 tons fully developed, average grade 1.19%, and 8,500,000 tons partially developed, average grade 1.01%. When further work has shown a sufficient tonnage the company will, it is said, build a concentrator. Property examined by Henry Krumb and R. H. Channing, Jr.

The company is doing development work only in 1916, but the Nevada Cons. Co. is reported to be working the Ora claim under an agreement whereby the ore is mined free of charge in payment for certain rights of way. The output is said to be 10,000 tons of ore per month, shipped to the Nevada Cons. smelter.

Suit against the company was begun in 1916 to compel it to work its properties, Col. Wall alleging that the management could and should mine, mill and ship ore. The financial management of this company is piratical.

CONSOLIDATED HOMESTEAD MINES CORPORATION ARIZONA

Controlled by U. S. Continental Mines Co., which see.

CONSOLIDATED INTERSTATE CALLAHAN MINING CO. IDAHO

Offices: 61 Broadway, New York. Mine office: Wallace, Idaho. **Officers:** John A. Percival, pres.; M. G. Rodearmel, 1st v. p.; Milie Bunnell, 2nd v. p. and treas.; above, with J. B. Cotton, A. L. Riley, A. L. Warner, S. S. Titus, Otto Sussman, Jas. F. Callahan, P. H. Nelson and Louis Hanitch, directors; C. W. Newton, supt.; D. F. Haley, cons. engr.; Julian B. Beaty, sec.

Inc. June 12, 1912, in Arizona as a consolidation of the Interstate Silver-Lead Mining Co. and the Callahan Mining Co. **Cap.**, \$5,000,000; shares \$10 par, nonassessable; 464,990 shares outstanding June 1, 1916. Annual meeting in August. Listed on N. Y. Exchange. Title Guarantee & Trust Co., New York, transfer agent; Registrar & Transfer Co., New York, registrar.

Financial statement: shows June 30,

	Current Assets—			Total	Current Liabilities		Surplus
	Cash	Ore Account	Other		Liabilities	Surplus	
1916.....	\$143,573	\$596,289	\$101,709	\$ 841,571	\$34,860	\$ 806,711	
1915.....	316,588	784,190	50,864	1,151,642	56,780	1,094,862	

Comparative operating statement: year ending June 30,

	Income Op. & Gen. Year's		Surp. from Prop.		Divid's.	Surplus	
	(a) Expen's.	Profit	Last Year	Invest.			
1916	\$4,013,172	\$912,681	\$3,100,491	\$1,142,967	\$181,818	\$3,254,930	\$ 806,711
1915	2,161,177	569,404	1,591,773	(b)200,686	697,597	1,094,862

(a) All from ore and concentrates except \$27,076 for 1916 and \$14,894 for 1915. (b) Operating deficit \$99,314; proceeds of bonds sold \$300,000.

Initial dividend of \$116,360 was paid April 1, 1915; total for year was \$697,597.50. Dividends for calendar year 1915 amounted to \$5.50 per share, with further dividends quarterly of \$1.50 each in April and June, 1916, a total of \$8 per share, or \$3,952,597.

Company is a consolidation of two prospects, called the Interstate and Callahan groups, the first named developed and the Interstate vein found while Walter Harvey Weed was consulting engineer, on whose advice the present consolidation was effected at a time when this part of the Coeur d'Alene district was regarded by many mining men as worse than unpromising. The mine has developed into one of the principal lead-zinc producers in the U. S.

Property: 79 claims, 1,004.84 acres, 601 patented; also the Nipsic group, 7 claims, in the Coeur d'Alene district, Wallace, Shoshone county; also stock holdings in the Blue Grouse mining company which adjoins the Cons. Interstate Callahan.

Geology: the two fissure veins thus far worked in the property are the Interstate and the Callahan. The veins cut through Prichard slates, which are intruded by a monzonite porphyry dike and by small diabase dikes. The Interstate vein varies from 3-20' in width, the Callahan from an inch to 8'. For geology of the district see U. S. G. S. P.P. 62, and 17th Annual Report of the Mining Industry of Idaho, 1915, by Robt. N. Bell.

Development: totals 20,500'. The principal working level is tunnel No. 4, about 1,200' below the mountain top, where an oreshoot 1,200' long has been encountered, running from 1-54' in width. This ore extends from the uppermost tunnel down, with equally good values on the lowest level. The present shaft has been sunk 450', and Nos. 5, 6 and 7 levels have been opened at a point 223', 457' and 675', respectively, below No. 4 level. New work for year ending June 30, 1915, was 1,510', mainly crosscuts and drifts. In August, 1916, 3' of high-grade ore was opened up for 50' on the 7th level.

Ore reserves: 350,000 tons, averaging 25% zinc. Development has not yet found lower limits of orebody, nor of ore shoots on Nipsic, Blue Grouse or Amazon-Manhattan veins, for which the outlook is decidedly promising.

Equipment: is modern and installed with a view to future big development. Buildings include saw-mill, bunk and rooming houses for 300 men. The concentrating mill, which treated at the rate of 10,000 tons of ore per month during 1915, was completely remodeled and equipped with 16" main feed elevator, screens, jigs, Traylor rolls, Aikens de-slimmer, settling classifiers, two 3" pumps, concentrate bins, two 12' Dorr tanks, 30' Dorr settling tank, spitzkasten, tables, motors, Callow tank, Oliver filter press, tube mill and flotation unit. Shipments are at the rate of 6,800 tons of concentrates per month, and the recovery averages a little better than 90%. Ore is conveyed from the mill over an aerial tramway to Sunset, on the N. P. R. R. A new mill, which will double the present output of the property, is to be erected at Enaville at some future time.

Company owns the Nipsic group, bought 1916, the Nipsic Co. being dissolved, Aug., 1916.

This tract of 7 claims, 6 patented, is located about a mile north of the portal of Interstate No. 4 tunnel, the main working level of the mine. The group lies between the Idora and Interstate-Callahan groups on the Beaver creek side of the Nine Mile divide.

The claims are crossed by two fissure veins in quartzite and slate, that average 3' in width and carry bands and shoots of lead and zinc ore, the lead ore carrying 4 oz. silver per ton to each 10% lead. The mine has

been intermittently prospected since 1892, but no important orebody discovered. There are several tunnels, longest 1,200', with a total of 2,140' of workings.

The group is intrinsically valuable, but has an additional value to the Interstate Callahan, as it permits much deeper tunnel work than any now existing and gives an outlet on the Beaver county side of the mountain, with easy access to the North Fork.

Production: for year ending June 30, 1916, amounted to 124,684 tons, from which there was produced 65,715 tons of crude ore and concentrates. Costs for first quarter, 1916, were: mining, \$3,666; milling, \$1,238; loading and shipping, \$0,766; total, \$6,110, or \$11.369 per ton of concentrate.

The management is able and progressive. On average metal prices of 5.68c for zinc, 4.55c lead and 57.85c for silver, company's May, 1916, output would yield a profit of \$90,747, or over \$1,000,000 yearly.

CONSOLIDATED KANSAS CITY SM. & REF. CO. TEXAS

Owens the El Paso smelter at El Paso, Tex. Company owned by American Smelting & Refining Co., and property described under that title.

CONS. KING DEV. & COLUMBIA COP. MG. CO. ARIZONA

Office and mine: Jerome, Yavapai Co., Ariz. Hon. Geo. W. Hull, pres.; Mary A. Hull, sec. Inc. in Arizona. Cap., \$6,000,000; shares \$1 par. **Property:** 11 claims, 154 acres, south of the United Verde mine, showing several bodies of oxidized and sulphide ores, carrying fair values in copper, gold and silver. Mine has a 100' shaft and a 750' tunnel, with about one-half mile of workings. Idle since 1913.

CONSOLIDATED MINES CO. CALIFORNIA

Office: 413 H. W. Hellman Bldg., Los Angeles, and Randsburg; Kern Co., Cal. Geo. Orr, supt. **Property:** at Randsburg, carries a vein containing gold and tungsten ore, developed by 600' shaft. **Equipment:** includes 5-stamp mill, pumps, compressor and air-drills. Listed in Los Angeles.

CONSOLIDATED MINES & REDUCTION CO. COLORADO

Office: 433 Century Bldg., Denver, Colo. Mine office: 412 E. Bennett Ave., Cripple Creek, Colo. Officers: P. A. Burns, pres.; R. A. Schwab, v. p.; John H. Gallup, sec.-treas.; J. B. Conger, gen. mgr.; with W. W. Oliver, directors. Inc. March 10, 1916, in Colo. Cap., \$1,200,000 common and \$300,000 preferred stock; shares \$1 par.

Property: the Mary A. and Ella W. claims on Tenderfoot Hill, in the Cripple Creek district; the Kittie Wells No. 2 mine, on Carbonate Hill; the Buckhorn mine, adjoining the Kittie Wells on the east, and the Tenderfoot Hill mine. In April, 1916, company secured a 5-year lease on the Dante Gold Mine Co., which see. Company also has a mill site on Carbonate Hill. The Ella W. has been developed to a depth of only about 85'. Vein opened for 100' along the strike, said to be 20' wide and to assay \$20 to \$50 per ton.

The Tenderfoot Hill property is said to show ore in vein 1' to 22' wide, assaying \$3.20 to \$75 gold per ton. **Development:** the 700' Tenderfoot tunnel with drifts and crosscuts. **Equipment:** includes a 30-h. p. hoist and an 8-drill electric air compressor.

Production: claims to have shipped 20 cars ore in first 3 weeks of March, 1916. Plans building a 250-ton mill and cyanide plant, sinking a third shaft, extending the Tenderfoot tunnel an additional 700', and adding a 6-drill air compressor to the tunnel equipment. Company has sent out much expensive advertising and is evidently in the hands of the "promoter."

CONS. MG. & SM. CO. OF CANADA. BRITISH COLUMBIA

Secretary and office: J. Kitto, Room 1202, C. P. R. Bldg., Toronto, Ont. Works office: Trail, Trail district, B. C. **Officers:** W. D. Matthews, pres.;

Geo. Sumner, v. p.; Jas. J. Warren, managing dir.; preceding, with E. B. Osler, Chas. R. Hosmer, H. S. Osler, W. L. Matthews, J. C. Hodgson and Wm. Farwell, directors; Robt. Holden Stewart, gen. mgr.; Selwyn G. Blaylock, asst. mgr.; T. W. Bingay, compt.; James Buchanan, smelter supt.; J. F. Miller, refinery supt.; M. E. Purcell, supt. Centre Star mines; F. S. Peters, supt. Le Roi mines; J. K. Cram, supt. St. Eugene and Sullivan mines; C. H. MacDougall, supt. construction at smelter; W. M. Archibald, engr. in charge of Slocum-Ainsworth properties.

Inc. 1905 as Canadian Consolidated Mines, Ltd. Cap., \$15,000,000; \$100 par; issued \$6,966,240; increased from \$5,500,000 in 1909 to \$7,500,000, and again in Dec., 1915, to present amount. Company's fiscal year ends Sept. 30. Annual meeting, third Tuesday in December.

For fiscal year 1915 net profits were \$795,411, and surplus account showed a balance of \$2,058,299. Dividends: for fiscal years—\$234,940 in 1906; \$480,005 in 1907; \$66,940 in 1908; \$464,352 in 1913; \$464,376 in 1914; \$464,398 in 1915; with total dividends to end of 1915 of \$2,175,011. An 8% dividend rate was resumed July 2, 1913, when 2% was paid; changed Jan. 1, 1916, to 10%.

Property: company was formed to take over the following properties, either by direct ownership, or by stock control: War Eagle Consolidated Mining & Development Co., Ltd.; Centre Star Mining Co., St. Eugene Consolidated Mining Co., The Rossland Power Co., and the Trail smelter, formerly operated by the British Columbia Southern railroad. In 1907 the Iron Mask, Idaho and Enterprise mines at Rossland were purchased and the Phoenix Amalgamated Copper Mines, Ltd.; also the Keystone and Four Ace claims adjoining the Phoenix, located at Phoenix, B. C. In 1910 the company acquired the La Plata, or Molly Gibson group, near Nelson, and the No. 7 group in the Boundary district. In 1911 company purchased control of the Fort Steele Mining & Smelting Co., Ltd., owning the Sullivan silver-lead mine, near Fort Steele; Le Roi Mining Co. at Rossland; the Virginia and Abe Lincoln mines. In 1915 company purchased the Monte Christo, Paul Boy, Eddie J. and the Iron Horse mines, all at Rossland, and acquired a controlling interest in the Silver King Mines, Ltd., at Nelson. Also the No. 1 and Highland groups in Ainsworth. In 1913 the Deer Park, Grand Prize and Mabel in Rossland were taken over and the Ottawa Mine near Slocan City purchased.

The Le Roi-Centre Star group, on the southern slope of Red mountain, at Rossland, is the principal property. Country rock is a series of effusive and fragmentary volcanics of the Paleozoic age, intruded by an elongated mass of monzonite-porphry. This monzonitic mass, with its adjacent rocks, has been intruded by a large number of nearly vertical dikes, from a few feet to 250' wide, with generally N.-S. trend, the dikes being basaltic, and occasionally slickensided, larger dikes cutting off the veins completely, with the more important orebodies occurring at the points of intersection, and having a series of faults, mainly parallel to the dikes. Ore occurs in shoots of 3 to 50' width, and 50 to 600' length, widening at intersections of veins with dikes. Ore is strongly auriferous and fairly argentiferous chalcopyrite, associated with pyrite, and pyrrhotite with gangue of silicious altered country rock, ore ranging 0.5 to 2% copper and \$8 to \$20, and occasionally up to \$100, gold, per ton. Pay shoots extend, in some cases, from wall to wall, and form local enrichments, walls in some cases being very indistinct, and ore shading into the country rock. There are several veins, the more important being the Centre Star, Le Roi and War Eagle, on which the mines are opened mainly, these being shear zones, carrying chalcopyrite disseminated mainly in pyrrhotite, with some pyrite and occasional arsenopyrite.

The Rossland group, which now has a total acreage of about 775 acres, includes the Le Roi, Centre Star, War Eagle and Iron Mask mines, which are practically one, all connected by drifts and crosscuts, with about 54 miles of workings. For fiscal year 1914-15 new openings were 15,548' with 22,577' of diamond drilling. Mines are worked by overhand stoping, partly on the shrinkage system and partly timbered with square sets, cut from round timber. There is electric haulage throughout, with 13 electric locomotives hauling 2-ton side-dumping cars to the underground ore pockets of the Centre Star shaft. The ore pockets are on the hanging-wall side of the shaft, 2 on each level, 1 directly behind the other, the front bin, of 70 tons capacity, being for waste, and the 150-ton back bin for ore.

The water from the lower levels of the Le Roi and the other connected workings is handled through the Centre Star, the pumping equipment consisting of a No. 6 Cameron on the 16th level, a No. 7 Cameron on the 14th level, a 4" Centrifugal driven by a 50-h. p. induction motor on the 12th, a Triplex 7½"x15" plunger driven by a 50-h. p. motor on the 10th, a Quintuplex 4x12" plunger driven by a 50-h. p. motor on the 6th, a Triplex 7"x10" plunger driven by a 50-h. p. motor on the 5th level, while a 7½"x15" Triplex plunger driven by a 75-h. p. motor on the 9th level Le Roi handles the water from the levels above to the Black Bear adit.

The Centre Star mine has a 2,200' three-compartment shaft, sunk at about 68°, with 16 levels opened, at intervals of 125 to 175'. The shaft timber has been replaced with concrete from the 12th level to the bottom. The Centre Star has 8 or 10 different orebodies, but mining is principally from the Centre Star vein, the ore of which averages 0.6% copper, 0.3 oz. silver and \$8 to \$10 gold per ton.

The mine has a 106' wooden head frame, with 11' sheave wheels, a 24x36" Jenckes-Farrel crusher, of 100 tons hourly capacity, driven by a 75-h. p. alternating motor; shaft storage bins of 450 tons cap., ore sorting and sampling plant with Pan and Link belt conveyors, carrying ore to the shipping bins of 1,200 tons capacity. The engine-room has an 1,100-h. p. 28x60" Nordberg hoist, with two 10' drums of 5' face, good for 10-ton loads to depth of 3,000' at a speed of 2,000' per minute, using a 1¼" plow-steel hoisting rope, hoist cages 10' high, having hinged bottoms that are turned back when hoisting ore, with 4-ton skips swung under.

Buildings include carpenter shop, smithy and machine shop.

In the Centre Star-War Eagle-Iron Mask group, ore is mined from the 3 Centre Star veins, viz., Main, North and South, as well as from the Iron Mask, War Eagle, Josie, Poorman and Mugwump veins.

The War Eagle 1,300' three-compartment shaft, sunk at 50°, is now used only for handling men, timber and supplies, a 8¼"x12" air hoist having been installed on the No. 2 level for the purpose, after the destruction by fire of the original surface equipment. The War Eagle mine has 11 levels opened.

The Le Roi group is producing ore from the Le Roi main South, Intermediate, North Peyton and Hollywell veins. The Le Roi mine has a 1,650' five-compartment shaft, connected underground with the Star shaft; the Le Roi workings are also connected on the 15th 1,650' and 1,850' levels with those of the Centre Star.

The Le Roi shaft is equipped with a Fraser & Chalmers hoist, good for 3,000', and there is also a smaller hoist having 6' drums, two 40-drill air compressors and other necessary equipment.

Electric power for the complete operation of the mines is taken from the Bonnington Falls plant of the West Kootenay Power & Light Co., 35 miles distant, at 60,000 volts, stepped down at the mine to 2,000 volts for

distribution and use. The compressor room has a 120-k. w. direct-current generator, driven by an alternating current motor, supplying current at 250 volts for electric motors on surface and underground, and for lighting. Air for drilling is furnished to all the mines through one system. The Centre Star plant has two 40-drill compressors, one a Canadian-Rand Corliss duplex compound 2-stage compressor, with 22" and 40" steam cylinders and 48" stroke, with 28x32" air cylinders, but the steam cylinders have been disconnected, and compressor is rope-driven by a 650-h. p. Westinghouse induction motor. The other compressor is a hybrid, built over from an Ingersoll straight-line into a duplex machine having 2 Canadian-Rand cylinders, rope-driven, by a 600-h. p. Canadian Westinghouse synchronous motor.

The Le Roi compressor working in the same system is a Rand 2-stage air compound steam 40-drill machine, with steam cylinders cut out and air cylinders bushed to 3,000 cu. ft. capacity, rope-driven from a 400-h. p. synchronous motor. A second 2-stage air compound steam 40-drill Rand machine is in reserve, with battery of boilers sufficient to drive both machines.

Operations at Rossland, 1914-1915, have been extensive, some 315,000 tons of gold-copper ore having been shipped.

The **Richmond-Eureka** mine, at Sandon, B. C., has argentiferous lead and zinc ores, developed by tunnels aggregating 1¼ miles in length. Ore is transported to bin on C. P. R. R. tracks at Sandon by 4,000' aerial tram.

The **Sullivan** mine, at Kimberly, is a lead-zinc producer, whose ore occurs in a replacement deposit, in a fine grained argillaceous quartzite. Ore is a mixture of fine grained galena, zincblende and iron sulphides, the ore shoot showing a maximum stope width of 125'. **Development:** principally by tunnels and raises. **Workings** total 5½ miles. **Production:** 1914-1915, 45,000 tons.

Equipment: consists of an hydraulic installation, comprising 30' concrete dam, 5,000' of 30" wood stave pipe delivering water under a head of 200' to 3 Pelton wheels operating a 120-k. w. alternating current generator, 2,200 volts, and driving a 3,000 cu. ft. Rand 2-stage compound steam air compressor. Steam cylinders disconnected. An auxiliary steam plant of sufficient capacity to operate the machine at full load was installed to provide against water shortage. Electric current from the 120-k. w. generator is carried to the mine over 7,000' transmission line. There is also an auxiliary air plant at the mine comprising a 6-drill, 2-stage compound steam Rand air compressor, and sufficient boiler capacity to operate.

A 6,000' aerial tramway carries ore from the mine rockhouse to the loading bins on the C. P. R. R. tracks. About 100 men are employed.

The **Molly Gibson** mine, bought 1910, formerly owned by Molly Gibson Mining Co., Ltd., and later by La Plata Mines, Ltd., has a regular fissure vein in granite containing highly argentiferous lead-zinc ore. Developed by over two miles of tunnels. An aerial tram 2 miles long connects mine and mill, while a second, 5 miles long, connects mill and loading bins, 5 miles from Kootenay Lake. The mine is equipped with 100-ton mill, operated by water power, and two air compressors. Employs about 40 men.

The **St. Eugene** mine, at Moyie, has produced over 1,000,000 tons of silver-lead ore. The mine has about 20 miles of workings, is equipped with a 500-ton mill, but considerable of its equipment has been dismantled. Now being operated by a small force and shipments of crude ore regularly made.

No. 1 Group, at Ainsworth, 400 acres, has a contact deposit between dolomite and a dark lime schist. The ore consists largely of oxides of iron, zinc and lead in a silicious lime gangue. Principal value is in silver. De

velopment, by tunnel and winze, totals $1\frac{1}{2}$ miles. Equipment includes a 2-stage $11 \times 16 \times 18$ " Jenckes air compressor, driven by belt from 150-h. p. 2,080-volt motor, power being supplied from a 350-k. w. generator at Highland Mill, Cedar Creek, 9,000' distant; and an aerial tram, connecting mine ore bins with loading bins, on shore of Kootenay Lake. Storage capacity at mine and lake bins is about 700 tons.

Highland group, 240 acres, has a series of fissure veins. Ores are silver-lead and development is by $2\frac{1}{2}$ miles of tunnels. Equipment includes 6-drill air compressor, driven by water power, and a single rope aerial tram 4,000' long, connecting mine ore bins with 150-ton mill at Kootenay Lake. Power for mill is from a 350-k. w. generator, driven by a Pelton wheel under a head of 1,000'.

The **Ottawa** mine has a fissure vein in granite. Development by $1\frac{1}{2}$ miles of tunnel and winze. Principal metal is silver, associated with copper, lead and zinc sulphides, some barite in gangue.

The **Silver-King** mine on Toad mountain, back of Nelson, purchased in 1912, was unwatered in 1913, the surface plan repaired, machinery installed and made ready for production. The mine works well mineralized fissure veins in granite, yielding high-grade silver-copper ores. Development by $3\frac{1}{4}$ miles of tunnels and winzes. Equipment includes single rope aerial tram $4\frac{1}{2}$ miles long, connecting ore bins at mine with shipping bins on C. P. R. R. tracks at Nelson, 2 single stage straight line Ingersoll air compressors, driven by motors, a double drum-gear electric hoist, using current at 220 volts, and a $7" \times 10"$ Triplex plunger pump. Mine not operated in 1914-1915; all development operations having been curtailed after outbreak of European war.

The **Trail smelter**, located near the International boundary line, treats both copper and lead ores and does an extensive custom business in addition to treating the company's ores. In 1915 nine furnaces were in blast and 650 men employed.

There are 2 sampling mills, equipped with crushers and Vezin samplers; No. 1 mill, for copper ores, has 200 tons hourly capacity; No. 2, for lead ores, has 100 tons hourly capacity.

The smelter has a calcining department, and blast-furnace departments for copper and for lead. All the copper ores are bedded and hauled from the beds by electric locomotives to the charge bins, and from charge bins to the blast furnaces. The lead ores for roasting department are delivered to beds by a system of belt conveyors, and drawn from these beds by a belt conveyor over an electric scale to the roasters.

The calcining department consists of three $22' 6"$ 7-deck Wedge roasters, and five $26'$ Godfrey roasting furnaces. The roasted ore is sintered in 34 Huntington Heberlein sintering pots and 2 Dwight Lloyd sintering machines, fumes being passed through the Cottrell precipitation tank.

The 1,800-ton copper smelter has 5 blast furnaces, largest $45" \times 420"$, all taking a 32-oz. cold blast. Ore is treated crude in the blast furnaces, making a first-fusion product of 10 to 15% copper tenor, which is cooled, crushed and smelted with silicious ore and 4% coke to a matte of 35% copper, and shipped to Tacoma for conversion. Two $12'$ Great Falls type converters are being installed in this department, and in the future all matte will be converted here.

The 350-ton lead smelter has one $45 \times 180"$ and three $45 \times 180"$ blast furnaces, with mechanical feed, taking mainly calcined ores, crude lead ores being roasted in seven $26'$ Godfrey furnaces, which reduce the sulphur from the original tenor of 16% to only 8%, and these calcines are re-roasted in fifteen $9'$ Huntington-Heberlein sintering pots, yielding a product car-

rying only 4½% sulphur. The fully sintered ore, carrying 30 to 50% lead, is smelted in the blast furnaces, each making 50 to 85 tons of lead bullion daily, with about 4% matte fall. This matte is roasted and again put through the blast furnaces, and slags are granulated. Blast furnace gases are passed through a Cottrell precipitation tank.

In connection with the smelters is an electrolytic lead refinery, handling anodes cast from the silver-lead bullion. This plant, of 100 tons daily capacity, was the first electrolytic lead refinery ever built, and uses the Betts process. The lead is of exceptional purity, with average assay of about 99.997%, which means that a short ton of lead carries only about 1 oz. of impurities, which is marvelously successful work.

The silver refinery, taking silver sludge from the electrolytic lead tanks, has a water-jacketed reverberatory furnace for the production of doré metal, and the necessary kettles, tanks and bluestone plant for parting the precious metals with sulphuric acid, also furnaces for melting and casting the silver and gold bullion. Products are silver 0.999 fine, and gold 0.995 fine. A hydro-electric zinc plant is reported about ready to leach complex zinc ores and produce electrolytic zinc in 1916. It will have an output of 25 to 35 tons of spelter per day. The process is similar to that used at Anaconda, Mont., but is the direct result of the operation of an experimental plant treating ore from the Sullivan mine and producing 1,000 lbs. of zinc per day.

Power for the reduction works is electric throughout, brought 30 miles from Bonnington falls, on the Kootenay river, received at the transformer station at 22,000 volts, and there stepped down to 550. The installed electric capacity is about 5,000-h. p. Blast is supplied at 32 oz. for all furnaces, by one No. 9, one No. 9 1/27, one No. 11 and one 400 cu. ft. Root blower, and one 200 cu. ft. Connersville blower.

The works have a central heating station and well-equipped machine, carpenter, boiler and electrical shops. The assay office, which handles an unusual variety of work, in great detail, is exceptionally commodious and well equipped.

In the past three years the smelter has had many betterments, both in the lead and copper smelting departments. In 1915 these included an additional lead furnace, charge bins equipped with conveyors and weighing hoppers for the lead furnace department, wash houses for the men, an additional 20-ton crane in the roasting department, new lead ore sampling mill, copper converters with necessary equipment, beds for bedding copper ores, and additional tanks at the lead refinery.

Production: Year	Tons Ore Smelted	Gold, Oz.	Silver, Oz.	Lead, Lbs.	Copper Lbs.
1915.....	447,064	148,891	2,230,500	40,177,910	5,306,184
1914.....	374,771	129,083	2,568,301	34,617,318	3,645,997
1913.....	407,124	186,017	3,224,458	48,325,252	3,454,814
1912.....	129,789	1,765,992	26,072,074	2,914,181
1911.....	119,067	1,458,758	24,026,015	4,421,988
1910.....	137,614	2,162,406	42,368,816	5,974,959
1909.....	114,920	2,443,475	43,675,077	4,637,631
1908.....	121,380	2,224,888	32,157,139	4,004,468
1907.....	69,186	1,100,271	20,380,083	3,433,310

Considering that the Centre Star and War Eagle mines were reported worked out, when taken over, the company has made a signal success. The management is enterprising and thoroughly competent.

CONSOLIDATED NEVADA-UTAH CORPORATION. NEVADA
 Office: 63 William St., New York. Mine at Pioche, Lincoln Co., Nev., and Frisco, Beaver Co., Utah. **Officers:** Chas. H. Clarkson, pres.; Victor Lindenberg and J. A. Jorgenson, directors. **Cap.,** \$1,000,000; shares \$1 par.

I. Cumnock, treas.; Wm. F. Roberts, sec.; Jos. W. Kay, F. A. Dillingham, W. J. Palmer, Wm. B. Randall, directors; H. R. Van Wagenen, mgr.

Inc. 1913 in Virginia. **Cap.**, \$6,000,000; shares \$3 par; issued, \$3,936,396; in treasury, \$1,163,604; reserved for bond conversion, \$900,000; authorized bond issue \$900,000, 1st mtge. 6%; issued, \$499,867.

Company is a reorganization of the Nevada-Utah Mines & Smelters Corporation, which went into bankruptcy in 1912 and whose holdings were sold under judgment proceedings for \$100,000 to the new company. Stockholders in the old company who subscribed 50 cts. in cash for each share held and deposited their old stock, received bonds for the cash paid by them and 200 shares of stock in the new company for each \$100 subscribed.

Property: 3 groups of mines, owned through control of subsidiary companies; the Pioche group, at Pioche, including several productive mines that are largely developed; the Imperial group at Frisco, including the Comet mine and the Last Chance at Bingham, Utah.

The Pioche property is operated by the Amalgamated Pioche Mines & Sm. Corp'n, of which Mr. W. J. Palmer, of Trippe & Co., is president; 60% of the stock is owned by the Consolidated Nevada-Utah. The Amalgamated Pioche group comprises 38 claims, 33 patented, also 51 town lots and 1,528 acres miscellaneous lands. The mines at Pioche (formerly owned by the Pioche Con.) include silver-lead properties that were large producers, 1870 to 1876, and suspended operations 1893, being popularly credited with a past production of \$20,000,000 gross, which probably is a high estimate. The May Day mine of this group has a 1,100' shaft and there are 2 shafts on the Yuba mine adjoining. The Meadow Valley claim has a 400' three-compartment incline shaft. The old Independence shaft is said to show a 40' body of sulphide ore between the third and fourth levels.

Development: to March, 1915, consisted of 800' of crosscuts and drifts on the 1,400' level with stopes on the 1,200, 1,300 and 1,400' levels. About 20,000 tons milling ore blocked out between these levels.

Production: for 13 months ending June, 1915, was 4,199 tons zinc ore and 158 tons lead ore shipped to smelter and 13,200 tons milling ore on dumps. Ore shipped assayed 40% zinc, 25 oz. silver, with some gold and lead values averaging \$26 per ton. A new contract was made with the U. S. Zinc Co. for purchase of ore and concentrates after July 1, 1915.

Equipment: includes 700' Leschen aerial tramway, steam power and 4-drill air compressor. New mill put in commission April, 1916, treating 70 tons daily.

The Half Moon group of 6 claims, 42 acres, lies 1½ miles west of Pioche. It is understood to be the policy of the new company to lease the upper levels and develop the deeper workings itself. The Telephone claims and parts of Imperial Group are operated by lessees on a royalty basis.

The Jack Rabbit group is connected with the Pioche by a 20-mile narrow-gauge railway, and Pioche is connected with the San Pedro railroad by a 28-mile branch line known as the Caliente & Pioche, completed 1907.

Company owned 48% of the stock in the Day and Bristol mines, formerly operated by the Day-Bristol Cons. Mng. Co.; this property was sold at receiver's sale in 1914 for \$99,200 (see Uvada Copper Co.), and the Cons. Nevada-Utah Co. decided to lose their holdings rather than expend \$150,000 on an unproven property.

The Imperial group, near Frisco, Utah, is a copper property formerly owned by the Imperial Gold & Copper Mining Co. It was purchased at a judgment sale by the old Nevada-Utah to satisfy its claim of \$100,000 against the Imperial Co. Developed by tunnels showing carbonate ores. The Comet mine, belonging to the Nevada-Utah Mining Co., a single claim,

adjoining the Cactus, is said to carry a continuation of the Cactus orebodies of the Newhouse Mines & Smelters Co. The mine has a single shaft of 300' depth, sunk on gossan carrying about 1% copper. The adjoining Cactus mine is opened by a 6,000-ft. tunnel and the development of the ~~Comet~~ would necessitate an even longer tunnel or an extensive aerial tram.

The Consolidated Co. also owns all the capital stock of the Pioche-Pacific Railroad Co., and all the capital stock of the Manhattan Copper & Gold Mining Co., comprising the Manhattan group of 7 unpatented mining claims in the Highland mining district about 10 miles westerly from Pioche, and the Half Moon and Telephone claims, in the Ely mining district, Lincoln county, Nev.

Company controls, through ownership of 300,962 out of 600,000 shares, the Ohio Kentucky Cons. Mining Co., whose sole assets consist of 200,000 shares of Amalgamated Pioche Mines & Smelters Corp'n.

CONSOLIDATED SONORA MINES CO.

MEXICO

C. P. Shaver, sec., care Bank of Thibodaux, Thibodaux, La. Operating office: Douglas, Ariz. Mine near Fronteras, Sonora, Mex. Jas. Beary, pres.; Chas. P. Shaver, sec.-treas.; Chas. McHenry, supt. Cap., \$3,500,000; shares \$1 par. Is a close corporation. Property: 1,140 hectares, slightly timbered, on both sides of the Fronteras river, about 25 miles S. E. of Douglas, shows numerous outcrops of ore carrying lead, silver and gold.

Development: on the Mary L. claim includes a crosscut tunnel, intersecting a vein at 425' and a 325' shaft sunk at this point on the vein, is all in ore with 125' of drifting on the 50' level and a 430' drift on the 300' level. Shipments to the Douglas smelter, though profitable, did not pay mining and development costs and mine was closed down, Jan., 1913, on account of repeated depredations at the property and danger to the men from the revolutionary disturbances. Still idle, Dec., 1915.

CONSOLIDATED VIRGINIA MINING CO.

NEVADA

Offices: 339 Bush St., San Francisco, Calif., and Virginia City, Nev. **Officers:** W. W. Turney, pres.; H. Zadig, v. p.; A. W. Havens, sec.; T. F. McCormick, supt.; with W. G. Morrow, H. L. Slosson, Jr., and Wm. Bannan, directors. Inc. Nov., 1904, in Cal. Cap., 216,000 shares; \$10 par, assessable; all outstanding. Stock transferred at company's office in San Francisco. Registration Trust Co., San Francisco, registrar. Listed on New York Curb and in San Francisco.

Property: the Con. Virginia claim, 1,310' along the Comstock Lode at Virginia City, is being operated in conjunction with the Mexican Gold and Silver Mining Co., which sec. Has no orebody exposed.

CONSTANCIA MINE.

CUBA

Maxmillian Paetzold, San Ignacio 54, Havana, has reopened this old mine in Pinar del Rio, and made preliminary shipments of 15% copper ore. Said to have opened up a new orebody.

CONSTITUTION MINING & MILLING CO.

IDAHO

Address: Judge Geo. Turner, pres., 525 Seventh St., Spokane, Wash. Thos. Thwaite, gen. mgr. Cap., \$1,000,000; increased Jan., 1916, to \$1,500,000; shares \$1 par, assessable. Said to have \$10,000 in cash and 250,000 shares stock in treasury, Feb., 1916. **Property:** 10 claims, on east fork of Pine Creek, 9 miles from Pine Creek siding on O.-W. R. & N. R. R., Coeur d'Alene district, shows zinc-lead ore in veins 4' to 8' wide.

Development: by adits, one at vertical depth of 150' and the other at 400'. At 1,500' south of the latter a 550' crosscut tunnel cuts the vein 150' below tunnel No. 2. This orebody is said to be several hundred feet long. A shaft, being sunk at the portal of tunnel No. 2, was 80' deep in February, 1916. Company employs 20 men.

Production: several carloads shipped late in 1915 said to average 41% zinc, 7% lead and 4 oz. silver. Management claims it is going to build a concentrator in the near future.

CONSUELO MINING, MILLING & POWER CO.

MEXICO

Subsidiary of the Mines Co. of America, which see.

CONTACT CONSOLIDATED COPPER CO.

MONTANA

Idle. Mine office: Bailey Blk., Helena, Mont. H. C. Hoffman, pres.; E. T. Kemper, sec.; H. Topel, treas.; N. H. Graeniling, supt. Inc. Aug. 19, 1907, in Nevada. Cap., \$500,000; shares \$1 par, nonassessable. **Property:** 3 claims, in Colorado gulch, near Helena, with about 300' of workings, including a shallow shaft, shows auriferous copper ore from surface. **Equipment:** includes gasoline power. Small shipments have been made intermittently for several years. Is a prospect.

CONTACT COPPER CO.

MICHIGAN

Office: 70 State St., Boston, Mass. Mine office: Houghton, Mich. **Officers:** Harry F. Fay, pres.; C. J. Morrisey, sec.-treas.; preceding, with W. A. Mosman, W. L. Frost and John G. Stone, directors. G. S. Goodale, supt. Inc. May, 1910, in Michigan. Cap., \$5,000,000; shares \$25 par; paid in \$2.50; issued 111,125 shares. Annual meeting third Thursday in March. Company is a reorganization of the Elm River Copper Co., whose shareholders were given the privilege of exchanging their stock for shares in the Contact Copper Co. on the basis of share for share, on condition that they subscribed for additional shares at \$2 each, to the extent of 50% of their holdings in Elm River. Practically 75% of Elm River stock was exchanged and the Contact Co. has now acquired title to all the real estate and personal property of the former company, which has been dissolved and is now in process of liquidation.

Payments on sale of timber lands and further collections on account of assessment in 1915 have provided the company with ample working funds. Report Jan. 1, 1916, showed cash on hand \$18,948.

Property: 2,300 acres, in Sec. 6, T. 52 N., R. 35 W., Sections 1, 2, 11 and 12, T. 52 N., R. 36 W., and Sec. 36, T. 53 N., R. 36 W.; also a mill site in Sec. 30, T. 54 N., R. 36 W., and an option on 800 acres in Sec. 12 and 13, adjoining the old Elm River tract on the southeast. The property has a maximum length along the strike of 16,900'.

Nearly a complete cross-section has been secured by upwards of 11,600' of diamond-drill borings, despite the heavy overburden on nearly all of the tract. Borings have given cores carrying copper from a number of different beds, but not in commercial quantities.

Property was closed down during part of 1913 and all of 1914. On July 1, 1915, drilling was resumed in the S. E. $\frac{1}{4}$ of Section 11, believed to contain the Baltic lode opened on a neighboring property and carrying various grades of commercial copper. Up to March, 1916, about 5,271' of drilling had been done; in holes No. 18 and 19 the Wyandotte No. 8 lode was located at depths of 450' and 950', respectively, from the outcrop. Hole No. 20, now being sunk, should cut the lode at 1,550'. The lode, where cut, is 50' thick, a strong amygdaloid showing a little copper.

Equipment: includes a Duplex hoist good for 1,000', 2 Burt marine boilers and a 4-drill air compressor. Water is taken from a dam by a Blake pump. Buildings include a carpenter shop, two-story warehouse, boarding house with accommodations for 100 men, school house and a number of dwellings.

CONTACT COPPER CO.

NEVADA

Hutchinson, Minn., and Contact, Elko Co., Nev. **Officers:** S. G. Anderson, pres.; Wm. Schultz, v. p.; Sam G. Anderson, Jr., sec.-treas.; with J. A. Lindenbergh and J. A. Jorgenson, directors. Cap., \$1,000,000; shares \$1 par.

Property: two groups, the Lucie, 7 claims, and the Blue Rock, 9 claims, at Contact, said to show copper carbonate ore in veins. **Development:** the Lucie group has a 145' shaft, said to show an orebody 75' wide at the bottom. The Blue Rock has 2 shafts 50' and 30' deep, both said to show ore. Management says it will sink the main shaft to the 500' level. No production to date.

CONTACT MINING & MILLING CO.

CALIFORNIA

Trimmer, Fresno Co., Calif. **Officers:** J. K. Apperson, pres.; C. C. Overstreet, sec. Present owners have operated the property since 1894, incorporating in 1914.

Property: 3 claims, unpatented, 9 miles from Trimmer, shows ore containing free gold, galena and pyrite, in a flat pitching deposit in granite, said to average \$21.25 per ton, including a little silver. The gold occurs mostly in the ochre on the footwall; pay shoot varies from 4" to 2' in width. Another vein on the property, 3' wide, is said to assay \$11.60 gold per ton. Partly developed by a 90' tunnel.

Development: 110' adit and two 60' drifts on the vein. Ore is sledged ½ mile to the mill. **Equipment:** includes a Straub patent stamp-mill which has ten 175-lb. stamps operating in a circular mortar, 115 drops per minute, 5½" drop, driven by a 6-h. p. distillate engine; capacity 4 tons per day. Five men are employed. See Mines & Min. Rec. of Fresno Co., p. 15, California State Mineralogist's Rept., 1915.

CONTINENTAL COPPER & GOLD MINING CO.

ARIZONA

Office: 611 Security Bldg., Los Angeles, Cal. **Officers:** Jas. R. Haddock, pres.; Coyle J. Tracy, v. p.; Herbert T. Muzzy, sec.; Fred Knobloch, treas.; preceding, with John Breiner, E. P. Clapp, J. F. Halsted, directors. Inc. June, 1905, in Arizona. **Cap.,** \$1,000,000; shares \$1 par, nonassessable; issued, \$900,000. Annual meeting, first Saturday in November.

Property: 6 claims, patented, 120 acres, in the Santa Maria, Yuma Co., district, shows slates, schists and limestones, with igneous intrusives, said to carry 12 fissure veins and contact deposits, of which one, of 8' estimated average width, traceable 1,500', has been developed by a 100' shaft, a 429' crosscut tunnel and 20' and 161' drift tunnels, with 700' of workings, showing occasional oxidized ores, estimated to average 10.87% copper and \$4 gold per ton. Idle several years, except for annual assessment work.

CONTINENTAL MINES DEVELOPMENT CO.

CALIFORNIA

Office: 301 First National Bank Bldg., Riverside, Cal. Harwood Robbins, pres. Inc. 1911 as a holding company. **Cap.,** \$500,000; shares 1 par.

CONTINENTAL MINES, POWER & REDUCTION CO. COLORADO

Office: 401-2 First National Bank Bldg., Denver, Colo. Mine office: Lombard, Clear Creek Co., Colo. **Officers:** Henry I. Seemann, pres.-gen. mgr.; K. R. Seemann, v. p.; Frank R. Baker, 2nd v. p.; Wm. H. Wariner, sec.-treas.; preceding, with E. J. Weinand, Chas. E. Brown and Chas. Eddy, directors. Inc. Nov. 7, 1905, in Colorado. **Cap.,** \$5,000,000; shares 1 par, nonassessable; issued, \$4,315,000. Annual meeting, first Wednesday in November.

Property: 182 claims, 2,000 acres, in the Lincoln mining district, said to show 75 fissure veins and contact deposits, ranging in width from 2' to 75'. Country rock is gneiss, schist and granite, with porphyry dikes. Vein system claimed to be proven to depth of 1,000' and traceable 4 miles. Ores are sulphides, reported by management to carry 1 to 7% copper; 1 to 35% lead, from a trace to 6% zinc, 1 to 200 oz. silver and \$5 to \$500 gold per ton.

Development: by shafts of 135', 150', and 200' and a number of tunnels of 100' to 2,000'. The Seemann tunnel, now idle, is about 4,000' long. The mine has approximately 4 miles of workings, with about 1 mile in ore.

estimated by management to show 300,000 tons of ore in sight. Most of the work is now being done on the Lombard vein and through 4 tunnels, 800', 1,500', 1,600' and 3,800' long.

Equipment: includes electric power, 150-h. p. at mine and 150-h. p. at mill, 25-h. p. hoist and 7-drill Sullivan air compressor. There are about 20 buildings.

The mill has 20 quick-drop gravity stamps, one 8x12" Blake crusher, 3 Card tables, 3 Wilfey tables and 2 sizers, capacity 100 tons per day. Company plans continuous development, adding an oil flotation plant to the mill, increasing its capacity to 200 tons per day, and selling commercial current. Claims production will be started in the spring of 1916.

CONTINENTAL MINING CO.

MEXICO

Mine office: Monclova, Coahuila, Mex. Otto Koehler, pres.; Otto Wahrmund, 209 River Ave., San Antonio, v. p.-gen. mgr.; N. G. Newton, sec.; Arthur L. Tuttle, gen. supt. Inc. April, 1905, as a reconstruction of Continental Copper Co. **Cap.**, \$1,000,000; shares \$10 par. Is closely allied in ownership and management with the Jimulco Mining Co. Owns the Panuco mine with 65 hectares, opened in 1700 and worked at intervals since. Property was bought from the Panuco Copper Co., under whom it was badly mismanaged. Ore deposit is a chimney of breccia, cemented by metallic sulphides, mainly chalcopyrite, but with a little chalcocite, in a quartz gangue, the country rock being granitic. The ore is reported to average about 3½% copper.

Property: includes a 40-mile railway, from Monclova to Panuco. Old company invested about \$1,000,000 in the property and improvements. Largest production, under former ownership, was 1,466,059 lbs. fine copper in 1902, and a small production was secured, July-Nov., 1907, by present company, estimated at 1,250,000 lbs. copper. Mine considered promising, though low in grade, and management good. Closed down since 1913, on account of danger to life and property by revolutionary bands.

CONTINENTAL-MORRIS COPPER MINING CO.

WYOMING

Office: Morris, Ill. Mine near Encampment, Carbon Co., Wyo. **Officers:** J. H. Rogers, v. p.; Dr. G. A. Leach, sec.-treas.; preceding with I. F. Hatcher, U. C. Davis, W. A. Thomas, E. R. Joyce, B. C. Hitchcock and B. W. White, directors. Inc. March 31, 1908, in Wyoming, as a merger of the Continental Copper Mining Co. and Morris Mining Co. **Cap.**, \$2,250,000, increased later to \$5,000,000; shares \$1 par, nonassessable; issued, \$1,750,000. Annual meeting, first Tuesday in February.

Property: 7 claims, patented, 120 acres, in the Battle Lake district, carrying about 50 acres of good pine timber. Claims show schist, with 4 veins, of 13 to 40' estimated average width, traceable 1,500 to 3,000', carrying carbonate and sulphide ore, estimated to average 1 to 8% copper, with small gold and silver values. **Development:** includes several shafts and tunnels. **Equipment:** includes a steam hoist, good for 500', and 2 buildings. Idle, but resumption planned in 1916.

CONTINENTAL ZINC CO.

MISSOURI

Office: 87 Milk St., Boston, Mass. **Officers:** Jere A. Downs, pres.; J. B. Hardon, v. p.; F. H. Baird, sec.-treas., Boston; preceding with F. T. Rubidge, Chas. Hayden, Galen L. Stone and R. F. Hoyt, directors.

Inc. April 4, 1902, in Me., as successor to Continental Zinc Mng. & Sm. Co. **Cap.**, \$550,000; shares \$25 par, all outstanding. Reduced 1916 to \$110,000; shares \$5 par. No bonded debt. Hayden Stone & Co., Boston, transfer agt.; Old Colony Trust Co., Boston, registrar. Annual meeting, first Tuesday in April. Listed on Boston Stock Exchange.

Dividends: formerly 8% per annum, quarterly; reduced to 2% in 1908; 1909 and 1910 none; since 1910 to 1916 at the rate of 4% payments semi-annually, J. & J. 1; Dec. 31, 1915, \$10 per share, in partial liquidation. Further dividends in liquidation of about \$2 per share may be expected, with further small cash distributions as the real estate is gradually sold.

Balance sheet as of Dec. 31, 1915, showed assets: \$684,984, which included real estate and property \$350,000; Litteral tract, \$63,900; Litteral mining and milling plant \$65,455, notes receivable \$1,500; cash \$15,282; deficit \$188,734; accounts receivable \$111; Temagam property \$1. Liabilities: included depreciation reserve, \$95,000; Empire & Con. First Addition, \$14,256; depletion \$25,728. The year's profit from the Kohinoor tract amounted to \$22,421, from the Litteral tract \$24,428, from Temagam, \$359.

Property: 2 tracts of land, 200 acres, at Joplin, Mo., the orebodies of which are fast becoming exhausted; the old Kohinoor tract upon which there are no mining operations at present and upon which the company is gradually selling house lots, and the Litteral tract which is leased on a royalty basis. Royalties for 1915 were \$25,389. Life of Litteral property figured in 1915 as 2 years.

Continental Zinc must be considered a liquidating proposition.

CONZETTI MINE

CALIFORNIA

Property at Cecilville, Siskiyou Co., Cal., contains a vein of quartz ore, said to be 4'-11' wide, showing milling averages of \$40 per ton, which must be selected ore. **Development:** shaft and crosscut. **Equipment:** 6-stamp mill. Developing in 1915. Worked by owners.

COOKE MINING & REDUCTION CO.

MONTANA

Idle. Mine near Cooke, Park Co., Mont., is developed by tunnels, showing auriferous and argentiferous copper ores. Has a small steam plant. District is remote from transportation, being on N. E. border of the Yellowstone Park.

COOPER MT.-SUMMIT CONSOLIDATED MINE

CALIFORNIA

Owned by G. H. Goodhue, Indian Falls, Plumas Co., Cal. **Property:** 36 claims, unpatented, 690 acres, near Genesee, Plumas Co., shows gold, silver and copper ore in fissure veins with granodiorite footwall and schist hanging-wall. **Ore:** a sulphide, occurs in shoots varying in width from 2' to 20' and in length from 60' to 210', average assays said to be 4% copper, 6 oz. silver and \$3.16 gold per ton.

Development: 120' vertical shaft and 5 tunnels, longest 460'. Total underground workings 1,200' claimed to block out 6,600 tons of ore. Total output to date said to be \$55,000.

COPETE CONSOLIDATED COPPER CO.

MEXICO

Office: 15 William St., New York. **Mine office:** Francis C. Nicholas, mgr., box 394, Nogales, Ariz. **Officers:** Wm. T. Read, pres.; F. C. Hanford, v. p.; Myra B. Martin, sec.-treas.; preceding with Ralph Melczer and John G. Morrow, directors. **Inc. March, 1906, in West Virginia. Cap., \$1,000,000; shares \$1 par, nonassessable; issued 549,170½ shares. Annual meeting, first Wednesday in March.**

The company was organized to develop the property formerly owned by the Copete Mining Co., under an agreement with that company, title to the property being vested in the Melczer Mining Co., legalized in Mexico, and the entire stock issue of which is held by the Copete Consolidated Copper Co.

Property: 120 pertenencias, comprising the Last Chance, Copetito, Jalisco, Santiago, and El Copete claims, about 173 acres, at El Copete, Sonora, shows an immense gossan capping, apparently the remnant of a great blanket vein, the greater part of which has been eroded away.

Development: by several tunnels and a 615' shaft with about 7,000' of workings. Ores are mainly gold with considerable iron pyrites and some copper, giving average assay values of \$6 per ton. The bottom of the ore zone seems to have been reached at about 300' Idle, owing to reclamation disturbances.

It is believed that those in control of the company will use every effort to bring the enterprise to a successful issue and the past may be considered a closed chapter. Those interested in the history of the company will find it given in Vols. X and XI, The Copper Handbook.

COPETE MINING CO.

MEXICO

Office: 15 William St., New York. Myra B. Martin, sec. **Inc.** 1900, in West Virginia. **Cap.**, \$5,000,000; shares \$5 par. Owned stock of the Melzer Mining Co., transferred, 1906, to Copete Consolidated Copper Co., which sec.

COPPER AGE & EDISON MINING CO.

MONTANA

Idle. Chas. J. Heidenreich, Spokane, Wash., pres.; Morton Webster, Wallace, Idaho, sec.-treas.; L. N. Hyde, supt. **Inc.** 1906, in Washington. **Cap.**, \$250,000. **Property:** 12 claims, 4 miles south of Saltese, is an eastern extension of the Richmond mines, carrying extension of copper-bearing outcrop of that mine, the vein paralleling the Monitor. The vein is exposed for some 700' in the tunnel just east of the divide; it averages 10' thick, is nearly vertical and carries a very little chalcopryrite and chalcocite in a siderite gangue.

Development: includes a main 1,160' crosscut tunnel, with back of 600' showing sulphide ore assaying up to 30% copper and \$14 gold per ton.

COPPER BASIN MINING CO.

IDAHO

H. W. Weller, mgr., Mackay, Idaho. Is a new company operating a recently discovered copper property and shipping a carload a day by motor truck to Mackay.

COPPER BASIN MINING & MILLING CO.

NEVADA

Mine near Battle Mountain, Lander, Co., Nev. **Officers:** L. G. Hardy, pres.; W. H. Brammel, sec.-treas.; preceding with C. W. Knudson and T. N. McCauley, directors. Wm. Burge, supt. **Cap.**, \$30,000; shares 10 cts. par, nonassessable; issued, 270,000. Annual meeting, second Monday in January. **Property:** 6 claims, 120 acres, in the Battle mountain district, 10 miles west of Battle mountain, shows veins in quartzite with orebodies along the line of the limestone-quartzite contact. The veins vary from 1 to 4' in width and carry 1½% copper, 8 to 15% lead, 7 to 12% zinc, 5 to 15 oz. silver and \$1 in gold. Vein runs N. W. with dip of 70°. **Development:** 1,200' of work including a 250' shaft and 300' tunnel with 2 other shafts and 2 tunnels. Management estimates 1,000 tons of ore blocked out.

Tests were made at University of Nevada in 1914, to determine most profitable process to be used on ore. Presumably closed down.

COPPER BELT MINES CO.

WYOMING

Idle. Lusk, Converse Co., Wyo. Edwin Hall, pres. and mgr. **Inc.** June 25, 1906, in Wyoming. **Cap.**, \$2,000,000; shares \$1 par. Company owns a controlling interest in the Lucky Strike Mining & Smelting Co.

Property: held under bond and lease, includes the old Michigan mine, and about 600 acres of mineral and timber lands, in the Rawhide Buttes district, 12 miles south of Lusk, latter showing 4 parallel veins, 2 traceable nearly a mile. This property is developed by a 640' shaft, and a 525' tunnel, with about 5,000' of workings, showing copper carbonates and sulphides, disseminated in limonite.

The Michigan mine, in Muskrat canyon, has shallow workings in a wide vein from which about \$100,000 in ore was taken in earlier operations.

Equipment: includes 54-h. p. Fairbanks & Morse gasoline engine, 5-drill air compressor, and mine buildings. Company out of funds.

COPPER BELT MINING & DEVELOPMENT CO. NEVADA

Letters returned, 1916, from Ludwig, Lyon Co., Nev., and mine probably idle. C. W. Walker, supt.; I. H. Baird, pres. Owns the Baird mine, or group of claims in Mason Pass section of Yerington district, showing a 3' vein of ore developed by a 200' incline shaft on the vein.

COPPER BOTTOM MINING & MILLING CO. WYOMING

Inez, Converse Co., Wyo. Henry Metz, Sr., pres.; Fred Metz, sec-treas. **Property:** the Green Hope mine, in the Hartville district, Laramie county, is under bond and lease until 1916, to Messrs. Wm. F. Moenke and Geo. Botsford, Sunrise, Wyo. Mine has produced about 125 tons of ore. Company also owns a few copper claims in the region at the head of Broom creek, 15 miles north of Sunrise in Sec. 26, T. 29, N., R. 65 W., on which annual assessment work has been done.

COPPER BUTTE MINES ARIZONA

Idle. **Office:** 906 New York Life Bldg., Minneapolis, Minn. **Operating office:** Phoenix, Ariz. **Directors:** Ace P. Abell, pres.; Wm. H. Lucia, v. p.; Frank A. Bates, sec.; Henry A. Blume, treas.; P. P. Parker, agent. **Inc.** July 21, 1900, in Arizona, as the Arizona Copper Mountain Mining Co., and name changed, June, 1904, to present title. **Cap.**, \$6,000,000; **shares** \$10 par.

Property: 16 claims, 8 patented, about 320 acres 4 miles N. W. of the Ray Consolidated, in the Walnut Grove or Mineral Creek district, 2½ miles north of the Gila river, with a good wagon road to the Phoenix & Eastern railway. **Property** was worked, 1879-81, on a small scale, for silver.

Geology: lands lie in a mountainous tract, east of the Florence Valley, and, while near the Ray Consolidated, property more closely resembles the form of copper deposits mined by the Moctezuma Copper Co. at Nacozeni, Sonora, Mex. **Property** shows rhyolite and later dacitic lavas, resting on a surface of schist, sedimentary rocks and granite, the granite being part of a broad mass, many miles in extent, cut through by the Gila river, the Copper Butte property lying on the border of this granite batholith.

The ore deposit is a mineralized mass of breccia formed of rock fragments, being an old volcanic throat, having an abrupt contact with Ray granite on the east and west, and a nearly vertical contact with dacite. The breccia consists largely of schist, varying from dark and light gray, pearly sericitic schist, to silicious schist, with fragments of quartz, diabase, granite and limestone. The deposit is peculiar, being part of the breccia mass that has been altered and mineralized, the only known counterparts of this surface ore being found at the Arizona-Hercules mines, 5 or 6 miles to the eastward, and at the Black Warrior mine, near Globe. **Property** shows extensive red areas similar in physical character to the ore, save that they carry no copper. The eastern red area of breccia shows rude bedding, with a dip of about 25° E., away from the mountain. The most promising portions of the property are an eastern tract of about 20 acres, on Copper Butte claims Nos. 2, 6 and 12, and a western tract of about 10 acres on the Junebug and Carlisle claims. The schist areas exposed show traces of copper at many points. Silicate ore is exposed at numerous points on the property, by discovery shafts, pits and trenches. Assays, made 1910, by disinterested parties, gave from 1.5% copper in lean breccia, up to 13.6% copper from the ore dump, at the Black Oxide pit.

Development: by 300' incline shaft which passes out of the ore; numerous shallow surface workings in ore and 6 tunnels, 2 longest 175' and 300', mine having a total of about 2,000' of workings. Principal shafts are the 175' James incline, and the 2-compartment vertical Wallace shaft. The

oxidized and silicate ores at and near surface could be mined economically and cheaply.

Equipment: includes a 60-h. p. steam plant and several buildings. There is considerable shipping ore in the old workings, which can be profitably mined. Property is a puzzle, needing drilling to determine possible deep ore occurrence, since experience shows that the rich silicate ores are often surficial. Existing workings give an unduly favorable aspect to the ground, which is considered promising.

COPPER BUTTE MINING CO.

UTAH

Idle. Office: Richfield, Sevier Co., Utah. Wm. Johnston, pres.; George H. Ogden, sec.-treas. Property is a copper prospect on Gold mountain, in the Kimberly district, Piute Co., Utah. **Development:** by a short tunnel, showing a 6' vein of low-grade silver-bearing copper ore.

COPPER BUTTE MINING CO.

WASHINGTON

Orient, Ferry Co., Wash. J. D. Gumpper, pres.; H. J. Miller, sec.; Willis Townsend, gen. mgr. Inc. Dec., 1905, in Washington. **Cap., \$1,000,000;** shares \$1 par. **Property:** 4 claims, patented, in the Pierre Lake district, south of Orient, shows 2 veins in open cuts, 14' and 15' wide, respectively. **Development:** by 300' shaft with drifts on the 100' level shows copper-gold ores, but not in commercial quantity. No recent returns.

COPPER CANYON MINE

ARIZONA

Owned by the Leviathan Mines Co., which see.

COPPER CHIEF MINES CO.

ARIZONA

Office: room 814, No. 60 State St., Boston, Mass., and Bouse, Ariz. **Officers:** Richard Darling, pres. and treas., 925 W. 49th St., Los Angeles, Cal.; Richard Darling, Jr., v. p.; B. A. Darling, sec. Inc. 1910, in Ariz. **Cap., \$5,000,000,** shares \$1 par, outstanding \$3,000,000.

Property: 28 claims, unpatented, 560 acres, 20 miles S. W. of Bouse, is said to show a contact deposit containing copper and gold ore that assays 1.3% to 20% copper. Little work has been done on the property to date. Management plans adding a 25-h. p. gasoline hoist and a small compressor and doing development work.

COPPER CHIEF MINING CO.

ARIZONA

Jerome, Yavapai Co., Ariz. Owned by the Hayden and Midgeon estates, Torrington, Conn., Franklin Brooks, Colorado Springs, Colo., and Arthur Hendey. Reported 1915 to have been taken over by the Guggenheim interests.

Property: 23 claims, 11 patented, adjoining Senator Clark's Iron King mine in the Black Hills range, just outside the Verde district proper. The orebody is 60 to 100' wide, and consists of copper-bearing iron oxide carrying gold, silver and a little copper, the total value being about \$6 per ton. Sulphide ores occur at and below 280'.

Development: by 400' shaft, 2,225' of work on the 100', 160', 220' and 280' levels. A crosscut tunnel, now 900' long, is being driven to connect with the bottom of the shaft. Mine reported to have a large tonnage of low-grade oxidized ore, which cannot stand transportation to a distance. Future of the property depends upon development of sulphide ore in quantity.

Management claims 400,000 tons of oxidized ore and 100,000 tons of sulphide ore blocked out, with oxides averaging about 1% copper and \$10 gold and silver, and sulphides assaying 3% copper with gold and silver, giving gross values of \$11 per ton. **Equipment:** includes a 200-ton cyanide mill, erected in 1915, electric power, air compressor and hoist. Employs 35 men.

COPPER CHIEF MINING CO.**MONTANA**

Office: Wallace, Idaho. Mine near Saltese, Missoula Co., Mont. J. H. Taylor, sec.-treas. Cap., \$1,000,000; shares \$1 par; assessable; last assessment (No. 4) of 2½ mills per share, called Oct. 8, 1913. Property: 11 claims, in the St. Joe district, carrying a fissure vein in quartz, supposed to be an extension of the Bullion vein, with a strong gossan showing a little copper. Property has been tested by trenches and prospect tunnels, and management planned reaching the vein at 700' by a crosscut tunnel, being driven 2,500' by the Copper Chief and the Bullion Mng. Co. Equipment: includes compressor, water wheel, pipe line and buildings.

COPPER CLIFF COPPER MINING CO.**WASHINGTON**

Office: 724 Peyton Blk., Spokane, Wash. Mine office: Chewelah, Stevens Co., Wash. T. F. Wilson, pres., treas. and gen. mgr.; J. O. Blair, v. p.; L. C. Dougherty, sec.; L. K. Armstrong, mg. engr. Inc. Feb. 24, 1912, in Washington. Cap., \$1,000,000; shares \$1 par; issued, \$62,000.

Property: 60 acres and 40 acres timber lands, held under bond and lease, in the Chewelah district, shows contact deposits between altered granite and limestone. Ores are mainly copper, with small silver values. Development: by shafts of 332' and 730', and by tunnels, longest 600', giving depth of 1,000'. Property closed down in 1914, but operations resumed in Spring of 1915.

COPPER CROWN MINING CO.**MICHIGAN**

Inc. July 18, 1902, in Michigan. Cap., \$2,500,000; increased about 1911, to \$3,000,000; shares \$25 par; issued, 66,200 shares. Company reported, July, 1916, to have sold its property to the Cass Copper Co., for 40,000 shares of latter company's stock.

Property: 2,500 acres, 6 to 8 miles west of the Victoria, and 8 miles north of Matchwood, Ontonagon Co., Mich., the nearest railroad point, includes a number of old mines, principal properties being the Hamilton and Norwich mines. The Lafayette mine, formerly owned, was sold, 1909, for \$14,000.

The first work of the present company was on the Hamilton, where a 602' tunnel was driven and a 270' shaft sunk on the Meads vein, the tunnel of 602' securing a back of only 300', and a shaft was sunk by mistake on a drift boulder in sandstone. Later work was at the Norwich mine, which, next to the Victoria, is the most extensively developed and promising mine west of the Ontonagon river. The Norwich tunnel is 950' long, with 1,000' of drifts that give an encouraging copper showing. The Norwich mine, worked 1850 to 1865, produced 993,360 lbs. fine copper, securing masses of native metal up to 10 tons in weight. The bed is bunchy, but shows considerable promising stamp-rock. The Meads bed was located by a series of prehistoric pits along the outcrop, the 270' shaft thereon showing a strong bed, up to 25' in width, with a 720' drift to the westward, on the fourth level. Idle since 1907, and reported involved in tax titles.

COPPER GIANT MINE**ARIZONA**

Hackberry, Mohave Co., Ariz. Wm. Neagle, supt. Property optioned in 1913, by United Verde Copper Co., Jerome, Ariz., which see.

COPPER HILL MINE**CALIFORNIA**

Jackson, Amador Co., Cal. W. F. Detert, owner and mgr. Property: 2,500 acres, patented, on the Consumnes river, shows a quartz-porphry dike of 500 to 600' width, with large gossan outcrop underlain by chalcopryrite, associated with pyrrhotite. Developed by 6 shafts, deepest 500', sunk on a 50' vein east of and parallel with the Consumnes river, which carries a 2' to 4' paystreak of fine-grained massive chalcopryrite, assaying 20 to 30% copper, with appreciable values in gold and silver. The mine has

about 3,000' of workings. Mine was worked, 1861 to 1881, securing a considerable production, as is evidenced by extensive slag dumps. Idle since 1881.

COPPER HILL MINING CO.

COLORADO

La Plata, La Plata Co., Colo. Inc. Oct., 1913. Cap., \$500,000; \$90,000 paid in for development work. E. N. Beach, mgr. Property: 450 acres, a copper and gold mine in Bed Rock gulch, 4 miles from D. & R. G. R. R., shows the Esmeralda and Copper Hill veins, developed by several tunnels and reported mining and shipping copper ore, Sept., 1914. Will install power plant and plans tram line.

COPPER HILL MINING CO., LTD.

MONTANA

Idle. Office: Wallace, Idaho. Mine near Quartz, Missoula Co., Mont. Officers: Morton Webster, pres.; A. T. Ryan, v. p.; P. L. Eberhardt, sec.-treas.; preceding with Howard K. Welch and Jas. Howarth, directors. Inc. March, 1908, in Montana. Cap., \$250,000; shares 25 cts. par, nonassessable.

Property: 7 claims, 125 acres, in the Sunrise district, on the Montana side of the Montana-Idaho divide, showing an altered zone of highly silicious rocks of 25 to 50' width, carrying fine disseminations of copper carbonates and sulphides. Mine has a 75' tunnel, showing ore said to be somewhat similar to that of the Snowstorm, and assaying about 4% copper.

COPPER HOARD MINING CO.

WASHINGTON

Chewelah, Stevens Co., Wash. Albert I. Kulzer, pres.; E. D. Germain, sec.-treas. Property: the Lookout claim, formerly owned by Col. G. F. Belcher, adjoining the United Copper mine, has been bonded to the Chewelah Grey Copper Mng. Co. This company is sinking a shaft to the 400' level and has installed machinery.

COPPER KING MINING CO.

MONTANA

Cooke City, Park Co., Mont. Property: the King and Queen group, developed by tunnels, showing an extensive orebody, with fair values in gold.

COPPER KING MINING & SMELTING CO.

IDAHO

Mullan, Shoshone Co., Idaho. Officers: E. B. Crawford, pres.; R. C. Vanderford, v. p.; Hon. Harry W. Ingalls, sec.-treas. and gen. mgr., with Henry Billberg and B. M. Ingalls, directors. Inc. Aug. 28, 1901, in Idaho. Cap., \$1,500,000; shares \$1 par; issued, 675,462 shares.

Property: 18 claims, surveyed for patent, on the West fork of Deadman's creek in the Snowstorm copper belt, has 2 narrow fissure veins, carrying galena and chalcopryrite ore said to assay 5% copper, 28% lead and 15 oz. silver per ton. Development: by 2 tunnels on the Copper King vein, on the Burke side of the mountain and No. 3, the lower tunnel, on the West fork of Deadman gulch, at depth of 927' below the Middle tunnel, No. 2 being 2,000' and No. 3 approximately 5,000' in length.

According to governmental reports, the vein is but 1' wide, runs N. W., dips at 52° S. and shows copper-lead sulphides in a quartz calcite gangue. The work is in Newland slates and St. Regis quartzite, not having yet reached the Revett quartzite.

Equipment: includes 12" and 24" Pelton wheels, taking water under a 500' head, with a 4-drill Franklin air compressor and a small electric light plant. Buildings include an engine house, boarding house, bunk house and barn. About 10 men employed. Property considered promising and management good.

COPPER KNOB MINE

NORTH CAROLINA

Idle. Hopkins, Ashe Co., N. C. Richard Eames, Jr., owner. Lands: 160 acres, freehold, also 90 acres miscellaneous lands, show a 30" fissure

vein in hornblende slate, carrying carbonate and sulphide ores, mainly bornite, estimated to average 6 to 8% copper, 15 oz. silver and \$12 gold per ton. Property was opened 1880. Has steam power, with hoist and 2-drill air compressor, and a 5-stamp mill.

COPPER MOUNTAIN CONS. MINING CO.**CALIFORNIA**

Mine near Redding, Shasta Co., Cal. **Officers:** John Pillius, pres.; F. G. King, v. p.; Fred Grotefend, sec.-treas. and supt. **Property:** the Sugar Loaf group, about 340 acres, immediately N. E. of the Mountain Copper Co., Ltd., on Sugar Loaf mountain, has an ore zone, in rhyolite, with N. S. strike, carrying a gossan up to 400' in width. Developed by 12 tunnels, aggregating 4,365', which have cut several small detached pockets of sulphide ores. **Equipment:** includes electric power and an air compressor. Three men employed.

COPPER MOUNTAIN MINING CO.**OREGON**

Grant's Pass, Josephine Co., Ore. C. E. Phillips, pres.; J. W. Gayetty, v. p.; W. R. Nipper, sec.-treas. Property is a gold mine, 40 miles from Grant's Pass, in the Takilma district. A 100-ton plant contemplated.

COPPER MOUNTAIN MG. & DEV. CO.**BRITISH COLUMBIA**

Office: 5406 Union Ave., South Tacoma, Wash. **Mine office:** Quatsino, Atlin district, B. C. B. S. Cowles, pres.; Jos. Hutchinson, sec. **Cap.,** \$200,000; shares 10 cts. par. **Property:** the June Group, 5 claims, 5 miles from shore at head of Quatsino Sound, near Quatsino Company's ground. Is a contact metamorphic deposit of magnetite and chalcopyrite, occurring between crystalline limestone on the north and granite (and felsite). Gangue is garnet, calcite, epidote, etc. An analysis shows 8.81% copper, 29.76% iron, 18.36% sulphur, 17.52% silica, 12.96% lime, 2.83% alumina, with trace of gold and 7.5 oz. per ton silver. The contact is 100' to 300' wide and traceable 3,800 through the group. A large amount of ore is shown on the surface, and the deposit has been worked opencast. A 5-ton shipment to the Tyee smelter assayed 2.18% copper, 0.63 oz. silver, 80c gold per ton. Reported under option 1916 to Judge Nash Rockwood, 61 Broadway, New York and New York capitalists. Company also owns 4 claims near Ryan, Stevens Co., Wash., developed by 300' shaft and 115' tunnel, showing a 75' lens of low-grade ore.

COPPER MOUNTAIN MINING & DEVELOPMENT CO. MONTANA

Office: Mullan, Idaho. Mine near Thompson, Sanders Co., Mont. **Officers:** John Hendricksen, pres.; A. B. Willard, v. p.; D. Flynn and John Foss, directors. **Inc.** 1906, in Idaho. **Cap.,** \$1,500,000; shares \$1 par. Annual meeting, second Tuesday in December.

Property: 5 claims, one fractional, 95 acres, with 3 adjoining claims, at the head of Copper creek. Mine has 2 tunnels, the upper a crosscut, deflected for 56' along the vein, said to be 25' wide, carrying pockets and seams of copper carbonates, with gold and silver values. Idle.

COPPER PRINCE CONSOLIDATED M. & M. CO.**IDAHO**

Office: Coeur d'Alene, Idaho. **Mine office:** Herrick, Shoshone Co., Idaho. **Officers:** Saml. R. Hite, v. p.; W. H. Batting, W. M. Ramsey, W. W. Parshall, John S. Craig, E. E. Dillinger and Boyd Hamilton, directors. Frank Drummond, supt. **Inc.** July 30, 1910, in Idaho. **Cap.,** \$4,000,000; shares \$1 par, nonassessable; cap. reduced, Sept., 1915, to \$400,000; issued \$2,775,000. Annual meeting, first Monday in September.

Property: 37 claims, unpatented, 740 acres, in 2 groups on the north bank of the St. Joe river, 6 miles and 20 miles, respectively, above the head of navigation. Property includes water rights. The Copper Prince group, formerly known as the Black Prince, has 13 claims, and the Idaho-Virginia,

or Gold Ridge group, of about 24 claims, is about 6 miles east of the Copper Prince, and 3 miles from the Milwaukee railway.

The Copper Prince group shows contact orebodies, between granite and Revett quartzite, of 20 to 30' estimated average width, carrying chalcopyrite, bornite and gray copper, giving assays of 3 to 41% copper, and 8 to 13 oz. silver per ton. **Development:** by 500' of drift tunnels, driven from the sides of 2 canyons. The orebody has been traced by trenches and cross-cut tunnels, on each claim, for the entire length of property, a distance of 7,800'.

The Idaho-Virginia group is reported to have a 15 to 20' contact deposit, between granite and slate, carrying galena giving assays of 8 to 40% lead, and 14 to 46 oz. silver. **Developed:** by 2 shafts of 50' and 250' depth, and 3 crosscuts, intercepting a vein said to show galena ore of good quality. Buildings include a smithy, boarding house and a stable.

Company plans utilizing water power from Prince Creek, by 6 miles of 3' ditch and 1 mile of 3' flume. **Equipment:** includes 4 boilers, 2 hoists, 2 six-drill air compressors, and a saw mill. Property has been under development for 6 years. Former president, L. B. Holbert, brought suit in 1916 against company to recover \$27,970 for services rendered and money advanced.

COPPER QUEEN CONSOLIDATED MINING CO. ARIZONA

Office: 99 John St., New York. Operating and works office: Douglas, Cochise Co., Ariz. **Officers:** Dr. Jos. Douglas, pres.; Arthur Curtiss James, v. p.; C. H. Dodge, v. p.; Geo. Notman, sec.-treas.; G. H. Dowell, gen. mgr.; Gerald Sherman, supt. mining dept.; Joseph P. Hodgson, mine supt.; F. Rutherford, smelter supt., and C. C. Barclay, purch. agt. Inc. Aug., 1885, in New York. **Cap.,** \$2,000,000; shares \$10 par. Is controlled through entire stock ownership by Phelps, Dodge & Co., Inc. The company was operated for many years as a close corporation, without making its figures public, but is said to have paid, 1888 to 1907, inclusive, dividends aggregating \$30,000,000 or upwards. Dividends: \$3,000,000 in 1908; \$4,025,000 in 1909; \$6,300,000 in 1910; \$5,200,000 in 1911; \$5,707,351 in 1912; \$5,700,000 in 1913; \$4,500,000 in 1914; \$7,000,000 in 1915.

Property: comprises the Copper Queen and other mines at Bisbee, a large smelting plant at Douglas, on the Mexican border, 30 miles from the mines and 21 claims, 19 patented, including the Emma Mine, which see, in the Central City mining district, Grant county, N. M., besides mining interests in various other localities. Mineral lands in the Warren, or Bisbee district, comprise 176 patented claims, 2,298 acres.

The Copper Queen, one of the best known copper mines of the world, was opened, 1880, on an outcrop of oxidized copper ore in massive limestone, opposite the Copper Queen hotel in Bisbee. The original orebody, now represented by a large cave, averaged 23% copper. The ore was smelted in a 30" water-jacket furnace, with English coke, brought via San Francisco. This orebody was exhausted in 3 or 4 years and the mine experienced many vicissitudes, until additional orebodies were developed, by following seams and stringers of ore leading to further large and rich deposits.

Geology: the ore-bearing formation of the Copper Queen and other mines of the Bisbee district, consists of thickly bedded limestone beds, dipping to the southward and cut by intrusive porphyritic dikes. Until 1902, the principal orebodies were found at the base of the carboniferous limestone beds, which are broken by igneous intrusive rocks, that evidently have a strong genetic bearing upon deposition. The ore deposits occur as pockets, lenses, chimneys, bunches, shoots, veins, stringers and seams, the

larger bodies being connected, in most cases, by small veins, or mere knife-blade seams. The limestone and its included orebodies have a general gentle dip to the southeast, necessitating deeper shafts as distance is made toward the southeast. Extensive bodies of high-grade ore have been found, since 1902, in the deeper levels driven in the older limestones (Cambrian), and developments prove these underlying orebodies to be persistent to great depth. The mines show beautiful caves, lined with calcite crystals and stalactites and wonderfully fine crusts of azurite, malachite and cuprite; some of these caves are of considerable size. Many of the shafts are bot-tomed in sulphide ores of high-grade, consequently the depth of the ore-bodies, while already proven great, is conjectural. New orebodies are de-veloped yearly and the ultimate lateral limits of payable ore are unknown.

"In the Copper Queen mine, the majority of the ore has occurred in a zone encircling the west boundary of the porphyry intrusion of Sacra-mento Hill. It has a width varying from 800 to 1,200', and a thickness of about 400'. It reaches the surface in the older part of the mine to the N. W., but dips to the S. E., where it is reached at 1,400' below the Czar collar, in its farthest extension at present developed on Copper Queen ground. There is one major extension from the N. W. end of the zone toward the west along the Czar fault, and others of minor importance.

"Individual orebodies are scattered through the zone in an eccentric manner, only matched by their own irregularities of form and size. Their most general characteristics are the softness of the ore and their great horizontal rather than vertical extent. It has been estimated that the aver-age vertical thickness of ore in the Czar and Lowell divisions is between 30 and 35'. It is calculated by assuming it to be uniformly distributed over its horizontally projected area.

"In this zone, and for some distance above it, the ground has been subjected to intense alteration and intense but irregular oxidation. It has resulted in an enormous quantity of earthy or clayey material, which may be either ore or waste, which, when wet, is both heavy and tenacious. Below alteration, the ground is fairly hard, and the limestones contain pri-mary ores differing from those heretofore considered typical of the camp, and which have not yet been thoroughly exploited."

Development: the Copper Queen mine has 7 shafts, all connected on the even numbered levels. The entire output is concentrated at and hoisted from the 1,700' Sacramento shaft. The mines are opened ahead for several years, development averaging about 1 mile monthly of new workings, or at the rate of 1 linear foot of new work for 10 tons of ore extracted, which figure is proven by past experience to maintain practically constant ore reserves, while avoiding excessive advance openings that require useless maintenance cost. The stopes are filled throughout and the mines are tim-bered with square sets, mainly Washington fir, an average of 30' in timber, board measure, being required for each ton of ore won in the oxidized zone.

The underground haulage plant is very extensive, with 21 miles of tracks, covering every second level from the 4th to the 16th, inclusive, ore from the intermediate levels being dropped through chutes, and all ore hauled to the Sacramento shaft for hoisting. The haulage system includes Goodman electric locomotives and side-dumping ore cars. Chutes have been installed throughout the mine for loading the cars, which discharge into large storage bins at the Sacramento shaft, through which all ore is hoisted. The system is fully described by Mr. Gerald F. G. Sherman. *supt. in Trans. A. I. M. E., Sept., 1915, p. 1837.* In order to complete the underground traction system, it was necessary to open many lateral drifts

and crosscuts, which were located in solid ground, wherever possible, as the electric tram lines are the arteries of the mine.

The Uncle Sam mine has an old shaft, and a new shaft, sunk 1908, of 224' depth. This mine is connected with the Czar, Holbrook and Sacramento shafts, and has a large orebody, discovered 1913, that compares favorably with the bonanza deposits of the adjoining Shattuck mine.

The White Tail Deer mine lies across the range on the edge of the mesa near Don Luis, being reached by wagon road through a detour of several miles. There is an old 100' incline shaft, sunk 1893. A new shaft, begun June, 1910, has some drifts on the 150' level. The mine shows a deposit of low-grade ore, with prospects of developing ore of better grade. It has been unworked, save by lessees, for several years.

The 4-compartment Sacramento shaft, 1,700' deep, handles the entire output of the mines. Work was started, Oct., 1915, to concrete the shaft. There are loading bins on the even-numbered levels from 400 to 1,600', reached by the electric haulage lines from all other workings of the mine. The shaft was sunk in rock for practically its entire depth, insuring as great a degree of immunity from drawing as is possible in this district. The Sacramento shows some rich ore, discovered 1913, on the 1,500' level near the Hoatson claim line. Exploratory work, in the porphyry stock of Sacramento Hill, which is the geological keystone of the Bisbee ore deposits, has shown up a large tonnage of concentrating ore.

The hoist at the Sacramento is a powerful Nordberg tandem-compound engine, having 7' drums with 5' face, operated by steam, with 6 auxiliary engines, actuated by oil, under 150 lbs. pressure. Hoisting is done in 3-ton skips, and the hoist can raise a skip each minute, giving the shaft a capacity of fully 4,000 tons daily.

The Sacramento shaft has, perhaps, the most elaborate and ingenious system for mixing and loading ores to be found at any copper mine. This is fully described by Sherman in the paper already noted. The ventilation of the whole property with its 6 downcast and one upcast (Lowell) shafts is well described by Chas. A. Mitke, in Bull. A. I. M. E., Sept., 1915, p. 1941.

The central power plant near the Sacramento shaft, includes a boiler house, having four 400-h. p. Stirling water-tube boilers, furnishing steam direct to the hoists at the nearby Sacramento and Gardner shafts, the hoists at the other shafts being operated by compressed air. Equipment of the engine house includes three 500-k. w. Curtis turbo-generators, 3 Ingersoll-Rand air compressors, of about 100 drills aggregate capacity, a 70-drill Nordberg air compressor, the largest in the Southwest, and a 7,000 cu. ft. Nordberg compressor. Fuel is Texas and California petroleum, with large tanks for oil storage. All of the shafts, and the principal mine buildings, are reached by spurs of the El Paso & Southwestern railway.

In addition to the Copper Queen mine at Bisbee, the company has important interests in several other districts, particularly the Burro Mountains, N. Mex., where it owns the Chemung and Burro Mtn. properties, and the Commercial mine, near Prescott, Ariz. See Geol. of Burro Mts., by R. E. Somers, Bull. A. I. M. E., May, 1915, p. 957.

The company owns mineral lands in the Old Hat district, in the Catalina mountains, north of Tucson, Pima county, Ariz.; also holds the Hanover mine at Fierro, Grant county, N. M.

During the past few years a large tonnage of concentrating ore has been developed in Sacramento Hill, necessitating the building of a concentrator. A 90-ton test mill was built in 1914, the best saving being effected by combined hydraulic and flotation methods. Tests, on a working scale demonstrated that 1.3% of copper will make ore, and it is prob-

able that 1% material can be worked. Based on the results of this experimental work a 3,000-ton concentrator will be built on the flat west of Douglas.

The Douglas smelter, known as the Douglas Reduction Works, is at Douglas, Ariz., 28 miles from the mine and one-half mile from the Mexican border. This plant treats 3,000 tons daily, handling the output of the Copper Queen mines and that of the Moctezuma Copper Co., as well as doing a general custom-smelting business. The works occupy a site of 320 acres and are served by a very complete standard-gauge railroad system, reaching every building. The plant was blown in March, 1904, since which time there has been almost continuous enlargement, the works costing fully \$4,000,000, smelting about 3,000 tons daily, there being no concentrator to eliminate part of the tonnage from the final furnace charges. The plant is incidentally described by J. Moore Samuel, in Bull. Am. Inst. Mng. Engrs., June, 1916, p. 1079, in a paper on Dust Losses.

Water for the works is secured from artesian wells, of about 300' average depth, the water rising nearly to the surface, with 1 well, of about 1,000' depth, flowing 200 gals. per minute. A large reservoir and cooling tower have been built in connection with the water supply.

The ore-bedding system consists of 5 pits, each 40x800' in size, and 11' deep, having an aggregate storage capacity of 90,000 tons. Ore, received from the mine in side-dumping steel cars, is discharged into the pits, which are lined with white tufa rock. The pits are filled with the different grades of ore required to constitute a normal furnace mixture, and the ores mixed by a mechanical plow. Ore is removed, as required by the furnaces, with steam shovels, running on permanent tracks laid upon the floors of the pits.

The blast furnace building, 150x900' in size, of steel frame, also covers the converter department. Three 60-ton traveling cranes, of 60' span, run the entire length of the building. There are ten 400-ton blast furnaces, each 44x240" with forty 4" tuyeres, and 16' in height from the tuyeres to the charging floor. The 10 furnaces are set 15' apart, in a single row, with a 10x20' settler between each pair, the lower half lined with chrome brick and the upper half with ordinary fire brick. Ore is charged on either side, alternately, charging being done from trains of twenty 2,500-lb. cars, hauled by 13-ton electric locomotives. Slags flow from the settlers into 18-ton slag cars, hauled by electric locomotives. The slag dump is 1,700' long, and is kept trim by a special leveling machine, operated by electric power. The blast furnaces consume 350 to 400 tons of coke daily.

The dust chamber is of steel frame with brick and tile walls, roofed with reinforced concrete supported by steel trusses and has a bottom of tiled hoppers.

Molten matte is taken from the blast furnace to the converters by 60-ton electric traveling cranes, each having two 15-ton auxiliary hoists. The converter department has 7 stands, operated hydraulically, with 10 shells, of the Great Falls type, basic lined. Copper is poured in a Walker casting machine, and product is blister copper of about 99% tenor, with considerable gold and silver values. The converter plant has a flue, taking the gases from the 7 stands to a dust flue 11' in diameter at the hoods and 13' at the dust chamber.

The 260' steel stack of the blast furnace building is 30' in diameter at the base and 25' at the top.

The calcining and reverberatory plant is 100x850' in size, of steel frame. Ore is brought in over an elevated railway track on steel trestles, 400' in length, and dumped into concrete storage bins, and drawn, from the bins to the roasters by belt conveyors. There are three 100' reverberatory fur-

naces and sixteen 75-ton McDougal calciners. A slag tunnel, 30' wide, 15' deep and 276' long, has electric cars, connecting with the slag tracks. The tunnel is lined with 4' concrete walls, with a 2' separating wall in the center. The reverberatory furnaces are next to the old building, succeeded by the slag tunnel, on top of which there is a battery of four 400-h. p. water-tube boilers, followed by a dust chamber; the McDougal roasters occupy the northern end of the building. The reverberatory department has a separate 300' stack, of 22' inside diameter, built of special hollow bricks, with walls 42" thick at the bottom and 12" at the top, requiring 1,250,000 brick and standing on a base of 60' diameter requiring 1,100 cu. yds. of concrete.

The power house, of steel and brick, was enlarged to transmit electric energy 72 miles to El Tigre mine, in northern Mexico. The power plant has about 20 units, of various sizes and types, aggregating more than 6,000 h. p. Equipment includes 4 Nordberg cross-compound blowing engines, each direct-connected to a 400-k. w. 250-volt direct-current generator; Nos. 9 and 10 Connersville blowers, set staggering; a cross-compound 2-stage condensing air compressor, with piston capacity of 2,000 cu. ft. of free air per minute, at 100 lbs. pressure, for running the pneumatic tamping devices, operating charging doors of the blast furnaces and pumping water; 3 triplex motor-driven pumps, delivering water into compression tanks, at 350 lbs. pressure per square inch, with automatic regulation; four 400-k. w. 250-volt direct-current generators, supplying power for cranes, slag locomotives and electric lights; two 750-k. w. turbo-generators and a number of minor engines and dynamos. The power plant is equipped with a complete set of gauges and meters, keeping exact record of the distribution of power to every department and subdepartment.

The steel boiler house has six 500-h. p. and four 1,000'-h. p. Stirling water-tube boilers, with a Green fuel economizer, and a Foster superheater with capacity of 90,000 lbs. of steam per hour. The stack of the boiler house is of brick, 177' high and 13' in diameter at the base. Boilers are arranged to burn either coal or petroleum, but latter is used exclusively, consumption of California and Texas petroleum, at the mine and works, amounting to about 500,000 gals. monthly. Oil for fuel is at present cheaper in first cost, easier and cleaner to handle, and effects a great saving in the wages of 3 daily shifts of stokers, formerly required at every boiler plant.

A limestone quarry, at Lee station, 7 miles east of Douglas, has a large crusher and storage bins, the smelter requiring 400 to 500 tons of limestone daily, for flux. A saw mill is operated, in the forests of the Chiricahua mountains, though the bulk of the timber and lumber requirements of the mine and works are met by the importation of timber from the Pacific coast.

COPPER QUEEN & COPPER KING GROUP **NEW MEXICO**

Mine near Steins, Grant Co., N. M. Dr. J. O. Hamilton, of El Paso, Texas, owner. **Property:** 17 claims, is reported to show a monzonite porphyry dike, 100' wide impregnated with copper sulphides and averaging about 3% copper. **Development:** by shallow shafts. Mine east of the San Simon valley and 5 miles from the S. P. R. R.

COPPER QUEEN GOLD MINING CO. **ARIZONA**

Officers: Louis Goldman, pres.-mgr., Paris, Tex.; R. F. Scott, v. p.; W. F. Gill, sec.; A. Goldman, treas.; preceding with J. K. Bywaters, H. P. Mayer, C. R. Caldwell, J. H. Gooch, H. S. Bettes, directors. J. B. Harper Stoddard, supt. **Cap.,** \$2,000,000; shares \$1 par; outstanding 1,238,089.

Property: 25 claims, 23 patented, and a mill site on the Agua Fria river, 6 miles east of Humboldt.

Claims show great beds of black, silicified schist, cut in places by rhyolite dikes. **Development:** by 3 tunnels; No. 1, 593' long with about 2,500' of workings, including shaft and workings on 300' level; No. 2, 600' long, with 2,100' of workings on adit level, a 300' inclined shaft and 800' of workings on the 100' level; No. 3 with about 300' of workings. The vein, 7' to 12' wide, contains ore carrying chalcocopyrite, chalcocite and tetrahedrite, with some gold and silver.

Equipment: consists of a 3-drill air compressor and 32-h. p. gasoline engine at No. 2 tunnel. Treasurer's report for year ending Feb. 1, 1915, shows total cash and securities of \$14,924. Development work is being done on a small scale.

COPPER QUEEN MINE **CALIFORNIA**

Portola, Plumas Co., Cal. Mine bonded to J. R. Walker, of Salt Lake City. Developed by tunnel, showing a vein of gold-copper ore. See Walker Mng. Co.

COPPER QUEEN MINE **IDAHO**

T. E. G. Lynch, owner, Digby, Nova Scotia, Canada. Mine near Téndoy, Lemhi Co., Idaho.

The mine is erroneously reported to be the property of the Copper Queen Gold Mining Co., in a Geological Survey report (Bull. 528, p. 120), but has belonged to T. E. G. Lynch since 1899. The Copper Queen Mining & Smelting Co. leased the Queen of the Hills mine, 40 miles away. Lessees Copper Queen mine shipped 448 tons of sorted ore to Salt Lake City, 1911, that averaged 29.4% copper, 5.2 oz. silver and 0.81 oz. gold per ton. Reported Dec., 1915, that mine has recently been leased to the Idaho-Seattle Mng. Co., which see.

COPPER QUEEN MINING CO. **WASHINGTON**

Property taken over by Copper King Mining Co. and a new company organized under title of King Mining Co., which see.

COPPER QUEEN MINING & MILLING CO., LTD. **IDAHO**

Company was amalgamated with the Reindeer Copper & Gold M. & M. Co., Ltd., and reorganized under title of Reindeer Queen Mining Co., 1913. Described under latter title.

COPPER QUEEN MINING & SMELTING CO. **IDAHO**

Office: 608 Lonsdale Bldg., Duluth, Minn. Mine office: Salmon, Lemhi Co., Idaho. Geo. H. Crosby, pres. and gen. mgr.; Emerson Hill, v. p.; A. J. McLennan, sec.-treas.; A. F. Bennett, supt. **Inc.** June 12, 1905, in Arizona. **Cap.,** \$500,000; shares \$1 par, nonassessable; issued, \$282,000. Absorbed 1908, the Copper Queen & Crescent Mining & Smelting Co., giving 1 share for 8.

Property: the Queen of the Hills mine, 17 claims, 320 acres, in the Eureka district, 7 miles N. W. of Salmon, is said to show 3 nearly vertical

fissure veins in granite and schistose quartzite, with a generally N. E. strike. The Eva, or westernmost vein, shows an 8 to 14" quartz band on the wall of a brecciated zone 5' wide. The central, or Queen, and the Nellie veins show 12 lodes of granite breccia partly cemented by quartz. The ore is coarsely crystalline quartz, carrying pyrite, chalcopyrite and some galena, with \$3 to \$5 in gold occurring in 5 known oreshoots, 2 in the Nellie, 2 in the Queen and 1 in the Eva vein.

Development: by shafts of 105' and 400' with 5 levels and by 7 tunnels, longest 450' with 4,700' of workings. Property was idle for nearly 5 years, but resumed work in Aug., 1915. Present work consists of sinking a winze on the Nellie vein.

Equipment: includes 100-h. p. electric plant, a 24-h. p. hoist, good for 700' and a 5-drill air compressor. There are 10 buildings, including a 50-ton log mill, having 15 Allis-Chalmers stamps, a gyratory crusher and 2 Wilfley tables.

COPPER RANCH MINING CO.

UTAH

Mine near Milford, Beaver Co., Utah. Moses Thatcher, pres.; C. L. Rood, v. p. Inc. in Utah. Cap., \$500,000; shares 50 cts. par.

Property: 17 claims, 340 acres, in process of patenting, includes the Jewel mine, between the Old Hickory and O. K. mines of the Majestic Mines Co. Claims carry 2 miles of the strike of a vein of about 100' claimed width, showing ores, assaying up to 43% copper, 10 oz. silver and \$8 gold per ton. Management estimates that entire vein will average 4 to 7% copper, with fair gold and silver values, which is a serious overestimate. Ore carries 5 to 25% iron, rendering it desirable for fluxing purposes. The mine has but slight development, with a shaft poorly planned, 32' deep on the incline and 43' farther vertically, mainly in ore. Equipment includes whim and hoist. Shipments of oxidized copper-silver ore resumed in 1913 by lessees and company.

COPPER RANGE COMPANY

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Mine office: Painesdale, Houghton Co., Mich. Sales Dept.: 32 Broadway, New York. **Officers:** Wm. A. Paine, pres.; F. W. Denton, v. p.-gen. mgr.; Frederic Stanwood, sec.-treas.; above with Chas. J. Paine, Jr., F. McM. Stanton, S. L. Smith, directors. W. Parsons Todd, sales mgr., New York; John M. Wagner, purch. agent, Houghton, Mich. American Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Annual meeting 1st Wednesday in May.

Inc. 1899, in Michigan. Cap., \$2,500,000, increased 1915 to \$10,000,000; shares \$25 par. The company is now the successor of the Copper Range Consolidated, which Dec., 1901, took over 99,699 shares of the company's stock. On Oct. 18, 1915, this holding company was formally dissolved and the shares exchanged for those of the Copper Range Co.

Dividends: \$1,536,086 in 1905; \$2,304,810 in 1906; \$2,304,810 in 1907; \$1,536,740 in 1908; \$1,536,930 in 1909; \$1,537,340 in 1910; \$1,357,104 in 1911; \$788,428 in 1912; \$1,084,498 in 1913; \$1,182,003 in 1915; total dividends to Dec. 31, 1915, \$15,168,749.50.

The balance sheet shows:	Assets:	1915	1914
Cash at Boston.....		\$ 853,641	\$ 177,249
Cash at mine and Supplies.....		615,559	627,460
Copper on hand.....		1,934,027	1,053,733
Copper Range R. R. Bonds.....		890,000	876,000
Accts. receivable.....		82,414
Michigan Sm. Co. stock.....		76,470	340,000

\$4,689,697 \$3,146,036

Liabilities:	1915	1914
Notes payable		\$1,200,000
Mine indebtedness	189,949	237,400
Accts. payable	201,949	
One-half Champion	907,934	603,410
Excess of assets	3,390,464	1,105,226
	\$4,689,697	\$3,146,036

Net income for 1915 from operations of all the subsidiary companies after deducting dividends was \$2,382,759, or \$9 per share. The dividend was but \$.3, the difference being added to surplus.

Holdings consist of the entire assets of the Copper Range Consol. Co., namely: 50,000 shares of Champion Copper Co., which is one-half the total issue; 99,990 shares Baltic Mining Co.; 99,353 shares Trimountain Mining Co.; 96,500 shares Atlantic Mining Co., and 42,443 shares of Copper Range Railroad Co. stock.

Property: 16,467.64 acres, mainly in Houghton County. Mining companies controlled own an additional 12,240.4 acres. Average yield of copper per ton of rock was 22.90 lbs. in 1914 and 32.50 lbs. in 1915, the highest figure yet obtained. The company's original tract of 9,360 acres mineral and 441 acres non-mineral land, lies between the Baltic mine (800 acres) on the south and the Tri-mountain (1,351 acres) on the north. The Champion lies between the Baltic and the St. Mary's Mineral Land property. All the properties are described under their respective titles, although they are subsidiaries of the Copper Range. The Atlantic mine has been idle since the mine was wrecked by air blasts in 1911. The Baltic mine, an highly mineralized amygdaloid bed 15'-60' wide, mined through three shafts, 2,500' deep. The Champion works three separate amygdaloid beds mined by four 2,000' shafts. The Tri-mountain output comes from the Baltic bed mined by 4 shafts, one 2,800' deep.

The company is the second largest producer of the Lake Superior district.

The total 1915 production of copper from which this company's profits are derived, that is, Baltic, Tri-mountain, and one-half of Champion, was 37,035,642 lbs. This compares with 19,953,854 lbs. in 1914, and is 3,895,345 lbs. larger than the best previous production in the history of the company.

Costs and Profits—1915

	Production, Lbs.	Cost Per Lb.	Profits	Price Rec.
Baltic	12,028,947	9.50c	\$ 949,965.40	17.4c
Trimountain	8,302,896	9.52c	654,746.52	17.4c
Champion, one-half	16,703,799	6.30c	1,854,524.52	17.4c
Copper Range Co.—				
1915	37,035,642	8.06c	3,459,236.44	17.4c
1914	19,953,854	10.66c	541,961.06	13.38c
1913	18,767,359	11.71c	595,958.01	14.89c
1912	28,967,428	10.51c	1,631,676.10	16.16c
1911	29,310,579	9.74c	817,879.86	12.54c

The above table shows the effect of improvements in mining and of new mining and milling machinery. These improvements give assurance that operating results similar to those of 1915 may be expected to continue under average conditions.

Development: for 1915 totaled 37,903', or more than in 1913 and 1914 together. Ore reserves were increased in 1915. The new selling department of the company effected a substantial saving in commissions and proved an

unqualified success. Copper Range is an assured success and worthy of all that has been said about it.

Assuming a cost of 10c a lb. and an annual output for 1916 of 50,000,000 lbs., the earnings per share would be \$12.50 for 20c copper, and \$1.25 per share for each cent change in the price of copper above or below that figure.

Copper Range Consolidated Co.

Company dissolved Oct. 18, 1915, shareholders receiving an equal number of Copper Range Co. stock in exchange.

Copper Range Railroad Co.

Office: 82 Devonshire St., Boston, Mass. Operating office: Houghton, Mich. Officers: Wm. A. Paine, pres.; F. W. Paine, v. p.; Frederic Stanwood, sec.-treas.; preceding officers, John H. Rice, Frederick W. Denton, Thos. S. Dee, Wm. D. Calverley, Samuel L. Smith, F. R. Bolles, gen. mgr., directors.

Inc. 1899 in Michigan. Cap., \$5,000,000; shares \$100 par; issued, \$4,244,300. Debentures outstanding, \$2,280,000 first-mortgage 5% bonds. Company is authorized to issue bonds to extent of \$20,000 per mile of completed main line, and \$15,000 per mile of completed branch lines and side-tracks. Is controlled by Copper Range Company. Balance sheet of Dec. 31, 1915, gave cost of road at \$6,183,390, with equipment inventoried at \$869,332. Earnings were \$601,643 gross and \$186,979 net in 1914; \$811,346 gross and \$326,895 net in 1915. The first dividend, of 10%, was paid 1909. About 75% of the gross income is derived from transportation of ore, mineral and freight.

The railroad has upwards of 100 miles of trackage, the 65-mile main line running from Calumet to McKeever, and connecting with the Keweenaw Central at Calumet; the Duluth, South Shore & Atlantic, Hancock & Calumet and Mineral Range railways at Hancock and Houghton, and the Chicago, Milwaukee & St. Paul railway at McKeever. The company also has trackage rights over 19 miles of the Chicago, Milwaukee & St. Paul railway, between McKeever and Ontonagon, and operates a daily passenger service between Calumet and Ontonagon, with additional trackage rights of 73 miles over the same line, over which fast freights are operated between Calumet and Channing, Mich. Trackage rights have been given the Chicago, Milwaukee & St. Paul over the Copper Range between McKeever and Houghton, and a direct passenger service, with exceptionally good equipment, is operated jointly by the Chicago, Milwaukee & St. Paul and Copper Range lines, between Chicago and Houghton. Spurs connect the main lines with all of the principal mines along the right-of-way.

The company owns a half interest in a bridge crossing Portage lake, between Houghton and Hancock; also extensive water frontage on Portage lake, in the western part of Houghton, with general office building, shops, roundhouse, warehouses and wharves for merchandise and coal. The coal wharf is equipped with modern unloading machinery, and has deep water alongside, capable of accommodating the largest freighters plying the great lakes. The Copper Range railway is a model small road.

COPPER REEF CONSOLIDATED MINES.

ARIZONA

Office: Wm. A. Griffith, sec., 1409 Park Bldg., Pittsburgh, Pa. Inc. Feb. 19, 1910, in Arizona. Cap., \$5,000,000; shares \$5 par; issued 632,000 shares. Union Trust Co., Pittsburgh, transfer agent. Annual meeting, first Monday in February.

Property: 125 claims, 2,500 acres, including 600-acre mill site, in the Stanley Butte district, 15 miles S. W. of San Carlos, and west of Stanley P. O. Claims are on the western slope of a high mountain ridge whose

eastern face shows granite overlaid by 600' of quartzite capped by limestone, while the western slope is plated with massively bedded gray limestone. On the claims these rocks are carboniferous and cut by numerous fractures carrying small replacement bodies of silicious copper ore. The rocks dip down the slope at 35° and most of the orebodies are either in gash veins or occur along fractures, conformable to the bedding. In the many older pits and shallow shafts, the narrow gash veins were not over 2' wide and the ore pinched out at 20 to 30' in depth.

Development: said to aggregate 3,600', is mainly by tunnel, but includes the 575' North Star and 125' Jessie shafts. The manager estimated in 1914 80,000 tons developed by this work, which is a liberal estimate. Ores average about 5.4% copper and 68% silica, the copper being partly in the form of chalcopyrite and bornite, mixed with chrysocola, malachite and azurite, etc. Management claimed average value of 8.65% copper with varying gold and silver values up to \$12 per ton.

Equipment: includes two 40-h. p. gasoline hoists, an Ingersoll-Rand 4-drill air compressor and all necessary mine buildings.

Operations suspended end of 1915. Secretary writes, March, 1916, that company is quite satisfied with its property and the existing conditions, and requests no publicity in the Handbook. Investors take notice.

COPPER SHIELD MINING CO.

NEVADA

Office: 45 W. Second St., Salt Lake City, Utah. Mine office: Contact, Elko Co., Nev. **Officers:** Dr. C. I. Douglas, pres.; U. U. Hiskey, v. p.; C. R. Strock, sec.-treas.; H. M. Shields, mgr., and J. A. De Valley, directors. **Inc.** 1907 in Nevada. **Cap.,** \$1,000,000; shares \$1 par; issued, 610,000. Annual meeting, second Tuesday in April. **Property:** 11 claims, 200 acres, in the Salmon River district. **Development:** by 4 shallow shafts, deepest 73', and several tunnels, with a total of 646' of workings, showing 4 veins in monzonite porphyry dikes in grano-diorite, said to carry up to 40% copper and 2 to 6 oz. silver per ton. About \$1,100 expended on development work in 1914-15. Oregon Short Line railroad is 37 miles distant.

COPPER-SILVER MONTANA MINING CO.

MONTANA

Dead. Holdings acquired at receiver's sale in 1914 by New Copper Silver Mining Co., which see.

COPPER & SILVER ZONE MINES.

ARIZONA

W. R. Martin, owner, Union Depot supt., El Paso, Texas. Mine near Globe, Gila Co., Ariz., adjoining the Old Dominion and Globe Consolidated mines and near the Superior & Boston. **Property:** 25 claims, about 500 acres, in diabase area, 1 mile east of Globe, was originally worked for its silver ore, found near the surface, but development has proven the existence of copper at depth and owners expect to encounter the extension of the Gladiator vein of the Old Dominion mine.

Development: by the 103' Clark and 108' Faugh shafts on the Old Ironsides claim, from which ore shipped has returned 1.25 to 3.5% copper, \$19 to \$236 silver, or an average of \$21.60 per ton. Nothing additional reported Dec., 1915.

COPPER STATE MINING CO.

ARIZONA

Office: 411 Metropolitan Life Bldg., Minneapolis, Minn. **Martin E. Tew,** pres.; **John A. Nelson,** 1st v. p.; **E. E. McCarthy,** 2nd v. p.-treas.; **S. H. Hudson,** sec.; preceding officers, **Geo. P. Douglas,** **A. M. Anderson** and **Walter De La Hunt,** directors; **W. C. Steubing,** mgr.; **Geo. S. Croyle,** foreman and electrician; **Gilbert O. Tew,** store mgr. **Inc.** 1915 in Ariz., as a successor to the Calumet & Copper Creek Mining Co., the Old Reliable Copper Co., the Copper Creek Mining Co. and other companies. **Cap.,** \$7,500,000; \$2,500,000 issued. All stock certificates held in trust under a

pooling agreement until Jan. 1, 1918, or until the financing of the company has been completed.

Property: 130 claims, unpatented, including 100 acres mill and smelter sites, 300 acres timber lands and 200 acres miscellaneous lands; also 28 patented claims under option, making total area 2,500 acres in the Copper Creek, or Bunker Hill, district, Graham and Pinal counties, Ariz. Properties are in the Copper Creek basin, on the western slope of the Galiuro mountains, 31 miles S. E. of Winkelman and Hayden, on the Arizona Eastern R. R.

Claims include the Sycamore Flat, Cumberland, Sioux Chief, Silver Reef, American Eagle, Copper Giant and Old Reliable groups. Country rock in lower basin is diorite, with porphyry intrusions, showing a large number of ore bodies, there being several different breccias and oxidized zones carrying mineral, ore bodies usually being elliptical, but sometimes occurring in chimneys. Outcrops, of which there are more than 50, are very prominent. Oxidized ores, including chrysocolla, are found at and near the surface, sometimes in commercial quantities, giving place, at shallow depth, to sulphides, chalcopyrite, bornite and chalcocite, associated with pyrite, in altered and brecciated diorite, some native copper showing in flakes and grains along shear zones. Company reports that one orebody 300' wide and 420' long has been developed to 342' depth, in porphyry breccias.

The Old Reliable mine has an orebody with the second largest outcrop in the district, same having a sectional area of 147,000 square feet, or about $3\frac{1}{2}$ acres. Development is by an upper tunnel, with back of 640' and 13 crosscuts, and a lower tunnel 480', with about 2,200' of workings, estimated by manager to show 250,000 tons of 3% ore ready for stoping, and an additional 350,000 tons of 2.25% ore partly blocked out.

The American Eagle group has 3 prospect tunnels, a 1,025' working tunnel, and a 300' three-compartment shaft, with about 3,500' of workings, showing oxidized ores at surface, with an orebody reported to be developed for about 50x100'. This mine is estimated by company to have developed about 60,000 tons of ore, averaging 3.78% copper and 8 oz. silver, with a trace of gold. The mine has electric lights underground, and equipment consists of a 75-h. p. electric hoist good for 500', 3-drill and 1-drill electric air compressors and a smithy.

The Prince mine is developed by a 300' shaft and drifts on 3 levels. Company claims 500,000 tons of ore averaging 3.56% copper in this mine. On the Globe mine a shaft has been sunk 650' and 300,000 tons of 3.08% ore are said to be blocked out on the 150', 250' and 450' levels. The Copper Giant mine, said to have an outcrop of nearly 4 acres, has a 200' shaft connecting at depth of 124' with a tunnel from which 2 drifts several hundred feet in length have been driven into the ore breccia. In the Silver Reef, Kimbro, Copper Reef, Sioux Chief, Rough Rider and several other claims belonging to the company, copper ore has been exposed by short tunnels and shallow shafts. Hand-sorted ore from these workings has been shipped to smelters, giving returns of 12% to 30% copper and \$5.50 to \$27 gold and silver per ton. From the Cumberland and Lead Carbonate mines, in which veins of galena have been exposed, several carloads of ore netting \$45 per ton and upward in gold, silver, copper and lead have been shipped.

A 180-ton concentrating mill was built several years ago. Power plant consists of two 100-h. p. boilers, a 200-h. p. Corliss engine, a 160-k. w. 2,300-y. G. E. dynamo. A 3-phase transmission line, 4 miles long, supported by steel towers, connects power plant with mill and 3 of the mines. Water supply system includes 5 miles of $2\frac{1}{2}$ " pipe, and a concrete dam $26\frac{1}{2}$ ' high and 131' across the canyon, creating a reservoir holding 8,000,000 gals. of water. Company also owns and operates a $2\frac{3}{4}$ -mile narrow gauge railroad, connect-

ing the Old Reliable mine with the mill, equipped with 18-ton Porter locomotive and 8 cars; a 31-mile telephone line connecting the mine with Mammoth, Winkelman and Hayden, and a store, used as a commissary and office building. A 60-h. p. distillate engine and 4-drill air compressor are installed at the Old Reliable mine. Other improvements are a machine shop, assay office, ice-making plant and 25 buildings for employes.

Production: by former owners in 1914 was 8,400 tons of ore, making 758 tons of concentrates averaging 28.26% copper, or a total of 428,421 lbs. copper. Company plans further systematic development, the building of concentrating mill in the San Pedro valley and the extension of the narrow-gauge railroad to this point.

Property has merit if handled for ore and not as a stock-selling proposition. Roy Sibley and Col. Frank J. Sibley, who formerly controlled the property, were promoters of the worst type, but are said to be eliminated from the present company.

COPPER & URANIUM MINING CO.

IDAHO

Office: Rexburg, Idaho. Mine office: Clyde, Blaine Co., Idaho. Henry Flamm, pres. and gen. mgr.; M. H. James, v. p.; Alfred J. Cole, sec.-treas.; preceding officers and James Shail, directors. **Property:** known as the Automatic mine, in the Hamilton district, has a 125' shaft on a 10' contact vein between limestone and quartzite, said to show copper and uranium ores, Developing with 2 shifts, 1915.

COPPER WORLD EXTENSION MINING CO.

WASHINGTON

Idle. Loomis, Okanogan Co., Wash. Walter A. Boyle, pres.; Edw. H. Caylor, v. p.; Alfred F. Carman, sec.-treas.; R. J. Thomas, supt., at last accounts. Inc. Jan. 11, 1904, in Washington. **Cap.**, \$1,500,000; shares \$1 par.

Property: 8 claims, 160 acres, on Palmer mountain, in the Wannicut lake district, shows an orebody about 25 to 30' wide, opened by a 300 2-compartment shaft, with crosscut on 210' level said to show 17' vein of chalcopryrite, assaying 8% copper, 4 oz. silver and \$1.40 gold per ton. **Equipment:** includes steam plant, with 2 small hoists and 5-drill air compressor.

Reported under bond to Ernest Barton, who plans erecting electric smelter.

COPPER WORLD GOLD MG. & SM. CO.

WASHINGTON

Idle. **Office:** 401 Columbia Bldg., Spokane, Wash. Mine office: Loomis, Okanogan Co., Wash. Jerome L. Drumheller, pres. and mgr.; John Wentworth, v. p. and supt.; S. A. Child, sec.-treas. Inc. in Washington. **Cap.**, \$3,000,000; shares \$1 par, nonassessable. **Property:** 2 claims, patented, lying between the Copper World Extension on the east and the Leadville mine on the west, on Palmer mountain, 4 to 5 miles N. E. of Loomis. Claims show a gossan of 100' width, traceable 2,000'. The mine has several short tunnels and shallow shafts, and a 135' two-compartment incline shaft, having a 125' crosscut, reported to be in ore, without reaching the hanging wall, ore being reported to give average assays of 4.5% copper, 2 oz. silver and \$1 gold per ton, with excess of iron.

COPPERFIELD PORPHYRY COPPER MINING CO.

ARIZONA

Care Oscar A. Turner, Kingman, Ariz. **Cap.**, \$1,000,000; shares \$1 par; 500,000 in treasury; 100,000 offered at 25c. **Property:** 6 claims, 120 acres, in Grand, Wash, Mineral Park section, Wallapai mining district, Mohave Co., Ariz., 22 miles north of Kingman. Ground covers high bluffs, called Ithaca and Goat Peaks, of old turquoise mines, which were drilled some years ago and very low-grade copper ore found. Copperfield group covers lower slopes where waters leaching bluffs would gather. Surface for 1,000' across said to show copper stain.

Development: by 200' shallow tunnel, reported to show 2% copper,

both as native and sulphide. Churn drill hole 53', reported to have been recently put down. Property is not a new discovery, despite attempts to make it appear so, and the 4-drill holes used to "indicate" tonnage showed values too low to be of commercial interest. Control of the company was acquired July, 1916, by the Arizona Copperfields, Inc., which took over more than 89% of the capital stock. Is a promotion of George Graham Rice, New York.

COPPERMINES CO.**NEVADA**

Property sold to the Consolidated Coppermines Co., which see.

COPPERROX MINING COMPANY OF ARIZONA.**ARIZONA**

Office: 96 Harris Ave., Providence, R. I. Mine near Courtland, Cochise Co., Ariz. T. F. Gilbane, pres.; Geo. F. Wordley, 1st v. p.; Thomson E. Going, 2nd v. p.; Hon. G. W. Esterbrooks, sec.-treas. Inc. Jan. 17, 1910, in Arizona, as successor of the Arizona Copper Syndicate of Providence. Cap., \$1,000,000; shares \$1 par.

Property: 28 claims, 18 patented and 2 mill sites, patented, in the Dragoon mountains, 3 miles from Courtland. Property is slightly developed, having a 236' shaft and about 500' of tunnels on a contact said to be traceable 3 miles, with surface ores carrying gold, copper and manganese, said to assay up to 16.5% copper. President reports, 1916, that a manganese "Motherlode" has been opened up by recent work. Company is merely a holding company and will lease or sell controlling interest.

COPPERSMITH MINING & MILLING CO.**MONTANA**

Idle. Mine near Lothrop, Missoula Co., Mont. Inc. Jan. 23, 1909, in Idaho. Cap., \$3,000,000; shares \$1 par, nonassessable; issued, \$2,200,000.

Property: 8 claims, unpatented, 160 acres, the Coppersmith group of 6 claims and the Inverness group of 2 claims, also a water right and mill site, about 6 miles up Petty creek from Lothrop. Property carries some good timber. The Coppersmith claim shows limestone and quartzite for an estimated width of about 400', and length of about one-half mile, with outcrops yielding 3 to 20% copper ore, that has given assays of 2 to 17% copper.

Development: by prospect shaft and crosscut tunnel, said by management to cut merely 300' of silicified limestone averaging 1% copper. Property also has a number of open cuts and pits, and a 50' shaft, bottomed in ore estimated to average better than 6% copper, with small gold and silver values. The Coppersmith was formerly reported to show 3 main veins, one reported to be over 100' wide at surface, giving ore assaying 2 to 3% copper. The Exty vein, parallel with and 500' from the Coppersmith, is reported as 15' wide.

The Inverness group, 3 miles from Lothrop, has a vein of 3 to 4' width, in quartzite and slate, carrying malachite, chalcopyrite and chalcocite, giving assays of 15 to 17% copper and \$10 to \$12 per ton in combined gold and silver values. Property has 4 buildings. Idle except for annual assessment work, and property not considered encouraging.

CORBIN COPPER CO.**MONTANA**

Office: 60 Congress St., Boston, Mass. Mine office: Butte, Mont. R. M. Edwards, pres. and gen. mgr.; Henry Tolman, treas., Newton, Mass.; with S. L. Powers, Jos. C. Walker and H. B. Byrne, directors; A. L. Wyman, sec. Inc. Dec. 24, 1908, in Michigan. Cap., \$3,750,000; shares \$25 par, assessable; amount issued, 130,000 shares; amount outstanding, 21,010 shares; amount in treasury, 128,990 shares; \$8 per share paid in. Company sold 15,000 shares of treasury stock, early 1910, at \$10. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agt. Stock is listed on the Boston curb. Annual meeting, third Tuesday in April.

Three assessments levied: \$65,000 due Feb. 11, \$65,000 due April 22, \$130,000 due Nov. 14, 1913. Poor response was made to these and the company was forced to borrow \$95,000 on its notes, giving, as guarantee, the unpaid assessments. Owing to lack of funds all work was stopped on Corbin property early in 1914.

The company owns 57 mining claims, 45 patented, near Corbin in Jefferson county, explored under lease and bond; 6 claims at Rochester, Madison county, and the Gambrinus, Belcher and Welch claims at Butte, Mont.; \$150,000 was paid for the Butte claims.

The Corbin group lies at the head of Clancey creek, a few miles west of Corbin, on the western side of an andesite hill across from the Boston & Corbin mine. This property carries several strong fissure veins in andesite on which considerable exploration work has been done with disappointing results. A vein opened for 800' in the Rosalie tunnel carries up to 20 oz. silver and 7% copper, but is only 18" wide.

The Montana tunnel shows a pyritized conglomerate with andesite, dacite and aplite cobbles, the matrix containing small silver values in the upper tunnel, while the winze in the lower tunnel shows considerable pyrite. The Bonanza tunnel is driven on a tourmalinized granite dike in andesite, and in places the tourmaline rock carries galena and chalcopyrite with small amounts of zinc-blende and pyrite. The Corbin property is not considered favorably.

Equipment: includes steam and electric power, commercial current being taken from the Missouri River Power Co. Buildings include a general office, laboratory, warehouse, three smithies, barn, boarding house, 6 bunk houses and 6 dwellings.

A 100-ton mill, near the portal of the Bonanza tunnel, at Wickes, planned as the first unit of a larger mill, was completed July, 1910, and is idle for lack of ore.

The Butte property lies about 800' west of the Gagnon shaft of the Apache Co. and is believed to carry the extension of the vein worked in that mine. A shaft, sunk on the Gambrinus, was 345' deep when the work was stopped in 1914. At a depth of 85', a crosscut was driven south 45' to prove the apex of the vein and found it to consist of 2' of quartz and 10' of vein matter, carrying silver-lead ore. On the 200' level N. and S. crosscuts were run. The south crosscut cut the vein 7' wide here, 70' from the shaft. Better assays were obtained here than on the 80' level. The north crosscut at 180' from the shaft cut a 5' vein, which showed lead, zinc and copper. About 400' of drifting and crosscutting were done in the mine.

The Rochester group shows a strong quartz outcrop, the vein being developed by a 523' shaft in which a crosscut at the bottom level has encountered 2 parallel veins, 15' apart, that assay 3 to 7% copper. Property is locally known as the Blowout mine. No work has been done here for about two years. The company's most promising asset is the Butte property.

CORBIN-COPPER KING MINING CO.

MONTANA

Office: State Savings Bank, Butte, Mont. Mine address: Corbin, Jefferson Co., Mont. W. H. Hall, pres.; W. D. Gibson, v. p.; R. M. Depeu, sec.; R. B. Nuckolls, treas.; preceding officers, I. A. Heilbronner, Wm. Gemmell and M. H. Schultze, directors. Inc. 1911 in Montana, as successor to the Montana-Corbin Copper Co. Cap., \$1,000,000; shares \$5 par; issued, 199,994 shares. Stockholders of the Montana-Corbin Co. received a new share for old on payment of 25 cts. a share.

Property: 2 claims, 26 acres, about 1 mile from Corbin, in Picnic gulch, shows 4 well-defined veins carrying bornite and chalcopyrite averaging

about 10% copper, 20 oz. silver and 50 cts. gold per ton. **Development:** consists of a 2-compartment shaft, 400' deep, with about 500' of workings, on the Hidden Treasure claim, and several pits and shallow shafts on the Copper King claim. There are also several short tunnels.

Equipment: includes two 60-h. p. boilers, a 15-h. p. hoist, and a 5-drill electric air compressor. Idle since organization.

A full report on this property was made, 1911, by Alfred Frank, E. M., supplementing earlier reports by E. P. Jennings, E. M., and L. S. Ropes.

CORBIN METAL MINING CO. MONTANA

Office: Pittston, Pa. Mine office: Corbin, Jefferson Co., Mont. J. H. Foye, pres.; John Hoy, v. p. and gen. mgr.; Thos. McLaughlin, sec.; M. W. O'Boyle, treas., at last accounts. **Inc.** 1907 in Montana, as Corbin-Montana Copper Co., changing name, Jan., 1910, to present title. **Cap.**, \$1,000,000; shares \$1 par, nonassessable; issued, \$400,000. Company apparently is a twin of the Jefferson-Montana Copper Mines Co. Windsor Trust Co., New York, registrar and transfer agt. Annual meeting, second Tuesday in April.

Property: 11 claims, 176 acres, known formerly as the Baldwin mine, 2 miles S. E. of Corbin, in the Colorado district, shows 5 fissure veins ranging from a few inches to about 8' in width, cutting granite. Ores carry chalcopryite, bornite and galena, estimated by company to average 4% copper, 8% lead, 5 oz. silver and \$2 gold per ton. **Development:** by 500' two-compartment incline shaft with considerable drifting on 500' level, cutting a small orebody carrying lead-zinc-copper sulphides, and by several short tunnels.

Equipment: includes electric hoist, good for 1,000' depth, and a 10-drill air compressor, taking current from the Missouri River Power Co. There are 6 buildings, including carpenter shop, smithy and change house. Idle several years.

CORBIN-VALPARAISO COPPER MINING CO. MONTANA

Presumably defunct. See Vol. XI, Copper Handbook.

CORDOVA COPPER CO. ARIZONA

Idle. Office: 500 Lonsdale Bldg., Duluth, Minn. Mine office: Globe, Gila Co., Ariz. Henry B. Hovland, pres.; Hoval A. Smith, v. p.; David L. Fairchild, treas.; Harvey P. Smith, sec. **Inc.** May, 1909, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; issued 100,704, fully paid; 77,069 outstanding, \$2 paid. Company owed about \$63,000 at last reports. Annual meeting, second Tuesday in September. Company was formed to take over the property and options of the Globe Consolidated Copper Co., now owning 98% of the stock of that company.

The Globe Consolidated property includes the Globe-Boston group of 21 claims, the Mallory group and other holdings aggregating 270 acres, north of the Old Dominion mine and west of the Arizona Commercial **Development:** by the 1,225' three-compartment Gem shaft with extensive crosscuts on the 1,100' and 1,200' levels, cutting the Gem and Future veins, which have shown a little ore occasionally, but nothing of commercial size.

Shipments made from a vein 5 to 8' wide on the 1,200' level, averaged 3.35% copper, 33% iron, 35% sulphur, with \$1.30 in gold and silver.

Equipment: includes hoist and 12-drill air compressor. Management has struggled faithfully to make a mine, both east and west of Globe, but is out of funds and the property idle since 1910, with rather poor prospects. Stockholders planning reorganization and refinancing latter part of 1915.

CORDOVA MINES, LTD. ONTARIO

Office: Sun Life Bldg., Toronto, Ont., Canada. Mine office: Cordova Mines, Peterboro Co., Ont. **Officers:** P. Kirkegaard, pres.; Wm. H. Price, v. p.-treas.; Edw. Willan, sec.; with C. M. Kirkegaard and M. Garvey,

directors. F. Oliver, mgr.; J. C. Stacey, supt. Inc. 1911 in Ontario. Cap., \$500,000; shares \$5; \$50,000 in treasury. Company is operated as a close corporation.

Property: 678 acres, owned in fee simple, in Belmont Twp., Peterboro county. Ore occurs in diorite in fissure veins, said to be from 4'-30' wide and from 50'-400' long, carrying quartz, calcite and iron sulphides, with average assays of from \$4-\$5 per ton.

Development: shafts of 160', 400' and 500' depth, with a total of 6,000' of underground workings. **Equipment:** includes 30-stamp mill of 150 tons daily capacity; two 2,000' compressors, hydro-electric power plant, pumps and 1,800' tramway. Management estimates 150,000 tons of ore blocked out, Jan., 1916. Operated intermittently during 1914-1915. Power plant to be enlarged in spring of 1916.

CORNUCOPIA MINES CO.

OREGON

Owns the Union-Companion mine at Cornucopia, Baker Co., Ore., 25 miles from a railroad. Gold was discovered in this district in 1880, and in 1895 the Union-Companion claims, although but slightly developed, were sold for \$60,000. A 20-stamp mill built in 1896 gave an extraction of only 65%; this, with high transportation charges, made it difficult to operate profitably. In 1913 a cyanide plant was completed and since then extraction has been much higher.

The vein is said to be traceable on surface for 6,800', with strike of N. 20° E.; dip of 45° W., and 2'-5' wide, maximum width 20'. Wall rock is granodiorite and schist. Hanging and footwalls are well marked. Vein material is massive white quartz containing 3 to 5% of pyrite, which contains the gold. There is some silver sulphide present, also appreciable quantities of chalcopyrite, arsenopyrite and blende. Ore ranges in value from \$10 to \$20 per ton.

Development: by incline shafts, with the 500' the lowest level at last accounts, said to show 4 ore-shoots having an average width of 3' and an aggregate length of 1,200'.

Mill: 20 stamps, weight 950-lb. each, making 98 drops per minute through 7". Ore is crushed in a 0.125% KCN solution. Stamp duty is 5.15 tons per stamp. Fine grinding is done in two 5'x22' tube mills, each driven by a 50-h. p. motor. The cyanide plant is equipped with Dorr thickeners, 3 Pachuea tanks, and 2 continuous revolving drum filters. An extraction of 87 to 89% of gold and silver is obtained. Average consumption of supplies per ton of ore is cyanide, 1.4 lbs.; lime, 3 lbs.; zinc dust, 0.9 lb. Power is furnished by the company's hydro-electric plant, 2 miles from the plant. Current is transmitted at 6,600 volts and transformed to 2,200 volts for use. Cost of treatment is said to be \$2 per ton. Production figures not available. Sec. Min. Res. of Oregon, Vol. I, No. 8, pp. 36-49.

CORONA MINING & MILLING CO.

CALIFORNIA

Office: 770 E. 4th St., Salt Lake City, Utah. Officers: J. A. Headlund, pres.; J. S. Ryan, v.p.; J. A. Stanley, sec.; W. G. Romney, treas.; with Thos. W. Bell, J. P. Moss, J. H. Hurd, directors. Thos. W. Bell, supt.; C. E. Merwin, Spokane, Wash., and Mosecow, Utah, fiscal agt.

Inc. 1915 in Ariz. Cap., \$3,000,000; shares \$1 par; issued \$1,600,000, non-assessable. Farmers & Stockgrowers Bank, Salt Lake City, registrar. Annual meeting in June.

Property: the Confidence mine, known also as the Mormon Gold mine, 12 claims, 2 patented, 240' acres, in Funeral Range, Death Valley, Inyo Co., Calif., 12 miles from Shoshone, a station on the Tonopah & Tidewater R. R. The mine was worked in early days by a small syndicate of Mormons.

Ore: free milling gold and a little silver in fissure vein in granite; said

to assay \$20 per ton. Outcrop of vein said to be 1,200' long and from 4' to 70' wide. **Development:** tunnels and several shafts, deepest 140'. Present management claims there are 117,000 tons of \$20 ore in place, which can be mined for less than \$1 per ton. This cost figure is too low.

Company planning to erect a 100-ton stamp mill in 1916.

CORONADO MINE.

Described under North Pinal Mng. Co.

CORONADO MINING CO.

ARIZONA.

ARIZONA

Idle. Clifton, Graham Co., Ariz. **Inc.** July 12, 1902, in Maine. **Cap.** \$1,000,000; shares \$1 par. Is controlled through ownership of a stock interest of about 53%, by the Shannon Copper Co., and the remainder of the stock is held principally by Phelps, Dodge & Co. Officers and management are the same as those of the Shannon Copper Co.

Property: 30 claims, 400 acres, patented, near Metcalf, adjoins the mines of the Detroit Copper Mining Co. and the Coronado mine of the Arizona Copper Co., Ltd. Mine has a 2-compartment shaft, on the Garnet claim, showing a fair body of auriferous and argentiferous chalcopryrite on the 200' level; also several shallow shafts and short tunnels. The Emerald mine shows ore averaging 3% copper.

CORTEZ ASSOCIATED MINES.

MEXICO

Office: 53 State St., Boston, Mass. Mine office: Jacala, Hidalgo, Mex. Joseph S. Fay, pres.; Olof Wenstrom, v. p.; Freeman Hinckley, sec.-treas.; preceding officers, Wm. R. Fay, Robt. A. Manning and Philip W. Wrenn, directors. **Inc.** Jan. 3, 1910, in West Virginia. **Cap.** \$1,500,000; shares \$3 par, nonassessable; issued, \$825,000. Company began business with \$275,000 cash, and Dec. 31, 1915, had on hand \$675,000 cash loans and accounts receivable. Boston Safe Deposit & Trust Co., transfer agent. Stock is listed on the Boston curb. Annual meeting, first Tuesday in March.

The Cortez Associated Mines is primarily a development and holding company, formed to explore and develop mining properties until they are ready to produce, and then to promote an operating company. Lands, 1,079 pertenencias, 2,666 acres, in 4 groups, in the districts of Jacala, Zimapan and Ixmiquilpan, about 20 miles distant. The lands include the entire old mining camp of Jacala.

Zimapan is 85 miles north of Mexico City and Jacala is 35 miles N. E. of Zimapan, this place being 43 miles from Sayula on the National railroad. The Pachuca-Zimapan R. R., under construction, has been completed to Ixmiquilpan.

The Jacala property shows thickly bedded blue limestone intruded by granular monzonite with alteration along the contact and mineralisation of the metamorphosed limestone by copper and silver-lead sulphides. The intrusive mass is $1\frac{1}{4}$ miles long and 700' wide. The contact zone carries numerous orebodies showing chalcopryrite and magnetite below the 300' zone of oxidation.

Careful exploration has shown that most of the ore shoots are low in copper and carry but 1 to 3 oz. in silver. At the Santa Maria ore shoot, the copper ore is found in a narrow chimney of 4 or 5% ore; in the Humboldt and Abeja, there are a few thousand tons of 4% ore. Main development is by the Cortez 1,770' tunnel, which has opened up about 35,000 tons of pyritic ore containing magnetite and chalcopryrite, the average copper contents being 1.72%. Several hundred thousand tons may possibly be developed here, and as the ore contains 50% iron, it will be valuable for a flux.

The Humboldt, Cortez, Abeja and Santa Maria show promise of making producing mines. The Humboldt has a magnetite-garnet outcrop, explored.

by the 1,304' Humboldt tunnel with drifts and a 130' incline winze, mostly in ore. The Santa Maria 394' shaft has developed a body of soft, leached copper-bearing gossan of 6,000 sq. ft. area. This shaft will connect with the Humboldt tunnel.

The Abeja shaft, 50', sunk 1912 through altered limestone to porphyry contact, shows massive, porous magnetite with chalcocite and oxidized copper minerals. This work will connect with the Cortez tunnel. The Gallo mine, east of the Humboldt, has a 350' shaft, connecting with the Humboldt tunnel, 1,055' from the portal.

Small silver-lead replacements in limestone also occur at Jacala, but the Carmen mine is the only one of promise. This is a well-known old producer, 1½ miles north of Jacala, that yielded 40 oz. silver-lead ore for many years. The mine workings are on the contact between limestone and porphyry and have developed a replacement chimney of silver-lead ore in limestone, worked by an incline shaft to a depth of 900'. The company's new work has not yet cut the downward continuation of this ore shoot.

The San Nicolas group includes the Soledad and Ensino Largo mines. The Ensino Largo, 6 miles from Jacala, shows irregular replacements of rich silver-lead ore in crystalline limestone developed by a 900' tunnel. This tunnel will also develop the Soledad mine. Production from the Ensino Largo mine in 1912-13 was 72 tons, valued at \$99 per ton.

Zimapan lies in a broad, arid valley with the 4,000' deep Moctezuma canyon 9 miles west and the 3,000' deep Toliman canyon 6 miles west. The mines lie in the Toliman canyon and on the ridge between it and the Moctezuma river. The ore deposits appear around a large intrusion of monzonite porphyry either as contact deposits carrying copper, or silver-lead deposits in the surrounding limestone, especially along fissures and intrusive dikes. The latter form pipes, or chimneys, either vertical or inclined. The copper properties at this place are practically undeveloped, but a contact deposit showing disseminated copper pyrite, zinc blende and galena, promises to develop a large tonnage.

The Sirena lead-antimony mine lies 9 miles north of Zimapan. Ore occurs as a replacement deposit, in Cretaceous limestone, cut by a porphyry dike, and apparently follows the bedding of the limestone, dipping about 40° S. The ore is massive and consists of pyrrhotite, arsenopyrite, blende and jamesonite, forming an orebody 700' long and 30' thick. Ore reserves: estimated at 1,000,000 tons of lead-antimony ore averaging 8% lead and 4% antimony. Examination of this property has been made by Waldemar Lindgren and W. L. Whitehead. See Economic Geol., Vol. IX, No. 5.

On Jan. 20, 1916, the company voted to sell the Sirena property to the Antimony Corporation, organized by Chas. F. Rand. The Cortez company receives 90,000 shares common stock, of which 50,000 shares are to be donated as treasury stock, to the Antimony Corp., and will be given as bonus to subscribers to preferred stock at the rate of one share of common stock bonus for every two shares preferred stock. See Antimony Corporation.

Property has been closed down since 1913, owing to revolutionary disturbances.

COSSACK MINING CO.

NEW MEXICO

Property: Lone Star Group, formerly owned by Navajo Gold Mining Co., near Bland, Sandoval Co., New Mexico. A. J. Underwood, supt. **Ore:** gold-silver, in veins, running nearly N.-S. and from 12 to 40' wide. Ore averages \$6 per ton in gold and is amenable to cyanide treatment.

Development: about 5,000' of workings, including crosscut tunnels.

Equipment: 100-ton cyanide plant and concentrating mill. Employed 150 men in 1915.

COTTONWOOD KING MINING CO.

UTAH

S. A. Perry, pres.; Geo. B. Bywater, sec. Inc. July 2, 1915. Cap., 1,500,000 shares, 10c par; 225 shares in treasury. In March, 1916, company reports \$900 cash on hand and notes payable \$6,800. Listed on Salt Lake Exchange.

Property: 7 claims and a bond and lease on the Giles property, located between Big Cottonwood and Park City, Utah. Bond calls for \$600,000, with no payments due for 3 years.

Development: 2,100' of tunnels and 187' shaft with 260' of workings. Management, in March, 1916, claims 50 tons ore in sight, average grade \$75 per ton, and to have refused a flattering offer for the bond and lease.

COYLE MINE.

MONTANA

Owned by Peter Coyle. Worked under lease by Courtney Bros., Phillipsburg, Mont. Property in Hasmark district, near Phillipsburg, shows contact deposit between granite and limestone, carrying silver-lead-copper, in veins 2'-6' wide, ore occurring in the limestone. The main vein is essentially a silver-bearing lead carbonate, said to assay 70 oz. silver and 10% lead per ton.

Development: 100' tunnel, winze and drifts. Equipped with 12-h. p. gasoline engine, air compressor and 2 drills. **Ore reserves:** 700 tons of ore in bins, result of 6 months development work.

Production has been steady since 1914, interrupted only because of low silver prices in autumn of 1914. Employs about 15 men.

CREOLE MINING CO.

UTAH

Officers: Norman W. Haire, pres. and managing director, 412 Dooly Block, Salt Lake City, Utah; H. A. Lemke, v. p.; J. M. Reynolds, sec.-treas.; with J. S. Farrington and R. J. Jeff, directors. Inc. Sept. 28, 1915, in Utah. Cap., \$100,000, shares 10c par; outstanding, \$69,820; assessable. Annual meeting 1st Monday in October.

Property: 10 claims, 6 patented, 75 acres, in Lincoln mining district, Beaver Co., Utah, shows gold, silver, copper, lead ore in a contact deposit between granite and limestone. Deposit has an E.-W. course and dips E. 38°. Average assays said to be 12% copper, 5% lead, 17 oz. silver and \$1-\$5 gold per ton. **Development:** 220' incline shaft and 200' tunnel, with total underground workings about 1,500'.

In 1915 one car of ore shipped is said to have netted \$43 per ton. In Jan., 1916, a lease was given on a portion of the property to Geo. H. Dern and C. C. Griggs, and shipments started. To June 1st, 34 carloads of ore reported shipped. Management believes prospects are promising. Eleven men employed.

CRESCENT MINING CO., LTD.

WASHINGTON

Office: Room 202, Donalds Bldg., 322 Donald St., Winnipeg, Manitoba, Can. Mine office: Twisp, Okanogan Co., Wash. D. C. McFee, pres.; W. J. Creighton, v. p.; J. H. Sutherland, sec.-treas.; with F. R. Creighton, C. H. McNaughton, D. D. Young and D. Munroe, directors. Theo. E. Dickel, mgr. Cap., \$3,000,000; unsubscribed stock, \$2,000,000; shares \$1 par; non-assessable. Directorate authorized to sell 750,000 shares of capital stock at 10 cents to furnish necessary funds for development work. Company is a reorganization of the Crescent C. Mng. Co.

Property: 43 claims, about 860 acres, and a mill-site on the east side of Cascade Range, in Okanogan Co., about 100 miles S. W. of the Granby. Ore occurs in fissure veins, carrying chalcopyrite, bornite and quartz. Main development by tunnel.

Equipment: includes a Samson turbine, electric plant, air drill, saw-mill, mine buildings and miners' lodgings. A compressor and hydro-electric plant will be installed. Management reports no debts and plans driving tunnel to 1,500'.

CRESSON CONSOLIDATED GOLD M. & M. CO. COLORADO

Offices: 137 S. La Salle St., Chicago, Ill., and Cripple Creek, Colo. Richard Roelofs, gen. supt. Company is a close corporation and gives out no information. The mine, located on Bull Hill, Cripple Creek, was for a long time regarded as a "lemon." A phenomenal strike was made late in 1914 on the 1,200' level when a vug approximately 14'x33'x36' was found, which is said to have been lined with calaverite and sylvanite and to have yielded \$468,637 from one shipment. During 1915 several rich shipments were made and \$1,200,000 in dividends is said to have been paid in the first half of 1915.

Reported sold in July, 1916, for \$4,200,000; with officers in the new company as follows: A. E. Carlton, pres.; Claude K. Boettcher, v. p.; A. J. Zang, sec.; E. P. Shove, treas.; Richard Roelofs, gen. mgr., with T. B. Burbridge, Chas. M. MacNeill, Spencer Penrose, Irving T. Snyder, Adolph Zang and L. G. Carlton, directors.

CRESTON COLORADO CO. MEXICO

Subsidiary of the Mines Co. of America, which see.

CRIMORA MANGANESE CORPORATION. VIRGINIA

Office: 15 Broad St., New York; and Crimora, Augusta Co., Va. **Directors:** John D. Brooks, pres.; Homer F. Merriman, v. p., and John H. Hulbutt, sec.-treas. Wm. L. Hogg, mgr., Crimora. Inc. Sept. 29, 1914, in Va. Cap., \$1,000,000; shares \$100 par; all outstanding. Transfer office: Security Transfer & Registrar Co., New York. Annual meeting, last Monday in Sept. Bonds: authorized and issued \$500,000 1st mtge. 6% sinking fund gold bonds, due 1929.

Property: 946 acres, including the Crimora mine, 2 miles east of Crimora station, on the Norfolk & Western R. R. The mine was first opened in 1867 and acquired by present company in 1914. Deposit consists of manganese-ore masses of various sizes scattered through a clay basin, ½ mile long, several hundred yards wide and 200' deep. The ore is hard and consists of psilomelane and pyrolusite. Percentage of ore to clay varies considerably, from 1 ton ore to 5 or even 20 tons of clay. Ore assays 38 to 52% manganese. See U. S. G. S. Bull., No. 427, pp. 58-61, pp. 101, 270.

Development: by open pits using a drag line excavator; formerly done by underground workings. Management claims 1,000,000 tons ore proven, with probable reserves of 3,000,000 tons.

Equipment: electric power, and a 200-ton mill, which started operating in June, 1916. Management anticipates a yearly production of 50,000 to 60,000 tons ore, 38 to 52% manganese.

CRIPPLE CREEK DEEP LEASING CO. COLORADO

Cripple Creek, Colo. Inc. in 1915. Company is a close corporation, 50% of the stock being held by the Milltown Extension Gold Mining Co., a Nevada corporation, and the remainder by those controlling the Jerry Johnson mine. The Deep Leasing Co. has a lease on the workings of the Jerry Johnson mine below the 650' level. The property is described under title of Jerry Johnson Gold Mining Co. Most of the work has been done on the 850' level. Shipments started in Oct., 1915, and have been at the rate of about 4 cars of \$24 to \$30 ore per month.

CRIPPLE CREEK DRAINAGE & TUNNEL CO. COLORADO

Colorado Springs, Colo. Jas. F. Burns, pres.; with J. T. Milliken, I. T. Snyder, R. Roelofs, Irving Howbert, executive committee. Company has

driven and operates a transportation and drainage tunnel through the ground of the Cripple Creek producers, from western slope of Grouse Mtn. toward the Golden Cycle and Vindicator mines at the N. E. end.

The tunnel as originally driven had a length of over 14,000'. In sections it is 10' wide, 7' high, with a ditch on one side 3' deep and 6' wide. Grade is 0.3%. Average cost per foot of tunnel was \$27.27, the cost being defrayed by the larger companies of the district. An extension financed in the same manner has been started. The only large mines not directly benefited by the tunnel are the Vindicator and Golden Cycle, but the extension, a little over 10,000' long, will extend to these mines. In Feb., 1916, the tunnel was discharging 15,000 gallons water per minute.

CRIPPLE CREEK GENERAL MINING & EXPLORATION CO.

COLORADO

Cripple Creek, Colo. **Officers:** Geo. S. Ryan, pres.; S. N. Francis, v. p.; with H. T. Hartman, E. A. Ritter and O. H. Nelson, directors. **M. M. Belshe**, sec.-treas. **Inc.** in Colorado. **Cap.**, \$200,000; shares 10 cts. par. **Treasury** 1,250,000 shares.

Property: 5 claims, 25 acres, patented, on Bull, Raven and Ironclad hills at Cripple Creek, had been idle for some time previous to recent acquisition by present company. Developed by a 300' shaft, 3 shallow shafts and a tunnel, all on the Katie Hollis claim. Present management claims that prospecting work will be done in 1916.

The stock is being handled by Harry J. Newton, of "Dollars and Cents" fame, who is referred to in the Financial World as a promoter of fake mining propositions.

CRIPPLE CREEK GOLD MINING CO.

COLORADO

Victor, Tellur Co., Colo. Company is a close corporation. **Geo. Harris**, mgr.; **B. J. Corbett**, supt. **Property:** the Kohyneo mine at Victor, first worked about 14 years ago, operated unsuccessfully for a time, closed down and again reopened in 1914.

Ore: shows gold-quartz ore in veins 18" to 2' wide, in contact between black schist dike and granitic country rock.

Development: 220' shaft and drifts on the Strong vein, which traverses the property. Shaft is being sunk an additional 300'. Two levels are said to show large bodies of fair grade ore; a few shipments in 1915 said to have assayed \$15 per ton.

Equipment: hoist, air compressor and 80-h. p. boiler.

CROESUS GOLD & COPPER MINING CO.

IDAHO

Company apparently dead. See Croesus mine.

CROESUS MINE.

IDAHO

Reported sold, Dec. 1, 1915, to F. C. Robertson, Spokane, Wash. Formerly belonged to Croesus G. & C. Mng. Co. Mine, 4 miles west of Hailey, Blaine county, has an 800' three-compartment vertical shaft, on a 20 to 60' fissure vein of nearly vertical dip, in granite; pay streaks on both walls said to carry chalcopryite, with values mainly in gold. There also is a nearly vertical blind vein, apparently joining the main vein at depth, carrying silver-lead ore at depth of 600'.

Equipment: includes steam and electric power, and a 12-drill electric air compressor. The 100-ton concentrator has 10 stamps, crusher, rolls, and Huntington mills. Shipped some lead ore, 1915.

CROESUS MINING CO.

CALIFORNIA

Office: 747 Fifth Ave., New York. **Walter B. Pearson**, supt.; **Chas. W. Smith**, mill supt. **Property:** the old Plumbago and Oriental mines at Allegheny, Sierra Co., Calif.

Ore: gold-quartz in veins in granite and amphibolite schist. Veins

strike N. W.; dip N. to N. E. Ore usually occurs as small masses of high-grade in nearly barren quartz. See U. S. G. S. Bull. 580, pp. 176, 178. **Development:** by tunnels, the longest over 4,000'. **Equipment:** 15-stamp mill at Plumbago mine, put into commission July 5, 1915. A 10-stamp mill started operating for the Oriental mine in Dec., 1915. Employs about 35 men.

CROFF MINING CO.**UTAH**

R. R. Tanner, pres., Beaver, Utah; G. P. Norton, sec. **Cap.**, 1,000,000 shares; \$1 par; 295,000 shares and \$7,354 in treasury Jan., 1916. Listed in Salt Lake City.

Property: 5 claims patented, in Lincoln mining district, 12 miles east of Milford, Beaver Co., Utah. Ore is found along the contact of lime shale hanging-wall and limestone foot-wall and varies in width from 6" to 3'. It is said to carry silver, lead, copper and gold.

Development: 5 shafts, combined depth 750', and 665' of tunnels and drifts. Company is now sinking a 60° incline shaft on the contact. This shaft was down 80' March 1st, 1916, and a carload of ore taken from there is said to have yielded \$25 per ton in silver and lead.

Equipment: includes a gasoline hoist and air compressor. Management plans on a level at 100' depth. The property was examined by Breitung & Co., Ltd., in 1915.

CROWN CITY GOLD MINES CO.**ARIZONA**

Address: John C. Dalton, 6 Union Savings Bank Bldg., Pasadena, Calif. **Cap.**, \$1,000,000; shares \$1 par; 633,000 shares issued. **Property:** 9 lode mining claims and the Independent millsite, 185 acres, in the Tom Reed-Gold Road mining district, near Oatman, Mohave Co., Ariz. Company also owns the Pasadena Springs with 3½-mile pipe-line, furnishing water for the district.

Development: 3 shafts, deepest 360', and 500' of drifting. **Equipment:** 15-h. p. gasoline hoist, 50-h. p. steam-driven hoist and surface buildings.

CROWN POINT GOLD & SILVER MINING CO.**NEVADA**

Company merged in 1914 with Yellow Jacket and Belcher Silver Mng. Co., into Jacket-Crown Point-Belcher Mines Co., and described under that title.

CROWN POINT LEASING CO.**IDAHO**

Inc. April, 1915, in Idaho. **Cap.**, \$25,000; shares 50c par; 24,999 shares retained in treasury. Arthur Cooper, F. L. Rowley and C. R. Teel, of Kellogg, Idaho, incorporators. Company has a long-time lease on the Crown Point mine in Government gulch, near Kellogg, Shoshone Co., Idaho.

Ore: occurs in veins and is said to run 40 oz. silver and 48% lead. This vein is opened by tunnels and shaft. **Production:** 2 cars monthly in 1914. Mine is an old-time producer. Employs about 7 men. Company plans further development and erection of mill.

CROWN POINT MINING CO.**UTAH**

Knight Investment Co., Provo, Utah. John Roundy, pres. and gen. mgr., Knightsville, Juab Co., Utah. **Inc.** 1907 in Utah. **Cap.**, \$100,000; shares 10c par, assessable. Listed in Salt Lake City. An assessment of ½c a share levied March, 1915, to raise \$4,000 with which to resume work. **Ore:** silver-lead. Development by 500' shaft.

CROWN PRINCE CONSOLIDATED MINING CO.**COLORADO**

Office: 954 Gas & Electric Bldg., Denver, Colo. Mine office: Empire, Clear Creek Co., Colo. **Officers:** M. H. Block, pres.; J. E. Rinehart, v. p.; Thos. Williams, sec.; Wm. G. Krape, mgr. and treas.; with Daniel Erickson, directors. **Inc.** June 9, 1910, in Arizona. **Cap.**, \$3,500,000; shares \$1 par; outstanding, \$3,433,014.

Property: the Mint mine, 17 claims, 85 acres, near Empire. Gold-silver ore occurs in veins and is claimed to average from \$6 to \$12 per ton. **Development:** by 75' shaft and tunnels, longest 1,025', with total underground workings of 7,000'. Equipment includes electric hoist.

Production claimed to have been \$200,000 in the past. Operations in 1915 consisted of 400' of drifting.

CROWN RESERVE MINING CO., LTD.

ONTARIO

Offices: Dominion Express Bldg., Montreal, Que.; 59 Victoria St., Toronto, Ont., and Cobalt, Ont. **Officers:** John W. Carson, pres.; W. J. Gear, 1st v. p.; J. G. Ross, 2nd v. p.; Jas. Cooper, sec.-treas.; preceding officers, C. A. Smart, J. W. Ross, A. G. Gardner, R. W. Reford, F. S. Meigh-ton, Ziba Gallagher, directors; John Reid, asst. sec.-treas.; S. W. Cohen, gen. mgr.

Inc. Jan. 16, 1907, in Canada. **Cap.**, \$2,000,000; \$1 par; outstanding, Jan. 1, 1916, \$1,999,957, of which \$231,143 is held by trustees for the benefit of the company and bears no dividends. Crown Trust Co., Montreal and Toronto, transfer office and registrar. Annual meeting, fourth Wednesday in Jan. Listed on Montreal Stock Exchange. Dealt in on unlisted department of Toronto Stock Exchange and on New York and Boston charts.

Dividends: 20% in 1908; 71% in 1909; 60% in 1910-12; 48% in 1913; 24% in 1914; 8% in 1915; total dividends to Jan. 1, 1916, \$6,102,408.

Balance sheet for 1915 shows assets of \$2,839,957, which includes mining lands, plant and equipment, \$2,033,664; supplies, \$6,617; ore in transit and on hand, \$155,571; cash, \$61,216; investments in other companies and properties, \$522,799; accounts receivable, \$60,086. Liabilities show: accounts payable, \$28,287; royalty accrued and accruing government, \$17,774; surplus, \$793,938. The property accounts, which stand at \$2,033,664, have not been written down. It appears that, according to the last balance sheet, the company had net quick assets of something like \$760,258 applicable to the stock, or about 40c per share.

* Includes \$144,000 (1918, \$308,877) profit on Porcupine Crown, Ltd., investment.
† Deficit.

The Crown Reserve Co. owns 60% of the stock of the Porcupine-Crown Mines, Ltd., from which it received \$144,000 in dividends in 1915. It owns jointly with Kerr Lake Mining Co., Ltd., the Drummond Fraction property from which it received a profit of \$10,251 in 1915. It also operates the Silver Leaf mine of the Silver Leaf Mining Co., Ltd., from which it received 65%, \$16,140 net, of the operating profits.

The company has paid total royalty to the government of \$880,315; this was at a 10% rate. Beginning Jan. 1, 1916, only the regular tax of 3% will be levied.

Property: original holdings at Cobalt consist of 23 acres in Kerr Lake, developed by the Crown Reserve mine, which has been one of the heaviest producers in Cobalt, but the end of this property is in sight. The company co-operated with the Kerr Lake Mining Co. in the draining of Kerr Lake, but results were disappointing to Crown Reserve in that no new valuable veins were found. The pumping out of the lake made it possible to obtain ore containing over 2½ million oz. silver, which otherwise could not have been extracted, and the small veins discovered, not in themselves of great importance, are sufficient to pay for the whole cost of the operation. Total

amount of mud and water removed to Jan. 1, 1916, was about 700 million gallons. Development during 1915 amounted to 3,387' with total underground workings to Jan. 1, 1916, of 29,586'.

Production—Years Ended Dec. 31

Development during 1916 should prove whether or not the conditions on the lower levels under the diabase sill will be of sufficient importance to give the mine a new lease of life. The mine should continue to show a small profit for some time to come; this, in addition to the assets on hand at the time of dissolution, would seem to warrant somewhat better prices for its stock than those now prevailing of between 50c and 60c per share. The future of the Crown Reserve Mining Co. beyond the life of the two mines it now controls, depends upon its ability to acquire new properties. It was in following this policy that in 1915 it exercised an option on the property of the Globe Cons. Mining Co. in Trinity Co., Cal. (see Globe Cons. Lease, Inc.). Under the agreement Crown Reserve will spend \$50,000 at the rate of \$4,000 a month; this to be returned out of the gross ore receipts, 60% going to Crown Reserve until the amount is paid. After this is paid the profits will go to liquidate debts of \$140,000 on a mortgage and \$112,000 in notes. For this expenditure Crown Reserve gets a 55% interest in the company on a 30-year lease.

CRUCIBLE STEEL CO. OF AMERICA (Tungsten) COLORADO

Office: 2 Rector St., New York. **Address:** A. V. Echternacht, editor Nederland Tungsten Light, Nederland, Colo., a lessee. Is an iron and steel manufacturer, but owns tungsten mines near Nederland, Colo., operated by lessees, D. Waren, J. J. Allen, B. Dawson and A. V. Echternacht.

CRYSTAL COPPER CO. MONTANA

Office: 85 Devonshire St., Boston, Mass. **Mine office:** Basin, Mont. **Officers:** W. W. Clarke, pres.; Bowdoin S. Parker, v. p.; Eugene H. Walker, sec.; Walter Harvey Weed, treas.-managing director, with Geo. W. Clement, Louis H. Goddu, Paul A. Gow, John A. Cardow and John E. Allen, directors.

Inc. 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; 610,000 shares outstanding, May 31, 1916. Stock listed on New York and Boston curbs. Federal Trust Co., Boston, Security Transfer & Registrar Co., New York, transfer agents; Old South Trust Co., Boston and Security Transfer & Registrar Co., New York, registrars. Annual meeting, April 1.

Property: 5 claims, 4 patented, 84.59 acres, in Cataract district, Jefferson Co., Mont., 8 miles N. of Basin, on the Great Northern R. R., located about 25 years ago. It lies within the quartz monzonite area extending northward from Butte to Helena, which is called the Boulder batholith. This is cut by fissure veins, showing chalcopyrite, bornite, pyrite and sphalerite, with galena and occasional arsenopyrite.

The Crystal vein is a typical compound fissure vein 30'-40' thick between granite walls; it extends for about 4,650' through the property, and where exposed for 900' in the mine workings contains orebands that yield 3-6% copper, \$8-\$9 gold and \$6-\$13 silver per ton. The nature of the vein appears to indicate persistence of its present character in depth and along its course. Developed by 900' drift tunnel and a new crosscut tunnel, in 400', is being driven 850' to cut the lead, 200' below the upper tunnel level.

For geology, see Eva May and Bullion mines, Bull. 527, U. S. Geol. Survey, pp. 122 and 124, 1913. Both tunnels are being advanced, shipments to the Anaconda smelter have been started and in the near future a compressor will be added to the equipment.

In the block of ground extending from the tunnel upwards for 50 to 100' there is a considerable tonnage of ore available for milling; this, however, does not show the real value of the property which rests in deeper development and extension of tunnel west to prove vein below the other claims whose surfaces show ore. In view of the size and persistence of the vein, its proven commercially valuable mineralization and the nature and continuance of values along the outcrop beyond the Crystal claim, the property fully warrants the proposed expenditure of \$100,000 for equipment and development. Considered an attractive mining proposition.

CUBA COPPER CO.

CUBA

Office: 2401-60 Wall St., New York. **Mine office:** El Cobre, Santiago de Cuba. Benj. B. Lawrence, pres.; Colgate Hoyt, v. p.; I. W. Hunter, sec.; W. T. C. Carpenter, treas.; Edw. H. Emerson, gen. mgr.; Edw. B. Nagle, supt. **Inc.** Jan. 5, 1907, in West Virginia, as successor of El Cobre Mines. **Cap.**, \$2,000,000, shares \$100 par, in \$1,500,000 non-cumulative 6% preferred and \$500,000 common stock. Annual meeting, first Tuesday in March. Property being operated, in 1916, by the Cuba Leasing Co., a temporary organization arranged for financial purposes with same management as the Cuba Copper Co. Offices with Beer Sondheimer Co., 61 Broadway, New York.

This was the first copper mine in the new world worked by white men; opened A. D. 1532 by the Spanish, the first copper from El Cobre mines having been used for casting Spanish cannon. Properties were taken over, about 1832, by a Hispano-English company, and ore was shipped to Swansea for reduction. The custom-house records of Santiago are said to show exports of 610,210 tons of ore, 1851-69, valued at \$50,186,225, probably in depreciated Spanish currency, the ore assaying from 12.69% upwards, and probably averaging about 16% in copper tenor. In 1844 El Cobre railway was built, the Queen of Spain being the principal shareholder. The property shows the remains of an old stamp mill. During the revolt of 1868-1878, the big Cornish pump was burned, flooding the mines, which remained idle until taken over, 1902, by the predecessor of this company. Immediately after the Spanish-American war, the property was denounced by F. D. Pagliuchi and financed by Wm. Astor Chandler and associates, who had much trouble handling the great amount of water and in opening up the orebodies.

The mine was finally unwatered in April, 1916, and the bottom level 1120' deep found to show unoxidized chalcopyrite ore, averaging 8% copper in substantial widths, besides a large amount of low-grade ore amenable to flotation treatment.

Lands: 8 miles west of Santiago bay, show a mineralized zone of 200' width, traceable 6,500', carrying 3 parallel veins with much altered intervening rock. The mine is in a hill of rhyolite tuff agglomerate, of variable texture and appearance; the nearby hills are limestone and diorite occurs

to the south. The veins are confined to the rhyolite, only 2 are worked, the main or principal one being also called the South or "Middle" vein. The veins run E. to a fault which throws them 350' to the north. Ore occurs in pockets and shoots up to 80' across, in a vein of breccia, lying against a fault plane or mud slip. The gangue is altered rock and quartz. The ore contains much anhydrite and gypsum at 640' depth and below. Ore carries chalcopryrite, associated with pyrite, in a quartz gangue, the grains of chalcopryrite frequently being coated with covellite. Ore occurs in lenticular shoots. The oxidized zone is of 50 to 75' depth only, succeeded by sulphide ores averaging 4 to 5% in copper tenor, without either gold or silver in important quantities.

In the mine workings the oxidized ore extends deeper, and is underlain by semi-oxidized or tarnished ore, which gave much trouble in flotation work. The deeper ore is fresh chalcopryrite with pyrite.

Development: old workings were extensive, including some 40 shafts, with numerous remains of hoists and boilers. The 4 deepest shafts were about 1,000' each, with 17 miles of workings, timbered mainly with mahogany. The mine was found in bad shape, requiring heavy retimbering, as many of the old stopes, up to 20' and 30' in width, had caved. During the rainy season the mine makes 500 to 1,200 gals. per minute of strongly acid water, requiring pumps of bronze, with lead or wood-lined pipes. The mine has pumps with a combined capacity of 5,000 gals. per minute. Water from the mine was formerly run over scrap iron, producing considerable cement copper, but this has been discontinued, owing to cost and because the mine water formerly carrying 400 grams copper per ton now carries only 50.

As a result of recent operations it seems certain that the mine was shut down 80 years ago, because of its great amount of water, as well as political disturbances.

The present company has sunk a 1,000' shaft at the footwall of the north vein and crosscut 400' S. to the vein. From this level winzes extend down to 1,300' in depth. Exploration consists in drifting along the vein with crosscuts at intervals to the hanging-wall.

El Cobre railroad, 9 miles long, connects the mine with Punta Sal, on Santiago harbor, and is equipped with 2 locomotives and 40 cars.

The reduction plant at Cobre includes a 600-ton concentrator with 4 largest size Hardinge mills for grinding the ore for the 700-ton flotation plant. Forces are about 450 men. Concentrates of about 16% copper tenor are shipped for smelting to the United States.

In this plant, "the ore is crushed dry by rolls, screened through 8-mesh and conveyed to the storage-bin. Four Hardinge and two ordinary tube-mills are fed from the storage-bin by individual Challenge feeders to insure equal distribution and regular feed, as the ratio of oil to ore is most important. Cresylic acid, carbolic acid, Mexican crude, and light asphalt oil are fed into the tube-mills by special machines. Grinding is done on a thick pulp, 25 to 30% moisture, until 65% will pass 60-mesh. The pulp goes to the M. S. box without classification or re-grinding. Fourteen stirrers with 13 spitz-boxes are used. Direct concentrate is taken from as many boxes as show a good concentrate, the poorer froth being returned to the first box. Number of boxes treated varies with this and is changed by the operator who judges by eye. All the coarse tailing is roughed over Wilfleys to recover the coarse pyrite carrying copper. Caustic soda and fuel-oil are added as needed in the stirring-boxes. The various concentrates go to the classifier, the coarser product passing direct to the bins with about 8% moisture. The overflow is thickened and drained by an

Oliver filter, giving about 20% moisture. The plant handles 600 tons per day and gives about 85% extraction of the insoluble copper in a 3% feed. It is interesting to note that with El Cobre ores using a cold neutral solution wood-products have not given any satisfaction. The concentrate carries 16% copper, 35% iron, 40% sulphur, and 9% silica." (Mng. Sci. Press, Jan. 22, 1916.)

Company is now milling about 600 tons of 3% ore daily besides shipping from 2,000 to 3,000 tons of 7% ore monthly. Property produces about 5,000,000 lbs. of copper annually and now after many years of difficulty, is attaining good results. (See "Mining in Oriente Province, Cuba," by Jos. T. Singewald and B. L. Miller, Eng. & Mng. Jour., April 1, 1916.)

CUBANA CONSOLIDATED COPPER CO. MEXICO

Idle. Mine near Arizpe, Sonora, Mex. Inc. Jan. 6, 1903, in Arizona. Cap., \$500,000; shares \$1 par. Lands: 244 hectares, bought for \$20,000, show 6 orebodies, of 4 to 20' width, of which 3, carry estimated values of 12% copper, 10 oz. silver and \$2 gold per ton. Development: 6 shafts, deepest 102', and a number of tunnels, longest 250' and 575', with a total of 1,415' of underground openings. Mine is about 30 miles from Cananea. Sample carload smelter shipments returned 23% copper, with fair gold and silver values. Property considered promising.

CULLOWHEE MINING & REDUCTION CO. NORTH CAROLINA

Idle. Cullowhee, Jackson Co., N. C. S. B. Ezell, pres.; D. D. Davies, v. p.; Thos. A. Cox, sec. and managing director; Chas. Davies, smelter supt. at last accounts. Inc. 1905, as successor of Cullowhee Copper Co.

Property: 1,300 acres, 12 miles from Sylvia, nearest rail point, shows a considerable body of sulphide ore, claimed to average about 5% copper and \$4 gold per ton, with occasional assays of 15% copper, which figures are probably correct for small lots of ore, but cannot be realized from a large tonnage. Equipment: includes hoists and a Sullivan air compressor, with steam and water power, latter with a plant 3 miles from works. The 30-ton smelter, near Sylvia, blown in Jan., 1909, with semi-pyritic smelting, suspended operations late 1910, and probably will remain idle until rail connections are secured.

CUMBRE MINING CO. COLORADO

Offices: 614 Ideal Bldg., Denver and Breckenridge, Summit Co., Colo. Officers: C. L. Colburn, pres.; F. W. Freeman, v. p.; P. E. Fields, sec.-treas.; with Carl A. Allen and Mrs. B. Maxwell, directors. Inc. in Colo. Cap., \$200,000, shares \$1 par; 100,000 shares outstanding. Annual meeting in Sept.

Property: 25 patented claims, 250 acres, at Breckenridge. Ore: gold, silver, lead and zinc in fissure veins in porphyry and slate, with E.-W. strike and dip of 56°. Orebodies occur as shoots with a maximum width of 4'. The company holds under lease and bond a large acreage on Nigger Hill, including the Juniata and Country Boy mines, the latter being a past producer of high-grade zinc sulphides. Some high-grade zinc ore is being shipped at present, also 3 or 4 cars weekly of low-grade zinc ore. Holdings also include leases on the Carpenter and 86 placers.

Development: by 400' incline shaft, and 1,075' of tunnels: In 1915 company sank the shaft to the 5th level and explored the vein, shipping some lead ore. Zinc ore was shipped from the Country Boy tunnel.

CUNNINGHAM PASS COPPER MINING CO. ARIZONA

Wenden, Yuma Co., Ariz. Without merit, even as a development proposition. See Vol. XI, Copper Handbook.

CUPRIC MINES CO.

UTAH

Office: 17 Battery Place, New York. Operating office: 206 Templeton

Bldg., Salt Lake City, Utah. F. A. Bishop, sec.; M. C. Morris, mgr. Inc. May 11, 1908, in New York. Cap., \$1,000,000, shares \$1 par, assessable; issued, \$500,000. Is affiliated in finances and is managed by the Horn Silver Mining Co.

Owens the Cupric, or Iron Devil mine, 16 claims, unpatented, in the Frisco district, Beaver county, adjoining the Peacock mine. Property is at the east end of White mountain and 2 miles S. E. of Newhouse. The mine is near the igneous contact, dikes and tongues of monzonite invading the limestone; there are numerous mineralized fissures carrying chalcopyrite, pyrite, specular hematite and magnetite with garnet, tremolite, muscovite, etc.

Development: by 2 old incline shafts and a new 425' two-compartment vertical shaft, sunk near the main tunnel of the Cactus mine. Equipped with gasoline hoist and 7 men employed. Property has good ore, but not in large enough quantity to make mine profitable.

CUPRITE COPPER CO.

ARIZONA

Inactive. Mine near Clifton, Graham Co., Ariz. N. W. Lord, pres.; Isaac N. Stevens, v. p.-pres.; L. B. Kauffman, sec.; Geo. B. Kauffman, treas.; Frank A. Ray, engr.; preceding officers and Frank B. Laine, directors. Inc. March, 1904, in Arizona. Cap., \$1,000,000, shares \$1 par.

Lands: 26 claims, 490 acres, in the Copper Mountain district, opened by shafts of 30' and 320' and tunnels of 150' and 260', showing orebodies of 5 to 100' width. Work has been done in the leached zone, which carries isolated pockets of rich ore, from which sundry small shipments have given returns of 15 to 30% copper, and up to \$5 gold per ton. Company also owns about 2,000 linear feet of strong hematitic outcrops, ranging 5 to 100' in width. It is likely that the copper veins, which are parallel with and similar to the Big Coronado vein of the Arizona Copper Co., are leached to very considerable depths, but prospects for developing large bodies of low and medium-grade sulphides at depth seem good. Property considered promising, but company inactive, awaiting developments on adjacent properties.

CUPRITE COPPER CO.

NEVADA

Property: 900 acres, 13 miles S. of Goldfield, and 2 miles from the L. V. & T. R. R., near Cuprite, Nev. Main vein in limestone is said to be 300' wide and to carry ore containing chalcopyrite, black oxide, cuprite, bornite, azurite, malachite and copper glance in small bunches.

Development: 150' shaft. Small shipments of picked ore made to smelters, show 17-48% copper and 40-60 oz. silver per ton, besides small values in gold. Was under option to W. A. Clark, 1915, but has been relinquished because sufficient ore was not found. The Rea mine is now under option to W. A. Clark.

CUPRITE COPPER MINING CO.

MONTANA

Mine near Marysville, Lewis and Clark Co., Mont. P. L. Reece, pres. and mgr., Helena, Mont.; J. B. Waltz, v. p.; F. J. Rixon, sec.-treas.; preceding officers, P. B. Moss, Geo. M. Siple, directors.

Property: 6 claims, about midway between Helena and Marysville, show copper and lead ores, carrying gold and silver values. **Development:** by 200' shaft, 100' of drifting on this level, and a winze 100' deep, with 140' of drifting on the 300' level. **Equipment:** includes a steam hoist and air compressor.

CURLEW MINE

MONTANA

Address: care A. M. Holter, owner, Helena, Mont. Mine office: Victor, Ravalli Co., Mont. Mine, formerly a silver producer, also shows zinc ores, and a vein claimed to be 12' wide, is said to show ore carrying 10% copper,

with some lead, silver and gold ores. A concentrating mill with flotation unit to treat 85,000 tons of tailings under construction in 1915; financed by Los Angeles capitalists.

CURTZ CONSOLIDATED MINES CO.

CALIFORNIA

Last address: 233 Bacon Bldg., Oakland, Cal. **Mine office:** Markleeville, Alpine Co., Cal. **J. G. Hanschildt**, pres.; **B. A. Snedker**, v. p.; **H. H. Jamison**, sec.; **Peter Curtz**, gen. mgr.; preceding officers and **H. F. Sack**, directors. **Inc.** April, 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; issued, 915,000.

Property: the Curtz and Morning Star mines with 20 claims, 320 acres, including a 20-acre mill site, in the Mogul, or Loope district, 10 miles east of Markleeville and 28 miles from the Virginia & Truckee railroad. Claims, cover disseminated or "porphyry" copper deposits in porphyry with rhyolite and andesite near by. The ore zone is 40 to 60' wide, runs N. E., dips at 45° and is traceable 3,600'. Two orebodies under development extend to deepest workings, 350'. A large amount of ore blocked out is said to average 3% copper, 20 oz. silver and \$2 to \$20 gold per ton. **Development:** 300' shaft and 4 tunnels, with about 7,520' of workings, estimated to block out 2,000,000 tons of concentrating ore.

Equipment: includes 30-h. p. steam hoist, 100-ton 20-stamp mill, operated by 220-h. p. water power and several mine buildings.

CUSI CONSOLIDATED MINING CO.

MEXICO

Office: 1417 First Natl. Bldg., Chicago, Ill. **Officers:** **Donald B. Gillies**, pres.; **H. C. Ferris**, v. p.; **Fred E. Stevenson**, sec.; **Jas. G. McNary**, treas., with **Chas. Newman**, of El Paso, Tex., directors.

Property: Promontorio mine, at Cusiuhuiriacic, 90 miles S. W. of Chihuahua, Mex. Shows silver-lead ore in veins, developed by shaft and crosscuts. **Equipment:** includes steam hoist, compressor, etc. **Production:** about 300 tons of better than 60 oz. silver per ton ore daily, when working to capacity. Shipments made to the smelter at Chihuahua. Employs 500 men when operating at normal capacity. Idle at present due to Mexican revolution. **C. R. Watson**, the company's manager, was shot in the Villa massacre, Jan., 1916. Property controlled by the Potter Palmer estate, Chicago.

CUSTER CONSOLIDATED MINING CO.

IDAHO

Wallace, Shoshone Co., Idaho. Inc. July, 1910, in Nevada. **Cap.**, \$1,000,000. shares \$1 par. Property, near the Tamarack & Chesapeake mine, was acquired by stock control by the Day Bros. Property a good one.

CUSTER PEAK MILLING & ORE CO.

SOUTH DAKOTA

Office: Roubaix, S. D. **Burt Rogers**, sec., **Black Hills Trust & Sav. Bank Bldg.**, Deadwood, S. D. **D. Grupe**, pres.; **John O'Brien**, v. p., with **John Plunkett**, directors. **Cap.**, \$1,500,000; shares \$1 par; assessable; 100,-400 shares outstanding. Owns the Jungle mine at the southeast base of Custer peak, showing a porphyry dike cutting schist with 5' of copper ore on both walls.

Development: includes 65', 90' and 250' shafts, showing an 8" streak of nearly solid malachite on the 60' level. The older holdings of the company, 1½ miles from the Jungle mine and S. W. of Deadwood, are said to carry average values of \$6 per ton in oxidized ore to depth of 100', changing below to pyrite and chalcopryrite, showing on the 200' level, a vein of 85' width, assaying about 1% copper with \$1.60 in gold. **Equipment:** includes hoist, air compressor, pump and steam power. Proceeds of 2c assessment called Oct., 1914, were used for development work, erection of leaching plant and installation of machinery.

CUSTER SLIDE MINING & DEV. CO.

IDAHO

Officers: R. L. Holland, pres.; J. L. Nichols, sec.; Wm. H. Fitts, gen. mgr.; all of Colorado Springs, Colo. **Property:** 530 acres in Yankee Fork district, Custer Co., Idaho, including the Montana, Lucky Boy, and Sunbeam groups, also Lucky Boy and Sunbeam mills and the power plant and dam of the Sunbeam Cons. Mines Co. The Montana mine was operated during 1915 and some rich gold ore is said to have been found. Mine is an old producer, and is being operated under bond and lease by the present management. An aerial tram connects the mine with the Sunbeam mill.

CUYAHOGA MINING CO.

SOUTH DAKOTA

Care of Chas. Smith, mg. engr., Keystone, S. D. **Property:** the Old Spokane silver-lead mine, involved in litigation for some time, is to be unwatered and equipped in 1916.

CYGNI MINING CO.

MISSOURI

A. J. Burnham, mgr., Webb City, Mo. Operates a lead-zinc property near Webb City.

CYMRU COPPER CO.

ALASKA

Idle. Office: 117½ South Tenth St., Tacoma, Wash. Mine near Baldwin, Prince of Wales island, Alaska. J. M. Miller, Jr., pres.; F. P. Hicks, v. p.; Frank D. Nash, sec.-treas. Inc. 1905, in Washington. **Cap.**, \$50,000; shares \$1 par.

Property: 6 claims, 100 acres, on Moira sound, shows 3 lenticular orebodies, reported by company as of 40' aggregate width, assaying 6 to 10% copper, 4 to 6 oz. silver and \$2 gold per ton, mainly from chalcopryrite ores. Mine has a 100' shaft and a 187' tunnel, with hoist and 6-drill air compressor. A 4,000' surface tram conveys ore to a 1,000-ton ore bin.

Shipments in 1906 were 3,000 tons of copper ore, returning 4½% copper and \$1.25 in gold and silver. Idle since 1907, owing to litigation among the stockholders; reported under bond to a stock company organized by Geo. V. Bland, of Ketchikan, Alaska, in 1914.

DAILY COPPER MINING & SMELTING CO.

MONTANA

Wickes, Jefferson Co., Mont. Wm. W. Dailey, pres.; A. R. Robertson, v. p.; C. H. Dailey, sec. Inc. Feb., 1907, in Montana. **Cap.**, \$1,500,000; shares \$1 par; issued, \$870,000.

Property: the Atlas group of 4 claims, patented, 25 acres, said to show well-defined fissure vein of 12' estimated average width, carrying malachite chalcopryrite, bornite and chalcocite, estimated by management to average 4% copper, 15 oz. silver, and \$1 gold per ton, without lead or zinc. Mine has a 300' shaft, with 1,000' of workings on vein, estimated by management to show 60,000 tons of ore blocked out. Mine water, in small quantities, carries copper sulphate strongly in solution.

Former owners shipped about \$30,000 worth of ore. An independent source estimate ore to average about 3% copper, 7 oz. silver and 80 cts. gold per ton. No shipments have been made for several years and management claims it needs a larger surface equipment and a concentrator.

DAIRY FARM MINING CO.

CALIFORNIA

Van Trent, Placer Co., Calif. **Officers:** E. B. Braden, pres.-mgr., Merchants Exchange Bldg., San Francisco, Calif.; Edw. Brush, v. p.; H. B. Underhill, Jr., v. p.; W. C. Corbett, sec.; C. J. Durbrow, treas., with J. B. Rice and H. H. Eastman, directors. Inc. 1903, in Calif. **Cap.**, \$200,000; shares \$1 par; issued \$143,500. Is controlled by American Smelters Securities Co., through ownership of \$96,927 stock and the E. I. Dupont de Nemours Powder Co., owning a 40% stock interest.

Property: 160 acres, on the Southern Pacific railway, show a mineralized fracture zone of 25 to 50' average and 80' extreme width, in rhyolite

and andesite, having a N.-S. strike, with dip of 60°, and a hematite gossan carrying a little gold and silver. Upper workings at shallow depth show about 50,000 tons of oxidized ores, amenable to cyaniding, these changing, at depth of 85', to ore containing chalcopyrite associated with pyrite, estimated to average about 3.25% copper, and occasionally carrying as high as \$30 gold per ton. Apparently the lens does not extend below a depth of about 500'.

Equipment: includes a 750-h. p. electric plant, with a 140-h. p. electric hoist, good for 1,000' depth, and a 20-drill electric air compressor. Buildings, about 25 in number, include machine shop, carpenter shop, smithy, office, store, boarding house dwellings.

The small concentrator contains Chilean mills, and a 100-ton cyanide plant treats the auriferous gossan. A 9-mile railway to Sheridan was completed in 1915. Company is a close corporation, operated as a subsidiary of Am. S. & R. Co.

DAISY BELL GOLD & COPPER DEVELOPMENT CO. MONTANA

Dead. Described in Vol. XI. Mine near Renova, Jefferson Co., Mont.
DAKIN MINE CALIFORNIA

Now patented under title of Gray Eagle mine, which see.

DAKOTA CONTINENTAL COPPER CO. SOUTH DAKOTA

Office: 205 Calder Bldg., Harrisburg, Pa. Company is a reorganization of the Continental Copper Mining & Smelting Co. **Property:** near Sheridan, Pennington Co., S. D., in the Black Hills, known as the Dakota-Calumet, or Lilian, property, 52 claims, patented, 179 acres. Claims show quartz schist with a pyrrhotized zone, from 50' to 200' wide, traceable one-half mile. The mineralized zone shows bands of nearly pure pyrrhotite, with occasional traces of copper. At boundary between oxidized and unaltered material, a little copper is occasionally found, as a secondary concentration. Small amounts of rich ore were found at the surface and down to 25-30', but property is valueless as a copper mine. Extensive diamond drilling and exploration work makes this conclusion certain. A body of gold quartz ore of commercial grade was cut in diamond drilling.

Development: includes an 850' shaft, 1,170' crosscut tunnel and 9 drift tunnels. **Equipment:** includes 300-h. p. steam plant, with hoist good for 1,200', 7-drill compressor, all necessary shops and an old smelter of no present value.

DALLAS MINING CO.

MISSOURI

H. Wells, Joplin, Mo., mgr. of Little Bess mine. **Property:** Little Bess mine, on the Knight land at Carl Junction, Jasper Co., Mo., also 20 acres of the Nilson land. **Development:** on the Knight land, 2 shafts, deepest 170'. The Nilson land has a 195' shaft. **Equipment:** 300-ton concentrating mill and sludge mill for treatment of sand and slimes from large mill. Estimated to have sufficient ore blocked out for steady supply of mill.

DALTON & LARK GOLD, SILVER & LEAD M. & M. CO. UTAH

Dissolved by order of court, 1911. Bingham Mines Co. owns the claims of this company.

DALY-JUDGE MINING CO.

UTAH

Reorganized in 1916 as the Judge Mining & Smelting Co., which see.

DALY MINES CO.

ARIZONA

Probably defunct. Mine near Bouse, Arizona. See Copper Handbook, Vol. XI.

DALY MINING CO.

UTAH

Office: 163 S. Main St., Salt Lake City, Utah. **Officers:** Col. E. A. Hill, pres.; Geo. W. Parks, sec.

Inc. in Utah. **Cap.**, \$3,000,000, all issued; shares \$20 par, assessable. Farmer's Loan & Trust Co., New York, registrar. Listed on Salt Lake City Exchange. Paid in dividends, \$2,925,000.

Property: in Uintah district, Summit Co., Utah; 6 claims and an interest in 12 of the Ontario Silver Mining Co. claims; also an interest in 17 claims of the Daly West Co., and 195½ acres in joint ownership of the Ontario Silver Mining Co., total acreage 316, of which 116 are patented.

Ore: silver-lead-gold and copper in fissure veins in quartzite. The property is an old one, and at last accounts had 2,300' of shafts and much unexplored ground between the 800' and 1,700' levels. Work has been carried on intermittently during the past few years. In Jan., 1916, a small force was working and the mine was producing 6 cars a month. Ore assays from 45 to 80 oz. silver, 8 to 15% lead, and \$0.75 to \$1.50 gold per ton. Present production is said to more than cover running expenses.

DAILY WEST MINING CO.

UTAH

Office: 163 South Main St., Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. **Officers:** Frank J. Hagenbarth, pres.; H. G. McMillan, v. p. and gen. mngr.; Herbert S. Cohen, sec.; W. S. McCornick, treas.; F. L. Williams, Jr., gen. supt.; Edw. L. Talbot, mine supt.; Frederick W. Sherman, mill supt.; F. I. Williams, engr.

Inc. Feb. 14, 1902, in Colorado. **Cap.**, \$3,600,000; shares \$20 par, and has been once reconstructed. Owns a 20% stock interest in the Little Bell Mining Co., an adjoining property. Corporation Trust Co., New York, North American Trust Co., New York, and McCornick & Co., Salt Lake City, registrars; American Loan & Trust Co., Boston; North American Trust Co., New York, and McCornick & Co., transfer agents. Stock listed on Boston Stock Exchange.

Gross income to the end of 1913, \$407,224, and operating expenses \$434,296, a loss of \$27,072. Dividends: 30c quarterly in recent years, reduced to 15c in 1913; total dividends to date, \$6,606,000. Company's report for year ending Dec. 31, 1913, shows dividends paid, \$27,000 and cash on hand, \$23,648. During the year company purchased new ground for \$18,537. Property was idle 1914 to April, 1915, and no report has been published since 1913.

Company is a large silver-lead producer, copper being a by-product, with annual production of about 800,000 lbs., or a total of 16,000,000 lbs., from 1898-1913.

Property: the Daly West and Quincy mines with 50 claims, patented, 250 acres in the Uintah district. Extensive orebodies carry gold and silver-bearing chalcopyrite, galena and sphalerite, with silicious gangue, values being mainly in silver and lead, with small copper values, and still smaller gold values. Ores are declining in value with depth. Production formerly equally divided between smelting and concentrating ore, is now mainly the latter. The property has 3 principal veins, of 4 to 6' minimum and up to 40' maximum width. Upper workings are practically worked out, lower workings show concentrating ore.

Development: the main shaft is 2,300' deep, and the mine has about 15 miles of workings, an average of nearly 1 mile of new ground being opened yearly. Connection was made, Oct., 1909, with the 3-mile Ontario drainage tunnel, on the 2,100' level, for the use of which company pays \$750 monthly rental.

Ore mined in 1915 came mostly from the 1,400 to 2,100' levels; average assays were 25% lead, 24 oz. silver, \$2 gold, with copper values. In 1913, the concentrates shipped averaged 34¼% lead and 52 oz. silver, with 8,332 tons of lead concentrates and 1,598 tons of zinc concentrates. Production in

1913 was 60,788 tons of ore. The copper in the lead concentrates averaged 1.86%.

Equipment: includes hoists and air-compressor. The 350-ton concentrator was destroyed by fire Dec., 1913. A new 600-ton mill was built and went into commission Jan., 1915. Plant includes a flotation unit with capacity of 30 tons of dry slime per day. The mill is treating 200 tons daily.

Costs for 1913, producing 60,788 tons, were: \$5.28 per ton for mining; general expenses, \$1.56 per ton; milling costs, \$1.46 per ton of ore fed.

Property, though an old one, has much new territory yet to be prospected and the known ore shoots give indications of going to greater depths. 125 men employed in 1915.

DAN CREEK GOLD & COPPER CO.

ALASKA

Mine office: Nizina, Copper River district, Alaska. Howard Birch, mgr. Inc. 1907, in Washington. **Cap.**, \$1,000,000. **Property:** 28 claims, 1 fractional, 550 acres, with 6 placer claims, 560 acres, and two 5-acre mill sites, on Dan and Copper creeks and Nikolai gulch, 8 miles E. of the Bonanza mine. Lands, known as the Rosebud group of 11 claims, show a vein of 2 to 10' width, carrying bornite and chalcopyrite ore. The hydraulic plant was rebuilt in 1913 and has since been in operation.

DANTE GOLD MINING CO.

COLORADO

Office: 516 Exchange Bank Bldg., Colorado Springs. **Officers:** L. I. Aitken, pres.; W. Arthur Perkins, v. p.; A. D. Aitken, sec.; Thos. A. Dines, treas.; Edwin Gaylord, gen. mgr.; Wm. A. Reed, supt. **Cap.**, \$1,250,000; shares \$1 par; all issued. Company has no liabilities and had \$10,660 in the treasury, Jan. 1, 1916. Stock listed on the Colorado Springs Mining Exchange. Charter renewed Nov. 25, 1915, for 25 years.

Property: Dante mine, about 10 acres, patented, in Sec. 20 on Bull Hill, Cripple Creek, is under 5-year lease from April, 1916, to the Cons. Mines & Reduction Co. Said to show gold ore averaging \$2 per ton. **Development:** 750' shaft with 6,500' of crosscuts and drifts, 520' shaft with 3,800' of crosscuts and drifts. Shaft No. 3 is leased. **Equipment:** 75-h. p. hoist, air compressor, complete machinery plant, 1,000' of cable and surface buildings.

Production: (gross) to Jan. 1, 1916, \$1,120,080; gross production for 1915, \$3,559 from mine, and \$13,641 from mill. Mill was treating about 2,000 tons of \$2 gold ore per month when it was destroyed by fire in Nov., 1915.

DAVIS-DALY COPPER CO.

MONTANA

Office: 79 Milk St., Boston, Mass. Mine: Butte, Mont. **Officers:** H. M. Burton, pres.; Wm. Bloom, v. p.; Charles G. Schirmer, sec.-treas.; preceding with F. M. Kimball and F. A. Schirmer, directors; W. L. Creden, gen. mgr.; Wm. Frazier, mine supt. Federal Trust Co., Boston, transfer agt.; Paul Revere Trust Co., Boston, registrar. Inc. Sept. 14, 1908, in Maine, as successor of Davis-Daly Estates Copper Co. **Cap.**, \$6,700,000; shares \$10 par, assessable; issued, \$6,000,000; paid \$8.50. For the earlier chapters in the history of the company, readers are referred to description of the Davis-Daly Estates Copper Co., in Vol. VIII, and to a spicy account by Stevens in Vol. X, of the Copper Handbook.

General balance sheet to June 30: **Assets:** mining property, \$4,112,474 in 1914; \$4,106,680 in 1915; equipment, \$111,044 in 1914; \$110,159 in 1915; development, \$1,069,321 in 1914, \$1,359,366 in 1915; stockholders liability, \$900,000 in 1914, \$900,000 in 1915; current assets, \$175,721 in 1914, \$37,960 in 1915; cash on hand, \$116,272 in 1914, \$66,236 in 1915. **Liabilities:** capital stock, 600,000 shares, \$8.50 per share paid and \$1.50 unpaid, total \$600,000. Taxes, accounts payable and wages payable: \$19,667 in 1914, \$20,056 in 1915.

Income and expense account for fiscal year ending June 30, 1915, was: total income accrued (ore sales \$19,482), \$24,412; deduct cost of development and expenses (Colorado mine) \$175,870; mining cost \$5,017, general expenses and salaries, Butte office, \$12,252; Boston office, \$5,583; ins., taxes and misc., \$5,732; total \$204,454; deficit for year \$180,043, as compared with \$108,020 for the previous year.

In 1st quarter 1916 ore sales amounted to \$42,540; total disbursements, \$72,272; deficit, \$27,504.

Property: a small surface area and mineral rights of 320 acres under the city of Butte, adjacent to, but south and west, of the known productive area. **Development:** consists of the Colorado shaft, 2,542' deep, with drifts and crosscuts. Development work for fiscal year 1914-1915, amounted to 4,140'. The chief workings are on the 1,000', 1,200', 1,400', 1,500', 1,700', 1,900' and 2,500' levels.

Geology: two main veins have been developed, running in N. W.-S. E. direction corresponding to the Blue Vein system of which the Jessie, Edith May and other very productive fault veins belong. There are also several east and west veins on which but a small amount of development has been done until recently. The first ore developed was on the "Fisher stopes" on the 1,400' level, 350' west of the Colorado shaft, showing an orebody 400' long, 7½' thick and 100' high, averaging 2.9% copper and 5.6 oz. silver per ton. The same vein was extensively developed down to the 1,700' level.

The veins are frequently faulted and a careful study of geological conditions is necessary to successful recovery of veins beyond the faults. The shaft was sunk to depth of 2,035' in 1912, and new crosscuts showed ore in several small fault veins, barren on the 1,700' level.

The Hesperus vein, the principal ore producer of the mine, was opened 1913 by a crosscut 85' south from the old Heinze workings on the 1,400' level, where it showed 12' of high-grade ore beneath the Hesperus claim. Drifting on this, together with crosscuts at other points, proved an orebody 12 to 14' wide, averaging 4.43% copper and 7 oz. silver per ton, for 325' in length. This ore shoot thinned out to a non-commercial width a few feet below the 1,200' level. Efforts made to find the faulted section of the vein beneath the Rarus fault, on both 1,400' and 1,500' levels have so far been unsuccessful. The Hesperus ore shoot was mined in V form for a height of about 300' and an average length of 150' and produced more than 60% of the total tonnage mined by the company since its organization to 1913.

Results of mining operations on upper levels, 1913-1914, being disappointing, the company decided to discontinue mining and to sink the shaft 500' deeper, for which a 50c assessment was levied. Shaft sinking started in May, and was completed to 2,500' level in December, 1914. During fiscal year ending June 30, 1915, no development of any consequence was done above the 2,500' level and the ore extracted from drift development, came from this level. While driving the crosscut to the No. 1 Hesperus vein on the 2,500' level a vein of good ore was reported to have been found. No. 1 Hesperus vein was reached in Aug., 1915, 670' from the shaft. At this point, commercial ore, 10' wide, is said to have been cut and shipments made of ore coming from drift development work. Company owns 2,500' on the length of vein.

Shaft has recently been enlarged from 1,700'-1,900' level, making it 3 compartments from the 2,500' level to surface.

The Western half of the property is practically undeveloped. A long crosscut from the Original mine explored the ground, but failed to develop commercial ore. Upon the Silver King claim, 2,500' N. W. of the Colg-

rado shaft, the Sutton shaft, 310' deep, developed ore, shipments of 489 tons carried 3% copper, 2½ oz. silver and 86 cts. gold. As this western half of the property was entirely undeveloped, an arrangement was made with the Anaconda Co., to drive a crosscut south from the West Gagnon mine at a depth of 1,900'. The result was disappointing.

Besides the 2 shafts already mentioned, there are several old openings on the company property. The Smokehouse shaft, across the street and south of the Thornton hotel, is 700' deep and lost the vein on the 500' level. The Mount Moriah mine has a 640' three-compartment shaft and the ground is explored by a crosscut 2,000' long from the 1,800' level of the Original mine. When seen by the writer, the veins cut in this crosscut showed no payable ore, but not a foot of drifting had been done to disclose conditions along the strike of these veins. There are various other shallow workings on the property held by this company, which it must be remembered, is a tract 1¼ miles long by one-half mile wide. These old workings yielded considerably over \$1,000,000, principally in silver from the enriched surface ore.

Equipment: though extensive, is not adequate for deep work and a new hoist has been ordered (1916). There is an electric-driven air compressor, and a large battery of boilers ready for action, in case electricity is cut off. The ground around the shaft being limited, the output at the mine is conveyed several blocks over a narrow-gauge surface tram to ore bins alongside the Northern Pacific railroad.

Production: in 1st quarter 1916, output amounted to 4,208 tons ore, yielding 278,389 lbs. copper and 17,884 oz. silver.

The Davis-Daly ground has been generally considered to contain only low-grade and base, zinc-pyrite ores and to be outside the copper section of Butte camp. Recent developments indicate, however, that good copper ores exist and that the extensive area of unexplored ground may make this property a profitable one. Under Mr. Creden's management the property will certainly receive proper exploration and development, if funds are provided, and it is believed the company will eventually be successful.

DAY BRISTOL CONSOLIDATED MINES CO. NEVADA

Property sold Jan., 1915, and transferred to Consolidated California-Nevada Mining Co., which after a brief struggle, went into receivers' hands. The Day-Bristol mine then passed into the possession of the Uvada Copper Co. (operating company for the International & Intercontinental Mng. & Ref. Co., holding company), which see.

DAY STAR MINES CO. COLORADO

Pitkin, Gunnison Co., Colo. Inc. 1912, in Colo. Cap., \$1,000,000; shares \$1 par; 700,000 shares outstanding. Annual meeting in August. **Officers:** T. C. Clayton, Gunnison, pres.; W. M. Henderson, v. p.; John E. Clark, Marion, Ind., sec.-treas. and gen. mgr., with J. S. Stewart, and Bracken Wagoner, directors.

Property: 15 lode mining claims, 40 acres of placer ground and a mill-site in Quartz Creek, about 9 miles from Pitkin. **Ore:** gold, silver, copper and zinc in veins in limestone. Property is 2½ miles from the Mary Murphy mine, but company claims to own 8,000' of the Mary Murphy vein. Developed by tunnels. Management intends disposing of sufficient treasury stock to carry on development work, and perhaps build a concentrator. Property still in the prospect class.

DEADWOOD-HEIDELBERG MINING CO. SOUTH DAKOTA

Deadwood, S. D. **Officers:** Geo. V. Ayres, pres.; John Treber, v. p.; Jacob Goldberg, treas., with N. E. Franklin, A. T. Roos, mgr., and T. A.

Solinsky, directors. Wm. L. Treber, sec. Inc. Aug., 1914, in S. D., as a result of work of the Deadwood Business Club, in an attempt to promote the mining interests of the section. Cap., \$125,000; shares 25c par. Annual meeting, in June. Gross earnings, 1914-1915, were \$1,200 from ore sales. Operating expenses were \$6,000.

Property: 9 claims, unpatented, 185 acres, on Two Bit Creek, Lawrence Co., S. D., shows gold ore in a contact deposit between shale and porphyry, and is said to assay \$4-\$5 per ton. Ore reserves said to be 5,000 tons.

Development: 7 tunnels, 65'-380' long, with deepest workings at 193' from surface; total development, 1,426'. **Production:** to 1916 amounted to 147 tons ore, said to average \$20 per ton. Management plans development work for 1916 and sinking to the contact of the shale and underlying quartzite.

DEADWOOD MINING & MILLING CO.

NEW MEXICO

Mogollon, Socorro Co., N. M. Earle C. Cleveland, gen mgr. Ore: gold-silver-lead-copper, said to average \$10 to \$15 per ton. Orebody outcrops at surface and is traceable for about 500'. **Developed:** by 500' shaft, and equipped with 15-ton mill and cyanide plant treating company and custom ore. Made small shipments of bullion and concentrates in 1915.

DEEP MINES CO.

NEVADA

Geo. Wingfield, mgr., Goldfield, Nev. A \$10,000,000 holding corporation, owning control of the Goldfield Merger Mines Co., organized by J. Ross Clark, of Los Angeles, who is president. The Deep Mines and Merger companies were thrown into receivers' hands in February, 1915, on application of stockholders who opposed the sale of the Velvet claim to the Jumbo Extension Mng. Co.

DEER CREEK MINING & MILLING CO.

IDAHO

Forest, Lewis Co., Idaho. W. J. Orr, gen. mgr. **Property:** 17 miles S. W. of Winchester, in the Salmon River district, shows orebodies 10 to 20' wide, carrying copper ore with gold values. One vein has 4' of chalcopryite ore developed by a tunnel; \$150,000 reported to have been spent in development and equipment, latter including 2,000' of flume, water wheel, 100-ton concentrator and compressor. Company plans 1,500' tunnel to tap vein at 1,000'.

DEERFLY MINING CO.

WASHINGTON

Property, near Lucerne, Chelan Co., Wash., shows fissure veins carrying copper and lead ores. Developed by tunnels. Company operating intermittently for several years.

DEERHORN MINE

COLORADO

Victor, Colo. Worked under lease by W. Hobson and S. C. Sutton. **Property:** the Deerhorn mine on Globe Hill, belongs to the Stratton estate. Ore: quartz, carrying gold and sylvanite, occurs in veins, 4' wide at shallow depth, said to return from \$30-\$40 per ton in gold. Development by shafts and tunnels. **Production:** several carloads monthly in 1915. Developing and producing in 1916.

DEFENDER MINE

CALIFORNIA

F. B. Joyce, owner, 1023 Mills Bldg., San Francisco, Calif. **Mine office:** Defender, via Volcano, Amador Co., Calif. **Property:** 3 claims, unpatented, 5 miles S. E. of Volcano, Calif. Ore: base in character, carries gold and some silver in chalcopryite, galena and sphalerite, in a vein in granodiorite. The lode has strike of N. 15° W., dip 85° W., and an average width of 20". **Development:** 360' vertical shaft, with 1,500' underground workings. At 130' south of shaft on 200' level the vein is cut by a diorite dike 22' wide. Ore has not been found south of this dike.

Equipment: includes steam hoist, compressor, 10-stamp mill and a

10' Lane mill. Eight men are employed. **Production:** to date said to be 12,000 tons, yielding \$140,000. Work in 1914 and 1915 consisted of development work only.

DEGGE CLARKE TUNGSTEN MILL.

COLORADO

Nederland, Boulder Co., Colo. **Property:** a 100-ton concentrate mill in Boulder Canyon. Will start to operate July 15, 1916. Company is a purchaser of custom ores.

DELAWARE MINING CO.

NEVADA

H. H. Hunter, mgr., Lovelock, Humboldt Co., Nev. **Property:** 200 acres, in Seven Troughs district, near Vernon, Humboldt Co., Nev. Ore occurs in veins 5-7' wide, said to average \$18-\$20 per ton. **Equipment:** includes the Darby mill, 4½ miles from the mine, said to be treating 50 tons of \$20 dump ore per day. Management is planning to explore the Delaware veins at depth.

DELORO MINING & REDUCTION CO.

ONTARIO

Deloro, Ont., Can. **Officers:** M. J. O'Brien, pres.; Thos. Southworth, v. p.; S. B. Wright, gen. mgr.; S. F. Kirkpatrick, cons. metallurgist; F. A. Bapty, sec.-treas. Owns a smelting plant and refinery at Deloro. Output consists of bar silver, arsenic, nickel oxide and metal, cobalt metal and anodes, and the oxide and salts of cobalt.

Company aims to finish all products at the Delora plant. Employs about 125 men.

DELTA CONSOLIDATED GOLD MINES CO. (THE) CALIFORNIA

Office: Redding, Shasta Co., Cal. Mine on Dog creek, near Delta, Cal. **Officers:** Dr. Sherman T. White, pres.; C. Tracie, v. p.; S. D. Furber, sec.; A. Bystle, treas. **Inc.** Sept. 3, 1903, in So. Dakota. **Cap.,** \$2,000,000; shares \$1 par; outstanding 1,150,000 shares, assessable. **Property:** the Pioneer group of 11 patented claims, 115 acres, and 80 acres timber land, on Dog creek, 6 miles west of Delta, Calif., shows quartz veins in andesite, and ores contain gold, silver and a little copper. Ore shoots average 2' in width, with length of 300' and are said to have average assay of \$22.40. **Development:** by tunnels with 3,500' of workings. Management claims to have 20,000 tons ore blocked out. Was idle in 1915, but intends building a 50-ton stamp mill and cyanide plant in 1916.

Company has built a narrow-gauge railway connecting with the Southern Pacific tracks at Delta.

DELTA LEAD & ZINC CO.

MISSOURI

Inc. in Missouri. **Cap.,** \$3,000. Has a lease on 40 acres of land belonging to the McCown estate, in the Spring City-Beef Branch district, Mo.

Development: 3 shafts with average depth of 200'. Has 2 concentrators with a daily capacity of 250 tons. Output consists of galena concentrates and mixed blende and silicate concentrates, averaging 48-50% zinc.

DEMIJOHN CONSOLIDATED MINING CO.

NEVADA

Offices: 410 Savings & Trust Co. Bldg., Salt Lake City, Utah. Mine at Pioche, Lincoln Co., Nev. **Officers:** Fred W. Price, pres.; J. Thomas, v. p.; W. M. McCrea, sec.-treas.; with Owen A. Bailey, F. E. Parish, O. P. Soule and M. Thomas, directors. Chas. H. Gitsch, supt. Listed in Salt Lake City.

Property: 9 claims, 7 patented, 2 miles W. of Pioche, said to show lead-silver-gold ore in fissure veins, assaying 13% lead, 2.2% copper, 18 oz. silver, \$2.40 gold per ton. The main vein traversing the property has a N.-S. strike and dips to the E.

Development: 300' shaft, drifts, crosscuts and winzes. **Equipment:** hoist, air compressor and all necessary machinery. Small shipments made

in 1915. Plans further development on 200' and 300' level in attempt to reach the main orebody.

DEMOCRATA CANAENA SONORA COPPER CO. MEXICO

Office: Fourth National Bank Bldg., Cincinnati, Ohio. Mine at Cananea, Sonora, Mex. **Officers:** H. H. Hoffman, pres.-treas.; C. E. Hoffman, v. p.-gen. mgr.; W. H. Topie, sec.; preceding with R. C. Swing, Mrs. H. H. Hoffman, directors. Inc. May 8, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; issued \$2,870,000. Bonds authorized \$271,000, but none issued. Central Trust Co., registrar. Annual meeting, last Tuesday in May.

Property: 18 hectares, 44.5 acres, lying between the Capote and Veta Grande, in the heart of the Greene Cananea mines. Orebody is of contact metamorphic origin, consisting of a breccia of fragments of altered limestone, cemented by quartz, bornite and copper pyrite, in a fracture zone 50' wide in limestone. The orebody lies about 300' north of the Democrat shaft and also outcrops in 2 patches of garnet rock surrounded by diorite porphyry, good carbonates being mined at the surface.

Development: comprises a 435' shaft and 1,300' tunnel, with 2 other shafts of 90' and 180', together with 3 tunnels of 300', 110' and 60'. aggregating 4 miles of underground workings. On the 500' level, the known orebody proved to be larger than previously estimated and the stopes yielded 8% ore. The East orebody near the Kirk mine, developed by tunnel workings, has also materially increased the proven ore reserves. Average assays at present are 2½% copper and 1.5 oz. silver per ton.

Equipment: includes electrically-operated hoist and air compressor, power being obtained from the Cananea Consolidated Copper Co. Smelter contains 2 blast furnaces of 150 and 300 tons daily capacity, making 33% matte.

Property was closed down Sept. 1, 1907, to Sept., 1912, since which time the mine operations have been intermittent due to the Mexican revolution. Work was resumed in 1915. When in full operation company employs 500 men.

Production: in 1912, 1,102,000 lbs. fine copper, 36,000 oz. silver and \$6,000 in gold for 4 months' operations with none reported since. Property is a valuable one.

DENN-ARIZONA COPPER CO. ARIZONA

Bisbee, Cochise Co., Ariz. **Officers:** Martin Pattison, pres.; Lemuel C. Shattuck, treas.; J. G. Williams, sec.; Byron M. Pattison, Thos. Barçon and H. L. Mundy, directors. Inc. Jan. 14, 1907, in Minn., as successor of Denn-Arizona Development Co. **Cap.**, \$3,500,000; shares \$10 par fully issued.

Property: 13 claims, patented, 200 acres, immediately east of the Junction shaft of the Superior & Pittsburgh. The Dividend fault traverses the company's ground for about 4,000', and big orebodies have been found on adjoining properties near this fault. Mine has a 1,600' shaft, started in conglomerate but penetrating limestone at 840', with upwards of a mile of workings. The 1,000' and 1,100' levels show considerable leached ore, with little commercial ore, though carrying occasional small bodies of rich cuprite. The 1,250' and 1,350' levels also show large areas of leached ore, with some low-grade sulphides on the 1,250' level, and a little native copper on the 1,350' level. The lower level has a little ore of 12 to 15% copper tenor. Management estimates the average tenor of ore developed, almost exclusively oxides and carbonates, at 8% copper. Apparently some good orebodies may be developed at 1,800' or deeper, though the ore is erratic. The mine is wet, and has two 1,000-gal. triple-expansion pumps on the 1,000' level, and five 800-gal. sinking pumps.

Equipment: includes a 1,600-h. p. steam plant, with 6-drill and 25-drill Sullivan air compressors, and an 18x36" Ottumwa Corliss first-motion hoist, raising double-deck cages. There is a railroad spur to the mine.

Last production, 1909, was 99,222 lbs. fine copper and 41 oz. gold. Development work was energetically carried on despite very heavy pumping expenses until 1912, when an unusual influx swamped the pumps and the mine has been idle since.

The Dean has an excellent chance of making a big mine, the claims covering an extension of the big ore zone of the camp, but the ore horizon at this point is lower than on the other properties. The deep development of the Junction, C. & A. and Saginaw properties will drain this ground as well as prove it, and further exploration will be easily and cheaply done. There is strong probability that this company and the Shattuck will be merged at some future time. Property is a splendid prospect. It may be several years before it makes a mine, but eventually, we believe, will be a valuable one.

DENNEMORA GOLD & COPPER MINING CO., LTD. MONTANA

Is a dormant corporation owning 6 lead-copper claims, one-half mile from N. P. R. R., near Taft, Missoula county, Mont. Described Vol. X. **DENNY DULIN GOLD & SILVER MINING CO. NEVADA**

Office: 223 Mohawk Block, Spokane, Wash. **Officers:** Fred N. Davis, pres.; A. E. Grant, v. p.; Thos. R. L. Harris, sec.; A. B. Railton, treas; preceding, with E. D. Doan, directors. Inc. Nov., 1910. **Cap.**, \$1,500,000; shares \$1 par, assessable; 18 assessments already called. T. R. L. Harris, transfer agent and auditor.

Property: 5 claims, 100 acres, unpatented, in Morning Star mining district, Nevada. Ore occurs in fissure veins in rhyolite, traversed by numerous porphyry dikes; vein runs east and west, dip 55° north, average width 4', proven depth 160', average assays, 12½% copper, 5 oz. silver, trace to \$12 gold per ton. **Development:** by shafts, 175' and 160' deep, and 150' tunnel. Company has let contract to continue shaft No. 2, 100', hoping to cut ledge dipping toward the shaft. Nearly 1 carload of ore blocked out. No recent returns secured.

DESCUBRIDORA MINING & DEVELOPMENT CO. MEXICO

Owned by El Rayo Mines Co., which see.

DESLOGE CONSOLIDATED LEAD CO. MISSOURI

Desloge, St. Francois Co., Mo. Inc. in Missouri. **Cap.**, \$1,000,000, with almost \$2,000,000 invested in land and plant. Controls 4,704 acres land, developed by several shafts, 2 of which are 300' deep and another 500' deep. Two of the shafts are near Deslodge, but No. 4 is near Leadwood. Company has a 1,500-ton concentrator equipped with Wilfley tables, Frue van-ners, rolls, Chilean mills and a 780-k. w. steam turbine; also a smelter equipped with Flintshire-Tarnowitz reverberatory furnaces.

DETROIT & COLORADO MINING CO. COLORADO

Address: care L. W. Partridge, sec., 517 Ideal Bldg., Denver, Colo. Inc. Nov. 10, 1903, in Colorado. **Cap.**, \$1,000,000; shares \$1 par, nonassessable.

Property: the Champion and Aletha groups, 5 claims, 4 patented, situated 1½ miles S. W. of Silverton, 9,700' elevation. Ore is a mixture of copper and iron sulphides with tetrahedrite, but Aletha ore is a silver-bearing galena with chalcopyrite. The Champion vein is a gold-silver quartz carrying copper pyrite. Ores are said to average 31 oz. silver, 4.5% copper and \$5 gold, with increasing values in gold as depth is attained. The main development is by tunnel, but extent of present development is not reported. Property now idle because of litigation.

DETROIT COPPER MINING CO. OF ARIZONA.**ARIZONA**

Office: 99 John St., New York. Mine and works office: Morenci, Ariz.
Officers: Dr. Jas. Douglas, pres.; Cleveland H. Dodge, v. p.; A. C. James, v. p.; Geo. Notman, sec.-treas.; M. H. McLean, gen. mgr.; J. S. Schroeder, chief chemist; W. A. Staab, assayer; D. J. Kelly, chief electrician; Chas. Legrand, cons. mech. engr., and C. A. Austin, purch. agt., 99 John St., New York.

Inc. in Michigan. Cap., \$1,000,000; shares \$25 par. Is controlled, through ownership of entire stock issue, by Phelps, Dodge & Co., Inc. Net earnings in recent years: \$543,456 in 1903; \$603,340 in 1904; \$532,684 in 1905; \$973,456 in 1906; \$814,874 in 1907; \$1,074,296 in 1908; \$1,153,269 in 1909; \$1,406,170 in 1912; \$1,112,870 in 1913; \$602,319 in 1914.

Dividends: 1897-1909, of $3\frac{3}{4}$ to 110% yearly, aggregated \$4,817,500; \$1,464,610 in 1912; \$760,000 in 1913; \$280,000 in 1914; \$920,000 in 1915.

Property: is extensive, including the Ryerson, Arizona Central, Copper Mountain, Yankee, W. Yankee, Montezuma and Santa Rosa mines, at and near Morenci.

The purchase of the mining properties of the New England & Clinton Copper Co., Standard Cons. Copper Co., Standard Copper Mines, and Clifton Copper Mines, Ltd., adds a large area of undeveloped, but promising mining ground. The mines of this company work varied types of copper deposits, all dependent upon and co-extensive with a big intrusive body of quartz porphyry and its dikes. The ores are chalcocite, chalcopyrite and pyrite with various oxidized products occurring either in altered limestones, or as fissure veins in the impregnated rocks adjacent to them, or in large masses of altered, impregnated, shattered porphyry. The geologic relations are fully treated in a monograph by Waldemar Lindgren, Prof. Paper 43, U. S. Geol. Surv.; see also Weed, "Copper Mines of the World," page 287.

Geology: ores are mainly sulphide with slight gold-silver values and high silica and lumina contents. The oxidized and limestone ores are still produced in small quantities, but 98.8% of the ores mined consists of small particles of chalcocite, associated with chalcopyrite and pyrite, in a leached and whitened, decomposed porphyry, averaging 3.08% copper, or about 47.67 lbs. of fine copper recovered. The high-grade ore from fissure veins carries 6 to 18% copper.

Development: is very extensive, with numerous shafts and long cross-country connections. The workings have thus far been shallow, 400' being for many years the greatest depth. In 1912, development on the 600 and 700' levels of the Yankee mine, north of the Yankee fault, opened up 194,939 tons of 2.36% ore and similar deep exploration in the Arizona Central mine upset previous ideas that ores would not go deeper. Total amount of development work in 1914 was 26,375'; in 1915, 14,709'.

About 90% of the output is now mined by the slicing system, costing about 81% of the square set and fill cost, which is necessarily still used in some parts of the mine. Block caving is still cheaper, uses but little timber and costs but 54.8% of the square set and fill method, but like the Gopher and fill method, which is slightly cheaper, can only be used where favorable conditions prevail.

Equipment: includes power house, of steel frame on concrete foundations, with one steam-driven blowing engine, 9,000 cu. ft. per min., one gas-driven blowing engine, 6,000 cu. ft. per min., one motor-driven No. 10 Connersville blower and one No. 9 Connersville blower driven by a 200-h. p. gas engine, two steam-driven air compressors, one of 4,000 cu. ft. capacity, the other of 1,300 cu. ft., one 600-k. w. turbo generator delivering 2,300 v., 2 phase, 60-cycle current, four 250-k. w. and one 100-k. w. belted generators

driven by gas engines, delivering 230 v., 2 phase, 60-cycle current, running in parallel with turbo generators through transformers.

The concentrator, designed by H. Kenyon Burch, has proved remarkably successful, running 95% of the time. It consists of two 650-ton units, is 166x240' in size, and cost about \$1,000,000. Equipment includes Chilean mills, 6 sets of 16x42" rolls, 28 revolving screens, 80 Frue vanners, 40 Wilfley tables, and Deister tables, the mill putting about 7 tons into 1.

A flotation plant was completed in Sept., 1915. The mill power plant has 3 gas engines of 200-h. p. and 2 of 175-h. p. each, in conjunction with electric motors driven from the smelter power house.

In 1915, the mill treated 361,970 tons of ore averaging 2.69% and produced 53,266 tons of concentrates, averaging 13.499% copper. One ton of ore is concentrated with between 500 and 600 gals. of water, which is a very reasonable figure. A pumping station 6 miles distant raises water from wells on the San Francisco river to a height of 600', whence it is fed by gravity to the mill, which uses about 4,400 gals. per minute, with a consumption of new water of only about 80 gals. per minute, new water being supplemented by clarified water from an ingenious and highly efficient settling system, designed by Mr. Hunt, that includes concrete tanks and settlers, a steel dam, and a pond for tailings. A 14,000' launder along Chase Creek cañon conveys tailings from the mill to impounding reservoirs on the slopes below the mouth of Morenci canyon. The tails form a solid compact mass almost as strong as cement and successfully solves the tailings problem.

The smelter has one 42x264" and four 54x144" blast furnaces, and a converter department. Flue dust is briquetted for resmelting. The smelter has 2,000-ton ore bins, surmounted by a steel railroad trestle.

In 1915, 77,870 tons of ore, concentrates and flux were smelted, making an output of 15,333,976 lbs. of copper with a saving of 94%, compared with 20,274,267 lbs. of copper in 1914 and a saving of 95.45%.

A 36" gauge railway connects the mines and smelters with the Arizona & New Mexico railroad, at Guthrie, this line having a maximum grade of 36", with 4 complete loops within an air-line distance of 1½ miles, near Morenci. A tunnel through Longfellow hill, completed 1909, gives direct rail connection with the mill.

The company operates a large department store, and an excellent hotel, and maintains a library, gymnasium and club room for its 1,438 employees.

Production: in 1915 was 376,604 tons of ore, averaging 2.83% copper, producing 15,333,976 lbs. of copper as compared with 472,194 tons of 2.899% copper produced in 1914. The property is managed with great skill, in all departments, and is an exceptionally fine example of a successful low-grade mine.

The New England Clifton Copper Co. holdings, now owned by the Detroit Company comprise 78 claims, 1,006 acres, lying mainly near the Shannon, 5 miles N. W. of Clifton, on the northern side of the San Francisco river, including the New England, Clifton, Antietam and Copper King mines. Development on former shows a fissure vein in granite of 5' width, with an ore shoot 400' in length, carrying silicious sulphide ores, with chalcocite, chalcopyrite and occasional oxides and carbonates, all slightly auriferous and argentiferous, said to average 12% copper to depth of 350', the ore shoot declining rapidly in grade below 350', running to silicious sulphides of about 2.5% copper on the tunnel level. Ore bunkers, about 2 miles below the mines, receiving ore by wagons and aerial tram, are connected with the Arizona railway by a 3-mile surface tramline.

Development: at the New England mine includes 2 shafts, deepest 750',

and a 2,000' tunnel. The Clifton mine has 7 shafts, of 70 to 315' depth, with tunnels of 220', 450', 700', 800', 1,000' and 1,700'.

The Antietam mine, 3 claims, has a 2-compartment shaft, developing an orebody of 15 to 35' width, carrying chalcocite and chalcopyrite, giving assays of 4 to 10% copper, 1 to 7 oz. silver and \$2 gold per ton, and has been said to have about 40,000 tons of ore in sight.

The Copper King mine is as yet but slightly developed, but has been claimed to show about 40,000 tons of ore. An aerial tram from the Copper King mine was completed 1909.

Equipment: includes steam, gasoline and electric power, with hoists, an air compressor, and a number of mine buildings. The properties were idle in the summer of 1915 on account of a strike, but resumed operations in the winter.

DETROIT COPPER MINING CO.

UTAH

Samuel A. King, agent, Judge Bldg., Salt Lake City, Utah; V. W. Kelly, pres., Deseret, Utah. Inc. Jan., 1916, in Utah. Cap., \$1,000,000; shares \$1 par; 400,000 in treasury. Holds 5-year \$100,000 bond and lease, from Nov. 24, 1915, on 40 claims, locally known as Ibex mine, and owned by Ibex Gold Mng. Co.

Property: the Ibex mine (see Ibex Gold Mng. Co.), situated in Detroit district, Millard Co., Utah, 35 miles from Oasis, and 20 miles west of end of Delta branch line. Claims were located 35 years ago, work began 1894, and the Ibex Co. was formed and smelter put up at Leamington, Millard Co., Utah, treating 50 tons per day. In winter of 94-95, company failed and property was idle till 1906, when Jesse Knight took it up and reorganized the Ibex Co., patented the claims and sank two shafts. Worked until panic of 1907. Idle till 1915, when lease and bond was taken from Mr. Knight by local farmers who organized the Detroit C. M. Co. and shipped ore.

Claims cover two horizons of limestone; one blue and hard, the other light and soft, both cut by porphyry dikes and intrusives. Ore occurs in veins and bedding offshoots, the veins being 25'-100' in width. Ore: carries 2%-20% copper, with trace to 3 oz. per ton silver and \$1 to \$20 per ton gold. Elevation of mine 5,500' to 6,500' above sea level.

Development: 600' shaft on Keystone claim, a tunnel on Ibex, with 500' vertical depth at face and a 500' shaft on E. P. H. claim. Good auto road from Delta to Oasis. Reported on May 6, 1916, by Wm. A. Farish.

Freight to Oasis, \$6 (to R. R. terminal \$4); R. R. to Salt Lake, \$2.50; smelter treatment, \$4.

DETROIT & LAKE SUPERIOR COPPER CO.

MICHIGAN

Waterbury, New Haven Co., Conn. Is a half owner of the stock of the Lake Superior Smelting Co., which bought the plants of the Detroit & Lake Superior Copper Co. at Hancock and Dollar Bay, Houghton Co., Mich. Built a smelter at Detroit, 1850, and shortly after built another at Hancock, being the pioneer in Michigan smelting.

DEVELOPMENT COMPANY OF AMERICA

ARIZONA

Reorganization committee: Room 514, 49 Wall St., New York. Company's affairs are in the hands of a bond and stockholders' committee (See Copper Handbook, Vol. X, for officers and organization.) Inc. Nov. 23, 1901, in Delaware, as a holding company. Controlled through stock ownership, the Tombstone Consolidated Mines Co., Ltd., Imperial Copper Co., Congress Consolidated Mines Co., Ltd., and Poland Mining Co. Company also owned large stock interests in the Gila Copper Sulphide Co.; the Lookout Copper Co.; controlled the Southern Arizona Smelting Co. through Imperial Copper Co., and owned a large block of stock in the London-Arizona Copper Co., which company had a large interest in the

London Range Copper Co. Company organized the Arizona, Mexico & Gulf of California Railroad Co., 1910, planning to build a railway from the Arizona Southern railway, which is owned by the Imperial Copper Co., a subsidiary, to Port Lobos on the Gulf of California, a distance of approximately 200 miles. The authorized bonds and stock of the Arizona, Mexico & Gulf of California Railroad Co. were never issued.

The Tombstone Co. owned, or controlled, practically all the mines of Tombstone, Ariz., that once wonderful camp, closed down in the 80's when a heavy influx of water drove the miners from the workings. The Tombstone Co., installed enormous pumps and succeeded in controlling the water, the Development Co. supplying nearly \$2,500,000 in addition to funds realized by the sale of its special contract bonds, before it came to the end of its resources, when, being unable to meet its bills, the company suspended operations.

Failure of the Development Co. to supply further funds to the Tombstone Co. and subsidiaries in 1910, with a loss of credit at various banks and indeed of its own stock and bondholders is, it is said, directly due to responsible financial interests in New York refusing to carry out their pledged word and agreement, a contract upon the strength of which the Development Co. implicitly relied and therefore made no effort to raise money elsewhere, until such refusal when it was too late to make other arrangements to meet its interest charges and other pressing obligations.

One of the most promising subsidiaries was the Imperial Co., whose property had to shut down because development work was not sufficiently advanced to supply the smelting plant with 700 to 800 tons per day of smelting ore, of high enough grade to yield a profit with 12½% copper. An important shaft lost by fire, would, in a few feet more depth, have entered a large body of sulphide ore, which would have supplied the necessary tonnage and flux for the smelter. The Imperial Copper Co., temporarily needing assistance, could not get it from the Development Co. for the reasons above stated and as it could not do development work, repair the burned shaft, or sink a new shaft, it too, had to shut down.

In 1913 the securities behind the bonds were sold at public auction, and purchased by Wallace Fairbank, Frank M. Murphy and Thomas W. Synnot, acting as a bondholders and stockholders committee. The securities included 250,000 shares of the Imperial Copper Co., and 400,000 shares of the Tombstone Consolidated Mines Co., Ltd., both without value. The stock of the Poland Co. and \$1,211,340.91 certificates of indebtedness, control that company, and the Congress Co. having no bonded debt, is controlled by its stock. The stock and certificates of indebtedness of the Poland Co., and the stock of the Congress Co. were also purchased by the committee.

All the securities purchased by the committee were placed in the treasury of the Congress Co. with the exception of such Congress stock as was set aside to be exchanged for the bonds of the Development Co., on the basis of 50% in stock for 100% in bonds. The committee hopes, even though it has not received much support, to get something worth while for the bondholders.

The Development Co. has brought suit against the Southern Pacific R. R. Co. for \$15,000,000 alleging that loss of its property is directly due to the refusal of the corporation to fulfill its pledged agreement to loan the \$500,000, thus bringing about insolvency to both the parent company and its various subsidiaries.

DEXTER GOLD MINING CO.

A close corporation controlled by Eastern capitalists. **COLORADO**
Property: the

Dexter mine, on Bull hill, Cripple Creek, under lease to C. W. Benkleman, of Denver, and Anderson Bros., of Victor, Colo. Gold ore occurs in veins, 4' wide and proved for 175'.

Development: by 1,200' shaft, crosscuts and tunnel. Has been a steady producer for several years. Average output 600 tons monthly, showing values from \$10-\$30 per ton. **Equipment:** compressor, power plant and surface buildings. Employs about 15 men. Plans further development below the 600' level.

DIAMONDFIELD BLACK BUTTE REORGANIZED MINING CO.

NEVADA

Office: 406 No. Columbia St., Goldfield, Nev. **Officers:** L. K. Koontz, pres.; L. L. Patrick, v. p.; Harry B. Ruhl, sec.-treas., with T. C. Damskey, directors. Andrew J. Canavan, supt. **Inc.** 1905, in Nevada, reinc. April, 1910. **Cap.**, \$2,000,000; shares \$1 par; 1,300,000 outstanding. Transfer office; U. S. Corp. Co., New York, and home office. Annual meeting, July. Listed on Salt Lake Stock Exchange. Two assessments, $\frac{1}{4}c$ in April and 1c in August, 1914, have been called, to meet operating expenses.

Property: the Black Butte mine, 60 acres, in the Goldfield district, Esmeralda Co., and a controlling interest in the Orizaba mine, 6 claims, about 35 miles north of Millers, Nye Co., Nev., belonging to the Orizaba Min. & Dev. Co., and described under that title.

Ore: gold, in numerous veins in fine grained andesite. Up to the present time the main producers have been the "Quartzite" and the "Flat" veins. The former is said to have produced \$500,000 under early lease operations, but values ended within 150' from surface. The "Quartzite" ore-body was cut off by a fault and its downward extension has not been found. The "Flat" vein apparently ends at the tunnel level.

Development: tunnels and shafts; the main shaft is 300' deep and the old Dortch shaft, 350' south of the main shaft, is 200' deep, but little work has been done below the 110' level. Recent work has been on the 300' level of the main shaft and on the 110' level of the Dortch shaft; on the former level a vein is said to have been cut late in 1915 that is 43' wide and assays \$4 to \$12 per ton. Lessees on the 110' level are said to have opened up a body of ore which assays \$40 per ton over a width of $1\frac{1}{2}'$ on the hanging-wall side, with remainder of face of drift in milling ore. This is claimed to have developed later into ore that assayed much better. **Equipment:** includes two 15-h. p. gasoline hoists and a 3-drill air compressor. Future of the company is entirely dependent upon results of development.

DIAMONDFIELD DAISY GOLD MINING CO.

NEVADA

Goldfield, Nevada. **Inc.** 1910, as reorganization of the Goldfield Daisy Mng. Co., of Goldfield, Nev. Property worked under lease by the Justice Gold Mines Co., which see.

DIAMONDFIELD MINING & MILLING CO.

NEVADA

Company operated a lease on the property of the Goldfield Great Bend Mining Co. Practically merged into the Great Bend Co. in 1915.

W. A. DICKEY COPPER CO.

ALASKA

Office: 31 Nassau St., New York. Mine office: Ellamar, Alaska. **W. A. Dickey**, pres.-gen. mgr.; Duncan Edwards, v. p.-treas.; **H. C. Bryan**, sec. **T. W. Blakney**, supt. **Cap.**, \$50,000. Is a close corporation.

Property: 2 miles from tide water at Irish Cove, Prince William Sound, Alaska, is developed by tunnels and has over 1,000' of workings. Ore contains chalcopyrite in lenses along shear zones, in greenstone, with

gold and silver; lenses of gold ore have been developed to a depth of 300'. Shipments of 400 to 600 tons monthly of 12% ore were made to the Tacoma smelter in 1912.

Company is reported to have 800 tons of 15% ore in bins at the mine and is building ore bins and wharf at Irish Cove, preparatory to shipping in 1916. Company bought the Mason-Gleason group, on Fidalgo Bay for \$15,000. The latter group shows high-grade ore, but nearest shipping point is Irish Cove, 3 miles distant.

DIG-GOLD MINING CO.

COLORADO

Inc. 1915. **Cap.**, \$150,000. B. Burke, pres.-gen. mgr.; Chas. Bender, supt. **Property:** the Alpha and Omega mines, on Gold Hill, near Cripple Creek, Teller Co., Colo.

Ore occurs in a vein, 5' wide on 200' level, and is said to assay from \$9-\$60 per ton in gold. Surface work said to show a number of veins containing low-grade ore. **Development:** by 150' shaft. Mine is drained to 200' level by the Roosevelt tunnel. **Equipment:** includes hoist and air compressor. Property is still in the prospect class.

DIVIDEND MINING & MILLING CO.

NEW MEXICO

Moved from Journal Bldg., Boston, Mass., left no forwarding address. Mine near Estey, Socorro Co., N. M. **Officers:** J. M. Bryson, pres.-gen. mgr.; J. E. Simpson, v. p.; B. F. Coburn, sec.-treas.; preceding with F. B. Street, J. Wm. Rice, Samuel Porter, A. B. Spear, Jas. B. Putnam and Halbert E. Parkhurst, directors; W. E. Morong, supt., at last accounts. **Inc.** Sept., 1902. **Cap.**, \$3,000,000. Authorized a \$150,000 five-year 7% bond issue.

Property: 2,000 acres, also coal lands about 16 miles distant. It has been claimed that about \$250,000 has been expended on the mine, which shows some sulphide ore, carrying good values in copper, with a little lead, and small values in gold and silver.

The company has been very free with "estimates" and promised that by merely producing 14,400,000 lbs. of copper yearly, millions of dollars could be earned. Company's advertising was indefensible, and the statement that "there has been no such opportunity for investment since the Calumet & Hecla and United Verde were first put on the market" leads to the conclusion that the promoters of the company were sadly lacking either in sense or truth. At last accounts was endeavoring to settle with bondholders by giving them the property.

DOBIE MINES, LTD.

ONTARIO

Porcupine, Ont. **Officers:** Frank C. Armstrong, pres., 25 Broad St., New York; S. J. LeHurray, sec.-treas. **Directors:** F. C. Armstrong, Geo. C. Loveys, Donald D. Fish, B. Osler, and W. A. J. Chase.

Inc. March 27, 1911, in Ont. **Cap.**, \$1,500,000; outstanding \$1,200,000. Of the issued stock, \$1,100,000 was given to the owners in payment of the property and \$100,000 stock was purchased by the Tisdale Gold Mng. Co., to provide funds for development purposes. Transfer agents: Toronto General Trust Corp., Toronto; Investment Trust Co., Montreal. Listed on Toronto Standard & Mining Exchange, and traded in on the unlisted department of the Toronto Stock Exchange, and on the New York and Boston curbs.

Property: 17 claims, crown patented, in Tisdale Twp., Ont., taken over from the Tisdale Gold Mng. Co., Ltd. Extensive development work is being carried on.

DOCTOR JACK POT MINING CO.

COLORADO

Offices: First Natl. Bank Bldg., Cheyenne, Wyo. and Cripple Creek, Colo. **Officers:** A. E. Carlton pres.; J. A. Hayes, v. p.; V. H. Mann, sec.-

treas., L. G. Carlton, mgr., with H. L. Shepherd, Ira Harris, F. H. Gay, A. M. Stevenson, directors. Inc. Aug. 31, 1905, in Wyo. Cap., \$75,000; shares $2\frac{1}{2}$ c par; \$71,083 outstanding; nonassessable. Colorado Title & Trust Co., Colorado Springs, transfer agents. Annual meeting, 2nd Wednesday in June. Listed in Colorado Springs and Denver. Balance sheet Jan. 1, 1916, shows cash \$114,742, accounts receivable \$486. No liabilities.

Gross production by present company, Sept. 1, 1905, to Dec. 31, 1915, \$1,330,280; under former owners about \$2,480,000. Gross earnings 1914-1915, \$89,483, of which \$87,333 was from ore sales; operating expenses, \$28,341. Dividends: to Jan. 1, 1916, \$90,000; last dividend, \$15,000, paid March, 1910.

Property: 15 claims, 99.3 acres, patented, on Raven hill, Cripple Creek, said to show gold ore in fissure veins. **Development:** tunnels and vertical shafts, amounting to several miles of underground workings with deepest at 900'. The Raven tunnel is over 3,000' long. During last half of 1915 company is said to have done 939' of work at a cost of \$10,000, while lessees did 500' at a cost of \$3,500.

Equipment: includes a 52-h. p. electric hoist and air compressor. Electric power is used. **Production:** in 1915, 14,719 tons gold ore, average grade \$19.98 per ton.

DOE RUN LEAD CO.

MISSOURI

A subsidiary of the St. Joseph Lead Co., and described thereunder.

DOLORES MINES CO.

MEXICO

Subsidiary of the Mines Co., of America, which see.

DOLORES MINING & DEVELOPMENT CO.

MEXICO

Address: care J. E. Dawson, pres., Oakland, Cal.; J. F. Torney, sec. Inc. Jan., 1910, to take control of the Empire Mining Co., S. A., a company protocolized in Mexico, which owns the Major Domo claim, 5 miles from Cananea, Sonora, Mexico, and 7 other properties, including the Golden Cross silver mine, Magdalena district, Sonora, Mex. See Empire Mining Co.

DOLPHIN MINE

ARIZONA

Prof. W. H. Temme, c/o Temme Engineering Co., Evansville, Ind., mgr. and engr. **Property:** in Turkey Creek, 5 miles from Poland, Yavapai Co., Ariz., said to show gold quartz ore. Developing in 1915-16. **Equipment:** 20-stamp mill and steam hoist.

DOME EXTENSION MINING CO.

ONTARIO

South Porcupine, Ont. **Officers:** W. S. Edwards, pres.; Alex. Fasken, sec., with J. S. Wilson, Jas. Playfair, and S. B. Morris, directors. H. C. Anchor, mine mgr. Inc. Jan., 1911, in Ont. Cap., \$3,000,000; par \$1; 2,300,000 shares issued. Annual meeting in May. Listed in Toronto and on New York curb.

Property: 5 claims, adjoining Dome Mines, Ltd., on the east, in the Porcupine district. Reported that the Dome Mines, Ltd. has taken an option on the property, effective until Oct. 15, 1917. Basis of exchange is 50 shares Dome Extension for one of Dome Mines, the Dome Extension to be allowed to develop on its own account.

Development: 3 shafts over 200' deep and about 10,000' of underground workings, said to have opened up considerable ore of too low grade to be treated profitably at that time. The mine was closed down for some time, but results obtained on the Dome Mines property indicated a continuation of its orebodies into Dome Extension ground and work has been resumed. Dome Extension is reported to be planning on diamond drilling to test a number of veins at depth, and Dome Mines, Ltd., on driving east on the 850' level from its No. 3 shaft into Dome Extension ground.

DOME LAKE MINING & MILLING CO., LTD. ONTARIO

New Liskeard, Ont., and South Porcupine, Ont. **Officers:** Geo. Taylor, pres.; A. A. McKelvie, v. p.; with Thos. McCamus, S. S. Ritchie, and Chas. J. Sherrill, directors. F. L. Hutchinson, sec.-treas.

Inc. Aug. 26, 1912. **Cap.**, \$2,500,000; shares \$1 par, reduced to 500,000 shares, Feb., 1913; increased to \$1,000,000 in Feb., 1914, and to \$2,000,000 in 1915. Outstanding Feb. 10, 1916, \$1,247,077. **Trusts & Guarantee Co., Ltd.**, Toronto, transfer office. Annual meeting 2nd Monday in Feb. Listed in Toronto and on New York curb. The Hudson Bay Mines, Ltd., purchased 540,000 shares of Dome Lake stock for \$119,375, and holds an option on the balance of treasury stock; Hudson Bay Mines, Ltd., in Oct., 1915, owned 460,900 shares.

Property: 3 claims, patented, 120 acres, in Tisdale Twp., Porcupine. Gold ore occurs in shoots as replacement deposits. Veins have strike of N. 10° E. and dip of 70°. Recent work is said to prove that the mineralized zone traverses the company's property instead of dipping into property on the north. Country rock is basalt.

Mine No. 1 was closed down, June, 1914, practically all the ore having been extracted. In 1915 underground work at Mine No. 2 amounted to 837' and was done near the Cobalt Lake fault. Diamond drilling revealed a large extent of conglomerate rock in which the silver veins occur.

Development: by 400' shaft with lowest workings at 446' and total underground workings of about 1,000'. In raising from the 300' to the 180' level, Feb., 1916, it is claimed that a 6' body of \$8 ore was found. Work at Mine No. 2 was discontinued Mar., 1916, to be resumed in the summer. **Equipment:** includes a Vulcan hoist, air compressor and 180-ton stamp mill.

Production: since Dec., 1914, when the mill was started, to Sept. 1, 1915, amounted to 12,975 tons of ore yielding \$63,738 in bullion and \$8,776 in concentrates. Recovery was 79.8%. Loss in tailing was heavy and the company is now building a cyanide plant to get a better extraction. Average grade of ore milled was \$9.12 per ton. Total mine operating costs over this period were \$3.90 per ton.

The property has not been as successful as hoped for, but the management believes that continued active development will prove the mine to be valuable.

DOMINE MINES, LTD. ONTARIO

Executive and financial departments: 43 Exchange Place, New York City. **Head office:** 36 Toronto St., Toronto, Ontario, Canada. Mine and works: South Porcupine, Ont. **Officers:** J. R. De Lamar, pres.-treas.; W. S. Edwards, 1st v. p.; C. D. Kaeding, 2nd v. p.-gen. mgr.; H. P. De Pencier, 3rd v. p.; Alex. Fasken, sec.; A. H. Curtis, asst. treas.-sec., preceding, except H. P. De Pencier and C. D. Kaeding, with Andrew V. Stout, G. C. Miller and J. S. Wilson, directors.

Inc. March 23, 1910, in Ont. **Cap.**, authorized \$5,000,000; outstanding \$4,000,000; shares \$10 par. Guaranty Trust Co., New York, and Trusts & Guarantee Co., Ltd., Toronto, transfer agents. Bankers Trust Co., New York, and Toronto Genl. Trusts Corp'n, Toronto, registrars. Annual meeting, last Tuesday in May. On June 23, 1915, the New York Stock Exchange listed \$3,500,000 of the capital stock with authority to add \$500,000 on official notice of issuance and payment in full.

Dividends: present rate, 20%, payable quarterly, March 1st, etc. On July 30, 1915, an initial quarterly dividend of 50c per share was declared, payable Sept. 1, 1915. Total dividends to March 1, 1916, \$600,000.

Comparative General Balance Sheet: years ending March 31:

	Assets					
	Bldg. Equip., Construction, Etc.	Inven- tories	Current	Ins. Unexpired	Int. Accrued	Total
1916	\$4,050,798	\$172,518	\$806,794	\$102,348(a)	\$5,132,458
1915	3,724,070	102,921	377,623	1,642	\$1,854	4,208,110
1914	3,753,878	97,025	232,039	1,796	1,143	4,085,884

Liabilities

	Liabilities					Total
	Cap. Stock	Accts. Pay.	Taxes Accrued	Accident Fund	Surplus	
1916	\$4,000,000	\$93,050(b)	\$14,636	\$5,132,458
1915	3,500,000	42,212	800	\$665,098	4,208,110
1914	3,500,000	92,580	2,308	\$4,476	486,520	4,085,884

(a) Includes undistributed development expenditures, \$98,506. (b) Includes payrolls, \$37,670.

Profit and Loss Statement: years ending March 31:

	Gross		Int., Disc. and Exch.	Balance	Dev. Deprec. & Improv.	Surplus
	Earnings	Net Earnings				
1916	\$1,778,959	\$889,365	\$23,015	\$912,380	\$370,518	\$541,861
1915	1,055,497	481,620	6,878	488,498	309,920	178,578
1914	1,204,597	750,633	2,695	753,328	295,631	457,696

Property: 6 claims, 240 acres, in Tisdale Twp., Ont. The geology is fully described in report of Ont. Bureau of Mines, 1915. Ore is white quartz carrying free gold and auriferous pyrite, occurring in a stockwork of veins and stringers netting schists of pre-Cambrian age. The orebody is large, being over 100' across in places and has been proven by diamond drill work for 500' or more. The original outcrop, a dome-shaped hillock about 30' high, showed so much free gold at one place that it was called the Golden Stairway. Has option on adjoining property of Dome Ex. M. Co.

Development: by 9 shafts, No. 2 shaft, 477' deep, is the main working shaft. A new central shaft is now being sunk to the 850' level; its location was thought to be out of the ore zone, but at 625' in depth \$15 ore was found. There is a level at 45' and 6 levels below this; numbering of levels beginning at the 100', or first level. The 6th level is at depth of 553'. Development work has been distributed over a zone 1,500' long and 400' wide. In year ending March 31, 1916, underground work totaled 11,705' compared with 6,223' the previous year, and diamond drilling footage totaled 5,654' compared with 5,875' the previous year. Of the 5,654' of drilling done 235' was drilled from surface. Total underground work March 31, 1916, was 32,436', besides 23,524' of diamond drilling.

Ore reserves: estimated April 1, 1916, as 2,600,000 tons, average grade \$6.20 in gold per ton, or a total value of \$16,120,000 compared with the estimate of previous year of 2,782,811 tons of \$4.15 ore. Work done since March 31, 1915, has greatly increased the ore reserves. Diamond drill hole No. 52 drilled from the 6th level horizontally from a point 40' S. W. of No. 2 shaft, showed 5 intersections of ore totaling 127' and averaging \$4.42. Hole No. 53 drilled horizontally and 75' E. of No. 52, showed 2 intersections of ore totaling 233' and averaging \$7.28. This ore was not included in estimate of ore reserves in 1915.

Equipment: includes a crusher on the 5th level, automatic loading hoppers, 5-ton cars and 4-ton skips. Shrinkage stoping system is used.

The company owns a mill and cyanide plant. The mill originally had 80 stamps with a monthly capacity of 28,000 tons, but through the substitution of ball mills for stamps it is expected to increase the capacity to 45,000 tons by the middle of 1916. Milling was started in 1912.

Water is obtained from Porcupine Lake by means of 2 electrically-driven 4-stage turbine pumps. Electric power is obtained from Wawaitin Falls, 13 miles from the property. Three-phase current is supplied over the Company's transmission line at a pressure of 12,000 volts, stepped down to 550 volts by three 600-k. w. Westinghouse transformers.

Production and costs since milling started, March 23, 1912, for fiscal year ending March 31st:

Year	Tons Milled	Value Per Ton	Rec. %	Costs Per Ton			Total
				Mng.	Reduct.	Gen.	
1916.....	347,640	\$ 5.50	92.88	\$1.22	\$1.01	\$0.32	\$2.56 (b)
1915.....	248,550	4.68	90.6	1.38	1.12	0.46	2.97 (b)
1914.....	145,305	8.77	94.51	1.86	1.69	0.64	4.19
1913.....	101,812	10.72	95.63	1.31(a)	2.35	1.29	4.95

(a) Does not include development. (b) Reduction due to larger units of operation, improved methods, and greater efficiency.

DOME MINING CO.

ARIZONA

Office: 805 H. W. Hellman Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz. **Directors:** C. P. Campbell, pres.; C. C. Spicer, v. p.; A. M. Wheelock, sec.-treas. **Inc.** Oct. 9, 1915, in Arizona. **Cap.**, \$100,000; shares 10c par; nonassessable; 500,000 shares in treasury. Annual meeting last Saturday in Sept. Listed on Los Angeles Exchange. Company reports \$1,000 in treasury, April 17, 1916.

Property: 32 acres, unpatented, at Oatman, Mohave Co., Ariz. Developed by 40' shaft and a little trenching. Management states that a hoist will soon be added. Property is a prospect.

DOMINION GOLD MINING CO.

MANITOBA

(See Calumet-Corbin Co.) **Office:** 802 Pioneer Bldg., St. Paul, Minn. **Officers:** Bernard Noon, pres.; J. P. Fetsch, v. p.-treas.; Jas. E. Liebe, sec.; with N. L. Watson and George Warner, directors.

Inc. Oct. 5, 1915, in Ariz. **Cap.**, \$2,500,000; outstanding Dec., 1915, \$1,500,000; shares \$1 par. Registrar & Transfer Co., New York, registrar and transfer agt. Cash on hand, Nov. 8, 1915, \$5,500. Listed on New York curb as a prospect. Outstanding shares 1,500,000, used in the purchase of property. Of this amount 1,000,000 shares were set aside to be given to stockholders of the Calumet-Corbin Mines Co., of Maine, in exchange for stock of that company, received by them in exchange for stock of the old Calumet-Corbin Mining Co., of Ariz., when the reorganization was effected early in 1915. "Reason for the gift of this stock to the stockholders of the Calumet-Corbin Mines Co. is stated by those giving it to be because they feel a certain measure of responsibility for the failure of the old Calumet-Corbin Mining Co., to make good, and because their efforts to bring it to a successful issue through its reorganization into the Calumet-Corbin Mines Co. failed." If the whole 1,000,000 shares are exchanged it will make the Dominion Gold Mining Co. a stockholder of the Calumet-Corbin Mines Co. to that extent.

Property: 6 claims, 280 acres, held by location, not contiguous, in the Gold Lake mining district, 100 miles N. E. of Winnipeg, Manitoba. Nearest P. O. is Manigotagan, at mouth of Manigotagan River, on eastern shore of Lake Winnipeg. Mine reached by boat to Manigotagan from either Selkirk on Red River, 23 miles north of Winnipeg, or from Gimil, or Icelandic Riverton, on the Gimil branch of the C. P. R. R.

The Gold Seal and Gold Pan claims, which were said to belong both to this company and to the Calumet-Corbin, are reported "abandoned 1915" the office of the New York curb.

The property is practically undeveloped. The country generally is covered by a swamp. Claims are said to show quartz veins "well exposed at the surface, except where covered by the swamp," and to contain considerable free gold. Management intends to do development work on the veins, ascertaining if veins and values continue to depth. Stock is a rank gamble.

DOMINION MINING CO.**NOVA SCOTIA**

Tangier, Halifax Co., N. S. W. J. Prinsk, mgr. Company owns a gold mine at Tangier. Production, 1914, amounted to 419 tons ore, yielding 57 oz. gold.

DOMINION NICKEL-COPPER CO., LTD.**ONTARIO**

Property taken over by British-American Nickel Corporation, which see.

DOMINION REDUCTION CO., LTD.**ONTARIO**

Offices: 42 Broadway, New York City, Cobalt, Ont. Officers: D. M. Steindler, pres.; Mortimer B. Davis, v. p.; E. P. Steindler, sec.-treas., with A. A. Allen and A. G. Kirby, directors. A. G. Kirby, supt. Inc. 1912, in Ont. Cap., \$2,000,000; shares \$1 par; \$1,600,000 outstanding. All the stock is held by the directors.

Company took over the Nova Scotia mill at Cobalt. Mill has 40 stamps, rated capacity 200 tons per day, and treats custom ore, including low-grade ore from the Kerr Lake and Crown Reserve mines, with which the mill is connected by an aerial tram. All ore is purchased outright and reduced to bullion; payment is made in cash or in bullion. Company also owns and operates the property of the Croesus Gold Mines, Ltd., in Munroe Twp., 50 miles E. of Porcupine.

DONNA DORA MINING CO.**NEW MEXICO**

Organ, Donna Ana Co., N. Mex. Reorganized as Mineral Hill Mining Co., which see.

DOUGLAS COPPER CO.**ARIZONA**

Office and secretary: Fred L. Mason, P. O. Box 421, Globe, Ariz. T. C. Hendricks, pres.; H. M. Foster, v. p.; Chas. Davis, supt. Inc. Aug., 1910. in Arizona. Cap., \$1,125,000.

Property: 35 claims, about 30 miles from Globe on the wagon road, and midway between the towns of Ray and Superior, Pinal county, Ariz. Lands are traversed by several N. W.-S. E. fissure veins of limestone and quartzite, carrying gold, silver and copper in oxidized ores or as bornite and chalcopyrite. Development: by 2 tunnels, a shallow shaft and a number of open cuts, all on one large vein. Management expects to sink shaft to 500' in depth. Property lies west of the limestone uplift in which the Newman group is located. From personal inspection, the claims are regarded as of highly speculative value.

DOUGLAS, LACEY & CO.**NEW YORK**

Company was notorious promoter of numerous mining and oil propositions and was in hands of a liquidating organization, known as the Amalgamated Properties, Inc., at last accounts. Mr. Steven's opinion of this firm and their clever scheme for obtaining money from small investors is fully described in Vol. X, under the title given above and that of the Amalgamated Gold & Copper Co. of Arizona.

DOUGLASS COPPER CO.**MICHIGAN**

Office: 705 Sears Bldg., Boston, Mass. Property north of Allouez and west of Ahmeek holdings in Allouez township, Keweenaw county, Mich. Officers: Charles J. Paine, Jr., pres.; George P. Gardner, v. p.; Arthur E. Coe, sec.-treas.; preceding with R. S. Shelden, C. C. Douglass, W. A. S. Chrimes and A. S. Knight, directors. Inc. 1912, in Michigan. Cap., \$2,500,000; shares \$25 par; assessable; 50,000 shares given for land, marked \$10 paid in value.

Property: 440 acres in a compact tract, being E. $\frac{1}{2}$ of Sec. 30 and W. $\frac{1}{2}$ of Sec. 29, embracing eleven 40-acre tracts formerly owned by the Sheldon Douglas and the Northey estates, and the St. Mary's Mineral Land Co. This tract covers the underlay, or deep extension of the Kearsarge lode into which the rich oreshoot now worked in the Ahmeek, pitches. To open this ground a 3,300' vertical shaft must be sunk. Company reported to have acquired 40 additional acres between Ahmeek and Allouez in 1916.

Management plans selling treasury stock to raise necessary funds for development work.

DOWN TOWN MINES CO.

COLORADO

Offices: Chemical Bldg., St. Louis, Mo., and Leadville, Colo. **Officers:** J. L. Goff, pres.; J. C. Waldeck, v. p.; Chas. J. Walker, sec.-treas., with C. W. Chamberlain, W. T. Nardin, directors. Jesse F. McDonald, mgr. Inc. March, 1914, in Colo. **Cap.**, \$400,000; shares \$10 par. Company has 20-year leases on several of the downtown mines at Leadville.

Property: 400 acres, includes a number of old mines which have produced several millions. The mines have been idle for a number of years; it was thought that all the valuable ore had been extracted, but in former mining no zinc ore was taken out. The present company was formed to unwater the mines and resume mining operations. As underground workings are estimated to be 30 miles in extent the task of unwatering is a large one. Pumping, which started in May, 1915, is done at the Penrose shaft with 4 electric vertical, centrifugal pumps. Property will be drained to the 875', the lowest level, and mining will then be resumed.

DOYLE CONSOLIDATED MINES CO.

COLORADO

Mine office: Mancos, Montezuma Co., Colo. **Officers:** Hon. Jas. Doyle, pres.; Earl P. Hopkins, v. p.; E. R. Marden, sec., 1426 You St., Washington, D. C.; D. T. Thompson, treas.; preceding with Wm. W. Fry and J. J. Butler, directors; R. J. Doyle, mine supt.; R. C. Morrison, mill supt.; C. F. Doyle, engr. **Inc.** Oct. 21, 1907, in Arizona, as consolidation of the Mancos Mining & Development Co., the Cliff Dwellers Gold Mining Co. and the White Quail Copper Co. **Cap.**, \$10,000,000; shares \$1 par; nonassessable; issued about \$3,000,000.

Property: 31 claims, in 3 groups of about 300 acres in Rush basin, part of the California mining district, Montezuma and La Plata counties, in southeastern Colorado. Claims are in a high part of the Sierra La Plata, $3\frac{1}{2}$ miles from La Plata city and 4 miles from the Colorado Southern railroad. The White Quail group shows a copper-bearing "dike" of monzonite, porphyry, said to be 150' across and to average $2\frac{1}{2}\%$ copper and \$4 gold across its entire width. Other claims cover about a mile of the apex of the Sundown (or North Star) vein, a flat, dipping fissure in red quartzite, carrying milling ore with gold and silver values. Company developed properties for several years, through Columbus tunnel. Had 10-stamp mill in 1910 and erected a new 150-ton mill, operated July, 1912. Company advertised for lessees in 1914.

Property has thus far failed to fulfill the extravagant claims and promises of the White Quail promoters, or their successors.

DRAGON CONSOLIDATED MINING CO.

UTAH

Office: care Knight Investment Co., Provo, Utah. Mine near Tintic, Juab Co., Utah. **Officers:** Jesse Knight, pres.; J. Will Knight, v. p.; W. Lester Magnum, sec.-treas.; R. E. Allen and L. E. Ritter, directors; E. R. Higginson, supt. **Inc.** 1911, in Utah. **Cap.**, \$2,000,000; shares \$1 par; issued 1,750,000; 250,000 in treasury. Stock listed in Salt Lake City. Annual report for year ending Dec. 31, 1915, shows assets, \$2,006,266, which includes: mining property, \$1,636,931; cash and accounts receivable, \$40,000.

and liabilities, \$6,266. Receipts totaled \$103,982 from ore sales, and operating expenses \$78,285, leaving a net gain for the year's operations of \$25,697, and a total gain to date of \$68,857.

Property: 28 claims, patented, 122 acres, comprising the Dragon and Governor groups in Tintic district. The Governor group has 2,000' or more of the big Iron Blossom fissure in limestone, from which the great production of that and the Sioux mines has come. The Dragon group shipped 100 tons per day of iron ore to the U. S. smeltery, for a long time. The Governor ground has a rich orebody of copper-silver ore developed by drifts from the Iron Blossom on the 300', 600', 800' and 1,000' levels, showing a 20' vein with 0.5 to 10% copper and 20 to 50 oz. silver. Part of the property is worked through the Black Jack shaft.

In 1915 development work consisted of 1143' of drifting, 983' of tunneling and about 400' of raises, winzes and opencuts. In the tunnel connecting the workings with the Iron Blossom property, large bodies of low-grade ore were encountered. Work is being prosecuted on the 800' level, in 1916.

Equipment: includes electric pump on 1,000' level which secures water supply of the Knight-Christensen mill, and a hoist installed in 1915.

Production: 1,743 tons in 1914, yielding 44,006 oz. silver, 135,814 lbs. copper, 57,552 lbs. lead and 432.37 oz. gold; 7,804 tons in 1915, yielding 102,143 oz. silver, 490,750 lbs. copper, 14,766 lbs. lead and 2,559 oz. gold.

DRUID GOLD MINING CO. COLORADO

Office: 420 Equitable Bldg., Denver, Colo. **Officers:** J. F. Vaile, pres.; W. N. Vaile, v. p.; C. A. Chisholm, sec.-treas.; Geo. E. Collins, E. M., mgr., with H. N. Berry, directors. Inc. in Colorado. Cap., \$1,000,000; shares \$1 par; nonassessable; all issued

Property: 11 claims, 95 acres, in Russell mining district, Clear Creek & Gilpin Co., Colo., has a complex system of fissure veins, carrying gold, silver, lead and copper in Archean schist. Developed by 1¼ miles of underground workings, including 1,200' tunnel and several shafts, deepest 650'. Equipped with steam hoists.

Production: in 1914, 457,565 tons smelting ore and 369,837 tons crude milling ore; in 1915, 259,916 tons smelting ore and 220,060 tons crude milling ore, latter averaging \$29.78 per ton. Gross earnings for 1915 were \$14,293 from ore sales and operating expenses were \$16,391, resulting in a loss of \$2,097 to the company. Property operated continuously for past 12 years.

DRUMMOND FRACTION ONTARIO

Property: 6 acres, at Cobalt, sold by Cobalt Comet Mines, Ltd., to Crown Reserve Mining Co., Ltd., and Kerr Lake Mining Co., Ltd., and operated jointly by them until Aug. 1, 1915, when the ore in vein No. 1 was all stoped out. Development in the future will be carried on from the workings of one of the above companies.

Production: 1915, to Aug. 1, was 89,968 oz. silver, with operating profit of \$20,502.

DRY CANYON CONSOLIDATED MINING CO. UTAH

Property: 29 claims, 12 patented, 400 acres, in Dry Canyon, Ophir mining district, Tooele Co., Utah. **Officers:** C. J. Garber, pres.-treas.; L. L. Travis, v. p.; J. E. Darmer, sec., with V. C. Anderson and Violet S. Scribner, directors. Inc. 1900, in Utah. Cap., \$100,000; shares 5c par, assessable; 1,800,000 shares outstanding. Annual meeting, Jan. 15th.

Property: 29 claims, 12 patented, 400 acres, in Dry Canyon, Ophir mining district, Tooele Co., Utah, said to show gold, silver, copper, lead and zinc ore, but not in commercial quantity at present. Miners said to have produced a little ore before present company acquired it. **Development:** by tunnels with a total of 7,500' underground workings. Company is developing.

DUBUQUE MINING & TUNNEL CO.**COLORADO**

Idle. Office: Colburn Bldg., Denver, Colo. Mine near Idaho Springs, Clear Creek Co., Colo. Officers: E. A. Colburn, pres.; W. W. Kirby, v. p.; J. A. Wright, sec.-treas.; preceding with B. L. Gorich and D. C. Waugh, directors. Inc. Dec. 4, 1905, in Colorado. Cap., \$2,000,000; shares \$1 par. Property: 2 claims, known as the Dubuque mine, opened by a 460' tunnel, said to show a 6' vein with a 3' paystreak carrying copper carbonates and melaconite, with good gold values.

DUCKTOWN SULPHUR, COPPER & IRON CO., LTD. TENNESSEE

Office: 1 Gresham House, Old Broad St., London, E. C., Eng. Mine office: Isabella, Polk Co., Tenn. Officers: J. G. Gordon, chairman and managing director; L. G. Mortimer, managing director; preceding with Col. J. Le G. Daniell, H. G. Palmer, Edward Dexter and Col. H. B. Mortimer, directors; Windsor Berry, sec.; William Young Westervelt, 17 Madison Ave., New York, cons. engr. Executives at the mine: C. W. Renwick, gen. mgr.; W. F. Lamoreaux, asst. gen. mgr.

Inc. in Great Britain, Feb. 16, 1891. Cap., £75,000; shares £1 par, in £74,800 ordinary shares and £200 founders' shares. Increased 1907, to £200,000 shares, increase subscribed to by the old stockholders at par, except £48,799 ordinary shares sold to the public at 25s. Stock is fully issued and fully paid. Profits are divisible on the basis of 7%, plus, one-half of the net remaining profits, to ordinary shares, balance of profits going to founders' shares. £120,100 first mortgage, 6½%, debentures outstanding, against which special redemption fund of £10,000 has been set aside, in addition to a general reserve fund of £45,000, previously accumulated.

Recent Dividends:

	Shares Ordinary	Shares Founder's		Shares Ordinary	Shares Founder's
1907.....	82½%	£249:3	1912.....	10 %	£29:19:5
1908.....	55 %	108:18	1913.....	12½%	54:18:11
1909.....	10 %	16: 0:8	1914.....	12½%	54:18:11
1910.....	10 %	21:17	1915.....	8 %	9: 9:10
1911.....	10 %	28: 4:5			

Total dividends including 1915, paid to all classes of shares, £492,129. Of this, £323,587, amounting to 355 5/6% on shares outstanding at the times of payment, was paid to the ordinary shares, and £168,532, amounting to 84,266% was paid to the founders' shares, the latter constituting the world's record for profitable copper-mining investment.

Property: nearly 7,000 acres, bought for £68,057, includes the Mary, East Tennessee and Isabella mines, which are active, and the Calloway and Cherokee mines which are idle. Country rocks consist largely of very tough highly metamorphosed, silicified mica schists, of ancient origin. The ores are exclusively sulphide, averaging about 2½% copper and containing minute quantities of gold and silver, sufficient however to be appreciable to the matte.

The Mary mine, which is the principal producer, has heretofore yielded largely through the 3-compartment 350' Baxter shaft, and from the 2-compartment 375' No. 2 shaft. The new Gordon, 3-compartment 1,180' shaft is however, the principal producer. The richest ore in the mine is on the lower levels. Ore actually blocked out in the Spring of 1916 is in excess of 1,000,000 tons, averaging over 2% copper and 17% sulphur.

The East Tennessee mine, idle since early days, did not commence to produce until 1910. The Thomas, or operating shaft, is 700' deep, has 2 compartments and yields from 50 to 75 tons per diem of ore containing

about 3½% copper and 10% sulphur. Reserves of over 30,000 tons of average ore had been proven in the spring of 1916.

The *Isabella* mine has thus far yielded but a few thousand tons of ore a year. The ore, averaging about 0.8% copper and 29% sulphur, has as yet been used for little else than experimental purposes. 5,600' of systematic diamond drilling, however, has already revealed over 2,500,000 tons of average ore with excellent prospects beyond, so that doubtless the property will, eventually, be worked on a considerable scale for acid and iron manufacture.

Equipment: the power plant at the smelter was enlarged in 1910 and changed from direct to 440-volt, 60-cycle, 3-phase, alternating current, two 500-k. w. Westinghouse-Parsons turbine generator units being installed, including air compressor for acid plant, etc., totaling about 1,500 h. p. The smelter, which is located at *Isabella* on the company's private, standard-gauge railway, about 2½ miles from the *Mary* mine, consists primarily of two 500-ton, sectional water-jacket blast furnaces. These furnaces are operated by induction motor Connersville blowers of 300 cu. ft. per revolution aggregate capacity, charged with Freeland patent electrical charges and served with electrical traveling crane for the mattes and belt bucket elevators for the granulated slag. Since 1905, when heap-roasting was abandoned, semipyrritic smelting, introduced into this country from Tasmania by this company, has been employed. The first fusion gives a matte containing from 15 to 20% copper and disposes of the bulk of the non-valuation material of the ore in a slag containing from 0.2 to 0.3% copper. This coarse matte is then raised to 50% copper content by a second fusion in the same furnace, usually undertaken once a week. A small percentage of coke, with cold blast of from 20 to 30 oz. pressure is used in both fusions. The 50% matte is sold to the American Metal Co., of New York, and treated for them at the Laurel Hill, L. I., or the Carteret, N. J., smelters.

In 1915, investigations were undertaken to determine the possibility of making sulphuric acid from the smelter fumes. In 1906, an experimental contact plant was erected but proved unsuccessful, and in 1908, work on the present chamber acid plant was commenced. This plant, which cost over \$600,000, was put into operation in less than a year from the time of breaking the ground for its erection and has since been producing at the rate of from 40 to 50 thousand tons per annum of 60° Beume sulphuric acid. It was the first acid plant to successfully convert sulphuric gases from pyritic smelting into concentrated acid. In 1915 a 50-ton acid concentrating plant was installed.

The credit for the successful development of the company is due primarily to the chairman and managing director, Mr. Gordon, himself a technical man, to the consulting mining engineer, Mr. Westervelt, who developed the mines, to the former manager, Mr. W. H. Freeland, assisted by the present manager, Mr. Renwick, who developed the pyritic smelting process employed, and to Mr. N. L. Heinz, chemical engineer, who designed and erected the present acid plant.

Production:

Year	Pounds Copper	Tons 60° B. Sulphuric Acid
1915.....	5,500,000	41,000
1914.....	5,862,000	46,900
1913.....	5,811,000	48,800
1912.....	5,213,000	48,100
1911.....	5,040,000	45,600
1910.....	4,409,000	46,800

Company is managed with commendable financial probity, technical

ability of a high order, and is heartily endorsed as worthy of confidence and investment.

DUENWEG LEAD & ZINC CO.**MISSOURI**

Webb City, Jasper Co., Mo. Inc. in Mo. **Cap.**, \$3,000. Has \$12,000 invested in land and plant. Operates a lease on 20 acres of J. I. Walker land; has one 180' shaft and a 200-ton concentrator. Output is lead and zinc concentrates.

DUGWAY COPPER MINING & SMELTING CO.**UTAH**

Office: 54 East 4th South St., Salt Lake City, Utah. Mine office: Clover, Tooele Co., Utah. **Officers:** O. F. Peterson, pres.-gen. mgr.; P. C. Kittle, v. p.; A. V. Peterson, sec.; O. F. Peterson, treas.; preceding with A. E. H. Peterson and H. B. Windsor, directors. Inc. June 13, 1902, in Utah. **Cap.**, \$30,000; shares 10 cts. par, assessable; issued, \$22,506.20. Annual meeting, third Tuesday in July.

Property: 6 claims, patented, 118 acres, in the Dugway district, 43 miles from a railroad. Shows an ore zone, reported by company, to be 300' long on the 200' level, containing a number of orebodies that carry chalcocopyrite, bornite and argentiferous galena, giving assays of 1 to 15% copper, up to 30% lead, up to 7% zinc, up to 66 oz. silver, and \$1.60 gold per ton. **Development:** by a 333' incline shaft, with about 1,000' of workings, showing considerable ore of good average assay tenor. Mine has no power equipment. Has been idle for several years.

DULUTH & CHIRICAHUA DEVELOPMENT CO.**ARIZONA**

Reorganized, 1912, as Sullivan Development Co., which see.

DULUTH-LEMHI MINING CO.**IDAHO**

Office: 416 Lonsdale Bldg., Duluth, Minn. Mine office: Baker, Lemhi Co., Idaho. **Officers:** Capt. J. H. Lanyon, pres.-gen. mgr.; A. R. Anderson, v. p.; W. H. Locker, sec.-treas.; preceding with C. H. Bird, H. P. Gill, and P. J. Blais, directors. Inc. Aug., 1910, in Minnesota. **Cap.**, \$250,000; shares \$1 par, nonassessable; issued, \$130,000. Annual meeting, first Tuesday in August.

Property: 6 claims, 120 acres, said to carry 1,000,000' of standing white pine, also a 7-acre mill site, 3 miles from a railroad, in the Wimpey Creek district. Mine shows diorite-porphry carrying 2 orebodies, of 4' and 16' width, traceable 1,800', carrying cuprite, azurite, malachite, and chalcocopyrite, estimated by Capt. Lanyon to average 6% copper, 4 oz. silver and \$8.50 gold per ton. Property is independently reported to have a 2' vein with an orebody assaying about 3% copper. The mine has a 140' tunnel, planned to be driven 427'. Management planned continuous development by tunnel. No recent reports received.

DULUTH-MOCTEZUMA MINING CO.**MEXICO**

Office: Room 610, Lonsdale Bldg., Duluth, Minn. **Officers:** Geo. H. Crosby, pres.; Cassius Bagley, v. p.; A. O. Rabideau, sec.; all of Duluth. Inc. 1909, in Minnesota. **Cap.**, \$500,000; shares \$10 par; \$300,000 issued. Company owns 5 undeveloped claims, with showings of lead, zinc and silver, in the Moctezuma district, Sonora, Mex. It lost the Monte Cristo, its only producing property, on which a payment of \$50,000 had been made.

In 1912, company took a lease on a 30-ct. royalty basis on 40 acres of iron land in the Cuyuna range, Minn. Drilling proved about 1,000,000 tons commercial ore and 500,000 of 40% ore on a small part of this tract. The lease was sold and the only holdings of the company are those in Mexico. Company is practically moribund.

DULUTH-SONORA COPPER CO.**MEXICO**

Office: 809 Sellwood Bldg., Duluth, Minn. Mine near Cananea, Sonora, Mex. **Officers:** James W. Norton, pres. and gen. mgr.; B. Silberstein, v. p.;

R. P. Burgan, 2nd v. p., with W. D. Underhill, sec.; Theron H. Hawkes, treas.; preceding with Geo. M. Tallant and A. F. Norton, directors. P. C. Probert, mine and smelter supt. and purch. agt.

Property: about 3,621 acres, embracing a part of the former holdings of the Calumet & Sonora Co., and the South Cananea, or Mitchell, property. The latter shows a strong vein with wide silicious outcrop and has been developed by a 400' shaft and some underground work, but an examination of dumps fails to show ore. Norton shaft, one-fourth mile distant, now filled with water, is said to be 293' deep and to show good ore, but none is seen and outcrop is unpromising. Remainder of property considered of questionable value. Property has been examined by Verne A. Hart and Walter Harvey Weed. Idle since 1910. Is a prospect only.

DULUTH & UTAH DEVELOPMENT CO.

UTAH

Idle. **Office:** 503 Utah Savings & Trust Bldg., Salt Lake City, Utah. E. J. Raddatz, pres.-treas.; Peter Porter, v. p.; Harvey J. Jones, sec. **Inc.** in Utah. **Cap.**, \$500,000; shares \$10 par, as successor of No-U-Dont Mining & Milling Co.

Property: 4 fractional claims, about 50 acres, near the Honerine tunnel and next north of the Honerine mine, which carries copper, at considerable depth. Mine has 2 shafts, deepest 500', with about 3,000' of workings, and under former ownership, produced silver-lead ore from above the 500' level, shipments said to have returned 35 to 60% lead and 20 to 30 oz. silver per ton, and to have aggregated \$250,000 in value. Copper ore is expected at depth.

Property will be absorbed by Bullion Coalition Mining Co. upon completion of payment of the \$15,000 purchase price. Part payments in 1914 and Feb., 1915, have already been distributed as dividends among the stockholders.

DUNDEE-ARIZONA COPPER CO.

ARIZONA

Phoenix, Ariz. **Officers:** Alex. Mackay, pres.; W. C. Foster, v. p.; with Chas. M. Shannon, L. H. Chalmers and F. S. Stephen, directors. J. W. Crenshaw, sec.-treas. **Inc.** March 21, 1916, in Arizona. **Cap.**, \$500,000; shares \$1 par; outstanding 425,000 shares, of which 225,000 belonging to F. S. Stephen and Alex. Mackay, former owners, are in escrow until Sept. 20, 1917. Equitable Trust Co., New York, transfer agent. U. S. Corporation Co., New York, registrar. Listed on New York curb as a prospect.

Treasurer's statement of May 1, 1916, shows assets: \$643,750, which includes, cash, \$55,294; accounts receivable (contracts sale treasury stock), \$86,300; mining property, \$499,995; machinery, \$1,003; general expense, \$1,158.

Property: 2 claims, the Greenup and Greenflower, lying between United Verde Extension on the east and Jerome Verde on the west, at Jerome, said to have a 1,000' showing of conglomerate ore. **Development:** 264' tunnel, in conglomerate for about 200', then enters limestone; from this tunnel level a 100' raise to surface and a 100' winze constitute a 200' shaft. Management expects to mine 5% copper ore from this conglomerate. Was preparing to drift on the ore and install compressor and hoist, March, 1916.

DUNKIN MINING CO.

COLORADO

Breckenridge, Summit Co., Colo. Owns the Dunkin Mine, worked under long-time lease by O. K. Gaymon, Theo. H. Knorr and W. W. Whar-ton of Breckenridge, and J. A. Summer of Salt Lake City.

Property: on Nigger hill, 1½ miles from Breckenridge, shows lead-sulphide ore carrying good gold values. Several rich pockets of ore were reported found in 1914-15 and to have netted the lessees \$15,000, \$30,000

and \$35,000. The Wolfstone vein, under development, is said to carry lead-carbonate ore, valued at \$40-\$50 per ton, at a depth of 500'. **Development:** to depth of 600' by shaft, tunnel and crosscuts. Producing 1 carload monthly.

DUNLAP COPPER MINE

NEVADA

Idle. Mina, Mineral Co., Nev. R. W. Hadden, cons. engr., 1807 Harvard Blvd., Los Angeles, Cal. **Property:** 10 claims, 200 acres and mill site in Silver Star mining district, 10 miles east of Mina. Claims show quartzite and quartzite breccia with mineralized zone 700' wide and 2,000' long, carrying ore-bearing reefs with oxides, carbonates, and native copper, values ranging from 1½ to 20% copper.

Development: by several thousand feet of tunnel, open cuts and winzes, mostly in ore, but none showing sulphide, as water level is not reached. Concentration test on 10 tons yielded product with 44% copper, \$8 gold and 8½ oz. silver. **Equipment:** includes compressor, blacksmith shop, etc. 250,000 tons of ore said to be available, but not blocked out. No recent returns secured.

DUPLEX MINING CO.

NEVADA

Office: 501 P. E. Bldg., Los Angeles, Cal. Mine office: Searchlight, Clark Co., Nev. Geo. L. Craig, Long Beach, Cal., pres.; C. W. Ennis, v. p.; Geo. R. Colton, sec.; G. F. Colton, treas. **Inc.** May 7, 1915, in Nevada. **Cap.**, \$500,000; shares \$1 par. All stock issued is assessable.

Property: 7 patented claims, 101 acres, is a well-known gold mine, with veins in quartz monzonite, carrying gold-silver ores, changing to copper, lead and zinc at depth.

Orebodies from 2.5' to 5' in width. **Development:** by 600' vertical shaft, a 45° incline shaft 400' deep, and a 74° incline shaft 300' deep, with about 2,500' of underground workings. Assay results from carload lots are 0.9 oz. gold, 4.9 oz. silver, 8.6% lead, 2.3% copper, 1.3% zinc. Company claims that on the lower levels the amount of lead is diminishing and copper increasing. The first-copper ore mined in commercial quantities in the district was shipped from this mine in Aug., 1913. Gross earnings from ore sales in 1914-1915 were \$7,500, with operating expense of \$10,500. Property equipped with stamp mill, which will resume operations when property is opened up between 500' and 700' levels. Company planning to remodel mill and install an oil flotation plant.

DUPONT COPPER MINES CO.

CALIFORNIA

Officers: Samuel J. Kistler, pres.; G. S. Fenwick, v. p.; J. E. Costegan, sec.-treas. **Inc.** 1915. **Cap.**, \$2,500,000; \$1,000,000 stock in treasury. Stock traded in on New York Curb.

Property: 31 claims in Trinity district, Trinity Co., Calif. Mine reported by company to be fully equipped and to have produced \$750,000 to date. Company also reported to have an option on properties in Nevada and Colorado. The stock was manipulated to \$3.50, May, 1916, and the enterprise closely resembles a stock-jobbing promotion pure and simple.

DUQUESNE MINING CO.

ARIZONA

Address: care T. A. Luckhart, sec., DuBois, Pa. Mine near Globe, Gila Co., Ariz. Geo. M. Luckhart, pres. and mgr. **Inc.** 1909 in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: 10 claims, in Gold gulch, about 3 miles south of the Arizona National and 15 miles west of Globe, in the Pinal mountains. Mine has a 10' vein, carrying mainly silver-lead ore with copper expected at depth. Opened by 3 tunnels, 2 of 200' and 300', showing ore assaying well in gold. A 50' shaft on the East End claim shows ore giving assays of 5% copper,

3 oz. silver and \$4 gold per ton. **Equipment:** includes a 25-h. p. gasoline hoist. Only assessment work done in 1914-15.

DUQUESNE MINING & REDUCTION CO.

ARIZONA

Maine office: Westinghouse Bldg., Pittsburgh, Pa. **Mine office:** Duquesne, Santa Cruz Co., Ariz. **Officers:** Geo. Westinghouse, pres.; W. D. Untergraff, sec.-treas.; Chas. A. Bankerd, agt.; H. T. Herr, v. p.-gen. mgr. **Property:** 84 claims, patented, 1,000 acres, near the Pride of the West and several miles south of the Mowry, in the Washington camp, Patagonia mining district, Ariz. Shows a contact deposit between limestone and granite-porphry, carrying argentiferous and auriferous chalcopryrite, sphalerite, galena and pyrite, opened by a shaft 650' deep. Ores being complex sulphides, are very refractory.

Property sometimes called the Washington mine, is said to have large bodies of complex ore which have been the subject of numerous experiments in wet, electrolytic, magnetic, dry and other systems of concentration for many years past. At present the workings on the Bonanza mine are 650' deep and the Duquesne shaft 120' deep. The Bonanza shaft is equipped with a 50-h. p. steam hoist and an Ingersoll compressor. The Duquesne shaft has a 12-h. p. gasoline hoist.

Mill and oil-flotation unit being installed, 1916.

The mine is shipping to the Douglas-Arizona smelter since Aug., 1912. Ore is hauled by wagon 23 miles to Patagonia, shipments running about 14% copper and 5 oz. in silver per ton.

DURANGO SMELTER.

COLORADO

Owned by San Juan Smelting & Refining Co., which is controlled by the American Smelting & Refining Co., at Durango, La Plata Co., Colo.

DURANT MINING & SMELTING CO.

MONTANA

Address: Spring Gulch via Martinsdale, Meagher Co., Mont. C. M. Durant, supt. **Property:** 14 miles from Martinsdale, shows fissure veins carrying copper sulphide ore with gold values. Developed by 200' two-compartment shaft. No recent returns secured.

DUTCH MILLER MINING & SMELTING CO.

WASHINGTON

Inactive. H. P. Fogh, pres. and agent for majority stockholders, 1403 Howell St., Seattle, Wash. Geo. H. Law, sec.-treas. **Cap.**, \$2,000,000; shares \$1 par; all issued; 1,000,000 shares in escrow for 5 years. Majority of stock is held by an ore contract association, which made a 5-year contract for output, the Dutch Miller to get 40% of earnings as royalty, one-half to apply to payment on 500,500 shares optioned to the ore contract association.

Property: 2 patented claims, on summit of range, 12 miles south of Skykomish, Wash., formerly worked by the Seattle-Boston Copper Co. Claims show an ore body in a vein in granodiorite. Ore is chalcopryrite with tourmaline and quartz and is high-grade. Mine lacks transportation facilities and rope tramway must be installed to get ore to the wagon road.

DUTCH-SWEENEY MINING CO.

CALIFORNIA

Quartz, Tuolumne Co., Calif. **Officers:** W. G. Devereux, pres.-gen. mgr., c/o Melones Mining Co., 131 State St., Boston, Mass. C. G. Segerstrom, v. p.; J. L. Brooks, supt.; with Albert Burch as manager for Bewick, Moreing & Co.

Property: formerly owned by the Dutch Cons. Gold Mining Co., comprises the Dutch mine, 70 acres, including the 200' Sweeney shaft, at Quartz Mt., 2 miles south of Jamestown. Company also has an option on the adjoining App mine, which is described under that title. Mines are on the Mother Lode. On the Dutch claim the vein splits into 2 veins about 75' apart; the east vein is irregular, breaking up into stringers running in all

directions, while the west vein is more regular. General course of veins is N. 35° W., with dip of 65° N. E. Both walls are of Calaveras slate.

Development: by incline shafts. Main working shaft, 1,800', is sunk on 65° incline, with levels to the 1,200' level at 100' intervals, remaining levels at 150' intervals. Work is being done from the 1,000' level down; on the 1,650' level the orebody has an average width of 16'.

Equipment: includes 150-h. p. double-drum electric hoist, one 450-cu. ft. Leyner and one 1,000-cu. ft. Rand Duplex air compressor. Water is pumped from 1,000' level by a Dean triplex pump.

Mill: 40 stamps, weight 1,050 lbs., drop 6", 106 drops per min., crushing 5 tons per stamp through 20-mesh; stamps are driven by two 50-h. p. motors. Pulp from batteries flows over Johnson and Frue vanners. Extraction assay \$36 gold per ton. Total operating costs are \$2.30 per ton. Company employs about 65 men.

EAGLE & BLUE BELL MINING CO.

UTAH

Office: 60 Congress St., Boston, Mass. **Operating office:** 404 Dooly Block, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. **Officers:** Jas. P. Graves, pres.; Henry N. Sweet, v. p.; Imer Pett, asst. treas.-gen. mgr.; Geo. E. Davis, sec.; preceding with Fred H. Williams, Duncan MacVichie and Fred R. Sands, directors; Sidney S. Millett, treas.; Wm. Owens, mine supt.

Inc. Sept., 1898, in Utah. Cap., \$250,000, increased, March, 1910, to \$1,000,000; shares \$1 par; issued 893,146 shares. Dividends: 4 of 5c each in 1913; 3 of 5c each in 1914; 1 of 10c and 1 of 5c in 1915, amounting to \$446,573 for the three years.

In March, 1910, issued 644,347 shares of new stock at 50 cts. to take up a floating debt of \$269,925 and put \$50,000 in the treasury, for working capital. Is controlled, through stock ownership, by Bingham Mines Co. First National Bank, Boston, registrar; Federal Trust Co., Boston, transfer agent. Stock is listed on the Boston curb. Annual meeting, first Saturday after first day of October.

Annual report for year ending Dec. 31, 1915, shows total receipts, \$281,755; expenditures include: operating expenses, \$101,705, and mine development, \$27,595. Net operating gain was \$143,345, as against \$121,536 in 1914. Assets amounting to \$1,035,976, include mining properties and real estate, \$893,702; mine construction and equipment, \$97,801; cash, \$16,860. Liabilities include: outstanding stock, \$893,146; surplus, \$142,800.

Property: 17 patented claims, 73 acres, includes a 9-acre mill site carrying the water right to a spring having a flow of about 30 gals. per minute. Lands lie between the Centennial-Eureka, Victoria and Chief Consolidated mines, on the Victoria-Grand Central ore zone, in the Mammoth Limestone.

Geology: ore occurs as chamber deposits in limestone, carrying gold, silver, lead and some copper. The lime is cut by numerous fissures, at all angles, with mainly vertical dip, carrying pipes, shoots and erratic deposits of ore at the intersections of fissures and bedding planes, in massive blue limestone. The mine has considerable bodies of silicious copper ore, lead sulphides and carbonates. Pay shoots vary from 6-100' in width. Average assays of dry ore: .230 oz. gold; 12.99 oz. silver; .31% copper; lead ore assayed: .13 oz. gold, 16.81 oz. silver and 17.05% lead.

Development: has been extensive in the last few years; the 3-compartment shaft is now 1,700' deep, with levels at 700, 1,000, 1,350, 1,550 and 1,700', and blind levels at 1,100, 1,200, 1,300, 1,425 and 1,538'. On 700' level a large body of silver-lead has been opened up. On the 1,300' an orebody, 10 to 70' wide and 20 to 50' high, has been developed for 600' north and south, occurring in a fractured zone as replacement of country rock and

has yielded silicious ore carrying gold and silver. On 1,350' level good ore was encountered and followed down 170' by a winze.

Development for 1914-15 amounted to 3,350' of drifts, crosscuts, raises and winzes, mainly on the 1,550' and 1,700' levels. No. 1 orebody, opened on the 1,500' level, reported to average 60' in width and proved continuously for 400' in length, extends from a point 120' above the 1,550' level down to 100' below the 1,700' level, with a N. S. course. Mine has about 4 miles of underground workings, deepest at 1,800'. Management plans development of unexplored sections in 1916. Reported in August that in sinking to the 1,850' level a first-class lead-silver orebody had been found 130' below the 1,700' level.

Equipment: includes a 180-h. p. Hendrie & Bolthoff double-drum hoist, good for 2,000' depth, a 100-h. p. tubular boiler and a 4x6' electric Triplex pump. The mine was electrically equipped throughout and a 250-h. p. Ingersoll-Rand air compressor and 225-h. p. electric hoist installed in 1916. Electric power is supplied by the Utah Power & Light Co.

	Tons	Oz. Gold	Oz. Silver	Lbs. Lead	Lbs. Copper
1915.....	26,744	1,226	441,263	8,275,734	3,806
1914.....	32,736	1,444	554,411	8,588,565	31,443
1913.....	35,244	7,514	417,279	4,664,362	129,062

Total shipments to date since 1908, 131,094 tons. Average grade of ore shipped in 1915 was (dry ore) \$8.13 per ton gross value; lead ore, \$15.07 per ton gross value. Gross value of total ore shipments in 1915 was \$492,-488, giving net smelter returns of \$280,135. Shipments are made to Salt Lake Valley smelter.

Property in favorable condition, physically and financially, and management able.

EAGLE COPPER CO.

CALIFORNIA

Taylorville, Plumas Co., Cal. Owns group of claims covering low-grade pyrite deposit with limited development. Company built small smelter. 1912.

EAGLE COPPER-GOLD MINING CO.

ARIZONA

Dead. Described Vol. XI, Copper Handbook. Property now owned by J. L. Zesiger, former treas., 2072 E. 40th St., Cleveland, O.

EAGLE COPPER MINING CO.

UTAH

Mine office: Santaquin, Utah Co., Utah. **Officers:** Armon Cravens, pres.; C. W. Higginson, v. p.; C. E. Snell, sec.-treas.; L. F. Peterson, supt. Inc. May, 1907, in Utah. Cap., \$1,000,000; shares 10 cts. par. Last assessment of ½ ct. delinquent, April 11, 1914. Mine, on Mount Nebo, east of Santaquin, has shipped a little high-grade lead and copper ore. Developing with a small force.

EAGLE GOLD & COPPER MINING CO.

ARIZONA

Address: care W. J. Riley, First National Bank, Clifton, Ariz. Mine near Morenci, Greenlee Co., Ariz. **Officers:** Wm. M. McCoy, pres.-mgr.; E. V. Horton, J. R. Hampton, J. R. McRea, M. H. Kane and E. C. Bunker, all of Clifton, directors. J. J. Hall, mine supt. **Property:** 20 claims, 4 miles N. W. of Morenci, carries veins with copper, lead and gold ores, developed by a 40' shaft on 1½' vein of rich silver lead ore. Shipped 7.4% copper ore, 1912, to the Shannon smelter. **Equipment:** includes 5-stamp gold mill. Idle since 1912.

EAGLE METALLIC COPPER CO.

PENNSYLVANIA

Address: care H. D. Deschler, Belvidere, N. J. Branch office: 208 Haas Bldg., Allentown, Pa. Mine office: R. F. D. 3, Fairfield, Adams Co., Pa. **Officers:** F. H. Cuyle, pres.; Dr. P. A. Stem, v. p.; A. L. Wickert, sec.; Thos. Zellner, treas.; Owen H. Nagle, gen. mgr.; preceding with

A. V. Diefenderfer, directors. Inc. 1903 in New Jersey. Cap., \$500,000; shares \$1 par, and reinc. Dec. 9, 1910, in Pennsylvania; \$150,000 in treasury after raising \$60,000 to build a smelter in 1911.

Property: 500 acres in Jacks Hollow, on the Maryland border, one-half mile from and crossed by the Western Maryland railroad, near Charmian. **Development:** by open-quarry work from pit 200' across, connected with smelter by 750' aerial rope tram. The mine is apparently a large open-cut filled with water. Careful examination of exposed rock and surface material said to show no indication of copper whatever. It is also reported that a pile of crushed ore in smelter bins, 1915, did not contain the minutest particle of mineral. Samples of matte from furnace said to run 2% copper, which evidently came from the pyrite used for flux.

Equipment: includes a 250-h. p. steam plant, 150-h. p. engine and a 2½" core drill, with office and laboratory. Smelter built in 1911. Regarded as a valueless property.

EAGLE MINE.

CALIFORNIA

G. H. Goodhue, owner, Indian Falls, Plumas Co., Cal. **Property:** near Genesee, Plumas county, consists of 15 claims, 300 acres, covering 8 outcropping orebodies, discovered, 1908, and occurring at contact between limestone and porphyry and as lenses in schist. Ore zone runs N. 27° W., dips 55° S. W. Ores contain chalcopryrite and bornite and are said to average 2% copper, 1½ oz. silver and \$2.40 gold per ton.

Development: 342' of workings, including 9 shallow shafts, 12 to 18' deep and a 210' tunnel, all in ore. Property 20 miles from Western Pacific railroad. No recent returns secured.

EAGLE MINING CO.

MONTANA

Care Harper McDonald Co., Lewisohn Block, Butte, Mont. Hon. Patrick Mullins, Arthur V. Corry and Thos. Bryant, directors. Inc. March 10, 1906, in Montana. Cap., \$150,000; shares \$1 par; is supposed to have increased capitalization, April 29, 1907, to \$250,000, shares 50 cts. par. **Property:** north of Walkerville, has a 250' shaft, showing a 5' vein, was formerly a silver mine, shipping ore running up to 1.7% copper and 186 oz. silver per ton. Mine dismantled, but claims show large vein, are well located and worthy of further prospect work.

EAGLE MOUNTAIN COPPER CO.

ARIZONA

Col. P. T. McGrath, gen. mgr., but his whereabouts unknown at Kelvin, Pinal Co., Ariz. **Property:** 27 claims, known as the Copper Queen group, in the Riverside district, is slightly developed. Idle several years and lands of doubtful value.

EAGLE PEAK COPPER MINING CO.

WASHINGTON

Mine office: Longmire, Pierce Co., Wash. Main office: Tacoma, Wash. **Officers:** R. H. Wheelock, pres., Ashford, Wash.; Bakier Long, v. p.-mgr.; M. A. Long, sec.-treas.; preceding, with G. W. Anderson and Chas. Metzler, directors. Inc. 1908 in Washington. Cap., \$150,000; shares \$1 par, fully paid and nonassessable; issued, 130,000. Annual meeting, April 21.

Property: 2 claims, 40 acres in Cascade mining district, 14 miles from railroad, in the heart of the Tatoosh range, near Mt. Tacoma. Claims show fissure veins in granite with ore carrying bornite and chalcocite and said to average 17% copper, \$4 in gold and some silver. **Development:** by shaft and tunnel. **Equipment:** includes 25-h. p. power plant, air compressor and 4 buildings.

EAGLE-PICHER LEAD CO.

MISSOURI-OKLAHOMA

Office: Continental & Commercial Natl. Bank Bldg., Chicago, Ill. **Officers:** O. S. Picher, pres., Joplin, Mo.; R. W. Evans, v. p.; S. M. Evans, v. p.; Jos. Hummel, Jr., sec.; T. S. Brown, Jr., treas.; above, with J. B.

Swift, chairman, F. L. Perin, J. E. Webb, Fred Hertenstein, directors. Inc. June, 1916, in Ohio. **Cap.**, \$9,000,000 com. and \$1,000,000 6% non-cumulative Pfd.; \$100 par; \$7,000,000 Com., and \$1,000,000 Pfd. outstanding. Pfd. dividends payable quarterly; initial dividend of 1½% paid July 12, 1916. Central Trust & Safe Deposit Co., Cincinnati, transfer agent. Annual meeting in January.

Company is a consolidation of the Eagle White Lead Co., of Cincinnati, O., and the Picher Lead Co.

The Picher Lead Co. is one of the oldest concerns in the Joplin district, having been chartered in 1867. Today it is one of the largest lead producing companies in the State. For many years the product was white lead and soft pig lead. During last 3 years company has entered the mining field, taking over extensive leases in Oklahoma.

Property: original Oklahoma lease consisted of 3,000 acres of Indian lands in North Miami district, about 1 mile from Cardin and 8 miles N. E. of Miami, Ottawa Co. After sinking 40,000' of drill holes, eight 40-acre tracts of the prospected territory were retained for further development. The property is owned by A. J. McConnell and the new townsite is called Picher.

Ore: occurs in a semi-sheet formation and is reported to average 11% in zinc and lead, the former predominating by a ratio of 3 to 1. Three veins were intersected in development work at 75', 130' and 200'. The White Bird tract has been leased to the W. M. Sheridan Co., Inc., of Chicago, and the Crawfish tract to the Ortt & Buchanan Mining Co. Both companies are developing and sinking shafts on their respective ground. Two 300-ton concentrating mills erected by the Picher Co. on these tracts were started up early in 1916.

The Picher Co. is sinking 3 shafts and erecting a 4th plant of 600 tons capacity at Henryetta, Okla., in 1916. The 3rd or Bingham plant was nearly completed in April, 1916. A. E. Bendelan is superintendent.

Company also operates a plant at Galena, Kansas, and has a 3-year lease on the zinc smelter of the Collinsville Zinc Co., at Collinsville, Ill.

EAGLE RIVER MINING CO.

ALASKA

Address: care D. C. Jackling, Hobart Bldg., San Francisco, Calif., who with his friends controls the company. **Property:** a group of gold quartz claims is 4 miles from Echo Harbor and 25 miles from Juneau, Alaska, adjoining and on same belt as the Yankee Basin and Cottrell groups. Gold ore occurs in 8 small shoots of high-grade quartz in black slate zone, broken by an elaborate faulting system and reported to average \$20 per ton.

Development: by various old tunnels abandoned 1913, when new tunnel, 2,000' long in 1914, tapped ore shoots beneath and beyond faulted section, at a depth of 700'. In 1915, 2,000' of diamond drilling in 7 holes was done. Property worked since 1903, producing upwards of \$500,000, according to reports.

EARL & EAGLE MINING CO.

UTAH

C. W. Earl, supt., American Fork, Utah Co., Utah. W. E. Evans, sec., Lehi, Utah. **Cap.**, \$10,000; shares 1 ct. par; \$5,600 issued. Listed in Salt Lake City.

Property: 120 acres, south of the Live Yankee and Globe Cons. properties in American Fork district, is said to have the continuation of the Live Yankee vein. A tunnel is being driven to cut the vein. Property is in the prospect class.

EAST BUTTE COPPER MINING CO.

MONTANA

Office: 85 Devonshire St., Boston, Mass. Mine and works office: Butte, Silver Bow Co., Mont. **Officers:** Robt. H. Gross, pres.; Hon. Jas. H. Reed,

v. p.; Wm. P. Everts, sec.; Frank P. Son, treas.; Oscar Rohn, gen. mgr.; preceding, with F. Ward Paine and Daniel C. Noble, directors; Andrew J. Ray, mine supt.; John E. Rothwell, mill supt.; G. G. Vivian, smelter supt.; Julius H. Warner, engr.

Inc. Oct. 14, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par, increased, May 11, 1909, to \$6,000,000, shares \$10 par, non-assessable; issued \$4,110,000. Has about 2,500 shareholders. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock is listed on the Boston Stock Exchange and N. Y. Curb. Annual meeting, first Monday in April.

The East Butte Copper Mng. Co. has no indebtedness. It owns \$910,716 of outstanding bonds and all preferred stock of the Pittsmt Copper Co., the latter amounting to \$1,000,000 par value; also $\frac{4}{5}$ of the common stock, amounting to \$4,000,000 par value. East Butte Co. works the property of the Pittsmt Copper Co. under an operating agreement.

Annual report for year ending Dec. 31, 1915, shows net surplus on operations of \$782,997 as compared with \$222,252 in 1914 and \$531,772 in 1913.

Financial statement of Dec. 31, 1915, shows cash and copper, \$318,385; accounts receivable \$14,755, with accounts payable of \$371,005.

Property: the Dutton group, 134 acres, held by placer patent, is in the S. E. part of the Butte camp near the Pennsylvania mine.

Principal production is from one strong E. W. vein in which an ore shoot 500' long by 3' wide is being mined between the 800' and 400' levels, averaging 4%-5% copper ore. Below the 800' level the major portion of this vein will dip outside of property owned by the East Butte Co. At present, operations are confined to territory adjacent to the Dutton No. 1 shaft, 900' deep, from which 100 to 150 tons daily are being hoisted. This shaft is equipped with electric hoist and compressor plant.

Geology: the Pittsmt claims cover 280 acres of flat valley bottom, about $1\frac{1}{2}$ miles east of Butte and extending outward from the footslopes of the continental divide mountain ridge. The ground is a filled-in valley, the sandy wash and debris being in places several hundred feet deep, so that no outcrops of any kind exist on the ground. The underlying rock is the normal Butte granite (quartz monzonite) which is cut by 3 systems of veins: Northwest, corresponding to the Blue Vein series of Butte; Northeast, and an East-West vein series. Ore shoots occur in veins of each series.

Development: 2 shafts, Nos. 2 and 3, 1,830' and 1,240' deep, respectively. Shaft No. 2 is the working shaft. Levels are opened from it at 800, 1,000, 1,200, 1,500 and 1,800'. The 1,500' level is but partially opened and work is only commencing on the 1,800' level. The zone of oxidation and leaching of copper values extends from 500' to 700' below the surface. Underground workings amount to about 16 miles. There are some 12 principal veins on the property that have been productive. While these veins are not wide, usually under 5', the ore shoots are long and persistent. At least 2 veins on the 800' level have been stoped almost continuously for 1,500' in length. Though the 800' level has been the most productive level opened to date, due both to an intense primary mineralization and secondary enrichment which has affected the lower levels to a much lesser extent, the lower levels continue to yield strong ore shoots of commercial grade, though lower in values than ore from upper levels. Development for 1915 consisted of 6,226' of drifting and crosscutting, and sinking No. 2 shaft from 1,770' to 1,828'.

Miscellaneous holdings include the Swissmont group of 6 claims, near

Elkhorn, Jefferson Co., Mont., and the Chamounix group near Austin, Lewis & Clark Co., Mont., including the Christina group of 6 claims and the Fannie Parnell group of 33 claims. The Swissmont group has developed a considerable tonnage of low grade oxidized gold ore carrying an excess of iron over insoluble material, which ore has had value from its combined fluxing character and gold content. During 1915 and first three months of 1916 continuous shipments of this ore have been made to the Pittsmont smelter, amounting to 50 tons daily in March, 1916. The Chamounix group has shipped some silver-copper ore in the past, but is now idle. Company also has timber operations at Feely, Mont.

Equipment: consists of hoisting plant, milling flotation plant and smelter. The above includes a 2,000-h. p. steam plant, 2,000-h. p. electric plant, 600-h. p. steam hoist good for 2,000', and 50-h. p. steam hoist good for 1,500'; a 25-drill Nordberg and 25-drill Rand air compressor, and 50 power drills. Electric power is used for practically everything except hoisting. There are about 20 buildings, which include the smelter, sinter plant, 2 engine rooms, change house, boiler room, concentrator, flotation plant, carpenter, machine and electric shops, sampling mill, laboratory and office building. The smelter building contains one 600-ton blast furnace and one 300-ton furnace with 3 basic lined converters. The sintering plant contains one 42" Dwight-Lloyd sintering machine. Concentrator is equipped with crushers, jigs, tables, etc., and flotation plant is equipped with tube mills and Janney flotation machines. The capacity of concentrator is 600 tons and of flotation plant 800 tons, the additional capacity of flotation plant to be used in reworking tailings.

The mine is served by the Northern Pacific railway, which makes connections at Butte with other lines, and the company has about 3 miles of private track, connecting the shops, mill and smelter, with 1 locomotive for switching.

A limestone quarry, 275 acres, bought, 1910, at Lime Spur, east of Whitehall and about 40 miles east of Butte, in Jefferson county, furnishes flux for the smelter.

The Pittsmont reduction plant is the only operating smelter in Butte and does a considerable amount of custom business, treating ore from several independent mines.

Normal operations for 1915 amounted to practically 7½ months out of 12, or a total of 230 out of 365 days. During 1914 the property operated 220 days.

Production 1916 has run higher than in 1915, though the ore is in cop-

per content, about 1% less than 1915, or approximately 3½% copper in addition to gold and silver values. The output of blister copper for the first half of 1916 has been 8,301,620 lbs. July output was 1,893,120 lbs. copper and 49,802 oz. silver.

EAST BUTTE EXTENSION COPPER MINING CO. MONTANA

Idle. Office: 113 Hamilton St., Butte, Silver Bow Co., Mont. Officers: Chas. J. Schatzlein, pres.; Philip A. Breen, v. p.; Frank H. Cooney, sec. and gen. mgr.; Dr. C. E. Blackburn, treas.; preceding, with Chas. N. Joyce, directors; A. F. Munroe, engr. Inc. April 10, 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; issued, \$550,000. Paid, Oct. 1, 1906, a 1% dividend, amounting to \$2,486.

Property: various fractional claims, 4 acres, lying between the Belmont, Pennsylvania and Ground Squirrel mines of the Anaconda, developed by 6 shafts, deepest the 250' two-compartment No. 6 shaft, begun 1909, with about 500' of crosscuts. The Westlake and Wall mines are said to have produced, under former ownership, about \$300,000 worth of ore. The two-compartment No. 1 shaft is 170' deep, and the 200' No. 2 shaft shows ore assaying up to 13% copper and 1 oz. silver per ton. No. 3, formerly known as the Westlake, has a small precipitation plant.

A little ore was produced, 1907, by lessees, shipments reaching 40 tons daily, with net smelter returns of \$37,360.21, yielding the company a net royalty of \$12,881.83 in 1907. Company also owns a divided one-half interest in the Centerville claim, and undivided interests as follows: one-half in Malone; eleven-sixteenths in Little Evelyn; one-sixth in Valley Forge one-half in Gregory; one-fourth in Simon; one-eighth in Eureka First; three-fortieths in Lost Fraction, and three-fortieths in Katy T. Inactive since July 20, 1909.

EAST CALEDONIA MINES CO. IDAHO

W. A. Barter, sec., First National Bank Bldg., Kellogg, Idaho. Officers: Herman J. Rossi, pres., Wallace; W. H. Nichols, v. p., Butte; W. A. Barter, sec.-treas.; with W. I. Hall, Kellogg, and Frank Pferman, Wallace, directors. Geo. H. Jennings, supt. Inc. March, 1915, in Idaho. Cap., \$1,000,000.

Property: 130 acres, including the Keating mine at Wardner, Shoshone Co., Idaho. Ore: silver-lead in 4 known veins, from 9-26' wide. Assays said to run from 1½% to 36% lead, with good silver values. Company claims to own or control 2,300' of the Silver-King-Caledonia vein system for a length of 4,500'.

Development: several tunnels and the Keating 416' vertical shaft, which present company unwatered to the 200' level. The mine had been worked intermittently for several years before present company acquired control. Recent development is said to have opened up 15% lead ore on the 100' level. Width of vein is 2½' to 3'.

Equipment: hoisting plant, 60-h. p. engine, air compressor, pump, cable, shaft house and blacksmith shop. Plans development at depth after de-watering old workings.

EAST CANADA SMELTING CO., LTD. QUEBEC

Property acquired by the Weedon Mining Co., Ltd., which see.

EAST COEUR D'ALENE MINING CO. MONTANA

Address: care Harry Hogan, pres., Mullan, Idaho; T. A. Westervelt, sec. **Property:** a group of claims a few miles north of Haugan shows a 30' vein carrying a 2' pay streak of copper ore reported to carry 8% copper and good gold values. Development by short tunnels and drifts.

EAST SNOWSTORM MINING CO. IDAHO

Mine near Larson, Shoshone Co., Idaho. A fraud order was issued,

1911, by the postal authorities against C. E. Mitchell, promoter of this company, and also against the company. The title was changed, 1911, to "The Snowstorm Deep Mines, Ltd.," which has also been branded fraudulent. Property described Vol. X, Copper Handbook.

EASTERN BELLE MINE.**MONTANA**

See Helena Mining Bureau, Inc.

EASTERN CANADIAN COPPER CORPORATION, LTD.**NEW BRUNSWICK**

Office: 14 St. John St., Montreal, Quebec, Canada. **Officers:** Howard R. Richey, pres.; E. A. Baynes, v. p.; with Chas. Brandeis, A. M. Vici and E. A. Reilly, directors; A. H. Thomson, treas.; Geo. W. Dow, sec. **Inc.** Dec. 28, 1915, in Ottawa. **Cap.**, \$990,000; shares \$10 par; 30,000 shares deposited in escrow with Security Trust & Registrar Co., New York, transfer agt. and registrar, for the benefit of the company. Listed on New York Curb.

Statement of March 1, 1916, shows assets of \$990,000 mining rights in St. John Co., inclusive of buildings and equipment. Free of debt.

Property: covers 1 sq. mile, including the Vernon copper mine on the north shore of the Bay of Fundy, St. John Co., New Brunswick, reached by both the Intercolonial and C. P. R. R. to Sussex and thence by driving 32 miles to Goose Creek. Can also be reached from St. John, N. B., by boat, being 45 miles E. of St. John and $1\frac{1}{4}$ miles from Goose Creek Harbor. Holdings on a steep mountain rising 550' above the bay are said to show copper ore. Country rock is diorite, schists and slates, crossed by diabase dikes.

Development: 7 tunnels, from 50' to 170' long, said to show a quartz-calcite vein, containing bornite and chalcopyrite, 45' long where exposed in lower tunnel, 6'-10' wide, and assaying 13.4% copper; tunnel No. 4, 45' E. of No. 1, is said to show several quartz veins, "ramifications of the vein exposed in the above 3 tunnels." The other 3 tunnels are inaccessible at present. **Equipment:** includes a shipping dock, blacksmith shop and quarters for the men, but little mining equipment.

Company is planning to renew development work in 1916 with the object of attaining "an average daily output of 100 tons of ore," a feat which will hardly be accomplished in 1916.

EASTERN CANANEA DEVELOPMENT CO.**MEXICO**

Mine about 18 miles N. E. of Cananea, Sonora, Mex. John Martin, supt. Property said to show copper sulphide ore, developed by shaft. Property is held under lease and bond from M. L. Fay, of Duluth, Minn., who controls the Fay Cananea Copper Co., which owns the mine through the Cananea Eastern Mining Co., S. A., a Mexican corporation. Idle. No returns secured.

EASTERN PRINCE GOLD & SILVER MINING CO.**NEVADA**

Cap., \$100,000; shares 10c par. Listed on Salt Lake Exchange. Owns 8 claims adjoining Prince Consolidated in Ely mining district, Pioche, Lincoln Co., Nev. Believed to have extensions of the Prince Consolidated low-grade, iron-manganese deposits, carrying a little silver, lead, zinc and gold.

EASTERN STAR MINING CO.**NEVADA**

Office: Winnemucca, Humboldt Co., Nev. **Officers:** E. Reinhart, pres.; Chas. F. Spilman, v. p.; L. G. Campbell, sec.-treas.; above, with Daniel Craig and R. S. Bolam, directors. **Inc.** 1911 in Nev. **Cap.**, \$1,500,000; shares \$1 par; outstanding, 1,200,000.

Property: 5 claims, 70 acres, in Gold Circle mining district, Elko Co., Nev., said to cover 4,000' on the strike of a gold quartz vein, average width

4½', in andesite. The promoters in their lavish advertising campaign in 1914 claimed, "This quartz is heavily mineralized, much of it carrying values from \$500 to several thousand dollars per ton"; also, "As the mine stands today there are fully 20,000 tons of ore developed on the three levels and awaiting extraction. As nearly as can be estimated this ore will average not less than \$30 per ton."

Development: 280' incline shaft with levels at 75', 160' and 240', and a total of 1,700' underground workings. **Equipment:** includes 25-h. p. gaso-line hoist.

In Nov., 1914, the mine closed down with the announcement that the "owners are getting ready for large operations next year. A 50-ton mill is to be installed on the property." In 1915 it was reported that the mill would be built, but to date this office has no information that anything has been done.

The "Thousand Member Gold Mining Association" was "founded" upon the Eastern Star mine. This company was organized to acquire control of a number of gold mines in Colorado, Nevada and other sections of the West and participation in it would assure the investor of returns fivefold within a year. It is not known how many persons got caught; those who invested deserve no sympathy for falling for such rank misrepresentations as were made in the lurid advertising sent out.

ECHO GOLD MINING CO.

SOUTH DAKOTA

W. L. Mason, sec.-treas., Manchester, N. H.; A. J. Simmons, gen. mgr., Deadwood, S. D. Inc. 1892 in South Dakota. **Property:** 62 acres, in the Maitland district, 5 miles N. W. of Deadwood, Lawrence Co., S. D., said to show gold, silver and lead, are in fissure veins. Developed by 200' vertical shaft, and several tunnels, with total workings of 2,270'.

Equipment: includes a 25-h. p. electric hoist, air compressor and sinking pump. Management claims company is well financed, and is yet in the prospective stage.

ECLIPSE-ARGO MINING CO.

MONTANA

Address: E. G. Hoffman, sec.-treas., New Britain, Conn. Mine near Argo, Broadwater Co., Mont. Bondholders foreclosed and in April, 1913, deeds were given to trustee for entire property.

ECLIPSE CONS. MG. & INVESTMENT CO.

WASHINGTON

Address: John E. Newell, supt., Silverton, Snohomish Co., Wash. O. Robert Dahl, pres., Seattle, Wash.; S. Hilmar Dahl, v. p.; H. M. Dahl, sec.; preceding officers, Andrew Chilberg and John E. Newell, directors. Inc. 1906 in Washington. **Cap.**, \$3,000,000; shares \$1 par, nonassessable; giving \$2,000,000 in stock for the property.

Lands: 10 claims, unpatented, and a mill site, in 2 groups, including the mill and claims on the Stillaguamish river, formerly held by Copper Independent Consolidated Mining Co.

Mine has 5 tunnels, longest 1,100', on a fissure vein in slate, carrying a little copper, but mainly gold and silver values. Water power from the Stillaguamish river develops 830-h. p. by turbine. The concentrator, rated at 300 tons daily capacity, has tank room for cyanide treatment. A compressor of 1,000 cu. ft. capacity to be installed.

ECONOMIC MINING & MILLING CO.

NEW MEXICO

George Hopkins, pres. and mgr., Carrizozo, N. M.; Ed. Monroe, sec.; A. V. Swearingin, treas. **Property,** 7 claims, in White mountains, 8 miles east of Carrizozo. Ore carries copper with silver and gold values in iron gangue, averaging \$12 per ton. Developed by shafts, tunnels and open cuts, exposing orebodies of low-grade copper ore with gold values. Man-

agement plans sinking tunnel and acquiring adjoining properties, said to have promising showings of high-grade ore.

ECONOMY GOLD MINES CO.**MONTANA**

East Helena, Mont. **Officers:** S. Rosenfield, pres. and mgr.; Chas. Ludwig, sec.-treas. **Inc.** in Mont. **Cap.**, \$100,000; shares 50 cts. par.

Property: 180 acres, patented, 6 miles S. E. of Helena, shows fissure vein in diorite, andesite and granite. Vein has an E.-W. strike, with 75° dip. Ore, containing gold, silver and copper, occurs in shoots said to average 2' in width and from 35' to 75' in length.

Development: 2 shafts about 100' deep. Ore was stoped out from the 100' to the 50' level and mine was idle during winter of 1915-16. It was reopened early in 1916 and management is sinking shaft. **Equipment:** includes gasoline hoist and 8-stamp mill. Shipments, 1915, amounted to 400 tons of \$24 ore.

EDEN MINING CO.**NICARAGUA, C. A.**

Controlled through ownership of 55% of capital stock, by Tonopah Mining Co., of Nev. **Office:** 572 Bullitt Bldg., Philadelphia, Pa., and Bluefields, Nicaragua, C. A. **Officers:** J. S. Austin, pres.; J. H. Whiteman, v. p.; W. W. Charles, v. p.; P. S. Bickmore, sec.; C. A. Higbee, treas. **Directors:** J. S. Austin, J. H. Whiteman, C. A. Higbee, Chas. R. Miller, C. A. Daniel, Henry D. Moore, Samuel Bell, Jr., Geo. S. Munson and Wm. I. Forbes. J. L. Phillips, gen. supt.

Inc. Nov. 24, 1914, in Delaware. **Cap.**, \$1,000,000, all outstanding; shares \$1 par, non-assessable. Company office, transfer office, Fourth St. National Bank, Philadelphia, registrar. Annual meeting, first Wednesday in May. Option on the property was exercised by Tonopah Mining Co. in Jan., 1915.

Property: 9 square miles in the Pis Pis mining district, Nicaragua, C. A. Only a comparatively small amount of development and construction of power and milling plants has been done; not yet operating or treating ore. Net average value of ore reported to be \$12 to \$15 gold per ton, with mining and milling costs estimated under \$6 per ton. **Development:** mainly by tunnels.

First unit of the mill will have a daily capacity of 100 tons. Electric power obtained from the hydro-electric plant of the Tunkey Trans. & Power Co., which was organized to acquire and operate the power plant, railroad and river transportation. The entire stock of that company is owned by the Eden Mining Co.

EDISON MINING & MILLING CO.**NEW MEXICO**

Idle. Property, near Red River, Taos Co., N. M., carries gold-silver-copper ores. Equipment includes a steam plant and 10-stamp mill.

E. & F. MINING CO.**NEVADA**

Idle. **Address:** care Walker Bros. Bank, Salt Lake City, Utah. Mine office: Pioche, Lincoln Co., Nev. **Officers:** A. C. Ellis, Sr., pres.; A. Levy, sec.; Walker Bros. Bank, treas. Arthur Murphy, mgr. **Inc.** March 17, 1902, in Utah. **Cap.**, \$100,000; shares 50 cts. par; assessable.

Lands: 12 claims, 11 patented, 240 acres, in the Bristol and Jackrabbit districts, 1½ miles from a railroad. Mine has a 450' incline shaft and 2 tunnels, one of 350', with several hundred feet of lateral workings. **Equipment:** includes a 25-h. p. gasoline hoist and necessary mine buildings. Mine produced a little copper ore, with excess of iron, but was shut down 1907. Development work in lower tunnel resumed in 1914 and shipments of ore on dumps, said to run \$20 per ton, planned, 1916.

85 (EIGHTY-FIVE) MINING CO.**NEW MEXICO**

Office: Moline, Ill. Mine P. O.: Lordsburg, Grant Co., N. M. **Officers:** Jas. Barclay, pres., Hot Springs, Ark.; C. H. Warner, sec.; A. P.

Warner, treas.; Wm. H. Kinnon, managing director; A. J. Interriden, mgr. Inc. Sept. 23, 1909. in New Mexico. **Cap.**, \$1,000,000; shares \$1 par. Annual meeting, second Wednesday in December.

Company purchased the Superior mine of the Superior Mining Co. in 1912. **Property:** 6 claims in Shakspeare camp, about 4 miles from Lordsburg, in the Virginia district, includes a mine, in rhyolite, developed by 600' tunnel and a 300' blind shaft, with a 300' air shaft to surface. Vein is estimated by company to average 10' in width and to carry 3.5% copper, 6 oz. silver and 0.1 oz. gold per ton.

Equipment: includes 100-h. p. electric motor, hoist, an 85-h. p. Fairbanks-Morse crude-oil engine, as an auxiliary, and an Aldrich electric pump. Company employs about 300 men and ships 300 to 400 tons per day to the smelter at Douglas or El Paso. Management competent and property promising.

The Atwood mine, purchased, in 1915, for \$100,000, is 3 miles from Lordsburg. **Development:** by 310' shaft with drifts on the 75 and 148' levels, and about 600' of drifts and crosscuts on the 210' level exposing 2 veins of 4' and 12' average width, carrying copper ore with some gold and silver values. Has a small steam plant. Shipping to the Copper Queen smelter at Douglas, 1916, at the rate of 2 cars daily. Ore averages \$9 per ton. Plans diamond drilling to 1,000'.

A shaft has been sunk to a depth of 570', 2 tunnels driven for 600' and 900', and there is about 900' of drifting said to expose 200,000 tons of silicious ore, continuous from the surface down and carrying gold, silver and copper.

EL CENTRO MINING & MILLING CO. NEW MEXICO

Lordsburg, Grant Co., N. M. **Officers:** E. S. Eno, pres.; Geo. M. Peck, v. p.; R. F. Fitz, sec.-treas., P. O. Box 275, Los Angeles, Cal.; with Henry Muntz, Alfred Cole, D. D. Culver and J. A. Rovelstad, directors. Inc. in Ariz. **Cap.**, \$200,000; shares \$1 par; outstanding \$100,000. Company in 1915 bought the Last Chance mine, owned by the Sutton Consolidated Mining Co., and claimed to have produced \$135,000 in the past.

Property: 4 claims, patented, 68 acres, in the Pyramid mining district, near Lordsburg, said to show shoots 9-30' wide of silver-copper ore in a fissure vein in andesite. **Ore reserves:** claimed to be 10,000 tons of ore assaying \$4 to \$12 per ton.

Development: 275' vertical shaft with 2,000' of underground workings. Mine idle in 1915, but present management planned to resume operations, March, 1916.

EL CLIFF MINING CO. NEW MEXICO

Hermosa, Sierra Co., N. M. No returns secured. See Vol. XI, Copper Handbook.

EL EDEN; COMPANIA MINERA y BENEFICIADORA. MEXICO

Idle, owing to revolution. Mine at El Eden, Zacatecas, Mex. Francisco Llamasa, pres. and gen. mgr.; Enrique Gutierrez, sec.; Luis Colina, supt. Inc. 1905, and reorganized 1907. in Mexico. **Cap.**, 600,000 pesos; shares 100 pesos par. **Property:** 102 hectares, is a silver-gold mine with incidental copper. **Development:** by 8 shafts, deepest 210', and 2 tunnels aggregating 1,120' in length, with considerable underground workings, developing ores of gold, silver, copper, lead and zinc.

Equipment: includes 40-stamp mill with 2 Krupp tube mills, 6 Wilfley tables and 6 Johnson tables, and it is planned installing a cyanide plant, to treat a large amount of tailings accumulated, the dump being estimated to average 400 to 500 grams silver and 3 to 5 grams gold per metric ton.

EL FAVOR MINING CO.**MEXICO**

Offices: Makeever Bros., Journal Bldg., Boston, Mass., and 170 Broadway, New York. Mine at El Monte, Hostotipaquillo district, Jalisco, Mex. **Officers:** Sanford Makeever, pres.; Dr. H. D. Meredith, v. p.; J. L. Makeever, treas.; M. M. Makeever, sec.; Walter Neal, gen. mgr. **Inc.** July, 1906, in Ariz.; protocolized, 1906, in Mexico. **Cap.**, \$3,500,000; shares \$1 par. After 6 years of development work, mine paid total dividend of \$210,000 in 1913-1914. Property said to represent investment of \$1,000,000.

Property: 476 acres mineral land and extensive surface areas at El Monte, 75 miles N., W. of Guadalajara, Jalisco, Mex. A branch line of the Southern Pacific R. R. runs to Quemada, near the mine, and the Chapala Hydro-Electric Co. furnishes power for \$50 per h. p. Mine shut down May 24, 1914, owing to Mexican revolution.

Vein reported as 10' to 14' thick with shoots of bonanza silver-gold ore workable to 1,300' by tunnels. Mine said to have 3 miles of underground workings open to 800' level. Mining costs reported to be 24c per ton.

Mill reported to be a modern 150-ton silver cyanide plant, equipped with 20 stamps, crusher, tube mills, Dorr classifiers and thickeners, Oliver filters, Pachuca-tanks, Wilfley tables. Extraction was only 54% of \$18 gold-silver ore, owing to manganese, but recent improvements are claimed to ensure nearly 90%. Total production to date reported as \$1,500,000. Mine presumably good, though it is a Makeever promotion and stock is not listed.

EL GLOBO MINING & MILLING CO.**MEXICO**

Mine near Nacozari, Sonora, Mex. **Officers:** Chas. A. Romadka, pres. and mgr.; C. P. Romadka, v. p.; W. S. Dixon, sec.-treas. **Inc.** 1905 in Arizona. **Cap.**, \$400,000; shares \$10 par.

Property: 80 hectares, about 20 miles east of Nacozari, the nearest rail point. Mine has a shallow shaft and a 1,600' crosscut tunnel, cutting a vein with a back of about 1,000'. Ore values are mainly gold and silver. **Equipment:** includes a 25-h. p. electric plant, with a 15-stamp mill having 2 Wilfley tables and a small cyanide plant. Presumably idle.

EL MAGISTRAL COPPER CO.**MEXICO**

Mine office: Choix Fuerte, Sinaloa, Mex. **Officers:** H. L. McNair, pres.; Hon. C. F. Wright, v. p.; A. G. Nash, sec.-treas.; preceding, with Hon. W. S. Lieb, Thos. H. Carvin, H. R. Woodward, John J. Dowdle, John P. Fiebig, John G. Whitmore and Hon. G. E. Green, directors at last accounts. **Inc.** June 15, 1906, in Maine. **Cap.**, \$1,000,000; shares \$10 par. Owns the entire capital stock of San Lucas Copper Co. No returns secured. Probably closed down owing to revolution.

EL ORITO MINING & MILLING CO.**MEXICO**

Officers: Wm. Grote, pres., Elgin, Ill.; A. W. Church, v. p.; C. R. Hopson, sec.; J. A. Waterman, treas.; with J. A. Rovelstad, E. S. Eno and F. H. Ackemann, directors. Robt. F. Fitz, mgr., P. O. Box 275, Los Angeles, Cal. **Inc.** May 10, 1910, in Ariz. **Cap.**, \$500,000; shares \$100 par; outstanding, \$432,500. Annual meeting, third Monday in May.

Properties: 233 pertenencias, free milling gold property, at Penon Blanco, and 144 pertenencias, copper property, at Velardena, Durango, Mex.

Development: one vertical and one incline shaft, depth 375' with deepest workings at 475'. Total underground workings 1,500'. **Equipment:** includes a 17-ton 3-stamp mill. Mines closed down owing to revolution, but management states operations will be resumed as soon as permissible.

EL ORO MINING & RAILWAY CO., LTD.**MEXICO**

Offices: 24 Lombard St., London, E. C.; 61 Broadway, New York. T. Dundas Pillans, sec. **Directors:** R. T. Bayliss, chairman, H. W. Barnett, Capt. H. V. Hart Davis, Alfred Naylor, L. Breitmeyer, P. L. Foster, J. H.

M. Shaw, R. M. Raymond, managing director in Mexico; A. F. Main, gen. mgr.; F. Jenkin, asst. mgr.

Registered, July 27, 1899, in London, to acquire the capital stock of the American Mng. Co. and the American Railroad & Lumber Co., the former owning the El Oro Gold & Silver mine in the El Oro district of Mexico, and the latter owning the railroad connecting the mine with the Mexican National Ry. Purchase price was £886,072; paid £820,084 in cash and £65,988 in stock. The two American companies have since been dissolved. **Cap.**, £1,150,000; outstanding, £1,147,500; shares £1 par. Annual meeting in Oct. Listed on London Stock Exchange.

Accounts for fiscal years ending June 30:

	Bullion	Railway	Loss	Deprec.	Profit
	Recovered	Receipts	Deprec.	on Exch. of Invest's	
1915....	£ 75,541	£ 7,944	£25,000	£20,444	£ 78,398 (d)
1914....	415,436	35,497	25,000	23,242	103,690

(d) Deficit, which, with £34,229 provision for income tax and £1,202 written off improvements, deducted from credit balance forward, left £77,240 carried forward; cash, £120,238; treasury bills, £19,805; bullion, £2,171; debtors, £7,203; investments, £26,643; creditors, £50,483.

Dividends: Aug., 1900, from profits to June 30, 1900, 5%; 1900-01, 11¼%; 1901-02, 15%; 1902-03, 15%; 1903-04, 7½%; 1904-05, nil; 1905-06, 12½%; fiscal years ended June 30, 1907, to 1911, inclusive, 15% each; 1911-12, 12½%; 1912-13, 10%. Nil since, due to political disturbances. Total dividends to July, 1913, £1,783,625.

The El Oro Mng. & Ry. Co., Ltd., owns 42,687 shares (par £1) of the stock, and £14,000 7% debentures of the Suchi Timber Co., Ltd., which declared a dividend of 5% on June 30, 1913.

Property: the San Antonio, San Rafael, Trianon, Diamante, Ofir, and Carmen No. 2 claims, 786 acres, at El Oro, 100 miles northwest of Mexico City. In 1912-1913, the adjoining Ofir claim, 11½ acres, was bought for £130,000 cash. This claim controls the rights of the San Rafael vein in depth.

Ore: values are mainly in gold. Orebodies vary in width from 10' to 60'. **Development:** by shafts from 1500' to 1600' deep. **Ore reserves:** June 30, 1913, estimated as 448,053 tons, value \$8.11 gold and 3 oz. silver per ton, total value \$9.90 per ton; compared with 301,934 tons, value \$9.26 per ton, on June 30, 1912.

Equipment: includes a 200-stamp mill, 8 tube mills and a cyanide plant. Crushing was continued with 100 stamps until April, 1914, when, owing to revolutionary disturbances in the district, all operations were suspended. Milling on a small scale was resumed Oct. 1, 1914, but had to be again suspended in Feb., 1915.

Recent production for fiscal years ending June 30:

Year—	Tons Milled	Value	Costs	Profit	Yield
1913.....	433,708	\$5.04	\$3.59	\$1.45	\$2,188,723
1912.....	387,157	5.75	3.79	1.96	2,228,190
1911.....	360,294	6.63	3.90	2.73	2,389,340
1910.....	316,138	8.10	5.17	2.93	2,562,705
1909.....	285,181	8.56	5.42	3.14	2,442,374

EL PASO CONSOLIDATED GOLD MINING CO. COLORADO

Offices: 20 Broad St., New York; Cripple Creek and Colorado Springs, Colo. **Officers:** H. McGarry, pres.-gen. mgr.; Fred. W. Bailey, v. p.; Geo. N. Miller, 2nd v. p.; Daniel Thatcher, sec.-treas.; preceding, with J. K. Corbiere, W. C. Sherwood, Geo. W. Gano, R. M. Rankin, and A. E. Carl-

ton, directors. **Executive Committee:** H. McGarry, F. W. Bailey, and R. M. Rankin. J. J. Darnell, mine supt.

Inc. Feb. 27, 1893, in Colo. **Cap.**, \$2,450,000; shares \$1 par, changed 1913 to \$2,500,000, shares \$5 par; outstanding 490,000 shares. No bonded debt. Stock transferred at office of secretary, Colorado Springs. Colorado Title & Trust Co., Colorado Springs, registrar. Annual meeting, 2nd Monday in April. Fiscal year ends March 31. Listed in Colorado Springs and on New York Curb.

Dividends: (on stock of \$1 par) 1903, 2 $\frac{1}{2}$ c; 1904, 13 $\frac{1}{2}$ c; 1905, 23c; 1906, 7c; 1907 and 1908, 2c each; 1909, 1c; 1910, 2c; 1911, 2 $\frac{1}{2}$ c; 1912, 5c; dividends on stock of \$5 par: March 31, 1913, 12 $\frac{1}{2}$ c; Feb. 25, 1914, 10c; none in 1915. Total dividends \$1,707,545.

Balance sheet of Dec. 31, 1915, shows: assets, \$2,808,266, which includes: mining property (stock) \$2,500,000; mining property (cash) \$91,262; stocks and bonds \$11,457; notes receivable \$215, accounts receivable \$4669; ore in transit \$4108; cash, \$5353. Liabilities show: working capital \$50,000; surplus \$221,522; vouchers payable, \$7744; notes payable \$29,000.

Profit and loss account for 1915 shows: ore sales and royalties, \$129,546; other income \$4466; total income \$134,012; mining and general expenses, \$118,189; net profit for 1915, \$15,823. Company's indebtedness was reduced by the year's operations from \$70,000 to \$22,500 and the mine was being operated at a monthly profit of about \$5000, March, 1916.

Property: 70 $\frac{1}{2}$ acres in the Cripple Creek mining district, developed by 3 shafts to a depth of 1350'. Has been a prominent operator for a great many years. For geology of the Cripple Creek district, see 16th Ann. Rept of Colo., also U. S. G. S. Bull. 260, 1905, pp. 85-98.

In 1915, after careful investigation it was found by a new management: that very little ore was in sight and it was mostly low grade; that during 1914-15 the company had made no profits, had exhausted its treasury surplus, was about \$70,000 in debt and doing business largely upon credit; that general expenses amounted to \$1500 per month and mining operations were being run at a loss of \$3000 to \$4000 per month.

Development: new work for year ending March 1, 1916, totaled 4230', resulting in the finding of several small orebodies. On the 8th level of the C. K. & N. vein, tributary to No. 1 shaft, an ore shoot 470' long was found which has produced 1,170 tons a month for about 9 months, average grade of this ore is \$9.50 gold per ton. Sixteen sets of lessees are working in the mine, and shipping 40 tons per day.

Ore reserves: estimated March 1, 1916, amounted to 7,000 tons broken ore and 12,000 tons ore in sight. **Production:** for year ending March 1, 1916, amounted to 28,448 tons by the company and 9,994 tons by lessees.

The lower levels of the mine, including the tunnel level on the C. K. & N. vein, which has been the heaviest and best producer, appear to be low-grade as far as exposed. There are possibilities of high-grade ore being opened in the upper levels where the management intends to prospect. A flotation mill for treating dump and low-grade ore is proposed if the experimental work now being done at the Portland and Vindicator mines proves successful. The future of the El Paso depends entirely upon results of new prospecting work.

EL POTOSI MINING CO.

MEXICO

Control obtained in Jan. 1916, by Howe Sound Co., which purchased 53,800 shares out of a total outstanding capitalization of 60,000 shares. **Property:** in Santa Eulalia district, Chihuahua, adjoins property of Chihuahua Mining Co., nearly all of whose stock is owned by El Potosi. Is one of the oldest producers of silver-lead ore in the district, said to have

paid dividends for many years, and to have large ore reserves. Idle at present due to disturbed conditions in Mexico.

EL RAYO MINES CO.**MEXICO**

Subsidiary of the Mines Co. of America, which see.

EL TIRO COPPER CO.**ARIZONA**

Drexel Bldg., Philadelphia, Pa. El Tiro, Pinal Co., Ariz. **Officers:** C. D. Bouton, v. p.; J. D. Goff, sec.; C. J. Schlaechter, treas.; W. H. Buehman, acting gen. mgr.; preceding, with G. W. Barnes, William Greif, L. O. Bailey, H. D. Moore, directors. **Inc.** May 22, 1907, in Arizona, as successor of the Cleveland-Arizona Mining Co. **Cap.**, \$4,500,000; shares \$10 par; fully issued. Funded debt outstanding July 1, 1916, \$1,291,000 (authorized \$1,500,000) first mortgage 6% 10-year \$500 and \$1,000 gold coupon bonds. Dividends 6% per year until all bonds are retired. Company controlled by American Finance & Securities Co., through ownership of majority of stock issue. Annual meeting third Thursday in April, at Tucson, Ariz.

Property: 14 claims, 255 acres, including a 5-acre mill site in the Silver Bell district, adjoining the Imperial mine, 70 miles west of Tucson. Claims show contact deposits between quartz porphyry and limestone, carrying cuprite, melaconite, chalcocite and chalcopyrite with a gangue of decomposed porphyry and limestone. Two orebodies under development are irregular in shape, of about 10 acres in combined area and proven to depth of 400'.

Development: by several shafts and tunnels, including the 283' three-compartment Kurtz shaft, and a 432' transportation tunnel connecting the Kurtz shaft with the railroad. There is about 15,000' feet of development work disclosing large quantities of concentrating ore and several large bodies of high-grade ore. Mine is said to have considerable 3% ore on the dumps. Not operating March 1, 1916.

Equipment: includes a 600-h. p. steam plant, 150-k. w. electric plant and a 120-h. p. gasoline plant, with a 16x20" 250-h. p. double-drum hoist, good for 1,000'; 3 gasoline hoists, and Nordberg and Sullivan air compressors of 18 drills aggregate capacity. There are 18 buildings in all.

A 50-ton concentrator, built for experimental purposes, and increased later to 100 tons daily capacity, is equipped with a 7x10" Blake crusher, 30-ton Huntington mill, 2 rolls, a Vezin automatic sampler, 1 vanner, 5 Wilfley tables and 1 Richards pulsator and hydraulic sizer. Railroad crosses land.

EL TRIUNFO CONSOLIDATED MINING CO.**MEXICO.**

Idle. **Mine office:** Bacoachi, Arizpe, Sonora, Mex. **Officers:** A. C. Charlot, pres.-gen. mgr.; Dr. S. Newton Leo, v. p.; A. L. King, treas.; preceding, with T. B. Johnstone, Albert Reineman, Julius G. Miller, Henry Stern, Wm. H. Freystadt, I. Neuberger, A. H. Wand, D. Powdermaker, Dr. Moritz Gross, Adolph Oltmann and John H. Brown, directors; John Martin, supt. **Inc.** in Arizona. **Cap.**, \$2,000,000; shares \$1 par. Property is held through a Mexican corporation with cap. of 10,000 pesos, shares 100 pesos par, entire stock issue of which is owned by El Triunfo. Annual meeting, first Monday in October.

Property: 136 acres, in 12 different groups, principal property, about 4 miles from the Picacho mines, about 8 miles S. W. of Bacoachi, 2 miles from the Sonora river and about 75 miles by wagon road from Cananea. Lands carry 5 orebodies, of 2 to 5' average claimed width, said to be traceable 2 miles, and to carry azurite, malachite, bornite, chalcopyrite and chrysocolla, all silicious, and occasional native silver, with a claimed average value of 5% copper, 25 to 600 oz. silver and \$3 gold per ton.

Development: about 7,000' of workings, main shaft 400' deep, con-

necting with a tunnel, for extraction. There are 5 shafts, 6 tunnels and various open cuts. The main vein is a fissure of 4 to 5' width, and practically vertical dip, carrying oxidized ores to shallow depth, succeeded by sulphides.

Equipment: includes a 90-h. p. steam plant at the mine, small saw-mill, 50-ton reverberatory furnace and 26 buildings. Wells provide water for boilers and potable use.

A 50-ton mill has a 25-h. p. steam engine and 4 Behrend tables, with a 3-mile pipe line to the Sonora river, where there is a small pumping station.

Company paid a dividend of 1% in Aug., 1911. During 1912, company operated its smelter (reverberatory), shipping matte to El Paso, running \$625 per ton. Closed down since 1913 on account of unsettled political conditions and insecurity of property rights during revolution.

Smelter was blown in in 1908 and shut down after a few days; again blown in in 1911. Transportation facilities are poor, nearest railroad station being at Cos, 38 miles distant by mule trail.

EL VAN COPPER CO., S. A.

MEXICO

Mine near Nacozari, Sonora, Mex. Property not operated for several years and several claims forfeited to government for non-payment of taxes.

ELECTRIC MINING & SMELTING CO.

OREGON

Mine at Idanha, Marion Co., Ore., in the foothills of the Cascade range, said to show chalcopyrite and bornite ore, associated with pyrite with high values in free gold. Property controlled by Hugh Freeland, through ownership of 85% of the capital stock. No record of operations secured.

ELENITA DEVELOPMENT CO.

MEXICO

Office: 1400 Alworth Bldg., Duluth, Minn. **Officers:** Henry B. Paull, pres.; E. J. Maney, v.-p.; F. R. Kennedy, sec.-treas.; preceding, with Thos. F. Cole, C. d'Autremont, Jr., I. B. Joralemon, directors. **Cap.**, originally \$200,000, was increased, 1907, to \$400,000; shares \$10 par; paid in, \$7; issued 27,310 shares. Owns entire stock issue of the Lomita Mining Co., S. A., a Mexican corporation that holds direct title to the land.

Property: the Bonanza de Cobre mine, 1,628 acres, at Cananea, lies north of the smelter and extends to a point nearly opposite the Puertecitos mines of the Greene Cananea. **Development:** by 2 shafts and 5 tunnels, mine being wet at slight depth and giving, as far as developed, mainly silver-lead and zinc ores with a little copper. Property inactive since early in 1913.

ELEPHANT HEAD MINING & MILLING CO.

ARIZONA

Address: Ben Daniels, pres., Nogales, Ariz. Copper-lead property near Mt. Hopkins, Santa Cruz Co., Ariz. **Inc.** 1910. **Lands:** about 40 miles from Tucson, and 6 miles from the Calabasas railroad, near Elephant Head Butte, in the Santa Rita mountains. A vein, said to have a 40' out-crop, carries a complex of argentiferous lead, copper and zinc sulphides, of low average grade, and there also is a 20' vein of quartzite, said to give surface assays of \$10 gold per ton. Reported to be working a force of 25 men and to be shipping good ore. Plans to erect reduction plant.

ELIZABETH GOLD HILL MINING CO.

WASHINGTON

North Yakima, Yakima Co., Wash. **Officers:** L. L. Matterson, pres.; P. J. Eschbach, v.-p.; Frank X. Nagler, sec.-treas.; preceding, with Jos. Feser, Thos. Hope, E. P. Sanford and Rudolph Mayer, directors. **Inc.** 1900, in Washington. **Cap.**, \$1,000,000; shares \$1 par, nonassessable. Annual meeting, second Monday in March.

Property: 14 claims, unpatented, 200 acres, adjoining the Blue Bell mine on the north, about 65 miles N. W. of North Yakima, in the Summit district. Shows a number of orebodies in granite, carrying gold-silver-lead-copper ores, with 1,600' of workings. **Ore reserves:** estimated by management, 150,000 tons of ore, with 100,000 tons blocked out for stoping, averaging \$40 per ton, which figures are excessive.

Equipment: includes steam and water power, and a small sawmill, with material for a 10-stamp mill on the ground. Idle.

ELKHART MINE.

WYOMING

Owned by Walcott Copper Mining Co.

ELKHORN, COPPER MINING CO.

WYOMING

Property: on Elk Mountain, near Overland, Carbon Co., Wyo., is said to carry a 7' vein of sulphide ore, giving assays of 6 to 20% and claimed to average 7 to 8% copper, with considerable ore in sight. Mine has a shaft and a 460' tunnel, with about 1000' of drifts. Worked under lease by W. C. Sammons of Saratoga and reported shipping in 1914.

ELKO PRINCE LEASING CO.

NEVADA

Midas, Elko Co., Nev. J. N. V. Dorr, pres. Operates mill and cyanide plant on property of Elko Prince Mining Co., which see.

ELKO PRINCE MINING CO.

NEVADA

Midas, Elko Co., Nev. Controlled by Leslie Savage. **Property:** in the Gold Circle mining district, about 50 miles N. E. of Golconda, on the Southern Pacific R. R., and 35 miles from Red House on the Western Pacific R. R. Auto truck runs between Midas and Golconda; supplies are hauled from Red House.

Geology: the Gold Circle formation consists chiefly of rhyolite, andesite and bostonite; ore occurs in vertical fissures in the rhyolite; hanging-wall of veins in the Elko Prince mine is bostonite; foot-wall is rhyolite. The vein is a quartz filling containing gold with silver sulphide, breaks clean on the hanging-wall, but less well defined on the footwall.

Development: 700' crosscut adit from which drifts have been run N. and S. 1,200' on the vein, giving a back of about 350' above this level; this has been opened up by raises and drifts. Vein has been opened below the tunnel level to a depth of 750' below the surface. Shrinkage stoping is used and stoping width will be held to 30" if possible. Ore is said to average \$40 per ton, with enough blocked out to net \$500,000 over cost of mill.

A lessee on the June Belle claim is said to have opened up a new vein paralleling the Elko Prince, with indications that it will prove of greater average width.

The mill, operated by the Elko Prince Leasing Co., J. N. V. Dorr, pres., is equipped with a 4' Marcy steel-ball mill, a 5'x14' tube mill, Dorr classifier and thickeners, and an Oliver filter. Power is supplied by a 185-h. p. Allis-Chalmers oil engine. Water is pumped from a gulch at Midas through a 10,000' pipe line to the mill.

ELKTON CONSOLIDATED M. & M. CO.

COLORADO

P. O. Box 146, Colorado Springs, and Cripple Creek, Colo. **Officers:** E. P. Shove, pres.; A. E. Carlton, v.-p.; with J. A. Connell, M. F. Stark, C. G. Kingsbury, Geo. Bernard, and J. W. Graham, directors. T. W. Gauss, sec.-treas.; H. M. Ragle, asst. sec.-treas.; R. P. Windsor, supt. **Inc.** 1892 in Colo.; extended 1912 for 20 years. **Cap.,** \$3,000,000; shares \$1 par; 500,000 shares in treasury. Annual meeting in Feb. Listed in Colorado Springs and Denver. Company is one of the oldest in the Cripple Creek district.

Balance sheet as of Dec. 31, 1915, shows: assets, \$3,756,604, which

includes. property and plant \$3,131,044; treasury stock \$500,000; Cripple Creek Drainage & Tunnel Co. \$98,400; cash \$3,697; accounts receivable \$6,554; current liabilities \$15,949; surplus earnings \$233,177. In 1915 there was received from ore sales \$498,753, as compared with \$623,695 in 1914. Net profit in 1915, \$33,414, as compared with \$138,192 in 1914.

Dividends: to Jan. 1, 1916, \$3,579,460; last dividend paid May 24, 1915, \$50,000, previous to which time the rate had been 2c a share quarterly.

Property: Elkton group, 93½ acres, patented, on Raven hill, in Cripple Creek district. Company holds the Arequa lease on the property of the Raven & Beacon Hill Gold Mining Co., but operations in 1915 showed a slight loss. **Ore:** telluride in fissure veins in breccia and granite.

Development: by shafts, with many miles of underground workings. The main shaft is 1,500' deep, has 17 levels, and is connected with the Roosevelt tunnel by a raise from the tunnel level. This connection was made early in 1916. In 1915, 3,471' of development work was done, compared with 3,917' in 1914.

Ore reserves: of the Elkton vein above the 16th level have been largely depleted. There is 125' of stoping ground available between the 17th and 16th levels and there remains about 175' between the tunnel level and the 17th level. In 1915 prospecting work was started on the Mt. Girl claim of the Ida May group. The work, not yet completed, has disclosed one fissure vein in breccia containing ore said to assay \$12.60 per ton.

Property is thoroughly equipped. Company employs about 50 men. Average wages in 1915 for entire mine, including superintendent and office, \$3.68 per day. In 1915, 43 sets of lessees operated on the properties, producing 21,131 tons ore, average assay \$9.53 per ton. Thirteen sets of these lessees operated at a profit, the remaining thirty at a loss. In 1914 lessees produced 9,050 tons ore, average assay \$9.38 per ton.

Production: (from the Elkton mine)

	Tons Ore	Value p. Ton	Cost p. Ton (a)	Freight & T'tment
1915.....	16,510(b)	\$18.42	\$3.30	\$5.63
1914.....	29,509	18.37	2.62	5.34
1913.....	28,814	18.88	2.40	5.95
1912.....	29,163	19.01	2.22	5.85

(a) Total cost of ore shipped includes underground labor and powder sorting, sampling and loading, but not development. (b) Production was curtailed, awaiting extension of Roosevelt drainage tunnel.

ELLA W. MINE.

COLORADO

Operated by Consolidated Mines & Reduction Co., which see.

ELLAMAR MINING CO.

ALASKA

Office: 211 American Bank Bldg., Seattle, Wash. **Mine office:** Ellamar, Prince William sound, Alaska. **Officers:** F. M. Jordan, pres.-treas.; C. S. Packer, sec.; L. L. Middlekamp, supt.; preceding, with W. R. Rust and Chas. de Steigure, directors. Inc. 1900, in Washington. Cap., \$10,000,000; shares \$100 par. Is reported to have paid over \$300,000 in dividends. Gross earnings in 1915 amounted to \$740,000, \$722,000 from ore sales. Property changed ownership April, 1909.

Property: 14 claims, patented, known as the Ellamar mine, at Ellamar, on Virgin bay, 20 miles S. W. of Valdez. The mine has a 600' three-compartment vertical shaft, with levels at 100' intervals, and has about 3 miles of workings, said to block out about 250,000 tons of ore for stoping.

Ore: occurs in a lens 80x200' and lies wholly within the slate, pinch-

ing out 30' below the 500' level. Ore is mainly chalcopyrite associated with pyrite, pyrrhotite and sphalerite in a gangue of slate, graywacke and quartz, assaying from 3 to 25% copper, 3 oz. silver and up to \$50 gold. Mine was the first copper producer in Alaska, beginning shipments in 1901. A cofferdam has been built to permit mining orebody outcropping on the beach, below the ocean level, and from 1910 to 1913 mining was confined to that part of orebody between surface and 200' level. In 1913 development work was done on the 200, 300 and 400' levels. Geology fully described, p. 90, U. S. G. S. Bull. 605, 1915. Ore is mined by underhand filling.

Equipment: includes a 300-h. p. steam plant, with 3 boilers, a 3-drill Ingersoll-Rand air compressor, Nordberg compressor, a 12x24 Nordberg engine, a 60-h. p. hoist. In 1914 a 200-ton per hour aerial tramway and new loading dock were completed. The tramway conveys ore from mine bunkers a distance of 2,200' across shallow water to the loading dock, having 25' of water at low tide. Buildings include a machine shop, smithy, laboratory, mess house and 12 other buildings.

Costs are said to be about \$3 per ton, for ore loaded on vessels, with about \$3 transportation charges to the Tacoma smelter.

Production: 1911, over 16,000 tons, averaging 0.24 oz. gold, 0.80 oz. silver and 6% copper; 1912, 22,000 tons, averaging 0.30 oz. gold, 0.90 oz. silver and 2½% copper; 1913, 25,000 tons; 1914, 31,000 tons; 1915, 36,000 tons, a total to date of 200,000 tons. Shipments in 1915 averaged .168 oz. gold, .607 oz. silver, 2.18% copper.

ELM ORLU MINING CO.

MONTANA

Office: Miner Block, Butte, Mont. Hon. W. A. Clark and W. A. Clark, Jr., owners. J. W. Pyle, cons. engr.; H. C. Mangum, agt. Inc. 1907. **Cap.**, \$1,000,000; shares \$1 par. Statements filed with assessor of Silver Bow county for years ending May 31:

	Ore Value		Total		Costs		Net
	Tons	p. Ton	Mining	Const.	Trans.	Reduct.	Profit
1916....	200,752	\$18.52	\$1,011,537	\$18,029	\$408,823	\$1,783,352	\$495,757
1915.....	322,074	267,722	345,624	593,852	456,711

Company owns the Elm Orлу mine and claim of that name adjoining the Butte & Superior holdings, the Badger State mine of the Anaconda Copper Co. and the Pilot Butte mine, all in the N. E. section of the Butte district. The Poser claim is owned by a separate company.

The Elm Orлу covers part of the Rainbow lode and several other veins containing large bodies of copper ore and immense bodies of zinc ore. Copper occurs as copper glance, both in secondary fault veins and in veins of the Rainbow lode, and also as chalcopyrite mixed with zinc ore. The mine has a 1,400' shaft and several miles of workings, principally below the 900' level.

The output of the mine is handled in the mill of the Timber Butte Milling Co., (which see), also owned by Senator and W. A. Clark, Jr., zinc concentrates going to the National Zinc Co.'s plants at Bartlesville, Okla., Kansas City and Springfield, Ill. The copper ore is shipped direct to the Anaconda smelter, the mine yielding from 50 to 100 tons a day during 1915.

The apex controversy with the Butte & Superior company was decided by the U. S. District Court in favor of the Elm Orлу Co., giving this company the westernmost 301' along the vein and Butte & Superior all rights to the Rainbow lode east of the point where it enters the Black Rock claim (B. & S. Co.) ; subject, however, to the prior rights of the Pyle vein of the Elm Orлу company below its junction with the Rainbow.

Timber Butte Milling Co.

Affiliation of Elm Orlu Mining Co., Butte, Mont. **Officers:** W. A. Clark, Jr., pres. and gen. mgr.; W. A. Clark, v.-p.; W. D. Mangum, sec.; J. K. Heslet and A. J. Johnston, directors; W. N. Rossberg, supt. **Cap.**, 1,000 shares, \$100 par. A close corporation.

The mill was erected to concentrate zinc ores of the Elm Orlu mine. Capacity, 350 to 400 tons daily. Process, gravity separation and flotation. Crushing is by rolls and Hardinge mills; separation, by tables and Mineral Separation, Ltd., flotation machines. Electric power is supplied by the Montana Power Co. Mill began operations about May 1, 1914. Recovery said to be over 93% and concentrates to average 52% zinc.

The mill is completely described by Theodore Simons in Trans. A. I. M. E., June, 1915.

ELM RIVER COPPER CO.**MICHIGAN**

Final dividend of 19 cts. per share paid to stockholders and company liquidated. Property acquired by Contact Copper Co., which see.

ELY AMALGAMATED COPPER CO.**NEVADA**

Company controlled since 1911 by Jesse Knight, pres., Provo, Utah, who owns 51% interest. Inc. 1907, in Utah. **Cap.**, \$100,000; shares 10 cts. par.

Property: 6 claims, and a townsite, about 1 mile from the Steptoe smelter, of the Nevada Consolidated Copper Co., at McGill, White Pine county, carries silver-lead ores. Several carloads of ore have been shipped and property under development.

ELY BELL MINING CO.**NEVADA & UTAH**

Letters unclaimed at Ely, Nev., and Salt Lake City, Utah. Company probably dead. Stock worthless. Fully described Vol. XI, Copper Handbook.

ELY-CALUMET COPPER CO.**NEVADA**

Ely, White Pine Co., Nev. **Officers:** Al. D. Myers, pres.; J. K. Turner, sec.-treas. and gen. mgr.; preceding, with G. L. (Tex.) Rickard and Thos. Rockwell, directors. Fred Stroelke, supt. Inc. in Nevada. **Cap.**, \$5,000,000; shares \$5 par. Stock listed on Salt Lake Stock Exchange.

Property: 32 claims, unpatented, 600 acres, said to have cost \$75,000, about a mile north of Ely, at the extreme eastern end of the known copper belt. Claims cover a high hill of limestone, traversed by E.-W. fault veins of ferruginous quartz, much crushed and brecciated, with replacement bodies of ironstone carrying copper. **Development:** by a 450' two-compartment shaft, and 500' of tunnels, with about a quarter-mile of workings, showing a 4' vein carrying auriferous and argentiferous chalcocite. Management said to plan sinking the shaft to 1,000' and drifting at 100' intervals.

Several sets of lessees, working on the Wildcat and adjoining claims, have shipped a little ore, one shipment returning 42.6% copper and 3 oz. silver per ton. Sunday shaft in limestone cut lead ore at 120', passed into ironstone, 40', carrying 2½% copper. Management resumed operations in 1915.

ELY CONSOLIDATED COPPER CO.**NEVADA**

Office: 414 Judge Bldg., Salt Lake City, Utah. **Mines:** Ruth, via Ely, Nev., and Elko, Nev. **Officers:** S. M. Levy, pres.-gen. mgr.; Gideon Snyder, sec.-treas.; Grant Snyder and Daniel B. Shields, directors; R. M. Kellogg, supt. Inc. Oct. 2, 1906, in Utah. **Cap.**, \$10,000,000; shares \$10 par, of which 300,000 shares were donated to treasury by incorporators. Last assessment 3 cts. per share, levied Sept. 2, 1914, delinquent Dec. 31, 1914. Stock listed on Salt Lake Stock Exchange and New York curb.

Registrar and transfer agent, United States Corporation Co., 34 Nassau St., New York.

Company's report for year ending Sept. 30, 1914, showed general expenses \$60,767, mine development \$230,907, surface improvements \$33,221; with cash and accounts receivable, \$2,393; accounts payable, \$9,729.

Property: 3 groups, 1 in the Ely district, 20 claims, 370 acres, also a lease and bond on the Copper Queen mine, Elko, Nev., and the Baltimore, an adjoining property.

The Ely property, 15 claims, about 300 acres, on the south side of the mineral belt, near the Ruth and Jupiter groups of the Nevada Consolidated, was bought for about \$100,000. Developed by 3 vertical shafts. The 625' Brilliant shaft has silver-lead ore on the 400' level, and near the bottom is said to show a 100' bed of disseminated copper ore, below commercial grade. The American shaft was 500' deep, at last accounts.

Development: in recent years has been at the 800' Zack shaft in the western end of the group. Orebody on 500' level reported to be 100' wide. From 500 to 700' levels, ore flattened, being 264' farther south on the 6th than on the 5th level. Ore consists of bunches of copper glance with some oxide and carbonate in white, clayey gouge and decomposed rock. Crosscut on 700' cuts monzonite, but too deep for pay ore. Car-load shipment in 1913 netted \$21.65 per ton, averaging 3.3% copper, 15.2 oz. silver and 12.2% lead.

The Copper Queen group, 18 claims, in the Merrimac district, 22 miles N. W. of Elko, Nev., shows a gossan outcrop, 500x600', carrying 40 to 50% iron; also 2 veins, one of them traceable a mile, showing surface exposures of shipping ore. Work was begun on this property in March, 1913, and shipments in May and June averaged 100 tons per week, smelter returns showing 7.4% copper, 7.9 oz. silver per ton, 40 cts. gold, 28% iron and about 35% silica. The ore is hauled by automobile trucks. Smelter returns on shipments in 1913 were \$5,341. Company was drifting on 100' level from Ironside shaft in 1914-15.

The Baltimore group, 12 claims, 6 patented, includes the Cuag and Morgan mines, taken under bond June, 1913, on 15% royalty, with no cash payment until 1914, appears to be a valuable acquisition. The Cuag workings contain ore blocked out and the shaft has been enlarged, re-timbered and is now reported to show high-grade bornite ore. The Morgan mine shows 4' of ore and shipments have carried 3% copper, a varying percentage of lead and 7.8 oz. silver. Developed by Morgan tunnel driven to open up Morgan vein on 200' level. Smelter returns 1913 amounted to \$886.

After an expensive campaign of development at the Ely-Nevada property, it was realized that the property could not be put on a paying basis under existing conditions and the policy of the company was changed and new properties sought. In March, 1913, the Copper Queen mine, near Elko, Nev., was purchased, for \$50,000. In May the Peterson group in Pine Valley was bonded and in June the property of the Pacific Consolidated Mining & Smelting Co., near the Copper Queen, was taken over on \$30,000 bond and lease.

The Peterson group, bonded in 1913, is located at Lone mountain, midway between Elko and Tuscarora, 8 miles from Hale Crossing, a station on the railroad with which it is connected by good wagon road. Property shows veins with ore shoot carrying high-grade copper ore and old workings carry 5% copper ore from which shipments were being made. The Pacific Consolidated Mining and Smelting Co. property, also held under lease and bond, consists of a 300-acre group of claims on which shipping ore was also found. About 350' from portal of Morgan tunnel

a 4' copper vein was opened up with reported values of from \$12 to \$26 per ton. A copper-zinc vein is also being developed, 1915-16.

Company has a practical business man looking after its affairs and seems now to be operated on safe lines. For several years past, extravagant statements concerning the company were issued by brokers and misleading assays were published of the value of the ore developed in the Zack shaft. It is now known that the orebody is low-grade and cannot be profitably mined. The company has a large capitalization, but the new management and new properties appear likely to bring the property to a self-supporting, if not a profitable basis.

ELY COPPER CO.**NEVADA**

Office: 815 Ernest & Cranmer Bldg., Denver, Colo. No representative at Ely, Nev. Idle since 1907. Fully described Vol. XI, Copper Handbook. Unfavorably regarded.

ELY GIROUX COPPER CO.**NEVADA**

Kimberly, White Pine Co., Nev. Windsor Trust Co., New York, trustee. Inc. 1909, by B. W. Coleman, Graham F. Putnam, and Roswell S. Nichols. Cap., \$5,000,000; shares \$5 par. In Nov., 1912, majority holdings were pooled, and \$75,000 shares treasury stock offered public, proceeds to be handled by Windsor Trust Co. as trustee, exclusively for payment of contractors sinking shaft on company's property at Ely, Nev.

Property in Robinson mining district. Stock listed on the New York Curb, as a prospect, 1915. No returns secured, and company advertised delinquent for \$91 taxes in Jan., 1916.

ELY-MIZPAH COPPER CO.**NEVADA**

Property: the Modoc group, near Ely, Nev. Assessment work neglected and property probably forfeited. See Vol. XI, Copper Handbook.

ELY REVENUE COPPER CO.**NEVADA**

Idle. Office: 830 Equitable Bldg., Denver, Colo. **Officers:** F. C. Goudy, pres.; L. F. Twitchell, v. p.; J. P. M. Humphrey, sec.-treas.; above, with C. C. Eddy and A. E. Reynolds, directors. Inc. 1907 in Colo. Cap., \$1,000,000; shares \$1 par. International Trust Co., Denver, registrar. Annual meeting 1st Tuesday in March.

Property: 132 acres, known as the Revenue group, at Ely, White Pine Co., near the Chainman and Altman mines. Operations to be resumed.

ELY VALLEY MINING & MILLING CO.**NEVADA**

Pioche, Lincoln Co., Nev. **Officers:** George Weddell, pres.; W. E. Harrison, v. p.; Edward Thomarson, sec.-treas. and gen. mgr. C. L. Warren, supt.; James W. Abbott, mg. engr. Inc. Jan. 6, 1908, in Nevada. Cap., \$1,000,000; shares \$1 par, fully paid and nonassessable; 600,000 promotion stock and 400,000 treasury; 10,196 issued. Annual meeting, second Tuesday in May.

Property: 200 acres, 16 claims, part patented and balance held by location, in Ely mining district, shows ore in vertical contact veins between limestone and quartzite. Vein reported to be 7' wide, to strike N. W. and to be proven to a depth of 500'. A vein of 10% copper ore was cut in shaft at 480' depth. Average assays claimed to have been 20% lead, 20 oz. silver and \$2 gold per ton.

Development: by 4 shafts and 400' tunnel at last accounts. **Equipment:** includes gasoline hoist, air compressor, pump and air-circulating plant. S. P. L. A. & S. L. R. R., 2½ miles from property. Letters neither answered nor returned.

ELY VERDI COPPER CO.**NEVADA**

Geo. Wingfield, pres., Goldfield, Nev. Mine near Ruth, via Ely, Nev.

S. R. Roberts, John Berry, of Ely; A. P. Sawyer and Leslie L. Savage, of Goldfield; M. R. Brown and H. S. Anderson, of Pierre, S. D., directors. Inc. May, 1912, in South Dakota. Cap., \$5,000,000; shares \$5 par. Is a reorganization of company of same name that was listed on New York curb in 1909.

Property: a large group of claims south of the Copper Flat steam-shovel pit of the Nevada Consolidated. Only assessment work being done.
ELY WITCH COPPER CO. NEVADA

Idle. Mine near Ely, Nev. **Officers:** J. E. Bamberger, pres., 163 So. Main St., Salt Lake City, Utah; D. M. Hyman, v. p.-treas.; H. Cohen, sec.; Ernest Bamberger, gen. mgr.; preceding with H. G. McMillan and W. W. Armstrong, directors. Inc. Nov. 22, 1906, in Maine. Cap., \$5,000,000; shares \$5 par.

Property: 7 claims, 1 fractional, 54 acres, patented, bought for \$275,000, lying in the porphyry zone between the Ruth and Cumberland-Ely mines of the Nevada Consolidated, shows large blowouts of iron-stained porphyry. **Development:** by 300' shaft, with levels at 100' intervals, and by tunnels of 1,200', 600' and 1,050', with 3,500' of workings. Development was disappointing, for, while claims cover the main monzonite belt of the district, the underground work on 300' level showed values too low to work. Drilling by Nevada Consolidated Co. is the logical thing to do and that company can probably work this property since it is now handling 1.6% ore at a profit. Company was a speculative promotion at time Nevada Consolidated was floated, and proving lean on development, has been idle since.

EMERALD MINING CO.

UTAH

Mine office: Mammoth, Juab Co., Utah. J. E. Oglesby, pres.; J. L. Yundt, gen. mgr. Inc. 1896 in Utah. Cap., \$300,000; shares \$1 par, assessable, fully issued; last assessment one-third cent a share, delinquent June 15, 1914. **Property:** silver-lead, with some copper; 4 claims, and additional land bought, 1910. Mine has 1,100' shaft, with about 4,000' of workings, on a narrow but rich vein, carrying copper and lead ores.

In May, 1913, it was reported that 22' of ore cut on the 2000' level of the Opex mine extended into this property. In July, 1913, company started a drift on the 1,100' level to be driven 1,200' north, to open up the ore formerly worked on the 2,000' Opex, the latter company having withdrawn permission to use the workings.

Development: on the Emerald property in the 700' winze disclosed a 4' vein between well defined walls, showing heavy iron mineralization and sugar quartz. Plan drifting on 1,000' level in 1916.

Company has levied assessments for years and been regarded as the "wildest of wildcats," but is now in favor, and may repay stockholders for their blind faith and yearly contributions.

EMERALD MINING CO.

WYOMING

Idle. Wheatland, Laramie Co., Wyo. **Property:** the Cooney Hill mine, formerly owned by the Cooney Hill Gold & Copper M. & M. Co., and the Emerald mine, on Slate creek, showing a prominent gossan outcrop in schist. The Emerald has a 60' shaft in ore, and a 100' shaft bottomed in a gossan showing traces of copper sulphides. No recent report received.

EMERY-WHITCOMB TUNGSTEN CO.

ARIZONA

Acquired by International Tungsten Corp., which see.

EMMA COPPER CO.

UTAH

Alta, Salt Lake Co., Utah. **Officers:** Frank R. Snow, pres.; W. J. Bateman, sec.-treas.; V. S. Snow, asst. sec.-treas.; A. O. Jacobsen, gen. mgr.; 644 E. 6 So. St., Salt Lake City, with Chas. S. Herzig, directors. Lee Glock-

ner, supt. Inc. 1906. Cap., \$1,000,000; shares \$1 par; 175,000 in treasury, March 1, 1916. Stock originally nonassessable, was made assessable and assessments levied in 1909 and 1913. Stock listed on N. Y. Curb and Salt Lake Exchange.

Property: 8 patented and 3 unpatented claims in Little Cottonwood district. The Vallejo and Joab Lawrence groups adjoining the Emma ground were purchased in 1915 from Moylan G. Fox of Salt Lake City in exchange for 352,000 shares Emma Copper stock.

Development: the Emma mine is developed by 1,200' of tunnels, a shallow shaft, drifts and raises, which so far have failed to prove ore in commercial quantities. In Sept., 1915, 6" of ore were reported opened on contact between shale and limestone. A 50-ton carload shipment to Am. S. & R. Co. in 1915 yielded \$1.50 gold, 16.6 oz. silver; 18.2% lead, 29% iron.

Is a prospect, promoted and financed by George Graham Rice, New York City. Operated intermittently 1915-16, under direction of C. S. Hertzig, who is developing the property as a result of a careful geological study, and the deduction that it contains a faulted portion of the Old Emma orebody.

EMMA MINE.

NEW MEXICO

S. L. Landon, supt. Mine at Fierro, Grant Co., N. M., is owned by the Copper Queen Consolidated Mining Co. and is being operated on a small scale by lessees, 1916.

EMPIRE COPPER CO.

IDAHO

Address: Wm. A. Kerr, sec.-treas., 111 Broadway, New York. Mine address: Mackay, Custer Co., Idaho. **Officers:** Frank M. Leland, pres. and purch. agt.; Ralph R. Osborn, v.-p.-gen. mgr. with L. R. Eccles and Fred G. Taylor, Ogdén, Utah, directors. Inc. June 6, 1907, in Maine. Cap., 6,000,000; shares \$5 par, reduced, July 16, 1908, to \$1,200,000, shares \$1 par; issued \$1,000,000. Stock listed on the New York curb. Annual meeting, third Tuesday in May. Equitable Trust Co., New York City, registrar; Corporation Trust Co. of N. J., transfer agt.

Company bought the Mackay property of the White Knob Copper & Development Co., Ltd., taking over also a 5-year lease on the property from the MacBeth Lease, Inc., giving 250,000 shares of stock to the White Knob and 750,000 shares to the MacBeth, and began business without any cash in the treasury, but with 200,000 shares of stock.

Property: the White Knob Copper mine, 3 miles south of Mackay, on Salmon river branch of the Oregon Short Line, with 39 claims, 18 patented, 700 acres, also mill and smelter sites of 480 acres, and a railroad right-of-way, in the Alder Creek district, Custer county, Idaho. **Geology:** property carries a large number of lenticular contact deposits, in granite-porphry between limestone and granite and is remarkable for its peculiar ore deposits. These are cylindrical, pipe-like masses of a branching, tree-like form, found in garnetized altered porphyry lying between limestone and granite. The geology has been carefully studied and is described by Kemp in the Transactions Am. Inst. of Mg. Eng., 1907, and in Genesis of the Mackay Copper Deposits, by Jos. B. Umpleby, Econ. Geol. The ore is largely a cupriferous pyrite with much chrysocolla derived from its alteration. The average assay of the 26,200 tons of ore mined in 1912 was 5.8% copper, 3 oz. silver per ton and \$1.36 gold per ton.

The mine was opened 1884, and worked by a succession of White Knob corporations, each making a failure of it, until leased, July 1, 1905, to the MacBeth Lease, Inc., which worked the mine on a business basis, at a profit, something the old owners never succeeded in doing.

Development: mine has a glory hole, 125 to 200' wide, but mining is

mainly by tunnel, the 700' main shaft connecting with the Albert tunnel 3,200' long. The Cossack tunnel is expected to strike ore at a point 730' deeper than the deepest winze in the Albert tunnel. The breast of the Cossack tunnel is now in over 4,000' and the rock shows traces of copper in the form of chalcopyrite. The mine has about 12 miles of workings, estimated to show 2,000,000 tons of 2½% and 200,000 tons of 4% copper ore, blocked out for stoping. The mine is dry.

Equipment: includes steam, electric, gasoline, water and air power, with a total of 152-h. p. at the mine and 125-h. p. at the smelter. There are 6 small hoists, 2 and 5-drill air compressors; 14-drill air compressor being installed.

There are 20 buildings and a machine shop at the smelter.

The mine is reached by an 85-mile branch of the Oregon Short Line railway, running from Blackfoot to Mackay, and is connected with the smelter by the 7¼-mile Empire railroad, owned by the company, of 36" gauge, equipped with two 23-ton Shay mountain-climbing locomotives and 30 cars. The line has a maximum gradient of 6%, with a rise of 2,000', and has one 6% grade on a 34° curve.

The smelter is not now in operation, ore being shipped to the A. S. & R. Co. plant at Garfield, Utah, for treatment.

Production:

Year	Tons mined	Lbs. copper	Oz. gold	Oz. silver
1915.....	54,295	4,702,119	3,155.064	125,134.784
1914.....	18,251.822	2,012,244	962.196	53,767.803
1913.....	34,721.696	3,565,479	1,812.463	92,805.319

The Empire Copper Co. was promoted just in time to be caught in the 1907 panic, but every share of stock sold to the public was redeemed, at subscription price, for which promoters deserve credit. Property is considered very valuable. Present management good, Mr. Leland having made the property pay from the time he took hold of it. Company employing 85 men and 150 men are working on 60 separate leases. The lessees pay 17½% royalty on net smelter returns.

EMPIRE COPPER & GOLD MINING CO.

ARIZONA

Office: 510 Bradbury Bldg., Los Angeles, Cal. Mine address: Dragoon, Cochise Co., Ariz. Officers: Leon V. Shaw, pres. and treas.; P. E. Woolf, v.-p.; Chas. R. Van Tilburgh, sec.; preceding with M. J. Gress, H. Hermanson, C. J. Nordquist, R. W. Pigeon, C. R. Lawrence, directors. Inc. Jan. 31, 1905, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, nonassessable; issued 953,814. Annual meeting, second Monday in October.

Property: 3 separate groups of claims, near Johnson and Dragoon, on the Southern Pacific railway. The Empire group, 16 claims, 2 miles S. E. of Johnson, shows limestones and quartzite cut by porphyry and traversed by N.W. fissures carrying ore. Principal development is by the 380' Empire 2-compartment incline shaft, with about 500' of drifts, so wet that it was abandoned, temporarily; also the 125' Bridge, 158' Copper Whale and a 2,000' tunnel-shaft started. Mine shows auriferous and argentiferous copper ore.

In May, 1913, machinery and supplies were moved from the Empire group 6 miles south to the Princess group, said to have attractive surface showings of iron gossan and copper carbonate and to be opened only by shallow shafts. Company also owns the Cowboy group of 8 claims, partly developed, showing veins in limestone near porphyry contacts.

Equipment: includes a 25-h. p. hoist and 1-drill Fairbanks & Morse air compressor. Buildings include an engine house, smithy, bunk house and boarding house.

Presumably idle in 1915.

EMPIRE MINING CO.**MEXICO**

Address: Dolores Mining & Development Co., P. O. Box 533, Sta. L., Oakland, Cal. Mine address: care Ben Bound, supt., Camanea, Sonora, Mex. Company is the Mexican holding company of the Dolores Mining & Development Co. **Cap.** 10,000 pesos. **Property:** 95 hectares, including the Major Domo copper mine, a few miles from Cananea. A 200' shaft is reported to show a N.E.-S.W. vein, 2½ to 3' wide. Company also owns the Dolores, Empire, Bonanza, Spanish, Golden Cross and Providencia, silver-gold properties, amounting to 65 hectares, in the Magdalena district, Sonora, Mex. Planned erecting a 3-unit Pittman mill at the Golden Cross property, 14 miles S.W. of Cananea. No recent reports received. Presumably idle.

EMPIRE-NEVADA COPPER MINING & SMELTING CO. NEVADA

Office: 42 Broadway, New York. Mine near Yerington, Nev. Wm. Gelder, pres.; G. B. Garrison, sec. Inc. in Arizona. **Cap.** \$5,000,000, shares \$5 par. General Development Co. is a small stockholder in this company.

Property: about 500 acres on Copper Flat in 2 groups; 1 about 1 mile W., the other 2½ miles N. W. of Yerington. **Ore:** occurs in bunches and disseminated throughout a body of monzonite-porphry, said to be opened for 3,000' in length and 1,000' wide, carrying copper in the form of silicates, carbonates and oxides, a considerable part of it averaging 2.65% copper.

Development: by 5 shafts, from 80 to 160' in depth, several tunnels and open cuts and also by diamond drilling. Mine is said to have produced about \$150,000 from surface workings. Shipped 6,000 tons of 6% ore to Mason Valley smelter, 1912, and 2,900 tons in 1914. Now making monthly shipments to the Mason Valley smelter at Thompson, Nev. Six sets of lessees working in 1916. Property has small smelting plant, assay office, hoist, boarding house, etc.

EMPIRE STATE MINING CO.**ARIZONA**

Office: 182 Buick Ave., Utica, N. Y. Mine office: Bisbee, Cochise Co., Ariz. **Officers:** R. E. King, pres.; F. L. Guillaume, v.-p.-treas.; E. M. Penny, sec.; W. A. Fenn, Geo. P. Langford, John A. Losee, John A. Urschel, directors. John A. Collins, gen. mgr. and purch. agt.; O. P. Zane, cons. engr. and supt. Inc. June 27, 1904 in Arizona. **Cap.** \$1,000,000; shares \$1 par; 813,000 shares issued. Annual meeting in June.

Property: 11 claims, 230 acres, near the Modern mine, about 9 miles N. W. of Bisbee, is developed by an 1,100' tunnel, said to show about 150' of low-grade copper ore, slightly auriferous and argentiferous, estimated to average about \$8 per ton. Ore is found in small stringers, typical of the district, and property is not considered well located. Idle since June, 1914.

EMPIRE ZINC CO. OF COLORADO.**UNITED STATES**

Is a subsidiary of the New Jersey Zinc Co., 55 Wall St., New York, which owns entire stock issue. Owns and operates mines in Arizona, Colorado, and New Mexico, including the San Xavier group of claims in Pima district, 20 miles S. of Tucson, Ariz.; the Cleveland group at Pinos Altos, N. Mex., properties at Hanover and Kelly, N. Mex., Eagle and Leadville, Colo.

The San Xavier claims show copper ores, but company was working silver-gold veins, employing about 40 men and shipping 40 tons daily, June, 1913. Operations are to be resumed in 1916.

The Cleveland Group of 6 claims, 120 acres, patented, and a mill site, 8 miles north of Silver City, on the west slope of the Pinos Altos mountains, shows limestone cut by intrusive dikes of diorite and andesite. Ore occurs in bedding planes in the limestone, varies from a foot or two up to 50' in thickness, with a generally N. E. strike and a dip of 15°.

Development: by several tunnels, longest 900', and pits, exposing copper carbonates and oxides, carrying up to 6% copper, 20% zinc, 3 oz. silver and \$1 gold per ton, ores being complex and highly zinciferous. The mine has about 2,000' of workings, and is said to show 200,000 tons ore developed. Producing at the rate of about 100 tons per day in 1916.

Equipment: includes a 9-mile mule tramway connecting the mine with the railroad and a 100-ton electrostatic concentrating plant, installed Nov., 1915, with 8 magnetic separators and a 280-h. p. Snow crude oil engine. A flotation plant will be installed in 1916.

The **Brockman and Thunderbolt mines**, and a 250-h. p. power plant, at Hanover, N. M., are also owned and operated by the E. Z. Co. The Thunderbolt is developed by a 3-compartment shaft showing zinc sulphides. Shipments during 1915 averaged 600 tons per day, the largest production of zinc carbonate coming from the claims on the western half of the company's holdings.

The **Eagle Mining & Milling Co.** property at Belden, Eagle Co., Colo., purchased in 1915, consists of the Ifon Mask and Rocky Point mines and a mill. The mines were formerly worked for gold-silver ore. Orebodies occur as irregular masses in pitching sedimentaries. The ores originally mined were oxides, but with depth sulphides became abundant and sphalerite proved so predominant that it precluded profitable mining of the gold-silver ore at that time. Ore averages 17% zinc and 1.5% lead. The magnetic-separation mill has a 120-h. p. Pelton wheel and two 6-hearth Dewey roasters. One ton of galena concentrate is produced with each 10 tons of sphalerite concentrate, the former averaging 75% lead, the latter 48% zinc. Production, 1915, was about 120 tons daily.

The **Small Hopes-Boreel mine**, Leadville, Colo., is reported to have been bought in April, 1916, for \$500,000. The Small Hopes Co., operating through the Robert Emmet shaft, is said to have opened one of the largest bodies of zinc sulphide ore ever found in the district. Shipments for several months have been at the rate of \$40,000 to \$50,000 per month.

ENGELS COPPER MINING CO.

CALIFORNIA

Office: 393 Mills Bldg., San Francisco, Calif. **Mine office:** Keddie, Plumas Co., Calif. **Officers:** Henry Engels, pres.; F. Klamp, v.-p.; Landon A. Bell, sec.; E. E. Paxton, treas.-gen. mgr., above with Richard Spreckels, I. J. Truman, Jr., J. F. Humburg and O. G. Traphagen, directors. Edmund Juessen, supt.; Henry Hanson, mill supt. **Inc.** 1901 in Calif. **Cap.**, \$1,500,000; shares \$1 par; nonassessable; 1,339,451 shares issued. Balance sheet, Dec. 31, 1915, shows: Assets, \$1,750,999; liabilities, \$118,484. Profit and loss, \$115,501; reserves, \$17,013. Gross earnings for 1915 were \$416,695 and operating profit was \$150,467. Net earnings for first 6 months, 1916, \$275,000. Paid initial dividend of 1½c per share, July 20, 1916.

Property: 2 groups, 2 miles apart, 114 claims, 2,300 acres, well timbered, on Iron Cap mountain; the Superior group near Taylorsville and the Engels group, 12 miles N. of Taylorsville and about 26 miles by good wagon road from Keddie, the nearest railway station on the Western Pacific line.

The Engel group, at 5,000' elevation, is in Sec. 3, 4 and 9 of T. 27 N., R. 11 E. The "copper belt" is 1,800' wide at this place and the gossan outcrop 300' across and 2,000' long, running N.E. and dipping W. Orebody is a huge lens, lying in porphyry alongside of a diorite dike and well adapted for development by tunnel. Underground workings, made in the past 5 years, amount to 4,108' of tunnels, longest 1,800', and prove ore for 250' in depth with upraise of 150'. The ore is a mixture of chalcopyrite and bornite with barite, magnetite and altered country rock and is said to

average 3.32% copper. Sulphide ore occurs at shallow depth. Company claims 350,000 tons chalcopyrite and bornite ore blocked out and total ore reserves of 5,000,000 tons of 2½% ore, this estimate probably being based on the assumption that the whole deposit is minable above the tunnel level. A shaft is being sunk to connect with tunnel 350' below present workings, to develop orebody disclosed by 4,000' of diamond drilling in 1915.

The Superior group of 8 claims, 164.8 acres, is 2 miles S.W. of the Engel group. The ore deposit is like that of the other group in both character and occurrence and is said to be 200' wide, to run N. and S., and dip 65° W. Development is meagre, being only a 400' tunnel and 60' shaft, but said to show 10,000 tons of ore on the dump and 25,000 in mine. Diamond drilling in 1915 opened up a promising orebody and tunnel is being driven to develop same.

The 100-ton smelter, built in 1911, was never operated owing to Government objections to fumes.

Improvements consist of 400-ton Minerals Separation oil flotation plant, 1½ mile rope tramway, electric and steam power plant, 5-drill air compressor, brickyard, sawmill and all necessary buildings.

Production: in 1915 was 2,893,133 lbs. copper, 30,226 oz. silver and 414 oz. gold.

The mill treated 63,526 tons in 1915, concentrates averaging 33.82%.

Employs 200 men when working at capacity.

Authorized by California Commissioner of Corporations to sell 133,395 shares at par \$1, to net 95, to build branch railroad to Keddie on W. P. R. R. Survey in progress, 1916. Extensive diamond drill exploratory work planned and 2,000-ton milling plant to be erected in 1916.

ENTERPRISE GOLD MINING CO.

CALIFORNIA

Owens the Enterprise mine, 160 acres, in East Fork mining district, 7½ miles north of North Fork, in the Trinity Forest Reserve, Trinity Co., Calif. The first claim, Lone Jack, was located in 1882 and mine has been operated more or less continuously since.

Ore: free milling gold occurs in vein in diorite. Vein has N.E.-S.W. strike and dip of 10° to 45° N.W. Ore occurs in 3 shoots, 900', 300' and 300' long, with average width of 14".

Development: by tunnels; longest 1,400', has 3,000' of workings, with 3 stopes from 300' to 900' long, 50' to 240' high, and average width of 5'. Greatest vertical depth of development is 500'. At last accounts considerable ore was said to be blocked out.

Equipment: includes compressor plant, small electric plant and 10-stamp mill. Employs 12 men. Production to date said to be over \$350,000. Cost of operating is over \$7 per ton.

ENTERPRIZE MG., REDUCTION & IMPROVMENT CO. ARIZONA

Kingman, Mohave Co., Ariz. Maj. W. A. Mensch, pres. and gen. mgr., 1729 29th St., San Diego, Calif. Property and equipment reported sold at sheriff's sale for a debt of \$2,169 in 1914. Described Vol. XI, Copper Handbook.

EQUATOR MINING & SMELTING CO.

ARIZONA

Idle. **Office:** 20 Exchange Place, New York, N. Y. Mine office: Jerome, Yavapai Co., Ariz. **Officers:** Hon. Wm. A. Clark, pres.; Jas. A. Macdonald, v.-p.; Harry H. St. Clair, sec.-treas.; preceding with Chas. W. Clark and Jas. H. Anderson, directors. Inc. March 19, 1900, in West Virginia. Cap., \$500,000; shares \$5 par; issued, \$250,000. Annual meeting, third Monday in February.

Property: the Iron King mine, on Equator hill, in the Agua Fria district, 6 miles by wagon road, south of Jerome, shows a mineralized zone

up to 600' in width, with N.S. strike, traceable for upwards of 1,000'. Mine has a 300' main shaft, and a 5,000' gravity tram line, connecting portal of upper tunnel with roast yard of the reduction plant.

EQUITY COPPER & GOLD MINING CO.

OREGON

Rev. W. J. Hughes, pres. and gen. mgr., 2441 Center St., Baker City, Ore. Mine P. O.: Prairie City, Grant Co., Ore. **Officers:** F. M. Saxton, v.-p.; Mrs. Kate Palmer, sec.; G. J. Bowman, treas.; preceding with Hon. T. E. Johns and Rev. R. W. Hughes, directors. **Inc.** 1901, in Oregon. **Cap.**, \$150,000; shares 10 cts., par, non-assessable. Paid a dividend of \$3,000.

Property: 16 claims, unpatented, 320 acres, with a 5-acre mill site, in the Quartzburg district, 7 miles north of Prairie City. Reported to show 11 orebodies, 3 under development by tunnels, traceable one-half mile, showing sulphide ore estimated by company to average 2 to 3% copper, 2% lead, 2% zinc, 4 oz. silver and \$18 gold per ton.

The frame mill has 5 stamps, a Blake crusher, New Standard tables and 3 slime-tables. Presumably idle.

EQUITY CREEDE MINING CO.

COLORADO

Office: 107 W. 3rd St., Pueblo, Pueblo Co., Colo. **Officers:** Frank Taylor, pres.; Geo. D. Weston, v.-p.; B. E. Watkins, sec.; E. E. Withers, treas., above with R. L. Rapalje, directors. Reorganized March 5, 1915, in Colorado. **Cap.**, \$600,000; shares \$1 par; outstanding, \$375,000. Annual meeting second Wednesday in March.

Property: 20 claims, 216 acres, unpatented, 7 miles N.W. of Creede, in the King Solomon mining district. Claims are on the Nelson Mountain vein which is said to show gold-silver ore in a contact vein in rhyolite and porphyry. Shipments made are said to have averaged \$24.65 net per ton.

Development: by tunnels, 225', 350', and 725' long; greatest depth of workings, 700'; total underground workings, 1,300'.

Total production to 1915, 43 cars netting \$18,555. No production in 1915.

ERNESTINE MINING CO.

NEW MEXICO

Absorbed June, 1915, by Mogollon Mines Co. Latter company wound up and holdings bought by Socorro Mining & Milling Co., which see.

ESMERALDA COPPER CO.

MEXICO

Has no representative at former mine office: Llano, Magdalena, Sonora, Mex. F. C. Emery, pres.; W. D. Fredericks, mgr., at last accounts. **Property:** 88 hectares, has about 300' of workings, showing copper ore, with silver said to increase at depth. Presumably idle.

ESMERALDA COPPER MINING & SMELTING CO.

MEXICO

Idle. Mine near Santa Catarina del Norte, Baja California, Mex., known as La Esmeralda, is opened by shaft, with considerable development.

ESMERALDA; NEGOCIACION MINERA.

MEXICO

Idle. **Property:** at Chalchihuites, Sombrerete, Zacatecas, Mex., includes the Anaconda, Esmeralda and La Luz mines, developed by shafts and tunnels, carrying argentiferous and auriferous lead and copper ores.

ESPERANZA, LTD.

MEXICO

Office: No. 1 London Wall Bldgs., London, E. C., Eng. Office of American company: 54 William St., New York. **Directors:** R. J. Frecheville, chairman; F. W. Baker, F. M. Crisp, W. F. Fisher, A. A. Kelsey, C. L. Johnson, sec.

Reg. Oct. 6, 1903, in Great Britain. **Cap.**, £455,000; shares £1 par, all issued and credited, except seven, as fully paid. Acquired by agreement with the Guggenheim Exploration Co., and the Venture Corporation, Ltd., 449,800 shares of \$5 each, all the capital except 200 shares, in the Esperanza Mng. Co. of New York, inc. in New Jersey and owning gold and silver

mines covering 384 acres, adjoining the El Oro mine at El Oro, Mexico. Purchase price, £454,993 in fully paid shares.

Financial report for 1914 shows a profit of £28,650, compared with £47,322 in 1913, making with balance forward, £31,536; dividends absorbed, £21,071; tax, £6,228, leaving £4,236 carried forward. American company had £216,971 cash and realizable assets, Dec. 31, 1914.

Dividends: now paid semi-annually: 1903-04, 10%, 1904-05, 14 months, 82½%; 1906, 160%; 1907, 105%; 1908, 70%; 1909, 25%; 1910, 30%; 1911, 30%; 1912, 15%; 1913, 10%; 1914, 5%; 1915, 5%, interim, paid July 31.

Ore: gold and silver in veins from 3' and 5' to over 50' wide. **Development:** chiefly on the Orion, Bumerango, Esperanza and Emilia claims, but south of these is the Sirio claim with an 840' shaft, and the Suceso claim with a 646' shaft, which has been unwatered down to 500' and is being prospected.

Total development work to Dec. 31, 1914, amounted to 155,467'. Work in 1914 comprised 13,277' of which 4,918' was on the San Rafael vein, 59' on the Descubridora vein, 3,553' on West vein No. 1, 1,130' on West vein "A" and 3,616' on the San Carlos vein. In the upper levels of the San Rafael vein a considerable tonnage of low-grade ore was developed, but in the lower levels the vein continued to show discouraging results. Black shales are found in the 14th level footwall. On the San Carlos vein the upper and lower limits of the orebody appear to be in sight.

Ore reserves: estimated Jan. 1, 1915, as 148,254 dry metric tons of developed and probable ore, which should yield an approximate working profit of \$446,000 gold. Estimate, which shows a slight increase over figures of previous year, does not include old stope filling, nor 200,000 tons of sand tailing, estimated to yield \$200,000 gold.

Equipment: includes 120-stamp mill, tube mills and a cyanide plant.

Production:

Year	Tons milled	Value per ton	Costs per ton	Profit per ton	Rec. %
1914.....	166,212 (b)				
1913.....	207,281 (a)				
1912.....	229,076	\$7.31	\$6.01	\$1.30	80
1911.....	272,235	6.17	4.43	1.76	88

(a) includes 121,438 tons of tailing; (b) includes 45,237 tons of tailing. Mill was closed down from April 21 to Aug. 31, 1914, due to revolutionary conditions, and in Feb., 1915, the plant was again closed down. A little development work was done during the year.

Other properties are being investigated with a view to prolonging the life of the company. An interest has been secured in the Anglo-Colonial Co., Ltd.

ESPERANZA MINING CO.

MEXICO

Office: 54 William St., New York. Controlled by Esperanza, Ltd., which see.

ESPERANZA MINING CO.

MEXICO

Sec. and office: E. W. Nicholson, 801 Land Title Bldg., Philadelphia, Pa. **Operating office:** P. O. Box CCC, San Diego Cal. Mine near Ensenada, Baja California, Mex. **Geo. P. Brown,** gen. mgr.

Property: 83 hectares, and 40 acres miscellaneous lands, on Cedros island, on the Pacific coast, shows diorite, cut by veins having 3 lenticular ore shoots carrying carbonate and sulphide ores, estimated by company to average 40' width, 300' depth and 1,100' length, and to contain an average of 2.5% copper, 3% zinc, 2 oz. silver and \$3.50 gold per ton. **Development:** about 8,500' of workings, showing 150,000 tons of low-grade ore, with about

100,000 tons blocked out for stoping. Has produced about \$450,000 from shipments to the Denver, Pueblo, San Francisco and Tacoma smelters.

In 1915, unsettled conditions in Mexico necessitated closing down the property.

ESPERANZAS MINING CO.

MEXICO

Idle. Mine at Estación Symón, San Juan de Guadalupe, Durango, Mex. Joseph Steel, gen. mgr., at last accounts. **Cap.**, \$200,000. Property includes the Montaña de Cobre, Esperanza and other claims.

ESQUER y CA; ALEXANDER.

MEXICO

Idle. Mine at Baroyeca, Alamos, Sonora, Mex. J. J. Esquer, mgr., at last accounts. **Property:** the Mexicana, Esperanza and other mines, developed by shafts and tunnels, carries auriferous and argentiferous copper ores.

ESTELLE MINING CO.

CALIFORNIA

Office: 310 So. Grand Ave., Los Angeles, Calif. **Officers:** R. C. Troger, pres., sec. and supt., Keeler, Inyo Co., Cal. E. H. Sweetser, v.-p. Adolph Ramish, treas. **Inc.** 1902 in California. **Cap.**, \$100,000; shares \$1 par; 90,300 shares issued.

Property: 29 claims, 500 acres, including the Morning Star group, shows complex lead-copper ore with gold-silver values. **Ore:** occurs in fissure veins and replacements in lime-porphyr. **Development:** by a 520' shaft and a 6,300' tunnel. Company plans continuing the tunnel to 7,300' and installation of electric power and larger compressor. Claims to have spent \$24,560 for development work in 1914-1915.

EUREKA COPPER MINES, LTD.

BRITISH COLUMBIA

Nelson, Kootenay district, B. C. **Officers:** J. J. Malone, pres.; A. B. Ritchie, v.-p.; L. B. Reynolds, sec.-treas. **Inc.** March 2, 1906, in British Columbia. **Cap.**, \$250,000; shares 25 cts. par, nonassessable; issued, \$231,250. **Property** was under bond and lease to B. C. Copper Co., Ltd.

Property: 7 claims, 2 fractional, all except 1 crown granted, approximately 250 acres. Situated 2½ miles from the Canadian Pacific railway, and about 9 miles westerly from Nelson. Claims contain several veins, partly along contacts between limestone and granite, and partly along fracture planes in the granite. One of these veins is developed by shaft, winzes, raises and a 900' crosscut tunnel. Mine is equipped with hoisting and steam-compressor plant. Crosscut adit, driven 1914, failed to disclose any ore and operations were discontinued.

EUREKA GOLD & COPPER MINING CO.

ARIZONA

Jerome, Yavapai Co., Ariz. Dr. A. J. Murietta, pres.; A. A. Macpherson, sec.-treas. **Property:** 8 claims, 7 miles south of Jerome, near the Iron King mine, is opened by 2 tunnels, showing a 30' vein with an 8' paystreak carrying bornite and chalcopyrite, with occasional visible gold, but has not developed ore in commercial quantities. Mainly idle, for some years, excepting annual assessment work.

EUREKA HILL MINING CO.

UTAH

Office: Deseret National Bank Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. **Officers:** Moylan C. Fox, pres.; Waldemar Van Cott, v.-p.; Jas. E. Berkey, sec., with Ed. W. Packark, directors. Jackson C. McChrystal, managing engr.; Chas. Weisbaker, supt. **Inc.** Nov. 12, 1875, in Utah. **Cap.**, \$1,000,000; shares \$100 par. Is a close corporation, and has paid considerable dividends, but accounts are not published. Annual meeting, third Tuesday in February.

Property: 5 claims, 27 acres, patented, also a 25-acre mill site and 150 acres miscellaneous lands, in the Tintic district, adjoins the Bullion-Beck and Centennial Eureka. The Eureka Hill mine has a 1,500' main working shaft and about 30 miles of workings. **Orebodies** are lenticular deposits,

carrying cuprite, malachite and enargite, with average values of about 1.4% copper, 6% lead, 25 oz. silver and \$3 gold per ton. Mine worked for 45 years but shut down, 1911, and only old workings mined by lessees since then. Produced many millions of silver-lead ore from above 1,000' level. Deep development in future will be from adjacent mines.

Lessees working through Bullion-Beck shaft, down to 700' level, 1915, marketed many carloads of ore assaying 93 oz. silver and 40% lead. Knight-Dern interests, 1916, leased tailing dumps of Eureka Hill, reported to contain 200,000 tons of ore, averaging \$4.50 per ton.

EUREKA MINES CO. CONSOLIDATED

NEW MEXICO

Property sold to Jarilla Consolidated Copper Co., Dec., 1912. Fully described Vol. X, Copper Handbook.

EUREKA MINING, SMELTING & POWER CO.

OREGON

Idle. P. O. Box 63, Clarkston, Wash. W. E. Howard, sec. **Property:** 40 claims, patented, at Imnaha, Wallowa Co., Ore. Secretary reports, 1915, property idle for many years, awaiting railway facilities.

EUREKA OPHIR MINE.

UTAH

At Dry Canyon camp, via Stockton, in Rush Valley district, Tooele Co., Utah, on the S. P. L. A. & S. L. R. R. Property shows veins with replacement orebodies in Paleozoic limestones at and near dike contact and was shipping 50 tons a month from the 200' and 375' levels, averaging 8% copper, 15 oz. silver, 10% lead, in 1913. Property idle in 1914, but reported operated under bond and lease by Mineral Development Co., in 1915 and shipping \$26.92 ore from the 200' level. Plans sinking main shaft to 400' level.

EUSTIS MINING CO.

QUEBEC

Eustis, Sherbrooke Co., P. Q., Canada. W. E. C. Eustis, 131 State St., Boston, Mass., pres., sec.-treas.; F. M. Passow, supt. Inc. 1878, in Quebec, and operated as a close corporation.

Property; near Sherbrooke, carries 4 parallel interbedded lenses of cupriferous pyrite, in talcose schist crossed by diorite dikes, the cupriferous belt being traceable for 2 miles. The orebody is worked through an inclined shaft to a depth of about 3,450' on the incline, with an average dip of 45°. Lenses are 3 to 60' in width, averaging about 2.5% copper, up to 60 cts. per ton in combined gold and silver values, and 40% sulphur, but with considerable variations, ore occasionally carrying up to 50% sulphur. Footwall vein, or lens 4 to 20' thick, 50 to 100' long. Main vein 20 to 60' thick, 100 to 120' long. Shaft vein, 3 to 15' thick, 50 to 100' long. No. 1 vein 2 to 25' thick, 20 to 120' long. Footwall and shaft lenses richest in copper, averaging 4 to 8%, while others carry 2½% copper with 42 to 48% sulphur. Property is primarily a producer of pyrite, for the sulphuric acid trade.

Development: the mine, opened 1870, and producing for 30 years, has a 7x7' crosscut tunnel, 1,000' long and a 3,000' shaft, sunk at 20 to 45°, with double skip tracks. The mine is dry, most of the water coming from surface and the upper stopes, but the limited quantity of mine water is very acid, and contains copper in solution, which is precipitated as cement copper on scrap iron as it leaves the tunnel, through which it is conducted by a launder. Mine is served by the Boston & Maine railway. About 150 men are employed in the mine and mill.

There is a 400-k. w. hydro-electric power plant on the Coaticook river, 2 miles from the mine. The main plant has 2 alternators mounted on the same shaft and run in parallel, driven by turbine water wheels. There is one 150 and one 200-k. w. generators, direct-connected to the water wheels running at 500 r. p. m. The power is generated at 2,200 volts. The electric

efficiency is 90 to 93% and efficiency of water wheels is 60 to 80%, according to load.

Equipment: includes a 150-h. p. Westinghouse electric hoist, good for 3,500' depth, and two 8-drill 2-stage Rand air compressors, 1 run by steam and 1 by electricity.

The 200-ton mill, three-fourths mile from the mine, is connected therewith by an electric tram, equipped with three 3-ton cars. The mill has a 150-h. p. electric equipment. Ore is dumped onto grizzlies, coarse ore falling to the sorting floors and conveyor belts, where hand-picked and cobbled. Ore sufficiently rich for shipping is reduced to 2½" size, and concentrated ore is reduced to ¼" size, by crushers and 3 sets of rolls, going thence to a 6-compartment classifier, which sends each size to one of 8 Wilfley tables, middlings from the tables being sent back through the classifiers.

Selected ore and concentrates are shipped to various acid works, and there burned for sulphur, the cupriferous cinder remaining then being shipped to the Norfolk smelter, where treated for copper. Production is about 30,000 tons of cupriferous pyrite yearly.

EVANGELINA COPPER MINING CO.

MEXICO

Idle. Mine near Santa Catarina del Norte, comprises 150 acres, carrying a fissure vein of 3 to 6' width. Has steam power.

EVERGREEN BLUFF MINING CO.

MICHIGAN

In liquidation. Property owned by Mass Consolidated Copper Co.

EVERGREEN GOLD & COPPER MINES CO.

COLORADO

Reorganized as the Evergreen Mines Co., which see.

EVERGREEN MINES CO.

COLORADO

Office: 409 Empire Bldg., Denver, Colo. Mine office: Apex, Gilpin Co., Colo. **Officers:** J. L. Tapp, pres.; Geo. E. Bell, v.-p.; Wm. C. Hollister, sec.-treas.; preceding with W. J. Tapp, E. F. Krewinghaus, M. C. Shaffer, J. W. Barre, C. W. Keal, directors. Etienne A. Ritter, cons. engr.; Shad Reid, supt. **Inc.** Sept. 17, 1914, in Colorado. **Cap.**, \$2,000,000; shares \$1 par, non-assessable; outstanding a little over 1,000,000 shares. Notes authorized, \$75,000, with \$35,000 outstanding. Annual meeting third Tuesday in August. Company is a reorganization of the Evergreen Gold & Copper Mines Co.

Property: the Evergreen mine with 9 claims, 3 patented, 60 acres, in the Pine mining district.

Geology: the property shows Archæan gneiss and crystalline schists, cut by pegmatite, with an eruptive rock called "evergreenite." This dike is 3 to 12' in width, bounded on either side by ore-bearing contact zones of about 50 to 80' width. The ore deposit is unusual, carrying secondary (?) bornite as chief constituent.

Development: by tunnel and 350' shaft. Two ore shoots were found on the 100' level, 1 on the 200' and a new one south of this on the 350' level. Main orebody is 15 to 18' thick. There are 4 known ore shoots, carrying chalcopyrite, bornite and covellite, estimated by management to average 3.5% copper, 2 to 8 oz. silver and 50 cts. to \$4 gold per ton. The upper workings show some malachite and tetrahedrite. Underground work amounts to 3,400'.

Equipment: includes steam power, with a 45-h. p. hoist and 4-drill Leyner air compressor. A 60-ton mill has one 9x15" Blake crusher, 2 sets of rolls, 1 Richards classifier and 2 Card tables, making a concentrate containing 26% copper, 0.15 oz. gold and 4 oz. silver per ton, the tailings carrying 0.75% copper, being a saving of \$80 of the assay value of the ore.

Property idle in 1914-1915. Company plans to resume development work on the 350' level and build a flotation plant.

EXCELSIOR CONSOLIDATED MINING CO. CALIFORNIA

Inc. May, 1914, as a reorganization of Excelsior Cons. Gold Mines Co. and controlled by Worcester, Mass., parties. **Cap.**, \$3,000,000; shares \$1 par. R. B. Elder, mgr., W. H. Rea, supt.

Property: Excelsior group, in Meadow Lake district, Forest Hill, Nevada Co., about 7 miles from Cisco, the nearest railroad station, said to show oxide ore with gold values averaging \$10 per ton. Ore is treated by amalgamation and cyanidation. **Development:** 135' shaft and drifts. Use of Baltimore tunnel has been secured for further development at depth. **Equipment:** 9-stamp mill, a Marks centrifugal mill, 700-h. p. Horseshoe Bar electric power plant, bunkhouse and mine buildings. The mill treats about 250 tons of ore daily. Employs about 70 men.

Ore reserves: management claims to have \$35,000 worth of ore in bins.

EXCELSIOR MINING CO. IDAHO

Burke, Shoshone Co., Idaho. Chas. Chriswell, supt. **Property:** 6 claims, carrying a 15' vein, said to show copper carbonates and galena at surface. **Development:** by 2 tunnels.

EXCELSIOR MINING & DEVELOPMENT CO. NEW MEXICO

Property: near Orogrande, Otero Co., N. M., includes the Nashville and Three Friends claims, said to carry a 4' vein of 4% silver-copper ore, also lead carbonate up to 50% in tenor. Controlled by Ben L. Farrar and associates of El Paso. Operations resumed, 1915.

EXCELSIOR MINING, MILLING & ELECTRIC CO. COLORADO

Office: 401 Continental Bldg., Denver, Colo. Mine address: Frisco, Summit Co., Colo. **Property:** the Excelsior mine with 2,600' tunnel, developing a vein carrying lead-copper ore, with gold-silver values. **Equipment:** includes Leyner compressor driven by water and electric power. Has a 50-ton concentrator mill.

Mine being operated under lease and bond, Dec., 1915, by E. Flood, Frisco, Colo..

EXCELSIOR MOUNTAIN COPPER CO. NEVADA

Hawthorne, Mineral Co., Nev. **Officers:** Frank D. Qualey, pres.-gen. mgr.; J. H. Suits, sec.-treas.; George Brodigan, W. R. Jackman, W. B. Tait, directors; Wm. Winkelman, supt. Inc. June, 1905, in Arizona. **Cap.**, \$1,000,000; shares \$1 par. Annual meeting, June 7.

Property: 13 claims, 260 acres, in process of patenting, 16 miles S. E. of Hawthorne, in Whiskey Flat district, Mineral county, Nev., said to have promising surface showings of copper for a distance of several thousand feet along a contact between granite and limestone. Has 4 shallow shafts and 2 tunnels, with one 1,500' tunnel showing ore averaging 4% copper and \$2 gold per ton. Total of underground workings about 3,000', said to prove ore to a depth of 600'.

Equipment: includes 50-h. p. gasoline engine and 6-drill compressor. Development in 1913 included a connection between No. 1 and No. 2 tunnels, claimed to be in ore of commercial character. Property closed down during past two years, but management planned resumption by April 1, 1916.

EXPLORATION CO., LTD. MEXICO

H. F. Wreford, sec., 24 Lombard St., E. C., London; P. L. Foster, 61 Broadway, New York. Directors: R. T. Bayliss, chairman and managing director; J. H. M. Shaw, managing director; J. R. Maguire, J. E. D. Ryder, G. D. Smith, O. E. Warburg.

Registered March 21, 1904, to acquire the assets and undertakings of a company of same name, registered June, 1896, except certain assets and liabilities which had been acquired by the Exploration Assets Co., Ltd. The

company carries on a general financial business and holds interests in the South African Real Estate Trust, Ltd., Tomboy, El Oro, Santa Rosa, Buena Tierra, Greene-Cananea Copper, Inspiration Cons. Copper, Chile Copper, Natomas Cons. and other concerns, and has floated the Mexico Mines of El Oro, Ltd., and formed the Exploration Company of England and Mexico, Ltd., to deal with Mexican interests.

Cap., authorized and outstanding, £750,000; shares £1 par. For every 5 old shares, holders received 3 fully paid shares and £2 of the Assets Company's debenture stock.

Dividends declared by former company: 1896, 2s; 1897, 2s 6d; 1898, 2s 6d; 1899, 3s; 1902, 1s. Dividends paid by present company: 1905, 1s; 1906, 1s; 1907, nil; 1908, 1s; 1909, 1s 6d; 1910, 1s; 1911, 1s; 1912, 1s 6d; nil in 1913, 1914 and 1915.

For year ending Dec. 31, 1914, there was a net profit of £28,586, making, with balance forward, £56,411, which was carried forward; cash, £112,617; loans to subsidiary companies, £39,676; investments, £652,575; debtors, £6,426; creditors, £4,416.

EXPLORATION CO. OF ENGLAND & MEXICO, LTD. MEXICO

H. F. Wreford, sec., 24 Lombard St., London, E. C., Eng. **Officers:** R. M. Raymond, cons. man'g dir., Columbia Univ., New York; R. T. Bayliss, chairman; P. L. Foster, J. R. Maguire, John E. Dudley Ryder, G. D. Smith, O. E. Warburg and J. H. M. Shaw, directors. **Inc.** March 8, 1909, in Great Britain. **Cap.**, £250,000; shares £1 par; all issued, 3s 6d paid, and held by the Exploration Co., Ltd. A dividend of 8s per share, payable in fully paid Buena Tierra mining shares, was declared, Aug., 1912. Company is a subsidiary of the Exploration Co., Ltd. It has acquired and sold to operating companies bearing these names, the Buena Tierra and Santa Rosa properties. Owns no copper mines at present.

EXPOSICION MINING CO., LA.

ARIZONA

See La Exposition Mining Co.

FAIRBAIRN EXPLORATION CO.

UTAH

Address: A. J. Fairbairn, Breckenridge, Colo. Has a 2-year lease on the Godiva mine at Eureka, Utah, and on adjoining property of the Plutus Mining Co., which see.

FAIRVIEW MINING CO.

ARIZONA

Mine near Dragoon, Cochise Co., Ariz., idle many years. See Vol. XI, Copper Handbook.

FAIRVIEW MINING CO.

CALIFORNIA

Reorganized as Calumet & California Mining Co., which see.

FANNY FERN MINING CO.

COLORADO

Lake City, Hinsdale Co., Colo. Property carries copper and silver-lead ores, developed by a 200' tunnel. Operated under lease by Theo. Watson and F. A. Ralph. Shipments in 1914 said to have returned 176 oz. silver, ¼ oz. gold, 6.9% lead and 2½% copper per dry ton, or \$108 per ton.

FANNY RAWLINGS MINING CO.

COLORADO

Office: 6 N. Nevada Ave., Colorado Springs, Colo. **Officers:** John A. Himebaugh, pres.; Thomas S. Brigham, v. p.; Walter C. Frost, sec.-treas. **Cap.**, 1,000,000 shares; par value \$1; only small amount of cash in treasury, Jan. 1, 1916. Has \$7,000 loaned at 5½ and 6% and secured by lien on first-class improved real estate, stock, 5,551 shares. Last stockholders' meeting held June 29, 1912. Listed on Colorado Springs Exchange. Total amount of dividends paid to date, \$50,000; last dividend, \$5,000, paid Dec. 29, 1908.

Property: the Fanny Rawlings lode mining claim, about 10 acres, on Breece Hill, near Leadville. **Development** on south half of claim said to have cost \$255,000, and plant cost about \$13,000. Property is leased to

Charlestown, W. Va., parties, who expect to develop it on a large scale.

FARRELL COPPER CO.

MONTANA

Idle. Mine at Butte, Mont. **Officers:** W. C. Lewis, pres.; Carlton H. Hand, v. p.; J. D. Slemons, sec.-treas.; above, with A. T. Morgan, Walter C. Lewis, Donald Campbell, W. H. Hall and Daniel Tewey, directors. Inc. July 24, 1906, in Montana. **Cap.**, \$1,000,000; shares \$2.50 par.

Property: 17 acres, in the S. E. part of the Butte district, has a 200' shaft, sunk jointly with the Alliance Copper Co. Cross-cut on the 200' level shows a little ore carrying copper, lead, zinc and silver values.

FARWELL MOUNTAIN COPPER CO.

COLORADO

Mine in Routt Co., Colo. **Officers:** J. A. Ouimet, pres., 301 Essex St., Lawrence, Mass.; J. R. Simpson, v. p.; W. H. Moisson, sec.; J. U. Emar, treas.; preceding, with J. E. Lemay, A. B. Sutherland and T. J. Buckley, directors; Geo. B. McFadden, gen. supt.; C. D. McFadden, mine supt., engr. and purch. agt. Inc. March, 1907, in Colorado. **Cap.**, \$5,000,000; shares \$5 par.

Property: 42 claims, 434 acres, 30 claims patented and 560 acres placer ground, in the Hahn's Peak district, Routt county, Colo., shows vertical fissure veins accompanying quartz porphyry dikes in granite. Ores carry values in gold and silver with some copper; the vein under development said to be 8' wide, proven to a depth of 351' and has a total value of \$14 per ton.

There are several shallow shafts, one 94' deep, and a tunnel 625' long. Total length of underground working 2,320'.

Property is 27 miles from the Denver, Northwestern & Pacific railroad. Letters neither answered nor returned, 1916.

FAUNTLEROY GOLD MINING CO.

COLORADO

Office: 516 Exchange National Bank Bldg., Colorado Springs, Colo. **Officers:** Verner Z. Reed, pres.; L. L. Aitken, v. p.; A. D. Aitken, sec.-treas. **Cap.**, 1,250,000 shares; \$1 par. In treasury Jan. 1, 1916, \$104.88; no stock. All taxes paid. Liabilities, \$3,336. Last stockholders' meeting, April 18, 1911. Listed on Colorado Springs Exchange.

Property: 5 claims, 20.3 acres, patented, on Gold Hill and Mineral Hill, Cripple Creek. **Development:** on the Little Fauntleroy, consists of 800' of work done from the Ophelia tunnel at 278' from surface. Shaft from surface also connects with tunnel. On the Garfield claim is an 80' shaft with 100' of drifting. During 1915 about 100' of drifting and cross-cutting was done.

Little Fauntleroy claim is leased for two years on graduated royalties ranging from 15 to 25%; 50 shifts per month required. Gross production to date, \$7,890; production during last six months of 1915, \$498.

FAVORITE GOLD & COPPER MINING CO.

WASHINGTON

Mine at Nighthawk, Okanogan Co., Wash. **Officers:** W. R. Calkins, pres.; Henry Loudenslager, v. p. and treas.; A. E. Faine, sec.; Edw. Williams, supt., at last accounts. Inc. Dec., 1902, in Washington. **Cap.**, \$2,000,000; shares \$1 par, nonassessable.

Property: 28 claims, 14 fractional, 300 acres, adjoining the Nighthawk mine, in the foothills of Mount Ellemeham, in the Wannicut Lake district, 34 miles from the Canadian Pacific railway. Said to show 3 veins, one, of 7' width, carrying copper, and 2 carrying silver-lead, with values mainly in lead. The principal silver-lead vein, of 1 to 5' width, has a 963' upper tunnel, and a 650' lower tunnel. No recent returns. Probably idle.

FAY-CANANEA COPPER CO.

MEXICO

Offices: 2105 East Superior St., Duluth, Minn.; Cananea, Sonora, Mex. **Officers:** Marcus L. Fay, pres.-gen. mgr.; G. A. Daugherty, v. p.-treas.

Geo. M. Fay, sec.; preceding, with Wm. J. Schulze, John McDaniels and Leo Kannaple, directors. *Inc.* Sept. 4, 1904, in Arizona. *Cap.*, \$3,000,000; shares \$5 par. Company holds title to its lands through the Cananea-Eastern Mining Co., S. A., inc. in Mexico. Mr. Fay is said to own a majority of the issued stock.

Property: originally aggregating 2,127 acres, about 2 miles apart, has been greatly reduced, company retaining only the Cananea Eastern group. Former holdings fully described Vol. VIII, Copper Handbook.

The Cananea Eastern property was acquired on a bond in 1912, by A. C. Charlot and associates, of New York, on behalf of the Charlot Mining & Smelting Co., which in turn transferred the bond to the Eastern Cananea Development Co., who did extensive development work and made necessary repairs.

The Sulphide group has a strong vein, claimed to average about 150' in width, but it is improbable that the full width will be found workable. This property has an antigua mine, with two 100' shafts, from which more or less high-grade silver ore was stoped in the past. A 26' shaft on the Azurite claim shows ore giving average assays of 6% copper, 10% lead and 30 oz. silver per ton. Property considered promising. Idle.

FEDERAL ELY COPPER CO.

NEVADA

Office: 26 Mining Exchange Bldg., Salt Lake City, Utah. **Mine office:** Ely, Nev. **Officers:** J. A. Cunningham, pres.; A. C. Ellis, Jr., v. p.; J. R. Evans, sec.-mgr.; L. L. Farnsworth, treas.; with Wm. J. Craig, John T. Hodson, D. C. Jackling, H. Newell, W. H. Dickson, E. L. Sheets and Wm. M. Bradley, directors. *Inc.* 1914 in Utah. *Cap.*, \$5,000,000; shares \$5 par; assessable; 12 assessments levied to March, 1915. Stockholders plan reducing company's capitalization to \$150,000 in 1916.

Property: 21 claims, 3 fractional, 400 acres, also the Huesser ranch of 600 acres, 15 miles north of Ely, in the Steptoe valley, bought 1906, and a mill-site. Mining lands are the Panama claim, bought, 1909, for \$10,000, lying about one-half mile north of the Star Pointer shaft of the Nevada Consolidated; 8 claims north of the Nevada Consolidated; 3 claims between the Cumberland-Ely and Turner-Ely, and the Queen of the West group, in Robinson cañon. Company is said to have paid \$225,000 for its lands.

Geology: property north of the Nevada Consolidated shows limestone beds dipping to the east, said to be underlaid by cupriferous monzonite, and to carry 3 parallel shear zones, each about 400' in width, 600' apart, showing a little copper and lead ore. The limestone capping on the Savage claim is said to carry lead ore. Churn-drill borings are said to have given a satisfactory showing of ore, and there also was some test-pitting and surface trenching.

Development: by tunnels aggregating about 1,600' and 4 shallow shafts, 3 said to show copper sulphides at depth of 100', the main shaft said to be near the contact of 3 ore zones, which seems peculiar, if the ore zones are parallel, as claimed.

The Queen of the West shaft shows, at depth of 110', a sulphide ore-body of considerable size, averaging 3% copper, 1 to 2 oz. silver and 40 to 50 cts. gold per ton. The Kessler shaft, about 100' deep, near the tunnel, shows lead carbonates of fair tenor. Mine has a small steam plant.

Company has done little save levy assessments for several years, doing barely enough work on the claims to meet annual assessment requirements. Their claims were surveyed for patent in 1912 and reported partly patented in 1914.

FEDERAL LEAD CO.

MISSOURI

Flat River, Mo. H. A. Guess, gen. mgr.; H. G. Washburn, supt. Sub-

subsidiary of American Smelters Securities Co. Inc. in Delaware. **Cap.**, \$2,000,000; shares \$10 par. The lead-smelting and refining plant, at Federal, Ill., near Alton, comprises 302.5 acres. The plant is a custom smelter.

Mining property, 13,690 acres in the Flat River district, southeastern Missouri, shows lead ore in limestone. Mine has 12 shafts and prospecting is done by diamond drills, as no outcrop of disseminated ore occurs. The mill of 4,600 tons daily capacity is equipped with 12 Hancock jigs, 72 tables, 18 vanners arranged in 3 units or 2 sections each; also regrind rolls, elevators and Esperanza-Federal drag classifiers. Most of the power is generated at a central power plant. The power plant consists of a battery of 10 boilers, equipped with chain grate stokers, 3 750-k. w. Curtis vertical turbines, 1 800-k. w. Allis-Chalmers turbine, 3 Nordberg compressors, 1 Ingersoll-Rand compressor, together with necessary condensing equipment, etc.

Production: 1,163,000 tons in 1913; 1,212,000 tons in 1914; 1,355,000 in 1915.

FEDERAL MINING & MILLING CO.

UTAH

Stateline, Iron Co., Utah. Company owns the Ophir mine and a mill in Rice canyon. Is a private corporation.

FEDERAL MINING & SMELTING CO.

IDAHO

Offices: 32 Broadway, New York; Wallace, Idaho, and Wilmington, Del. (Corporate office). **Officers:** F. H. Brownell, pres.; Wm. J. Hall, sec-treas.; preceding officers, with Chas. Sweeny, Frank Sweeny, of Spokane; F. C. Druding, H. W. York, F. R. Ruff, W. E. Bennett, Edwin Brush and E. L. Newhouse, of New York, directors; F. E. Burbidge, gen. mgr.; P. E. Smith, asst. gen. mgr.

Inc. 1903 in Del. (charter perpetual), amended Sept. 15, 1903. **Cap.**, authorized \$20,000,000 Pfd., 7% Cum., and \$10,000,000 Com.; shares \$100 par. Outstanding, \$12,000,000 Pfd. and \$6,000,000 Com. Preferred stock has no voting power except in connection with the increase of preferred stock, but is preferred as to assets. One-sixth entire capital stock said to be held by American Smelters Securities Co., which controls Federal. Guaranty Trust Co., New York, transfer office; U. S. Mortgage & Trust Co., New York, registrar. Annual meeting, 2nd Monday in April. Listed on New York and Spokane Exchanges.

Dividends:

Year—	Pfd.	Com.	Year	Pfd.	Com.	Year	Pfd.	Com.
1903.....	7%	1908	7%	1915	4%
1904.....	7%	4½%	1909	7%	1½%
1905.....	7%	6 (a)	1910-11	7%

Total

(a) Includes 28,000 shares Bunker Hill & Sullivan stock carried at par value.

Note—In 1915 mines and equipment carried at par value of outstanding stock, regardless of actual value of property.

The Federal has a contract with the A. S. & R. Co., dated Oct. 16, 1905, terminating Aug. 31, 1930, by which the Federal company must sell all of the silver-lead ores, slimes and concentrates, of its own or leased mining properties, and all owned or leased property of any company in which the Federal owns 75% of the capital stock to the A. S. & R. Co., and the A. S. & R. Co. agrees to take all such output.

The A. S. & R. allows the Federal 90% of the contents of the latter's lead ore at 90% New York quotations, when lead sells at less than \$4.10 per 100 lbs.; when the price is over \$4.10 they divide the difference between \$4.10 and the market price. Contract for silver calls for 95%, based on Handy & Harman quotation. Contract for gold calls for 95% at \$20 per oz., provided ore contains 0.05 oz. per ton. Contract provides deductions of \$8 per ton for treatment charge plus freight to smelter (app. \$7.17 per ton) and 50c per ton for each 1% or fraction of 1% of zinc in excess of 10%. Federal cannot lease or dispose of its stock in a company owning or leasing mining property without previous written consent of the A. S. & R. Co.

Suit was filed Feb., 1913, by Sydney Norman, on behalf of the minority stockholders, to set aside the above "alleged unfair smelting contract" and to recover \$2,000,000 damages to Feb., 1913; said amount being the estimated difference between New York price of lead and the lesser terms of the contract. On July 1, 1914, this suit was dismissed in the Supreme Court of New York City, but that it will be appealed seems certain. With lead selling at its present high price the burden carried by Federal is indeed a heavy one.

Apex litigation with the Bunker Hill & Sullivan, started in 1908, was settled in 1910 by agreement between the two companies.

History: company entered upon the operation of its properties Sept. 1, 1903. Of the preferred stock, \$10,500,000, and of the common stock, \$5,250,000, were issued upon the acquisition of all the mining property formerly owned by the Empire State-Idaho Mng. & Dev. Co., by the Standard Mining Co., the Mammoth Mines in Idaho, and certain smelting property at Everett, Wash. The smelting property has since been sold without loss to the company. The above mentioned mining property consists of silver-lead mines in the Coeur d'Alene mining district.

In 1910, company acquired an option on a portion of the stock of the Govt. Gulch Dev. Co., lying east of the Black Hawk mines in the Wardner district. On account of default of the stockholders, 414,000 shares out of a million reverted to the Federal Mining & Smelting Co. The property of this company consists of 1 patented and 6 unpatented claims. Company also controls through stock ownership the Black Hawk Mng. & Dev. Co., Ltd.

In fiscal year 1912-13 the company exercised an option on $\frac{1}{4}$ of the Cleveland group of the Idaho Investment Co., and started negotiating for remaining $\frac{3}{4}$, also for the Green Hill ground. This resulted in the organization of the consolidated Green Hill-Cleveland Mng. Co., to which company Federal deeded its $\frac{1}{4}$ interest, and the owners thereof deeded their $\frac{3}{4}$ interest in the Cleveland group, and also all of the Green Hill ground. Subsequently Federal leased to the Green Hill-Cleveland Mng. Co. all of the mining and milling plant of the Mace mines for an indefinite term, until the ores in the ground belonging to the new company are exhausted, receiving therefor a rental of \$180,000, payable out of the first profits of the new company, before any dividends were declared. Ownership of the Green Hill Co. lies 50% with the Federal company and 50% with the Green Hill interests. Owners of each half interest share equally in directorate and management of the new corporation, operations of which were started Nov. 1, 1912. Dividends received by the Federal from the Green Hill-Cleveland Co. amounted to \$352,000 in 1913, \$576,000 in 1914 and \$192,000 in 1915.

In Oct., 1915, a bond was taken by the Green Hill-Cleveland on the Olympia group, adjoining the Green Hill-Cleveland on the west. Extensive development at depth will be done from Green Hill levels.

The Helena-Frisco property was purchased in Jan., 1913, for \$100,000. Federal company agrees to spend \$150,000 in dewatering the mine and equipping it for further active work; then to take back out of the earnings \$250,000, and after this will be entitled to one-half the balance, the remainder going to the former owners. Helena-Frisco values consist largely of zinc.

In July, 1915, Federal purchased, at receiver's sale, the mine, concentrator, power line and supplies of the Iron Mt. Tunnel Co., at Superior, Mineral Co., Mont., for \$100,000. The mine is an old one, having been stoped for 1,700' above water level about 20 years ago. Operations to date by Federal have shown a steady monthly deficit, but this is being reduced and property is expected soon to be on a paying basis.

In the 1915 annual report the following active properties are named: the Wardner, which includes the Last Chance mine at Wardner; the Mace, or Standard-Mammoth, one mile west of Burke; the Morning, at Mullan; the Helena-Frisco, at Gem; the Green Hill-Cleveland, near Mace; the Iron Mountain, at Superior, Mont.

The Wardner group consists of 40 patented and numerous unpatented claims, also several hundred acres of agricultural land. Mineral claims cover over 7,000' in length of the Wardner lode, developed by the Last Chance mine, north and west of the Bunker Hill & Sullivan; orebodies belong to the same vein as those worked by that company, and lie chiefly along the Jersey fissure zone. The Sweeny adit level is the principal level. It is about 700' above the Kellogg tunnel of the Bunker Hill & Sullivan. Ore is hauled to the Arizona portal, from there over a spur of the O.-W. R. R. & Nav. Co.'s line to the mill at the mouth of Government Gulch. Below the Sweeny tunnel is an inclined shaft several hundred feet deep with several

levels. The mine has been a steady producer for 25 years, but is approaching the end, together with the Mace.

The Morning mine, $\frac{1}{2}$ mile N. W. of Mullan, is one of the large lead-silver properties in the district, and one of the best equipped. It is the most important mine of the Federal group, though its ores are the lowest grade of any property in the district and very difficult to treat.

For geology of the Coeur d'Alene district, see U. S. G. S. Prof. Paper, No. 62.

The Iron Mountain mine, near Superior, Mont., is an old worked-out property, recently acquired by the Federal, and thus far operated at a loss.

The North Star-Triumph mines, near Hailey, Idaho, acquired 1916, have a 300-ton concentrator with flotation system and electric separator under construction. General Naval Stores oils are used in the flotation plant.

Ore reserves and development work for past two years:

		Reserves		Concts.		1st Class	Dev.
		Milling Ore	Ore	Ore	Ore	Feet	
		Tons	Tons	Tons	Tons	(b)	
Wardner	Jan. 1, 1915	62,200	4,060	1,020			3,655
	Jan. 1, 1916	25,000	2,060	450			3,364
Morning	Jan. 1, 1915	673,150	61,180	43,660			2,212
	Jan. 1, 1916	752,300	74,840	62,685			3,781
Mace	Jan. 1, 1915	87,000	8,250				85
	Jan. 1, 1916	87,700	8,350	4,390			1,154
Frisco	Jan. 1, 1915	111,000	20,000 (a)				
	Jan. 1, 1916	181,600	41,730 (a)				1,314
Iron Mt.....	Jan. 1, 1916	46,500	3,330 (a)	210			278
Green Hill-Cl.....	Jan. 1, 1915	55,100	5,660	3,960			1,304
	Jan. 1, 1916	14,500	1,060	445			2,541
Total	Jan. 1, 1915	988,450	99,150	48,640			7,256
	Jan. 1, 1916	1,107,600	131,370	68,180			12,432
Increase		119,150	32,220	19,540			5,176

(a) Includes lead and zinc. (b) For year ending.

The Federal company is amply provided with modern concentrating, pumping, hoisting, compressor and electric plants.

Employed an average of 1,064 men, 1915, at average wage of \$3.747 per shift, compared with 997 men at average wage of \$3.675 in 1914.

Production:

Year—	First-Class Ore				Lead Concts. &			Zinc Concts.	
	Total Tons Mined	Tons	% Pb.	Milled Tons	Tons	% Pb.	Oz. Ag.	Tons	% Zn.
1915 (a) ..	461,252	29,338	30.4	408,315	66,610	40.20	14.77	8,839	42.46
1914.....	421,631	21,091	34.0	389,450	57,058	44.67	16.01	4,200	44.61

(a) Morning mine only operated for last 8½ months.

	First-Class Ore		Concentrates		Frisco (a)		Iron Mt. (b)				
	%	Oz.	%	Oz.	%	Oz.	%	Oz.			
1915.....	Pb. Ag.	45.7	28.9	57.7	19.6	46.1	15.5	25.9	7.6	37.1	60.1
1914.....	51.2	29.6	59.1	22.4	44.7	14.7

(a) % zinc in zinc concentrates was 40.0%; (b) % zinc in zinc concentrates was 37.6%.

Production of Various Mines in 1915

Mines—	Tons Prod.	Gross Val.	Cost Extr.	Trans. & Red	Net Profits
Standard	52,958	\$ 332,794	\$205,296	\$ 88,206	\$ 39,291
Morning	250,260	1,947,606	598,898	741,996	571,560
L. Chance.....	136,180	620,682	369,083	204,228	47,370
Frisco	58,113	None
G. H.-Cleve....	1,643,798	658,941	415,228	497,864 (a)

(a) Compares with \$1,046,757 in 1914.

The Last Chance and Green Hill-Cleveland mines are practically worked out, the latter reverting to the Bunker Hill Co. whenever it fails to show an operating profit for 5 consecutive months. Inasmuch as \$12,000,000 7% preferred stock is in arrears \$1,000,000 and the common has received no dividend since 1909, and is now worthless, the sole property of value, the Morning mine, has a heavy load to carry. Nothing but a miracle could restore the company's prosperity so long as it is subject to a surtax of \$5 a ton more than other companies in the same district, as a result of the present smelting contract.

FELIX BASIN COPPER MINES.

MONTANA

Assessment work not done in 1915 and location forfeited. Described Vol. XI, Copper Handbook. Mines near Coram, Mont.

FERRIS-HAGGARTY COPPER MINING CO.

WYOMING

Inactive. Owns, or did own, the copper mine of this name at Rudefeha, Carbon Co., Wyo. Company also owned \$375,000 of the Penn Wyoming bonds, but as its stock is practically all owned by the Penn Wyoming, its corporate officers and affairs are of no public interest, save as the only valuable mining asset of the chain of bankrupt corporations, controlled by the Penn Wyoming and its alleged and equally rotten successor, the United Smelters, Railway & Copper Co. The mine itself has been idle for many years. See Penn Wyoming Co.

FESSENDEN GOLD MINES CO.

ARIZONA

Oatman, Ariz. **Officers:** M. A. Fessenden, pres.; F. W. Crosley, v. p.; J. E. Shank, sec.; Dan Angius, treas.; with J. O. A. Carper, directors. **Inc.** in Arizona. **Cap.,** \$100,000; shares 10 cts. par; treasury 600,000 shares. Listed in Los Angeles.

Property: the Sunlight and Moonlight claims, 40 acres, adjoining the Long and McIver group on the East, at Oatman. Developed by 500' shaft and equipped with 3-drill compressor. Company is cross-cutting, 1916.

FIDALGO-ALASKA COPPER CO.

ALASKA

Ellamar, Alaska. **Thos. Donahue, pres.;** L. A. Levensaler, mgr.; E. D. Reiter, supt. **Property:** 24 claims, about 15 miles from Ellamar and one-half mile east of Irish cove, on the southern side of Fidalgo bay, an inlet of Prince William sound. **Development:** includes a 450' main tunnel following a well-defined fracture zone, in slate, carrying 2 lenticular ore shoots, said to be 5x50' in cross-section, cut at 200' and 300' from portal, with many small stringers. **Ore:** mainly chalcopyrite, said to give average assays of about 10% copper, occurs as cementing material of fractures, irregular stringers, disseminated grains and as lenticular replacements of country rock, the fracture zones being very erratic in size and extent.

Equipment: includes 1,000' aerial tram, ore bins and wharf, besides several mine buildings. Company employing 16 men. Operations were continued throughout 1915 and management plans further development and prospecting. Geology described on page 118, U. S. G. S. Bull. 605.

FIDELITY COPPER CO.

ONTARIO

Owns property 12 miles north of Sturgeon Falls, Ont., showing copper ore. **W. G. Colwell, Buffalo, N. Y., pres.** Idle.

FIFE MINES, LTD.

Rossland, B. C. Chas. Dempster, gen. mgr. **Property:** the Hattie Brown claim at Rossland and the Dykehead, Ben Hur, Three Bells and Fife claims at Fife, near Christina lake, 12 miles E. of Grand Forks, Boundary district, B. C. Claims show a vein up to 30' in width, carrying about 6' of smelting ore, with balance of concentrating grade, developed by a glory hole, an 80' shaft and a main tunnel having a 235' winze. **Ore:** contains chalcopryrite, carrying gold and silver values, claimed to average 3 to 6% copper and \$4 to \$8 gold per ton. **Equipment:** includes necessary mine buildings and a 5-drill Rand air compressor. Property considered promising. Presumably idle.

56 (FIFTY-SIX) COPPER MINE.

J. P. Turner, operator, Winnemucca, Nev. Is the first quartz mine located in Nevada, being staked out in 1856, by L. D. Vary. The mine is in the southern end of the Eugene mountains, not far from the Humboldt river and S. W. of Mill City. Idle.

FINANCE MINING CO.

Idle. St. Thomas, Lincoln Co., Nev. Levi Syphus, pres.; Robert O. Gibson, sec. **Inc.** Oct. 23, 1906, in Nevada. **Cap.**, \$500,000; shares \$1 par, nonassessable. **Property:** 4 claims, unpatented, in the Gold Butte district, 60 miles from a railroad, developed by 120' shaft, with hand whim, said to show complex ores with copper, lead, silver and gold values.

FINDLAY COPPER CHIEF MINING CO.

Idle. Findlay, Ohio. John N. Dotz, pres.; P. M. Cox, sec.; R. E. Taylor, treas., at last accounts. **Inc.** 1907. **Cap.**, \$1,000,000; shares \$1 par. **Property:** 2 claims, in the Yellow Pine district, about 25 miles S. W. of Las Vegas, developed by 30' shaft and 60' tunnel, said to show ore.

FINDLEY MINES CO.

Cripple Creek, Colo. **Officers:** L. G. Carlton, pres.; A. E. Carlton, v. p.; V. H. Mann, sec.-treas. **Inc.** Jan. 1, 1912, in Wyo. **Cap.**, 2,000,000 shares; par value 2½c. In treasury Jan. 1, 1916, cash \$291, 750,000 shares stock. Total dividends, \$337,500; last dividend paid September, 1906, by original company; amount, \$12,500. Colorado Title & Trust Co., Colorado Springs, transfer office. Annual meeting 2nd Wednesday in June. Last meeting, June, 1913. Stock listed on Colorado Springs Exchange. Liabilities, \$2,500 demand note.

Property: 5 claims, patented, 12.5 acres, on south slope of Bull Hill, Cripple Creek, Colo. **Ore:** carries gold and occurs in fissure veins. Underground workings are extensive, aggregating about 6 miles. Property fully equipped with machinery.

Litigation: Stratton C. C. M. & D. Co. vs. Findley, re ownership of certain ores. Gross production to date, \$1,651,183.14. None of this company's mines are being worked.

FIRST CHANCE MINING & MILLING CO.

Idle. Mine office: Ibadah, Tooele Co., Utah. **Officers:** Wilkins Goodrich, pres.; Soren Nielsen, v. p.; John Jensen, sec.-treas., at last accounts. **Inc.** Nov. 17, 1909, in Utah. **Cap.**, \$100,000; shares 20 cts. par. **Property:** 7 claims, unpatented, in Paleozoic limestones cut by porphyry, in the Dugway district, 76 miles S. W. of Center on the Salt Lake railroad. Slightly developed.

FIRST NATIONAL COPPER CO.

Office: 111 Broadway, New York. Mine and works office: Coram, Shasta Co., Cal. **Officers:** Thos. W. Lawson, pres.; Wm. A. Kerr, v. p. and treas.; A. R. Buchanan, sec.; with Frank M. Leland, gen. mgr.; preceding, with H. W. Hoops, John A. Young and E. M. Buchanan, directors. **Inc.** Jan.

BRITISH COLUMBIA**NEVADA****NEVADA****NEVADA****COLORADO****UTAH****CALIFORNIA**

20, 1908, in Nevada. **Cap.**, \$3,000,000; shares \$5 par, assessable; paid in \$3.75; 600,000 shares outstanding. Is said to have 5,500 shareholders, including American Smelters Securities Co., owning 80,000 shares. Stock is listed on the New York and Boston curbs. Empire Trust Co., New York, and State Street Trust Co., Boston, registrars; Registrar & Transfer Co., New York, and International Trust Co., Boston, transfer agents. Annual meeting, last Thursday in October, at Carson City, Nev. This corporation is a holding company, owning the entire capital stock of the Balaklala Consolidated Copper Co., which in turn owns the entire capital stock of the Coram Water Co. and other subsidiaries and a third interest in the Balaklala Central Mining & Smelting Co.

The mining property and smelter are described under the above titles. The smelter was shut down in 1909 by fume litigation in the California courts, and cannot resume operations until some device is successful in eliminating the damage done by smelter fumes. Mine closed Aug. 21, 1914, on account of low price of copper, and resumed operations Aug. 25, 1915. Shipping 300 tons of 2.8% ore daily to the Mammoth smelter of the U. S. Smelting Co. at Kennett, Calif., in 1916. Company has entered into a 10-year contract with the U. S. Sm. Co. Management claims to earn about \$2.25 per ton on 19c copper.

The Balaklala Consolidated Copper Co. had a bond issue of \$1,500,000, which was paid by the First National, in 4 annual installments of \$375,000 each. The First National authorized, 1909, a \$1,000,000 bond issue, flotation of which was a failure, but pledged some of these bonds for a loan of \$375,000, which loan presumably was paid by the proceeds of the last assessment. The stock was manipulated to \$10 per share by Boston interests in 1915. Property fully described under Balaklala Consolidated Copper Co.

Property should and could be operated, and its idle condition with copper selling at 29c a pound is almost a crime.

FIRST THOUGHT MINING CO.

WASHINGTON

Idle. Orient, Wash. Patrick Burns and Blake Wilson, of Calgary, owners. Alexander Sharp, mgr., Vancouver, B. C. Property produced \$750,000 prior to 1909, idle since. Company won a suit against Stevens County assessor, June, 1916, and court ordered valuation reduced to \$10,000.

FISSURES EXPLORATION CO.

UTAH

McCornick Blk., Salt Lake City, Utah. Operates a lease on property of Pacific Gold M. & M. Co., which see.

FITZSIMMONS GROUP.

BRITISH COLUMBIA

P. O.: Newport, B. C. **Property:** All-Up and Yellow Jacket claims, on Fitzsimmons creek, Howe Sound district, 38 miles from Newport, of which 26 miles is by trail. Mine is in the Greenlake country, tributary to the Pacific & Great Eastern railroad, and shows a mineralized zone, 150' wide, with an orebody 10' wide, traceable for 250'. Outcrop forms a bluff 60' high with chalcopyrite in epidote and garnet gangue. Outcrops show values of 60 cts. to \$4 gold, one-half to 1½ oz. silver and 5 to 12% copper per ton. Property examined by F. W. McCready, who reports large quantities of payable ore on outcrop.

FIVE BEARS MINING CO.

CALIFORNIA

Office: 15 N. 40th Ave., Chicago, Ill. **Mine office:** Genesee, Plumas Co., Cal. **Officers:** F. A. Meidinger, pres.; A. Vermaas, sec.; J. D. Meidinger, treas.; preceding, with E. C. Goeckel, directors. **Inc.** April 10, 1903, in South Dakota. **Cap.**, \$2,500,000; shares \$1 par, nonassessable; issued, \$2,428,174.

Property: 10 claims, patented, 200 acres, well timbered, 21 miles from the Western Pacific railway, shows fissure veins in talcose schist, and con-

tact replacement deposits between schist and porphyry. The gossan was worked, 1876-93, for gold. Main vein, of 14' estimated average width, carries chalcopryrite, associated with pyrite, estimated by management to average 6% copper, 1.5 oz. silver and \$1.40 gold per ton. **Development:** 2 tunnels, of 380' and 1,250', latter a drift tunnel, following the vein fault-fissure, showing low-grade chalcopryrite for an average of about 12' width. Mine has 3,484' of workings, estimated to show 80,000 tons of ore, with 9,500 tons blocked out for stoping.

Equipment: includes a 50-h. p. water plant, a 2-drill Giant air compressor, 50-ton mill with ten 850-lb. stamps, and electric light plant. There are 11 buildings. Idle.

FIVE PINES MINING CO.

CALIFORNIA

Minersville, Trinity Co., Calif. H. J. Van Ness, pres.; L. Van Ness, mgr. **Property:** located in 1896, is on the N. E. side of Van Ness Creek, about 1½ miles above its mouth and 2 miles N. W. of Minersville. Mine is said to have produced to 1915 almost \$300,000, and to be the best producer of the district.

Ore: free milling gold quartz with calcite, occurs in a series of pockets in a contact vein between meta-andesite and overlying slate and sandstone.

Development: 225' incline shaft with a level at 125'. **Equipment:** includes a small hoist and 2-stamp mill. Coarse gold and 80% of total value is recovered in hand mortar. Water power is used. Employs 4 men. See U. S. G. S. Bull. 540, p. 73 and Mines & Min. Res. of Trinity Co., State Mineralogist's Report 1915.

FLAGSTAFF COPPER MINING CO.

UTAH

Dead. Company consolidated with the Columbus Consolidated, and Superior Alta, under name of Wasatch Mines Co., which see. Described Vols. X and XI, Copper Handbook.

FLANNERY ZINC CO.

MISSOURI

Pittsburg, Pa., and Sarcocie, Mo. Acquired the Boyd zinc properties at Sarcocie, 1915, and spent \$40,000 rehabilitating the mine and mill. **Equipment:** includes a 1000-ton concentrator and a Diesel engine. The ore is blende, but some calamine is also mined.

FLATHEAD DEVELOPMENT CO.

MONTANA

Address: Gen. Chas. S. Warren, 73 Hirbour Blk., Butte, Mont. Mine at Coram, Mont. L. O. Evans and John M. Murphy of Butte, Fred Oliver and V. D. Williamson of Spokane; Dr. W. H. Campbell and A. Ingraham of Kalispell, organizers. **Property:** Big Copper, Nos. 1, 2, 3 and 4 and Noble Copper claims covering veins 10 to 20' wide on Felix creek, a tributary of South Flathead river, 30 miles south of Coram, a station on the G. N. R. R. No development done.

FLORENCE COPPER MINING CO.

ARIZONA

Address: Jas. C. Tharp, supt., Florence, Pinal Co., Ariz. Property is a copper-gold prospect, intermittently operated and developed by several shallow shafts.

FLORENCE GOLDFIELD MINING CO.

NEVADA

Offices: Goldfield, Nev. and Denver, Colo. **Officers:** A. D. Parker, pres. and treas., P. O. Box 4561, Denver, Colo.; G. C. Cunningham, v. p.; S. G. Arscott, sec.; preceding with S. W. Morris, and J. K. Turner, directors. H. C. Clapp, gen. mgr. Inc. April 28, 1905, in South Dakota. **Cap.,** \$1,250,000; outstanding \$1,050,000; shares \$1 par. Stock transferred at company's office. **Dividends:** 1908, 40%; 1909, 20%; 1910 and 1911, 10% each; none since. Annual meeting March 1st at Goldfield, Nev.

Financial statement for 1915 shows assets of \$1,145,442, which in-

cludes: property account \$1,044,604, and cash \$66,451. Balance to credit of profit and loss, Dec. 31, 1915, was \$95,384, compared with \$124,793 in 1914. Net revenue for 1915 was \$58,495, compared with \$215,024 in 1914. Expenditures in 1915 were \$88,240, leaving an operating deficit of \$29,744 for the year. In 1914 there was a total net profit of \$73,786.

Property: 67.7 acres at Goldfield. The main shaft was sunk 1,200' several years ago; at this depth the vein was mineralized, but ore was not of commercial grade and the shaft was allowed to fill with water to the 600' level. Work since then has been above this level, and in 1915 amounted to 3,543', compared with 2,601' in 1914. The orebody which was furnishing the shipping ore played out in Sept., 1915, and no shipments have been made since. Management claims there are 100,000 tons of low-grade sulphide ore, averaging \$4 to \$6 per ton in gold, silver and copper, opened up in the mine.

In Oct., 1915, a 2-year lease on the surface dumps was granted to F. A. Mead, who organized the Nevada Metals Extraction Co. to erect a 150-ton mill and treat the low-grade ore by flotation. Mill started operations in April, 1916, and is reported to be making an extraction of 92% gold and 99% copper. Operating costs are reported under \$2.25. Dumps have been estimated to contain 50,000 tons of \$5 ore.

Development work is being done on the 250' level at the northern end of the property and in the neighborhood of the old stopes of the famous Reilly lease. The mine may be developed at depth. Upon the results of this work depends the future of the property.

Production: for 1915, 3,194 tons ore, average value \$17.42 per ton; compared with 8,029 tons, average value \$26.39 in 1914.

FLORENCE MINING & MILLING CO.

IDAHO

Address: John B. Steffes, sec.-treas., Kellogg, Idaho. Chas. Dallaire, pres.; J. D. Chisholm, Jas. Ezkiel and John Haalund, directors. **Inc.** 1908 in Idaho. **Cap.**, \$1,000,000; shares \$1 par, assessable; 440,000 issued. Annual meeting 2nd Tuesday in July.

Property: 10 claims, 170 acres, due E. of the Alhambra and S. E. of the Sherman and Roanoke mines in the Yreka mining district. Ore occurs in vein in Revett quartzite, carrying lead, silver and copper. Orebody is 10' wide, has dip of 35° and S. E.-N. W. course. Developed by crosscut tunnels, 150' and 300' long, with a total of 650' underground workings.

Plans for 1916 include installation of electric power, compressor and machine drills. Property is still in development stage.

FLORENCE-RAE COPPER CO.

WASHINGTON

Index, Snohomish Co., Wash. N. Rudebeck, mgr; Fred Booth, supt. **Property:** on Copper mountain, about 4 miles E. of Index, has a tunnel showing a 10' paystreak of chalcopyrite in the Margurite vein and an assay of 400 lbs. taken across 6' of the vein averages 12 oz. silver, 18.5% copper, 29.6% iron, 7.2% silica and 35.8% sulphur. **Development:** hindered 1913-14 by litigation among opposing factions of stockholders, was resumed in 1915. Plans installing an aerial tram over the divide to Mineral City, to connect with the railroad at Index.

FLORENCE SILVER MINING CO.

BRITISH COLUMBIA

Office: Hutton Bldg., Spokane, Wash., and Ainsworth, B. C. **Officers:** F. R. Wolfe, pres. and gen. mgr.; W. M. Frost, v. p.; D. E. Sanders, sec.-treas.; with A. F. Kelly, J. A. Lavender, directors. Chas. Simpkins, supt. **Inc.** July 1, 1911, in Washington. **Cap.**, \$1,000,000; outstanding \$900,000; shares \$1 par; non-assessable. Stock transferred at company office. Annual meeting July 3.

Property: 9 claims, crown granted, 370 acres, 3 miles N. of Ainsworth in the Ainsworth mining district. Claims, on the west side of Lake Kootenay, extend west from shore about 2 miles. **Ore:** lead, zinc and silver in E. W. fissure veins in quartzite and slate. One oreshoot said to have over 400' of commercial ore. Milling ore said to contain 10% to 20% lead, 8% to 15% zinc and 6 oz. silver per ton.

Development: tunnels, with 5,000' underground workings at average depth of 350'. Company states there are 300,000 tons ore blocked out and \$50,000 was spent for development in 1915. A 200-ton mill being built, is expected to be completed by Sept., 1916. Water power is being developed. Total cost of these improvements, \$150,000.

During first two months of 1916 eight cars of ore were shipped. Company was concentrating 60 tons per day and extracting 30 tons of crude ore, March, 1916.

FLOWER OF THE WEST GOLD MINING CO. COLORADO

Cripple Creek, Teller Co., Colo. **Officers:** K. C. Schuyler, pres.; N. S. Gandy, sec.-treas. **Cap.**, \$1,500,000; shares \$1 par. In treasury Jan. 1, 1916, 69,500 shares; cash, \$10,000. All except current taxes paid. No liabilities. Exchange Registry and Guarantee Co., Colorado Springs, transfer office. Listed in Colorado Springs.

Property: 2 claims on Squaw Mountain, and 2 on Gold Hill, 15 acres, patented. Gross production to date, nominal.

FORD MINING CO.

ARIZONA

Address: Geo. O. Ford, pres., Junction, Yavapai Co., Ariz. **Property:** 16 claims, unpatented, a copper-gold-lead prospect in the Black Hills district, developed by shaft and prospected by diamond-drill work. Owner claims to have expended \$50,000 in 12 years uncovering ledge.

FORT HALL MINING & MILLING CO., LTD.

IDAHO

Pocatello, Bannock Co., Idaho. **Officers:** Geo. W. Derr, pres.; W. A. Hyde, v. p.; W. H. Witty, sec.; L. Fargo, treas.; preceding and A. Fitzgerald, directors. **Property:** 7 miles from Pocatello, said by R. N. Bell, state mine inspector, to show big, low-grade deposits of copper-iron-sulphide ores, not as yet profitably mined. Equipped with steam power. Reported under bond and lease to T. A. Ferguson, 1915, who planned erecting cyanide plant.

FORT PITT COPPER CO.

NEW MEXICO

Practically out of business. Was unfavorably regarded. Fully described, Vol. XI, Copper Handbook.

FORTUNA, S. A.; COMPANIA MINERA LA.

MEXICO

Aguascalientes, Mex. **Mine office:** Tepezalá, Ocampo, Aguascalientes, Mex. **Officers:** Geo. B. Wardman, pres.-gen. mgr.; O. F. Westlund, v. p.; De Witt Crevelling, sec.-treas. Alberto Pez, supt. **Inc.** 1902. **Cap.**, 200,000 pesos; shares 100 pesos par. **Property:** 20 hectares, including La Fortuna and adjoining mines. **Development:** by 2 tunnels and a 100-meter blind shaft, mines having a vertical depth of 200 meters and greatest horizontal length of 600 meters of workings, showing mainly oxidized argentiferous copper ores of good average tenor in both metals. Has animal power and employs 200 men normally. Probably idle owing to revolution.

FORTUNA COPPER CO.

CALIFORNIA

Letters neither answered nor returned. Mine at Fortuna, Humboldt Co., Cal. **Officers:** P. J. Mulley, pres.-gen. mgr.; Frank Legg, v. p.; C. A. Eastman, sec.; Fortuna Merchandising Co., treas.; A. E. Purdy, supt., at last accounts. **Inc.** June 8, 1901, in California. **Cap.**, \$70,000; shares \$5 par. **Property:** 19 claims, unpatented, 380 acres, in Trinity county, Cal.,

opened by tunnels. Ore said to have assayed 28% copper and \$3 gold per ton, in veins of 12 to 16" width.

FORTUNA GOLD & COPPER CO.

ARIZONA

Property sold at sheriff's sale and acquired by Nathan Sturdy. See Sturdy Gold Mining Company.

FORTUNA MINES CORPORATION

ARIZONA

Mines at Fortuna, Yuma Co., Ariz. **Office:** 31 State St., Boston, Mass., and care F. G. Hobbs, sec.-treas., Sharon Bldg., San Francisco, Calif. **Officers:** F. E. Boland, pres.; Frank G. Hobbs, Thos. Pascoe, J. E. Manders, directors. T. C. Woodworth, cons. engr.; W. H. Enderton, supt.; F. B. Keever, mgr. Inc. 1913 in Calif. **Cap.**, \$500,000; shares \$1 par. Listed on Boston Curb. Federal Trust Co., Boston, depository.

Property: the Fortuna mine, 7 patented, 11 unpatented claims, 358.7 acres, 15 miles S. of Blaisdell station on the S. P. R. R. and 22 miles S. E. of Yuma, Ariz. Claims are at base of W. slope of the Gila range. The Fortuna mine is said to have been worked by Chas. D. Lane of San Francisco, 1896-1904, with a gross production of \$2,887,075 gold and to have paid \$1,180,000 in dividends. The oreshoot was lost in 1901, a fault from 800' to 1,200' level cutting off the ore, and \$500,000 was spent in vain to recover ore beyond the fault. Present company started work May, 1913, and is reported to have spent \$100,000 and to have recovered the vein on the 800' level.

The Fortuna is a quartz vein in schist, near gneiss and granite masses. It runs E. W., dips 50° S. and has an average thickness of 4', said to widen out to 30' in lenses. The outcrop shows iron and copper oxides, but the ore is free milling.

Development: by an old 1,500' working shaft whose levels have been utilized by present company. Crosscutting is reported to have found the oreshoot, 5' wide, on the 800' level. A new shaft, 400' E. of old workings, is said to show a 2' vein of \$40 ore. Company claims 1,000,000 tons of probable ore, which is regarded as too optimistic.

Mill has 20 1400-lb. stamps and receives water from a 4-mile pipe line.

Mine has a good record and company has several eminent stockholders, but promotion record has been disappointing.

FORTUNA MINING CO.

ARIZONA

Address: care Judge D. A. Richardson, Douglas, Ariz. **Mine address:** care Johnson & Marvel, Superior, Pinal Co., Ariz. Inc. Jan. 27, 1908, in Arizona. **Cap.**, \$1,000,000; shares \$10 par. **Property:** a group of claims near Superior, under lease and bond to Johnson & Marvel at last accounts, shows copper ore with high gold and silver values. **Development:** by the 250' Richardson tunnel following a vein carrying a 2 to 6" pay streak of ore, said to assay 10% copper, up to several thousand ounces silver and \$25 gold per ton, but cut off by a cross fault in face. Tunnel was being continued to cut the Fortuna vein at 750' from portal in 1913. Probably idle. No recent returns.

FORTUNA MINING CO.

UTAH

Idle. Office: 161 South Main St., Salt Lake City, Utah. **Mine office:** Bingham Canyon, Salt Lake Co., Utah. Simon Bamberger, pres.; J. B. Bean, sec.; Jas. Start, supt. Inc. March 10, 1904, in Utah. **Cap.**, \$300,000; shares \$1 par, nonassessable; fully issued.

Property: 23 claims, mainly fractional, 175 acres, adjoining the Ohio, in Keystone gulch. Mine shows monzonite porphyry, quartzite and limestone, with a series of 4 nearly parallel veins following the strike and dip of the quartzite bedding, occasionally cutting across, and with some fracturing and crushing. The veins, of 2 to 5' width, carry films and vein-

lets of native copper, with occasional chalcocite. The mine carries silver-lead ores in the upper workings, with copper sulphides at depth, giving good assays. **Development:** by shafts of 150', 300', 200' and 1,100'; 2 crosscut tunnels of 400' each, and drift tunnels of 1,700', 4,200', 1,900', 900' and 400', with about 16,000' of workings. Mine was opened 1875 and closed 1908.

Equipment: includes electric power, with 2 hoists, good for 1,500' depth, and an air compressor.

FORTUNE MINING CO.

ARIZONA

Address: 19 Lawler Blk., Prescott, Ariz. **Officers:** A. W. Davis, pres.-gen. mgr.; H. J. Marshall, v. p.; J. P. Dillon, sec.-treas.; preceding, with J. E. Russell, A. E. Broas, J. L. Dennerlein, M. Collins, directors. W. W. Lewis, cons. engr. **Property:** the Wizard mine and other claims in the Big Bug mining district, Yavapai county. Is a gold mine in which high-grade copper ore was found Oct., 1913. **Development:** 1,200' tunnel on the vein showing 4 to 6' of ore in a shoot 800' long; 225' shaft and cross-cuts. **Equipment:** includes 10-stamp mill and two 50-h. p. gas engines. 10,000 tons of milling ore reported on dumps.

FOSS RIVER CONSOLIDATED COPPER CO.

WASHINGTON

Everett, Wash. Owners exhausted their means and shut down mine, 1910. Fully described Vol. XI, Copper Handbook.

FOSTER COBALT MINING CO., LTD.

ONTARIO

Property worked by Glen Lake Cobalt Mines, Ltd., and described under that title.

FOUR METALS MINING CO.

ARIZONA

Reorganized as Red Mountain Mining Co. Owns the Four Metals mine near Patagonia, Ariz. Described Vol VIII.

FOURTH OF JULY MINING & MILLING CO.

COLORADO

Dead. Property, the Fourth of July group, Eldora, Boulder Co., Colo., now owned by Cons. Copper M., M. & Sm. Co., which see.

FOX COPPER MINING & MILLING CO.

IDAHO

Letters neither answered nor returned from Mullan, Idaho, or Saltese, Missoula Co., Mont. Fully described Vol. XI, Copper Handbook.

FRANK HOUGH MINING CO.

COLORADO

Office: 830 Equitable Bldg., Denver, Colo. Mine: Lake City, Hinsdale Co., Colo. Inc. 1907, in Colorado. Mine, on Engineer mountain, has a 2,500' tunnel, developing a large body of copper sulphides, including bornite, with assays up to 27% copper, 47 oz. silver and \$5 gold per ton. Mine shipped several hundred tons of high-grade silver-copper ore, under former ownership. **Equipment:** includes 800-ton shipping bins. **Production:** estimated at 250,000 lbs. fine copper in 1909, and 600,000 lbs. in 1910. Property considered promising, but was closed down in 1912 because of destruction by fire of its surface equipment.

Development work resumed in 1914 under Edward Arps and promising ore said to have been found 100' below old workings.

FRANKLIN JUNIOR MINE.

MICHIGAN

Owned by Franklin Mining Co., at Demmon, Houghton Co., Mich.

FRANKLIN MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Demmon, Houghton Co., Mich. **Mill office:** Point Mills, Houghton Co., Mich. **Officers:** R. M. Edwards, pres.-gen. mgr.; Henry D. Forbes, v. p.; Henry Tolman, treas.; preceding, with C. W. Van Law, C. A. Hight, Sidney J. Jennings

and Harry M. Howard, directors. Albert L. Wyman, sec. Enoch Henderson, supt.

Inc. April 3, 1857, in Michigan; cap., \$500,000, and reincorporated, 1887, for 30 years; cap. increased, 1899, to \$2,500,000, and again increased, Nov., 1908, to \$5,000,000; shares \$25 par; issued, 166,473; paid in \$16.20, to Dec., 1915. Unissued stock has been set aside for the purpose of acquiring the total capitalization or 100,000 shares of the Rhode Island Copper Co. Has paid dividends of \$1,240,000, and has levied assessments of \$1,753,000, including a \$2 assessment called Aug., 1914. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, third Wednesday in April. Balance sheet of Dec. 31, 1915, showed a cash surplus of \$30,022, as compared with \$117,165 in 1914.

Property: 3,280 acres of mineral property, and a 217-acre mill site, with 1 mile of frontage on Portage lake. The old Franklin mine (described Vol. VIII), 160 acres, was sold, July, 1908, to the Quincy Mining Co., for \$170,000, and Sec. 6, T. 55 N., R. 33 W., 640 acres, lying directly north of the Franklin Junior and west of the Rhode Island, was bought from St. Mary's Mineral Land Co., 1909, for 33,333 shares of stock.

Property carries 2 miles of the strike of the Pewabic amygdaloid and other cupriferous beds of the Keweenaw series. In addition to the main tract, there are 3 other tracts of mineral lands, of 160, 480 and 640 acres. The company also controls, and is absorbing, the Rhode Island Copper Co., which has 800 acres immediately north of the Franklin Junior mine.

Development: early work was on the Franklin Junior property, where two parallel lodes, the Allouez conglomerate and the Pewabic amygdaloid, 500' apart, have been worked. The amygdaloid worked prior to 1902, gave but 9.65 lbs. copper per ton, and was abandoned in favor of the conglomerate until the latter, decreasing in width and value on the 2,000' to 2,400' levels, was abandoned and work resumed on the Pewabic in the Franklin, Jr., shaft (No. 1), sunk about 20' in the footwall. The values being extremely low, mining was stopped, and only exploratory work done. In 1913, a crosscut was started eastward from the shaft at the 3,200' level to explore the entire eastern part of the company's holdings. At 550' from the amygdaloid this crosscut entered payable ore in the Allouez conglomerate, in the Autumn of 1913. Drifts were at once started to prove the extent and copper content of the orebody. Work continued until August, 1914, and was resumed in July, 1915, the orebody now being developed for 1,100' on the 32nd level. It is opened for stoping on each level from the 27th down to the 36th, an average of 700' on each level, or a total of 7,043' of drifting, with a continuous raise, used as an ore chute from the 2,700' to the 3,700 level, where ore is gathered by electric motor trains and carried to the shaft. Besides this main raise there is another for men and supplies, the new raises in 1915 aggregating 1,253'. The shaft is down to the 37th level, and shows considerable improvement below a depth of 2,000'. Shaft is equipped with a steel circular rock house (Edwards design), formerly used at No. 2 conglomerate shaft. On the 28th level a crosscut driven in 1915 connects the lode with the shaft, and a similar crosscut has been driven on the 37th level. The old conglomerate shaft, bottomed at 2,400' on the incline, has not been connected.

Having cut the Allouez conglomerate, the exploration crosscut on the 32nd level was continued to a total distance, Dec. 31, 1915, of 4,000' from the Pewabic lode. The crosscut encounters and passes for 25' through the Calumet conglomerate at 2,150', the 10' Osceola amygdaloid at 2,820' and the Kearsarge conglomerate, 40' wide, at 3,380' from the shaft, but

all three lodes were devoid of any copper. Twenty-two other amygdaloids were also cut, 9 of them copper bearing, but only 2 rich enough to warrant exploratory drifts and raises; the remaining 13 were barren.

Production in 1915 came from development work only, no stoping being done on the conglomerate lode and but little from reopened stopes on Pewabic. Total openings, development and exploratory, amounted to 11,554' in 1915. Company employs 340 men at mine and 80 men at mill.

Equipment: includes a Nordberg hoist at No. 1 shaft hoisting a 10-ton skip, and has special air-compression cylinders, storing up energy, otherwise wasted, in compressed air, the compressed air being mixed with steam, in the cylinders, as a prime motive force.

The mill is reached by the Mineral Range railroad. Equipment includes 5 Allis-Chalmers 2-way heads, with 20x24" cylinders, each capable of crushing 350 tons of conglomerate or 500 tons of amygdaloid rock daily. Each stamp is fed from a 1,000-ton rock bin, and equipped with hydraulic separators, which remove considerable heavy copper. The washing plant includes 8 Woodbury classifiers, 20 roughing jigs, 15 finishing jigs, 32 Wilfley and 10 Overstrom tables. The jigs are of the Hodge eccentric type, with centershield copper discharges, obviating skimming.

Power for the mill is furnished by a 16x32" Allis-Chalmers engine, and steam is supplied by two 500-h. p. Stirling boilers. The boiler house has a self-supporting brick-lined smokestack of 7' diameter, 165' high, on a 52' brick foundation. Water is furnished by a 15,000,000-gal. Allis-Chalmers vertical compound pump, having 12x42" high-pressure and 42x42" low-pressure cylinders, with 47" stroke and plungers of 37½" diameter. Water is drawn through a 36" pipe line, running 200' under the rock to a crib protected by quarter-inch screens. The mill has a 5x12" duplex fire pump with fire hose, and electric light. There is a 267' wharf at the mill site, equipped with coal hoist and sheds, with 18' of clear water alongside. The mill site has about 20 dwellings for employees.

In 1903 the recovery of copper was 15.25 lbs. per ton of rock stamped and in 1907 was only 11.48 lbs., falling, 1909, to 9.47 lbs. per ton of rock stamped. The largest production ever secured by the mine was 5,259,140 lbs. fine copper in 1902. Recent production has been: 4,206,085 lbs. in 1905; 4,228,650 lbs. in 1906; 4,401,248 lbs. in 1907; 3,703,421 lbs. in 1908; 1,615,556 lbs. in 1909; 966,353 lbs. in 1910; 820,203 lbs. in 1911; 1,710,651 lbs. in 1912; 1,021,440 lbs. in 1913; 93,283 lbs. in 1914; 1915 production was 151,269 tons hoisted, 29,251 being discarded and balance, 122,018, stamped, yielding 1,314,969 lbs. refined copper for six months work.

The 1914 production was from test runs only on rock from the Allouez conglomerate. Regular shipments were started in the summer of 1915 and by December had reached a daily average of about 900 tons. A daily production of 1,600 tons, capacity of the mill, is looked for in the near future. Output is coming from the Allouez conglomerate and the Pewabic amygdaloid, the latter furnishing about 16% of the tonnage and carrying 8 to 9 lbs. copper per ton rock, while the Allouez lode carries about 20 lbs.

In Sept., 1915, Franklin made money for the first time in 20 years; net profits were about \$12,000. Property is now on a profitable basis and management excellent.

FRANKLIN MINING CO.

Webb City, Mo. Owns a tract of "sheetground," carrying zinc ore at depth of 200'. Is equipped with 880' air-compressor and a 600-ton mill, completed 1915.

FRANKLIN MINING CO.

Helena, Mont. Inc. 1915 in Mont. Cap., \$1,000,000; shares \$1 par.

MISSOURI

MONTANA

Owned by estate of Thos. Cruse. **Property:** in the Scratch Gravel district near Helena, Lewis and Clark Co., Mont., adjoins the property of the Scratch Gravel Gold Mining Co., on the W. The mine is said to have made a profit of \$29,597 from Dec. 20, 1914, to March 15, 1915. Total profits from April, 1914, to May, 1916, aggregate \$185,498; the net profit for May, 1916, was \$11,000, with disbursements of \$8,099.

Claims show 2 veins, crossing, one carrying high-grade gold ore, with free gold, the other silver ore. The gold vein is developed eastward and passes into the lands of the Scratch Gravel Co. Values are chiefly in gold. Employs 50 men.

FRASER MOUNTAIN COPPER CO.**NEW MEXICO**

Dead. Property now owned by Taos Mining Co. See Vols. VI and XI, Copper Handbook.

FREE COINAGE GOLD MINING CO.**COLORADO**

John B. Neville, mgr., Altman, Colo. **Property:** the Pinto mine; and the Neville 60-ton mill at Altman, Teller Co., Colo., operated by lessees. Mill treats Pinto ores, said to average \$7 per ton. Fully equipped with modern machinery and aerial tram, connecting shaft with mill.

FREE COINAGE MINING & MILLING CO.**UTAH**

Office: 69 Commercial Bldg., Salt Lake City, Utah. Mine near Alta, Salt Lake Co., Utah. L. A. Evans, pres.; D. H. Wenger, sec.-treas. Inc. 1896, in Utah. **Cap.**, \$125,000; shares 25 cts. par, assessable, with 2 assessments levied. **Property:** 4 claims, 3 patented, in Little Cottonwood canyon, 2 miles from a railroad, developed by shaft and tunnels, showing lead and copper ores. Letters neither answered nor returned. Probably idle.

FREELAND CONSOLIDATED MINING CO.**OREGON**

Office: Salem, Ore. Mine at Elkhorn, Marion Co., Ore. Hugh Freeland, owner. Assessment work only has been done since 1911. Inc. 1901, in Oregon. **Cap.**, \$2,000,000; shares \$1 par, nonassessable; issued, \$1,625,000. Annual meeting, third Monday in April.

Property: 13 claims, unpatented, 200 acres, with about 100 acres timbered, on Gold creek, a tributary of the Little North fork of the Santiam river, 18 miles from Gates, the nearest rail point. Lands show porphyry, syenite and diorite, with occasional Tertiary sedimentary rocks, having 5 fissure veins, of which 3, under development, are estimated by the company at 17' average width, and to be traceable 2,000'. Veins have 1 to 6" stringers, carrying chalcopryrite and occasional native copper, and the pyrite adjoining carries gold. Ores are reported by the company to range 1 to 14% copper, and \$2 gold per ton. **Development:** 175' crosscut tunnel, and about 1,300' of workings. There are 4 buildings.

FREMONT CONSOLIDATED MINING CO.**CALIFORNIA**

Officers: 24 Market St., San Francisco, and Amador City, Amador Co., Calif. Arthur Goodall, gen. mgr.; A. L. Palmer, supt.

Property: 4 claims, 4,200' on the lode, 1½ miles north of Amador City, shows gold ore occurring on contact of black slates on the west, and meta-diabase on the east. Vein strikes N. 25° W., dips 50° E., and has an average width of 6'. West of the main vein ore has been developed in schist. Orebodies occur as lenses, the ore being in the form of quartz stringers, cutting the schist. The rock is highly mineralized with pyrite.

Development: by the Fremont shaft, 2,350' deep, sunk on a 51° incline, and a 1,500' incline shaft north of the Fremont shaft. There are several miles of underground workings. The Fremont shaft is being sunk to 2,750'.

Equipment: includes a steam hoist at each shaft and a 40-stamp mill. Oil is used as fuel. Company employed 140 men at last accounts.

FREMONT DEVELOPMENT CO.

WYOMING

Out of business. See Vol. XI, Copper Handbook.

FREMONT MINING & MILLING CO.

ARIZONA

Probably dead. Was not favorably regarded. See Vol. XI, Copper Handbook.

FRESNO COPPER CO., LTD.

CALIFORNIA

Lands sold and company out of business. See Vol. XI, Copper Handbook. Company had a ranch, not a mine, and is another case of too trusting Englishmen.

FRIDAY-LOWDEN COPPER CO.

CALIFORNIA

Idle. At Redding, Shasta Co., Cal. **Officers:** T. H. Benton, pres.; S. E. Bretherton, v. p.; John R. Lowden, sec.-treas. and gen. mgr., at last accounts. **Inc.** 1909. **Cap.**, \$2,000,000.

Property: 15 claims, partly patented, 300 acres, near the Balaklala, Mammoth and Trinity mines. Considerable diamond drilling done is said to have proven extensive orebodies, and there are 5 tunnels of 800' aggregate length. Letters neither answered nor returned.

FRISCO CONSOLIDATED MINING CO.

UTAH

Probably dead. Letters unclaimed at Salt Lake City and Frisco, Beaver Co., Utah. Fully described Vol. XI, Copper Handbook.

FRISCO MINES & TUNNEL CO.

COLORADO

Animas Forks, San Juan Co., Colo. Joe Warner, mgr.; Dan McNaughton, supt. **Property:** the Bagley mine, near Animas, developed by 11,000' tunnel cutting veins carrying gold, silver, copper, lead and zinc ores. A strike of very rich silver-copper ore was made in the Red Cloud vein at a point 900' below the outcrop. Mine has electric power, air compressor, a 150-ton concentrating mill and employs about 75 men. Requests for information ignored.

FRONTENAC CONSOLIDATED MINES, LTD.

COLORADO

Bankrupt. Mine at Central City, Gilpin Co., Colo., is a gold mine, whose ores carry lead and copper, the latter as tetrahedrite, in small quantities. Credited with production of \$500,000 worth of ore in 1913. Property closed down end of 1913 and was sold at sheriff's sale, 1915, to creditors. Lessees reported shipping from old workings, 1916.

FRONTENAC COPPER CO.

MICHIGAN

Dead. Property conveyed to Calumet & Hecla Mining Co.

FRONTIER MINING CO.

WISCONSIN

Office: 413 Fletcher Trust Bldg., Indianapolis, and Galena, Ill. **Officers:** J. H. Billingsby, pres.; D. C. Ellison, v. p.; W. C. Haneisen, sec.-treas.; preceding, with C. W. Craig, C. R. Hinkle, Carl L. Rost, S. O. Deschler, directors. **Cap.**, \$125,000; shares \$100 par. Dividends began April, 1916; were 2% the first of each month, and 10% on the 15th.

Property: 500 acres under lease, in Sections 8 and 9, T. 1 N., R. 1 E., at Benton, Wis. **Ore:** zinc sulphide in pitches and flats in limestone. Stopes are 120' wide and 35' high. **Development:** 3 shafts, average depth of 150'. Room and pillar mining system is used.

Equipment: includes one 50-h. p. and one 75-h. p. electric hoists, air compressor and Keystone drilling machines. There are also 3 concentrators with daily capacity of 600 tons in 10 hours.

Treated 189,252 tons of ore, 1915. The Calvert property produces 220 tons of zinc concentrate and 6,000 lbs. lead ore weekly; the Bull Moose, 200 tons weekly, and the Treganza the same amount of 48% material.

A new power and concentrator plant began operations in May. Wages are \$2.75 to \$3 for car men and shovelers.

FURLOUGH DEVELOPMENT CO.**ARIZONA**

Geo. B. Halderer, mgr., Wickenburg, Ariz. **Property:** several claims in Big Horn district, 30 miles S. W. of Wickenburg, shows ledge in "Pinal" schist, traceable for 6,000' and showing iron gossan with copper and gold ore. **Development:** 550' shaft, with levels at 100', 300' and 500', now being deepened. Employed 22 men in 1916.

FURNACE CREEK COPPER CO.**CALIFORNIA**

Dead. See Vol. XI, Copper Handbook.

GALENA BAY MINING CO.**ALASKA**

Office: 425 Orchestra Bldg., Chicago, Ill. **Mine office:** Valdez, Prince William Sound, Alaska. B. F. Millard, pres. and mgr. A. Stanford White, v. p.; Alfred Barge, sec.; J. S. Jurey, asst. sec. **Inc.** 1906, in Washington. **Cap.**, \$500,000; shares \$1 par. Stock held by voting trust of 7 trustees for a term of 10 years, the Continental & Commercial Trust & Savings Bank issuing trust certificates, in lieu of stock, which are negotiable and transferable.

Property: company now owns control of the Standard Copper Mines Co. and the Hemple Copper Mining Co.

The company's holdings proper, acquired in 1907, are all on Galena bay, about 30 miles from Valdez, and include the Sunnyside, Copper Crown, Starvation, Sheep Run and the Vesuvius claims.

Development: by 2,200' adit on the Starvation, 400' adit on the Sunnyside, with only surface work and diamond drilling on the Copper Crown and Sheep Run claims. Ore occurs in lenses of chalcopyrite, pyrrhotite, quartz and calcite, 4-5' long and up to 14" in width. On the Copper Crown a 4' vein of solid sulphide ore was opened up in a N. E. shear zone, assaying \$3-4 gold per ton. Geology fully described, p. 100, U. S. G. S. Bulletin 605. Only assessment work done since 1912.

GALENA FARM MINING CO.**BRITISH COLUMBIA**

Silverton, B. C. Care Jas. J. Stewart, 50 Broad St., New York.

Property: the Galena Farm mine, with a vein said to show 14' of ore, treated in a 100-ton concentrator which produced, May, 1916, 759 tons of concentrate that averaged 46.5% zinc and 20 oz. per ton silver, netting \$25 per ton; also 237 tons lead concentrate averaging 67.3% lead and 66.1 oz. silver, netting \$125 per ton. Net earnings for May, 1916, were \$40,000.

GARBUTT LEASING CO.**COLORADO**

John Cortellini, mgr., Leadville, Lake Co., Colo. **Property:** adjoining the famous Little Jonny mine on Jonny Hill, has 1,000' shaft, producing copper with good gold-silver values. Report that a large body of ore, assaying \$15 gold per ton, was found in 1915. Equipment includes a steam hoist and 15-drill air compressor. Company planning to erect a 200-ton mill in 1916.

GARFIELD MINING CO.**MONTANA**

Property: 5 claims, 13 miles from Belgrade and 18 miles from Manhattan. A 450' tunnel is said to cut a gold-copper vein, 9 to 15' wide. Lower tunnel to be driven to cut vein below zone of oxide ore.

GARFIELD MINING & MILLING CO.**IDAHO**

Mine at Harvard, Latah Co., Idaho. Albert Burns, supt., at last accounts. **Property:** the Gold Bug mine, developed by shaft and carrying copper ore. Equipment includes a small steam plant.

GARFIELD SMELTING CO.

Office: 165 Broadway, New York. **Operating office:** 714 McCornick

Blk., Salt Lake City, Utah. **Works office:** Garfield, Salt Lake Co., Utah. Is the Utah Copper Co. smelter, owned by American Smelters Securities Co., and itself owns the Garfield Water Co. and the Garfield Improvement Co. The smelter has cost, complete, about \$6,000,000. Fully described Vol. X.

GARNET MINE.**NEW MEXICO**

Mine near Oro Grande, Otero Co., N. M. Operated by C. C. Camp-house for English company and shipped copper-silver ore, 1914.

GARRETSON-SAHUARIPA CO.**MEXICO**

Mine at Calera, Sahuaripa, Sonora, Mex. W. H. Farnsworth, pres.; Laurens Enos, v. p.; W. H. H. Davenport, sec.; D. B. Sherman, treas.; John A. Moore, supt., at last accounts. Inc. 1903, in Arizona. **Cap.**, \$600,000; shares \$100 par, nonassessable; issued, \$450,000.

Property: 96 hectares, and 14,000 acres of surface rights, about 30 miles S. E. of Sahuaripa, includes La Calera mine, having 6 orebodies. 2 under development, of 3 to 6' width, estimated by company to average 2% copper, 45 oz. silver and \$14 gold per ton, which is interesting, if true. Mine has about 1,200' of workings.

The smelter, 1 mile from the mine, receiving ore by pack trains, has a 50-ton 29x48" Garretson pyritic water-jacket blast furnace, burning charcoal and wood, which apparently has not worked well. Idle since 1908, awaiting construction of the Sonora Central railway from Tonichi, which has been surveyed to pass through this property.

GARRISON-MONSTER MINING CO.**UTAH**

Idle. Mine at Ibapah, Tooele Co., Utah. **Officers:** J. P. Gardner, pres.; J. S. Garrison, v. p.; H. B. Windsor, sec.; S. W. Morrison, treas. Inc. June, 1906, in Nevada. **Cap.**, \$1,000,000; shares \$1 par, as a merger of the Garrison Gold & Copper Mining Co. and Monster Mining Co. **Property:** 26 claims, patented, on Dutch mountain, in the Clifton district, 40 miles from Wendover, on Western Pacific railroad. Branch line to property was to be completed, 1914. Mine has 3,500' of workings and is said to show considerable bodies of silver-lead ore.

GARSON MINE**ONTARIO**

Owned and operated by Mond Nickel Co., which see.

GEM CONSOLIDATED MINES CO.**COLORADO**

Letters neither answered nor returned from 341 Sixth Ave., Pittsburgh, Pa. **Mine office:** Idaho Springs, Clear Creek Co., Colo. Inc. Jan. 1, 1907, in Colorado. **Cap.**, \$5,000,000; shares \$1 par.

Property: 10 claims, patented, and a mill site, showing a vein traceable 3 miles, carrying sulphide ores said to assay 10 oz. silver and \$18 gold per ton, with a little copper. Mine has about 5 miles of workings. A 550-h. p. hydro-electric plant supplies 350-h. p. to the mine and 200-h. p. to the mill. There are 4 hoists, good for 3,000' depth, and an 18-drill Ingersoll-Rand air compressor. Buildings include a machine shop, carpenter shop, smithy, etc., and a 100-ton stamp mill. Several sets of lessees reported developing and producing at a profit in 1915.

GEMINI MINING CO.**UTAH**

Office: 723-4 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah. E. W. Packard, pres.; Jackson H. McChrystal, v. p. and gen. mgr.; J. E. Berkley, sec.; E. O. Howard, treas., with W. Van Cott, directors. John H. McChrystal, supt. **Cap.**, 5,000 shares, \$100 par. Dividends to end of 1915, \$3,230,000, with \$5 a share paid Mch. 10, and June 10, 1916.

Property: the Gemini is a silver-lead mine with accessory copper ore, in shoots. There are 3 fissure veins, in an ore channel about 450'

wide, cut transversely by a number of cross-fissures, making a rather complex system of orebodies, the main fissure, of 15 to 20' width, having a S. E. dip, with ore shoots raking to the north. Ore in the upper workings averages about 12% lead and 40 oz. silver, while the bottom level, at 1,600' shows a 20' vein carrying argentiferous 3% copper ore. The mine has a 1,700' shaft, and a 300' winze, equipped with electric hoist. The adjoining Ridge & Valley mine is operated through the Gemini shaft. Company operating on 1600 and 1700' levels in 1916; plans drifting to open new ore system. Upper levels leased, over 100 men being employed.

Production in 1916 about 60 tons daily, partly by lessees, and estimated to average about \$30 per ton. Mine has been a regular producer since 1886.

GENERAL DEVELOPMENT CO.

Office: 61 Broadway, New York. **Officers:** Adolph Lewisohn, pres.; J. Parke Channing, v. p.-cons. engr.; Theo. L. Herrmann, sec.; Sam A. Lewisohn, treas.; preceding officers, Samuel Untermeyer, Herman Sielcken, D. M. Hyman, H. W. Davis, W. T. Rosen, A. S. Rossin, J. H. Susmann, E. H. Westlake, Arthur Lehman, B. Hochschild, F. W. Estabrook and S. S. Rosenstamm, directors.

Inc. 1906, in Delaware. **Cap.**, \$2,000,000, increased to \$2,500,000, in 1909 to \$2,600,000, and again increased, 1913, to \$3,000,000; shares \$25 par, nonassessable; 120,000 shares issued. Equitable Trust Co. of New York, registrar. Dividends paid 1908, 1½%; 90% in 1909, 15% in 1910; 1½% in 1913; 6% in 1915; 5% or \$1.25 in March, 1916, a total of 119%. Balance sheet of Oct. 31, 1915, shows a surplus of \$1,896,651.

Company is a securities holding corporation, which owns nearly one share of Miami stock for each issued share of its own, and also owns a large block of dividend paying Kerr Lake stock, and of New Cornelia Copper. It also controls, through stock ownership the Colorado Gold Dredging Co., San Cayetano Mines, Ltd., and Naumkeag Copper Co. The increase of capitalization; 1913, was to finance the merger of the Silver Mines Exploration Co., the corporation which developed and promoted the Kerr Lake and Wettlaufer-Lorraine companies of Cobalt, Ont. Company has extensive stock interests in New Planet Copper Co., Bagdad Copper Co., with other mining interests in the United States, Canada and Mexico.

The General Development Co. is a parent corporation, examining, developing and financing mining properties which, when they have reached the self-supporting producing age, are turned over to operating companies. It is a powerful factor in the copper industry, and with the wide experience and astute guidance of Mr. Adolph Lewisohn, combined with the technical skill and great ability of J. Parke Channing, its consulting engineer, promises to become increasingly important.

GENERAL EXPLORATION CO.

UTAH

Alfred Frank, gen. mgr., Newhouse Bldg., Salt Lake City, Utah. Clarence Bamberger, E. L. Newhouse, Jr., John MacGinniss, C. W. Saacke, directors. **Inc.** June 15, 1915, in Utah, to operate a lease on the mine and mill of the Ohio Copper Co., which see.

GENERAL MINING, MILLING & LEASING CO.

BRITISH COLUMBIA

Officers: W. H. Honefenger, pres., Hyde Bldg., Spokane, Wash. W. A. Kelly, sec.; Chas. V. Bobb, mgr., with W. T. McCurry, directors. Has a lease on the Lucky Strike and Wisconsin mines, on a tributary of Midge Creek, 7 miles W. of Kootenay landing, said to show a 30' ledge

in Nelson granite, traceable for 3,000'. Cuts and pits along ledge reported to show assays of \$25 to \$40 gold and 3 to 7 oz. silver per ton.

Development: 2 tunnels claimed to open up \$1,000,000 in ore which seems very high. Company said to plan driving a new tunnel at greater depth, to add machinery and an aerial tram. Ore will be shipped to Trail, B. C., or to Tacoma, Wash.

GENESSEE MINING CO.

ONTARIO

Cobalt, Ont. L. F. Steenman, mgr. Inc. in 1915. Cap., \$1,000,000. Has a 6 years' lease on the U. S. claim, north of the East claim of the Chambers-Ferland.

Property has been idle 6 years, but recent developments in the Chambers-Ferland have given hope to the Genesec management, which intends to sink 60' shaft to 300'. This shaft was sunk on a 4" vein of low-grade silver ore. Property is a prospect.

GENESSEE VALLEY COPPER CO.

CALIFORNIA

Genesee, Plumas Co., Cal. A. L. Beardsley, pres.; Henry Metz, v. p.; Mel. J. Smith, sec.-treas.; A. B. Clark and J. E. Baum, directors. Inc. Nov. 1, 1909, in Nevada. Cap., \$2,000,000; shares \$1 par, nonassessable; issued, \$1,000,000. Annual meeting, August 1. Properties have been transferred to Mel. J. Smith, trustee, to satisfy creditors' demands.

Property: 15 claims, unpatented, 300 acres, in 3 groups, and a 120-acre mill site, showing porphyry dike in meta-andesite, with bornite disseminated through the porphyry. Dike runs N. 20° W., dips 54° S. W. Orebody reported as 80 to 300' wide, 3,000' long and proven for 150' depth, assaying 3% copper, 2 oz. silver and \$0.50 gold per ton. Company reported, 1913, about 100,000 tons. No recent development except drilling to determine tonnage and value. Ore shows 90% recovery by Minerals Separation flotation process, concentrates carrying 35% copper, 10 oz. silver and 1 oz. gold per ton. Property considered promising. Idle and will probably remain so for some time.

GENESSEE VANDERBILT MINE

COLORADO

John F. Thompson, owner, Ironton, San Juan Co., Colo. **Property:** in the Red Mountain district, was formerly owned by the Red Mountain Mining Co., which was sold out for debt. Mine has a 3,000' tunnel cutting a vein carrying covellite, which was developed for stoping preparatory to shipments made Sept., 1913. Owner plans building mill and installing machinery, 1916.

GEORGETOWN TUNNEL & TRANSPORTATION CO. COLORADO

Offices: care T. D. Fuller, 608 Dearborn St., Chicago, Ill., and Georgetown, Colo. **Officers:** C. G. Breitenbach, pres. and treas.; Geo. W. Talmage, v. p.; Miss C. A. Bassey, sec., Jacob H. Robeson, cons. engr., Denver; J. J. Keating, local mgr.; with H. S. Parks, and Alex Williams, directors.

Inc. Dec., 1909, in Colo., as a reorganization of the Georgetown M. P. & T. T. Co. Cap., \$15,000,000; shares \$5 par; \$300,000 outstanding. Annual meeting in August at Denver.

The company is a transportation project, which will supply power and cheap transportation to mine owners in the district, similar to the Argo, or Newhouse, tunnel at Idaho Springs. The tunnel when completed will cut at depth the veins that traverse Columbian, Republican, and Democrat mountains at Georgetown; it is being driven by contract. Information not available as to present length of tunnel. In Oct., 1915, it was in about 800', had been idle for some time, but work was again in progress, Jan., 1916.

GERMAN-AMERICAN PIONEER CONSOLIDATED CO. ARIZONA

Kingman, Ariz. Claims and 10-stamp mill sold in 1915 to Jos. Winchester of Cripple Creek, Colo.

GERMAN COPPER CO.**ARIZONA**

Office: Chas. H. Trotter, sec., 10 No. New Jersey St., Indianapolis, Ind. Mine at Globe, Ariz. John H. Murdoch, pres.; Chas. H. Zollner, v. p.; John A. Hook, treas.; preceding officers, Wm. Elwarner, Jos. Lauler, David Fair, Wm. Burnett, John I. Carson and J. B. McMurray, directors. John H. Faught, supt.; P. H. Pernot, cons. engr. Inc. March 25, 1911, in Arizona. **Cap.**, \$3,000,000; shares \$5 par, fully paid; 142,373 issued; outstanding debt, \$75,000. Annual meeting, second Tuesday in October. Company is successor, 1911, of the Arizona-Colorado Belt & Gold Mining & Milling Co.

Property: 14 claims, 270 acres, held by location in the Globe district of Arizona. Ore occurs in a large fissure vein cutting through diabase, quartzite, and limestone, and as contact ores between diabase and sedimentary rocks. Vein strikes N. E.-S. W., dips 55°, is reported as 9' wide, proven to depth of 900', and said to carry 2% copper, 2 oz. silver and slight gold values per ton, principally as chalcopryite, on 800' and 900' levels. Ore developed above 800' estimated at \$125,000.

Development: by 863' shaft, several short shafts, and a total of 3,000' of underground work. The 800' level is said to block out 2,000 tons of ore with 18,000 tons of 2½% ore reasonably certain. **Equipment:** includes 100-h. p. steam hoist, Cameron pump and 7-drill air compressor. Arizona-Eastern railroad is 1 mile from property, which is well located and has merit. Assessment work only was done in 1915.

GERTIE MINING CO.**IDAHO**

Burke, Idaho. **Officers:** L. W. Hutton, pres.; M. J. Maher, v. p.; John Harvey, treas., with Mrs. J. H. Tarvers and A. A. Booth, directors. G. N. Crawford, sec. **Cap.**, \$150,000, increased in 1914 to \$250,000; shares 10 cts. par; unissued about 250,000 shares. Listed on Spokane Stock Exchange.

Property: 3 patented claims, 35 acres, adjoining Hecla on the S. E. and Maher Ahearn group on the W., near Burke. Also owns about 10 acres at mouth of crosscut tunnel. Company has been driving a long 6'x8' tunnel, now in over 4,100' with depth of 1,400', in the expectation of cutting a vein mined on the Hecla property. This vein is said to have shown 3 or 4" of clean galena, 300' from the Gertie lines and 250' farther back Hecla is said to have mined 3 to 5' of clean ore. A large vein was cut, Dec., 1915, but results to date have been very disappointing and in flow of water so heavy that the management decided to start work on a different fissure, March, 1916.

GETHIN LEROY UNITED MINES CO.**UTAH**

Office: 517 Atlas Blk., Salt Lake City, Utah. **Officers:** A. S. Fowler, pres. and treas.; E. P. Hapgood, 72 R St., Salt Lake City, v. p.; Jas. Mof-fat, sec., with Given Fowler and Lorin Pratt, directors. **Cap.**, \$1,000,000; shares \$1 par; 750,000 issued. Paid a dividend of 1c per share, Nov., 1913.

Property: in Silver Island district, Tooele Co., 15 miles north of Wendover, said to show silver-lead-copper ore. Company has made several shipments during the past few years. Property is being worked by lessees who are said to have shipped 500 sacks of ore in Jan., 1916.

GIANT-ECLIPSE CONSOLIDATED CO.**COLORADO**

Address: P. O. Box 488, Salida, Chaffee Co., Colo. Wm. Murray, pres.; Clyde H. Jay, v. p. and cons. engr.; F. L. Ream, sec. and gen. mgr.

Inc. Sept. 21, 1909, in Colorado. **Cap.**, \$800,000; shares \$10 par, fully paid, nonassessable; 67,800 issued. Annual meeting, third Friday in January.

Property: 11 claims, 101 acres, in Monarch district, Colo., showing contact deposits of lead-iron, copper, and zinc ores between granite, limestone and quartzite. Deposit runs N.-S. and dips at 45°. Orebody developed for 50 to 150' width, 1,400' length and 1,400' depth, claimed to carry 12 to 35% zinc, 3 to 25% lead, 1 to 3 oz. silver and 80 cts. to several dollars per ton in gold. Zinc occurs in ore and as clean zinc carbonate. Mine has tunnels aggregating several thousand feet. Company claims to have developed 10,000 tons low-grade zinc ore.

Equipment: includes electric hoist and compressor. Property credited with \$1,000,000 production since 1878. Shipments, resumed in 1915, were 200 tons in November-December, netting \$5 per ton. Incline shaft being sunk to water level, 1916.

GIANT LEDGE GOLD & COPPER CO.

CALIFORNIA

Office: 500 Frost Bldg., Los Angeles, Cal. **Mine office:** Barnwell, San Bernardino Co., Cal. L. M. Gregory, pres. and gen. mgr.; H. G. Stoddard, sec.; R. W. Kenny, treas.; Edward Brough, mine supt. **Inc.** July, 1901, in Arizona. **Cap.**, \$1,000,000, increased, 1910, to \$1,500,000; shares \$1 par. Company has kept out of debt.

Property: 30 claims, a 40-acre mill site and miscellaneous holdings, about 800 acres, in the New York district, 5 miles from Barnwell. Claims show 4 veins, of which 2 are under development, one a fissure in granite, the other a contact deposit between limestone and granite, with average width of 60', giving average assays of 5% copper, 5% lead, 10 oz. silver and \$4.50 gold per ton, from carbonate and oxide ores near surface and sulphides at depth. Mine has 1 shallow shaft and 2 tunnels, longest 992', with about 4,000' workings, developing a considerable amount of ore. Company experimenting with leaching and electric precipitation, having about 50,000 tons of oxidized ores available for this process, which is planned to yield electrolytic copper, with lead peroxide as a by-product.

GIANT LEDGE MINING CO.

IDAHO

Office: at Spokane, Wash. **Inc.** 1913, as reorganization of the Granite Allie Co. Chas. G. Taylor, mgr. **Property:** on Granite Gulch, 4 miles E. of Murray, Shoshone Co., Idaho, shows galena, containing gold-silver and copper values, in an E.W. vein said to be 7' wide.

Development: 176' double-compartment shaft; a drift 150' long in June, 1915, was said to be entirely in good grade of milling ore. **Equipment:** 7-drill compressor, hoist, pump, 1½ mile flume and water power.

GIBSON COPPER CO.

ARIZONA

Office: Globe, Gila Co., Ariz. Mine at Bellevue, Gila Co., Ariz. P. P. Greer, pres.; F. F. Towle, sec.-treas.; P. P. Greer, F. F. Towle and S. D. Gibson, directors. **Inc.** 1906, in Arizona. **Cap.**, \$2,500,000, shares \$25 par; non-assessable; issued \$2,000,000. Has authorized a \$500,000 issue of 6% bonds; issued, \$6,000. Total dividends to date, \$20,000. Annual meeting, first Wednesday in March. Property was under lease and option to the Summit Copper Co., Arizona, for 17 months, at \$442,375, but reverted to owners, Jan., 1912.

Property leased to Sultan and Wayne until Aug., 1913, and in Oct., 1913, was reported taken over by W. H. Mason, J. W. Sanders, J. H. Dieter and Richard Stevens, the last two named being attorneys, all of St. Louis, Mo.

Property: 15 adjoining claims, 7 patented and 8 in process, 300 acres, about 18 miles W. of Globe, with a good wagon road connection, includes the Summit, Pasquale, Reynolds and one additional group, of 4 claims each.

Worked in a very small way, by different owners, 1900-06, when taken over by the Gibson Copper Co., and thereafter worked continuously, until June, 1910.

Geology: country rock is Pinal schist and granite carrying 3 approximately parallel fissure veins, having a N.E. strike. The Summit and Pasquale are the principal veins, the former vein, of 4 to 7' width, traceable for the entire length of the property, a distance of $1\frac{1}{4}$ miles. The Summit and Pasquale veins are about 250' apart, the Intermediate vein about 75' E. of the Pasquale. Ore occurs in the Summit and Pasquale veins in well-defined shoots, pitching 40 to 65° S. the lenticular form of these shoots being in some cases due to strike faulting and movements. Ore is mainly massive chalcopyrite, with a little bornite. Gangue is quartz with some calcite and small quantities of specular hematite and gypsum. Two veins show high-grade ore and some low-grade ore has been developed in 5 veins. The McKinley vein, undeveloped, shows a strong outcrop.

The Gibson mine was opened by Messrs. Gibson and Henderson, with capitalization of \$90 cash and a team of horses, and not only paid its way but earned good profits from grassroots. **Development:** 3 shafts and 5 tunnels, 2 shafts and 4 tunnels being worked. The Pasquale tunnel, driven on the Pasquale vein, is about 200' below the collar of the incline shaft. The Reynolds tunnel is to intersect the vertical shaft at 1,800' from the portal, at depth of 500'; the Toombs tunnel, 100' vertically above and the Upper Toombs tunnel, 210' above the Reynolds, are drifts on the Summit vein. Working shaft is an incline, 600' deep, sunk on the Summit vein, with 6 levels which show that the Summit vein runs N. 21° E., dips 56° N.W., and carries a seam of high-grade ore, the main pay streak carrying 8 to 15" of chalcopyrite ore assaying 20 to 30% copper, throughout the various levels. The shaft has 5,915' of workings on the Summit vein, besides drifts on the Pasquale and Intermediate vein, reached by crosscuts on the 3rd and 4th levels.

Development by the Summit Copper Co. was by a vertical 3-compartment shaft, sunk to a depth of 244' by the Gibson Copper Co., and deepened by this company to 573', this depth corresponding with the 7th level of the old incline shaft. About 4,000' of new drifting and crosscutting, costing nearly \$142,000, was done. The vertical shaft cuts the Pasquale vein at 165', the Intermediate vein at 300' and the Summit vein at 500' depth.

The Pasquale vein differs from the Summit in that it cuts across the bedding of the schist, instead of following the bedding planes as does the Summit, having a strike of N. 20° E., with dip of 35 to 50°. Apparently the Pasquale vein is better defined, more continuous and stronger than the Summit, the fissure being of 5 to 10' width, carrying a pay streak, from a few inches to 3' in width, of ore assaying up to 33% copper. Ore occurs in the Pasquale vein in shoots pitching to the south, similar to the ore occurrence of the Summit.

The Intermediate vein, with drifts of 225' length on the 3rd and 4th levels, has a strike of 12° E., with dip of 52° N. W., and is only about 8" wide, with firm walls and, as developed, is not of great importance, but has possibilities. The ground is heavy and treacherous, requiring timbering for practically every foot of drifting and concrete posts were used. Messrs. Pritchett & Hamilton estimated the developed ore reserves, at the end of 1910, excluding all high-grade ore, and omitting probable ore between the 3rd and 4th levels on the Pasquale vein, as 33,011 tons of ore, averaging 4.36% copper, on the Summit vein; 17,062 tons of 3% copper ore in the Summit filling; 39,860 tons of 2% ore on the Summit dump and 8,578 tons of 6.51% copper ore developed in the Pasquale vein. The development by

the Summit Copper Co. proved disappointing; irregular occurrence and insufficient tonnage failing to offset the high-grade ore extracted. C. W. Pritchett, Denver, Colo., consulting engineer, advised the surrender of option after sampling and examining all workings.

Equipment: at the incline shaft includes two 250-h. p. boilers, a 14x16" hoist and a 6-drill Sullivan air compressor. The plant at the vertical shaft includes two 200-h. p. Stirling water-tube boilers, a 16x20" Hendrie & Bolt-hoff double-drum hoist, good for 1,000' depth and a 10-drill Sullivan cross-compound air compressor, with a 132' steel smokestack of 42" diameter. The vertical shaft has pumps with capacity of 500,000 gals. daily.

The gross value of ore produced by the Gibson Copper Co., 1906-09, has been estimated at \$1,250,000. It was shipped to the Old Dominion smelter, a distance of about 18 miles, by 10-horse teams, and required careful selection, owing to the extremely high cost of transportation, returning better than 20% copper. **Production:** 1,106,100 lbs. fine copper in 1906; 3,340,777 lbs. in 1907; 1,270,211 lbs. copper and 2,000 oz. silver in 1908; 667,405 lbs. copper in 1909, and 600,000 lbs. in 1912. Shipments in 1913 claimed to have averaged 20% copper. Company plans building a 50-ton mill.

GILA CANON COPPER CO.

ARIZONA

H. Stuart Hotchkiss, pres., 214 East St., New Haven, Conn. Mine address: Ray, Pinal Co., Ariz. Milton J. Warner, sec.-treas.; preceding officers, Geo. B. Chittenden and Erroll M. Augur, directors. **Inc.** 1907, in Arizona. **Cap.**, \$1,000,000, shares \$5 par. Is operated as a close corporation. **Property:** 16 claims, 320 acres, known as the Schneider group, in the Banner or Troy district, Gila county, 4 miles from the Southern Pacific railway. **Development:** by Geo. Chittenden, progressing since Sept., 1912, and according to the company, sufficient ore is being shipped to the smelter at Hayden, to pay for development work.

GILA COPPER SULPHIDE CO.

ARIZONA

Office: Room 514, 49 Wall St., New York. S. H. Sherman, supt. Christmas, via Winkelman, Ariz. **Officers:** B. P. Cheney, pres.; F. M. Murphy, v.-p.-gen. mgr.; G. D. Morris, sec.-treas.; L. B. Mulhearn, assist. sec.-treas.; preceding officers, H. J. Meany, F. P. Cruice, F. L. Stoessel, R. E. Sloan, W. G. Bushnell, directors. Company is controlled by B. P. Cheney and F. M. Murphy. **Inc.** 1909, in Arizona, by the Development Co. of America, which bought the property from the Saddle Mountain Mining Co. **Cap.**, \$2,500,000; shares \$10 par, non-assessable. Has authorized and issued \$1,000,000 first mortgage 5-year 6% bonds, convertible into stock at par, at option of bondholder.

New company spent over \$350,000 in developing a large and valuable property at Christmas, which is now being equipped and operated by the American Smelting & Refining Co., under title Southern Arizona Mining & Smelting Co. Property is not under lease and bond, but merely operated under a smelting contract. Mines still belong to the Gila Co. which can resume direct management whenever able to meet certain conditions.

Property: 2 groups, comprising 60 claims, 1,200 acres, 50 patented, and 640 acres coal land. Holdings include Christmas mine and claims in Banner district, Gila county, and coal, gold and copper claims in the Saddle Mountain district, Pinal county, all within a radius of 6 miles.

The Saddle Mountain group of gold and silver claims, patented, 265 acres, with 3,450' of workings, shows base dry ore, with a little lead and zinc and traces of copper, an average of 300 assays showing \$13 per ton in gold and silver values.

There are also 640 acres of patented coal lands, in the lower basin of creek, showing a 3' vein of dirty bituminous coal, developed by a

175' incline shaft and 800' of workings, equipped with a small steam hoist and pump. There is a bee-hive coke oven for testing the coal.

The Christmas mine is at the junction of Christmas canyon with the Gila river, on the north side of the stream, 8 miles from Winkelman. The mine was opened, 1883, but closed, 1884, because found to be located on the San Carlos Indian Reservation, and remained idle until the lands were restored to the public domain, by executive order of the president, Dec. 2, 1902. **Geology:** property shows heavily bedded white and gray Carboniferous limestone, in various stages of alteration, near a granite porphyry contact. Ore occurs mainly as replacements in limestone, with garnetiferous gangue, carrying sulphides, mainly chalcopyrite, but with bornite and some copper glance. The contact zone has shown copper ore wherever opened and the porphyry also carries copper ore. Four main orebodies are under development, ranging from 4 to 60' in width. Orebody contains nuclear blocks of undigested limestone, surrounded by ore, hence it is difficult to measure tonnage developed. Ore mined gave average assays of about 3% copper and 30 to 40 cts. per ton in combined gold and silver values.

Development: at Christmas is by 4 shafts, all showing oxidized and sulphide ores. The mine has open cast workings of 30,000 sq. ft. area, showing carbonate ores. Much new and important work and equipment is being added. In 1915 the improvements on the property were about completed, including the construction of an aerial tram, connecting the mines with the Arizona Eastern Railroad, and production began early in 1916. The company entered into a contract with the American Smelting & Refining Co., whereby they have control of the mines for a given period, and the ores will be smelted at the Hayden plant.

GILA MONSTER COPPER CO.

ARIZONA

Probably dead. Owned the Confidence mine, near Kelvin, Ariz.

GILA MOUNTAIN COPPER CO.

ARIZONA

Idle since 1909 and probably dead. Property has had a checkered career; it was first the basis of a swindling promotion that landed the promoters in jail; then worked as a real mine by John Weber, who made money until the panic of 1907. Present company out of funds and property liable for watchman's wages, etc., at last accounts. See Vol. XI, Copper Handbook, for description of holdings.

GILES MINING & MILLING CO.

UTAH

Property reported sold to Samuel Perry, B. T. Critchlow, L. L. Bagley, and Geo. Webb in July, 1915, for \$600,000, or at the rate of 40c per share, with payment to be completed within 2 years. H. L. Giles, gen. mgr. **Property:** 31 patented claims, 560 acres, in Big Cottonwood canyon, near Bingham, located 20 years ago by H. L. Giles.

Ore: said to occur in veins from 4-6' wide, containing gold-copper-silver and lead, said to run 80c gold, 15 oz. silver and 16% copper. Main vein outcrops for 10,500'. **Development:** 1,200' main tunnel, several shafts and drifts. At last accounts new owners expected to start extensive development work.

GILMORE MINING CO.

IDAHO

Offices: 222 Kearns Bldg., Salt Lake City, Utah and Gilmore, Lemhi Co., Idaho. **Officers:** Edgar C. Ross, pres. and gen. mgr.; Frank Hahne, v.-p.; Harry R. Hyde, treas.; Clarence Warnock, asst. sec., with E. B. Critchlow, directors. **Inc.** Feb. 10, 1912 in Utah. **Cap.,** \$1,000,000; shares \$1 par, assessable; outstanding \$800,000. Bonds authorized, \$100,000; none issued. Company is a close corporation. Annual meeting, Jan. 2. All receipts from ore sales spent in development work.

Property: 12 patented claims, 250 acres, in the Texas mining district,

at Gilmore, was purchased from the Allie Mng. Co., Ltd. **Ore:** gold-silver in fissure veins in limestone, said to have an average value of \$14.50 per ton. Veins strike N. 10° E. and dip 60°. **Development:** by a 60° incline shaft and tunnels, greatest depth of workings on the vein is 850'. Total underground workings, 4,650'. This company in conjunction with the Pittsburgh-Idaho and Allie Mining companies has run a 4,500' development and transportation tunnel into Gilmore Mountain, which is said to cut a number of lead-silver fissures and one important gold vein.

In Jan., 1915, the following statement was compiled from smelter returns: dry tons, 8,460; average assay per ton, \$11.63 gold; \$0.14 silver; iron bonus, \$1.65; total, \$13.43. Gross cash receipts were \$114,539; freight, \$44,616, leaving net cash receipts of \$69,923.

Company intends developing the lead veins on the property in 1916. See U. S. G. S. Bull., 528, p. 107.

GILPADO MINING CO.

COLORADO

Office: 512 Equitable Bldg., Denver, Colo. Forbes Rickard, pres.; W. C. Wright, sec.-treas. Harry T. Willis, supt., Central City, Gilpin Co., Colo. **Property:** the Chase mine, said to show a vein of gold-silver bearing copper ore developed by 500' shaft. Equipment includes steam power. Idle.

GILPIN-EUREKA MINING CO.

COLORADO

S. S. Clark, sec.-treas., Denver, Colo. John C. Jenkins, supt., Idaho Springs, Colo. **Property:** Eureka mine, near Central City, Gilpin Co., Colo., shows gold-silver-lead-zinc ore in veins, developed by Newhouse tunnel and shaft. **Equipment:** 10-stamp mill, concentrating plant, compressor and electric power.

Returns from 2 car lots of concentrates shipped in Jan., 1916, gave 1.28 oz. gold, 5.45 oz. silver and 12% lead per ton.

GILPIN ORION GOLD MINING CO.

COLORADO

Office: Suite 22, Moffatt & Kassler Block, Denver, Colo. Wm. A. Miller, v.-p. and gen. mgr.; A. C. Ogle, Jr., sec.; Jas. A. Jones, director. **Inc. Sept., 1910, in Ariz. Cap., \$2,500,000, shares \$1 par. Property:** 4 claims, patented on Gregory and Bobtail Hills, Gilpin Co., Colo., worked by lessees since 1914 and reported producing about \$300 worth of ore per month. **Development:** 340' shaft and E. and W. drifts. Shipments returned from 1-3 oz. gold, 3-8 oz. silver, and 1-6% copper, netting better than \$20 per ton. Management plans raising funds for systematic development on company account. A small and not particularly attractive property.

GILT EDGE MINES CO.

ARIZONA

Oatman, Ariz. **Officers:** E. A. Burns, pres.; E. A. Shaw, v.-p.; S. W. Klass, sec.-treas., Kingman, Ariz. **Inc. in Ariz. Cap., \$150,000; shares 10c par; 800,000 in treasury. Listed on San Francisco and Los Angeles Exchanges.**

Property: 95 acres, 2 miles S.W. of Oatman, adjoining the old Vivian mine, said to show 4 parallel veins varying from 4' to 60' in width. **Development:** 4 tunnels, one claimed to have opened a vein for 50' with gold values from \$5 to \$12 per ton. Company is sinking a shaft, 250' deep, April 25, 1916, at which depth altered andesite was found, said to show quartz and spar and to contain fair values. Crosscutting is being done on the 100' and 200' levels. Company employs 20 men. **Equipment:** includes 25-h. p. Fairbanks Morse hoist and a 52-h. p. air compressor. Plans sinking 600'.

GILT EDGE MINES & SMELTING CO.

COLORADO

Office: 402 First National Bank Bldg., Denver, Colo. **Officers:** Henry I. Seemann, pres.-gen. mgr., P. O. Box 1374, Denver, Colo.; Wm. H. Warrinner, v. p.; A. W. Craig, sec.-treas., with E. M. Kirton, directors. **Inc. July 24, 1913, in Colorado. Cap., \$1,500,000, to be increased later to \$2,500,000;**

shares \$1 par; outstanding Dec. 20, 1915, 1,002,750 shares. Annual meeting fourth Thursday in July.

Property: 46 claims, about 300 acres, partly patented, in Lincoln mining district, Clear Creek Co., Colo. **Ore:** gold-silver-copper in fissure veins in schist and porphyry, said to assay from \$9 to \$200 per ton. The Gilt Edge mine is said to have produced some rich gold ore.

Development: the Aurora tunnel is being driven to develop the property at a depth of 1,000'; in Dec., 1915, this tunnel was in 400'. Total underground workings, 2,000'. **Equipment:** includes a 20-stamp mill and electric power.

Output in 1915, which was small, said to assay \$18 per ton. Company plans adding an air compressor to equipment this year.

GILT EDGE MINING CO.

MISSOURI

Company held lease on ore lands, 2 miles E. of Tipton Ford, near Joplin, Mo. Lease was transferred, June, 1916, to Wade Mining Co., which see.

GINZA COPPER CO.

UTAH

Mine near Kelton, Box Elder Co., Utah. Operations stopped in 1915 after considerable prospecting had failed to locate ore of commercial grade. Described Vol XI, Copper Handbook.

GIRARD COPPER CO.

MONTANA

George J. Kirby, pres., Willimantic, Conn.; Geo. R. Grantham, sec., Kimball Bldg., Boston, Mass., E. C. Denton, supt., Warm Springs, Mont. Inc. 1912 in So. Dakota. **Cap.**, \$10,000,000; shares \$10 par; 601,120 issued; 501,000 shares pooled. Admitted to quotation on Boston curb, for 91,020 shares, Jan., 1913. Annual meeting in Jan. First Nat'l. Bank, Boston, registrar; Ex. Trust Co., Boston, transfer agents.

Property: 20 claims, partly patented, 400 acres, 5 miles from Warm Springs and 10 miles N.W. of Butte. Ore occurs as a sulphide in 5' fissure-quartz vein, between monzonite and aplite, assaying 4-8% copper, 6 oz. silver and 2 oz. gold. **Development:** by 60' Jack Pot shaft and 150' tunnel. Assessment work only done in 1915.

GIRARD DEVELOPMENT CO.

Garrit B. Kip, Girard C. Herrick and E. Hicks Herrick, 7 Wall St., New York, chief stockholders. Company is a New York corporation interested in several mining properties in the United States.

GIROUX CONSOLIDATED MINES CO.

NEVADA & MEXICO

(Subsidiary of Consolidated Coppermines.) **Office:** 1400 Alworth Bldg., Duluth, Minn. **Mine office:** Kimberly, White Pine Co., Nev., and Carbo, Ures, Sonora, Mexico. **Officers:** Thos. F. Cole, pres.; Henry B. Paull, v.-p.; John Uno Sebenius, v.-p.; Jos. B. Cotton, gen. counsel; Thos. B. Adams, treas.; preceding officers, J. H. McLean, Geo. G. Barnum, J. W. Neukon, C. d'Autremont, Jr., G. A. Tomlinson, directors; Frederic R. Kennedy, sec.; E. F. Gray, gen. mgr. in Nevada; S. L. Heslett, supt. Mexican mines.

Inc. April 14, 1903, in Delaware. **Cap.**, \$7,500,000, shares \$5 par, was originally \$5,000,000, increased 1908, to \$6,500,000 and again increased, 1909, to present amount; issued, \$7,207,100, with \$496,400 in the treasury for the conversion and retirement of convertible bonds. Bonds outstanding, \$496,400 firsts at 6%. American Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, first Tuesday in June.

Income for first quarter of 1916 was \$101,961 from 18,537 tons of ore, netting a profit of \$49,026, on which the bullion tax was \$613.

The Giroux is now controlled absolutely by the Consolidated Coppermines Co., through exchange of Giroux stock for that of the new company.

on a basis of 10 shares for 1, amounting to 90% of the stock issue of the new company. A proposed \$3,000,000 bond issue by the new company will furnish ample working funds.

Property: the Nevada mineral lands, originally 52 claims, patented, 1,050 acres, were largely increased, 1909-10, by the acquisition of the Giroux-Ely Extension Copper Co. holdings, 130 acres, south of the Giroux Consolidated and east of the Ely-Central; the Rickard-Ely Copper Co. holdings, 5 claims, adjoining the Veteran-Ely on the west; the Military group of 4 claims, adjoining the Giroux, and various other adjoining properties, for which \$226,551.40 was expended in 1909. The main holdings constitute a tract about $2\frac{1}{2}$ miles in length, and one-half to one mile in width, lying immediately west of the Nevada Consolidated. The company also owns 1,800 acres of miscellaneous lands, including the town site of Kimberley, 7 miles west of Ely, and valuable water rights in the Steptoe valley.

The Giroux controls the lands of the Butte & Ely Copper Co. through ownership of 239,175 shares, bought at \$1 per share.

The Giroux property covers a total area of 2,000 acres, with extreme length E. and W. of 15,000' and a maximum width of 4,000'. It covers an intrusive body of monzonite porphyry and is part of the long mass running through the district, on which the steam-shovel pit of the Nevada Consolidated Co. is working. This porphyry is exposed over a large part of the company holdings, the rest being limestone whose beds dip away from the porphyry. The contacts are silicified with very extensive areas of quartz, stained by iron and copper.

Ore: deposits include porphyry, or disseminated ore, similar to that of the Nevada Consolidated Co., and secondly the contact orebodies beneath the outcrop just mentioned. The porphyry orebodies have been developed by churn drill holes in the customary 200' blocks and by underground workings. It is found that the orebodies, together with blocks of barren rhyolite, are faulted and are not continuous throughout the property. These orebodies cannot be worked by steam shovel but are being mined by caving methods. They are mined through 3 shafts, the main ore supply coming from the 205' Morris shaft, now yielding 1,000 to 1,200 tons a day, of 2.24% ore. The Bunker Hill shaft is connected with the above, the main level being 165' beneath the surface. The Brooks incline shaft is used as a stair-way for the men and for lowering timber and supplies.

The porphyritic ore is comparatively friable, and readily amenable to concentration, though necessarily somewhat given to sliming. The southern monzonite orebody is about 400' wide, with a proven length of about 2,000' and is 100 to 175' thick. Another monzonite orebody extends along Old Glory hill from the western end of the property, in a course between the Alpha and Giroux shafts. The porphyry orebodies have been tested by 6 Keystone churn drills, and these drills have done considerable work also on the Butte & Ely ground. A large number of holes have been bored, mainly to the depth of about 500', with 1 hole of 1,035' put down, 1909. The lands are so extensive that a comparatively small part of the property has been thoroughly drilled.

Development: was continued until Aug. 1, 1914. In 1913 40 holes were drilled, totaling 14,334', at a total cost of \$2.477 per foot; 2,875' of underground work was performed through the Minnesota shaft, Old Coppermines, at a cost of \$8.197 per foot. This development work applies to the property of the Consolidated Coppermines Co., and not to that of the Giroux Cons. alone.

The Alpha mine is an independent orebody, having a zone, or lode, several hundred feet wide of mineralized, silicified limestone along the

porphyry contact. This deposit is thoroughly leached from the surface downward almost to the water level 1,000' below. The orebody so far developed is 400' wide on the 1,000' and 1,200' levels, and is several hundred feet long. It has not been found on the 700' level, though that drift shows the formation to be 360' wide by 520' long. The mine has 2 shafts, the Alpha 1,200' deep, and the Giroux 1,450' deep.

The 1,200' three-compartment Alpha shaft formerly was the principal working under the old management, but caved, Jan., 1908, rendering the sinking of a new main shaft necessary. The Alpha is about 800' from the Cumberland-Ely mine, and is connected with the Giroux shaft on the 770' and 1,200' levels. The Alpha is now only used as an air-shaft, and an extra exit from the mine.

The 1,450' vertical Giroux shaft, 700' west of the Alpha, is 12x19' 4" in the clear, with 5 compartments. Timbers are unusually heavy, being 12x14", with wall plates 20' long, and 12x12" and 14x14" end plates. The shaft was sunk through solid limestone, at the rate of 120' per month, a record for Nevada shaft work, almost exclusively by raising, at an average cost of \$71.25 per ft. The Giroux shaft made very little water while in the limestone, but became wetter when bottomed, and is equipped with unusual pumping facilities, having 2 pumps of 600 gals., and 1 of 1,200 gals. capacity per minute. The main pumping station is on the 1,200' level. The 1,200-gal. Prescott cross-compound condensing pump is one of the largest underground engines ever built, and has a 7-ton fly wheel, with a 16" discharge pipe.

Equipment: at the Giroux shaft, includes a 26x48" Allis-Chalmers duplex-cylinder hoist, capable of handling 5-ton skips in counter balance to depth of 2,000', at a hoisting speed of 1,500' per minute; also a 20x48" Allis-Chalmers hoist for the cage. Part of this equipment was moved to Morris No. 2 shaft in 1912.

A 3-mile private railway, connecting the principal shafts with the Nevada Northern line, has grades averaging about 1.5%. Equipment includes a Porter engine, of 600 tons tractive power, and 75 Ingoldsby ore cars.

The company owns the water right to Steptoe creek, 9 miles from the mine and 967' lower.

Ore reserves: the Bunker Hill-Morris mine contained 7,000,000 tons of 2% ore, according to the rigid estimate made by Henry Krumb, 1913, for the Consolidated Coppermines Co. Reliable estimates, with allowance for probabilities made by Giroux engineers and published in the company's report for 1915, give 16,952,989 tons of fully developed ore, average grade 1.19%, and 7,437,108 tons of partially developed ore, average grade 1.01%, for the Giroux property as a whole, considerable churn drilling and underground development work having been done in the interim, and for Old Coppermines the tonnage of partially developed ore is given as 1,011,304 tons, average grade 1.02%.

The Sultana mine, the Mexican property, 9 claims, includes the San José mine, about 1 mile W. of Copete, in the Sierra de Oro, 25 miles E. of Carbo and about 35 miles from Hermosillo. Property shows a contact vein of 50 to 100' width, between limestone and porphyry, opened by 3 shafts, No. 2, the main working shaft, sunk on an incline, 1,200' deep. The San José mine shows, in the bottom level, a vein of about 40' width, carrying oxidized ores to shallow depth, succeeded by sulphides. The Mexican property as a whole shows low-grade copper ore with fair gold value. The shipments of Sultana ore to El Paso smelter have returned combined gold and silver values ranging from 92 cts. to \$734.36 per ton.

The Sultana mill is said to be an utter failure. The smelter, purchased after the failure of the mill, remains at the railway station, because a competent metallurgist reported that the ore could not be profitably smelted. The mine produced about \$250,000 from enriched oxidized ores which gave out and exploration and development costing about \$500,000 to the end of 1907 developed only low-grade ore which the critics say is neither millable, smeltable nor profitable. The mine has been inactive since 1907 but maintenance expenses during these years of idleness have been quite heavy.

The Giroux has been a disappointment to its stockholders from the beginning, the many promises made by the old management were never kept and the optimistic press reports of later years have not been sustained by results. Company is now practically merged with the Consolidated Coppermines Co. by the exchange of over 90% of its stock, and it is believed to be a good thing for the stockholders, as by an amalgamation of properties the mines may be worked on a large scale and thereby made profitable. Experience has shown that low-grade ores of this character can only be profitably worked on a scale of at least 1,000 tons a day and this the new company will be able to do. Excessive freight rates on the railroad and smelter charges at Steptoe prohibit local treatment by another company and developed tonnage of Giroux alone would not warrant independent reduction plants. For production, see Cons. Coppermines Co.

GLACIER PEAK MINING & SMELTING CO. WASHINGTON

Office: Roslyn, Kittitas Co., Wash. Mine in Snohomish Co., Wash. Wm. Adam, pres.; Jas. Wright, v.-p.-sec. Christopher Menseghel, treas. Property: near Glacier peak shows fissure veins carrying copper ore. Developed by tunnel. Employs about 15 men when operating.

GLADSTONE MINE. CALIFORNIA

Owned and operated by Hazel Mining Co., which see.

GLASGOW & WESTERN EXPLORATION CO., LTD. NEVADA

Office: 33 Renfield St., Glasgow, Scotland. Sec. and office: H. O. Jackson, 317 McCornick Bldg., Salt Lake City, Utah. Mine office: Golconda, Humboldt Co., Nev. See Vol. XI, Copper Handbook, for details of organization, capitalization, directors, property, etc.

A large sum of money, approximating \$5,000,000, was spent on these properties in the last 15 years and on April 1, 1913, debts against the company amounted to over \$95,000. The English managers sent a representative to settle up the claims and to avoid bankruptcy compromised with the creditors for 40 cts. on the dollar. The money spent was used for the erection of smelters, concentrators and leaching plants, when underground development had not yet shown sufficient ore reserves to supply the reduction plant. The 2 Nevada properties and a small railway in that state, together with the Montreal mine in Utah, were attached as the result of a suit for \$2,250,000 brought by Peter Coats, of the J. & P. Coats Thread Co. of Scotland, for money advanced to the company.

A reorganization of the company was effected and mining operations resumed in the Fall of 1913, but the death of Mr. Coats, the guiding financial interest, in Sept., 1913, put an end to all work. In Dec., 1915, all interests connected with the company were being liquidated.

The Montreal, Copper Basin and Copper Canyon properties all possess sufficient merit to justify extensive development.

GLEN LAKE COBALT MINES, LTD. ONTARIO

Inc. July 9, 1914 in Ont. Has a lease on the Foster mine of the Foster Cobalt Mng. Co., Ltd., about 40 acres on and under Glen Lake, Ont. An oreshoot, small but high-grade, was found on the 50' level in March, 1916. A long crosscut has been run from the old Foster shaft out under Glen

Lake to within 40' of the Bailey line. The management expects to run another crosscut parallel to the Bailey line with the hope of finding extension of the Bailey veins.

Company is operating on a royalty basis of 15% for 200 oz. ore and under, and 25% for higher grade ore.

GLENWOOD MINING CO.

UTAH

Office: 1102 West Seventh South St., Salt Lake City, Utah. **Officers:** Abel Grovenor, pres.; E. P. Mowers, v.-p. and gen. mgr.; M. L. Grovenor, sec.-treas. **Inc.** Feb. 21, 1901, in Utah. **Cap.**, \$30,000, shares 10 cts. par, assessable; increased 1912, to \$125,000, shares 25 cts. par. **Property:** 8 claims, patented, in Big Cottonwood district, 6 miles from a railroad, opened by shafts and tunnels, with about 1,600' of workings.

GLOBE CONSOLIDATED LEASE, INC.

CALIFORNIA

Inc. 1916. **Cap.**, \$100,000. Practically all of stock is held by Crown Reserve Mining Co., Ltd., of Ontario, which see for terms of lease. **Property:** the Bailey, Chloride and Globe groups, 200 acres, at an elevation of 6,100', in Canyon Creek mining district, 4 miles north of Dedrick, in Trinity Reserve, Trinity county. Claims, said to have 4 veins in hornblende schist, of which the Globe and Bailey are the main veins. The Globe is 6' wide with a known oreshoot of 1,500' length; the Bailey can be seen 500' below this. Ore is free milling, assaying \$9 per ton.

Development: to date, by 6 tunnels, from 250' to 1,700' long, greatest depth on vein 620' with several thousand feet of underground workings. A large body of fair grade ore is said to be blocked out. The mine is 27 miles from a railroad; transportation is by auto.

Equipment: includes a 5,600' gravity tram from mine to mill, compressor, electrical plant, sawmill and dwellings. There is a 20-stamp mill and 125-ton cyanide plant. Water power is obtained from Canyon Creek. Plant is said to have cost over \$300,000.

Production: said to have produced \$750,000 in gold under previous owners, who had insufficient ore blocked out to operate at a profit. See U. S. G. S. Bull. 540, pp. 76-78; Mines & Min. Res. Trinity Co., State Mineralogist's Report, 1915, pp. 145-7.

GLOBE & LOST GULCH SILVER-COPPER MINES CO.

ARIZONA

Office: 423 McPhee Bldg., Denver, Colo. Mine in Lost Gulch, Gila Co., Ariz. Mary E. Brooke, pres. and gen. mgr.; V. G. Hills, v. p.; H. A. Wimbush, sec. **Inc.** April 1, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par, nonassessable. **Property:** 10 claims, patented, 180 acres, and other locations; also a mill site at the head of Lost gulch, 1½ miles N. of Inspiration and Miami, Ariz., showing quartzite, granite and limestone, cut by porphyritic dikes.

Development shows lead ore in diabase, silver-chloride ore in granite and limestone and copper silicate ore in dacite.

GLOBE MINING CO.

ARIZONA

Globe, Gila Co., Ariz. **Officers:** Hon. J. F. Hechtman, pres. and gen. mgr.; M. A. Patterson, v. p.; Walter M. DeKalb, sec.; Geo. L. Beach, treas.; preceding officers, F. B. Walker, L. E. West and R. A. Jamison, directors. **Inc.** Feb. 19, 1903, in Arizona. **Cap.**, \$2,500,000; shares \$1 par. Property leased to Mineral Farms Co., 1912. Both companies idle.

Property: 21 claims, patented, 335 acres, 2½ miles north of Globe, shows granite-porphry, syenite, quartzite and diorite, carrying fissure veins in diorite of 2 to 100' width, with gossans giving assays of 2 to 6% copper, 4 to 30 oz. silver and \$2 to \$28 gold per ton. The Mineral Farm group of 21 claims, 3 fractional, includes the Vacey-Constance mine, worked 1886 for silver, and said to have produced upwards of \$100,000 worth of ore

under former ownership, this group having upwards of 20 old pits and shafts, of 10 to 165' depth. The Mineral Farm group shows altered sedimentary and igneous rocks, with iron dikes and a complex fissure system. The Mineral Farm vein, of about 4' width, gives assays of 4.8% copper and up to 132 oz. silver and \$7.44 gold per ton, and the group also shows a 20' vein, said to sample 22% copper, 9% zinc, 2 oz. silver and \$4.96 gold per ton, which seems excessive. The Eagle Pass group has a 215' two-compartment shaft, between 2 iron outcrops.

Equipment: includes a 60-h. p. boiler, 8x10" hoist and air compressor. There are 6 mine buildings.

GLOBE MINING CO.

MICHIGAN

Office: 15 William St., New York. R. D. Rickard, pres.; J. R. Stanton, sec.-treas.; preceding officers, Frank McM. Stanton and W. H. Leggett, directors. **Inc. May, 1911, in Michigan. Cap., \$78,250; shares \$25 par; fully paid and fully issued.**

Property: 3,200 acres, Secs. 1, 2, 3, 4 and 5, T. 53 N., R. 35 W., extending entirely across the Keweenaw trap formation, from the eastern to the western sandstone, lies next south of the Champion, and immediately north of the Challenge, carrying about 6,000' of the strike of the Baltic and all parallel beds. Mine was developed by the Copper Range Consolidated Co., under option, but option was relinquished, Feb. 1, 1909, after expenditure of upwards of \$500,000.

Development: diamond-drill borings, to locate the Baltic bed, gave some cores with excellent values, but disclosed a heavy overburden of sand and boulders, rendering it necessary to reach the solid rock by a vertical shaft. Work was begun early 1905, but the first shaft was abandoned, owing to quicksand, and was replaced by a new vertical shaft, about 700' south of the Champion boundary. The shaft is telescopic, inside measurements of timbers at the collar being 13' 3"x23' 3", with a second section below of 9x19' 6", and a third section of still smaller size.

The shaft is 1,040' deep, with first level 356' below surface, and flats were cut thereafter at 100' intervals. The Baltic amygdaloidal bed was tested by some diamond-drill boring, and about 900' of drifting on the seventh level, which is about 1,000' from surface, and showed a little copper, in patches, but on the whole was unpayable, and work was suspended Jan. 31, 1909, and property has been idle since. Notwithstanding the unfavorable results secured by the work done so far, the property is by no means devoid of promise.

GLOBE SMELTING & REFINING CO.

COLORADO

Denver, Colo. Controlled by American Smelting & Refining Co., and described thereunder.

GODIVA MINING CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. **Officers:** Edw. Packard, v. p. and gen. mgr.; J. E. Berkley, sec.; L. S. Hills, treas.; Jackson H. McChrystal, supt.; preceding officers and W. Van Cott, directors. **Cap. increased, 1908, from \$100,000 to \$1,000,000; shares \$1 par. Company related to the Gemini Mining Co., and is operated as a close corporation. Has paid dividends, but figures are not made public. Listed on Salt Lake Exchange.**

The mine is one of the pioneers of the Tintic district and was once a notable producer. Owns 9 claims, 8 patented, carrying gold-silver bearing copper and lead ores. Has a shaft 1,200' deep, 1,000' tunnel and several thousand feet of crosscuts and drifts. Surface equipment includes engine, hoist, air compressor and 100-ton concentrating mill.

Production: from 1898 to 1915, 16,930.57 dry tons. Mine under 2-year

lease to Fairhairn Leasing Co. Reported developing on 1,200' level and employing 12 men. Said to have 25,000 tons ore in sight.

GOLCONDA CONSOLIDATED.**ARIZONA**

A. W. Clapp, mgr., Golconda, Ariz. Inc. Dec., 1915, in Ariz. Cap., \$1,250,000; \$1 par. Has a lease and bond on the Fredonia and Fredonia No. 2 lode claims, owned by the Ryan Cattle Co., and situated N. of Kingman, in the Wallapai mining district. Company is promoted by a Mr. Wills and well advertised as a neighbor of Mr. Amster's Golconda mine.

GOLCONDA EXTENSION MINING CO.**ARIZONA**

O. A. Turner, mgr., Kingman, Ariz., and Golconda, Ariz. Inc. Dec., 1915, in Ariz. Cap., \$1,500,000; shares \$1 par. Property: adjoins the Golconda mine on the N., 16 miles N. of Kingman; 5 claims in one group, 2 in another and a bond and lease on the Golden Gem mine, 6 patented claims, 1½ miles from the Golconda.

Development: by 400' shaft, with a 300' drift on 280' level, said to expose a 4' vein, carrying some \$50 ore with values in gold, silver and zinc, and drift N. on 400' level. Production: \$300,000 in former years.

GOLCONDA LEDGE CO.**ARIZONA**

M. R. Tomlinson, mgr., Golconda, Ariz. Company owns the Kramer gold mine and a 10-stamp mill, remodeled to 30 stamps.

GOLCONDA ZINC MINE.**ARIZONA**

See Union Basin Mining Co.

GOLD BAR MINING CO.**ARIZONA**

J. A. Twitchell, pres., Phoenix, Ariz. F. X. O'Brien, mgr., Wickenburg, Ariz. Property: the mine and mill of the Interior Mining & Trust Co., 14 miles N. E. of Wickenburg, shows gold quartz ore developed by a 330' shaft, with level at 330'. Mill has Nissen stamp and a capacity of 90 tons per day.

GOLD BOND CONSOLIDATED MINES CO.**COLORADO**

Offices: 415 Kittredge Bldg., Denver and Cripple Creek, Teller Co., Colo. Officers: G. A. Hummer, pres.; S. R. Herber, v. p.; C. R. Slusser, sec.-treas.; with I. W. Herber and F. H. Beers, directors. Inc. 1900 in Colorado. Cap., \$1,350,000; shares \$1 par; outstanding 1,350,000 shares. In treasury Jan. 1, 1916, \$54.12. One-half 1913 taxes unpaid. Gross production to 1916 said to be \$100,000. Company office transfers stock. Exchange Guaranty & Registry Co., Colorado Springs, registrar. Listed on Colorado Springs Exchange.

Property: 4 patented claims, 18 acres, on S. W. slope of Gold Hill, Cripple Creek. Ore: gold in fissure veins in granite, said to average \$5 to \$32.50 per ton with 1915 shipments of \$12 ore. Development: 300' vertical shaft with over 2,500' underground workings. Worked by lessees, 1916.

GOLD BOND MINING & MILLING CO.**UTAH**

Office: 27 Latimer Block, Salt Lake City, Utah. Officers: A. A. Crome, pres.; Walter Crome, v. p.; Wm. Crome, sec.-treas.; with W. C. Howe and C. F. Stanley, directors. Inc. 1898 in Utah. Cap., \$25,000; shares 5c par, assessable; 200,000 shares outstanding; has levied 9 assessments.

Property: 2 patented claims, 4 miles from a railroad, in Tooele Co., Utah, shows a contact fissure vein, traceable on surface and carrying streaks of copper, gold, silver in limestone formation. Assays average 4% copper. Is merely a prospect reported to have good showings. Developed by a shallow shaft and 120' tunnel, with about 300' of workings. Tunnel being driven, 1916, to tap orebody.

GOLD BULLION MINING CO.**ALASKA**

Donald Harris, supt. Property: 8 claims, on the S. E. wall of Craigie Creek valley, 4 miles above mouth of Creek, in Willow Creek district, south

central Alaska. **Ore:** gold quartz in vein from 2' to 14' wide. **Development:** by several tunnels. Vein is said to be proven for a length of 3,500'.

Equipment: includes 2 aerial tramways, the longest 3,253' with a rise of 850'; a 7-stamp mill and small cyanide plant. Water power is used. About 70 men were employed in the 1915 season. Company reported to have taken an option in 1915 on property of the Brooklyn Dev. Co., located at the head of Willow Creek.

Operating costs in the Willow Creek district are high, due to short season of 100 to 150 days each year, and the isolated location of property. District will be made accessible by the Government railroad from Seward to Fairbanks, now being built. See U. S. G. S. Bull. 607, pp. 66, 71.

GOLD BUTTES MINING & MILLING CO.

ARIZONA

Jos. and Daniel Fraser, incorporators, Duncan, Ariz. Inc. Dec., 1915, in Ariz., to operate the New Strike gold property, near Twin Peaks. Ore contains gold and is developed for 800'.

GOLD CHAIN MINING CO.

UTAH

Provo, Utah. Mine office: Mammoth, Juab Co., Utah. **Officers:** C. E. Loose, pres. and gen. mgr.; J. T. Farrar, v. p.; P. G. Peterson, sec.-treas.; preceding officers, G. Simmons and John R. Turloes, directors. W. D. Loose, asst.-mgr. Inc. Dec., 1910, in Utah. **Cap.**, \$250,000; shares 25 cts. par. Dividends: to date, \$130,000. Company absorbed the Ajax Mining Co., said to have paid upwards of \$1,000,000 in dividends.

Property: the Gold Chain group and Ajax mine in the Tintic district. Recent development on the 1,500' level has shown an orebody which averages 15 to 20 oz. silver, 40 to 50% lead and \$2 to \$3 gold per ton. **Development:** from the Lower Mammoth mine into the west end of the property, 900' below the deepest previous work, disclosed another orebody said to carry 3% copper, 44 oz. silver and \$2.50 gold per ton. **Production:** about 100 tons per day, from the 200 to 700', inclusive, and 1,500' levels. Ore shipped is medium grade. **Equipment:** includes hoist, compressor and electric power.

GOLD CLIFF EXPLORATION CO.

ARIZONA

Oatman, Ariz. Stephen E. Barren, pres. and mgr.; Thos. Devine, sec.-treas. Inc. 1915 in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 510,000 shares outstanding. **Property:** 300 acres, adjoining the Tom Reed Gold Mines Co. property, near Oatman. Was sinking a shaft at last accounts. Property is a prospect.

GOLD & COPPER DEEP TUNNEL M. & M. CO.

NEW MEXICO

Idle. Beaver Falls, Beaver Co., Pa. Mine office: Elizabethtown, Colfax Co., N. M. A. T. McIntyre, pres.; Jas. E. Glasson, v. p.; W. H. Martin, sec.-treas.; W. P. McIntyre, gen. mgr. and supt.; preceding officers and Geo. E. Dachtler, directors. Inc. Oct. 10, 1900, in New Mexico. **Cap.**, \$200,000; increased 1912 to \$500,000; shares \$1 par, nonassessable; issued, \$225,000. Annual meeting, third Tuesday in July.

Property: in the heart of Cimarron range, on the west slope of Baldy mountain, 12,500' high, comprises 13 claims, 260 acres, in the Moreno district, 18 miles from the St. L. R. M. & P. R. R. at Ute Park. Orebody, a contact between slate and monzonite, is developed by 2 shallow shafts and a 2,300' crosscut tunnel, planned to penetrate the mountain with a final length of 3,500', cutting 2 bodies of low-grade copper ore. Total underground work, 3,100'. **Equipment:** includes a 12-h. p. gasoline air compressor and 10 buildings. The 20-ton stamp mill has a 5' Huntington mill and gravity stamps. See U. S. Geol. Survey Prof. Paper, 68, p. 95, for geology of this district.

GOLD CROWN MINING CO., LTD.**MONTANA**

Idle. Mine near St. Regis, Missoula Co., Mont. A. A. Mayo, Henderson, Mont., pres. Cap., \$1,000,000; shares \$1 par. Lands: 5 claims, 7 miles from a railroad, show a vein said to be 7 to 15' wide between quartzite and diabase, carrying ore with values in copper, silver and gold. Development by tunnels. No recent returns secured.

GOLD CUP MINING CO.**COLORADO**

Care Albert Sutcliffe & Co., 60 State St., Boston, Mass. Mine near Central City, Colo. Officers: F. W. Cramer, pres.; W. D. Drake, v. p.; Hugh Rouse, sec.; H. K. Dean, treas.; above, with H. K. Dean, directors. Inc. in Colo. Stock listed on Boston Curb. Commonwealth Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar.

Property: 9 claims, 54 acres, patented, in Quartz Valley district, Gilpin Co., developed by 3 shafts, each 100' deep, and a 300' adit tunnel. The mine has several fissure veins, carrying lead sulphide ore with gold and silver values. Shipments were made in 1915-16 to the A. Sm. & Ref. Co. plant at Globe. Ore is said to assay 1-2 oz. gold, 11 oz. silver, 25% lead and 14% zinc per ton. Management plans development at depth. A prospect.

GOLD DOLLAR CONSOLIDATED MINING CO.**COLORADO**

Cripple Creek, Colo. Officers: H. L. Shepherd, pres.-treas.; J. R. Young, sec. Cap., 2,500,000 shares; par value 10c. In treasury Jan. 1, 1916, \$370 cash; no stock. Transfer office: 125 East Pike's Peak Ave., Colorado Springs, Colo. Liabilities, \$11,000. Dividends: paid to date, \$100,000; last dividend, \$12,500, paid December 1, 1912. Listed on Colorado Springs Exchange.

Owens about 62 acres, patented, being a part of the Arequa townsite, Cripple Creek mining district. Gold ore occurs in vein 2' to 4' wide, said to average \$20 gold per ton. Under lease to A. J. Campbell, operating under name of Gold Dollar Lease.

Development: the 1,050' Mabel M. and Union shafts, from which there has been considerable drifting and crosscutting. Mine has recently been sampled with a view to building a mill. About 10 men are employed.

Gross production in 1915 was \$43,893; net to company \$3,730.

GOLD HILL CONSOLIDATED CO.**NORTH CAROLINA**

Office: Room 309, No. 42 Broadway, New York. Mine at Gold Hill, Rowan Co., N. C. Walter Geo. Newman, pres. Inc. 1910 as successor of Gold Hill Copper Co., a notorious promotion that caught many Wall Street operators. New company, under same management, became bankrupt and property sold at auction, Jan. 27, 1910, for \$45,000. Company does not own the adjacent Union Copper mine.

Property: consisted of 1,050 acres in Rowan and Stanley counties, the Gold Hill mine, where gold was discovered, A. D. 1799. Gold quartz veins were discovered 1831, and in 1845 this mine was the largest gold producer in the United States. Development: by 2 shafts of 615' and 830', and 2 lesser shafts. The mine was operated in 1913 and part of 1914. Shipments to the Perth Amboy smelter returned 1.5% copper and about \$3 gold per ton, with small silver values. Copper occurs in minute particles of chalcopyrite in hard quartz schist and recovery by wet concentration is not commercially profitable. Equipment: includes ten 100-h. p. boilers and a 10-stamp mill.

This company and its companion, the Union Copper Mining Co., enjoyed decidedly checkered careers. Operations conducted on a considerable scale, 1901-1903, were unsatisfactory and failed to show up the much advertised orebodies. A receivership ensued which was ended early 1906, but a receiver was again appointed, Aug., 1906; for the old company, on the application of Walter Geo. Newman, on claims aggregating \$352,000. In June,

1915, the Court again appointed a receiver for the property, which has been shut down and apparently abandoned by the company.

Mr. Newman evidently used this property solely for stock-jobbing purposes. The mine is considered worked out and low grade, but worthy of some drilling in depth. At best the company could never have paid honest dividends on its capitalization and under its present president is not regarded as worthy of any confidence whatever.

GOLD HILL & IOWA MINES CO.

IDAHO

Quartzburg, Boise Co., Idaho. **Property:** Gold Hill & Iowa groups at Quartzburg, said to show gold-quartz ore averaging \$5 per ton. **Development:** 6,000' tunnel and shaft. **Equipment:** 20-stamp mill, cyanide plant, compressor, stamps, electric power. Employs 35 men. A production of \$5,000,000 is claimed for the property.

GOLD HILL UNITED MINES CO.

COLORADO

Office: Bailey Bldg., 1218 Chestnut St. Philadelphia, Pa. **Inc.** June 1, 1910, in Delaware. **Cap.**, \$2,000,000; shares \$1 par. Registrar & Transfer Co., New York, transfer agent. Listed on New York Curb. **Properties:** in the Kerber Creek, Manitou and Hull mining districts, Saguache Co., Colo. Inactive for several years, doing assessment work only.

GOLD HUNTER MINING & SMELTING CO.

IDAHO

Mullan, Idaho. Dennis Ryan, gen. mgr. **Cap.**, \$2,000,000; shares \$10 par. Close corporation; no stock ever offered publicly. **Property:** 9 patented claims, including the Hunter or Gold Hunter mine, discovered 1885. 20-acre mill-site and 100-acre ranch, East of Mullan. Is a large producer.

Ore: lead-silver containing some copper, is developed by tunnels; main tunnel, No. 6, driven from mill level, cuts vein 1,600' vertically below apex; a winze down 800' below tunnel level is being sunk to 1,200'. Main ore extraction on 800' level, 2,000' below apex. Two oreshoots have been explored to depth: the north shoot, said to be 12', the south shoot 20'-22' wide. Best ore reported coming from east part of Yolande and west part of West Hunter claims; upper tunnel is Yolande, driven 400', said to show 250' of an oreshoot 6' wide.

Equipment: property is well equipped. A flotation plant, using Callow units, was completed early in 1915, and is said to have raised extraction from 75% to 90%.

Results of operations in 1915:

Tons Ore	Gross Value	Cost Extr.	Trans. & Red.	Improvements	Net Profits
118,764	\$614,590	\$333,904	\$214,315	\$34,707	\$31,662 (a)

(a) Compared with a loss of \$45,926 in 1914, though in that year \$370,000 was charged to improvements from gross earnings of \$421,318.

GOLD KEY MINING CO.

ARIZONA

Offices: 733 Central Bldg., Los Angeles, Cal., and Oatman, Ariz. **Officers:** Wm. H. Wise, pres. and treas.; H. M. Hall, v. p.; B. E. Shaw, sec.; with W. K. Ridenour and R. A. Carr, directors.

Inc. in Ariz. **Cap.**, \$1,250,000; shares \$1 par. Listed in San Francisco.

Property: at Oatman, developed by 300' shaft, now being sunk to the 500' level. In March, 1916, management reports 2' of ore averaging \$28.11 gold per ton on the 200' level. Property is a prospect, with a good vein and ample indications of making a mine.

GOLD KING LEASING CO.

COLORADO

Mine at Gladstone, via Silverton, San Juan Co., Colo. Harry L. Frank, mine supt.; Louis C. Bastian, mill supt. Operates the Gold King and Sampson mines, formerly owned by the Gold King Cons. Mines Co., reorganized as New Gold King Mines.

Ore: claims show fissure veins carrying irregular stringers of lead-

copper ore with gold-silver contents, in altered andesite, free gold occurring in white quartz associated with iron pyrite, galena or blende. **Development:** by 600' shaft and 3,000' tunnel. **Equipment:** includes complete steam and electric power, compressor, tramway, 300-ton mill, converted into flotation plant in 1915, 80 stamps, etc.

Production: the Gold King mine is credited with a production in excess of \$12,000,000 to end of 1915. Shipments in 1915 averaged about 400 tons of \$20 ore per month. Present work confined to 2nd, 3rd and 4th levels with about 70 men employed.

GOLD KING MINING CO.**ALASKA**

Chas. R. Crawford, mgr., at last accounts, Valdez, Prince William Sound, Alaska. **Property:** Gold King mine, at elevation of 3,750' on east end of an ice-surrounded mountain rising out of Columbia Glacier, 6 miles from Shoup Bay and 15 miles from Valdez. Reached by 8-mile trail from head of Shoup Bay. **Ore:** free milling gold in quartz veins in graywacke. Veins vary in width from 2" to 36". Development by tunnels.

Equipment: includes 2-stamp mill, amalgamating plates, and a concentrator, operated by gasoline engines during about 6 months each year; production said to be about \$15,000 monthly. Transportation charges are high.

GOLD KING MINING CO.**COLORADO**

Cripple Creek, Teller Co., Colo. **Inc.** 1892. **Cap.**, \$1,000,000; shares \$1 par. A close corporation. Owns the El Paso Gold King mine, worked under lease by Owen Roberts, on a royalty basis, said to net the company substantial profits.

Property: about 40 acres at the head of Poverty Gulch, Cripple Creek, developed by shaft, is said to show gold ore running from \$10-\$20 per ton. **Production:** about 20 cars of ore per month.

GOLD LEAF CONSOLIDATED MINING CO.**IDAHO**

Reorganized under name of Wisconsin Mining Co. and described under that title.

GOLD MOUNTAIN MINING & MILLING CO.**NEVADA**

Properties: about 13 miles from Bonnie Claire and 6 miles from Horn-silver, Nev., operated under lease by J. W. Crane. Veins are silver-gold deposits carrying copper. Developed by two 240' shafts and connected by a 200' drift. Estimated reserves, 2,000 tons of milling ore, valued at \$20 per ton, blocked out on the 200' level. An outcropping oreshoot 20" wide said to have yielded ore assaying from \$100 to \$500 per ton.

GOLD ORE MINING CO.**ARIZONA**

Oatman, Ariz. **Officers:** C. E. Sperr, pres.; J. J. Mitchell, sec.; A. F. Pollock, treas.; A. C. Werden, gen. mgr. **Inc.** in Ariz. **Cap.**, \$500,000; shares \$1 par. Listed on San Francisco Exchange.

Property: 6 claims, at Oatman, ½ mile north of Gold Road mine, shows gold ore in vein 2' to 6' wide, said to average \$20 per ton. Ore occurs in andesitic formation. **Development:** by 2 shafts, deepest 530, and drifts, totaling about 1,200'. In the upper levels an oreshoot was stoped to surface that is said to have yielded high-grade milling ore. Company claims to have a 6' orebody on the 530' level from which daily shipments of 20 tons, averaging \$15, were recently started.

GOLD PRINCE MINING & LEASING CO.**NEVADA**

E. L. Luker, sec.-treas., Grand Island, Neb. **Officers:** Dr. A. H. Farnsworth, pres.; Jos. Kotik, St. Paul, Neb., v. p.; Chas. O. Orr, Goldfield, Nev., gen. mgr.; with E. L. and E. S. Luker, directors. **Inc.** in 1914. **Cap.**, \$500,000; shares \$1 par. Has lease and bond on the Gold Crater mine, formerly

owned by the Gold Crater Cons. Mng. Co., about 30 miles S. E. of Goldfield, Nev.

Ore: gold, milling grade, said to run about \$15 per ton. **Development:** 265' shaft and crosscuts. Management claims large ore reserves in sight. **Equipment:** includes a 12-h. p. hoist and small mill.

GOLD QUEEN MINING CO.

COLORADO

Idle. Office: Room 408, 40 Dearborn St., Chicago, Ill. **Mine office:** St. Elmo, Chaffee Co., Colo. C. Kirchner, pres. **Inc.** 1904 in Wyoming. **Cap.,** \$2,500,000; shares \$1 par. **Property:** 13 claims, about 125 acres, on Barren mountain, in the Chalk Creek district, has several tunnels, longest 600' with 900' of workings, developing a vein carrying gold-silver ores.

Stockholders planned reorganization of company, 1914, and refunding its indebtedness, amounting to \$2,000, and interest on bonds long past due. Property unpromising and company regarded with suspicion.

GOLD RANGE MINING & MILLING CO.

ARIZONA

Oatman, Ariz. Company reorganized, March, 1916, with H. J. Sayers, pres., Los Angeles, Cal.; T. A. Wetzel, supt. **Cap.,** \$1,000,000; shares \$1 par. **Treasury** 400,000 shares. Listed on Los Angeles Exchange.

Property: Esmeralda group at Oatman, adjoining the Ivanhoe on the south. Company is sinking a shaft, 135' deep, April, 1916, to 500' level before doing lateral work. Is a prospect.

GOLD ROAD BONANZA MINING CO

ARIZONA

Oatman, Ariz. **Officers:** F. T. Torpey, pres. and treas.; W. B. Ross v. p.; W. P. DeWolf, sec. **Inc.** in Ariz. **Cap.,** \$1,000,000; shares \$1 par. **In treasury** 250,000 shares. Listed in San Francisco.

Property: 90 acres, adjoins the Gold Road mine on the S. W. Said to be installing machinery preparatory to sinking shaft. Is a prospect.

GOLD ROAD MINES CO.

ARIZONA

D. R. Muir, mgr., Gold Road, Ariz. **Inc.** in Maine. **Cap.,** 400,000 shares; \$5 par; entirely owned by U. S. Smelting, Refining & Mining Co., which see for officers.

Property: 15 patented claims, 216.52 acres, at Gold Road, Mohave Co., Ariz., 22 miles west of Kingman, on the Santa Fe R. R. **Ore:** gold-bearing quartz occurring in a fissure vein with E.-W. strike. Company owns about 1¼ miles on the strike of this vein. The mine had a good record of production prior to its purchase by this company in 1912. Stopping operations had been carried down to the 500' level and were extended on the strike of the vein and also in depth to the 900' level. Company now extracting ore from the 800' level. Assay value of ore diminishes with depth as far as explored to date and only a small percentage of ore found on the 800' level is of commercial grade, though the vein continues strong and permanent.

Development: to a depth of 1,100' by 5 miles of workings. There are 2 shafts, one reaching the 800 and the other the 900' level, equipped with cages and skips. Property is fully equipped with power house, air compressors, shops, warehouse and dwellings; has a 40-stamp 300-ton cyanide mill, located within a few hundred feet of the mine. Electric power is purchased from power plant at Kingman.

Production: for 1915 was 96,272 tons. Cost of mining averages \$3.15 per ton; milling about \$2.13 per ton. Recovery of gold per ton is \$6.77.

The mine has considerable unexplored territory within the depth to which it has been worked, and the prospects are that it will yield a small profit for some time to come from ore reserves now existing, or which may be found within this depth. Larger earnings may be expected in case exploration at depth discloses increased ore values.

GOLD SOVEREIGN MINING & TUNNEL CO.**COLORADO**

Office: 203 Burns Bldg., Colorado Springs, and Cripple Creek, Colo.
Officers: Jas. F. Burns, pres. and treas.; M. B. Rapp, v. p.; John T. Hawkins, sec.; with Daniel Thatcher, A. Feringher, directors. C. G. Jackson, supt.
 Charter renewed Oct. 31, 1915. **Cap.**, \$2,000,000; shares \$1 par; in treasury Jan. 1, 1916, 195,228 shares; cash, \$3,074. Listed on Colorado Springs Exchange. Dividends: \$32,559, last dividend of \$5,000 paid in 1912.

Property: Gold Sovereign and J. G. Blaine claim, 7.2 acres, patented, on Bull Hill (Sec. 20), adjoining the Cresson, is under lease to the Union Leasing Co. Management believes firmly that rich Cresson veins extend into the Gold Sovereign ground. Shoots reported as 3' wide and assaying \$50 per ton in gold said to be disclosed on the 15th level.

Development: 1,350' shaft, to be sunk an additional 200'. **Production:** gross production of lessee, Union Leasing Co., for 6 months ending Jan. 1, 1916, \$30,174, netting the company \$6,306 in royalties. About \$19,618 expended by lessees on development in 1915. Ten men are employed.

GOLDEN BELL MINING CO.**ARIZONA**

Mine at Kelvin, Pinal Co., Ariz. L. W. St. Charles, pres.; Geo. H. Sarrick, v. p. and gen. mgr.; G. L. Sarrick, sec.; L. C. St. Charles, treas. Inc. 1910. **Cap.**, \$1,000,000. **Property:** 9 claims, near the Southern Pacific railway, 5 miles west of Kelvin, shows gold-copper ore in veins in altered diorite. **Developed:** by 100' tunnel, shaft and crosscuts. Equipped with 25-h. p. hoist and air compressor.

GOLDEN CENTER MINING CO.**CALIFORNIA**

C. A. Brockington, supt., Grass Valley, Nevada Co., Calif. Initial dividend, \$11,000, at rate of 4c per share, was paid in Sept., 1915. **Property:** 130 acres, including the Golden Center mine in Grassvalley and the Peabody mine on Gold hill, the latter only recently acquired.

Ore: free-milling quartz, occurs in veins, about 16" wide and said to average \$15-\$18 per ton. There are 3 main veins on the Golden Centre which are being worked on the 700' level by incline and vertical shafts. The Peabody has only been developed to depth of 150'. **Equipment:** includes 10-stamp mill.

Production: shipments of concentrates being made to Pioneer Reduction Co. at Nevada City. Employs about 25 men. Company said to be planning a 10-stamp addition and cyanide plant, also sinking the Golden Center shaft to the 1,000' level.

GOLDEN CURRY MINE.**MONTANA**

Formerly owned and operated by the Elkhorn Mining Co. Reported under option, 1915. **Property:** 9 claims, 162 acres, near Elkhorn, Jefferson Co., Mont. Orebody shows oxidized iron cap, lying between limestone and granite and dipping at 45°. Property said to show 5 orebodies, 2 now being developed. Principal oreshoot has a width of 30', length of 295' and a proven depth of 180'. Ore contains chalcopyrite and tenorite in oxidized iron ore, the average contents being: 1.9% copper, 4 oz. silver and 0.35 oz. gold per ton, with 48% excess iron.

Development: 2 shallow shafts and 4 tunnels, total underground work said to be 8,200'. Ore blocked out estimated at 20,000 tons; probable ore 100,000 tons. Average cost of mining \$2.20, smelting charges \$2.10. Mine was operated intermittently by lessees in 1913-14. Geology and history of property given in Bull. No. 527, U. S. G. S., "Helena Mining Region," by Adolph Knopf, pp. 136 to 139.

GOLDEN CYCLE MINING & REDUCTION CO.**COLORADO**

Colorado City, El Paso Co., Colo. **Officers:** A. E. Carlton, pres.; E. P.

Shove, v. p.; I. T. Synder, sec.-treas.; with Spencer Penrose, Richard Roelofs, H. McGarry and L. G. Carlton, directors.

Inc. in West Virginia. Cap., 1,500,000 shares; \$1 par; all issued. No bonded indebtedness or preferred stock. Listed on Colorado Springs Exchange. Balance sheet of Sept. 30, 1915, shows: Assets, \$2,474,697, which included mill, plant and equipment, \$1,113,272; cash, gold and bullion, \$620,012; notes and accounts receivable, \$165,937; stocks and bonds, \$354,725. Liabilities: accounts payable, \$119,795; surplus and reserves, \$760,512. Yearly net earnings for 6 years previous to 1915 averaged over \$625,000. Net earnings, for first 9 months of 1915, \$505,729. Above earnings do not include those from the coal properties, at present about \$75,000 per year. Dividends: to Jan. 10, 1916, inclusive, \$7,338,000; rate 24% per annum, payable monthly. Dividends, 1916, are 3c a month.

Company is an industrial corporation, having disposed of its mining property at Cripple Creek to the Vindicator Cons. Gold Mng. Co. in 1915 for \$1,300,000. Its holdings include practically full ownership of 2,700 acres coal land in Colorado and a reduction plant at Colorado City. This plant is the largest cyanide mill in the U. S., treating 40,000 tons of ore a month; its equipment is thoroughly modern, having been enlarged in 1915. Between 400,000 and 500,000 tons of gold ore from the Cripple Creek district are treated annually.

GOLDEN GATE MINING CO.

OREGON

Greenhorn, Baker Co., Ore. M. F. Douce, pres.-gen. mgr.; G. L. Bender, supt. **Property:** Golden Gate mine at Greenhorn. **Development:** in progress since 1900; tunnels reach depth of 350'. A 9' vein of good milling ore said to have been cut on the 300' level, March, 1916. **Equipment:** 20-stamp mill, 10 stamps in commission since January, 1915. Employs 25 men.

GOLDEN GLOW MINING CO.

IDAHO

Wm. Schultz, supt., Ketchum, Blaine Co., Idaho. **Property:** shows a deposit of low-grade silver-lead-copper ore developed by tunnels. Operated intermittently.

GOLDEN JUBILEE MINE.

CALIFORNIA

Reported in March, 1916, that work had been resumed by Cal. Extraction Co. H. C. Lyon, mgr. **Property:** 8 miles S. W. of Carrville, Trinity Co., Calif., 150 acres, patented, said to show a 2½' vein between slate foot-wall and diorite hanging-wall. **Development:** tunnels, with several hundred feet of underground workings. Mine is said to have produced \$250,000 in gold. **Equipment:** includes compressor, hoist and 10-stamp mill. Employs 30 men. Plans building cyanide plant and developing at depth.

GOLDEN LINK CO.

NEW MEXICO

Jackson, Grant Co., N. M. **Property:** 8 claims, along the Big Dry canyon, 6 miles from Jackson, in the Cooney, or Mogollon district, Socorro Co., N. M. J. G. Barnesdale, Superior, Wis., treas. **Development:** by 3 tunnels, lowest 120' long, and a vertical shaft, all in ore, vein said to be 8' wide. Equipped with 100-h. p. water-power plant, 3-stamp mill and 500' tram. No returns secured. Probably idle.

GOLDEN PEN MINE.

NEVADA

G. H. Miller, supt., Rand, Mineral Co., Nev. Reported, April, 1915, under option to Jesse Knight, of Provo, Utah; Adams O'Neill, of Los Angeles, and J. H. Miller, of Hawthorne, Nev., for \$200,000. Has been operated by them for several months under lease and bond.

Property: 11 claims, at Rand, a new mining camp, 18 miles south of Rawhide, is said to have produced \$50,000 in gold in 1915, with only two men working. The lowest carload shipment is said to have assayed over \$100 per ton. Present owners have continued the tunnel development work and

are reported to have opened up good milling ore in addition to high-grade ore. In April, 1916, a 4' vein was said to have been found 150' from the main ledge, with the richer portions assaying from \$100 to \$500 per ton. Fifteen men are employed.

GOLDEN REWARD CONSOLIDATED GOLD

M. & M. CO.

SOUTH DAKOTA

Office: 475 Fifth Ave., New York. **Mine office:** Deadwood. **Lawrence Co., S. D. Officers:** C. C. Tegethoff, pres.; Harris Franklin, v. p.; with R. W. Goelet, Henry de Forest, W. B. Devereux, Walter Luttgen, Ed. de Witt and W. A. Harriman, all of New York, directors. W. J. Johnson, sec.; N. E. Franklin, Deadwood, asst. sec.; Henry Schnitzel, gen. mgr.; F. R. Baldwin, gen. supt.

Inc. June 25, 1896, in South Dakota. **Cap.**, 1,000,000 shares; \$10 par; 841,793 shares issued to June, 1916. Stock transferred at company's office. Annual meeting 1st Tuesday in August at Deadwood, S. D. Gross earnings for 1915 were \$804,068; operating expenses amounted to \$703,837. Balance sheet shows assets, \$10,710,511, and liabilities, accounts payable, \$70,647.

Property: 442 patented claims, 3,391 acres at Terry, in Whitewood and Bear Butte mining districts, near Deadwood, includes the Union and Astoria mines. **Ore:** occurs as contact deposit in shale, carrying gold-silver values and 75% silica. Pay ore occurs in shoots from 5-100' long, said to give average assays of \$5 per ton.

Development: by several tunnels and vertical shafts from 100-350' deep, with about 15 miles of workings. **Equipment:** includes electric power, electric double-drum hoist, compressor, 150-ton cyanide plant and 75-ton Wedge roaster. Average gold extraction is 75.55%.

Ore reserves: estimated by management June, 1916, at 2,000,000 tons. Production for 1915 amounted to 57,770 tons, yielding 16,428 oz. gold and 20,196 oz. silver.

GOLDEN RULE MINING & MILLING CO.

MISSOURI

Fred Kincannon, mgr., Granby, Mo. **Inc.** in Mo. **Cap.**, \$8,000. Company leasing and operating 30 acres land at Granby, developed by 5 shafts, 100' deep. **Equipment:** 100-ton concentrating mill, compressor and steam power. Produces zinc-lead concentrates.

GOLDENVILLE MINING CO.

NOVA SCOTIA

Goldenville, N. S. R. Verner Neily, mgr., at last accounts. **Property:** a gold mine on St. Mary's river. Production for year ending Sept. 30, 1914, was 6,806 tons ore, yielding 895 oz. gold. Employed 48 men. Later returns not available.

GOLDFIELD BLUE BELL MINING CO.

NEVADA

Bert Ward, sec., P. O. Box 992, Goldfield, Nev. D. S. Johnson, supt., Berlin, Nye Co., Nev. **Property:** the Berlin Group, 50 acres, patented. Veins carry gold and silver-bearing lead-copper ores, developed by a 175' shaft. Equipped with steam hoist, air compressor and a 30-stamp concentrating mill.

Property operated under 3-year lease from March, 1915, by H. B. Lind, of Goldfield; who plans sinking a 2 compartment shaft to the latite-shale contact, estimated to be at 500' depth.

GOLDFIELD CONSOLIDATED MINES CO.

NEVADA

Goldfield, Nev. Exploration Dept office: c/o E. A. Julian, Crocker Edg., San Francisco, Calif. **Officers:** Geo. Wingfield, pres.; J. D. Hubbard, v. p.; A. H. Howe, sec.-treas.; J. W. Hutchinson, gen. mgr.; with J. H. Carstairs, F. M. Monson and H. M. Hoyt, directors. K. M. Simpson, asst. mgr.; Jos. B. Kendall, mine supt.; J. B. Lain, mill supt.; Robt. Sterling, chief engr.; Fred Scars, Jr., geologist; F. M. Moore, purch. agt.

Inc. Nov. 13, 1906, in Wyo. **Cap.**, \$50,000,000; shares \$10 par; issued, \$35,591,480. Stock listed on San Francisco and Salt Lake Exchanges and New York and Boston Curbs. Stock was stricken from N. Y. Stock Exchange list, Dec. 26, 1914. **Dividends:** to date, \$28,998,831. John S. Cook & Co., Goldfield, Nev., registrar. Company office, Goldfield, transfer agt. Annual meeting, third Monday in March. Company is a merger of Goldfield-Mohawk, Red Top, Jumbo, Laguna Goldfield, Goldfield and Combination mining companies. In 1911, company acquired Vinegerone Fraction and the Bull Dog and Jumbo Fractions. Company owns entire stock of the Goldfield Cons. Milling and Transportation Co.; 25% stock interest in the C. O. D. Cons. Mining Co., and 87% stock interest in the Aurora Cons. Mines Co., of Aurora, Mineral Co., Nev., described under that title.

Annual report for 1915 shows gross value of ore treated, \$4,101,247, or \$1,558,308 net; \$3,515,833 came from mines alone; expenses, \$1,957,525; dividends, \$1,601,616; cash in hand and due Dec. 31, 1915, \$678,363, and loans outstanding, \$400,000. **Dividends:** 20c in 1907; 90c in 1909; \$2 in 1910; \$2 in 1911; \$1.60 in 1912; 70c in 1913; 30c in 1914; 45c in 1915, and earnings at rate of about 20c per share in 1916.

Property: 26 patented lode claims, and 1 unpatented claim, 390 acres, at Goldfield, Nev., with 6 working shafts, Combination, Mohawk, Red Top, Jumbo-Clermont, Jumbo No. 2 and Laguna, 50% of the ore coming from the Mohawk shaft. Deepest shaft is 1,200'. Output is from several mines working fissure veins whose stoping width varies from a few feet to as much as 20 or even 30'. Veins show orebodies with variations in which the commercial limit is not dependent upon structural planes, the shoots swelling out and pitching with but slight relation to the vein walls.

Development: during 1915, 34,603' of work was done at an average cost of \$5.73 per foot. **Ore reserves:** estimated Jan. 1, 1916, at 105,000 tons of ore.

Equipment: includes 100-stamp mill treating 1,057 tons per day with an average recovery of 90.45% in 1915; a 50-ton flotation plant installed and operated successfully in 1916; a 1,790' electrically operated cableway, a 3-drum electric hoist and a 1,000 ton cyanide plant, etc. The ore is amalgamated, cyanided and concentrated.

Production: from 6 shafts aggregated 390,054 tons in 1915, valued at \$3,540,459 gross, or \$1,558,308 net. The Jumbo Clermont yielded 5,442 tons copper ore in 1914 of an average value of \$29.00 per ton.

Production, Costs and Profits Since Completion of Mill

	Ore, Tons	Rec. per Ton	Total Cost per Ton	Operating Profit per Ton	Total	Dividends
1915.....	390,054	\$10.37	(c) \$5.16	\$1,558,308	\$1,601,617
1914.....	338,192	11.61	6.19	\$ 5.42	1,835,224	1,067,744
1913.....	349,465	14.14	6.32	7.82	2,731,945	2,491,403
1912 (a)...	415,786	18.40	6.65	11.75	4,886,399	5,694,637
1911 (b)...	330,549	30.74	7.97	22.77	7,526,846	7,118,296
1910 (b)...	266,867	38.50	10.97	27.53	7,347,692	7,118,271
1909 (b)...	194,479	34.72	8.88	25.84	5,026,620	3,201,239

(a) 14 mos. ending Dec. 31, 1912. (b) Year ending Oct. 31. (c) Average value per ton.

Owing to the remarkable decrease in ore values and ore reserves in the mine, the Goldfield Consolidated management has decided on exploring, purchasing and developing promising properties at Goldfield and Aurora. The Aurora Cons. Mng. Co.'s property, 30 miles west of Hawthorne, Mineral Co., Nev., comprising 52 patented claims and a 500-ton mill at Aurora,

was acquired 1914 through purchase of 85%, or 592,000 shares, for \$763,011. (See Aurora Cons. Mng. Co.)

As a stock investment the buyer is taking a chance on a rapidly liquidating proposition, for the irregularity of the gold in the orebodies makes it impossible to give an accurate estimate of ore reserves; the discoveries each year about balance extraction and the records show a well sustained yearly average tonnage treated, but the ore shows decreasing value ranging from \$38.50 per ton in 1910 to \$10.37 per ton in 1915.

The 1915 figures show lowered mine and mill costs and it is evident that the management is making every effort to offset decreased values by decreased costs so as to maintain earnings.

Company is one of the largest gold mines in the world, and also produces copper ore from one of its veins. Ore is shipped to the Mason Valley smelter at Wabuska, Nev.

GOLDFIELD MERGER MINES CO.

NEVADA

Office: Goldfield, Esmeralda Co., Nev. **Officers:** Elmer H. Cox, pres.; J. Ross Clark, v. p.; A. H. Howe, sec.-treas.; with Geo. Wingfield, John Erikson, Edgar Ames, directors. Willis Lawrence, mgr. Inc. 1908 in Wash., and reorganized 1911, when Geo. Wingfield obtained control. **Cap.**, \$5,000,000, increased Aug. 4, 1915, to \$6,000,000; shares \$1 par. Company had \$30,000 cash in treasury at end of fiscal year, 1915. Majority of the stock is held by the Goldfield Deep Mines Co.

Property: the St. Ives group, 9 claims, 120 acres, shows veins with shoots of copper-silver-gold ore, developed by 1,750' shaft with crosscuts at 1,325' and 1,725' into Consolidated and Atlanta ground. A crosscut was being driven Jan., 1916, to the N. E. at a depth of 1,175' through the northern extremity of the Algae Fraction, into the Sunflower claim to open up the Jumbo Extension ore channel.

Alleging that the property was being operated for the benefit of Geo. Wingfield; that valuable concessions had been made to Wingfield and Clark railroad interests; that officers of the Merger Co. had illegally received 21,000 shares of Jumbo Extension stock when the latter company took over the Velvet claim for \$85,000 cash and 171,000 shares of Jumbo Extension stock; that the sale of these shares at 33c was unauthorized and the result of collusion between the directors of the 2 companies, a suit was brought for recovery of the Velvet claim, or payment of \$680,000, based on the highest market value of Jumbo stock since the sale.

On application of Lucy Ames, John Erikson and other minority stockholders, the company was thrown into receivership Jan. 30, 1915, which terminated in August, 1915, after an agreement had been reached whereby the Merger company admits that the Jumbo Extension is the lawful owner of the Velvet lode and all minerals within the extension boundaries thereof, extending downward vertically.

GOLDFIELD SHALE MINING CO.

NEVADA

Goldfield, Nev. R. S. Wilbur, F. S. Hunt, Frank Friedman, G. K. Ford and Albert Billett, all of Goldfield, directors at last accounts. Inc. Dec., 1914, in Nevada. **Cap.**, \$1,000,000; shares \$1 par. Listed on San Francisco Exchange.

Has a 2-year lease on the south 700' of the Spearhead claim, belonging to the Spearhead Gold Mng. Co., at Goldfield. **Ore:** gold, occurs in stringers, 2-7" wide, and said to assay as high as \$40 per ton. **Development:** 215' Maloney and 250' Wilbur shafts. **Equipment:** 60-h. p. gasoline hoist and compressor.

Company pays from 10 to 25% royalty on all ore mined. At last accounts was sinking to depth of 750' to reach the shale-latite contact.

GOLD KEY MINING CO.**ARIZONA**

Office: 733 Central Bldg., Los Angeles, Calif. J. C. Denton, supt., Old Trails, Mohave Co., Ariz. **Officers:** W. H. Wise, pres.; H. M. Hall, v. p.; B. E. Shaw, sec.; with W. K. Ridenour and Raymond A. Carr, directors. **Inc.** 1915 in Arizona. **Cap.**, \$1,250,000; shares \$1 par. Listed in San Francisco.

Property: the Treasure Key group, 4 claims, 50 acres, between the Boundary Cone and Orion groups, west of Old Trails and near Oatman, Ariz. Contains the Oatman type fissure veins in andesite, showing gold quartz ore. The one under development is 20' wide.

Development: by a 310' shaft with drifts on 300' level. The east drift exposes an ore-shoot 75' long and 4'-6' wide, showing 3' of \$30 ore. A second shoot 75' to the west is said to average \$12. Property is a "likely" prospect.

GOLDSTRIKE BONANZA MINING CO.**UTAH**

Officers: H. G. Snyder, pres.; C. J. Price, v. p.; Rolla E. Clapp, sec-treas., 603 Newhouse Bldg., Salt Lake City; with B. N. C. Stott and C. A. Peet, directors. **Inc.** May 25, 1915. **Cap.**, \$100,000; \$65,000 issued.

Property: 2 groups, 11 lode claims, in the Goldstrike district, about 1 mile W. of Hamburg, and 36 miles from Modena on the S. L. R. R. **Ore:** oxide, occurs in fissure veins in porphyry, said to be from 2' to 4' wide and to average better than \$20 per ton. Ore is free milling and carries manganese. **Development:** 35' shaft, tunnel and crosscuts. Reported sacking high-grade ore at last accounts, Sept., 1915.

GOLDSTRIKE CONSOLIDATED MINING CO.**UTAH**

Office: 603 Newhouse Bldg., Salt Lake City, and Goldstrike, Utah. **Officers:** Rolla E. Clapp, pres.-gen. mgr.; Bishop Geo. A. Holt, v. p.; F. A. Johnson, mgr. and supt.; with Thos. Marionaux and P. P. Canfield, directors; J. S. Farrington, sec.-treas. **Inc.** May, 1915, in Utah. **Cap.**, \$160,000; shares 10c par; assessable. Transfer office: 605 Newhouse Bldg.

Property: 16 unpatented claims, in Goldstrike mining district, about 38 miles S. of Modena on the S. I. R. R. **Ore:** gold, occurs in fissures in limestone and quartz porphyry dikes traversing the limestone formation. Assays taken from shaft showed from \$3.65 to \$31 per ton in gold and silver. **Development:** 100' shaft, crosscut and surface cuts. Property is a prospect.

GOLDSTRIKE MINING & LEASING CO.**UTAH**

Office: 603 Newhouse Bldg., Salt Lake City, Utah. **Officers:** H. G. Snyder, pres.; E. J. Lund, v. p.; Rolla E. Clapp, sec.-treas.; with Clyde McQuarrie, Louis R. Lund and H. A. McQuarrie, directors. **Inc.** April 16, 1915. **Cap.**, \$100,000; shares 10c par.

Property: lease Nos. 1 and 2 on Hamburg claim of Bull Valley Gold Mines Co., 3 claims of the Herd Girl group, Last Chance and Cripple Creek groups in Goldstrike district, Washington Co., Utah. Said to show gold ore occurring in fissure vein, 4' wide and averaging from \$7 to \$20 per ton. **Development:** 500' adit, at depth of 300' with several winzes, drifts and upraises.

Equipment: two 3-stamp mills of 20 tons daily capacity, 20-h. p. engine and compressor. **Ore reserves:** 10,000 tons blocked out, according to published reports. Employs 15 men.

GOLINSKY MINING CO.**CALIFORNIA**

Idle. Mine near Kennett, Shasta Co., Cal. George Bayha, pres.; W. D. Tillotson, v. p. Sold to the Golinsky Copper Co. in 1911. **Property:** 14 claims, adjoining the Mammoth mine on the east and 4 miles west of Kennett, shows an ore shoot 30' wide carrying low-grade copper ore with gold

values. Equipment includes electric power. Reported held under bond by Mammoth Copper Co. in 1915.

GOOD SPRINGS ANCHOR CO.**NEVADA**

Office: 1202 Hollingsworth Bldg., Los Angeles, Calif. Mine at Jean, Clark Co., Nev. Officers: Frank A. Keith, pres.; Philip Wiseman, v. p.; R. I. Rogers, treas.; J. W. Keith, sec.; with Seeley W. Mudd, directors. Ray W. Moore, mgr. Inc. Dec. 20, 1913, in Nevada. Cap., \$1,000,000; shares \$1 par; issued, \$550,000. Annual meeting, second Monday in May.

Gross earnings from ore sales, 1914-1915, \$219,904.74; for 1915, \$165,659. First dividend paid in June, 1915; total for 1915, 16 cts. per share; total to date, including March, 1916, \$103,285.

Property: 7 patented claims, 140 acres, at Jean, said to show lead-zinc ore occurring as replacement deposits in limestone; strike N.-S., dip 50°. Developed by 212' winze from a 110' tunnel; greatest depth of workings 400'; total underground workings, 1,400'.

Equipment: includes a 6-h. p. gasoline hoist, 2,000' gravity tram, and a 50-ton dry concentrator using Stebbins table.

Production:

	Tons Crude Ore		Mixed Ore	Concts. Tons	
	Lead	Zinc	Tons	Lead	Zinc

GOONEY MANOR COPPER CO., INC.**VIRGINIA**

Front Royal, Warren Co., Va. Hugh E. Naylor, pres., gen. mgr. and purch. agt.; Lewis F. Cooper, v. p.; S. G. Waller, sec.; Geo. H. Bowman, treas.; preceding officers, H. C. Sheetz, N. S. Waller, S. M. Chiles, S. R. Millar, J. S. West, A. J. Sager, H. R. Kern, directors. Inc. July 12, 1909, in Virginia. Cap., \$500,000; shares \$100 par; issued 3763. Annual meeting third Tuesday in July.

Property: 84 acres, 5 miles south of Front Royal, reported to carry a fissure vein in porphyry and contact deposits between limestone and porphyry, with generally N. E.-S. W. strike and dip of about 55°. Main orebody is reported to average 7' width, and to be traceable 800', carrying a little malachite near surface, with chalcopryrite at depth, averaging 5% copper, 1 to 6 oz. silver and \$2.50 gold per ton. Orebodies apparently are lenticular. Development: by a 40' open cut, a 65' tunnel and by shafts of 250 and 228' without laterals, estimated by the company to show 35,000 tons of ore. Equipment: includes a 150-h. p. steam plant, with a 50-h. p. hoist good for 800' depth, and a 1-drill Rand air compressor. Buildings include a smithy, engine house, tool house and dwelling. Company plans developing the orebody for about 500' in length and building a mill. No shipments made since 1907.

GOOSE LAKE COPPER CO.**MONTANA**

Cooke, Park Co., Mont. John Martin, supt. Operating Copper King group, in 1912. Developed: by a 350' tunnel driven on the strike. Ore occurs in fissure veins in granite, carrying copper and silver values.

GOWGANDA COPPER CO.**NEVADA**

Letters returned from Goldfield, Nev., address. C. A. Braconier, pres.; Herman Krieger, sec.; S. H. Thompson, Reese Wampler, W. H.

Brock, directors. Inc. July, 1913, in Nevada. Cap., \$100,000; shares 10 cts. par. Property: 9 claims, near Round mountain, 14 miles south of Goldfield, said to show a deposit of low-grade copper ore. Workings are as yet shallow. Probably idle.

GRAFTER COPPER MINING CO.

YUKON

Geo. Armstrong, E. A. Dixon and J. P. Whitney, owners. Property: 1 claim, crown-granted, 50 acres, elevation 3,822', 1 mile N. of the Arctic Chief, near White Horse, Yukon, Can., has a 7-mile wagon road to the terminus of the White Pass & Yukon R. R.

Mine lies in an area of alternating bands of limestone and diorite, with aplitic cross dikes. Ore: consists of magnetite containing bornite and chalcopryrite, with a garnet-augite gangue. Ore is estimated to carry 8% copper and \$3 gold per ton. Mine opened 1900, but idle until 1907, has a shaft of about 90' depth, with 150' of workings, including some stopes nearly to the surface.

Equipment: includes steam power. Estimated 200 tons of high-grade copper ore on dumps. Operations resumed and mine unwatered in 1915.

GRAHAM COUNTY COPPER CO.

ARIZONA

Owns group of claims in Graham mountains, near Cedar Springs, Navajo Co., Ariz. W. C. Rohns, mgr., at last accounts.

GRANADENA MINING CO.

MEXICO

Closed down by revolution. Mine at Santa Barbara, Hidalgo, Chih., Mex., produces silver-lead ore with a small amount of copper. Fully described Vol. X.

GRANBY CONS. M., SM. & POWER CO., LTD. BRITISH COLUMBIA

Office: 52 Broadway, New York. Mine at Phoenix, Boundary district, B. C. Smelter at Grand Forks, Boundary district, B. C. Officers: Wm. H. Nichols, pres.; E. P. Earle, W. H. Robinson, v. p.'s.; Edwin Thorne, v. p.; F. M. Sylvester, gen. mgr., Vancouver; Northrup Fowler, sec.; Geo. W. Wooster, treas.; preceding officers, J. P. Graves, B. Hochschild, M. K. Rodgers, Sanford H. Steele, J. B. F. Herreshoff and Wm. A. Paine, directors; C. C. Mailloux, asst. to pres.; O. B. Smith, supt.; Wakeley A. Williams, smelter supt.; C. M. Campbell, supt.; J. C. McDonald, supt.

Inc. March 29, 1901, by special act of the British Columbia parliament. Cap., \$20,000,000, originally \$15,000,000; shares \$10 par, changed, 1906, to \$160 par; issued 149,985.15 shares. Bonds authorized Feb. 25, 1913, \$5,000,000, first-mortgage, 6%, 15-year, convertible at par. Series A of \$1,500,000 bonds underwritten Feb., 1912, at 96 by Speyer & Co. Bonds redeemable at 105 plus interest after 10 years, 4% to be retired by purchase at \$110, annually; \$3,440,000 outstanding June 30, 1915. Shares listed on Boston Stock Exchange. Boston Safe Deposit & Trust Co., Boston, registrar; American Trust Co., Boston, and Title Guaranty & Trust Co., New York, transfer agents. Annual meeting, first Tuesday in October.

Company was organized to purchase the property and assets of the Old Ironsides Mining Co., Knob Hill Gold Mining Co., Ltd., Gray Eagle Gold Mining Co., Ltd., Granby Consolidated Mining & Smelting Co., Ltd., and the Grand Forks Water & Light Co., at an aggregate cost of \$12,097,030. Stock to the amount of \$1,402,970 was issued for cash and services, rendered.

Comparative General Balance Sheet, years ending June 30:

Assets:

	Prop. & Equip.	Investments	Supplies Accts. Rec.	Cash. Ore & Metals	Total
1915.....	\$19,965,755	\$430,517	\$568,465	\$1,756,543	\$22,721,281
1914.....	19,630,026	514,809	525,097	1,375,794	22,045,726

Liabilities:

	Capital Stock	Bonds	Loans Unsecured	Current	P. & L. Surplus	Total
1915...	\$14,998,515	\$3,390,000	\$ 664,680	\$3,668,087	\$22,721,281
1914...	14,998,515	2,290,000	\$960,000	1,057,296	2,739,914	22,045,726

Comparative Income Account, years ending June 30:

	Gross Sales.	Oper't'g Expenses.	Int. & Deprec.	Net Income.	Div. Paid.	Prev. Surplus.	P. & L. Surplus.
1915	\$5,058,886	\$8,713,329	\$411,898	\$929,164	\$2,788,922	\$8,668,086
1914	4,504,786	3,882,695	182,520	489,651	\$899,901	3,199,272	2,788,922

Net profits for half year ending Dec. 31, 1915, were \$1,513,180. leaving a surplus of \$962,104.

Dividends:

\$133,630.....	1903	\$270,000.....	1909
339,991.....	1905	248,481.....	1910

		449,955.....	1916 (a)

(a) first half; present rate \$6 per share, payable quarterly.

Properties: include original Granby group at Phoenix in the Boundary district, B. C.; the Hidden Creek mine on Granby bay, Observatory inlet, B. C.; Copper Key and Belcher groups at Belcher mountain, Wash., taken over, 1910, under a working bond and lease; the Oversight group; the Bonanza mine on Bonanza creek; 30 quartz claims on Granby Peninsula; Mamie and Dean mines on the Kasaan Peninsula; the Midas mine at Valdez, and an option on the It mine adjoining the Dean on Prince of Wales Island. Also owns a large interest in the coal mine and coking plant at Crow Nest Pass, and a 100,000-h. p. waterpower plant at Kettle Falls, both together valued at \$2,000,000; a smelter at Grand Forks, operated since 1901, and one at Anyox, blown in 1914.

The Phoenix Mines.

C. M. Campbell supt., Phoenix, B. C.

The Granby or Knob Hill properties at Phoenix, B. C., 43 claims and fractions, 1,050 acres, 15 claims being in the mineralized area, include the Old Ironsides, Knob Hill, Victoria, Gray Eagle, Banner, Tip Top, Triangle, Gold Drop, Curlew, Monarch, Tamarack, Monte, No. 13, and others. Claims form a compact tract of about 8,000x9,000' size, carrying 8,000' of the strike of the mineralized zone. The Phoenix property has 2 distinct sets of orebodies. The largest and longest worked are those of the Knob Hill-Ironsides mines; the other one, one-half mile east, is the Gold Drop. The first named has 3 mines with separate crews and equipment.

Geology: of the district is not simple. Paleozoic rocks, limestones, tuffs and argillites overlie beds of fragmental volcanic rocks with small amounts of limestone. These rocks are intensely altered by contact metamorphism, due to igneous intrusions, and orebodies formed in basin-shaped troughs in the zone of mineralization. They are replacements of limestone by garnet, epidote, quartz-calcite, with magnetite and finely-divided copper pyrite. The footwall is either jasperoid or limestone; the hanging wall is determined by assays.

The Old Ironsides-Knob Hill claims carry the main orebody, the Gold Drop ore deposit being irregular in shape, and of limited size. The main orebody has an approximately N. S. strike, with an eastward dip of 60° at surface and 30° at depth. Ore now being mined at Phoenix yields slightly less than 15 lbs. copper and about 79 cts. in gold and silver per ton. The mine is opened by an immense pit, or glory-hole, 400x1,000' in size,

which, however, is worked out and present extraction is mainly through tunnels. On the Gold Drop only 61,400 tons of ore remain to be extracted, and the Snowshoe, Curlew and Monarch claims are almost worked out. Practically all reserve tonnage is in the Ironsides.

Development: 5 shafts, the more important being the 300' Aetna shaft, 400' No. 2 shaft, and the 485' Victoria shaft. Principal extraction is by tunnels, including the 250' Knob Hill tunnel; 250' No. 1 Gold Drop tunnel; 1,000' No. 3 Gold Drop tunnel; 2,500' No. 2 tunnel; 3,000' No. 3 tunnel, and 1,500' No. 4 tunnel. The ore stoped is milled through chutes to lower levels, the mine having electric haulage on the 200', 300' and 400' levels, with double-tracked tunnels, equipped with 75-h. p. locomotives drawing 10-ton ore cars. Development for 1915 included 16,842' of underground work and 5,416' diamond drilling, or about 1,000' per month, adding 14 cts. per ton to cost of ore mined. Total shipments up to June 30, 1915, have been: above No. 3 tunnel, 5,882,468 tons; Victoria shaft, 3,799,767 tons, and Gold Drop mine, 1,369,600 tons.

Average cost per ton crushed on cars including all development was 85.1 cts. Ore is smelted direct; cost of copper after crediting gold and silver values is slightly more than 13 cts. per lb. The mechanical equipment at the mine is fully described, Volume X.

The 3 main haulage tunnels are each equipped with 150-ton crushers, and bins of 2,000 and 3,000 tons capacity. The main crusher house, at the portal of No. 3 tunnel, has a 30x42" Farrell-Bacon crusher, driven by a 150-h. p. Westinghouse motor, the crusher being capable of breaking masses of nearly a cubic yard in size to chunks not larger than 7 to 8". This crusher was shipped to Anyox, when the properties closed down in August, 1914, following the declaration of war in Europe. A 42" rubber belt conveyor, with capacity of 250 tons hourly, handles the ore. An electric shovel installed in 1915 proved very satisfactory. Operating costs were about 75 cts. per ton crushed in cars; 5 new 10-ton cars with automatic side-dump arrangement being constructed in 1916.

The mine is connected with the smelter at Grand Forks, 24 miles distant, by 2 railways, the Canadian Pacific and the Great Northern. By means of extensive ore bins at the Victoria shaft and the 3 main tunnels a train of 35 thirty-ton cars can be loaded in 25 minutes or less.

Hidden Creek or Anyox Mines.

H. J. C. MacDonald supt., Anyox, B. C.

The Hidden Creek mine is located on Granby (formerly Goose) bay, Observatory inlet, south of and parallel to Portland canal. It is probably the largest copper mine of British Columbia. The 9 claims cover the top and sides of a hill 920' high, enclosed by 2 branches of Hidden creek and 2 miles from Anyox, the smelter site and seaport town of the company.

The ore occurs as a mass of solid sulphides, pyrite and chalcopyrite, or mixed with country rock in shear zones, in crushed and schistose argillite. The rocks are folded and mashed but are part of the cover of the great granite mass forming the Coast range. There are 2 deposits, one 25 to 40' wide, traced 1,400', said to average 6%, the other estimated to be 100' wide and of unknown length. Development by diamond drill holes shows the ore to extend 300' below sea-level, a vertical distance of 1,250' below outcrop.

Development: by tunnels with principal workings on the 750' cross-cut main tunnel, which is about 450' from the surface.

Company also owns the Bonanza group, adjacent to the Hidden Creek mine. No development work was done on this property in 1915.

The Midas Mine.

The Midas mine, 12 claims, 9 in 1 group and 3 in another, in Solomon basin, 790' above tidewater and 6 miles from Valdez bay, was acquired in 1915. Claims show an ore deposit from 25 to 200' feet wide, stripped in 8 places and traceable 1,500' running N. 70° W. and dipping 45° S. W. Ore carries chalcopyrite mixed with pyrite in a slaty gangue.

Development: by a 2,000' crosscut tunnel with 400' upper level and 700' lower level, all in 7% ore. Development made under a \$540,000 bond by the Alaska Syndicate, Sept., 1912, to June, 1913, consisted of 1,700' of workings said to block out 200,000 tons of 7% ore. Ore as a whole is said to average about 6% copper and \$2.40 gold. **Equipment:** includes an aerial tramway, compressor and necessary mine buildings. Shipments will be made as soon as power is secured.

The Mamie, Dean and It mines were under development in 1915. Shipments amounted to 15,000 tons of 1.5% copper ore, with reserves of 130,000 tons, June 30, 1915. For calendar year 1915 the Mamie mine is said to have produced 40,000 tons ore; 70 men reported working in May, 1916, producing 200 tons ore daily.

Ore reserves: estimated, June 30, 1915, exclusive of Midas mine:

	Tons	% Copper
Phoenix Mines	4,232,405
Hidden Creek	9,205,837	2.2
Hidden Creek	8,628,000	0.63
Bonanza	414,775	2.6
Bonanza	489,580	0.7
Mamie and Dean.....	130,000	1.5
Total	23,100,597	

Note: Phoenix mines estimated to give returns of 17 lbs. copper and 40 cts in gold and silver per ton ore. At present rate of production they will be exhausted in about 5 years or less.

Grand Forks Smelter: company's reduction plant at Grand Forks has up-to-date smelting, converting and power plants, with 2,000 acres of land and 68 town lots. Smelter has 4,400 tons daily capacity, being the largest in Canada, and among the largest in the world. Steel storage bins hold 8,000 tons of coke and 13,000 tons of ore. Ore is handled by 4 electric locomotives, each drawing two 2-ton cars, constituting a single charge; the ore being practically self-fluxing, is charged without concentration, or assortment, just as it comes from the mines, with the addition of limestone and fuel.

The 8 blast furnaces are 4x22' in cross-section at the tuyeres. A steel dust chamber, set 22' above the charging floor, is 13' wide, 15' high and 313' long, with a floor of 28 hoppers, having a conveyor underneath for flue dust. Slags now granulated are dewatered, carried on conveying belts to a height of 120' and discharged.

The first-fusion 40% matte is taken in ladles by a 40-ton electric traveling crane to the converter house, which has 3 stands, electrically operated by 25-h. p. motors, with ten 84x126" shells of barrel type. There are 3 mould carriers under each stand and the product is blister copper of 98.5% tenor, containing an average of 18 oz. silver and 4 oz. gold per ton, sent to the Laurel Hill works of the Nichols Copper Co., for electrolytic refining.

The smelter power plant is driven by electricity. Equipment includes 9 small blowers and 2 Connersville Jumbo blowers, with capacity of 100,000

cu. ft. of free air per minute, driven by two 300-h. p. motors. Converter blast is furnished by an Allis-Chalmers double-cylinder air compressor, with capacity to reduce 10,000 cu. ft. of free air per minute to a pressure of 15 lbs. per square inch, driven by a 500-h. p. direct-connected electric motor.

Operations were suspended Aug. 7, 1914, to Dec. 7, 1914.

In March, 1914, the new smelter at Anyox on Observatory inlet was blown in. The plant has 4 furnaces, 52" wide and 30' long, and is the largest pyritic smelter in the world. Daily capacity is from 2,000-2,500 tons. Company has laid out a town, installed water works, electric plant, graded streets, built stores, hospitals, etc.

Recent production: for years ending June 30, except 1916, which is for 9 months ending March 31:

	Ore			Cost per Ton		Lbs. Cu. Tot. per Ton	Copper Lbs.	Silver Oz.	Gold Oz.	Cost Cu. (b)
	Tons (a)	Mng.	Sm.	\$...	\$....					
1916..	\$...	\$....	\$....	28,122,261
1915..	1,098,020	.85	1.19	3.18	23.99	26,638,912	377,881	31,388	10.66	
1914..	1,289,000	.80	1.22	2.73	16.89	23,320,097	435,275	43,882	11.5	
1913..	1,279,869	.75	1.21	2.65	17.68	22,688,614	324,336	47,266	10.6	
1912..	739,519	.77	1.26	2.90	18.01	13,231,121	225,305	33,305	11.1	

(a) In 1914 and 1915 approximately 2% of ore treated was custom ore. (b) after crediting gold and silver.

Note: In 9 months' period ending March 31, 1916, company produced 28,122,261 lbs. copper, of which 15,971,786 lbs. were produced at the Anyox smelter. Anyox mines, from 516,381 tons ore, yielded 105,951 oz. silver and 28,254 oz. gold. Cost of copper produced from Anyox and laid down in New York was 10.36 cts. and from Grand Forks, 13.71 cts. Copper unsold in New York reported as 11,093,318 lbs. Total net income for this period was \$2,373,863, of which all but \$39,157 was net operating profits of the Anyox and Phoenix mines; added to surplus \$1,531,588.

The production cost of 13+ cts at Phoenix will not be reduced materially during the remaining life of the mines, but the cost, 9.72 cts at Anyox, should be lowered. Production, 3,555,411 lbs. copper and 33,622 oz. silver, in March, 1916, will be increased to 4,000,000 lbs. copper monthly. At this rate and with copper selling at 30 cts. per lb and silver at 75 cts. per oz., the company will earn at the rate of \$55 per share annually, or sufficient to write off the entire cost of the new smelter at Anyox, and its mining properties at Hidden Creek. With 15 ct. copper Granby should earn \$2,500,000 per year.

Granby is under efficient, progressive management and its future looks bright.

GRANBY MINING & SMELTING CO. OF MISSOURI MISSOURI (Subsidiary of Amer. Zinc, Lead & Smelting Co.)

Granby, Newton Co., Mo. Inc. in 1864. In June, 1916, net quick assets exceeded \$2,750,000, of which nearly \$1,000,000 was in cash; current liabilities, less than \$300,000. Reported in June that company had declared a dividend of \$2,000,000 in the form of 10-year, 5% bonds, secured by mortgage of its real estate, and the company subject to this mortgage, had been taken over by the Granby Co. of Maine, to be then taken over by the American Zinc, Lead & Smelting Co. Purchase price, \$8,000,000. The \$2,000,000 bond issue has been taken as part payment; and it is proposed to furnish \$2,000,000 additional by an issue of 40,000 shares of common stock of the American Z. L. & Sm. Co., to be offered stockholders at \$50, stock to be underwritten without commission; remaining \$4,000,000 to be

paid for out of earnings. Value and earning capacities of properties based on a 5-ct. spelter market.

Property: owns in fee simple about 30,000 acres of land in the zinc district of southwestern Missouri. For nearly 50 years its revenues have come from royalties paid by lessees operating on these lands. Within the past 3 years it has itself developed a large tonnage of rich ore near Granby. Company has been a dividend payer almost from its inception, and has, out of earnings, acquired 10,000 acres of coal land in Illinois; built a new coal zinc smelter and sulphuric acid plant in East St. Louis; bought and improved a gas zinc smelter at Neodesha, Kansas, and acquired a small lead smelter at Granby. Approximately 75% of the Granby spelter to be produced during balance of 1916 has already been sold on firm contracts, together with a considerable tonnage through 1917, and all its sulphuric acid has been sold up to and through 1920.

GRAND CENTRAL MINING CO.

UTAH

Office: Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah. **Officers:** Jos T. Farrar, pres.; H. L. Holbrook, v. p.; Preston G. Peterson, sec.-treas.; Col. Edwin C. Loose, gen. mgr.; W. D. Loose, Kansas, Inc. Feb. 1902, in Colorado. **Cap.,** \$600,000, increased 1909 from \$250,000; shares \$1 par, nonassessable; issued 500,000. Stock listed on Salt Lake Exchange. Last dividend 2½ cts; total dividends to Jan. 1, 1915, \$1,615,250.

The Grand Central is the deepest mine of the Tintic district. It adjoins the Centennial Eureka and is opened to the 2,600' level, carrying a vein with an orebody 200' feet wide in places and of low average grade, though it is the largest orebody in the Tintic camp. A second ore shoot, 700' west of the old one, and with parallel strike, was opened, 1910, on the 2,000' and 2,100' levels. This ore shoot averages 15 to 20% copper on the 2,380' level and has been opened up on the 1,600' level for a distance of 1,200', showing a width of 50 to 100'. At this point the ore is bunchy, requiring careful sorting. Mine producing, 1915, from the 600' to the 2,300' levels, inclusive.

Equipment: includes hoist, tramway and electric power. Mill to be constructed after the Knight Christensen plant has proved successful.

Production: for 1915 was 9,100 tons of ore. Employs about 35 men. Property and management good.

GRAND GULCH MINING CO.

ARIZONA

Office: 503 McIntyre Bldg., Salt Lake City, Utah. **Officers:** Wm. H. McIntyre, pres.; Frank R. Snow, v. p.; W. P. Jennings, sec.-treas.; preceding officers, Jas. E. Jennings, Wm. C. Jennings, Jos A. Jennings, directors; S. R. Calloway, supt. St. Thomas, Clark Co., Nev. Inc. Sept. 15, 1874, in Utah. **Cap.,** \$750,000; shares \$2.50 par; issued, 600,000. Total assessments to end of 1915 were \$14,400. Dividends: total \$7,195; last dividend 1 ct. per share declared in Dec., 1915. Annual meeting, first Monday in February.

Property: 9 claims, 1 patented, 180 acres, in the Bentley district of Mohave county, Ariz., but more easily accessible from Nevada than from southern or central Arizona, owing to the barrier to access presented by the Grand canon of the Colorado river. Property shows sandstone and limestone carrying an apparently circular zone of copper impregnations, also having copper in the bedding planes. Ores occur as cuprite, melamnite, malachite, azurite and chalcocite, estimated by management to assay 35% copper and 4 oz. silver per ton. **Development:** by a 500' shaft. Mine is 45 miles from St. Thomas, Nev., railroad terminal on the San Pedro railroad. The mine has been in practically continuous operation since 1899.

Equipment: includes a 22-h. p. gasoline hoist, good for 800' depth, and a 2-drill air compressor. There are 9 buildings and a small and antiquated smelter, of no present value. Production, to end of 1909, was 299,154 lbs. fine copper. In 1915 shipments amounted to 824 tons ore running 20% copper. Employs 40 men.

GRAND REEF MINE.**ARIZONA**

R. V. Dey, owner, 28 W. 88th St., New York. **Property:** 14 claims, patented, in the Aravaipa district, Graham Co., Ariz. **Ores:** occur in fissure veins between granite and porphyry with average values of 3½% copper, 24% lead, 12 oz. silver and \$2.30 gold per ton. Developed by 7,500' of workings in which superintendent estimates 175,000 tons of ore blocked out. **Equipment:** includes steam hoist and 7-drill air compressor.

Property worked under lease by Laurel Canyon Mng. Co. in 1915-16 and reported shipping 1-2 cars of concentrates per week to El Paso smelter. Thirty men employed.

GRAND TRAVERSE & ARIZONA MINING CO.**ARIZONA**

Idle since 1910. **Office:** 129 East Front St., Traverse City, Mich. Mine near Cave Creek, Maricopa Co., Ariz. Owns 3 patented claims. Fully described Vol. X, Copper Handbook.

GRANDINA MINING CO.**NEVADA**

Goldfield, Nev. **Officers:** Chas. S. Sprague, pres.; J. K. Turner, v. p.; Ben Gill, sec.-treas.; with P. J. Somers, Jr., and S. A. McCandless, directors. Inc. Nov. 1904, in Ariz. **Cap.,** \$1,500,000; outstanding \$1,468,000; shares \$1 par. Company reported in February, 1916, that a reorganization was soon to be effected, capitalization increased and stock placed upon an assessable basis. Annual meeting, first Tuesday in Nov. Listed on Salt Lake Exchange.

Property: 1 patented claim, 18½ acres, at Goldfield. Company was planning to acquire 20 to 40 acres adjoining ground upon reorganization. Property is bounded on the west by Kewanas, on the east by Blue Bell, and on the south by Spearhead. The Spearhead vein is said to outcrop on Grandina ground, though location of the claims precludes apex litigation. Property has been idle for some time. Little development work has been done to date, but work is to be resumed upon completion of reorganization.

GRANITE COPPER CO.**UTAH**

Beaver, Beaver Co., Utah. A. L. Fotheringham, pres. and mgr.; Jos. McEwen, v. p.; J. F. Tolton, sec.-treas., at last accounts. **Cap.,** \$1,000,000; shares \$1 par. **Property:** in the Mineral range between Milford and Beaver, Utah, has a 2' vein, carrying high-grade silver-lead ore with some copper, opened by a 250' shaft and tunnel. Was developing, 1914.

GRANITE GOLD MINING CO.**ALASKA**

Valdez, Alaska. **Officers:** B. F. Millard, pres. and treas.; W. R. Millard, 1st v. p.; O. S. Larsen, 2nd v. p.; J. W. Gibson, sec.; above, with Nick Carter and Jafet Lindeberg, directors. Inc. 1913, in Alaska, upon purchase from original locators for \$50,000. **Cap.,** \$500,000; shares \$1 par; outstanding 430,000 shares. Annual meeting first Tuesday in October. **Transfer office:** Chilberg Bldg., Seattle, Wash. Listed on New York Curb, Spokane and Seattle Exchanges.

Company claims to have spent \$330,000 to March, 1916, on the property, and to have had a total production of \$277,000. Monthly expenses \$8,000 to \$10,000, with a monthly output of \$20,000; surplus claimed March 1, 1916, \$21,000. Initial dividend, 2 cts. per share, paid April 10, 1916, and 2 cts. paid in May.

Property: 3 claims, 60 acres, unpatented, on the west side of Port

Wells, on the coast between Hobo Bay and Harrison Lagoon, covers 3,000' of a vein of 3-3½' average width, strike N. 60° W., dip 31° N. Country rock consists of interbedded slates, graywackes and argillites cut by large masses of granite. Present development is said to indicate a split in the vein on the 200' level, continuing as two veins below this level. Metallic ore minerals are gold, and the sulphides of iron, zinc, lead and antimony. Ore said to run from \$6 to \$50 with average of \$12 per ton. See U. S. G. S. Bull. 622, pp. 136-138.

Development: 200' incline shaft and tunnels, with 4 levels opened up from 300' to 500' in length. Total underground workings about 3,000'. Two levels are worked through the shaft, the other two through the 900' lower tunnel. Reported in April, vein had been cut on lower tunnel level about 900' from portal, said to give an additional 300' of back.

Equipment: includes 15-h. p. gasoline hoist, 180-h. p. oil-burning engine, 5 gasoline engines of from 7 to 36 h. p., 150-h. p. electric generator, 100-h. p. motor operating an air compressor, 600 cu. ft. capacity, 4,800' transmission line, and a 70-ton concentrator equipped with a 10-stamp Hendy mill, 7' Lane mill, crushers and rolls.

Production: April, 1916, averaged 60 to 70 tons per day, yielding about \$20,000 gross per month.

Reported in June that mill had been closed down, that a mistake had been made in figuring ore reserves and that development work was being done in an attempt to open up ore.

GRANITE GOLD MINING CO.

COLORADO

Officers: 301 Mining Exchange, Colorado Springs, and Victor, Colo.

Officers: C. M. MacNeill, pres.; C. C. Hamlin, v. p., treas. and gen. mgr.; C. B. Garnett, asst. treas., with Michael Finnerty, J. W. Graham, C. L. Tutt, directors. D. L. McCarthy, supt.

Inc. 1905, in Wyoming. **Cap.**, \$1,750,000; shares \$1 par; nonassessable; outstanding \$1,650,000; stock transferred at company's office. Colorado Title & Trust Co., Colorado Springs, registrar. Annual meeting, 4th Monday in April. Stock has been very closely held, but was listed on Colorado Springs Exchange in July, 1915.

Owns all the stock, excepting 3 shares, of the Little Montana Mining Co. Those portions of the Granite Gold property lying within the City of Victor were incorporated as a separate company, the Little Montana Mining Co. Financial statement of this company for 1914 shows: gross income, \$19,845; expense, \$21,241; net loss, \$1,396.

Gross production for 1915: (Granite Gold Mining Co.), \$534,459, with a net production of \$337,705. Financial statement for 9 months ending Dec. 31, 1914, showed an operating profit of \$17,367, but with general expense, \$27,768, and depreciation \$28,055, charged off, there was a net loss of \$38,456. Total production to 1916, approximately \$14,500,000.

Dividends: paid to date, \$286,500. Last dividend paid Nov. 15, 1912, \$16,500.

Property: 11 claims, 40.5 acres, patented, in the Cripple Creek district. In 1914, to avoid apex litigation, the Dead Pine claim, owned by the Raynor Gold Mining Co., was bought for \$87,500. The main production of the company is now coming from this claim. For geology of the Cripple Creek district, see U. S. G. S. Prof. Paper 54.

Development: by shafts with several miles of underground workings. The Dillon shaft is 1,600' deep, the Gold Coin shaft, 1,300' deep. The Roosevelt tunnel will, when completed, drain Granite Gold ground and deeper development will be possible. In March, 1916, an orebody said to be over 450' long, was being developed on the 1,400' level of the Dil-

lon shaft, the ore shoot following the contact of the Little Montana phonolite dike with the granite. There is 550' of unprospected ground between the bottom of the Dillon shaft and the Roosevelt tunnel level. Upper levels of the various properties are operated under lease; lower levels are worked by company.

Equipment: mines are well equipped; a new hoisting plant good for 2,000' is being installed at the Dillon shaft. Employs 75 men.

Production: a heavy tonnage of ore is mined and shipped monthly from the Granite, Dillon, Gold Coin, Monument and Dead Pine mines of the company. Production in Jan., 1916, reported as 3,300 tons, average value \$30 gold per ton.

GRANITE HILL COPPER MINE.

NEVADA

Property: 14 miles N. W. of Reno, Nev., now owned by Nixon-Nevada Mining Co., which see.

GRANITE MINING & MILLING CO.

UTAH

Santaquin, Utah. **Officers:** E. O. Bylund, pres.; Jos. Tietjen, v. p.; Jas. Goodall, sec.; C. A. Linstrom, treas. and supt.; preceding officers, T. B. Heelis, R. J. Armstrong, and Jos. Crook, directors. **Property:** 12 claims, unpatented, near Santaquin, includes the Granite mine, claims show limestone with ore-bearing fissures, carrying replacement deposits of copper and silver-lead ore developed by 1,000' tunnel. Tunnel driven 44' in 1915.

GRANITE TUNNEL CO.

COLORADO

Jacob C. Kirsch, supt., Granite, Chaffee Co., Colo. **Property:** the Yankee Blade mine, shows lead-copper ores in D. C. C. vein, from 2-7' wide, said to assay \$30. Developed by 1,700' tunnel. Operated intermittently.

GRANT CONSOLIDATED COPPER MINING CO. WASHINGTON

Chesaw, Okanogan Co., Wash. Geo. A. McLeod, mgr.; A. D. McPhee, supt., at last accounts. Inc. 1907, in Washington. **Cap.**, \$1,650,000. **Property:** 14 claims, on Copper mountain, near Chesaw, developed by an open cut and tunnel planned to be driven 1,500', cutting 2 strong veins carrying medium-grade chalcopryrite in considerable quantities. Shipments said to have returned about 6% copper and \$3 gold per ton. **Equipment:** includes two 80-h. p. boilers and an air compressor. Letters neither answered nor returned.

GRANT MINE.

NEW YORK

Mine near Carmel, Putnam Co., N. Y. The orebody consists of a complex of arsenical sulphides, carrying copper, quicksilver, gold and iron. The crude ore is estimated to have a gross value of about \$25 per ton, but, on account of its refractory nature, has no present commercial value, and cannot be utilized without special metallurgical treatment. Closed down for several years.

GRASS VALLEY CONSOLIDATED GOLD MINES CO.

CALIFORNIA

Recently incorporated. **Cap.**, \$900,000; shares \$1 par. C. A. Brockington, supt. Owns the Golden Center mine in Nevada county. During the year ending March 1, 1916, 2,200' of development work was done; 7,969 tons of ore crushed: gold recovered \$112,352, and concentrates \$21,638, a total of \$133,991, an average of \$16.81 per ton. Company paid \$58,000 for property; erected plant costing \$35,401; made a profit of \$49,843; and paid \$21,990 dividends.

Company is planning additions to mill and building a cyaniding plant. Reported to have purchased the Allison Ranch mine, south of Grass Valley which has been closed since July, 1902.

GRATIOT MINING CO.**MICHIGAN**

Idle. **Office:** 12 Ashburton Place, Boston, Mass. **Operating office:** Calumet, Mich. **Officers:** Rodolphe L. Agassiz, v. p.; Geo. A. Flagg, sec-treas.; Jas. MacNaughton, gen. mgr.; Walter Hunnewell and Francis L. Higginson, directors. **Inc.** Feb. 16, 1906, in Maine. **Cap.,** \$300,000; shares \$3 par, fully paid. Is controlled, through ownership of 50,100 shares, by the Calumet & Hecla Mining Co. Ended year Dec. 31, 1914, with debit balance of \$400,833.

Property: 600 acres, the N. W. $\frac{1}{4}$ of Sec. 26, N. E. $\frac{1}{4}$ of Sec. 27, S. E. $\frac{1}{4}$ of Sec. 23, and S. E. $\frac{1}{4}$ of Sec. 22, except the N. W. $\frac{1}{4}$ of the N. W. $\frac{1}{4}$, T. 57 N., R. 32 W. Property lies S. and E. of the Seneca and N. and E. of the Mohawk, carrying the Kearsarge amygdaloidal bed under about 175 acres, to a maximum depth of about 2,700'. Extensive drill borings were made before the shafts were started. The Kearsarge bed averages about 12' in width, with strike of N. 42° E., and average dip of 33 to 36° with the horizon, and its copper contents are painfully low.

Development: by two 3-compartment shafts, exact duplicates, sunk at an angle of 36° on the Kearsarge bed. Levels are opened at 100' intervals.

No. 1 shaft, about 1,500' from the Seneca boundary, is 1,900' deep, having a bed up to 18' in maximum width. Drifting has been done on the alternate odd-numbered levels, from the 1st to 9th, inclusive.

No. 2 shaft, 1,475' S. W. of No. 1, and 1,800' N. of Mohawk No. 1, is 1,520' deep, and drifting has been done on the 2nd, 3rd, 5th, and 7th levels, the best showing being on the 5th.

Property is served by a $2\frac{1}{4}$ -mile spur of the Mineral Range railway, built north from the Mohawk mine.

Production: begun July, 1910, was 28,552 tons of rock, yielding 265,869 lbs. fine copper, and in 1911, was 1,347 tons rock, yielding 14,275 lbs. fine copper, or about 9.3 lbs. copper per ton of rock milled. The mine was shut down April 3, 1911. It is obvious that, owing to its comparatively small size and shallow depth, the Gratiot cannot work the Kearsarge bed profitably at the average price of copper, except on a very large scale, and it could be operated much more advantageously in connection with the Seneca than alone.

GRAY COPPER MINING CO., LTD.**IDAHO**

Osburn, Shoshone Co., Idaho. E. F. Hall, pres.; W. H. Herrick, sec. and mgr. **Cap.,** \$375,000; shares 25 cts. par. **Property:** 7 claims, 2 very hard miles from a railroad, on McFarren gulch, 12 miles from Osburn, shows a vein of 6 to 20' surface width, developed by a combination cross-cut and drift tunnel, showing mainly gray copper ore, said to average 17% copper, 20 oz. silver and \$10 gold per ton. No recent returns secured. Probably idle.

GREAT BRAS D'OR MINING CO.**NOVA SCOTIA**

Baddeck, Victoria Co., N. S. **Mine office:** Middle River, Victoria Co., N. S. D. J. Patriquin, mgr. Operates a gold mine which during year ending Sept. 30, 1914, produced 775 tons ore, yielding 262 oz. gold.

GREAT BRITAIN GROUP.**ALASKA**

Owned by a Vancouver and Victoria syndicate. **Property:** at Whalebone cove, on the western shore of South Valdez island, Alaska, comprises 4 claims, showing bornite, tetrahedrite and chalcocite ore, occurring in the contact between limestone and altered lime. **Developed:** by 3 tunnels, showing 4 to 12% copper ore. Ore blocked out estimated at 1,800 tons by F. J. Crossland. Shipments of 700 to 800 tons have been made to the Tacoma smelter, said to average 3% copper. A 500-ton bunker was

being erected on the beach for loading shipments on vessels. Probably idle. No returns secured.

GREAT COPPER KING MINING CO.

UTAH

Inc. Aug., 1904, in Utah. **Cap.**, \$50,000; shares 10 cts. par; issued, \$47,500, assessable; last assessment 1/10 ct. delinquent March 7, 1914. **Lands:** 10 claims, unpatented, including 4 claims, 1 fractional, held under bond and lease, near the mouth of Little Cottonwood canyon, 7 miles from Alta, Salt Lake Co., Utah. Mine has shallow shafts and a 330' tunnel, with about 800' of workings, showing auriferous and argentiferous copper and lead ores. Ore occurs in fissure veins as contact deposit in granite and quartzite.

Samples taken from main tunnel on 300' level said to assay from 19-33% copper. J. E. Smith, a director, is developing property under contract in 1916.

GREAT DIVIDE MINES CO.

UTAH

Inactive. **Office:** 422 McCornick Bldg., Salt Lake City, Utah. **Mine Office:** Lincoln, Tooele Co., Utah. **Officers:** Henry A. McCornick, pres.; Walter A. Cooke, v. p. and gen. mgr.; Jos. H. Hurd, sec.; Rodney T. Badger, treas.; John B. Taylor, supt. Inc. Aug. 15, 1903, in Utah. **Cap.**, \$2,000,000; shares \$5 par, nonassessable. Company controls Western Mining & Milling Co. and Homestead Tunnel & Copper Co.

Property: 108 claims, mainly patented, 1,735 acres, 600 considered as well mineralized, with 160 acres mill and smelter sites, lying on the Tooele side of the Oquirrh mountains and on the summit of the range, west of the holdings of the Utah Consolidated. Property shows Cambrian quartzite, monzonite-porphry and altered limestone, with a number of fissure veins and contact deposits between limestone and quartzite. Claims cover 11,600' on the westerly course of the mineralized limestone beds of Bingham. This tract is 2 1/6 miles from E. to W. and 10,800' N.-S., and contains the apexes of many ore-bearing fissures, and the westerly extensions of the ore-bearing limestone bed worked in the Utah Consolidated, Bingham, New Haven, Utah, Apex and Yampa mines.

Development: includes the 400' Homestake tunnel in Pine Canyon; 525' North tunnel at 6,600' elevation, and the 2,457' Spring tunnel. These tunnels are prospect work only, but ore is cut in the last named at 1,050' in, and shows a 5' width for 40' along the drift and in a 25' raise. A vertical E. W. fissure 100' wide is also cut at 2,250' from the portal and shows kidneys and stringers of silver-lead ore.

Equipment: includes a 35-h. p. electric plant, with a 1-drill Ingersoll air compressor, and there are 10 buildings, including a small power house, 2 smithies, a bunk house, stable and dwellings. Electric current is taken from the Telluride Power Co., over this company's private line from the sub-station at Bingham. Property considered promising.

GREAT EASTERN GROUP.

NEW MEXICO

Santa Rita, Grant Co., N. M. Al. Owen, owner. **Property:** 8 claims, 160 acres, adjoining Chino Copper Co.'s lands on the east side of the Santa Rita basin. The S. W. side of the group shows a quartzite capping and iron gossan, with limestone covering porphyry over other parts of the claim. Veins with a N. E. course outcrop and show small percentages of copper. Developed by shallow shafts. Owner was preparing to drill property in 200' blocks, at last accounts.

GREAT EASTERN MINING CO., LTD.

IDAHO

Wallace, Idaho. **Officers:** John Carlson, pres.; Edwin Erickson, v. p.; John C. Furst, sec.-treas. John Carlson, Chas. Solberg and John C. Furst,

directors. **Inc.** Sept. 19, 1900, in Idaho. **Cap.**, \$1,000,000; outstanding \$800,000; shares \$1 par. Annual meeting in April.

Property: the Great Eastern group, 14 claims, patented in Lelande mining district, 4½ miles N. E. of Wallace, said to show silver-lead-zinc ore in fissure veins. **Development:** by shafts and tunnels, longest tunnel 3,000'. Claims are still in the development stage, and have been for a number of years. Management states that \$6,000 was spent in 1915 on development work. Property is easily accessible to Northern Pacific and Union Pacific (O.-W.) railroads.

GREAT FALLS MINE.

MARYLAND

Formerly called the Hill-Townsend Gold Mine, in Montgomery Co., Md. In 1914 the old workings were cleaned out, the shaft retimbered, and new drifts run. The 25-ton tube mill was only used to make tests of ore mined. Small shipments were made to the smelter and results said to have been satisfactory.

GREAT NORTHERN COPPER CO.

MINNESOTA

Idle since 1911. Was to be reorganized in 1914, but no recent information has been received. **Office:** 504 Globe Bldg., Minneapolis, Minn. Mine at Hinckley, Pine Co., Minn. Fully described Vol. XI, Copper Handbook.

GREAT NORTHERN COPPER CO.

MONTANA

Owns the Great Northern mine, 1 mile north of Tava, Flathead Co., Mont. **Developed:** by several tunnels, 200 to 500' long, on the strike of the vein. **Ore:** principally gold and copper.

GREAT NORTHERN COPPER CO.

NEWFOUNDLAND

Idle. **Office:** Commonwealth Bldg., Pittsburg, Pa. **Mine office:** Twillingate, Newfoundland. **Officers:** Obadiah Hodder, pres. and gen. mgr.; W. S. Tannehill, v. p.; Roselle C. Burns, sec.; Geo. B. Klein, treas.; preceding officers, Jeremiah Doody, Titus Hodder, Robt. M. Ewing and Chas. Hardenberg, directors. Wm. Brown Sterrett, chemist. **Inc.** 1905. **Cap.**, \$100,000; shares \$1 par. Company was combined with Notre Dame Copper Co. and Hodder Supply Co. of Pittsburg, in 1912.

Lands: 320 acres, freehold, on Twillingate, North Island, on the eastern coast of Newfoundland, in the vicinity of the Tilt Cove mine. Company claims a vein 163' wide, uncovered for one-half mile and tested to depth of 200', carrying chalcopryite assaying 2 to 27.4% copper, and company claimed, early in 1909, that ore then being mined averaged 12% copper, which claim is too high for credence. Ores of this district, as developed elsewhere, average about 4% copper, 50% sulphur and \$1.50 gold per ton, and are somewhat lumpy, with sphalerite frequently found in connection with the chalcopryite. Mine is worked opencast.

Equipment: includes steam power and a hoist, with a tram line and 2,000-ton ore bins on the sea.

GREAT NORTHERN DEVELOPMENT CO.

ALASKA

Office: 2 Rector St., New York. **Operating office:** Valdez, Alaska. **Mine and works office:** Phillips, Alaska. **Officers:** Jas. Phillips, Jr., pres.; E. F. Gray, v. p.; Walter M. Briggs, sec.-treas.; Edwin F. Gray, gen mgr.; preceding officers, J. C. Fairchild, H. F. Knoblauch and H. I. Gaskill, directors. **Inc.** 1906, in Maine. **Cap.**, \$1,000,000; shares \$10 par, nonassessable; issued, 70,100. Is a holding company. Annual meeting, first Tuesday in November. Petley Morse & Co., auditors, 43 Exchange Place, New York.

Property: a solid tract of about 130 claims, in process of patenting, about 2,600 acres, immediately south of the camp, which is on the south bank of the Kotsina river, below the mouth of Roaring creek, near the Copper River railroad, and about 60 miles from the Bonanza mine of the

Kennecott Co. Lands apparently lie in the greenstone formation. **Development:** by 600' adit with 20 crosscuts. Ore said to average 12 to 17% copper with some gold. Company has a 50-mile telephone line to Ton-sina, the nearest rail station. Company did 5,000' of new underground development work in 1912. Only assessment work done in recent years.

GREAT OHIO COPPER MINE.

BRITISH COLUMBIA

Sargent & Munro, owners, New Hazelton, B. C. **Property:** adjoins the Butte Rocher de Boule mine and is operated by Jennings and Trimble, under lease and bond. Ore occurs in a well defined fissure vein in granodiorite, traceable at surface for 700'. Main orebody, 4' wide, gave assays of 22.5% lead, 9.5% copper, 134 oz. silver, 8.6% zinc and 0.04 oz. gold. **Developed:** by 355' tunnel, open cuts and drifts. Ore occurrence and conditions are similar to those in the Rocher de Boule, but further development necessary to determine value of mine.

GREAT WESTERN CONSOLIDATED MINING CO.

NEVADA

In 1915, control of this company was acquired by the Greenwater Copper Mines & Smelter Co. **Property:** 11 unpatented claims, about 300 acres, at Tonopah. **Development:** by a 2-compartment shaft, 1,150' deep, which enters one of the ore-bearing formations at about 1,000'. Considerable exploration work was done on the 860' level, but it is said to have been all in cap rock and commercial ore was not found. The new management intends to explore the ground thoroughly and at last accounts was crosscutting on the 1,130' level.

GREAT WESTERN COPPER CO.

ARIZONA

Courtland, Cochise Co., Ariz. Wm. J. Young, Jr., pres.; Edw. A. Young, sec.; C. H. Young, treas., all of Clinton, Iowa; W. G. McBride, gen. supt. Inc. Oct. 22, 1900, in Arizona. Cap., \$1,000,000; shares \$10 par, nonassessable; fully issued.

Property: several copper mines in the Courtland district acquired about 14 years ago, and the Mammoth-Collins mine near Mammoth, Pinal county, taken under bond in 1913. The Courtland property embraces 23 claims, patented, 407 acres in the Turquoise, or Courtland district, showing limestones intruded and altered by monzonite and quartz monzonite porphyry. The Humboldt mine first opened, yielded high-grade ore from the surface to a depth of 200', where it played out. In 1908, workings on the Mary claim developed a payable orebody and the Mame mine opened up shipping ore in 1909. At the present time there are 3 orebodies which show rusty capping over a leached zone, followed by oxidized ores, succeeded by secondary sulphides, the 2 forms grading irregularly into each other. The mines are opened by 25,000' of workings, including 3 vertical shafts, the Mary of 310', Mame of 300', Monarch 430' and Humboldt, 200'.

Equipment: includes a 300-h. p. electric plant driven by steam power and having two 150-k. w. generators, a 500' 8-drill air compressor, 2 electric hoists, electric pump, etc.

Production: begun Aug., 1908, has continued intermittently ever since. In 1913 company shipped 26,178 tons, one-half of which came from the Mame mine. In 1914, the ores yielded 898,110 lbs. fine copper and in 1915 the production was 1,022,534 lbs. copper from ores that averaged nearly 6.5%.

It is generally understood that the Courtland properties have proven disappointing, the limits of the orebodies being known and the exploration work unsuccessful. The company has, however, acquired the Mammoth mine at Schultz, near Mammoth, a well-known gold mine. Claims show strong quartz veins cutting porphyritic granite and schist and carrying pyritic gold ores with abundant wulfenite. On the 700', the bottom level,

the vein becomes copper-bearing and shows a shoot $2\frac{1}{2}$ ' wide of 4 to 6% copper ore with \$9 gold per ton. The company has installed new machinery at the mine, deepened the shaft to 1,100' and opened up the vein on several levels. Company suspended operations in 1914 and mines worked by lessees since then.

GREAT WESTERN GOLD & COPPER CO.**UTAH**

Merged 1916 with Mountain Lake Mining Co. and Thor Mining Co. under title of Great Western Mines Co., which see.

GREAT WESTERN GOLD & SILVER CO.**ARIZONA**

Idle. Dragoon, Cochise Co., Ariz. Inc. about June, 1908. Lands, in the Dragoon mountains, show lead and copper ores with gold-silver values.

GREAT WESTERN MINE.**COLORADO**

Armstrong and Vanetta, lessees. Mine near Lake George, Park Co., Colo. **Property:** shows vein with gold-copper ore, developed by 218' vertical shaft, 800' of crosscuts and drifts. Equipped with steam power and air compressor. Development work continues and small shipments of sulphide ore were made, 1913 and 1914.

GREAT WESTERN MINES CO.**UTAH**

Office: Knight Bldg., Provo, Utah. **Officers:** Jesse Knight, Pres.; J. W. Knight, v. p.; W. L. Mangum, sec.-treas., with Jas. H. Moyle, W. I. Snyder, R. A. Brighton and K. N. Jordan, directors.

Inc. 1916, in Utah. **Cap.**, \$750,000; shares 10c par; outstanding in May, 1916, 1,270,000 shares. Listed on Salt Lake City Exchange. Debts reported, \$6,036. Company is a merger of the Great Western Gold & Silver Co., Mountain Lake Mining Co., and the Thor Mining Co., all described in Vol. XI, Copper Handbook.

Property: 98 claims, in the Big Cottonwood and Snake Creek districts, in Salt Lake and Wasatch counties. **Ore:** gold, silver, copper, and lead, mainly in contact deposits; no estimate of ore in sight. **Development:** 500' of shafts, 8,500' of tunnels, 350' winzes and raises, and 2,000' of crosscuts. Reported in May 1916 that operations would start in the near future. Ten cars of copper ore said to have been shipped from the property. No special equipment. Company has a transportation agreement with the Snake Creek company for use of the 14,000' tunnel.

GREAT WESTERN MINING CO.**IDAHO**

Burke, Shoshone Co., Idaho. **Officers:** W. W. Russell, pres. and mgr.; Victor Huot, v. p.; G. T. Edmiston, sec.-treas.; preceding officers, F. P. Robinson, John J. Jenkins, R. R. Carnes and C. H. Kratzer, directors.

Property: 7 claims, patented, 3 miles from Burke, show vein traced for about 1,200' by trenching, carrying copper and lead ore. **Development:** tunnels of 1,270' and 900' and a 207' shaft. Work was begun Aug. 12, 1904. A raise being driven, 1914, reported to have opened up a 12' orebody. Assays average 7% lead, 1.54% copper and 0.4 oz. gold. **Equipment:** includes hoist and small Rand air compressor, driven by a 6-h. p. motor.

GREENE CANANEA COPPER CO.**MEXICO**

Office: 42 Broadway, New York. **Officers:** Thos. F. Cole, pres.; John D. Ryan, v. p.; Jos. W. Allen, treas. and sec.; W. S. Harper, asst. treas.; H. B. Paull, aud.; Myron M. Parker, Philip L. Foster, Chester A. Congdon, Jas. McLean, Wm. E. Corey and John D. Ryan, Thos. F. Cole, Jos. B. Cotton, and Jos. W. Harriman, directors.

Inc. Dec. 26, 1906, in Minnesota. **Cap.** \$60,000,000; shares \$100 par; issued, 48,801,050. New York Trust Co. and Old Colony Trust Co., Boston, transfer agents; Bankers Trust Co., New York, and State Street Trust Co., Boston, registrars. Shares listed on the New York and Boston Stock Exchanges.

The Greene Cananea is a securities holding company only, but it is practically the only one in which the public now own shares. The relations of the company with its subsidiaries is as follows: Green Cananea Copper Co. controls, by stock ownership, the Greene Cons. Copper Co., a West Virginia corporation, and the San Pedro Copper Co., S. A., a Mexican corporation. The Greene Cons. Copper Co. owns nothing but the entire capital stock of the Cananea Cons. Copper Co., S. A., Mexico. The Cananea Cons. Copper Co., S. A., and the San Pedro Copper Co., S. A., own, jointly, the property formerly held by the Indiana-Sonora Copper & Mining Co. The company also owns the Superior Bonanza Mining Co. and through this, the Mexican operating company, the Bonanza Mining Co., S. A. The subsidiary corporations named are listed and described elsewhere in this volume, so far as organization, finances and officers are concerned, but the physical properties are described here because the properties are operated together and no description would be complete, or easily understandable, if the properties were described separately. The Cananea Duluth, Cananea Central Copper Co., America Mining, Cananea Development, Sierra de Cobre Mining and Indiana Sonora companies, are all dissolved.

The Greene Cananea Copper Co. was organized for the purpose of acquiring the outstanding capital stock of Greene Cons. Copper Co. and Cananea Central Copper Co. To that end there was authorized to be issued 2,500,000 full paid shares of the aggregate par value of \$50,000,000.

The Greene Cananea exchanged its shares for the stock of the two subsidiary corporations on the basis of $1\frac{1}{2}$ shares for each share of Greene Consolidated, and $1\frac{3}{4}$ shares for each share of Cananea Central. By this transaction the corporation has become the owner of 961,398 shares out of 1,000,000 outstanding shares of Greene Cons. Co.'s stock and has acquired all of the 600,000 full paid shares outstanding of the Cananea Central stock. The privilege of exchanging the balance of the Greene Cons. Copper Co.'s stock not owned by the Greene Cananea Copper Co., is still open, the exchange basis being $\frac{1}{3}$ of a share of Greene Cananea stock, par value \$100. for each share of Greene Cons. Copper Co.'s stock, par value \$10, and stock is reserved for such exchange.

On July 18, 1913, par value of the shares was changed from \$20 to \$100 per share. All shares of \$20 par value have been exchanged for shares of \$100 par value, with exception of 6,931 shares, so that there are now issued and outstanding: 486,851 shares, \$100 par; 6,931 shares, \$20 par; 191.8 shares, \$100 par. the latter represented by fractional scrip which was issued when par value of shares was changed and which scrip is not entitled to dividends but, which is exchangeable in aggregates of \$100 for full shares, making a total outstanding capitalization of \$48,842,900.

Dividends:

	Rate	Shares	Amount
1916 (a).....	\$4.00	\$100	\$1,953,534
1915.....	0.00	100
1914.....	2.00	100	972,645
1913.....	1.25	100	1,093,143
1912.....	0.75	20	1,819,877

(a) includes dividend paid May 29th. Present rate is \$8 per share per annum.

Income for 1915 was \$550,571; all from dividends of subsidiaries; expenses totaled \$44,532.

Cananea is a community of 16,000 inhabitants, located 40 miles south of the international boundary line, on a branch railway of the Southern Pacific Lines of Mexico.

The ores from all of the mines of the various companies are treated at the works of the Cananea Cons. Copper Co., S. A., the principal Mexican corporation, producing blister copper.

The following description covers all of the subsidiary companies of the Greene Cananea Copper Co.:

Property: mineral lands held under title from the Mexican government amount to 14,062 hectares, or approximately 34,738 acres. The surface lands owned by the company comprise 130,414 hectares, or approximately 322,123 acres. All of the mines, works, offices, warehouses, stores, etc., of the company are located on its own land and in addition the company owns valuable residence properties in Cananea, which are occupied by its local officials and employees.

Geology: the producing mines of the company are situated in the Cananea mountains, which rise from the headwater valleys of the San Pedro and Sonora rivers in northern Sonora. The mines are distributed along a mineral belt, or series of belts, about 6 miles long, in a N. W.-S. E. direction, and about 2 miles wide. The oldest geological formation of the Cananea mountains is pre-Cambrian granite, which is overlaid by Cambrian quartzite, in turn overlaid by Cambrian limestone. Breaking through these rocks, and covering much of the mineral belt, is a series of eruptives of Tertiary age, in which 12 different rocks may be recognized, one, a bedded tuff, the others massive. Three main classes of ore deposits may be recognized: (1) Deposits containing secondary chalcocite together with iron pyrite either massive or disseminated along shear zones in diorite porphyry; (2) Contact deposits containing chalcopyrite associated with iron pyrites and some zinc blende in a matrix of altered limestone; (3) Disseminated chalcopyrite associated with zinc blende in a diorite porphyry breccia.

The principal producing mines of the Cananea property are the Cobre Grande, Kirk, Veta Grande, Oversight, Capote, Chivatera, Sierra de Cobre, Eureka, Elisa, Henrietta and Puertecitos mines. Also owns the Cananea Duluth and American mines. The Henrietta and Cobre Grande mines were idle in 1915.

The **Cobre Grande** mine was the original mine of the Cananea Consolidated Copper Co. Idle for some years; has been worked for ore to be used in the converters. The ore occurs in a strong and wide vein traversing both altered limestones and igneous rocks.

The **Kirk** mine is situated in an extensive area of highly-altered limestone capped with diorite porphyry and cut in places by small, irregular dikes and intrusions of the same material. The ore is not adapted to concentration and it is necessary to hand-pick it as mined. The sorted ore carries a desirable high percentage of lime and iron.

The great mines of Cananea are the **Veta Grande**, **Oversight** and **Capote**, which have had large bodies of high-grade ore and now have large bodies of direct smelting ore and also contain great deposits of concentrating ore. This ore and the associated first-class ore contains copper in chalcocite, disseminated through diorite porphyry in broad shear zones.

The Capote mine differs from the Veta Grande and Oversight in that the ore occurs not only disseminated in diorite porphyry but also in the underlying granite. There are 3 principal ore shoots connected by continuous ore on the various levels. The ore in the upper levels is chiefly chalcocite, but the new shoot now being developed, consists of massive pyrite with primary chalcopyrite and bornite in granite. This mine has attained a depth of 1,050', and has ore on each level from the 1st to the 10th. The Capote mine yields both concentrating and direct smelting ores. A new 5-compartment shaft has just been completed to the 12th level to provide an outlet for the new orebody on the lower levels,

Much of the ore is lean pyrite, a mass on the 5th level, 220' long with a maximum width of 100', carries over 2½% copper, but there is much leaner ore in the mine which is unprofitable at present.

The **Chivatera** has a large body of oxidized ore containing about 2% copper, but averages 12-15 oz. silver and some gold. As the orebody now stands it contains several years reserves on the basis of 150-200 tons daily production, and there is a considerable territory lying ahead of present developments that gives promise of important development.

The **Sierra de Cobre** property was acquired by purchase from the Phelps-Dodge interest several years ago, and since its acquisition has proved to be one of the largest and most profitably productive mines of the Greene Cananea Copper Co.

The ore from this mine occurs in limestone. Fissures extending out from the "Eureka" fault have acted as channels for mineralizing solutions, making ore along the veins and for a considerable distance into the walls, replacing the limestone by pyrite and chalcopyrite along the bedding planes. There appear to be notable bodies of heavy sulphides on and below the level of the Combination tunnel which passes through this property to the Elisa mine, and these are now being developed with very satisfactory results. The Sierra de Cobre property also has an extensive area of undeveloped ground lying in the limestone areas, along which smelting ore has been found in the Kirk mine and elsewhere.

The Elisa mine contains a number of lenses of ore lying approximately parallel to a nearly vertical fault between limestone and the diorite porphyry. These lenses occur in the limestone at the fault and back of it for a distance of 150', along a zone some 1,500' in length. The ore consists of a garnet matrix containing chalcopyrite and iron pyrites. It is a very desirable ore for the smelter, being more than self-fluxing, containing about 20% of lime in addition to the iron. Recent developments in the Elisa mine have been exceedingly satisfactory and a large amount of first-class ore has been opened up on the deeper levels. The ore from this mine is now delivered through the Combination tunnel to bins at the Capote mine.

The **Henrietta** is a small mine whose ore occurs on a contact between diorite porphyry and quartz porphyry. The orebodies are not large and the ore is silicious. New development work in the vicinity of Henrietta has not yet shown workable orebodies.

The **Puertecitos** mine and the town of that name are located at the N. W. end of the mineral belt and at the terminus of the narrow-gauge railroad of the company. The Puertecitos mine ore deposit has a great outcrop of limestone altered by contact metamorphic action to lime-iron-garnet rock and containing carbonates of copper and some chalcopyrite and bornite. Large areas of this outcrop contain enough copper to warrant mining, which is carried on by means of large quarries. The ore as mined is not sufficiently rich to be sent direct to the smelter but has to be broken and hand-sorted, yielding about 4 tons of waste material to each ton of ore.

Recently a large amount of underground development work has been done at Puertecitos with highly satisfactory results, the ore being fit for direct smelting; the mine is developed sufficiently to yield 450 tons a day if needed.

The **Elenita** mine, one of the earliest producers of the camp, located southwest of Puertecitos, has been reopened with a view to again putting it in the producing class. The ore from this mine is similar to that of Puertecitos.

The Cananea Duluth mine has an orebody about 1,200' long with a maximum width of 200'. This orebody is a neck of diorite intruded in bedded tuffs. The intrusion is shattered, altered and for 200 to 300' below the surface is impregnated throughout with pyrite and copper minerals. On the 600', the lowest level, the central portion is not commercial; the values being concentrated around the border of this long canoe-shaped orebody. The ore carries good silver and gold values, with about 2% copper. Practically all of the product of this mine is concentrated before smelting.

The American mine, idle since 1907, produced only such ore as was obtained through development work. Not fully developed, though there are sufficient indications of ore occurrences to warrant a resumption of development operations. Mine has a 3-compartment shaft to the 100' level and ore bins of 900 tons capacity.

Development: total development work since the organization of the company, Dec., 1906 to 1916, is 453,991', which does not include 279,200' done under previous management. Development work done in 1915 amounted to 17,870', compared with 31,859' in 1914 and has kept well ahead of mining.

Equipment: power is delivered from a central power plant located at the smelter, and electrical power is used exclusively except for the steam pumping plant at Ojo de Agua. The power house, also containing the boiler plant, contains three 1,500-kw. horizontal Curtiss turbines, delivering current to the switchboard at 2,300 volts. The entire electrical equipment of turbines and engines has a capacity of 5,850 kw. alternating current and 500 kw. of direct current. Electrical energy is transmitted to various parts of the camp at from 2,300 to 11,000 volts. The furnace blast is supplied by 7 Curtiss engines and 1 piston blower, having a combined capacity of 176,000 cu. ft. of free air per minute. The blast is conveyed to the furnace through a pipe 6' in diameter. Converter blast is supplied by 5 blowing engines having a total piston displacement of 55,000 cu. ft. of free air per minute, and is conveyed to the converters through two 30" pipes. In the power house there is also one 6,000-cu. ft. capacity Ingersoll-Rand compound condensing air compressor, furnishing air to the mines for drilling and other purposes; also one 1,200-cu. ft. Ingersoll-Rand compressor, used to furnish air for ramming converter lining and for sundry pneumatic tools around the works.

The boiler has 11 boilers, with a total capacity of 4,260 b. h. p. Crude oil, imported free from the United States, under a Federal concession, is used as fuel. The waste-heat boiler plant nearby consists of 8 water-tube boilers having a combined nominal capacity of 2,450 b. h. p., heated by the waste gases of 2 reverberatory furnaces. In connection with this waste-heat plant there is a battery of 4 Green economizers, consisting of 288 tubes each. All boilers are equipped with Foster superheaters. The feed water is carefully measured after a simple treatment for the removal of scale-forming material, and is fed to the boilers by means of electrically-operated plunger pumps. The power house is equipped with 2 counter-current barometric condensers, each having a separate water pump and separate dry air pump. All engines are operated condensing excepting those whose exhaust is used in heaters.

The principal water supply of the company comes from Ojo de Agua, 9 miles from the town, where a pumping plant, with water-tube boilers, using crude oil as fuel, runs a Reidler high-duty compound condensing engine delivering 1,500,000 gals. of water per day against a pressure of 967'. A 10" main connects the pumping plant with a 600,000 gal. tank located on a hill near the concentrators. The Ojo de Agua water is used exclu-

sively for domestic purposes and for feed water for the boilers and is delivered under substantial working pressure. A very well equipped fire department, with a complete system of mains to pressure tanks, is maintained. Water from the mines is delivered to the concentrator through wooden pipes and is there used in milling operations.

At the Sierra de Cobre mine, in the Capote basin, there is an Ingersoll-Rand air compressor having a capacity of 2,500 cu. ft. of free air per minute, which is directly connected to a 2,300-volt A. C. motor. This machine is used to boost the pressure in the mains in the outlying districts. Fuel oil is stored in 3 main tanks with a capacity of 10,000 bbls. each.

The main shops near the smelter include machine, boiler, blacksmith, foundry, pattern and electric shops, all well-equipped, up-to-date, and served by both standard and narrow-gauge tracks. A large warehouse, for the company's supplies, and a framing mill, in which timbers for all of the mines are framed, are located on the southern slag dump.

The concentrating department has a capacity of 2,800 tons per day, and consists of a crushing plant, sampling mill, 2 concentrating mills, a settling system and a slime plant. The concentrator is now being re-modeled and oil flotation system added.

The crushing plant has storage bins holding 2,000 tons, ore from the mines being delivered in Ingoldsby side-dump cars of 30 tons capacity each. From the storage bins ore is fed to a 30" conveying belt by automatic feeder. This belt delivers the ore to 2 grizzlies, inclined at 48° with 1" openings. The screened ore falls on an 18" conveyor, transferring it to a 24" conveyor, taking it to the mill bins of 4,800 tons capacity.

The oversize from the grizzly goes to two 36" picking belts, where first-class ore and also pieces of wood and steel are sorted out. The ore left on belt is then delivered to crushing bins and fed by automatic plunger feed to five 10x20" Blake crushers of the Cananea type, which reduce the ore to 1½" size. This crushed ore passes to 16x36" rolls, breaking to pieces that which passes a 2" ring. This product is delivered to a 24" conveyor, which delivers to the mill bins, together with the grizzly undersize. The crushing plant is electrically driven and has a capacity of 2,000 tons per 10 hours. An automatic sampler at the head of the 24" conveyor cuts one-fortieth of the total ore, which is ground and automatically cut to sample. All rejects drop to elevator and return by conveyor to mill bins.

No. 1 mill consists of 2 sections of 600 tons capacity each. No. 2 mill is a steel structure, containing 2 sections of 800 tons capacity each. The mills are supplemented by a settling system and a slime plant containing 100 vanners. The 2 mills have practically the same flow sheet, although in Mill No. 1 fine grinding is carried further in rolls.

The ore from the 4,800-ton storage bins is fed by automatic feeders into each section. Concentration begins on all material finer than 2" ring. The course of the ore in all 4 sections is as follows:

The ore is delivered to two 5/8" trommels, the undersize passing to two 3/8" trommels. The undersize of the latter goes to two 3/16" trommels and the undersize from these to four 2 mm. trommels. The various coarse sizes from screenings are passed to Hartz jigs, and all tailings from jigs coarser than 3/8" ring are passed through rolls, elevated and returned to screen, so that no material coarser than 3/8" goes to the Hardinge mills. The coarser material is concentrated on 20 concrete Hartz jigs in each section. The jig tailings finer than 3/8" pass to 3 Hardinge mills and are ground to about 2 mm. The discharge from the Hardinge mills is deslimed in a drag belt classifier, the coarser sands are classified, the resulting product being treated on 30 tables. The very fine sands and slimes are treated on 36 vanners.

Tailings from tables and vanners are settled out and sent to the slime plant for further treatment.

The tailings, containing a gross value of nearly \$2 per ton in copper, silver and gold, are impounded in a coarse tailings dam, the slime settling above the dam. The clear water is pumped back for re-use in the mills but is first passed through precipitating tanks, where the dissolved copper is precipitated and recovered. The concentrates are delivered in narrow-gauge cars to the spreading beds.

All ores, concentrates, fluxes and secondaries for blast-furnace treatment are weighed and delivered to the main receiving bins by the company's narrow-gauge railroad. The bin system consists of 11 wooden and 8 steel bins, having a combined capacity of about 3,000 tons. From the receiving bins all material is discharged on a conveyor belt, which passes through the sample mill on its way to the spreading bed plant. In the sample mill the ore is crushed to about 4" through a 24x36" Farrel crusher. One-tenth of the ore stream is cut out and passes through a 10x20" crusher of the Cananea type; one-tenth of this is cut and passed through a Gates gyratory crusher, then one-fifth is cut and passed through a set of 17x27" rolls, when the final sample is cut out, amounting to about one-four-thousandth of the original material. This final sample is quartered down, dried and prepared for the laboratory. The reject from the sample mill is elevated back to the main conveyor system. All material is sampled in this manner with the exception of concentrates, which are hand sampled.

The ore after passing the sampling mill is conveyed to the spreading beds and distributed evenly over the entire length of the bed by an overhead belt which is automatically tripped. The bedding plant is of steel construction, being 453' long, and 198' wide, and contains 3 ore beds of about 9,000 tons capacity each. The composition of each bed is known in advance and in this way an even mixture is assured to the furnaces. When a bed is completed it is reclaimed by a machine which advances into the face of the pile and discharges on to a conveyor which delivers the mixed charge into bins over the blast furnaces, each bin having a capacity of 75 tons. The reclaiming machine has a capacity of about 175 tons per hour. The charge is dropped by gravity from the 75-ton bins above the furnaces into measuring hoppers holding 2,000 lbs. There are 5 such hoppers to each furnace, and these are discharged either directly into the furnace or on to the feed floor by means of arc gates.

The blast furnace building contains 8 blast furnaces, 48x210" at the tuyeres. There are 4 settlers, 10' 5"x19' inside of brick lining, each settler serving 2 furnaces. The slag overflows continuously into self-dumping slag cars of 45-cu. ft. capacity. Trains of 6 to 8 cars are hauled to the dump by electric locomotives. The matte is tapped from the settlers into 66-cu. ft. cast-steel ladles and transferred to the converters by electric cranes.

The gases from the furnaces are discharged into a steel balloon flue, thence through 2 cross-flues and 2 goose-necks into the main brick dust chamber. From here the gases pass through a flue to another chamber, thence to a brick-lined steel stack. All flue dust is drawn from the dust chamber and balloon flue into small cars and trammed to the reverberatory furnaces. The coke bins at the west end of the furnace building have a capacity of about 3,000 tons.

The roaster building contains ten 18' six-hearth McDougal calciners. There is a special bedding plant for the roasters, consisting of 4 bins of 500 tons capacity and 2 beds of 3,000 tons each. The mixed roaster charge is

reclaimed and delivered by conveyor belts into 60-ton bins over and charging into the roasters. The roaster product is hauled by electric motor in 5-ton cars to the reverberatory furnaces.

The reverberatory plant consists of two 19' 6"x100' oil-fired furnaces. The waste gases fire three 300-h. p. and five 250-h. p. boilers placed parallel, and then pass through 4 units of Green economizers containing 1,152 tubes, thence through a brick flue 130' long to a stack 12' 6" in diameter by 152' in height. The slag is skimmed into 112-cu. ft. electrically-tilted slag cars and hauled to the dump by electric locomotive. The matte is tapped into 66-cu. ft. ladles and hauled to converter buildings in ladle cars, from which it is transferred to the converters by electric cranes.

The converter building contains 3 electric cranes of 40, 50 and 60 tons capacity, 6 electrically-operated stands of the Great Falls type of converter, with 7 basic-lined shells, 12' in diameter, for same.

The copper from the bessemer converters is poured into the ladles of 2 straight-line electrically-operated casting machines, each equipped with tilting ladles of 66 cu. ft. capacity. Each machine has a chain of 39 molds, casting bars weighing about 260 lbs., dumping into bosh from which they are removed by drag conveyor to the bullion platform. The bar bullion is then stacked by an air-operated radial crane, picked up on trucks, weighed, and loaded into standard-gauge railroad cars. The converter slag is skimmed into ladles, transferred by crane to slag cars, hauled by electric motor to pits and reclaimed by a 10-ton steam shovel. It is then delivered in narrow-gauge cars to the receiving bins of the main spreading bed system.

The converter gases pass through balloon flues of steel construction and enter into a steel dust chamber, with a circular arch roof having a 13' radius. The gases then pass to a steel stack 12' in diameter by 125' high.

The daily capacity of the entire reduction works is 3,600 tons of gross charge.

The company owns and operates 36 miles of standard and narrow-gauge railway, including branches, spurs and sidings. The narrow-gauge line is double-tracked from the smelter to Capote basin, and laid with 50-lb. steel rails. The equipment includes 2 standard-gauge and 9 narrow-gauge locomotives, all oil burners, and about 140 cars, most of which are 25 and 30-ton steel ore cars. The railway system has direct rail connection with the Nogales and Naco branches of the Southern Pacific Lines of Mexico, and by this line with the El Paso & Southwestern railroad at Naco, Ariz.

The Cananea Consolidated Copper Co. operates practically all of the public utilities in Cananea. Its Public Service Department operates the water system; an electric light system; a telephone system operating 200 drops and approximately 450 telephones; and sundry other minor public utilities. The company's Mercantile Department operates a lumber yard, a large department store located near the smelter and 9 branch stores scattered throughout the various camps. The rental properties of the company include 619 buildings, consisting of rooming houses for its employees, residences, bunkhouses, etc.

Production, output and earnings since beginning of operations:

(a) July 31, 1906. (b) Aug. 1, 1906—Dec. 31, 1907. (c) First 5 months.

In 1915 the concentrator treated 79,642 tons ore at a cost of \$0.8263 per dry ton. The smelter treated 220,049 dry tons ore at a cost of \$2.7146 per ton.

The property was closed down in Aug., 1914, due to revolutionary conditions in Mexico; operations started in June, 1915, were suspended in Oct., resumed again in December, 1915, and have been continuous to date.

GREENE CONSOLIDATED COPPER CO. MEXICO

Office: 42 Broadway, New York. **Officers:** Wm. D. Thornton, pres.; C. D. Fraser, v. p.; J. W. Allen, sec.-treas.; preceding officers, L. D. Ricketts, Alfred Romer, P. L. Foster and Geo. Notman, directors. **Inc.** Sept. 15, 1899, in West Virginia. **Cap.** increased, 1904, and again increased, 1906, to present amount of \$10,000,000; shares \$10 par. Has paid 28 dividends, totaling \$9,544,400, to 1916. Annual meeting, second Tuesday in June.

The only asset of the Greene Cons. Copper Co. is the total stock issue of the Cananea Cons. Copper Co., S. A., a Mexican corporation.

The Greene Cons. Copper Co. is controlled, through ownership of 961,398 shares, by the Greene Cananea Copper Co. Financial statement is included under description of the Cananea Cons. Copper Co., S. A., which is to all intents and purposes the same company under another name. The mines and other properties of this and of all affiliated corporations are described under title of the Greene Cananea Copper Co.

Company was organized and controlled by Col. Wm. C. Greene and his friends until Feb. 18, 1907. The early history of the company fully given Vol. X.

GREEN HILL CLEVELAND MINING CO. IDAHO

See Federal Mining & Smelting Co.

GREEN HORN MOUNTAIN COPPER CO. CALIFORNIA

Offices: 401 Mills Bldg., San Francisco, and Green Horn Mt., Shasta Co., Calif. **Officers:** Albert Hanford, pres.; M. E. Dittimar, v. p.; F. M. Lee, sec.-treas.; preceding, with Luther Elkins and Andrew Turner, directors. M. E. Dittimar, supt., Redding, Calif. **Inc.** Sept. 25, 1915, in Nevada. **Cap.** \$400,000; shares \$1 par; outstanding May 5, 1916, \$250,000. Annual meeting, Jan. 15.

Property: 12 claims, 360 acres, 160 acres patented, on Green Horn Mt., in French Gulch mining district, includes the Green Horn mine. Said to show gold-silver-copper sulphide ore, occurring as a fissure in porphyry. Vein strikes N. 61° W., dips 40°. Assays said to average 4.5% copper per ton. **Development:** 3,000' of tunnels. Greatest depth of workings, 480'. Management claims 120,000 tons of ore blocked out.

Production: for 1914, 25,118 lbs. copper; 1915, 36,283 lbs. copper; all from 442 tons ore. Concentrator planned for 1916.

GREEN MONSTER MINE. NEVADA

Office: care of W. R. Hearst estate, San Francisco, Calif. W. C. Neal, supt. Mine in Platina mining district, 6 miles N. W. of Platina, Lincoln Co., Nev., is opened by a 350' two-compartment vertical shaft, said to disclose an orebody 6-30' wide, carrying 15 oz. silver and up to 40% in zinc. Zinc ore occurs as silicate, oxide and carbonate. Was originally worked for copper. Mine reopened in 1915 and shipping about 300 tons monthly.

GREEN MONSTER MINING CO. ARIZONA

Jerome, Ariz. **Officers:** Neill E. Bailey, pres. (gen. supt., United Verde & Pacific Ry. Co. and Verde Tunnels Smelter R. R. Co.); Thos. Taylor, v. p. (smelter supt., United Verde Copper Co.); David Morgan, sec.-treas. (supt., United Verde Extension Mng. Co.); W. S. Humbert, Phoenix, Ariz. (director Phoenix National Bank), and W. A. Drake (gen. mgr., A. T. & S. Fe lines),

directors. Leroy Anderson, Prescott, Ariz., sec. and counsel. **Inc.** Dec. 8, 1915, in Ariz. **Cap.**, \$750,000; shares 50c par.

Company made contract Dec. 16, 1915, to issue 500,000 shares for \$25,000 cash and deeds to (1) Manzanita group of 8 lode claims; (2) Big Jim group of 23 claims; (3) option to purchase Cliff group of 22 claims and an undivided $\frac{1}{2}$ interest in Green Monster and Green Monster Extension claims, for \$100,000, payable \$25,000 Jan. 21, 1917, and equal amounts yearly thereafter; (4) assignment of purchase option on Missouri group of 8 claims for \$20,000, $\frac{1}{2}$ of which has been paid by Green Monster Co. out of the \$25,000 put in treasury; balance in 2 equal payments July 21, 1916, and a year thereafter.

All this property is in the Verde district, the Green Monster and Green Monster Extension claims being $\frac{1}{2}$ mile S. of the United Verde Extension and 1 mile S. E. of the United Verde mine. The remaining claims form a compact group of about 1,200 acres, north of Sen. Clark's Equator mine and $2\frac{1}{2}$ miles from the United Verde mine at the extreme easterly end of the Verde district.

Recently the company issued 700,000 shares stock at 75c. With \$500,000 in the treasury the management is beginning active development work. Nothing but assessment work has been done in the past. Secretary of the company says: "Green Monster is purely a gamble.—We have made no promises and will make none, save that every dollar will be expended in a businesslike way;—if there is a copper deposit of any magnitude on the property, we promise the stockholders that their money will be used to find and develop it."

GREEN MOUNTAIN COPPER MINES.

CALIFORNIA

Mine in S. E. part of Mariposa county, 7 miles N. W. of Raymond, on the S. P. R. R., and 12 miles from La Grande, on the Santa Fe R. R. W. R. Sundberg and J. L. Sydney, owners. O. R. Sydney, mgr. Property considered promising. Probably idle. Fully described Vol. XI, Copper Handbook.

GREEN MOUNTAIN MINING & MILLING CO.

UTAH

Officers: Dr. R. S. Millbee, Marshfield, Wis., pres.; Dr. H. H. Millbee, v. p.; A. E. Goodell, sec.; S. Amberson, treas.; with B. S. Rich, directors. **Inc.** 1915 in Utah. **Cap.**, 1,500,000 shares; 100,000 issued.

Property: Green Mountain group in Miners Basin, Grand Co., Utah. 35 miles S. E. of Cisco, on the Denver & Rio Grande R. R., formerly owned by the Green Mtn. G. & C. Mng. Co. and fully described in Vol. XI, Copper Handbook.

Ore: gold, silver and copper, low-grade ore said to average about \$8 per ton; also said to show some high-grade ore. Developed by Dewey cross-cut tunnel. **Equipment:** 30-h. p. gasoline engine, 2 sets of power drills, compressor and pumps.

GREENBACK COPPER CO.

CALIFORNIA

Mine at Woody, Kern Co., Cal. Joseph Weringer, owner. **Lands:** 1,520 acres, 18 miles east of Jasmin, on the Porterville branch of the Southern Pacific railroad. Country rock is granodiorite, showing an ore zone carrying lenses of 20' maximum width, with granite walls irregularly impregnated with chalcopyrite. **Development:** by a 185' incline shaft, with 3 levels opened. Carbonate ores stoped from the upper levels have averaged 19.4% copper and 5.7 oz. silver per ton. Work resumed, 1913, after several years and 1 carload of copper ore shipped to Selby smelter. Credited with a total production of \$40,000 in high-grade copper ore.

GREENDALE EXPLORATION CO.**MONTANA**

Controlled by Rainbow Lode Development Co. When the Rainbow Lode Dev. Co. wished to acquire the Butte & London property at Butte, Mont., several years ago, it was not practicable to recall a majority of the outstanding stock of that company; the Greendale Exploration Co. was organized to meet the emergency. The property of the Butte & London was transferred to this company, the Rainbow Lode Dev. Co. receiving 51% of the stock in return for certain development work (see Rainbow Lode Dev. Co.); the remaining 49% is held by Butte & London Copper Dev. Co.

GREENWATER COPPER MINING & SMELTING CO. CALIFORNIA

Lloyd E. Marsden, sec.-treas., Room 515-E, 30 Church St., New York. Chas. R. Miller, pres.; M. R. Ward, v. p.; preceding, with Max E. Bernheimer, Chas. Gold, W. G. Denham, Clyde Milne, Oscar A. Daube, F. I. Mallory, B. H. Campbell and W. H. Drayton, 3rd, directors. John McGee, supt. at Tonopah. Inc. Dec. 12, 1906, in Delaware. Cap., \$25,000,000; shares \$5 par. Was a securities holding company only, and owned stock in a number of Greenwater promotions, all dead, described Vol. VIII, Copper Handbook. Company, on Dec. 31, 1910, had \$144,727 invested in choice bonds, after losing about \$170,000 through the failure of Chas. Minzesheimer & Co., New York brokers, who failed Oct. 15, 1910. Reorganized Oct., 1914, and capitalization reduced to \$500,000; shares 10c par; 3,000,000 issued. Stock listed on the N. Y. Curb. Annual report Dec. 31, 1914, showed cash assets of \$72,000 and \$51,834 on Dec. 31, 1915. Corporation Trust Co., Jersey City, N. J., transfer agents. Annual meeting 2nd Friday in February.

In August, 1911, company took over the O. K. and Supply groups, gold mines at Dale, Calif. Considerable work was done on the Supply mine. In 1915 a crosscut on the 700' level cut the Armenian and Jeane veins, showing practically no values. Two winzes were sunk and drifts extended on the 800-1,100' levels of the Supply vein with negative results. The values decreased with depth and on the 1,200' level no pay ore was found. All development and prospect work gave unsatisfactory results and the property was abandoned in Oct., 1915.

In November, 1915, the company acquired stock control of the Tonopah Bonanza Mining Co. and the Gréat Western Cons. Mining Co., at Tonopah, Nev. Property, 25 claims, is extensively developed and located on the trend of known ore veins. Company now hopes to recoup losses sustained in California operations. Holdings described under their respective titles.

GREY'S SIDING DEVELOPMENT CO., LTD.**ONTARIO**

Owns the Little Dan mine on Arsenic lake, 3 miles from Grey's Siding, T. & N. O. R. R. John McMartin, pres.; William Marshall, managing director; J. E. Wilson, supt. at last accounts. Property: 3 claims covering diorite containing bunches and impregnations of arsenical pyrite and chalcocopyrite, said to carry several dollars per ton in gold. Deposit opened up by open-quarry work and shallow shaft. No recent returns secured.

GRIBBELL ISLAND COPPER CO.**BRITISH COLUMBIA**

Office: 203 First National Bank Bldg., Bellingham, Wash. Mine at Gribbell Island, Skeena River division, Cassiar district, B. C. Idle since 1906, owing to lack of funds. Fully described, Vol. XI, Copper Handbook.

GRIFFITH CONSOLIDATED MINE.**COLORADO**

See Salida Copper Co., Colo., which owns mine through stock ownership in Mountain Mining Co.

GRIJALVA NUEVA MINING CO.**ARIZONA**

Wickenburg, Yavapai Co., Ariz. Officers and directors: J. H. Mulholland, pres. and gen. mgr.; J. J. Heard, v. p.; T. B. Inglis, sec.-treas. A. R.

Schloesser, supt. Inc. May 15, 1915, in Ariz. Cap., \$500,000; shares \$1 par; all outstanding. Annual meeting, first Monday in April.

Property: 13 claims, 2 patented, 220 acres, 10 miles N. W. of Wickenburg, includes the old Grijalva mine. **Ore:** free milling gold in granite occurs in an elliptical shaped oreshoot 30'x60', said to average \$13.29 per ton. Developed by tunnels. Management claims 20,000 tons ore blocked out.

Equipment: includes an 80-ton amalgamating and concentrating mill. A pumping plant of 150 gal. per min. capacity will deliver water from the Hassayampa river, a distance of 4,000' and at an elevation of 600'. Company started operations in Dec., 1915.

GRIZZLY MINE.

OREGON

Cottage Grove, Lane Co., Ore. Property has an orebody reported to be in a porphyry dike 20' wide, the vein showing good walls with 12" of high-grade ore on the footwalls, 4' consisting of mixed lead and copper sulphides with gold and silver values. The discovery is a mile from the mill and 2,000' lower.

GRIZZLY MINING CO.

UTAH

Succeeded by Michigan-Utah Mining Co., March, 1912.

GRUTLI MINING CO.

UTAH

Mine at Eureka, Juab Co., Utah. Inc. Dec., 1908, in Utah. Cap., \$100,000; shares 10c par. Listed on Salt Lake Exchange. **Property:** 7 claims, patented, adjoining the East Tintic Consolidated on the north, 2 miles from a railroad. Mine has a 250' main shaft, winze and crosscuts, showing gold, silver and lead ores. **Equipment:** includes steam hoist and compressor. Developing at last accounts.

GUANACEVI TUNNEL CO.

MEXICO

Address: Room 2009, 55 Liberty St., New York. Mine at Guanacevi, Santiago Papasquiaro, Durango, Mex. Inc. 1904 in Arizona. Cap., \$5,000,000; shares \$5 par. Property in hands of trustee until conditions in Mexico permit of financing company sufficiently to carry on the extensive development planned.

Lands: 22 properties, about 700 hectares, including timber rights and original concessions, said to possess large bodies of gold and copper ore. The mine has 3 shafts, of 100' depth each, with tunnels of 1,250' and 1,400', the main tunnel, 7x9', planned to be driven about 3 kilometers, management estimating that in this distance a large number of veins carrying lead and copper ores should be cut, the tunnel being estimated as likely to cost about \$250,000.

The Mexican Western railroad from Tepehuanes to Guanacevi should add materially to value of property.

The L. Diamond Co., of Boston, was never a representative of this corporation, but a number of brokers bought stock and combined to unload on the public at unduly high prices. Debts amounted to \$150,000 in 1912 and have since been increased.

GUANAJUATO CONS. MINING & MILLING CO.

MEXICO

Office: 15 Broad St., New York, and Guanajuato, Gto., Mex. **Officers:** Fred G. Corning, pres.; Robt. Mulford, v. p.; C. Van Rensselaer Cogswell, sec.-treas.; preceding, with R. A. Walker, W. Lawrence Green, Chas. G. Molin, Sidney Green, all of New York, and Geo. A. McGlone, Charlestown, W. Va., directors.

Inc. 1899 in West Virginia. Cap., \$3,000,000; outstanding, \$2,830,920; shares \$5 par; \$169,080 of the unissued stock has been set aside to retire the outstanding 7% bonds. State St. Trust Co., Boston, transfer agent. Old Colony Trust Co., Boston, registrar. Annual meeting in Jan., at Charles-

ton, W. Va. Listed on Boston Stock Exchange and dealt in on New York Curb.

Bonds: authorized \$300,000; outstanding \$128,000 convertible debenture 7's, dated 1904, due Jan. 2, 1924. Interest Jan. 2 and July 2, at office of company, New York. Coupon and registered bonds, \$100, \$500 and \$1,000; convertible at 120 into stock at par; 10% of net earnings is set aside for redemption of this bond issue. Trustee, Columbia Trust Co., New York.

Dividends: 1¼%, 6¼c per share, paid July 31, 1906; 1½%, 7¼c per share, Oct. 31, 1906; none since.

Balance sheet Dec. 31, 1913, the last reported, showed assets of \$3,495,586, which included mines, plants, etc., \$3,136,890; supplies, \$78,896; cash, \$96,996. Liabilities included: 7% bonds, \$128,000; refunding notes, \$53,800; surplus, \$200,000; sinking fund, \$28,409; undistributed profits, \$45,019; notes payable, \$10,466.

Income account for 1913, last reported, showed: Receipts—bullion and concentrates, \$670,142; expenditures, mining, etc., \$302,452; ore bought, \$176,585; treatment charges, \$39,186; bullion expense, \$23,413; taxes, etc., \$26,674; total, \$568,312. Gross profit, \$101,830. Deduct: bond interest, \$13,412; depreciation, \$33,427; bond redemption reserve, \$5,494; total, \$52,333. Net profit, \$49,498; undistributed profit forward, \$45,522; total, \$95,019. Forward to surplus accounts, \$50,000. Undistributed profit, Dec. 31, 1913, \$45,019.

The company is reported to own \$1,000,000 of the \$2,000,000 capital stock of the Republic Mines Co., N. Mex., also owns a large interest in the Carmen-Guanajuato Gold Mining Co.

Property: owns a number of silver-gold mines in the Guanajuato district; of these the Sirena is the oldest, having been worked for 100 years. Under normal conditions it has a monthly output of 7,500 tons milling ores. **Ore:** silver-gold, with values mainly silver. Vein varies in width from 3' to a maximum of 200'. Ore reserves of the Sirena mine were estimated 1913 as 800,000 to 1,400,000 tons blocked out, pillars and fill; Penafill lease, 180,000 tons. **Development:** by shafts to depth of about 1,000'.

Equipment: includes 80-stamp mill, cyanide and electrical plants.

The revolution has greatly interfered with operations during the past few years, the property having been run on half time for a large part of the time.

GUANAJUATO DEVELOPMENT CO.

MEXICO

Office: 50 Broad St., New York. Corporate office: Jersey City, N. J. Mine office at Guanajuato, Gto., Mexico. **Officers:** Willard P. Reid, pres.; C. A. Decker, v. p.; P. E. Sharpless, v. p.; W. H. Porter, sec.-treas.; preceding, with Jas. T. Potter, Ross Vanderhoven, Wm. B. Field, F. B. Medbury, John A. Martin, directors. John Pritzl, asst. treas.

Inc. Feb. 24, 1906, in New Jersey. **Cap.,** \$300,000 com. and \$600,000 pfd., decreased June 24, 1916, from \$1,000,000, 6% cum. pfd.; \$3,000,000 common; shares \$100 par. Preferred stock has preference as to assets and is subject to call at par and accrued dividends on any semi-annual dividend date. Stock transferred at company's office. Annual meeting, first Thursday after first Monday in April, at Jersey City, N. J. **Dividends:** preferred, paid semi-annually Jan. and July 1, from 1906 to 1910, inclusive, none since.

Company controls the Pinguico Mines Co., Mexican Milling & Transportation Co. and Peregrina Mining & Milling Co. Properties are located at Guanajuato, Gto., and are held under Government titles by leases, options, etc. **Ores:** gold-silver bearing quartz found in veins cutting bedded volcanic tuffs and intrusive rocks.

Company refuses to supply information.

Peregrina Mining & Milling Co.

Controlled by Guanajuato Dev. Co. Same officers, with Levi Holbrook, H. J. Milligan, Delavan Smith, W. B. Field and J. A. Martin, directors. **Inc.** Feb. 21, 1905, in New York. **Cap.**, authorized and outstanding, \$1,000,000, 7% cum. pfd., and \$2,000,000 common. Shares: preferred, \$100; common, \$10. Annual meeting in April in New York.

Dividends: preferred paid 3½% in 1905; 1906 to March, 1911, inclusive, 7% per annum; none thereafter until April 15, 1915, when 3½% was paid. Common none. Preferred dividends, payable March 1 and Sept. 1, at 27 William St., New York. Last one, of 5% paid April 15, 1916.

Balance sheet for year ending Dec. 31, 1914, shows assets \$3,306,254, which included: property account, \$3,033,829; cash, \$66,984; accounts receivable, \$39,130; metal pending settlement, \$62,683; supplies, \$38,185; investments, \$43,333; deficit, \$22,110. Liabilities included: current liabilities, \$2,920; accrued preferred dividends, \$303,334.

Profit and loss account for 1914 showed: balance, surplus, Dec. 31, 1913, \$50,539; 1914 earnings, \$66,332; total, \$116,871. Of this accrued preferred dividends absorbed \$70,000; sundry items of 1913, \$11,197; depreciation, \$57,784; total, \$138,981. Deficit Dec. 31, 1914, \$22,110.

Property: about 175 acres, which include a group of old producing silver mines near Guanajuato. Output under normal conditions, 13,000 tons per month. **Ore reserves:** estimated Jan. 1, 1915, at 98,000 tons.

Equipment: includes milling and cyanide plants. Ore milled in 1914, 119,202 metric tons, with an operating profit of \$168,492. Revolutionary conditions have greatly hampered mining operations during the past few years.

Pinguico Mines Co.

Controlled by the Guanajuato Dev. Co.; same directorate. **Inc.** Sept. 13, 1906, in New Jersey. **Cap.**, authorized and outstanding, \$2,000,000 6% cum. pfd. and \$5,000,000 common. Shares: preferred, \$100; common, \$10. Preferred stock has preference as to assets and is subject to call at par, and accrued dividends on any dividend date. Stock transferred at company's office. Annual meeting, first Tuesday after first Monday in April at 15 Exchange Place, Jersey City, N. J. Fiscal year ends Dec. 31.

Dividends: preferred, 1907, to Oct., 1913, inclusive, 6% per annum; none reported since. Common, none. Preferred payable April and Oct. 1 at 27 William St., New York.

Property: 5 claims, 300 acres, covering 3,200' on the main Pinguico vein, near Guanajuato, Gto. **Ore:** silver-gold. **Development:** Pinguico shaft, 800' deep, and the Fortuna, 670' deep, with several miles of underground workings. **Equipment:** includes a 40-stamp mill and a cyanide plant. Capacity, under normal conditions, about 8,000 tons per month.

Political disturbances have interfered with operations during the past few years.

The Mexican Milling & Transportation Co. built and operates the 2 miles of railroad connecting the mine and mill. The Guanajuato Dev. Co. refuses to give out any information.

GUANAJUATO REDUCTION & MINES CO.**MEXICO**

Columbus, Ohio. Mines and mills at Guanajuato, Gto., Mex. **Officers:** C. L. Kurtz, pres., Columbus, Ohio; Wm. G. Moore, v. p.; Geo. D. Bounton, v. p., Philadelphia; C. J. Kurtz, sec.-treas.; preceding, with C. J. Schlaechter, Wm. D. Sherrerd, Robt. T. Moore and Geo. W. Chase, directors. W. G. Wheaton and H. P. Smith, gen. mgr.

Inc. 1904 in Colorado, as a consolidation of several silver and gold mines in the Guanajuato district. **Cap.**, \$7,500,000; shares \$100 par. Stock trans-

ferred at company's office, Columbus. Empire Trust Co., New York, registrar. Annual meeting, first Tuesday in Feb. at Colorado Springs, Colo.

Bonds: authorized, \$3,000,000; outstanding, \$2,800,000, first mortgage 6%. 20-year, \$100, \$500 and \$1,000 gold bonds, dated July 1, 1904, due July 1, 1924; interest Jan. 1 and July 1, at office of the trustee, Empire Trust Co., New York.

The company was unable to convert its product into cash on account of the Mexican revolution and defaulted, July 1, 1914, interest on its first mortgage 20-year 6% bonds; this interest was paid in Jan., 1915. To Aug., 1915, the interest due Jan. 1 and July 1, 1915, had not been paid.

Comparative Income Account, Years Ended Dec. 31

	Gross Earnings	Optg. Expenses	Net Earnings	Bond Interest	Balance for Year
1914.....	\$1,527,523	\$1,293,523	\$234,000	\$168,000	\$ 66,000
1913.....	1,149,176	838,107	311,069	168,000	143,069
1912.....	1,004,290	693,477	310,813	168,000	142,813
1911.....	930,280	648,159	282,121	168,000	114,121
1910.....	931,562	618,067	313,495	168,000	145,495

Properties: Tepeyac group: in 1915 the Tepeyac mine produced 2,501 tons ore, averaging 314.7 gm. silver and 2.61 gm. gold. (Note: all weights are given in metric tons, 2204.6 lbs.)

Valenciana group: includes the Valenciana, Esperanza, La Union and Nuestra Senora de Guanajuato mines, practically idle in 1915.

Cata group: includes the Cata, Secho, San Lorenzo, Avispero Maravillas mines and part of La Sorpresso. In 1915 the Maravillas-Cata workings were operated for 9 months and produced 5,616 tons ore, averaging 248.6 gm. silver and 2.34 gm. gold. The Cata shaft produced 2,926 tons mine fill.

Mellado-Rayas group: includes the Mellado and Rayas mines and their various annexes, and the San Miguel, Santa Anita, San Roberto, Fraustros mines and part of La Sorpresso. In 1915 the Mellado mine produced from San Miguel shaft workings 19,783 tons, averaging 268.6 gm. silver and 2.3 gm. gold, which is the best grade so far obtained from these workings. The Mellado principal workings produced 3,643 tons ore, averaging 307.7 gm. silver and 3.07 gm. gold. The Kurtz shaft workings produced 22,194 tons ore, averaging 257.8 gm. silver and 2.44 gm. gold; bulk of tonnage coming from the 100-meter and 125-meter levels. The Rayas general shaft workings produced 16,395 tons ore averaging 267.9 gm. silver and 3.06 gm. gold; bulk of tonnage came from Santa Sofia fill body. The Garropata shaft, 195-meter deep, produced 10,279 tons ore, averaging 239.1 gm. silver and 4.2 gm. gold.

Ore Reserves estimated Jan. 1, 1916:

	Tons	Grams per Ton Silver	Gold
Dumps	498,000	166	1.41
Mine ore, blocked out.....	168,972	256	2.91
Mine ore, probable.....	257,849	257	2.73
Total	924,821	208	2.05

Ore from dumps in 1915 totaled 17,856 tons, averaging 170.7 gm. silver and 1.87 gm. gold; average cost of handling, 11.8c per ton, with a profit of \$1.253.

Recent total mine production from the various properties:

	Ore, Tons	Gm. Ag. per Ton	Gm. Au. per Ton	Cost per Ton	Profit per Ton
1915.....	85,329	264.5	2.76	\$0.898	\$1.716
1914.....	129,245	208.7	2.37		

In 1915 tonnage milled amounted to 102,658 tons, averaging 246.3 gm. silver and 2.6 gm. gold, the highest since the company started operations. Total milling and cyaniding cost averaged \$1.309 per ton.

Equipment: includes the 180-stamp Bustos mill and the Flores cyanide plant. Crushed ore from the mill is sent through a 6,000' 8" pipe line to the cyanide plant.

During 1915 operations were much hindered by political disturbances; the mill operated only 47.9% of the time compared with 89.2% in 1914, the worst previous year.

GUERRERO MINING CO.

MEXICO

Is the Mexican incorporation of the Victor Mining & Smelting Co., which owns 2 properties in Magdalena district, Sonora, Mex., 10 miles S. W. of Cananea. Properties about one-half mile apart, contain 15 and 32 per-tenencias, respectively.

GUGGENHEIM EXPLORATION CO.

U. S. & MEXICO

Office: 120 Broadway, New York. Liquidation and dissolution of the company was announced in Autumn of 1915, the assets being distributed on the following basis:

Guggenheim Exploration owned 404,504 shares of Utah Copper, which were sold to Kennecott Copper Corporation, 1 share Utah Copper for 1½ shares Kennecott Copper. Stockholders of Guggenheim Exploration had the privilege of choosing between a payment of \$36.387 per share or taking 0.7277 of a share of Kennecott. Guggenheim Exploration also owned 97,750 shares of Chino Copper, which were distributed to its stockholders in the ratio of 0.1172 of a share of Chino for each of Guggenheim owned. Similarly 69,500 shares American Smelting & Refining common were distributed in the ratio 0.0833 share A. S. & R. for each share Guggenheim; 154,300 shares Ray Consolidated in the ratio of 0.185 share Ray Consolidated for each share Guggenheim. It was announced February, 1916, that a further distribution would be made to shareholders of \$12 cash, payable April 15, 1916, together with a ¼ share beneficial interest in the Yukon Alaska Trust with 208,433 certificates of beneficial interest.

The trustees of the Yukon Alaska Trust are Wm. Loeb, Jr., Chas. K. Lipman, Chas. Earl and Roger W. Strauss, holding residuary assets of Guggenheim Exploration Co. Time of trust limited to lives of Fred'k A. Collins and Wm. Magowan or less if directed by 75% of certificates. The trust was created to avoid shrinkage and loss of values by sale of assets in open market. The holdings comprise cash and demand loans, \$11,000,000; 2,800,000 shares (out of 3,500,000) Yukon Gold Co.; eight 5% notes of \$625,000 each of Yukon Gold Co., issued Feb. 1, 1916, and due one each year thereafter: this \$5,000,000 covers purchase price of the property, dredges, and loans made Yukon Gold by Guggenheim Exploration Co. Also 500 shares preferred stock, series A of American Smelters Securities Co.; also various causes of action, interests, and miscellaneous property rights of uncertain and in part speculative value in various mining properties, prospects and contracts relating thereto.

At a special meeting of the shareholders held March 9, 1916, dissolution was approved.

GULF COPPER CO.

MEXICO

Head office: Phoenix, Ariz. Mine at Angeles Bay, Gulf of California, Mex. **Cap.**, \$1,000,000; shares \$1 par. J. H. Baker, pres. and gen. mgr.; G. E. Anthony, mg. engr.; J. H. Loudon, directors.

Property: 40 hectares, about 100 acres, at north end of Angeles bay, 140 miles N. W. from Guaymas and about 90 miles S. W. from Port Lobos. Claims show silicious schists cut by porphyry dikes and a vein running

N. W., dipping at 45° and varying from 5 to 42' in width. **Ore:** black oxide and sulphide of copper said to average 4.7% with trace of gold and silver.

Development: by tunnels with 1,363' workings, including winze sunk on vein 175'. Has shipped 300 tons, 25% picked ore, and has several thousand tons of low-grade ore on dump. Property considered promising if properly financed and handled. Presumably idle.

GWIN MINE DEVELOPMENT CO.

CALIFORNIA

J. J. Hachman, sec., 267 Mills Bldg., San Francisco, Calif. This famous old gold mine, at Gwin Mine, Calaveras Co., Calif., whose deeper ores carry copper, has been closed down since 1908. Assessment No. 17, 2c a share, delinquent Jan. 6, 1916. See Vol. X, Copper Handbook.

GWINN MINING CO.

WASHINGTON

Meteor, Ferry Co., Wash. Peter Proff, mgr. Company owns a group of claims in the Meteor, or Covada, district, showing fissure veins in sedimentary rocks cut by diorite and carrying complex ore said to average about \$16 per ton in gold, silver, copper and lead. **Development:** by shafts and tunnels, said to have blocked out considerable low-grade ore which is being treated in a 50-ton concentrator. Company is also erecting a dam on Hall creek for its hydro-electric plant.

GYPSY QUEEN MINING CO.

NEVADA

Office: 265 Russ Bldg., San Francisco, Calif. **Officers:** C. F. Wittenberg, pres.; F. A. Burnham, treas. **Inc.** in Nevada. **Cap.**, 1,250,000 shares. Four assessments have been called. Listed on San Francisco and Salt Lake City exchanges.

Property: 53 acres in Tonopah mining district, Nye Co., Nev., said to show silver ore. Ledge is from 1 to 5' wide. Formation is rhyolite, quartz and trachyte. **Development:** by 1,370' shaft. On the 1,350' level a cross-cut was run S. E. for several hundred feet. At 247' from the shaft a 4' vein was cut with ore from 8" to 18" in width. A winze, being sunk on this vein, was down 80' in March, 1916.

Property has been under development for several years without showing any net results.

HACKBERRY MINE.

ARIZONA

Now known as the Sunshine. Located in 1874 by W. B. Ridenour, in the Peacock district, 26 miles N. W. of Kingman. Reported Jan., 1916, to have been taken over on a lease and bond by Seeley W. Mudd, 1202 Hollingsworth Bldg., Los Angeles, Calif.; R. I. Rogers, Philip Wiseman and Frank A. Keith, of Los Angeles.

The mine is credited with a production of \$2,000,000 in high-grade silver ore. In the early days a 500' incline shaft, giving a vertical depth of 360, was sunk on the vein. At this depth water stopped operations, but not before all ore above water level had been stoped out. Ore is said to have occurred in a 2½' vein. In later years a vertical shaft was sunk to the water level, a small amount of exploratory work done and the mine allowed to fill with water.

HAGGARTY COPPER MINING CO.

WYOMING

Idle. **Office:** Electric Bldg., Cleveland, Ohio. Mine at Rudefeha, Carbon Co., Wyo. L. N. Pennock, pres. **Cap.**, \$10,000, increased Nov. 9, 1908, to \$1,500,000; shares \$1 par. Controlled and owned by the United Smelters, Railway & Copper Co. Is a companion of the Ferris Haggarty Co., but like all its sister companies owned by the U. S. R. & C. Co., is bankrupt. No one but a lawyer can tell which of the two owns the copper mine that has been the bait for so many "investors."

HAHN'S PEAK GOLD MINING & MILLING CO. COLORADO

Office: 55 High St., Oshkosh, Wis. Mine at Hahn's Peak, Routt Co., Colo. **Inc.** Jan. 29, 1906, in Colorado. **Cap.**, \$1,000,000; shares \$1 par; 944,633 shares outstanding. **Officers:** H. O. Granberg, pres.; C. A. Spencer, v. p.; Patrick Magill, supt.; E. E. Meeleus, sec.-treas.; preceding, with Dr. H. A. Wolter, M. A. Rasmussen and W. E. Brown, directors.

Property: 25 claims, 248 acres, patented. **Development:** 442' incline shaft and a 950' tunnel on Royal Flush claim, said to cut 5 veins; also the 2,200' Conundrum tunnel 430' lower, cutting 12 veins, values being principally gold and silver. Shipments in 1914-15 assaying from \$92-\$198 per ton. returned \$3,974.

Equipment: includes gasoline engines, compressor, air drills, blower and a 400-ton concentrating mill, which is to be rearranged for the oil flotation process. Development work has been going on since Sept., 1915.

HAHNEWALD LEASING CO. COLORADO

Has a lease on the Abe Lincoln mine in Poverty Gulch, near Pitkin, owned by the Brant Gold & Copper Co., which see. Reported shipping about 100 tons of fair grade ore per week in 1916.

HALE MINING & MILLING CO. ARIZONA

Constellation, Yavapai Co., Ariz. Felix X. O'Brien, supt. Has gold and copper ores in veins. Equipped with gasoline power. Inactive save for yearly representation work.

HALIFAX TONOPAH MINING CO. NEVADA

Offices: 1008 Kearns Bldg., Salt Lake City, and Tonopah, Nev. **Officers:** F. M. Smith, pres.; Thos. Kearns, v. p.; F. J. Westcott, sec.; C. B. Zabriskie, treas.; preceding, with Clyde A. Heller, directors. B. F. Edwards, mgr., Syndicate Bldg., Oakland, Cal. J. W. Chandler, supt.

Inc. Sept. 27, 1902, in Utah. **Cap.**, \$2,000,000; outstanding, \$1,895,000; shares \$1 par. Stock transferred at company's office. Registrar & Transfer Co., 19 Nassau St., New York, registrar. Annual meeting, 2nd Tuesday in October. Listed on San Francisco Exchange.

Property: 4 patented claims, 81 acres, adjoining the central portion of the Belmont property on the east. **Ore:** gold-silver. Developed by a vertical shaft, 1,734' deep, with the deeper levels at 1,000', 1,200', 1,400' and 1,700'. The 1,000' crosscut picked up the easterly extension of the Belmont vein and ore shipments were made. After considerable work the vein was lost through faulting. In Nov., 1915, a crosscut 500' S. from an E. drift, cut a vein, since opened up to the 1,400' level, and said to have a width of 8' in a winze, from which ore was mined in 1916. All ore below the 1,200' level is taken to the 1,400' station and hoisted from there. **Production:** in 1913 valued at \$22,595 gross.

For geology of Tonopah district, see U. S. G. S. Prof. Paper 42.

HALL CREEK MINING & MILLING CO. WASHINGTON

Daisy, Stevens Co., Wash. Herman Camerer, supt. **Property:** the Gwin mine and group of claims, shows a fissure vein carrying gold-copper ore, developed by 400' shaft. **Equipment:** includes steam plant and water power, hoist and 4-drill Fairbanks compressor. Has a 75-ton concentration mill, driven by electric power. Employs about 25 men at mine and mill.

HAMBURG-AMERICAN COPPER M. & M. CO. IDAHO

Kellogg, Idaho. **Officers:** Wm. Schaefer, pres.; D. W. Price, v. p.; J. A. Walden, sec.; W. W. Papesh, treas.; Elmer Brown, Paul Jacobs, H. Froehlich and Frederick Bell, directors.

Inc. Nov., 1908, in Idaho. **Cap.**, \$1,500,000; shares \$1 par. **Property:** 8 claims, between the Handspike and Riverside, on the Little North fork, shows copper ore. **Development:** by 749' tunnel. Mine 18 miles from O. W. R. & N. Co.

HAMBURG MINE.**UTAH**

Property: in Goldstrike district, Washington Co., Utah, owned by the Bull Valley Gold Mng. Co. and operated under lease by the Goldstrike Mining & Leasing Co., which see.

HAMILTON-MONTANA GOLD MINING CO.**MONTANA**

Richard Daxon, mgr., Hamilton, Mont. Company owns group of claims in Missoula Co., Mont. **Developed:** by 400' crosscut, driven to intercept a vein of copper-lead ore.

HAMILTON POWER, MINING & TRANSP. CO.**NEVADA**

W. B. Bierce, pres.-mgr.; McGill, White Pine Co., Nev. Mine in Rocco canyon, near Hamilton, White Pine district, Nev. J. D. Teasdale, v. p. and sec.; Wm. Harwood, mgr.; preceding, with R. G. Henke and John Blair, directors.

Property: the Grand Prize group, 5 claims and power rights on Illipah creek. Ore is a carbonate carrying copper, lead and silver. **Development:** by 235' tunnel cutting ledge at 165' with 36' winze in ore and a 125' shaft sunk on the vein, showing a 12" paystreak of shipping ore. Shipments in 1913, of 20 tons sacked, averaged \$84 a ton, assaying 6.40% copper, 20.5% lead and 107 oz. silver. Shipments averaged 60 tons a month during 1914. Plan installing hoist and electric power plant. Management estimates 1,000 tons of \$65 ore blocked out.

HAMLET MINING & MILLING CO.**COLORADO**

Howardsville, San Juan Co., Colo. Fred Ballard, mgr.; E. A. Ritter, cons. engr., Colorado Springs, Colo. G. Roland, supt. **Property:** the Hamlet mine developed by tunnels, longest known as Mill tunnel, 500' below 5th level of old mine workings, connected by raises with tunnel. **Ore:** a complex mixture of copper-lead and zinc sulphides carrying good gold and some silver values.

Equipment: includes steam power plant, compressor and conical mill with flotation unit, latter reported destroyed by fire, Dec., 1915. Company employs about 15 men.

HAMMOND MINING CO.**WASHINGTON**

Officers: F. C. Hammond, Bellingham, Wash., pres.; Hugh Eldridge, v. p.; Geo. C. Fisher, sec.-treas.; with Frank Wright, Fred J. Wood, directors. **Inc.** 1914. **Cap.,** paid up, \$500,000.

Property: 32 claims, 600 acres in T. 39 N., R. 8 E., in Sec. 5, 6, 7 & 8, of Whatcom Co., Wash., includes the Great Excelsior mine. **Ore:** gold-silver, said to average \$4 per ton, occurs in formation of slate, sandstone and andesite. **Developed:** by 2,500' of underground workings. **Equipment:** includes a 100-ton 20-stamp mill. **Production:** said to be 10,000 tons of ore, with net returns of \$20,276, to 1915.

Company was building a 150-ton cyanide plant in 1915.

HAMPTON CONSOLIDATED MINES CO.**COLORADO**

Granville I. Chittenden, agt., 200 E. and C. Building, Denver, Colo. Mine at Russell Gulch, Gilpin Co., Colo. **Inc.** in Colorado. **Cap.,** \$3,000,000; shares \$1 par. Company reported without funds and indebted to Chittenden estate for taxes, etc. The widow of W. H. Chittenden, organizer and moving spirit of the company, is practically the owner.

Property: 4 claims, patented, very close to the War Dance gold mine and believed to carry an extension of the ore shoot of that mine. The western, or 80' shaft of the Hampton, might strike this ore at 250'. The ore has bornite, tetrahedrite, pyrrargyrite, pyrite and marcasite, said to assay 2.7 to 35% copper, 6 to 35 oz. silver and 0.16 to 5.4 oz. gold per ton. The mine has a 250' tunnel, and shafts aggregating 300', with about 3,000' of workings.

Equipment: includes a 16-h. p. gasoline engine. Development work was resumed March, 1915, and management plans installing electric hoist, compressor and 10 drills. Property believed to have merit.

HANAUER SMELTING WORKS.

UTAH

At Salt Lake City, Utah. Controlled through stock ownership by American Smelting & Refining Co.

HANCOCK CONSOLIDATED MINING CO.

MICHIGAN

Hancock, Mich. **Officers:** John D. Cuddihy, pres.; Capt. Thos. Hoatson, v. p.; John H. Hicok, sec.-treas.; preceding, with Allen F. Rees, Capt. Samuel B. Harris, Capt. Jas. Hoatson and Frederick W. Nichols, directors; John L. Harris, gen. mgr.; Richard Coombs, mg. capt.; Daniel Fisher, clerk; C. W. McDougall, engr.; Fred G. Schubert, master mechanic.

Inc. June 11, 1906, in Michigan. **Cap.**, \$5,000,000; shares \$25 par; issued, \$2,500,000; fully paid with \$3 assessment levied Mch., 1915, payable \$1 each, in May and Sept., 1915, and Jan., 1916. Old Colony Trust Co., Boston, Mass., registrar; State Street Trust Co., Boston, transfer agent. Stock listed on Boston Exchange. Annual meeting, third Wednesday in June.

Company began business with \$1,000,000 and paid \$552,623 for its property. Disbursements were \$264,539 in 1907; \$205,289 in 1908; \$279,973 in 1909; \$383,414 in 1910; \$359,278 in 1911; \$267,542 in 1912; idle in 1913; \$214,971 in 1914; \$501,457 in 1915. Total receipts in 1915 from ore sales, assessment and sale of lands to Quincy Mining Co., \$502,950, as compared with \$229,894 in 1914.

The mine, which had been idle 15 months in 1913-15, 8 months due to the strike, and for 7 months because of the outbreak of the European war, resumed operations in March, 1915, and the Hancock, after several years' development work, is now in the producing stage.

Property: consists of 840 acres of mineral territory, immediately west and south of the old Quincy mine, in T. 55 N., R. 34 W., including the original Hancock mine, 136 acres, set aside, 1859, by the Quincy Mining Co., which reserved the mineral rights to the Pewabic bed. The Pewabic bed, on lands other than the original Hancock tract of 136 acres, is owned by the Hancock Consolidated. Lands carry the Pewabic, Quincy, West and Hancock or Sumner copper-bearing beds.

Perhaps the best part of the Quincy mine is tributary to No. 7 shaft, which is immediately north of the Hancock boundary.

In June, 1916, approximately 75 acres were sold to the Quincy Mining Co. for \$226,000. In part payment therefor the Hancock was granted the right to use Quincy No. 7 shaft and 1 stamp of the Quincy mill. Company also owns lots 6 and 7, Sec. 28, for a mill site.

The old Hancock mine, opened 1859, was closed June 1, 1885, on account of the low price of the metal, after producing 5,709,384 lbs. fine copper. The Hancock or Sumner amygdaloidal bed averaged about 12' in width below the fifth level, to a depth of 1,052', where the mine was bottomed.

The property carries the upper half of the Michigan series of cupriferous traps and conglomerates, and has 4 known copper-bearing beds, the Pewabic being the most important. The property also carries the underlay, but not the outcrop, of the 3 copper-bearing beds of the Quincy, these being the Quincy to the eastward, apparently of little value, followed by the Pewabic, which is the main bed of the Quincy and the so-called West lode of the Quincy. The known copper-bearing beds outcropping on the Hancock property are the Hancock or Sumner, mined in the old Hancock mine, and now known as No. 1 lode, lying about 1,100' west of the Pewabic; the old West bed, now known as No. 2 lode, lying about 300' west of

No. 1, and the New West bed, now known as No. 3 lode, lying about 75' west of No. 2.

Development: No. 1 shaft is the old main 3-compartment shaft of the Hancock mine. It has a remodeled wooden shaft rock house, with a Lake Shore hoist good for 2,000' depth.

The new and main 5-compartment working shaft known as No. 2 is 2,200' N. W. of No. 1. It is vertical, with dimensions 9' 6" x 29' 6", being the second largest in the Lake Superior district, and is 4,001' deep. This shaft intersects No. 3 bed at a depth of 2,038', the bed here showing a pitch of 37°, compared with 47° in the upper workings, this flattening of 10°, at depth, corresponding to a similar flattening shown to the northeast in the No. 7 shaft of the Quincy. The No. 4 lode is intersected by the shaft at a depth of 3,105'; it is 17' thick and carries payable ore.

Ground below the 53rd level, 4,000' below the surface, is reached by 2 subsidiary shafts sunk from the 49th level, connecting with the No. 2 shaft through chutes on the 53rd level and through drift connections on the 49th level. In Oct., 1915, work was started in Quincy, No. 7 shaft; drifts were extended into Hancock ground and although the veins are narrow, the ground is reported to be rich. The 63rd level has been holed through from Hancock's No. 2 shaft to Quincy's No. 7 to provide ventilation. In May, 1916, stoping was in progress on the 68th level, with other stopes to be worked on the 69th, 70th and 71st.

Considerable drifting has been done on both No. 2 and No. 3 beds, No. 3 being opened by a winze from the 10th to 18th levels, with drifts on the 9th to 18th levels, inclusive, several of which are more than 1,000' long. No. 2 shaft has loading stations on the 13th, 18th, 23rd, 27th, 34th, 39th, 44th, 49th and 53rd levels, to which rock broken will be sent by chutes from the levels above.

No. 2 shaft has a shaft rock house that is the most modern in the Lake Superior district. The building has a total height of 128', with working floor 60' above the ground. The bins are of 1,000 tons capacity each.

Equipment: includes two 50-ton Farrel crushers and a smaller crusher to treat waste rock. The 2 large crushers are fed by 2 steel traveling-belt picking tables; crushers each have a 50-h. p. induction motor and each picking table has a 10-h. p. induction motor. Two men per shift are expected to do all work on the crushing floor.

The main engine house at No. 2 shaft is equipped with 2 hoists, main engine being a Sullivan Corliss direct-connected hoist, operating 2 skips in counterbalance, with capacity to hoist 8 tons of rock from a depth of 4,000', at a steam pressure of 150 lbs. There also is a Sullivan first-motion hoist.

The steel compressor house has an electric traveling crane, 13-drill and 16-drill air compressors and a new 35-drill tandem-compound air compressor. The boiler house has 2 batteries of 4 return tubular boilers, each 72" in diameter and 18' long.

Buildings at No. 2 include a machine shop, smithy, office, changing house and a number of dwellings. The main plant at No. 2 shaft is reached by a spur of the Mineral Range railway. Company employs about 200 men when running full time.

Production: in 1915 amounted to 871,000 lbs. refined copper, as compared with 488,678 lbs. in 1914. Shipments of 400 tons daily being made June, 1916, will eventually be increased to 800 tons daily. Ore averages 17 lbs. copper per ton.

The mine has been developed very extensively and given a thoroughly

modern and complete equipment. The ground opened, while by no means as rich as some in the Lake Superior district, is of fair average value and with exceptionally good equipment and an able and experienced management, the Hancock promises to make a successful low-grade mine.

HANEY COPPER CO.**ARIZONA**

Company owns properties at Ramsgate, 12 miles west of Prescott. Did some development work in 1913 and reported to have resumed operations in 1914.

HANNA MINING & MILLING CO.**COLORADO**

Capitol City, Hinsdale Co., Colo. Has copper-lead ores, with steam and electric power and a 100-ton concentrator. Letters returned in 1916. Probably dead.

HANOVER COPPER CO.**NEW MEXICO**

Idle. Hanover, Grant Co., N. M. Geo. A. St. Clair, pres.; with Wm. Elder, M. E. Riley and Arthur Howell, directors. Inc. 1909. Cap., \$50,000; shares \$10 par. Property: 15 claims, north of the Chino Copper property and near the holdings of the Philadelphia Copper Co. Mine has shafts of 70', 100' and 150', and tunnels of 40' and 60', showing copper ore. Company involved in litigation.

HAPPY JACK MINING & REDUCTION CO.**ARIZONA**

Office: 530 Land Title Bldg., Philadelphia. Pa. Mine office: Patagonia, Santa Cruz Co., Ariz. Officers: Alfred W. Barnett, pres. and gen. mgr.; W. H. Barnett, v. p.; Henry W. Scattergood, sec.-treas.; preceding, with Martin Stotz and Theo. Myers, directors. Inc. Oct., 1908, as successor of Happy Jack Mining Co., in Arizona. Cap., \$1,000,000; shares \$1 par, fully paid and nonassessable; issued, 304,709 shares. Property: 9 miles from Patagonia, has a shallow shaft and a 950' tunnel planned to be driven 2,700', showing lead and copper ores. Is said to have shipped considerable ore of good average tenor in the past and is considered promising. Assessment work only done under present ownership.

HARDSCRABBLE MINING CO.**NEW MEXICO**

Pinos Altos, Grant Co., N. Mex. Officers: J. E. Lundstrom, pres.; E. S. Bruning, sec.-treas.; with S. H. Beach and J. T. Janes, directors. J. T. Janes, supt. Inc. 1911 in Colo. Cap., \$150,000; outstanding \$75,000; shares \$1 par. Has a 5-year lease, dating from 1913, on the Hardscrabble mine, 1½ miles W. of Pinos Altos.

The mine is an old one, operated by lessees for a number of years and sold at sheriff's sale in 1909. Present management is said to have opened up low-grade ore, averaging 4.5% copper and 7 oz. silver per ton, and high-grade ore averaging 20% copper and 38 oz. silver per ton. In 1915, 800 tons of high-grade ore shipped, is said to have yielded gross returns of \$12,960. Development is by shaft and tunnels.

HARDSHELL-FLUX MINING & DEVELOPING CO.**ARIZONA**

Patagonia, Santa Cruz Co., Ariz. Officers: Ben Heney, pres.; R. R. Richardson, v. p.; W. E. Francis, sec.-treas.; Frederick John Siebert, cons engr.; Francis J. Heney, counsel; J. C. Hartness, gen. mgr., at last accounts. Property: 30 claims, 6 to 9 miles from Patagonia, including the Flux and Hardshell mines. Ore values are mainly in silver, with some lead, copper and gold. Property regarded as promising, though ore is complex.

HARRIS COPPER CO.**ARIZONA**

Offices: Findlay, Ohio, and 319 Van Nuys Bldg., Los Angeles, Cal. Officers: C. C. Harris, of Findlay, Ohio, pres., treas., gen. mgr. and purch. agt.; W. J. Martin, v. p.-mine supt.; Harry W. Moore, sec.; preceding officers, W. J. Sease, Los Angeles, and Fred F. Harris, San Jose, directors

Inc. July 10, 1910, in Arizona. Cap., \$1,000,000; shares \$1 par; nonassessable; issued, \$710,001. Annual meeting, second Tuesday in January.

Property: 34 claims, 550 acres, in the Tip Top district, about 50 miles north of Phoenix and 30 miles east of Wickenburg, on the Agua Fria river, at the mouth of Black Canyon creek. Claims, partly purchased with stock and partly located by the company, show schists cut by diabase intrusions. The company's map shows 2 groups of claims, the Cascadilla, or western, being in part 3,000' wide, and 1,200' long; the group covers 3 veins running north and south. Development is meager; one shaft in diabase and 2 tunnels with an aggregate of 800' of work, costing \$9,000.

The Copper Reef, or east group, covers 2 veins, 1 alongside the Agua Fria river claimed to be an extension of the vein mined by the Kay Copper Co. Company claims 1,000 tons of \$15 ore blocked out, which is reasonable. One vein said to be 500' wide and another 90' in width, the observers evidently considering altered schist to be vein matter.

The president of the company writes the editor as follows: "We insist that the report speaks the truth quoted as we make the report to you and if any embellishment is placed on the wording of our report, it must conform in meaning to give the information that can be construed from the wording that we give."

The property may have a great outcrop and it may contain copper in commercial quantities, but we defy any mining engineer to find out what the company does have on its property, from the report issued by the management and reprinted as a gem of humor in the Mining & Scientific Press, and in part reproduced herewith: "COPPER.—A red, ductile, tenacious, malleable metal of great and varied use, originally called brass of cypress, copper sand, alacaunte, C group of minerals, mostly soft, included C. suprite, malaconite, malachite, chessylite, chrycopyrite, olivinite, etc. Black C ore, malaconite, gray C ore, Chalcocite, C Purite, yellow C ore, variety Chalcopyrite, the common ore.

"The formation of the Harris Copper Co. have blended with the iron, lime and porphyry with quartz. Many of the above minerals, but more especially the commoner forms with oxides condensed formation on the top with the iron and lime, with a great amount of carbon and sulphur in the schist formation, with an amalgamated condition of the various mineralizations where gold and silver predominates. The schist formation being soft, it stands to reason that when the sulphides appear in the lower rocks, I am led to believe from the geological lay of the uplift that is now held and owned by the Harris Copper Co., there is beneath the surface of this great iron capped ledge a great body of copper ore." Enough said.

Despite the unfavorable impression created by the company's literature, it is understood that the property has genuine merit, has large ore-bodies and with cheaper transportation will make a good mine. Part of property reported leased to Wilson Foster of Los Angeles in 1914 for ten years; lessee is required to spend \$20,000 and company to receive 15% of gross output.

HARRIS COPPER CO.

MEXICO

Oscar Werner, agt., L. A. Athletic Club, Los Angeles. Inc. about 1908. **Property:** 346 hectares, 3 miles east of the Pilares mine of the Moctezuma Copper Co., includes La Caridad group, supposed to have been bought for \$40,000 and said to have 6,000 tons of ore blocked out averaging 4 to 6% copper.

The Caridad mine, about 18 miles east of Nacozari, Sonora, and 10 miles from the Bavispe river, shows N. W. and S. E. shear zones in quartz

porphyry, carrying pyrite in silicified rock. Where crossed by intersecting fissures there are "pipes" of brecciated rock cemented by tennanite (sulpharsenite of copper with 57.5% copper) and chalcopyrite with pyrite. The claims cover precipitous bluffs and pillars of rock, showing porphyry overlaid by coarse, iron-stained breccia (agglomerate). The porphyry shows abundant and widespread traces of mineralization throughout a zone about 2,000x3,000', containing several small "pipe" orebodies of high-grade ore.

Development: 5 tunnels on the Caridad claim, totaling 800', and a few shallow shafts. Diamond drilling has shown that the orebody extends downward, but does not increase in size. Property interesting, but not considered attractive as a large mining proposition.

HARTFORD-ARIZONA COPPER MINING CO.

ARIZONA

Hamburg, Cochise Co., Ariz. Henry Hamburg, pres. and mgr. In Sept., 1913, the Arizona Corporation Commission authorized the company to incur a \$100,000, 6% bond issue, for further mine development. Owns the Wisconsin group in the Huachuca mountains. Company has surveyed a line for tramway to wagon road and will ship to Hereford or to a point on Fort Huachuca branch of the El Paso & S. W. R. R. Property developed by tunnels, has steam plant and compressor and employed 30 men at last accounts. No recent returns secured.

HARTFORD MINING CO.

MISSOURI

Joplin, Mo. **Officers:** L. A. Barbour, pres., Hartford, Conn.; H. H. White, sec.-treas., Joplin, with S. B. Griswold, Carthage, Mo., and C. C. Spencer, Joplin, directors. H. H. White, Joplin, Mo., gen. mgr.; Geo. Elliott, supt., Galena, Kans. **Inc.** 1906, in Missouri. **Cap.**, \$100,000; shares \$100 par, all outstanding.

Output: zinc-lead concentrates; production not available.

HARTWIG MINING CO.

IDAHO

Idle. **Address:** care George Hartwig, gen. mgr., at Vancouver, Wash. Mine at Pollock, Idaho Co., Idaho. **Officers:** Wm. Hartwig, pres.; G. W. G. Geiger, sec.; W. J. Moore, treas.; preceding officers, C. Brinkman, Fred Goldsmith and Gustave Peters, directors. **Inc.** Jan. 3, 1906, in Iowa. **Cap.**, \$72,000; shares \$25 par; fully issued.

Property: 5 claims, patented, 72 acres, and a 5-acre mill site, in the Rapid River district, near Salmon river, said to carry several contact deposits between limestone and diorite, of which 4, under development, are of 30' estimated average width, traceable 400', carrying oxidized and chalcopyrite ores, reported by company to average 14% copper, with traces of lead and zinc, 3 oz. silver and \$10 gold per ton. Figures undoubtedly too high for an average of the orebody. **Development:** 75' shaft, and 3 tunnels of 1,000' aggregate length, an 875' lower tunnel cutting the ore zone, which shows but little ore. Property has 4 buildings but no power equipment. Idle some years, owing to lack of transportation facilities.

HARVARD MINE, INC.

CALIFORNIA

Office: 141 Milk St., Boston, Mass. W. B. Buckminster, gen. mgr.; H. W. Gould, supt. **Property:** 4 claims, and a mill site, 80 acres, on the S. E. slope of Whiskey Hill, one mile S. W. of Jamestown, Tuolumne Co., Calif. Claims cover 5,000' along the strike of the veins.

Ore: 3 veins, the east, central and west, with strike N. 37° W., dip 60° N. E., and average width 10', have been explored. Central vein consists of solid quartz 6' to 12' wide, but values are, as a rule, too low to mine. The east and west veins consist of a mass of quartz stringers cutting the schist and containing free gold. Main footwall is serpentine with hanging-wall of Calaveras slates. Ore occurs W. of the central vein.

There are 7 distinct ore-shoots developed on the property, average length 200', width 6'. Veins are faulted on S. end of orebody between the 1,200' and 1,400' levels, and on the N. end between the 1,100' and 1,200' levels they are faulted 8' to 25' to the S. W.

Development: 3-compartment shaft, 1,650' deep, with levels at 200', 500', 700', 800' and below this at 150' intervals; lowest level is at 1,400'. Total underground workings about 4 miles. Shrinkage stoping is used. Ore pockets, 100 to 200 tons capacity, are in hanging wall of shaft.

Equipment: includes a 300-h. p. double-drum electric hoist; 2 electrically driven Rix compressors of 1,100 cu. ft. and 800 cu. ft. capacity, and a 60-stamp mill driven by two 75-h. p. motors. Weight of stamps, 1,200 lbs. each, drops 7", 100 times per min., crush 5 tons per stamp, through 40 mesh. Mill is 600' from shaft and ore is handled by a 15-h. p. electric motor, in two 1½-ton cars. An 86% extraction is made of the pulp from stamp batteries, by 24 Johnston vanners, driven by 35-h. p. motor. Concentrates assay \$30 per ton. Company employs 116 men. See Mines & Min. Res. of Tuolumne Co., State Mineralogist's Report 1915, pp. 149-151.

HASBROUCK MINE.

NEVADA

Formerly owned by the Hasbrouck Mining Co., but abandoned after doing considerable work. Now owned and operated by Geo. Kernick of Tonopah. Located 5 miles south of Tonopah. Shipments of gold ore were made during 1915, but at last accounts only development work was being done.

HAUXHURST MINE.

ARIZONA

Jas. Hauxhurst, owner and mgf., at last accounts. **Property:** 900 acres, in the Big Horn mountains, about 65 miles W. of Phoenix and 27 miles S. W. of Wickenburg. Mine, formerly owned by the Hauxhurst Copper Co., was under bond for about 3 years to the United States Copper Mines, Inc., which forfeited same, 1909; leased to F. C. Alsdorf, 1913, but apparently relinquished. See Vol. XI, Copper Handbook.

HAVALINA MINING CO.

ARIZONA

Sold its Santa Nino property, Patagonia mountains, S. W. of Duquesne, Santa Cruz Co., Ariz., to J. Wells Smith, Feb., 1913. Property was being developed by 800' crosscut tunnel to reach a rich copper shoot said to have been found in the mine. Litigation has stopped work.

HAYDEN DEVELOPMENT CO.

ARIZONA

Operating the Copper Chief mine of the Copper Chief Mining Co., which see.

HAYES & GRACEY SYNDICATE.

ARIZONA

M. P. Hayes and T. H. Gracey, Los Angeles, Cal., owners. Succeeds the Dragoon Copper Mining & Smelting Co., now dead. **Property:** the Christmas and Eureka claims, carries replacement deposits with silver-lead-copper ores. **Development:** by a 550' shaft. **Equipment:** includes steam power and air compressor. Presumably idle. No returns secured.

HAYNES COPPER CO.

ARIZONA

Succeeded 1916, by Jerome-Victor Extension Copper Co., which see.

HAYSTACK MINES, INC.

NEVADA

Officers: F. L. Reber, v. p.-treas.; Winnemucca, Nev. C. T. Smith, pres. and supt., with W. J. Merryfield, directors. B. Smith, sec.

Inc. June, 1914. No outstanding stock. Annual meeting, first Tuesday in Jan. Gross earnings in 1915, \$7,500 from lessees.

Property: 5 unpatented claims, 35 miles W. of Winnemucca and 7 miles S. of Jungo, on the Western Pacific R. R. **Ore:** occurs as free milling gold, in fissure veins in granite and quartzite. Ore shipped in 1915

said to average \$22 per ton. **Development:** by 70' incline shaft. Management planning to resume shaft sinking.

HAZEL GOLD MINING CO.

CALIFORNIA

French Gulch, Shasta Co., Calif. J. O. Jillson, pres.; E. L. Young, supt. **Property:** 178 acres, patented, and 485 acres, unpatented, at 2,300' elevation, on N. side of Cline Gulch, 5 miles N. E. of French Gulch, includes the Gladstone mine, the largest gold quartz producer in Shasta county. Claims were originally located by T. Cummings in 1896. After exhaustion of oxidized ore the mine changed hands several times until acquired by present company in 1901.

Ore: free milling gold. Two fissure veins with E. W. strike and dip of 60° S. have been mined from adit level to 7th level; below 7th the dip changes to steep N.; average width 2½' to 3'; walls are slate. Ore shoot is 300' long. Milling ore averages about \$10 per ton.

Development: the upper 1,000' of vein has been mined by tunnels, while lower portion is worked from a winze on the main adit (Ohio) level. On the lowest, 1,300' level, a 700' crosscut cut the vein in Nov., 1915. Mine makes about 70 gal. water per minute.

Equipment: includes a 375-h. p. double-drum electric hoist, compressor plant, electric haulage from mine to mill, 9 miles of power and 5 miles of telephone lines. An electrically driven 30-stamp mill is equipped with concentrating tables and electroplating plant. Stamps weigh 1,050 lbs., drop 106 times per min., from height of 6"; capacity, 100 tons in 24 hours, through a 40-mesh screen; 92% extraction. Electric power is obtained from Northern Cal. Power Co. Company employs 140 men.

Production: previous to 1901, said to be \$85,000; 1901-1914 said to be \$3,000,000; yearly production, about \$360,000.

See U. S. G. S. Bull. No. 540, pp. 35, 37, 46, 57-60; Mines & Min. Res. of Shasta Co., State Mineral Report 1915, pp. 43-44.

HAZEL MINING & MILLING CO.

TEXAS

Officers: John V. Hughes, Dallas, Texas, pres.; G. G. Wright, v. p.; C. F. Freeman, Dallas, Tex., sec.; R. B. Stichter, treas. **Directors:** J. V. Hughes, T. J. Oliver, G. H. Cox, C. A. Culters, C. F. Freeman, Milton Parks and G. G. Wright.

Property: the Hazel Silver mine, in Diablo mountains, 15 miles N. E. of Van Horn, Culberson Co., Texas, shows a fissure vein that yields chalcocite ore with barite gangue. Shipping ore said to average 10% copper and 50 oz. silver per ton. **Development:** includes 700' shaft and extensive workings at various levels. Mine was worked for 10 years by H. G. Clifford of El Paso and A. C. Schriver of San Antonio, producing \$500,000, but was shut down in 1895. A dry concentrator was erected to treat the old dumps, said to contain about 100,000 tons of \$15 copper-silver ore, but was unsatisfactory and has been converted into a wet concentrator.

Reported in 1915 that the Sutton Steel & Steel Co. of Dallas had taken over the mine and would operate it.

HEAD LAKE GOLD-COPPER MINING CO.

WASHINGTON

Address: care George Geisler, pres., S. 1111 Augusta St., Spokane, Wash.; J. A. Sullivan, v. p.; A. M. Harris, v. p.; W. E. Allen, sec.-treas. **Property:** 22 claims, about 500 acres, in the Newport mining district, near Metaline, Pend Oreille Co., Wash. Company recently acquired the Comstock and Key Fraction group, containing silver and lead-bearing ore.

HEARNE GOLD & COPPER CO.

COLORADO

Idle. Office: Wheeling, W. Va. **Mine office:** Central City, Gilpin Co., Colo. W. H. Hearne, mgr.; Mathew Daniels, supt. **Inc.** 1907, in Colorado. **Cap.,** \$500,000. **Property:** the Anchor mine, in Willis gulch,

drained by the Newhouse tunnel, shows low-grade copper and lead ores and medium-grade silver ores. Electric power used; has air compressor, and a 50-ton 10-stamp mill and concentrating machinery.

HECLA (CONSOLIDATED) MINE. MONTANA

Glendale, Beaverhead Co., Mont. Mine worked by lessees until 1912, when it was taken over by the Longmaid Bros. of Helena, who installed electric power. **Property:** the Atlantis, Cleves and other mines, formerly owned by the Hecla Consolidated Mining Co., which for 20 years was a large producer of silver and lead, with considerable gold and copper, latter reaching 100,000 lbs. fine copper yearly. Property paid dividends of \$2,250,000 on an original investment of \$40,000, but was bought, 1906, at sheriff's sale, for \$28,000. About 65 men employed for a year or two, but the little ore found was low-grade and the mine was again closed down, and abandoned, after some \$300,000 had been spent.

HECLA CONSOLIDATED MINES CO. WYOMING

Idle. **Office:** 1624 Curtis St., Denver, Colo. **Mine office:** Hecla, Laramie Co., Wyo. **Officers:** Henry Schwartz, pres.; Wm. L. Wilson, v. p.; Lawrence Myers, sec.; Eli Miller, treas., and Henry Hirsch, directors. Inc. 1909, in Wyoming, as a merger of the Hecla Mining Co., Amalgamated Copper Mining & Extraction Co. and Kopper Krown Mining Co. **Cap.**, \$5,000,000; shares \$1 par.

Property: 610 acres, including the Hecla group, 13 claims, 2 patented, and a 35-acre townsite, in the Silver Crown district, 4 miles from Granite Canyon, on the Union Pacific railroad and 7 miles from the Cheyenne Northern line. The Hecla is claimed to show 16 fissure veins, of 8' average width, in schist and granite, of which 3, of 7' average claimed width, carry oxidized and sulphide ores, said to give average assays of 3.4% copper, 3 oz. silver and several dollars in gold per ton, besides nickel, platinum and uranium. **Development:** includes a 40' tunnel and 14 pits and shafts of 10 to 140' depth.

The Teddy Roosevelt-Good Hope group, formerly held by the Amalgamated Copper Mining & Extraction Co., comprises 10 claims in the Silver Crown district, 2 miles from the Union Pacific railway and 23 miles from Cheyenne, with about 700' of workings, claimed to show ore giving fair assays in copper.

The Kopper Krown group, about 2 miles S. W. of Hecla and 22 miles W. of Cheyenne, 7 claims, 140 acres and not 154 acres as claimed by the company, has 413' of workings, claimed to show 10,000 tons of sulphide ore blocked out for stoping.

The Hecla mill has 15 stamps, a 50-ton concentrating plant and a leaching plant. The Ohly process, installed in an attempt to save the rare metals, was not a success. Ore, mainly low in grade, is only in part adapted to concentration, and the mill requires overhauling and adaptation to the ore. With concentration by the Minerals Separation process, on the sulphide ores, property ought to be workable. The history and financial methods of this company and its predecessor are described in Vol. X. Idle, except for annual assessment work.

HECLA COPPER-SILVER MINING AND MILLING CO. WASHINGTON

Chewelah, Wash. **Officers:** J. C. Argall, pres.; Howard McPhee, v. p.; Virgil R. Hoar, sec.-treas.; Fred F. Foster, supt.; preceding, with Chas. Kliner, directors.

Property: 11 claims $3\frac{1}{2}$ miles N. E. of Chewelah and S. of the United Copper Co. holdings. Claims show 4 ledges, the main vein varying from 6 to 14' wide, traceable by cuts and pits for nearly a mile and averaging

5.4% copper, \$1 in gold and \$1.80 in silver. **Developed:** by a 75' tunnel and a 140' vertical shaft. **Equipment:** includes a 50-h. p. hoist and a 4-drill compressor. Company plans sinking the shaft to 500'.

HECLA-GRANITE MINING CO.

COLORADO

Idle. Mine near Turret, Chaffee Co., Colo. Company is an offshoot of the Stratton Gold & Copper Mining Co. that took over the Stratton group. Owns the Copperopolis group of 5 claims developed by 600' shaft and said to show an 8' vein of copper ore in shoots.

HECLA MINING CO.

IDAHO

Wallace, Idaho. **Officers:** Jas. F. McCarthy, pres.-treas. and gen. mgr. Wallace; Frank Upman, v. p., with Sarah E. Smith, Carl Landsee, F. J. Kipp, W. J. C. Wakefield and H. C. Lambach, directors. L. E. Hanley, sec., Wallace. Original Hecla Mining Co., inc. in Idaho in 1891, with cap., \$500,000 and shares \$1 par, owned the Hecla and Katie May claims. **Reincorporated** July, 1898, in Wash. **Cap.,** \$250,000; shares 25 cts. par; all issued and fully paid. Security Transfer and Registrar Co., New York, transfer agent; Metropolitan Trust Co., New York, registrar. Annual meeting in April. Listed on New York Curb and Spokane Stock Exchange.

Balance sheet, Dec. 31, 1915, shows: assets: \$1,067,361, which includes property and improvements, \$716,350; inventory, \$35,562; accounts receivable, \$1,530; ore in transit, \$114,272; cash, \$199,645. Liabilities include: accounts payable, \$52,501; reserves for depreciation, \$333,091; surplus, \$431,768.

Income statement for 1915 shows: net receipts from ore sales, \$1,028,991; interest and misc., \$5,495; total, \$1,034,486. Expenditures, \$388,340, which include: mining and development, \$259,177; ore sorting, \$21,620; haulage, mine to mill, \$11,168; milling, \$40,261; taxes and general \$56,112. Net income, \$646,146; depreciation reserves, \$84,395, leaving net profit of \$561,751.

Dividends: for 1915 amounted to \$565,000 or 56½ cts. per share. Total dividends paid to 1916, \$3,775,000. Dividends in 1916 total \$800,000 to July 20, at which date the 158th consecutive dividend was paid. Dividend rate, formerly 2 cts. per share per month, was decreased to 1 ct. in 1914, due to condition of the lead market, and increased, Dec., 1915, to 10 cts. per share; increased June, 1916, to 15c per share.

Property: 29 patented claims, 347 acres, near Burke, also mill site at Gem. **Ore:** chiefly silver-lead sulphides accompanied by sphalerite and pyrite, occurring in the Hecla lode; strike N. W.-S. E., with average dip 80° to N. E. General country rock is sericitic Burke quartzite. The lode is intimately associated with a lamprophyric dike, which has an average width of 2'. Ore averages 5' to 6' in width, occurs mainly in the quartzite on one or both sides of the dike, and, to a large extent, fills fissures. The pay shoot has an extreme length of 1,200'. For geology of Coeur D'Alene district, see U. S. G. S. Prof. Paper No. 62. Also paper by Oscar A. Hershey. Published by Mng. & Sci. Press.

Development: by tunnels and shafts; working shaft 1,600' deep with 20,000' drifts and crosscuts. Development work in 1915 amounted to 3,411'. Lowest level is at 1,600', where orebody has been drifted on for its full length. The 1,400' level had 535' work done in 1915, all in ore; the 1,200' level had 529' in ore which is apparently an extension of the old orebody; the 600' level, 344' work in waste, and 88' in ore, which discloses the same extension; the 270' level 270' in ore.

Ore reserves: estimated Jan. 1, 1916, at 1,110,000 tons, sufficient at present rate of production to last over 6 years.

Equipment: the property is one of the best equipped in the district with hoists, compressors, machine shops, and a 500-ton concentrator, the latter at Gem, has a flotation unit, using General Naval Stores oils. Electric haulage is being tried out on the 1,600' level; if successful there, it will be extended to other levels. Company employs 175 men. In June 1916, leased the Union mill from the Federal Mng. & Sm. Co., planning to increase production 60%.

Production:

	Ore & Cncts.		Lead Lbs.	Silver Ounces	Lbs.Pb. Oz.Ag. per T. per T.	Sell. Pr.	
	Shipped Tons					Pb.	Ag.
1915.....	26,214 (a)		24,917,867	692,444	951 26.4	4.866	50.4
1914.....	20,051		18,957,823	509,200	945 25.4	3.866	55.0
1913.....	19,937		18,832,534	507,236	945 25.4	4.364	50.5

(a) includes 15,199 tons dry concentrates and 11,015 tons crude ore; 112,646 tons ore were milled.

Costs per ton, 1915, were as follows:

	Perm.					Gross			
Mng.	Dev.	Sorting	Imp.	Misc.	Mill	Trans.	Rec.	Exp.	Profit
\$1.68	8.7c	14.7c	14.7c	38.3c	35.7c	9.9c	\$7.05	\$2.65	\$4.40

The Hecla mine, unsuccessful in its early years, has become one of the steady dividend payers of the district. The property is kept up to a high standard in condition and is most efficiently managed.

HEDLEY GOLD MINING CO.

BRITISH COLUMBIA

Offices: 42 Broadway, New York, and Hedley, B. C. **Officers:** I. L. Merrill, pres.; W. B. Dickson, v. p.; C. D. Fraser, treas.; preceding, with W. D. Thornton, C. A. Congdon, G. E. Tener, F. E. Searle, Marcus Daly, and W. E. Corey, directors. J. D. Clarke, sec. and assist. treas. Gomer P. Jones, gen. supt., Hedley, B. C.

Inc. Aug., 1909, in Delaware. Is successor of the Yale Mining Co. **Cap., \$1,500,000;** shares \$10 par; outstanding \$1,200,000. American Trust Co., Boston, transfer agent. Old Colony Trust Co., Boston, registrar. Annual meeting, second Wednesday in April, at 42 Broadway, New York. Listed on Boston Stock Exchange.

Comparative Statements of Income Account:

Year	Rec. at		Expen- ditures	Profits (a)	Dividends	Erngs. on	
	Mill					Surplus	Cap.Stk.
1915.....	\$796,591		\$421,846	\$374,745	\$300,000	\$74,745	\$3.12

1910.....	1.40	14	1914.....	2.50	25
1911.....	2.50	25	1915.....	2.50	25
1912.....	3.00	30	1916 to July 1, 1917	1.00	10

Property: the Nickel Plate and Sunnyside mines, 31 claims, crown-granted, and a mill site, 1,370 acres in all, on Nickel Plate Mountain, and in Similkameen Valley, Osoyoos mining division, Boundary district, Hedley, B. C. Also owns the Copper Flat property near Silver City, N. M.

Geology: the Hedley ore deposits are of contact metamorphic origin, and occur at contact of dikes and sheets of gabbro in altered limestones; they are irregular in outline, usually have a well-defined boundary on the side of the gabbro, and dip about 24°. Ore occurs in shoots. Nickel Plate shoot is 150' wide, 40' thick, and 1,500' long. Principal ore mineral is arsenopyrite, with which occurs chalcopyrite, pyrrhotite, sphalerite, pyrite, gold and sometimes tetradymite; the valuable content of the ore is gold alone. In the association of gold with arsenopyrite in deposits of this origin the Nickel Plate ore deposits are unique and have no known counterpart in North America.

All ore treated in 1914 and 1915 came from the Nickel Plate property. **Ore reserves:** estimated Jan. 1, 1916, at 423,500 tons, average assay \$10.39 per ton.

Development: 2 tunnels, 900' and 1,160' long and a 35° incline shaft, 900' deep. Greatest depth of workings, at 5,200' elevation, 670' below the outcrop. Shrinkage stoping is used; no timbering required. In 1915 ore opened up on the 700' level was found to be 25' wide, assaying \$12 to \$13 per ton. Below the 700' and separated from it by an andesite sheet, lies another orebody which is said to be as wide as the ore on the 600' and 700' levels, but with values averaging \$15 per ton. New work in 1915 totaled 935', in addition to 2,784' diamond drilling. Company plans to develop orebodies below the 600' level in 1916.

Ore is transported from the mines to the mill at Hedley by means of electric and gravity tramways; the electric tramway is 1 mile long, while the 45° gravity tramway is 10,000' long, with a 4,000' drop.

Equipment: includes an air hoist, two compressors, each of 2,000 cu. ft. capacity and driven by 440-h. p. motors; also a 200-ton 40-stamp mill equipped with 24 Frue vanners and 12 Deister tables. The system is being changed to an all cyanide plant.

Electric power supplied by company's hydro-electric plant on the Similkameen river. The dam, located on the river just below its confluence with Twenty-Mile Creek, is of the stoplog type; from it water is conveyed in a flume, 7'x9' inside dimensions, a distance of 15,000' to the forebay, which supplies 2,100-h. p. twin turbines through an 8' steel penstock. Powerhouse has a 1,250 k. v. a. alternating current generator. Work was started on the dam about Jan. 1, 1914, and the whole plant was finished and in operation Jan. 2, 1915. Total cost of plant, \$192,009, charged to capital account.

Recent production:

	Ore Tons	Ave. Assay	Gold Rec.	% Rec.
1915.....	74,265	\$11.65	\$796,592
1914.....	78,494	10.80	797,340	94.09
1913.....	70,796	12.03	802,330	94.14
1912.....	70,455	11.19	748,133

Conditions in the lower levels of the mine have changed considerably during the last two years. While the orebodies are larger and stronger and maintain practically the same grade, the specific gravity has increased due to an increase in arsenopyrite, which adds to the cost per ton of ore milled. Concentrate tonnage rose from 3,831 tons in 1913 to 6,218 tons in 1915 and to offset this increase in costs the company is installing a cyanide plant. Is a good property and well managed.

HELENA MINING BUREAU, INC.**MONTANA**

Helena, Mont. **Officers:** S. A. Balliet, pres.-mgr.; M. H. Gerry, Jr., v. p.; preceding, with E. N. Brandegee, O. G. Beck, J. P. Bahnsen, C. E. Dalton, and Wm. Scallon, all of Helena, directors. L. M. Rheems, sec.-treas. W. F. Word, supt. **Inc.** May 7, 1914, in Montana. **Cap.**, \$100,000; shares \$5 par; 875 shares outstanding. Annual meeting second Monday in Jan. Operating expenses in 1915, \$15,000.

One of the objects of the Bureau is to develop properties to a certain stage and then endeavor to transfer them to some company that will continue the development. Since its organization several properties have been acquired in the Scratch Gravel and Unionville districts within a few miles of Helena. Among these are the Eastern Belle, Wayside, and Blue Bird in the Scratch Gravel district, and the Yellow Boy, White Boy, Panama, Lena, and Little Wonder in the Unionville district. The Eastern Belle has been transferred to Huffaker and Hill of Helena and small shipments of gold ore have been made. The Wayside and Bluebird have also been transferred.

The Bureau has recently put the Yellow Boy in shape for operation; a shaft had been sunk to the 100' level with a long drift on the vein and a winze to the 150' level. **Ore:** free milling gold, is treated in the stamp mill on the Little Wonder, $\frac{3}{4}$ of a mile distant. **Ore** has been cut in the bottom of the winze and if this proves of any importance the shaft will be sunk deeper.

Work of the Bureau deserves great praise and has done much to restore the once famous Scratch Gravel and Unionville districts to the attention of the mining world generally.

HELVETIA COPPER CO.**ARIZONA**

Idle. Office: 907 Metropolitan Life Bldg., Minneapolis, Minn. **Mine and works office:** Helvetia, Pima Co., Ariz. **Officers:** C. C. Prindle, pres.; Chas. W. Sexton, v. p.-sec.; preceding, with William A. Paine, Jas. H. Seager, John S. Pillsbury, Russel M. Bennett and John R. Van Derlip, directors. Robt. H. Gross, treas. **Inc.** March 3, 1899, in New Jersey, and reorganized Oct. 4, 1905, in Arizona. **Cap.**, \$5,000,000; shares \$25 par, in \$250,000 full-paid and \$4,750,000 assessable stock; fully issued. Levied 50-ct. assessments, payable July 20, 1908; April, 1909; February, 1910, and Feb. 15, 1911, the latter assessment rendering the stock \$15 paid. State Street Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, 1st Monday after 1st Tuesday in October.

Financial statement of Dec. 15, 1915, is as follows: Capital stock, \$3,100,000; expenditures to date for mining property, \$2,181,786; for development, \$95,450; for equipment, \$40,250; treasurer's account, \$30,727; unpaid assessments, \$35,388; interest on funds on deposit, subject to check, \$10,012; ore account, \$3,550; accounts receivable, \$50; general expense, \$26,404; taxes, \$1,068. There is no bonded indebtedness and all accounts are paid.

The company's holdings are at Helvetia, at the west foot of the Santa Rita mountains, 18 miles north of Vail, on the Southern Pacific, and El Paso & Southwestern railroad.

Property: 38 patented claims, also 8 patented mill sites and 960 acres of scrip land, giving total holdings of 1,673 acres, 30 miles S. E. of Tucson. The formations, resembling those of Bisbee, include Carboniferous and older limestones lying north of a great granite mass with porphyritic intrusions. The limestone has many iron outcrops underlain by orebodies occurring as replacements. These have an average strike of N. 35° W., with average dip of 45°, carrying ore of 2 to 4% copper.

There are 5 known orebodies called the Isle Royale, Old Dick, Exchange, Pilot and Heavy Weight, with development on 3.

The Copper World mine, to which operations were confined before closing down in 1912, was the principal producer of recent years, showing a vein of 15' estimated average width, traceable about 3,000', carrying oxidized ores above and sulphides below, with values, mainly in the latter, formerly estimated by company to average 5% copper, 0.5 oz. silver and 50 cts. gold per ton, which figures probably were too high. The Copper World mine has a 480' shaft sunk at an angle of 64°. A heavy flow of water on the 400' level hampered operations and necessitated bulkheading until the installation of a Prescott triplex pump, with capacity of 700 gals. per minute, working against a 500' head.

The mine as a whole has several miles of laterals, estimated to show about 400,000 tons of ore. **Equipment:** includes a 375-h. p. steam plant and a 50-h. p. gasoline hoist, good for depth of 600', a 9-drill Ingersoll-Sergeant air compressor and an electric light plant.

The cost of hauling this ore to the railroad proved too expensive to permit operating at a profit and the amount of ore developed does not warrant building a railway, so the mine is closed down.

Management reports Oct. 4, 1915, that an expenditure of over \$279,000 would be necessary to build a railroad from Helvetia to Vail, and put the company's properties in shape for mining. An assessment of \$2.50 per share would have to be levied to raise this amount and company considered such assessment inadvisable at that time.

For full description of properties and development, see Vol. XI, Copper Handbook.

H. E. M. MINING CO.

IDAHO

Consolidated with the Aurora-Sampson Mining Co. to form the Western Union Mining Co., which see.

HEMBRILLO COPPER MINING CO.

NEW MEXICO

Mine in Socorro Co., N. M. **Officers:** J. W. Eubanks, county surveyor, El Paso, Texas, pres.; W. M. Fly, Gonzalez, Texas, v. p.; H. C. Marks, sec.-treas.; John P. O'Connor, gen. mgr. Inc. 1904.

Property: 12 claims, in Hembrillo canyon, on the eastern side of the San Andreas mountains, 35 miles W. of Tularosa, with a wagon road thereto, said to carry 3 strong veins with N.-S. strike converging to the S. The central or main vein is but a few inches wide at the surface, but widens to 6' in the shaft. Vein lies between quartz-porphry and limestone and is said to have a nearly vertical dip. **Development:** by the Platte crosscut tunnel 1,000' long, in April, 1914, which has cost over \$20,000 and has cut the vein 500' below the outcrop. Before starting this tunnel company sank numerous pits showing copper ore, and a 150' vertical shaft in which the vein is seen to carry oxide and carbonate ores that average 12% copper and has a little chalcopryite in the lower workings. The heavy flow of water led to the abandonment of this shaft. A 10-ton shipment to El Paso smelter in 1914 said to have assayed 24% copper and 4.6 oz. silver per ton.

HEMLOCK SILVER-LEAD & MINING CO.

MONTANA

Saltese, Missoula Co., Mont. Walter J. Hughes, pres. Inc. 1907, in Montana. **Cap.**, \$150,000; shares 10 cts. par.

Property: 3 claims, on Packer Creek, 1½ miles from Saltese, is an old prospect, worked by tunnels. Present management sank a shaft 150', and in 1914 crosscut 220' to the lode, which is claimed to be 60' wide and to carry silver-lead ore.

Friction in the company is said to have delayed operations. At last

accounts, Feb., 1916, the mine was being worked and shipments were supposed to start when the roads became passable; another assessment was then in sight.

HEMPLE COPPER MINING CO.

ALASKA

Valdez, Alaska. **Mine office:** Landlock, Alaska. **Officers:** S. A. Hemple, pres., treas. and gen. mgr.; F. S. Sylvester, v. p.; S. I. Hemple, sec.; preceding, with Arthur Lang and R. P. Ferguson, directors; Frank Stone, supt. **Inc.** March, 1910, in Alaska. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. Company is said to have expended considerably over \$25,000 on the property. Is controlled by Galena Bay Mining Co.

Property: 6 patented claims, 120 acres, with a 2-acre mill site, all timbered, near the Standard and Three Man mines, at Landlock bay. Shows greenstone, slate and quartzite, carrying 2 veins with 5 or 6 shoots, said to average 24' in width and to be traceable 2,000', carrying chalcopryrite giving average assays of 3 to 6% copper. Mine is opened by tunnels of 50', 300', 575' and 800', with about 2,000' of workings, estimated by management to show about 200,000 tons of ore blocked out for stoping, which estimate seems high. There is no power plant, but property has 6 buildings and gasoline engine.

HENLEY CONSOLIDATED COPPER MINES.

WYOMING

Henry Schwartz, 308 Masonic Temple, Denver, Colo., chief owner; H. W. Honacker, v. p. **Property:** 3 claims, 60 acres, 25 miles S. W. of Cheyenne, Laramie Co., Wyoming. Developed for 15 years past. Mine has 2 orebodies. Property reported sold to an English-French syndicate in 1913, for \$5,000,000, which report was evidently premature, to say the least.

HENRIETTA MINING & MILLING CO.

COLORADO

Company has suffered from a complication of bad luck and bad financial conditions and has been in a comatose condition for several years past. The former president, E. C. Drews, is said to be in the penitentiary, but whether for his connection with the company or not is not known. Company and its property, near Silverton, Colo, are described Vol. X, Copper Handbook.

HENRY ADNEY GOLD MINING CO.

COLORADO

A close corporation operating the Henry Adney mine on Rosebud Hill, Cripple Creek.

HERCULES MINING CO.

BRITISH COLUMBIA

Idle. Nearest P. O.: Jedway, Queen Charlotte island, B. C. Claims are near the Ikeda mine, on Moresby island. Apparently has little or no development.

HERCULES MINING CO.

IDAHO

Burke, Idaho. Company is not incorporated. Controlled by the Day Brothers and associates and information on the property is not made public.

Owns and operates the Hercules mine, a large silver-lead producer. The ore, containing galena, with high silver values, occurs in the lower beds of the Burke formation. The ore shoot has enlarged downward until, at a depth of over 2,000', it is said to be three times as long as it was in No. 2 tunnel. **Development:** by tunnels. The Humming Bird tunnel, 8,000' long, finished 1914, gives an additional depth of 800' on the vein.

The mine and mill were idle for three months in 1915, due to a deadlock resulting from a controversy over renewal of the smelting contract with Amer. Sm. & Ref. Co. As a result the Hercules acquired and remodeled the old Northport smelter, near the Canadian line in Washington, where ores and concentrates from the Hercules and Tamarack & Custer mines are now treated.

Production: \$1,868,761 net in 1914 gave the mine first place among the mines of the Northwest. In 1915 the mine ranked third in output, with net profits of \$1,096,019. The report shows: tons extracted, concentrates and crude ore, 49,441; gross value, \$3,090,175; cost extraction, \$950,852; cost transportation and reduction, \$986,219; cost betterments, \$57,084.

Reported in April, 1916, that the 500-ton mill was treating more than 1,000 tons daily; feed contains about 15% lead, 12 oz. silver and a varying amount of zinc. Most of the concentrate is comparatively low-grade, the object being to save as much iron as possible as flux for the Northport smelter. The flotation plant is reported to use General Naval Stores oils.

The mine is comparatively young and the orebodies opened up are sufficient to keep the property in the front rank of producers for many years.

HERMINA MINING CO.

ONTARIO

Office: 109 5th St., Calumet, Mich. **Mine office:** Massey, Ontario, Canada. **Officers:** Edw. J. Hall, pres.; Christ Schenk, v. p.; Lucas Hermann, sec.; W. B. Anderson, treas.; preceding, with Ole Olson, A. T. Laberge, W. O. Olson, J. S. Pickell and T. H. Pollack, directors.

Inc. June, 1903, in Ontario. Cap., \$2,500,000; shares \$12.50 par; \$8 paid and \$4.50 assessable. Total assessments to date, \$2.35 per share; 71,000 shares issued. Annual meeting, fourth Tuesday in June. Property: 1,040 acres near Massey, Ont., on which shafts were sunk and ore developed. In 1910 company extracted small quantities of copper, but has been idle since then.

HERMOSA COPPER CO.

NEW MEXICO

Office: 30 Church St., New York. **Mine office:** Hanover, Grant Co., N. M. **Officers:** John B. Keating, pres.; L. B. Judson, v. p.; M. F. Westover, sec.; Henry N. Darling, treas.; preceding, with A. W. Burchard, D. M. Riordan, directors. **Inc. July 20, 1905, in New Jersey. Cap., \$100,000; shares \$100 par. Corporation Trust Co., New York, registrar. Annual meeting, first Monday in June.**

The mines, discovered 1800, and opened 1880, were worked intermittently, owing to various Indian troubles and lack of funds, until taken over, 1904, by the present owner, which practically is the General Electric Co.

Property: 114 claims, patented, about 2,200 acres, in the Central or Hanover district, adjoining the Chino Copper Co., includes the Ivanhoe and Humboldt mines, also the Copper Queen, Treasure Vault, Wild Cat, Ninety, Tourmaline and other mines and attempts at mines. Country rocks are porphyry, granite, quartzite and limestone, showing various contact deposits between granite and limestone, with porphyry intrusions, ores occurring as lenticular bodies, in veins with a generally N. E.- S. W. strike and an average dip of 45°. Four different orebodies are developed, ranging from 15 to 20' in width, with a known depth of 410' and known length of 2,000'.

Development: by several shafts, 300 to 400' deep and all showing ore; the various mines have about 3 miles of workings, estimated to show 100,000 tons of ore, with 25,000 tons blocked out for stoping. The property has large bodies of low-grade concentrating ore carrying average value of 3% copper, 3 oz. silver, and slightly under \$1 gold per ton, with small quantities of lead near the surface and occasional traces of zinc, but not in sufficient quantities to materially hamper reduction.

Equipment: includes a 700-h. p. steam plant, with 7 hoists, good for 500 to 1,000' each, and 4 Sullivan air compressors of 26 drills aggregate capacity.

Buildings include machine shop, smithy, carpenter shop, framing mill, warehouse and sawmill, with a total of 20 buildings.

The 100-ton concentrator has a No. 14 Blake crusher, 2 sets of rolls, 1 Hartz jig, 5 Overstrom tables, 2 Wilfley tables, 7 screw sizers, 1 hydraulic sizer and 1 Huntington mill.

Considerable systematic development was done, 1904-07, based upon estimates of tonnage by eminent engineers, but results did not come up to expectations, for although some fairly large bodies of low-grade ore were found, they were not large enough to render the property profitable. Property closed down and in hands of a caretaker at last reports.

HERMOSILLO COPPER CO.

MEXICO

Office: 914 Columbus Savings & Trust Bldg., Columbus, Ohio. **Operating office:** Apto. 98, Hermosillo, Sonora, Mex. **Officers:** J. L. Zimmerman, pres.; C. P. West, v. p.; R. D. Wood, sec.-treas.; preceding, with A. J. Rusling, F. E. Resler, L. A. Clark, E. C. Plyley, Gilbert Holmes and Dr. H. W. Whitaker, directors. **Jas. Penman, gen. mgr. Inc. Feb. 13, 1909, in Mexico. Cap., \$1,500,000; shares \$1 par; nonassessable; issued, \$1,031,052. Authorized bond issue, \$200,000 of 7% convertible gold bonds; amount outstanding Dec., 1915, \$24,100.**

Company was a reorganization of the Verde Grande Copper Co., whose old shareholders were given new stock, share for share, by paying 25 cts. cash per share.

Property: about 1,300 acres, with 200 acres of mill and smelter sites, in the Hermosillo district, about 28 miles N. W. of Hermosillo, consists of 9 claims, reported by the management to carry porphyry and lime cut by granite. The Picacho and Verde Grande have contact deposits in limestone, near igneous intrusives, carrying oxidized ore giving assays of 6% copper, 8 oz. silver and \$1 gold per ton. La Cobriza group and La Verde have contact deposits between granite and quartzite, of 30 to 60' claimed width, traceable 7,000', carrying auriferous and argentiferous copper ore said to assay 5.5 to 20% copper, with gangue of talcose limestone. Company reports 7 orebodies under development of 10 to 100' width, averaging 5.44% copper, 8.66 oz. silver and 75 cts. gold per ton.

Development: 20 shafts and tunnels with over 7,000' of workings, reported to show over 200,000 tons of ore. **Equipment:** consists of a 100-ton Allis-Chalmers blast furnace, a 30-h. p. hoist, 6-drill compressor, etc. Smelter is 1½ miles from principal workings.

Owing to the Mexican revolution the work done for the past few years has been mainly churn drilling. Company expects to operate smelter and vigorously develop mine when peace is restored.

HESS MINING CO.

CALIFORNIA

I. W. Gibbons, supt. Property: at Alturas, Modoc Co., Calif., said to show gold-quartz ore. **Development:** 300' shaft. **Equipment:** 10-stamp mill, compressor and cyanide plant. Employs 15 men.

HIDALGO COPPER MINING & SMELTING CO.

MEXICO

Office: Avenida 16 de Septiembre No. 26, Mexico, D. F. **Mine and works office:** Zimapan, Hidalgo, Mex. **Officers:** Sydney Ludlow, pres.; Ricardo T. Sobey, v. p.; R. A. Mills, sec.; Hedley Ludlow, treas.; preceding, with George A. Camphuis and W. H. Armstrong, directors; Hedley Ludlow, gen. mgr.; Jas. H. Armstrong, supt.; Plenio Lopez, engr.; Halarion Diaz, chemist. **Inc. Aug. 14, 1907, in Arizona. Cap., \$2,000,000; shares \$10 par, in \$1,000,000 preferred and \$1,000,000 common stock. Annual meeting, third Monday in August.**

Property: 44 mines, 500 acres, with a 500-acre mill site, said to carry copper ores, with small amounts of lead ore. Lands show monzonite-

porphyry and limestone, with contact orebodies. Copper ores are estimated by the company to average 2.8% copper and 800 grams silver per ton. The mines have a great variety of ores, including copper oxides and carbonates, carbonate and sulphide ores of lead, argentite and chalcopryrite. **Development:** by shafts and tunnels, with a total of 3,000 meters of workings, estimated to show 50,000 tons of ore, with 20,000 tons blocked out for stoping.

Equipment: includes a small steam plant and 16 buildings. Company employs about 800 men at the mines and works.

The 50-ton smelter, at Zimapan, 5 miles from the mine, receives ore by pack-train. Copper production is 20% matte, sent to the Aguascalientes smelter. Lead smelter running, 1913, after many years' idleness, on ore from Nevada group of mines, averaging 25% lead and 900 grams silver. Company plans further development of Purisima, Camino and Concordia groups, and was installing oil engines and electric light, etc., at smelter. Probably closed down, owing to disturbed conditions in Mexico. No recent returns secured.

HIDDEN TREASURE CO.

SOUTH DAKOTA

Trojan, Lawrence Co., S. D. **Officers:** S. T. Cochran, pres.; J. N. Andrews, v. p.-sec.; Banks Stewart, treas. and gen. mgr.; above, with J. T. Bickle, Harry Thurston and Wm. Hill; directors at last accounts. **Property:** near Deadwood. **Ore:** carries copper-gold values. Has recently resumed shaft sinking after having crosscut E. and W. 100' on the 200' level. Property is a prospect.

HIDDEN TREASURE GROUP.

MONTANA

Address: W. J. Stephens, owner, Missoula, Mont. **Property:** near Clinton, Missoula Co., Mont., 9 patented claims in the Wallace district, said to show 5 veins with gray copper and bornite ores averaging 2 to 20% copper, \$2 to \$4 gold and 2 to 20 oz. silver per ton as sorted for shipments.

Development: mainly on Hidden Treasure and Cascade claims, includes 2 tunnels in a steep mountain side, uppermost 558' on vein claimed to be 50' wide. Ore cut 80' from portal and extends to face. Lower tunnel, 1,400' long, follows the east vein, said to be 50' wide. Crosscuts develop 1 other vein of 13' width and drifts have opened up some rich spots and several hundred feet of concentrating ore. Total work 3,600'. Shipments began 1899 and ceased in 1907 and property has had but little development since, though owner expects to reopen it in 1916.

HIGGINS & BIELENBERG MINE (H. & B.).

MONTANA

See B. & H. Mines & Mill.

HIGGINS LEASING CO.

ARIZONA

Inc. 1912, to prospect the Higgins property for silver-lead and copper ores. Lease has expired and property reverted to owner, Thos. Higgins, of Los Angeles, in 1916.

HIGH TOP MINING CORPORATION.

VIRGINIA

Walter Hall, supt., Elkton, Rockingham Co., Va. **Inc.** 1909 in Arizona. **Cap.**, \$10,000,000; shares \$10 par. Is a reconstruction of the High Top Copper Mining Co.

Property: about 1,000 acres in Greene Co., Virginia, 10 miles from Elkton, on the Norfolk & Western railway, said to show ore zone 600' wide carrying sulphide ores, claimed to give average assays of 6% copper, 10 oz. silver and \$15 gold per ton, which figures are entirely too high. **Development:** by shaft 130' deep, with a 30' crosscut said to show 8' of rock spotted with bornite and chalcocite, giving sample assays of 10% copper. There also is a 55' shaft and several shallow pits and open cuts, tracing the outcrop for the entire length of the property. A report formerly circulated by

the company states that there are 70,000,000 tons of commercial ore discovered, which is a statement worthy of Baron Munchausen. Property does show occasional spots and bunches of copper ore and a few tons of selected ore have been shipped, but the mineralized rock as a whole is altogether too lean to work at a profit. Company is believed to have no chance to succeed, its officers to be self-deceived and stock is considered valueless. The property has been visited by various geologists and described in official government reports and the guarded warning given therein should be heeded.

At the request of the financial house backing the company, this office sent an engineer to look over the property and see if above statements were incorrect. His examination confirms what has been said and throws serious doubt on the judgment, to say the least, of the retired army officer, who is acting as the company's advisor and engineer.

HIGHGRADE SILVER & COPPER MINING CO. WASHINGTON

T. F. Hertzell, pres.-mgr., Chewelah, Stevens Co., Wash.; L. E. Hertzell, v. p.; W. W. Dickson, sec.-treas. Inc. 1909 in Washington. Cap., 1,500,000 shares; assessable. **Property:** formerly known as the Enterprise, in the eastside mineral belt 3 miles from Chewelah, shows an ore deposit along a granite limestone contact. **Development:** includes a 125' shaft with some crosscutting exposing a short 6" streak of high-grade silver-copper ore and some galena with stephanite. Small shipments are said to have assayed 7.7% copper, 85 oz. silver and 20% lead.

Equipment: includes boiler, hoist, pump and 2 buildings.

Property taken over July, 1916, by Columbia Copper Co., which see.

HIGHLAND BOY GOLD & COPPER MINING CO. UTAH

Controlled by Utah Cons. Mining Co., and described under that title.

HIGHLAND COPPER CO., LTD. MONTANA

Office: 20 Riverside Ave., Spokane, Wash. **Officers:** R. C. McCaffery, pres.; J. A. Anderson, v. p.; Homer Wylde, sec.-treas., with N. J. Thomas and J. H. Marks, directors. Inc. 1909 in Washington. Cap., \$1,500,000; shares \$1 par; issued, 415,200.

Property: 5 claims, unpatented, 130 acres, in the Silver Star district of Madison county, Mont., shows granite and limestone, carrying 5 contact deposits, with some work on each, there being 9 pits and shafts, of 45' and 80'. Main vein, estimated by company at 10' in width, shows copper carbonates at surface, with chalcocite and chalcopyrite at depth, ore having given average assays of 6% copper, 2 to 5 oz. silver and \$19.78 gold per ton. **Equipment:** includes a 40-h. p. hoist, good for 1,000', and necessary mine buildings. Is a prospect.

Probably idle. No recent returns.

HIGHLAND SURPRISE CONSOLIDATED MINING CO. IDAHO

Kellogg, Idaho. Chas. Weigand, sec.-treas. **Officers:** W. W. Papesh, pres.; M. J. Sinclair, v. p.; preceding, with Geo. Lomielle, Wm. McDougall, C. W. Simmons, all of Kellogg, and Al. Page, Spokane, directors. P. F. Rogers, mgr., Beeler. Inc. 1912 in Idaho. Cap., \$1,200,000; shares \$1 par; assessable; 1,158,000 shares outstanding. Company is a consolidation of the Surprise Mining & Milling Co. and the Highland Chief Group. Annual meeting, 4th of April. Listed on Butte Exchange.

Annual report for fiscal year ending April 2, 1916, shows: net returns from shipments, \$27,214; total expenses, \$27,704; operating loss, \$490. Cash balance, April 3, 1915, \$1,341; sales of treasury stock during fiscal year, \$15,061; miscellaneous receipts, \$505; total year's income, \$44,121.

Property: 21 claims, 3 patented, 400 acres on Pine Creek, 15 miles by road S. of Kellogg. **Ore:** silver-lead-zinc sulphides in fissure veins in slate;

veins strike N. 60° E., dip 70°. **Ore:** occurs in shoots 3' to 14' wide. The pay shoot is said to be 7' wide and 1,500' long, with step faults to the S. about every 200'. Ore is said to average 5 oz. silver, 8% lead and 20% zinc per ton. Ore reserves not reported.

Development: by tunnels, longest 2,000' with 4,750' of underground workings; greatest depth of workings, 325'. **Equipment:** includes a 6-drill compressor, two 80-h. p. boilers, 75-h. p. engine and 150-ton mill. It was reported in March, 1916, that a flotation unit would be added to the mill. Concentrates said to assay 17 to 22 oz. silver, 58% lead, and 40% zinc. Electric power obtained from the Washington Water Power Co. Concentrates hauled to the railroad at Pine Creek siding. Company employs about 35 men.

Production: for fiscal year ending April 2, 1916, was 750 tons zinc concentrates, yielding \$31,361; 23 tons lead concentrates, containing 1,865 oz. silver, which returned \$5,401.

Company plans sinking a 3-compartment shaft to 500' depth in 1916.

HILARITY MINING CO.

IDAHO

W. H. Moffitt, sec., Wallace, Idaho. Jacob Lackman, pres., Nampa, Idaho. **Cap.**, \$1,000,000; shares \$1 par. A 6 months' option, dating from April 18, 1916, on majority of stock, has been taken by Spokane brokers. Listed on Butte Exchange.

Property: 7 claims in the Pine Creek district, covers about 1 mile along strike of vein said to be the extension of the Constitution Douglas. **Ore:** lead-zinc. Development under way in 2 tunnels. Property is a prospect.

HILL CITY MINING & DEVELOPMENT CO.

SOUTH DAKOTA

Hill City, Pennington Co., S. Dak. **Officers:** John Wise, pres. and supt.; with Wm. Stoner and Chas. Booth, directors; E. A. Schilliman, sec-treas. Inc. 1911 in S. D. **Cap.**, \$500,000; shares \$1 par; 300,000 shares issued. Annual meeting, March 9.

Property: 11 claims, 6 patented, 220 acres in Burnt Fork gulch, 3 miles north of Hill City. **Ore:** gold, in fissure vein, in schist; strike N. S., dip 80°. Said to have been proven for a distance of 2,000' along the strike by 100' shafts, and to have an average width of 16'. Management expects to produce \$5 milling ore.

Equipment: includes Lidgerwood double-drum hoist, Leyner compressor and a 10-stamp mill. Company plans to put in a new hoist and sink to 400' depth and later to build a cyanide plant.

HILLSIDE COPPER CO.

NEVADA

See Bristol Cons. Mines & Sm. Co.

HILLTOP MILLING & REDUCTION CO.

NEVADA

Hilltop, Lander Co., Nev. **Officers:** Frank LeBar, pres.; Chas. E. Beach, v. p.; E. Ross Carver, sec-treas. and mgr. Above are directors. Inc. in Nevada. **Cap.**, \$50,000; shares \$10 par; all outstanding. Annual meeting in January. Company operates a 75-ton 10-stamp cyanide plant. Gross earnings, 1914, \$21,721; operating expenses, \$15,133.

HILLTOP MINES (not Inc.).

ARIZONA

Principal owners: J. O. Fife, Kansas City; P. J. Kasper, Chicago; R. O. Fife, Trustee. Dos Cabezos, Cochise Co., Ariz.

Property: 50 unpatented claims, 1,000 acres, in California mining district, Chiricahua Mountains, Cochise Co., Ariz., said to show copper, lead, zinc, silver ore in quartz veins and contact deposits; strike N. W.-S. E., dip 60° S. W. Ten shoots reported opened up on 800' level, 2' to 10' wide and 30' to 110' long, said to show assays of 20 to 40% lead, 1 to 3% copper and 6 to 10 oz. silver.

Development: by 2 tunnels, one 1,100' long, the other 2,600' long; greatest depth of working 800'. Total underground workings, 5,000'. No ore blocked out and has been cut on one level only. No shipments made in 1915. **Equipment:** includes a 70-h. p. Snow-Diesel engine and an Ingersoll-Rand compressor, capacity 385 cu. ft. Management is planning to drive 2 more tunnels.

HINSDALE TUNNEL & REDUCTION CO. COLORADO

Is a reorganization made in 1907 of the Henson Creek Lead Mines Co. **Property:** at Lake City, Hinsdale Co., Colo., known as the Bonanza group, is said to carry complex lead and copper ores. Has water and electric power and a 50-ton concentrator. Letters neither answered nor returned.

HOBSON SILVER LEAD CO. BRITISH COLUMBIA

Address: Box 1123, Spokane, Wash., and Ymir, B. C. **Officers:** George T. Reynolds, pres.; W. L. McEachren, v. p.; W. B. Ward, Jr., sec.-treas.; C. H. Harvey, asst. sec. and treas.; preceding, with J. C. Buchanan, F. R. Monfort and W. A. Buchanan, directors.

Inc. 1911 in Wash. **Cap.**, \$1,500,000; shares \$1 par; outstanding 1,286,571. Stock transferred at company's office. Annual meeting in January. Operating expenses in 1915, \$30,977.

Property: Yankee Girl mine, 3 claims, patented, 126 acres, at Ymir, Nelson mining district, B. C., said to show gold, silver, lead, zinc ore in contact deposits between granite, slate and schist; strike N. E.-S. W.; dip 60°. One orebody is said to be 90' long, another 400' long. Ore is said to assay \$20 gold, 6.5 oz. silver and 5.5% lead per ton. The main vein, the Yankee Girl, has been drifted on 300' in No. 4 tunnel; it is said to be 5' to 7' wide and to average \$7.24 gold and 0.77 oz. silver per ton. Another vein, the Yukon, is of secondary importance to the Yankee Girl.

Development: 4 tunnels; No. 1, 1,600' long; No. 2, 2,100' long and 400' below the surface; No. 3, 400' long and 175' below No. 2; No. 4, 2,100' long and 600' below No. 2, is driven in the footwall and for the first 1,160' nearly parallels the vein. At No. 4 tunnel level the Yukon vein is estimated to lie 100' N. E. of the tunnel. Company claims to have 400,000 tons ore blocked out. Total underground workings, 6,000'.

Equipment: includes 2 air compressors and a 6,000' tramway. Total output to date, 24,900 tons.

Company plans completing the development of No. 4 tunnel to add a compressor, build a 300-h. p. hydro-electric plant and a 200-ton concentrator.

HOLDEN GOLD & COPPER MINING CO. WASHINGTON

Mine near Lucerne, Chelan Co., Wash. **Officers:** W. J. Nicholls, pres.; A. L. White, v. p., Old National Bank Bldg., Spokane, Wash.; C. A. Smith, sec.-treas.; Wm. Yolen Williams, gen. mgr., and B. H. Kizer, directors.

Property: 3 claims, 60 acres, on Railroad creek, near Lake Chelan, 87 miles N. of Wenatchee on the G. N. R. R., shows gneiss and schist cut by granite with a vein of 40' average and 185' claimed maximum width. **Development:** by 6 tunnels, Nos. 2 and 3 being connected by a blind shaft with about 2,000' of workings on 3 levels. There also are numerous open cuts. Mine shows ore said to assay from 7 to 10% copper, 2 oz. silver and \$5 to \$10 gold per ton. Idle, except for annual assessment work.

HOLDEN MINING & MILLING CO. NEVADA

Tuscarora, Nev. Edw. R. Holden, pres., 524 S. 4th St., Los Angeles, Cal. **Inc.** 1916 in Nev. to take over leases and bond on properties of Tuscarora Cons. M. Co. and the Nevada rights of the Holden patents for concentrating and reducing ores. **Cap.**, \$500,000; shares \$10 par.

HOLLINGER CONSOLIDATED GOLD MINES, LTD. ONTARIO

Offices: 85 Bay St., Toronto, and Timmons, Ont. In May, 1916, definite announcement was made of the consolidation of Hollinger Gold Mines, Ltd., Acme Gold Mines, Ltd., Millerton Gold Mines, Ltd., and Claim 13,147, owned by Canadian Mining & Finance Co., Ltd., under the name of Hollinger Cons. Mines, Ltd. The present Hollinger Gold Mines, Ltd., cap., 600,000 shares, \$5 par, was converted into Hollinger Cons. Gold Mines, Ltd., cap., 5,000,000 shares, \$5 par, of which 200,000 shares will remain in the treasury. Hollinger will receive 2,400,000 shares of the new stock, 4 new for 1 old; Acme Gold Mines, Ltd., cap., \$3,000,000, will receive 2,100,000 shares of the new stock; Millerton Gold Mines, Ltd., will receive 200,000 shares and Claim 13,147 will receive 100,000 shares. Dividend rate, 20c every 4 weeks, to continue the same; this will require \$240,000 per 4 weeks for dividends. These properties, aggregating about 440 acres, all adjoin and are controlled by the Canadian Mining & Finance Co., Ltd.

The Hollinger system of veins extends to the S. W. into the property of Millerton Gold Mines, Ltd., and to the N. E. into the property of Acme Gold Mines, Ltd. For the purpose of securing maximum economy in operation, and a minimum of capital expenditure for equipment, it was desirable that the operations of the 3 properties should be centralized.

Hollinger has been producing for 3½ years and up to Jan. 1, 1916, had mined and milled 728,172 tons, with a profit of \$6,078,924. Of this profit \$4,170,000 has been disbursed as dividends.

Acme has been producing upon a comparatively small scale for 10 months. Ore milled up to Jan. 1, 1916, amounted to 106,486 tons, which yielded \$1,036,087 in bullion. Millerton and Claim 13,147 have not reached a producing stage.

Assumed valuations of the ore in the different properties:

Acme Gold Mines, Ltd.....	\$14,327,455
Millerton Gold Mines, Ltd.....	1,250,000
Claim 13,147	200,000
Hollinger Gold Mines, Ltd.....	13,708,227

Hollinger Gold Mines, Ltd.

Officers: Noah A. Timmins, pres.; John McMartin, v. p.; D. A. Dunlap, sec.-treas.; with L. H. Timmins and John B. Holden, directors. Canadian Mining & Finance Co., Ltd., gen. mgrs.; P. A. Robbins, gen. mgr. Inc. June 28, 1910, in Ont. Transfer offices: Toronto General Trusts Corp., Toronto; Montreal Trust Co., Montreal. Registrars: Guardian Trust Co., Toronto; Montreal Safe Deposit Co. Annual meeting at call of directors. Listed Montreal and Toronto Stock Exchanges, and traded in on New York Curb.

Comparative General Balance Sheet, Dec. 31

Assets—	1915 (a)	1914	Liabilities—	1915	1914
Mining Prop..	\$2,500,000	\$2,500,000	Cap. Stock.....	\$3,000,000	\$3,000,000
Plant	807,705	(d) 640,000	Wages Unpaid..	49,558	53,025
Development..	203,786	199,862	Accounts Pay..	218,323	79,694
Deferred Devl.	219,024	123,688	Conting. Liabil.	15,533
Real Estate...	2,950	2,950	Surplus	1,478,210	1,126,743
Current assets.	1,012,626	808,495			
			Total	\$4,746,091	\$4,274,995
Total	\$4,746,091	\$4,274,995			

(a) Less amounts written off. (d) After marking off \$165,621 for depreciation.

Income and Expenses, Years Ended Dec. 31

	Bullion Prod.	Other Income	Oper. Exp's	Gross Profits	Div'ds	Add. to Surplus	Capital Expend.
1915..	\$3,169,813	\$79,884	\$1,186,231	\$2,063,466	\$1,560,000	\$498,466 (a)	\$413,966
1914..	2,688,354	22,077	923,752	1,786,679	1,170,000	616,679	454,121

(a) Reduced, in addition to dividends, by donations, \$5,000.

Dividends: (since organization) 9% in 1912; 39% in 1913; 39% in 1914; 52% in 1915; total of \$4,170,000. Starting in Jan., 1915, dividend rate was made 4%, payable every four weeks.

Property: 4 claims, 160 acres, patented, in Tisdale Twp., Porcupine. The chief rocks of the entire area consist of basalt in the S. E. portion and the common greenstone of the Keewatin series in the N. W., while between these two areas, approximately 2,000' apart, lies an area of basalt schist and an area of greenstone schist, which have been intruded by a quartz-feldspar porphyry. The porphyry has not, except near its marginal contacts with the older rocks, proved of value as a source of gold, yet it is believed that its occurrence has had some definite influence upon the mineralization and concentration of gold values in the older rocks. It is within the area between the basalt and the greenstone that the gold bearing veins are found; 54 veins had been found on the Hollinger property up to 1915, and 12 had been reached by underground workings. Orebodies consist of quartz veins and country rock containing gold and pyrite. Veins are not fissures with well defined walls; the fissuring has been very irregular; a vein consisting largely of quartz in one place may consist of quartz veinlets and intervening schist a short distance away. In No. 1 shaft the veins are practically vertical.

Ore reserves estimated Dec. 31:

	Tons	Value	Estimated Gross Value
1915 (a).....	1,846,000	\$ 9.65	\$17,824,800
1915.....	1,600,800	10.02	16,031,600
1914.....	1,162,960	11.49	13,358,420
1913.....	845,300	13.71	11,604,800
1912.....	644,540	17.48	11,271,400
1911.....	462,000	22.14	10,230,000

(a) Reserves refigured for consolidation purposes.

Development: by shafts. No. 1 shaft, the main working shaft, has levels at 100', 200', 300', below this at 125' intervals to the 800' level; below this at 950' and 1,100' opened by a winze. Most of the work has been confined to the upper levels. New workings totaled 10,805' in 1915, in addition to 8,378' of diamond drilling; compared with 10,622' workings and 10,227' diamond drilling in 1914. The C. M. & F. Co., Ltd. (which see), is sinking a central shaft about 700' S. E. of No. 1 shaft. Electric haulage is used underground.

Mill: 100-stamps and cyanide plant, with daily capacity of 1,900 tons; this to be increased during the next year to 3,500 tons, which will permit treating a lower grade ore. The ore is easily treated; practice is to crush by stamp and to regrind in tube mills, preparatory to cyanide treatment.

Milling record for 1915 shows: supplies consumed per ton of ore: cyanide, 0.574 lbs.; lime, 1.896 lbs.; zinc, 0.467 lbs.; acid, 0.0032 lbs.; lead acetate, 0.0021 lbs. Tons of solution pptd. per ton of ore, 1.909; zinc added per ton of solution, 0.244 lbs.; average value of pregnant solution, \$5.074. Average tons per day 917, compared with 583 in 1914. Stamp duty tons per 24 hours of running time 14.72, compared with 13.30 in 1914.

Power: obtained from the central power plant built by the C. M. & F. Co.

Average number men employed in 1915, 735, compared with 546 in 1914.

Recent production and costs (costs are per ton of ore milled):

	Tons Milled	Aver. Value	Mng. Costs	Mllg. Costs	Assay Tailing	Values Recovered
1915 (a).....	334,750	\$10.11	\$2.18	\$0.999	\$0.40	\$3,169.813
1914.....	208,936	13.676	2.70	1.220	0.56	2,719,354

(a) In addition there was milled 106,486 tons Acme ore at a cost of \$1.09 per ton.

Operating costs are greatly affected by the war; the price of explosives in Feb., 1916, was sufficient to add 15c per ton to the mining costs; milling costs per ton were increased 7c, due to advanced price of zinc dust. It is expected that greater economies in operations will partly offset the increased cost.

Acme Gold Mines, Ltd., Ontario

Inc. in Ont. Cap., \$3,000,000; shares \$5 par. Before the consolidation was owned entirely by Canadian Mining & Finance Co., Ltd., and worked under one administration with the Hollinger and Millerton Gold Mining, Ltd. **Property:** a 40-acre claim adjoins that of the Hollinger Gold Mines, Ltd., on the E. and N. E. and covers the continuation of the Hollinger vein system.
